REFER TO DIVISION 31 ABOVE

**APPENDIX**

GEOTECHNICAL REPORT DATED AUGUST 16, 2024 (from Geotechnical Engineering Testing, Inc.)  
AVAILABLE UPON REQUEST

END OF SECTION

**SECTION 08 71 00 - DOOR HARDWARE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. This Section includes commercial door hardware for the following:
1. Swinging doors.
  2. Sliding doors.
  3. Other doors to the extent indicated.
- B. Door hardware includes, but is not necessarily limited to, the following:
1. Mechanical door hardware.
  2. Electromechanical door hardware.
  3. Cylinders specified for doors in other sections.
- C. Related Sections:
1. Division 08 Section "Hollow Metal Doors and Frames".
  2. Division 08 Section "Flush Wood Doors".
  3. Division 08 Section "Aluminum-Framed Entrances and Storefronts".
  4. Division 28 Section "Access Control Hardware Devices".
- D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
  2. ICC/IBC - International Building Code.
  3. NFPA 70 - National Electrical Code.
  4. NFPA 80 - Fire Doors and Windows.
  5. NFPA 101 - Life Safety Code.
  6. NFPA 105 - Installation of Smoke Door Assemblies.
  7. TAS-201-94 - Impact Test Procedures.
  8. TAS-202-94 - Criteria for Testing Impact and Non-Impact Resistant Building Envelope Components using Uniform Static Air Pressure.
  9. TAS-203-94 - Criteria for Testing Products Subject to Cyclic Wind Pressure Loading.
  10. State Building Codes, Local Amendments.
- E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:
1. ANSI/BHMA Certified Product Standards - A156 Series.
  2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
  3. ANSI/UL 294 - Access Control System Units.
  4. UL 305 - Panic Hardware.

### 1.3 SUBMITTALS

- A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.
- B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
  - 1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
  - 2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
  - 3. Content: Include the following information:
    - a. Type, style, function, size, label, hand, and finish of each door hardware item.
    - b. Manufacturer of each item.
    - c. Fastenings and other pertinent information.
    - d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    - e. Explanation of abbreviations, symbols, and codes contained in schedule.
    - f. Mounting locations for door hardware.
    - g. Door and frame sizes and materials.
    - h. Warranty information for each product.
    - i. Operational narratives for electrified hardware.
  - 4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
- C. Shop Drawings: Details of electrified access control hardware indicating the following:
  - 1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
    - a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
  - 2. Point to Point Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
    - a. Complete (risers, point-to-point) access control system block wiring diagrams.
    - b. Wiring instructions for each electronic component scheduled herein.
  - 3. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.
  - 4. Provide engineered diagrams specific to each opening. Individual wiring instructions shipped with devices are not considered a complete diagram.

- D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.
- E. Informational Submittals:
  - 1. Hurricane Resistant Openings: Exterior hurricane opening assemblies to be tested according to ASTM E330, ASTM E1886, ASTM E1996, TAS 201, TAS 202, TAS 203 standards, and certified by a qualified independent third party agency acceptable to authority having jurisdiction, with labeling indicating compliance with the design pressure and debris impact resistance level requirements specified for the Project.
  - 2. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

#### 1.4 CLOSEOUT SUBMITTALS

- A. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.
- B. Project Record Documents: Provide record documentation of as-built door hardware sets in digital format (.pdf, .docx, .xlsx, .csv) and as required in Division 01, Project Record Documents.

#### 1.5 QUALITY ASSURANCE

- A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.
- B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).
- C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
- D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.
- E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
  - 1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
  - 2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.
- F. Hurricane Resistant Exterior Openings: Provide exterior door hardware as complete and tested assemblies, or component assemblies, including approved doors and frames specified under

Section 081113 "Hollow Metal Doors and Frames", to meet the design pressures, debris impact resistance, and glass and glazing requirements applicable to the Project.

1. Test units according to ASTM E330, ASTM E1886, ASTM E1996, TAS 201, TAS 202, and TAS 203 standards, certified by a qualified independent third party listing agency acceptable to authority having jurisdiction, and bearing a third party certification agency permanent label indicating windstorm approved product.
- G. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.
- H. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
1. Function of building, purpose of each area and degree of security required.
  2. Plans for existing and future key system expansion.
  3. Requirements for key control storage and software.
  4. Installation of permanent keys, cylinder cores and software.
  5. Address and requirements for delivery of keys.
- I. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
  2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
  3. Review sequence of operation narratives for each unique access controlled opening.
  4. Review and finalize construction schedule and verify availability of materials.
  5. Review the required inspecting, testing, commissioning, and demonstration procedures
- J. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

## **1.6 DELIVERY, STORAGE AND HANDLING**

- A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.
- B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.
- C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

## 1.7 COORDINATION

- A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.
- B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.
- C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

## 1.8 WARRANTY

- A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
  - 1. Structural failures including excessive deflection, cracking, or breakage.
  - 2. Faulty operation of the hardware.
  - 3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
  - 4. Electrical component defects and failures within the systems operation.
- C. Warranty Period: One year from date of Substantial Completion unless otherwise indicated.
- D. Special Warranty Periods:
  - 1. Ten years for mortise locks and latches.
  - 2. Five years for exit hardware.
  - 3. Twenty-five years for manual surface and overhead door closer bodies.
  - 4. Five years for motorized electric latch retraction exit devices.
  - 5. Two years for electromechanical door hardware and accessories.
  - 6. Two years for automatic power door operators.

## PART 2 - PRODUCTS

### 2.1 BUTT HINGES

- A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.
  - 1. Quantity: Provide the following hinge quantity:
    - a. Two Hinges: For doors with heights up to 60 inches.
    - b. Three Hinges: For doors with heights 61 to 90 inches.
    - c. Four Hinges: For doors with heights 91 to 120 inches.
    - d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
  - a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.
  - b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.
3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
  - a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
  - b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
4. Hinge Options: Comply with the following:
  - a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for all out-swinging lockable doors.
5. Manufacturers:
  - a. Hager Companies (HA)
  - b. dormakaba Stanley (ST).
  - c. McKinney (MK).

## 2.2 CONTINUOUS HINGES

- A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.
  1. Manufacturers:
    - a. Hager Companies (HA).
    - b. Select Hinge (SL).
    - c. Pemko (PE).

## 2.3 SLIDING AND FOLDING HARDWARE

- A. Sliding and Folding Door Hardware: Hardware is to be of type and design as specified and should conform with ANSI/BHMA A156.14.
  1. Sliding Bi-Passing Pocket Door Hardware: Provide complete sets consisting of track, hangers, stops, bumpers, floor channel, guides, and accessories indicated.
  2. Manufacturers:
    - a. Hafele Manufacturing (HF).
    - b. Pemko (PE).
    - c. KN Crowder (KN).

## 2.4 POWER TRANSFER DEVICES

- A. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
  1. Manufacturers:

- a. Architectural Builders Hardware (AH) - PT1000-EZ Series.
  - b. Pemko (PE) - EL-CEPT Series.
  - c. Securitron (SU) - EL-CEPT Series.
- B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
1. Provide one each of the following tools as part of the base bid contract:
    - a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
    - b. McKinney (MK) - Connector Hand Tool: QC-R003.
  2. Manufacturers:
    - a. McKinney (MK) - QC-C Series.

## 2.5 DOOR OPERATING TRIM

- A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.
1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
  2. Furnish dust proof strikes for bottom bolts.
  3. Surface bolts to be minimum 8" in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
  4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
  5. Manufacturers:
    - a. Burns Manufacturing (BU).
    - b. Rockwood (RO).
    - c. Trimco (TC).
- B. Coordinators: ANSI/BHMA A156.3 door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.
1. Manufacturers:
    - a. Burns Manufacturing (BU).
    - b. Rockwood (RO).
    - c. Trimco (TC).
- C. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
  2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
  3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
  4. Pulls, where applicable, shall be provided with a 10" clearance from the finished floor on the push side to accommodate wheelchair accessibility.

5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets. When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.
  6. Manufacturers:
    - a. Burns Manufacturing (BU).
    - b. Rockwood (RO).
    - c. Trimco (TC).
- D. Locking Pull System: Post-mount style door pulls with integrated deadbolt locking system in type and design as specified in the Hardware Sets. Pulls available in multiple head, floor, or combination locking options, with outside keyed rim cylinder operation and inside turn piece activation. Mounting applications for aluminum, glass, steel and wood doors, with customized sizing and configuration options. Locking pulls shall be provided with a 10" clearance from the finished floor on the cylinder side to accommodate wheelchair accessibility.
1. Manufacturers:
    - a. Blumcraft (BL).
    - b. dormakaba (DO).
    - c. Rockwood (RO).

## 2.6 CYLINDERS AND KEYING

- A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
- B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:
1. Threaded mortise cylinders with rings and cams to suit hardware application.
  2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
  3. Tubular deadlocks and other auxiliary locks.
  4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
  5. Keyway: New Patented and Restricted Keyway.
- C. Large Format Interchangeable Cores: Provide removable cores (LFIC) as specified, core insert, removable by use of a special key, and for use with only the core manufacturer's cylinder and door hardware.
- D. Security Cylinders: ANSI/BHMA A156.5, Grade 1 Certified Products Directory (CPD) listed security cylinders and keys able to be used together under the same facility master or grandmaster key system. Cylinders to be factory keyed.
1. New security key systems shall not be established with products that have an expired patent. Expired systems shall only be specified and supplied to support existing systems.
  2. Manufacturers:
    - a. Corbin Russwin (RU) - Access 3 AS.
    - b. Medeco (MC) - X4.
    - c. Sargent (SA) - Degree DG2.
    - d. Schlage (SC) - Everest 29 SL.
- E. Keying System: Each type of lock and cylinders to be factory keyed.
1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
  2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
  3. New System: Key locks to a new key system as directed by the Owner.

- F. Key Quantity: Provide the following minimum number of keys:
  - 1. Change Keys per Cylinder: Three (3).
  - 2. Master Keys (per Master Key Level/Group): Five (5).
  - 3. Construction Keys (where required): Ten (10).
  - 4. Construction Control Keys (where required): Two (2).
  - 5. Permanent Control Keys (where required): Two (2).
- G. Construction Keying: Provide temporary keyed construction cores.
- H. Key Registration List (Bitting List):
  - 1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
  - 2. Provide transcript list in writing or electronic file as directed by the Owner.

## 2.7 KEY CONTROL

- A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.
  - 1. Manufacturers:
    - a. Lund Equipment (LU).
    - b. MMF Industries (MM).
    - c. Telkee (TK).

## 2.8 MORTISE LOCKS AND LATCHING DEVICES

- A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.
  - 1. Manufacturers (Full Mortise Case):
    - a. Corbin Russwin Hardware (RU) - ML2000 Series.
    - b. Sargent Manufacturing (SA) - 8200 Series.
    - c. Schlage (SC) - L9000 Series.
  - 2. Manufacturers (Narrow Mortise Case):
    - a. Accurate Lock - 1700/M8700 Series.

## 2.9 MULTI-POINT LOCKS AND LATCHING DEVICES

- A. Multi-Point Locksets: Vertical rod locking devices designed for openings requiring multiple latching points within one locking mechanism. Listed manufacturers shall meet all functions and features as specified herein.
  - 1. Provide locksets with functions and features as follows:
    - a. Where required by code, provide knurling or abrasive coating on all levers leading to hazardous areas.
    - b. Meets UL and CUL Standard 10C Positive Pressure, Fire Test of Door Assemblies with levers that meet A117.1 Accessibility Code.
    - c. Meets Florida Building Code FL2998 and UL Certification Directory ZHEM.R21744 for latching hardware for hurricane requirements.
  - 2. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - MP9800 Series.
    - b. Sargent Manufacturing (SA) - 7000 Series.

**2.10 DEADLOCKS AND LATCHES**

- A. Mortise Deadlocks, Small Case: ANSI/BHMA A156.36, Grade 1, small case mortise type deadlocks constructed of heavy gauge wrought corrosion resistant steel. Steel or stainless steel bolts with a 1" throw and hardened steel roller pins. Deadlocks to be products of the same source manufacturer and keyway as other specified locksets.
1. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - DL4000 Series.
    - b. Sargent Manufacturing (SA) - 4870 Series.
    - c. Schlage (SC) - L460 Series.
  - B. Narrow Case Deadlocks and Deadlatches: ANSI/BHMA 156.13 Series 1000 Grade 1 narrow case deadlocks and deadlatches for swinging or sliding door applications. All functions shall be manufactured in a single sized case formed from 12 gauge minimum, corrosion resistant steel (option for fully stainless steel case and components). Provide minimum 2 7/8" throw laminated stainless steel bolt. Bottom rail deadlocks to have 3/8" diameter bolts.
    1. Manufacturers:
      - a. Adams Rite Manufacturing (AD) - MS1850S Series.

**2.11 LOCK AND LATCH STRIKES**

- A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
  2. Custom Lip Strikes: For locks used on doors with overlapping astragals and frames with wood casing trim.
  3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
- B. Standards: Comply with the following:
1. Strikes for Mortise Locks and Latches: BHMA A156.13.
  2. Strikes for Auxiliary Deadlocks: BHMA A156.36.
  3. Dustproof Strikes: BHMA A156.16.

**2.12 CONVENTIONAL EXIT DEVICES**

- A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:
1. Exit devices shall have a five-year warranty.
  2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
  3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.
  4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
  5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.

6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
    - a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    - b. Where function of exit device requires a cylinder (Rim or Mortise) as specified in Hardware Sets.
  7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
  8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.
  9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
  10. Rail Sizing: Provide exit device rails factory sized for proper door width application.
  11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.
  12. Hurricane and Storm Shelter Compliance: Devices to be U.L. listed for windstorm assemblies where applicable. Provide the appropriate hurricane or storm shelter products that have been independently third party tested, certified, and labeled to meet state and local windstorm building codes applicable to project.
    - a. Meets Florida Building Code FL2998 and UL Certification Directory ZHEM.R21744 for latching hardware for hurricane requirements.
- B. Electromechanical Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.
1. Electromechanical exit devices shall have the following functions and features:
    - a. Universal Molex plug-in connectors that have standardized color-coded wiring and are field configurable in fail safe or fail secure and operate from 12VDC to 24VDC regulated.
    - b. Wire routing for all non-access control electromechanical functions.
    - c. Options to be available for request-to-exit or enter signaling, latchbolt and touchbar
  1. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - PED4000 / PED5000 Series.
    - b. Sargent Manufacturing (SA) - PE80 Series.
    - c. Von Duprin (VD) - 35A/98 XP Series.
- C. Steel Removable Mullions: ANSI/BHMA A156.3 steel removable mullions with options for fire rating, locking, through-wire electrification and hurricane compliance as specified.
1. Provide mullions with functions and features as follows:
    - a. At openings designed for severe wind load conditions due to hurricanes or tornadoes, provide manufacturer's certified mullion and accessories to meet applicable state and local windstorm codes.
    - b. Provide keyed removable feature where specified in the Hardware Sets.
    - c. Provide stabilizers and mounting brackets as required.
  2. Manufacturers:
    - a. Same as exit device manufacturer.

## 2.13 SURFACE DOOR CLOSERS

- A. All door closers specified herein shall meet or exceed the following criteria:
1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
  3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
  4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
  5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
  6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.
- B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.
1. Heavy duty surface mounted door closers shall have a 30-year warranty.
  2. Manufacturers:
    - a. Corbin Russwin Hardware (RU) - DC6000 Series.
    - b. LCN Closers (LC) - 4040XP Series.
    - c. Sargent Manufacturing (SA) - 351 Series.

## 2.14 ELECTROMECHANICAL DOOR OPERATORS

- A. General: Provide low energy operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for compliance with UL 325. Coordinate operator mechanisms with door operation, hinges, and activation devices.
1. Fire-Rated Doors: Provide door operators for fire-rated door assemblies that comply with NFPA 80 for fire-rated door components and are listed and labeled by a qualified testing agency.
- B. Standard: Certified ANSI/BHMA A156.19.
- C. Performance Requirements:
1. Opening Force if Power Fails: Not more than 15 lbf required to release a latch if provided, not more than 30 lbf required to manually set door in motion, and not more than 15 lbf required to fully open door.
  2. Entrapment Protection: Not more than 15 lbf required to prevent stopped door from closing or opening.
- D. Configuration: Surface mounted. Door operators to control single swinging and pair of swinging doors.
- E. Operation: Power opening and spring closing operation capable of meeting ANSI A117.1 accessibility guideline.
1. Normal Close Operation: Door can be used as a manual door with no damage to the operator. Closing provided by means of a spring and adjustable tension provided by means of a single screw.
  2. Power Assist Operation: Operator can be adjusted to lower the open forces when used manually. Power Assist will be active only while pushing or pulling the door and will allow the door to close when an opening force is no longer applied to the door.

3. Push-Pull-to-Activate programmable feature. Push or pull the door open from any position, and the door will gently power open, time out and slowly close.
- F. The swing door package consists of operator housing, swing power operator, electronic control, wire harnesses and connecting hardware.
- G. Features: Operator units to have full feature adjustments for door opening and closing force and speed, backcheck, motor assist acceleration from 0 to 30 seconds, time delay, vestibule interface delay, obstruction recycle, and hold open time from 0 up to 30 seconds.
- H. Provide on board modules and relays to allow for coordination of exit device latch retraction and blow open operator activation upon signal from the smoke evacuation system.
- I. Provide outputs and relays on board the operator to allow for coordination of exit device latch retraction, electric strikes, magnetic locks, card readers, safety and motion sensors and specified auxiliary contacts.
- J. Brackets and Reinforcements: Manufacturer's standard, fabricated from aluminum with nonferrous shims for aligning system components.
- K. Signage: Provide signage in accordance with ANSI/BHMA A156.19.
- L. Manufacturers (Surface/Overhead Concealed Operators): Subject to compliance with requirements, provide products by one of the following:
  1. Besam Automated Entrance Systems (BE) - SW200i Series.
  2. Horton Automatics (HO) - S4100LE Series.
  3. Norton Rixon (NO) - 6000 Series.
- M. Manufacturers (Actuator Switches and Bollards): Subject to compliance with requirements, provide products by one of the following:
  1. Wikk Industries (WK).
  2. BEA Security (BEA).

## 2.15 ARCHITECTURAL TRIM

- A. Door Protective Trim
  1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
  2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
  3. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.
  4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:
    - a. Stainless Steel: 300 grade, 050-inch thick.
  5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
  6. Manufacturers:
    - a. Burns Manufacturing (BU).
    - b. Rockwood (RO).
    - c. Trimco (TC).

**2.16 DOOR STOPS AND HOLDERS**

- A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.
- B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
  - 1. Manufacturers:
    - a. Burns Manufacturing (BU).
    - b. Rockwood (RO).
    - c. Trimco (TC).
- C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
  - 1. Manufacturers:
    - a. Architectural Builders Hardware (AH).
    - b. Norton Rixson (RF).
    - c. Sargent (SA).

**2.17 ARCHITECTURAL SEALS**

- A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.
- B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
  - 1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.
- C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
  - 1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.
- D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.
- E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.
- F. Manufacturers:
  - 1. Pemko (PE).
  - 2. Reese Enterprises, Inc. (RE).
  - 3. Zero (ZE).

**2.18 ELECTRONIC ACCESSORIES**

- A. Door Position Switches (By Security System Provider with Prep by Door Hardware Provider): Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide DPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.
- B. Door Position Switches (By Door Hardware Provider): Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide DPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.
  - 1. Manufacturers:
    - a. Bosch (BH) - 1076D Series.
- C. Linear Power Supplies (By Door Hardware Provider): Provide Nationally Recognized Testing Laboratory Listed 12VDC or 24VDC (field selectable) filtered and regulated power supplies. Include battery backup option with integral battery charging capability in addition to operating the DC load in event of line voltage failure. Provide capability for power distribution, direct locking control, and Fire Alarm Interface (FAI) through add on modules.
  - 1. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware.
  - 2. Manufacturers:
    - a. Altronix (AX) - Maximal 3 Series.
    - b. Securitron (SU) - AQD Series.

**2.19 FABRICATION**

- A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

**2.20 FINISHES**

- A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.
- B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

- B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

### 3.2 PREPARATION

- A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
- B. Wood Doors: Comply with ANSI/DHI A115-W series.

### 3.3 INSTALLATION

- A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
  - 1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
- B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
  - 1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
  - 2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
  - 3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
  - 4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
- C. Power Operator products and accessories are required to be installed through by supplier of operator products.
- D. Push Plates and Door Pulls: When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.
- E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."
- F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

### 3.4 FIELD QUALITY CONTROL

- A. Field Inspection (Punch Report): Reference Division 01 Sections "Closeout Procedures". Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.
  - 1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

**3.5 ADJUSTING**

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

**3.6 CLEANING AND PROTECTION**

- A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
- B. Clean adjacent surfaces soiled by door hardware installation.
- C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

**3.7 DEMONSTRATION**

- A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

**3.8 DOOR HARDWARE SETS**

- A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
- B. The door hardware sets are based on described door and hardware applications and may apply to multiple types of doors and locations. The hardware sets should be applied in conjunction with the door schedule, floor plans, and technology drawings for verification of quantities, sizes, materials, types, and applications.
  - 1. The supplier is responsible for verifying product quantities, handing, sizing, and custom options at each pair or single door application.
    - a. Hinges: Comply with Section 2.2(A) Hanging Devices for hinge quantities and sizes.
  - 2. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
  - 3. Fire Rated Hardware: If required, revise hardware sets to include the manufacturer's listed fire door hardware and comply with NFPA 80 standards at fire rated openings shown on life safety plans and door schedules.
  - 4. Manufacturer Abbreviations:
    - 1. MK - McKinney
    - 2. PE - Pemko
    - 3. SU - Securitron

4. RO - Rockwood
5. SA - SARGENT
6. AT - Accurate Lock
7. AD - Adams Rite
8. KA - Kaba Ilco
9. RF - Rixson
10. BM - Besam
11. ZE - Zero International
12. BH - Bosch
12. OT - Other

### Hardware Sets

#### **Set: 1.0**

Doors: 01.03.06A, 01.31.03A

Description: Pair ALUM - Grand Hall Vestibule - Panic/ELR (CR, DPS, Smoke Evac)

2 Elec Continuous Hinge	CFMxxSLF-HD1 PT	ALUM	PE
2 Electric Power Transfer	EL-CEPT	630	SU
1 ELR CVR Exit, Exit Only (rex)	55 56 ADPE8410 EO	US32D	SA
1 ELR CVR Exit, Nightlatch (rex)	DG264 55 56 ADPE8410 P106	US32D	SA
1 Perm Core	DG264 6300	US15	SA
2 Offset Door Pull	RM3311-36 Mtg-Type 12XHD	US32D	RO
2 Auto Operator - Outswing	SW200i - Smoke Evac - Full Header	ALUM	BM
2 Wiring Harness (transfer/door)	QC-Cxxx		MK
2 Wiring Harness (trasfer/jbox)	QC-CxxxxP		MK
1 Card Reader	By Security Provider		OT
2 Door Position Switch	By Security Provider (prep by Dr/Frm mfr)		SU
1 Power Supply - Low Voltage	By Security Provider		OT
1 Power Supply - Smoke Evac	AQD Series x Battery Backup (amps, relays, as req'd)		OT
1 Power Supply	By Security Provider (ACS devices)		SU

Notes: Perimeter seal and astragal by aluminum door provider.

Operation:

1. Doors electrically unlocked or locked during established time zones as programmed by the access control system.
2. Authorized access by card reader retracting exit device latch for predetermined time limit.
3. Request to exit switch in the push pad to signal authorized egress to the access control system.
4. Door position switch to signal door open/closed to the access control system.
5. Keyed cylinder override for emergency access.

Smoke Evacuation Operation: Combine and provide least number of low voltage power supplies across the entire bank of Smoke Evac openings.

1. Door position switches to signal door open/closed to the smoke evacuation system.
2. Upon signal from smoke evacuation system exit device latches are electrically retracted and auto door operators activated to power open doors.
3. Door to remain open until smoke evacuation system is reset.
4. Smoke Evac power supply battery backup provides emergency power for low voltage electrified hardware during power loss.
5. Auto door operators (120V) require backup UPS for activation during power loss.

#### **Set: 2.0**

Doors: 01.27.13B, 01.ST-3C

Description: Ext Pair HM - Exit Stair - Panic/ELR (CR, DPS)

2 Elec Continuous Hinge	CFMxxHD1 PT	ALUM	PE
2 Electric Power Transfer	EL-CEPT	630	SU
1 Mullion	HCL980	PC	SA
1 Fail Secure Exit Device	DG264 HC 55 PE8876- NEMD	US32D	SA
1 Elec Rim Exit, Exit Only	HC 55 PE8810 EO	US32D	SA
1 Mullion Cylinder	DG264 980C1	US26D	SA
2 Perm Core	DG264 6300	US15	SA
2 Surf Overhead Stop	9-x36	630	RF
2 Surface Closer (OHS arm)	351 PD10	EN	SA
2 Kick Plate	K1050(F) 10" x 2" LDW 4BE CSK	US32D	RO
2 Astragal	18061CNB (both leaves)		PE
1 Mullion Gasketing	5110BL		PE
1 Gasketing (head)	2891APK		PE
2 Gasketing (jambs)	290APK		PE
2 Sweep	315CN		PE
1 Threshold	2005AV		PE
2 Wiring Harness (transfer/door)	QC-Cxxx		MK
2 Wiring Harness (trasfer/jbox)	QC-CxxxxP		MK
1 Card Reader	By Security Provider		OT
2 Door Position Switch	By Security Provider (prep by Dr/Frm mfr)		SU
1 Power Supply - Low Voltage	By Security Provider		OT

Notes: Exterior doors are required to meet applicable standards for windstorm. The hardware set listed is a basis of design guideline. Supplier to verify hardware is compliant with an approved manufacturer's frame and door assembly listing.

Install perimeter seal prior to closer, stops, and strikes. Special templating required.

Operation:

1. Doors normally closed and secure.
2. Authorized access by card reader releasing lever trim for predetermined time limit.
3. Request to exit switch in the push pad to signal authorized egress to the access control system.
4. Door position switch to signal door open/closed to the access control system.
5. Exit device trim remains locked (fail secure) in event of power loss. Keyed cylinder override for emergency access.

**Set: 3.0**

Doors: 01.12.14A, 01.14.05A

Description: Ext Pair ALUM - Player/VIP, Staff Entry - Panic/ELR (CR, DPS)

2 Elec Continuous Hinge	CFMxxSLF-HD1 PT	ALUM	PE
2 Electric Power Transfer	EL-CEPT	630	SU
1 ELR CVR Exit, Exit Only (rex)	55 56 ADPE8410 EO	US32D	SA

1 Threshold	2005AV		PE

2 Wiring Harness (transfer/door)	QC-Cxxx	MK
2 Wiring Harness (trasfer/jbox)	QC-CxxxxP	MK
1 Card Reader	By Security Provider	OT
2 Door Position Switch	By Security Provider (prep by Dr/Frm mfr)	SU
1 Power Supply - Low Voltage	By Security Provider	OT

Notes: Exterior doors are required to meet applicable standards for windstorm. The hardware set listed is a basis of design guideline. Supplier to verify hardware is compliant with an approved manufacturer's frame and door assembly listing.

Perimeter seal and astragal by aluminum door provider.

Operation:

1. Doors normally closed and secure.
2. Authorized access by card reader retracting exit device latch for predetermined time limit. Exit device latch can be electrically held retracted for open access.
3. Request to exit switch in the push pad to signal authorized egress to the access control system.
4. Door position switch to signal door open/closed to the access control system.
5. Exit device latch releases (fail secure) in event of power loss. Keyed cylinder override for emergency access.

**Set: 4.0 (NOT USED)**

**Set: 5.0**

Doors: 01.22.02C

Description: Ext Sgl HM - Loading Dock Exit - Panic/FSE (CR, IC, DPS)

1 Elec Continuous Hinge	CFMxxHD1 PT	ALUM	PE
1 Electric Power Transfer	EL-CEPT	630	SU
1 Fail Secure Exit Device	DG264 HC 55 PE8876- NEMD	US32D	SA

2 Wall/Door Stop	406/481(H) as req'd	BSP	RO
1 Astragal	18041BSPNB (both leaves)		PE
1 Gasketing	S88BL		PE
1 Card Reader	By Security Provider		OT
1 Door Position Switch	By Security Provider (prep by Dr/Frm mfr)		SU
1 Power Supply - Low Voltage	By Security Provider		OT

## Notes: Operation:

1. Doors electrically unlocked or locked during established time zones as programmed by the access control system. When devices are locked the card reader grants access upon presentation of a valid credential. Exit devices mechanically lock during power failure with a mechanical key override entry.
2. Egress always free from inside by depressing inside push bar.
3. Request to exit switch in push bar to signal authorized egress to the access control system.
4. Door position switch to signal door open/closed to the access control system.

1 Card Reader	By Security Provider		OT
2 Door Position Switch	By Security Provider (prep by Dr/Frm mfr)		SU
1 Power Supply - Low Voltage	By Security Provider		OT

**Notes: Operation:**

1. Doors electrically unlocked or locked during established time zones as programmed by the access control system. When devices are locked the card reader grants access upon presentation of a valid credential. Exit devices mechanically lock during power failure with a mechanical key override entry.
2. Egress always free from inside by depressing inside push bar.
3. Request to exit switch in push bar to signal authorized egress to the access control system.
4. Door position switch to signal door open/closed to the access control system.

END OF SECTION 087100

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 08 80 00 - GLAZING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Glass for windows, doors, interior borrowed lites, and storefront framing.
  - 2. Glazing sealants and accessories
- B. Related Requirements:
  - 1. Section 08 83 00 "Mirrors for opaque mirrored glass."

**1.2 DEFINITIONS**

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C 1036.
- C. IBC: International Building Code.
- D. Interspace: Space between lites or plies of an insulating-glass unit.

**1.3 COORDINATION**

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances to achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.

**1.4 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
  - 2. Review temporary protection requirements for glazing during and after installation.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Glass Samples: For each type of glass product other than clear monolithic vision glass; 12 inches square.
- C. Glazing Accessory Samples: For sealants, in 12-inch lengths. Install sealant Samples between two strips of material representative in color of adjoining framing system.
- D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
- E. Delegated Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by qualified professional engineer responsible for their preparation.

- F. Shop Drawings: Submit shop drawings showing details of each type glazing system indicating sizes, shapes, material and quantity.
  - 1. Show details indicating sealant thickness and profile, bite on glass, glass edge clearance, depth of rabbet and thickness of glass.
  - 2. Identify materials, color, hardness and locations for all gasket materials, side spacer blocks, and setting blocks.
  - 3. Show the weep system in glass pockets.
  - 4. Details shall be full scale and fully drawn, not outlined.
- G. Calculations: Submit calculations demonstrating the structural capacity of each fabricated glass product to resist the design loads specified in the respective glass framing system specifications.
  - 1. Glass shall be designed using the probability of breakage of 8 lites per 1000 for vertically glazed areas, and one lite per 1000 for sloped glazed areas.
  - 2. Include strength and deflection, thermal stress, and secondary silicone sightline analysis calculations as part of this submittal.
  - 3. Calculations shall be performed by the glass fabricator.
  - 4. When glass fabricator cannot assure adequate structural performance of insulating glass units based upon combination of inner/outer lite, assume outer lite alone must satisfy structural requirements.
- H. Certifications: Submit certification from the glass fabricator stating that the glass fabricator has reviewed all glazing details, project conditions and thicknesses and compositions of all glass and finds same suitable for the purpose intended in accordance with these specifications.
  - 1. Submit certification from the glass fabricator stating that insulating glass units meet standards specified herein.
  - 2. Submit glass fabricator's certified identification, showing strength, grade, thickness, type and quality for each type of glass provided for this project.

## 1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer, fabricators of insulating-glass units with sputter-coated, low-E coatings ,glass testing agency and sealant testing agency.
- B. Product Certificates: For glass.
- C. Product Test Reports: For tinted glass, coated glass, insulating glass, and glazing sealants, for tests performed by a qualified testing agency.
  - 1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
- D. Preconstruction adhesion and compatibility test report.
- E. Sample Warranties: For special warranties.

## 1.7 QUALITY ASSURANCE

- A. Fabricator Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass fabricator who is approved by coated-glass manufacturer.
- B. Installer Qualifications: A qualified installer who employs glass installers for this Project who is certified under National Glass Association's (NGA) Certified Glass Installer Program .
- C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.
- D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

- E. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
  - 1. Install glazing in mockups specified in Section 08 41 13 "Aluminum-Framed Entrances and Storefronts", 08 44 13 "Glazed Aluminum Curtain Walls", and 08 51 13 "Aluminum Windows" to match glazing systems required for Project, including glazing methods.
- F. Mockups: Before glazing, build mockups for each glass product indicated in Part - Product Schedule to verify selections and to demonstrate aesthetic effects and qualities of materials and execution.
  - 1. Construction: Build mockups with glass and glazing systems specified for the project, including typical lite size, framing systems and glazing methods.
  - 2. Scheduling: Notify architect seven days in advance of dates and times when mockups will be available for viewing.
  - 3. Quality Assurance: Maintain mockups during construction in an undisturbed condition as a standard for judging the completed work. Accepted mockups may become part of the completed work if undisturbed at the time of substantial completion.

## 1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
  - 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
  - 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
  - 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
  - 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
  - 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.

## 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

## 1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
  - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F.

## 1.11 WARRANTY

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
  - 1. Warranty Period: 10 years from date of Substantial Completion.

- B. Manufacturer's Special Warranty for Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
  - 1. Warranty Period: 10 years from date of Substantial Completion.
- C. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is obstruction of vision by dust, moisture, or film on interior surfaces of glass.
  - 1. Warranty Period: 10 years from date of Substantial Completion.
- D. Manufacturer's Special Warranty for Heat-Soaked Tempered Glass: Manufacturer agrees to replace heat-soaked tempered glass units that spontaneously break due to nickel sulfide (NiS) inclusions at a rate exceeding 0.3 percent (3/1000) within specified warranty period. Coverage for any other cause is excluded.
  - 1. Warranty Period: 10 years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Basis-of-Design Glass Product: Subject to compliance with requirements, provide Viracon, Inc. product indicated in glass schedules or comparable product by one of the following:
  - 1. AGC Glass Company North America, Inc.
  - 2. Guardian Industries Corp.
  - 3. Pilkington North America.
  - 4. SCHOTT North America, Inc.
  - 5. Vitro Architectural Glass.
- B. Source Limitations for Glass: Obtain from single source from single manufacturer for each glass type.
  - 1. Obtain tinted glass from single source from single manufacturer.
  - 2. Obtain reflective-coated glass from single source from single manufacturer.
- C. Source Limitations for Glazing Accessories: For each product and installation method, obtain from single source from single manufacturer.

### **2.2 PERFORMANCE REQUIREMENTS**

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design glazing.
  - 1. Glass Design: Glass thickness designations indicated are minimums and are for detailing only.
  - 2. Confirm glass thicknesses by analyzing Project loads and in-service conditions.

3. Provide glass lites in the thickness designations indicated for various openings, but not less than the thicknesses and in strengths (annealed or heat-treated) required to meet or exceed the following criteria:
  - a. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E1300, according to the following requirements:
    - 1) ASCE 7 Wind loads.
    - 2) ASCE 7 Snow Loads.
    - 3) ASCE 7 Ice Loads – Atmospheric Icing.
- C. Thermal Analysis:
  1. Evaluate effects of partial and full shading of glass under expected service temperature ranges.
  2. Evaluate effects of heat build-up and related thermal stresses on spandrel and/or shadow box areas under expected service temperature ranges.
- D. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E 1300:
  1. Design Wind Pressures: Determine design wind pressures applicable to Project in accordance with ASCE/SEI 7, based on heights above grade indicated on Drawings.
    - a. Wind Design Data: As indicated on Drawings.
  2. Design Snow Loads: As indicated on Structural Drawings.
  3. Thickness of Patterned Glass: Base design of patterned glass on thickness at thinnest part of the glass.
  4. Probability of Breakage for Sloped Glazing: For glass sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.
  5. Probability of Breakage for Typical Glazing: For glass surfaces, design glass for a probability of breakage not greater than 8 lites per 1000.
  6. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
- E. Windborne-Debris-Impact Resistance: Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone as indicated on Drawings for protection. Test specimens shall be no small in width and length than glazing indicated for use on Project and shall be installed in same manner as glazing indicated for use on Project.
  1. Large-Missile Test: For glazing located within 30 feet of grade.
  2. Small-Missile Test: For glazing located between 30 feet above grade.
- F. Safety Glazing: Where safety glazing is indicated and where required by IBC, provide glazing that complies with 16 CFR 1201, Category II.
- G. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
  1. For monolithic-glass lites, properties are based on units with lites 6 mm minimum thick.
  2. For laminated-glass lites, properties are based on products of construction indicated.
  3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
  4. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
  5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
  6. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

**2.3 GLASS PRODUCTS, GENERAL**

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. NGA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
  2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR A7, "Sloped Glazing Guidelines."
  3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
  4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the IGCC.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than thickness indicated.
1. Minimum Glass Thickness for Exterior Lites: 6 mm minimum.
  2. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide heat soaking of all fully tempered float glass.

**2.4 GLASS PRODUCTS**

- A. Clear Annealed Float Glass: ASTM C 1036, Type I, Class 1 (clear), Quality-Q3.
- B. Ultraclear Float Glass: ASTM C 1036, Type I, Class I (clear), Quality-Q3; and with visible light transmission of not less than 91 percent.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. AGC Glass Company North America, Inc.; Krystal Klear.
    - b. Guardian Industries Corp.; Ultrawhite.
    - c. Pilkington North America; Optiwhite.
    - d. Vitro Architectural Glass; Starphire.
- C. Tinted Annealed Float Glass: ASTM C 1036, Type I, Class 2 (tinted), Quality-Q3.
- D. Fully Tempered Float Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
    - a. Roll-Wave Distortion Limits: Maximum peak to valley deviation of 0.003 inch in center field of lite, and 0.008 inch within 10.5 inches of leading and trailing edges.
    - b. Millidiopter: Plus or minus 100 mD over 95 percent of glass surface.
    - c. Overall Bow/Warp, Maximum: Maximum bow and warp 1/32" per lineal foot.
    - d. Maintain measurement documentation for each lite. Upon request provide documentation for verification.

- E. Heat-Strengthened Float Glass: ASTM C 1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3
  - 1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
    - a. Roll-Wave Distortion Limits: Maximum peak to valley deviation of 0.003 inch in center field of lite, and 0.008 inch within 10.5 inches of leading and trailing edges.
    - b. Millidiopter: Plus or minus 100 mD over 95 percent of glass surface.
    - c. Overall Bow/Warp, Maximum: Maximum bow and warp 1/32" per lineal foot.
    - d. Maintain measurement documentation for each lite. Upon request provide documentation for verification.
- F. Reflective-Coated Vision Glass: ASTM C 1376.
- G. Anti-Reflective Coated Vision Glass: At 90-degree angle, less than 2 percent visible reflectance.
  - 1. Basis-of-Design Product: SCHOTT North America, Inc.; AMIRAN anti-reflective glass.
- H. Ceramic-Coated Vision Glass: ASTM C 1048, Condition C, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3; and complying with Specification No. 95-1-31 in GANA's "Engineering Standards Manual."
  - 1. Basis-of-Design Product: Viracon, Inc.: Simulated Acid Etch Viraspan.
- I. Reflective- and Low-E-Coated Spandrel Glass: ASTM C1376.
- J. Ceramic-Coated Spandrel Glass: ASTM C 1048, Type I, Condition B, Quality-Q3.

## 2.5 LAMINATED GLASS

- A. Laminated Glass: ASTM C 1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
  - 1. Construction: Unless otherwise indicated, laminate glass with or ionomeric polymer to comply with interlayer manufacturer's written instructions.
    - a. Ionomeric Polymer Interlayer: DuPont Kuraray SentryGlas Ionoplast Interlay.
  - 2. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
  - 3. Interlayer Color: Clear unless otherwise indicated.
- B. Windborne-Debris-Impact-Resistant Laminated Glass: Comply with requirements specified above for laminated glass except laminate glass with the following to comply with interlayer manufacturer's written instructions:
  - 1. Ionomeric polymer interlayer
- C. Both plies of laminated glass to be of same thickness and have Ionoplast interlayer.

## 2.6 INSULATING GLASS

- A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E 2190.
  - 1. Sealing System: Dual seal, with polyisobutylene and silicone primary and secondary sealants.
  - 2. Spacer: Provide spacers with bent corners.
  - 3. Desiccant: Molecular sieve or silica gel, or a blend of both.

## 2.7 GLAZING SEALANTS

- A. General:

1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
  2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
  3. Field-applied sealants shall have a VOC content of not more than 250 g/L.
  4. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range of industry colors.
- B. Glazing Sealant: Neutral-Curing Silicone Glazing Sealant, Class 50: Complying with ASTM C 920, Type S, Grade NS, Use NT.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Dow Corning Corporation; 795.
    - b. GE Advanced Materials - Silicones; SilPruf NB SCS9000.
    - c. Pecora Corporation; 895NST.
    - d. Sika Corporation U.S.; Sikasil WS-295.
    - e. Tremco Incorporated; Spectrem 2.

## 2.8 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
  2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
1. AAMA 810.1, Type 1, for glazing applications in which tape acts as primary sealant.
  2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

## 2.9 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
1. All material that contacts the edge of glass should be silicone.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks:
1. Elastomeric material with Shore, Type A durometer hardness of 85, plus or minus 5.
- D. Spacers:
1. Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks:
1. Elastomeric material of hardness needed to limit glass lateral movement (side walking).

- F. Cylindrical Glazing Sealant Backing: Closed cell sealant backing of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

## **2.10 FABRICATION OF GLAZING UNITS**

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
  - 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
    - a. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
- C. Grind smooth and polish exposed glass edges and corners.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
  - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
  - 2. Presence and functioning of weep systems.
  - 3. Minimum required face and edge clearances.
  - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

### **3.3 GLAZING, GENERAL**

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches.
  - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
  - 2. Provide 1/8-inch-minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.
- H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended in writing by gasket manufacturer.

### **3.4 TAPE GLAZING**

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

### **3.5 GASKET GLAZING (DRY)**

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal

without developing bending stresses in glass. Seal gasket joints with sealant recommended in writing by gasket manufacturer.

- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended in writing by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

### 3.6 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

### 3.7 CLEANING AND PROTECTION

- A. Immediately after installation, remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
  - 1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- C. Remove and replace glass that is damaged during construction period.
- D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 08 81 13 - DECORATIVE GLASS GLAZING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Coated glass.
- B. Related Requirements:
  - 1. Section 08 80 00 "Glazing" for architectural glazing.
  - 2. Section 08 83 00 "Mirrors" for mirror glass.

**1.2 DEFINITION****1.3 COORDINATION**

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

**1.4 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
  - 2. Review temporary protection requirements for glazing during and after installation.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For decorative glass. Show fabrication and installation details. Include the following:
  - 1. Size and location of penetrations.
  - 2. Glazing method.
  - 3. Mounting method.
  - 4. Attachments to other work.
  - 5. Full-size details of edge-finished profiles.
- C. Glass Samples: For the following products, 12 inches square:
  - 1. Each type of decorative glass.
  - 2. Each applied coating on type of decorative glass.
- D. Glazing Accessory Samples: For sealants, in 12-inch lengths. Install sealant Samples between two strips of material representative of the glazed system.
- E. Decorative Glazing Schedule: List decorative glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
- F. Delegated Design Submittal: For decorative glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

**1.6 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer and sealant testing agency.

- B. Product Certificates: For each type of decorative glass.
- C. Preconstruction adhesion and compatibility test report.
- D. Sample Warranty: For special warranty.

#### **1.7 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each type of decorative glass and each applied coating to include in maintenance manuals.

#### **1.8 QUALITY ASSURANCE**

- A. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under NGA's Certified Glass Installer Program.
- B. Sealant Testing Agency Qualifications: An independent testing agency qualified in accordance with ASTM C 1021 to conduct the testing indicated.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### **1.9 PRECONSTRUCTION TESTING**

- A. Preconstruction Adhesion and Compatibility Testing: Test each laminated decorative glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
  - 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
  - 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
  - 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
  - 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
  - 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

#### **1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Protect decorative glass and glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Retain packaging and sequencing numbers for decorative glass units.

#### **1.11 FIELD CONDITIONS**

- A. Environmental Limitations: Do not deliver or install decorative glass until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

- B. Field Measurements: Verify actual dimensions of openings and construction contiguous with decorative glass by field measurements before fabrication.

### 1.12 WARRANTY

- A. Special Warranty on Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
  - 1. Warranty Period: Five years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS OF DECORATIVE GLASS

- A. Source Limitations for Glass: Obtain each type of decorative glass from single source from single manufacturer.
- B. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer, for each product and installation method.

### 2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed glazing systems shall withstand normal thermal movement and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design decorative glass.
- C. Structural Performance: Decorative glass installed adjacent to walking surfaces shall withstand the following design loads within limits and under conditions indicated:
  - 1. Differential deflection of adjacent unsupported edges shall not exceed glass thickness when subjected to 50 lbf/ft. applied horizontally to one panel at any point up to 42 inches above the adjacent walking surface.
  - 2. Base design on thickness at thinnest part of the glass.
- D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

### 2.3 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with glass product manufacturers' written instructions, NGA's "Laminated Glazing Reference Manual," and NGA's "GANA Glazing Manual" unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

- D. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with requirements indicated. Where heat-strengthened glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with requirements indicated. Where fully tempered glass is indicated, provide fully tempered float glass.

## 2.4 GLASS PRODUCTS

- A. Ultraclear Float Glass: ASTM C 1036, Type I, Class I, Quality-Q3, and with visible light transmission not less than 91 percent.
1. Product: Subject to compliance with requirements, provide one of the following:
    - a. AGC Glass Company North America, Inc.; Krystal Klear.
    - b. Guardian Industries Corp.; UltraWhite.
    - c. Pilkington North America; Optiwhite.
    - d. Vitro Architectural Glass; Starphire.
    - e. Saint-Gobain Corporation; Diamant.
- B. Low-Iron Float Glass: ASTM C 1036, Type I, Class I, Quality-Q3, and with visible light transmission not less than 91 percent.
- C. Fully Tempered Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
- D. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II, Class 1 (clear) or Class 2 (tinted) as indicated, Form 3; finish, pattern, and quality as indicated.
- E. Ceramic-Coated Glass: ASTM C 1048, Condition C, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3; and complying with Specification No. 95-1-31 in NGA's "Engineering Standards Manual."
- F. Laminated Glass: ASTM C 1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

## 2.5 GLAZING MATERIALS

- A. Glazing Sealants, Tapes, and Miscellaneous Glazing Materials: As specified in Section 08 80 00 "Glazing."
1. Colors: As selected by Architect from manufacturer's full range.

## 2.6 HARDWARE FOR GLASS INSTALLATION

- A. Hardware: Glass panel to wall clamps/connectors Continuous top track, or Continuous floor track.
1. Manufacturers: Subject to compliance with requirements, provide mounting hardware by decorative glass fabricator or comparable product by one of the following:
    - a. Gyford Productions, LLC.
    - b. KL meglA America, LLC.
    - c. Laurence, C. R. Co., Inc.
    - d. Sugatsune America, Inc.
  2. Dimensions: See Drawings.
  3. Material and Finish: Satin chrome or equal.
- B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
- C. Gaskets: Manufacturer's standard, compatible with decorative glass type indicated.

- D. Anchors and Inserts: Provide devices as required for hardware installation. Provide metal expansion-bolt devices for drilled-in-place anchors. Provide stainless steel anchors and inserts for applications on inside face of exterior walls and where indicated.

## **2.7 DECORATIVE GLASS FABRICATION**

- A. Fabricate decorative glass and provide other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with product manufacturer's written instructions and with referenced glazing standard.
- B. Edge Finishing: Finish edges smooth and polished, without chips, scratches, or warps.
  - 1. Finished Edge: Rounded polished.
  - 2. Edge-Finished Glass Adhesive: Clear, nonyellowing, as recommended by manufacturer.
- C. Lite Treatment: Cut out as indicated on Drawings with smooth, uniform edge.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine decorative glass framing members, with Installer present, for compliance with the following:
  - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
  - 2. Minimum required face or edge clearances.
  - 3. Effective sealing between joints of decorative glass framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate orientation of outer surfaces as indicated on Drawings. Label or mark units as needed so that surface orientation is readily identifiable. Do not use materials that leave visible marks in the completed Work.

### **3.3 INSTALLATION**

- A. Set decorative glass units in each series true in line with uniform orientation, pattern, draw, bow, and similar characteristics.
- B. Set glass lites with proper orientation so that each outer surface faces the direction indicated on Drawings.
- C. Set decorative glass in locations indicated on Drawings. Install glass with hardware and accessories according to hardware manufacturer's written instructions. Attach hardware securely to mounting surfaces and building structure.

### **3.4 GLAZING, GENERAL**

- A. Decorative Glass: Install glazing as specified in Section 08 80 00 "Glazing."
- B. Comply with combined written instructions of manufacturers of glass, gaskets, sealants, tapes, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.

- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is more than 50 inches.
  - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances, and to comply with system performance requirements.
  - 2. Provide 1/8-inch-minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

### **3.5 SEALANT GLAZING (WET)**

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels and between glass-to-glass joints to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants smooth.

### **3.6 CLEANING AND PROTECTION**

- A. Immediately after installation, remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.
- C. Remove and replace glass that is damaged during construction period.
- D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION

**SECTION 08 83 00 - MIRRORS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes: Silvered flat glass mirrors.
  - 1. Annealed monolithic glass mirrors.
  - 2. Laminated glass mirrors qualifying as safety glazing.
- B. Related Requirements:
  - 1. Section 08 80 00 "Glazing" for glass with reflective coatings used for vision and spandrel lites.
  - 2. Section 10 28 00 "Toilet, Bath, and Laundry Accessories" for metal-framed mirrors.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Mirrors: Include description of materials and process used to produce each type of silvered flat glass mirror specified that indicates sources of glass, glass coating components, edge sealer, and quality-control provisions.
- B. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachment details.
- C. Samples: For each type of the following:
  - 1. Mirrors: 12 inches square, including edge treatment on two adjoining edges.
  - 2. Mirror Clips: Full size.
  - 3. Mirror Trim: 12 inches long.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of mirror and mirror mastic.
- C. Preconstruction Test Reports: From mirror manufacturer indicating that mirror mastic was tested for compatibility and adhesion with mirror backing and substrates on which mirrors are installed.
- D. Sample Warranty: For special warranty.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For mirrors to include in maintenance manuals.

**1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: A qualified Installer, who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

**1.6 PRECONSTRUCTION TESTING**

- A. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing.
  - 1. Testing is not required if data are submitted based on previous testing of mirror mastic products and mirror backing matching those submitted.

**1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Protect mirrors in accordance with mirror manufacturer's written instructions and as needed to prevent damage to mirrors from moisture, condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with mirror manufacturer's written instructions for shipping, storing, and handling mirrors as needed to prevent deterioration of silvering, damage to edges, and abrasion of glass surfaces and applied coatings. Store indoors.

**1.8 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install mirrors until ambient temperature and humidity conditions are maintained at levels indicated for final occupancy.

**1.9 WARRANTY**

- A. Special Warranty: Manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.
  - 1. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 SOURCE LIMITATIONS**

- A. Source Limitations for Mirrors: Obtain mirrors from single source from single manufacturer.
- B. Source Limitations for Mirror Accessories: Obtain mirror-glazing accessories from single source.

**2.2 SILVERED FLAT GLASS MIRRORS**

- A. Mirrors, General: ASTM C 1503; manufactured using copper-free, low-lead mirror coating process.
- B. Annealed Monolithic Glass Mirrors: Mirror Select Quality, clear.
  - 1. Nominal Thickness: 6.0 mm.
- C. Laminated Mirrors: ASTM C 1172, Type II.
  - 1. Glass for Outer Lite: Annealed float glass, Mirror Select Quality, clear.
  - 2. Nominal Thickness for Outer Lite: 6.0 mm.
  - 3. Glass for Inner Lite: Annealed float glass; ASTM C1036, Type I (transparent flat glass), Quality-Q3; Class 1 (clear).
  - 4. Nominal Thickness: 6.0 mm.
  - 5. Interlayer: Mirror manufacturer's standard 0.030-inch-thick, clear polyvinyl-butylal interlayer with a proven record of showing no tendency to delaminate from, or cause damage to, silver coating.
- D. Safety Glazing Products: For laminated mirrors, provide products that comply with 16 CFR 1201, Category II.

**2.3 MISCELLANEOUS MATERIALS**

- A. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.
- B. Edge Sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.
- C. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.
- D. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

**2.4 MIRROR HARDWARE**

- A. Aluminum J-Channels and Cleat: Aluminum extrusions with a return deep enough to produce a glazing channel to accommodate mirrors of thickness indicated and in lengths required to cover edges of mirrors in a single piece.
  - 1. Aluminum J-Channel and Cleat, Bottom and Side Trim: J-channels formed with front leg and back leg not less than 5/16 and 3/4 inch in height, respectively.
    - a. Product: Subject to compliance with requirements, provide the following:
      - 1) Laurence, C. R. Co., Inc.; D638A CRL FHA Type J-Channel.
  - 2. Aluminum J-Channel and Cleat, Top Trim: Formed with front leg with a height matching bottom trim and back leg designed to fit into the pocket created by wall-mounted aluminum cleat.
    - a. Product: Subject to compliance with requirements, provide the following:
      - 1) Laurence, C. R. Co., Inc.; D1638A CRL Top Channel and D1637M CRL Mill Mirror Mount System Cleat.
  - 3. Finish: Clear bright anodized.
- B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.
- C. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield, expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

**2.5 FABRICATION**

- A. Shop fabricate mirrors to greatest extent possible.
- B. Fabricate cutouts for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts, so they fit closely around penetrations in mirrors.
- C. Mirror Edge Treatment: Flat high polished.
  - 1. Seal edges of mirrors with edge sealer after edge treatment to prevent chemical or atmospheric penetration of glass coating.
  - 2. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.

- B. Verify compatibility with and suitability of substrates, including compatibility of existing finishes or primers with mirror mastic.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

### 3.2 PREPARATION

- A. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

### 3.3 INSTALLATION

- A. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced National Glass Association (NGA) publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.
  - 1. NGA Publications: "Laminated Glazing Reference Manual," "Glazing Manual" and "Installation Techniques Designed to Prolong the Life of Flat Glass Mirrors."
- B. Provide a minimum airspace of 1/8 inch between back of mirrors and mounting surface for air circulation between back of mirrors and face of mounting surface.
- C. Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors.
  - 1. Aluminum J-Channels and Cleat: Fasten J-channel directly to wall and attach top trim to continuous cleat fastened directly to wall.
  - 2. Install mastic as follows:
    - a. Apply barrier coat to mirror backing where approved in writing by manufacturers of mirrors and backing material.
    - b. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
    - c. After mastic is applied, align mirrors and press into place while maintaining a minimum airspace of 1/8 inch between back of mirrors and mounting surface.

### 3.4 CLEANING AND PROTECTION

- A. Protect mirrors from breakage and contaminating substances resulting from construction operations.
- B. Do not permit edges of mirrors to be exposed to standing water.
- C. Maintain environmental conditions that prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.
- D. Clean exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Clean mirrors as recommended in writing by mirror manufacturer and NGA's publication "Proper Procedures for Cleaning Flat Glass Mirrors."

END OF SECTION

**SECTION 08 88 53 - SECURITY GLAZING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes: monolithic polycarbonate for the following applications:
  - 1. Windows.
- B. Related Requirements:
  - 1. Section 06 16 00 "Sheathing" for ballistic-resistant opaque wall panels.
  - 2. Section 08 56 53 "Security Windows."

**1.2 DEFINITIONS**

- A. Glazing Manufacturers: Firms that produce primary glass, monolithic plastic glazing, or fabricated security glazing, as defined in referenced glazing publications.
- B. Interspace: Space between lites of air-gap security glazing or insulating security glazing.

**1.3 COORDINATION**

- A. Coordinate glazing channel dimensions to provide necessary bite on security glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

**1.4 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
  - 2. Review temporary protection requirements for security glazing during and after installation.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Security Glazing Samples: For each type of security glazing; 12 inches square.
- C. Glazing Accessory Samples: For sealants and colored spacers, in 12-inch lengths.
- D. Security Glazing Schedule: List security glazing types and thicknesses for each size opening and location. Use same designations indicated on Drawings. Indicate coordinated dimensions of security glazing and construction that receives security glazing, including clearances and glazing channel dimensions.
- E. Delegated Design Submittal: For security glazing indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

**1.6 INFORMATIONAL SUBMITTALS**

- A. Test and Evaluation Reports:
  - 1. Product Test Reports:
    - a. For each type of security glazing, for tests performed by manufacturer and witnessed by a qualified testing agency.
    - b. For each type of glazing sealant, for tests performed by a qualified testing agency.

- 1) Provide test reports based on testing current sealant formulations within previous 36-month period.
2. Preconstruction Test Reports: For preconstruction adhesion and compatibility testing.
- B. Qualification Statements: For installers, manufacturers of insulating or air-gap security glazing with sputter-coated, low-e coatings.
- C. Delegated design engineer qualifications.
- D. Sample warranties.

### 1.7 QUALITY ASSURANCE

- A. Qualifications:
  1. Installers: Entity that employs installers for this Project who are certified under the National Glass Association Glazier Certification Program.
  2. Delegated Design Engineer: A professional engineer who is legally qualified to practice in state where Project is located and who is experienced in providing engineering services of type indicated.
  3. Security Glazing Testing Agency: Subject to compliance with requirements, testing agency is one of the following:
    - a. Intertek.
    - b. Underwriters Laboratories, Inc.
    - c. Wiss, Janney, Elstner Associates, Inc.
  4. Sealant Testing Agency: An independent testing agency qualified in accordance with ASTM C 1021 to conduct the testing indicated.

### 1.8 MOCKUPS

- A. Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.
  1. Install security glazing in mockups specified in Section 08 56 53 "Security Windows" to match glazing systems required for Project, including glazing methods.
  2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

### 1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each security glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.
  1. Testing will not be required if data based on previous testing of current sealant products and glazing materials match those submitted.
  2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to security glazing, tape sealants, gaskets, and glazing channel substrates.
  3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
  4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
  5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures, including the use of specially formulated primers.

### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Protect security glazing and glazing materials according to manufacturer's written instructions. Prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.

- B. Comply with insulating security glazing and with air-gap security glazing manufacturers' written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

### 1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
  - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F.

### 1.12 WARRANTY

- A. Manufacturer's Special Warranty for Polycarbonate Sheet: Manufacturer agrees to replace polycarbonate sheet that deteriorates within specified warranty period. Deterioration of polycarbonate sheet is defined as defects developed from normal use that are not attributed to maintaining and cleaning polycarbonate sheet contrary to manufacturer's written instructions. Defects include yellowing and loss of light transmission.
  - 1. Warranty Period: 10 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 SOURCE LIMITATIONS

- A. Obtain each type of security glazing from single source from single manufacturer.
  - 1. Obtain tinted glass from single source from single manufacturer.
- B. Obtain glazing sealants from single source from single manufacturer for each product and installation method.

### 2.2 PERFORMANCE REQUIREMENTS

- A. General:
  - 1. Installed security glazing will withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
  - 2. Installed security glazing will withstand security-related loads and forces without damage to the glazing beyond that allowed by referenced standards.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design security glazing.
- C. Structural Performance: Glazing will withstand the following design loads within limits and under conditions indicated.
  - 1. Design Procedure for Glass: ASTM E 1300 and the IBC.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
- E. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
- F. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

### 2.3 SECURITY GLAZING, GENERAL

- A. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
  - 1. GANA Publications: "GANA Glazing Manual."
- B. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.
- C. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction. Label will indicate manufacturer's name, type of glazing, glass thickness, and safety glazing standard with which glazing complies.
- D. Thermal and Optical Performance Properties: Provide security glazing with performance properties specified, as indicated in manufacturer's published test data, based on construction products indicated and on procedures indicated below:
  - 1. SHGC and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on most current non-beta version of LBL's WINDOW 5.2 computer program.
  - 2. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

## 2.4 POLYCARBONATE SECURITY GLAZING

- A. Laminated Polycarbonate: Polycarbonate sheets laminated with clear urethane interlayer that complies with ASTM C 1349, Appendix X2, and has a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation. Provide laminated units that comply with requirements of ASTM C 1349 for maximum allowable laminating process blemishes and haze.
- B. Glass-Clad Polycarbonate: ASTM C 1349. Place glass layer at customer side of window.
  - 1. Spacer Specifications: Manufacturer's standard rigid spacer material and construction.

## 2.5 SPALL-RESISTANT FILM

- A. Composite of clear polyvinyl butyral film and clear abrasion-resistant polyester film.
- B. Laminating Process: Factory laminate spall-resistant film to glazing assemblies to produce laminated lites free of foreign substances, air, and glass pockets.

## 2.6 GLAZING SEALANTS

- A. General:
  - 1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they contact, including security glazing, seals of insulating security glazing and air-gap security glazing, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
  - 2. Suitability: Comply with sealant and security glazing manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
  - 3. Colors of Exposed Glazing Sealants: Match Architect's samples.

## 2.7 GLAZING TAPES

- A. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

## **2.8 MISCELLANEOUS GLAZING MATERIALS**

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of security glazing and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks:
  1. Elastomeric material with Shore Type A durometer hardness of 85, plus or minus 5.
- D. Spacers:
  1. Elastomeric blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain security glazing lites in place for installation indicated.
- E. Edge Blocks:
- F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

## **2.9 FABRICATION OF SECURITY GLAZING**

- A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine framing for security glazing, with Installer present, for compliance with the following:
  1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
  2. Presence and functioning of weep system.
  3. Minimum required face or edge clearances.
  4. Minimum required bite.
  5. Effective sealing between joints of framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Clean glazing channels and other framing members receiving security glazing immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

### **3.3 GLAZING, GENERAL**

- A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of it off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing and impair performance and appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.
- F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches.
  - 1. Locate spacers directly opposite each other on both inside and outside faces of security glazing. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with performance requirements.
  - 2. Provide 1/8-inch minimum bite of spacers on glazing lites and use thickness equal to sealant width. With glazing tape, use thickness of slightly less than final compressed thickness of tape.
- G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and in accordance with requirements in referenced glazing publications.
- H. Set security glazing in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- J. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended in writing by gasket manufacturer.

### **3.4 TAPE GLAZING**

- A. Position tapes on fixed stops so that, when compressed by security glazing, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center security glazing in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

### **3.5 SEALANT GLAZING (WET)**

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between security glazing and glazing stops to maintain face clearances and to prevent sealant from extruding into glazing channel and blocking weep systems. Secure spacers, or spacers and backings, in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to security glazing and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from security glazing.

### **3.6 CLEANING AND PROTECTION**

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter. Examine security glazing surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
  - 1. If, despite such protection, contaminating substances do contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer. Remove and replace security glazing that cannot be cleaned without damage.
- C. Wash security glazing on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash security glazing as recommended in writing by security glazing manufacturer.

### **3.7 GLASS-CLAD POLYCARBONATE SECURITY GLAZING SCHEDULE**

- A. Glass Type GI-7: 1 1/4" glass-clad polycarbonate.
  - 1. Detention Security Grade: Grade 3 in accordance with ASTM F 1915.
  - 2. Maximum Overall Unit Thickness: 1 1/4 inch.
  - 3. Outdoor Lite: Tinted heat-strengthened or fully tempered float glass.
  - 4. Glass Tint Color: Gray.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 08 91 19 - FIXED LOUVERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Fixed extruded-aluminum louvers.
- B. Related Requirements:
  - 1. Section 07 92 00 "Joint Sealants" for sealants installed in perimeter joints between louver frames and adjacent construction.
  - 2. Section 09 91 13 "Exterior Painting" for field painting exterior louvers.

**1.2 DEFINITIONS**

- A. Louver Terminology: Definitions of terms for metal louvers contained in AMCA 501 apply to this Section unless otherwise defined in this Section or in referenced standards.
- B. Horizontal Louver: Louver with horizontal blades (i.e., the axis of the blades are horizontal).
- C. Drainable-Blade Louver: Louver with blades having gutters that collect water and drain it to channels in jambs and mullions, which carry it to bottom of unit and away from opening.
- D. Wind-Driven-Rain-Resistant Louver: Louver that provides specified wind-driven-rain performance, as determined by testing in accordance with AMCA 500-L.
- E. Windborne-Debris-Impact-Resistant Louver: Louver that provides specified windborne-debris-impact resistance, as determined by testing in accordance with AMCA 540.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
  - 2. For each louver include information air performance, water penetration and wind driven rain ratings.
- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.
  - 1. Show weep paths, gaskets, flashings, sealants, and other means of preventing water intrusion.
  - 2. Show mullion profiles and locations.
- C. Samples: For each type of metal finish required.
- D. Delegated Design Submittal: For louvers indicated to comply with structural and seismic performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Product Test Reports: Based on evaluation of comprehensive tests performed in accordance with AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.
- B. Manufacturer's windborne-debris-impact-resistance test reports.

- C. Sample Warranties: For manufacturer's special warranties.

### **1.5 QUALITY ASSURANCE**

- A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:
  - 1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- B. Obtain perimeter band louvers (operable and blanked off) from single manufacturer.
- C. Structural Requirements: Design all materials to withstand wind and snow loads as required by the applicable building code. Maximum allowable deflection for the louver structural members to be  $l/180$  or 0.75 inch, whichever is less. Maximum allowable deflection for the louver blades to be  $l/120$  or 0.50 inch across the weak axis, whichever is less.
- D. Professional Engineer Requirements: Drawings and structural calculations to be signed and sealed by a professional engineer licensed to practice in the project state.

### **1.6 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

### **1.7 DELIVERY, STORAGE AND HANDLING**

- A. Visually inspect all materials for damage at time of delivery. Any damage louvers to be reported to supplier.
- B. Store louvers in packaging according to manufacturer's direction. Do not allow louvers to sit directly on the ground or allow it to be flooded.
- C. Store louvers under weather proof cover.
- D. Hoist louvers according to manufacturer's directions. Do not lift by head, sill or blades.

### **1.8 WARRANTY**

- A. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.
  - 1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
    - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
  - 2. Warranty Period: 20 years from date of Substantial Completion.
- B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
  - 1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
    - b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
    - c. Cracking, peeling, or chipping.
  - 2. Warranty Period: 10 years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain fixed louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Design louvers, including comprehensive engineering analysis by a qualified professional engineer, using structural performance requirements and design criteria indicated.
- B. Structural Performance: Louvers withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures are considered to act normal to the face of the building.
  - 1. Wind Loads:
    - a. Determine loads based on pressures as indicated on Drawings.
- C. Windborne-Debris-Impact Resistance: Louvers located within 30 feet of grade pass protection, when tested in accordance with AMCA 540.
- D. Louver Performance Ratings: Provide louvers complying with requirements specified, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width in accordance with AMCA 500-L.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
  - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- F. SMACNA Standard: Comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" for fabrication, construction details, and installation procedures.

**2.3 FIXED EXTRUDED-ALUMINUM LOUVERS**

- A. Horizontal, Wind-Driven-Rain-Resistant Louver, Extruded Aluminum:
  - 1. Manufacturers: Subject to compliance with requirements, provide Architectural Louvers; Model E6JN, or comparable products by one of the following:
    - a. Aiolite Company, LLC (The).
    - b. Architectural Louvers
    - c. Construction Specialties, Inc.
    - d. Industrial Louvers, Inc.
    - e. Nystrom, Inc.
    - f. Ruskin Company; Tomkins PLC
  - 2. Louver Depth: 4 inches or as indicated on the Drawings.
  - 3. Frame and Blade Nominal Thickness: Not less than 0.080 inch.
  - 4. Louver Performance Ratings:
    - a. Free Area: Not less than 50% for 48-inch-wide by 48-inch-high louver.
    - b. Air Performance: Not more than 0.10-inch wg static pressure drop at [900-fpm free-area velocity.
    - c. Wind-Driven Rain Performance: Not less than 95 percent effectiveness when subjected to a rainfall rate of 3 inches per hour and a wind speed of 29 mph at a core-area intake velocity of 300 fpm.
  - 5. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

## 2.4 LOUVER SCREENS

- A. General: Provide screen at each drainable-blade louver.
  - 1. Screen Location for Fixed Louvers: Interior face.
  - 2. Screening Type: Bird screening.
  - 3. Screening Type for Intake Louvers: Insect Screening.
- B. Secure screen frames to louver frames with machine screws with heads finished to match louver, spaced a maximum of 6 inches from each corner and at 12 inches o.c.
- C. Louver Screen Frames: Fabricate with mitered corners to louver sizes indicated.
  - 1. Metal: Same type and form of metal as indicated for louver to which screens are attached. Reinforce extruded-aluminum screen frames at corners with clips.
  - 2. Finish: Mill finish unless otherwise indicated.
  - 3. Type: Non-rewirable, U-shaped frames.
- D. Louver Screening for Aluminum Louvers:
  - 1. Bird Screening, Aluminum: 1/2-inch-square mesh, 0.063-inch wire. Frame: Extruded Aluminum, 0.055 inch thick.
  - 2. Insect Screening, Aluminum: 18-by-16 mesh, mill finish, 0.011-inch wire. Frame; Extruded Aluminum, 0.055 inch thick.

## 2.5 MATERIALS

- A. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B 209, Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Fasteners: Use types and sizes to suit unit installation conditions.
  - 1. Use hex-head or Phillips pan-head screws for exposed fasteners unless otherwise indicated.
  - 2. For fastening aluminum, use aluminum or 300 series stainless steel fasteners.
  - 3. For color-finished louvers, use fasteners with heads that match color of louvers.
- D. Post-installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed for masonry, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

## 2.6 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
  - 1. Decorative Louvers: Heads, sills, jambs and mullions to be one-piece structural aluminum members with integral caulking slot and retaining beads.
  - 2. Architectural Line, Drainable, Wind Resistant Fixed-Blade designed to collect and drain water to exterior at sill by means of multiple gutters in blades and channels in jambs and mullions.
- B. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

- C. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
  - 1. Frame Type: Channel unless otherwise indicated.
  - 2. Fully weld perimeter frame.
- D. Include supports, anchorages, and accessories required for complete assembly.
- E. Provide vertical mullions of type and at spacings indicated, but not more than is recommended by manufacturer, or 72 inches o.c., whichever is less.
  - 1. Fully Recessed Mullions: Where indicated, provide mullions fully recessed behind louver blades. Where length of louver exceeds fabrication and handling limitations, fabricate with close-fitting blade splices designed to permit expansion and contraction.
  - 2. Exterior Corners: Prefabricated corner units with mitered blades with concealed close-fitting splices and with fully recessed mullions at corners.
- F. Sills: Louvers to be supplied with 4" high by full depth sill flashings formed from minimum 0.050" thick aluminum. Sill flashings to have welded side panels.
- G. Provide subsills made of same material as louvers for recessed louvers.
- H. Join frame members to each other and to fixed louver blades with fillet welds concealed from view, threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

## 2.7 ALUMINUM FINISHES

- A. Finish louvers after assembly.
- B. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
  - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
  - 2. Color and Gloss: As selected by Architect from manufacturer's full range

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

### 3.3 INSTALLATION

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.
- B. Protect unpainted galvanized and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.

- C. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- D. Form closely fitted joints with exposed connections accurately located and secured.
- E. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- F. Erection Tolerances:
  - 1. Maximum variation from plane or location shown on the approved shop drawings: 1/8" per 12 feet of length, but not exceeding 1/2" in any total building length or portion thereof (non-cumulative).
  - 2. Maximum offset from true alignment between two members abutting end to end, edge-to-edge in line or separated by less than 3": 1/16" (shop or field joints). This limiting condition shall prevail under both load and no load conditions.
- G. Cut and trim component parts during erection only with the approval of the manufacturer or fabricator, and in accordance with his recommendations. Restore finish completely. Remove and replace members where cutting and trimming has impaired the strength or appearance of the assembly.
- H. Do not erect warped, bowed, deformed or otherwise damaged or defaced members. Remove and replace any members damaged in the erection process as directed.
- I. Set units level, plumb and true to line, with uniform joints.
- J. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 07 92 00 "Joint Sealants" for sealants applied during louver installation.
  - 1. Seal blank-off panels to louver frame to ensure air/vapor barrier continuity.
  - 2. Louvers and sill flashings to be installed in accordance with the manufacturer's recommended procedures to ensure complete water integrity performance of the louver system.

### 3.4 ADJUSTING AND CLEANING

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
  - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.
- D. Protect installed materials to prevent damage by other trades.
  - 1. Use materials that may be easily removed without leaving residue or permanent stains.

END OF SECTION

**SECTION 09 21 16.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Gypsum board shaft wall assemblies.
- B. Related Requirements:

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each component of gypsum board shaft wall assembly.
- B. Shop Drawings: For gypsum board shaft wall assembly.
  - 1. Include plans, elevations, and sections.
- C. Samples for Selection: For each type of exposed finish indicated.
  - 1. Metal Finishes: 6-inch-long sections of, accessory fittings, and other items.
- D. Fabrication Sample: Provide assembly, made from 12-inch lengths of full-size components.
- E. Delegated-Design Submittal: For gypsum board shaft wall assemblies indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation. Engineer must be licensed in the State where the project is located.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Evaluation Reports: For shaft wall assemblies, firestop tracks, from ICC-ES.

**1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and support them on risers on a flat platform to prevent sagging.

**1.5 FIELD CONDITIONS**

- A. Environmental Limitations: Comply with gypsum-shaftliner-board manufacturer's written instructions.
- B. Do not install finish panels until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, or mold damaged.
  - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
  - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E90 and classified according to ASTM E413 by a testing and inspecting agency.

**2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES**

- A. Fire-Resistance Rating: As indicated on Drawings.
- B. STC Rating: 51, minimum.
- C. Gypsum Shaftliner Board:
  - 1. Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with paper faces, 1 inch thick, with double beveled long edges.
  - 2. Moisture- and Mold-Resistant Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with ASTM D 3273 mold-resistance score of 10 as rated according to ASTM D 3274, 1 inch thick, and with double beveled long edges.
  - 3. Moisture- and Mold-Resistant, Fiberglass-Mat Faced: ASTM C 1658/C 1658M; manufacturer's proprietary fire-resistive liner panels with ASTM D 3273 mold-resistance score of 10 as rated according to ASTM D 3274, 1 inch thick, and with double beveled long edges.
- D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C 645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.
  - 1. Protective Coating: ASTM A 653/A 653M, G60, hot-dip galvanized unless otherwise indicated.
- E. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:
  - 1. Depth: 2-1/2 inches.
  - 2. Minimum Base-Metal Thickness: 0.033 inch.
- F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches long and matching studs in depth.
  - 1. Minimum Base-Metal Thickness: 0.033 inch.
- G. Firestop Tracks: Provide firestop track at head of shaft wall on each floor level.
- H. Elevator-Hoistway-Entrance Struts: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches, matching studs in depth, and not less than 0.033 inch thick.
- I. Room-Side Finish: Gypsum board.
- J. Shaft-Side Finish: Gypsum shaftliner board, moisture- and mold-resistant Type X.
- K. Sound Attenuation Blankets: As specified in Section 09 29 00 "Gypsum Board."

**2.3 PANEL PRODUCTS**

- A. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

- B. Gypsum Shaftliner Board, Moisture- and Mold-Resistant Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with moisture- and mold-resistant core and surfaces.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. CertainTeed Corporation; ProRoc Moisture and Mold Resistant Shaftliner.
    - b. Georgia-Pacific Gypsum, LLC; Subsidiary of Georgia Pacific; Dens-Glass Ultra Shaftliner.
    - c. National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner XP.
    - d. USG Corporation; Sheetrock Brand Mold Tough Gypsum Liner Panel (EcoSmart version is acceptable).
  - 2. Thickness: 1 inch.
  - 3. Long Edges: Double bevel.
  - 4. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
- C. Gypsum Board: As specified in Section 09 29 00 "Gypsum Board."
- D. Cementitious Backer Units: As specified in Section 09 29 00 "Gypsum Board."

## 2.4 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.
- B. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in Section 09 29 00 "Gypsum Board" that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.
- C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
- D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
  - 1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488/E 488M conducted by a qualified testing agency.
  - 2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency.
- E. Sound Attenuation Blankets: As specified in Section 09 29 00 "Gypsum Board."
- F. Acoustical Sealant: Section 07 92 00 "Joint Sealants."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates to which gypsum board shaft wall assemblies attach or abut, with Installer present, including hollow-metal frames, elevator hoistway door frames, cast-in anchors, and structural framing. Examine for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies to comply with requirements specified in Section 07 81 00 "Applied Fire Protection."
- B. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

### 3.3 INSTALLATION

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.
- B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.
- C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.
  - 1. Elevator Hoistway: At elevator hoistway-entrance door frames, provide jamb struts on each side of door frame.
  - 2. Reinforcing: Provide where items attach directly to shaft wall assemblies, provide galvanized steel reinforcing strip with 0.033-inch minimum thickness of base metal (uncoated), accurately positioned and secured behind at least one layer of face panel.
- D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.
- E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.
- F. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
- G. Control Joints: Install control joints at locations indicated on Drawings according to ASTM C 840 and in specific locations approved by Architect while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
- H. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.
- I. Cant Panels: At projections into shaft exceeding 4 inches, install 1/2- or 5/8-inch thick gypsum board cants covering tops of projections.
  - 1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft wall framing.
  - 2. Where non-load-bearing steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to shaft wall framing.
- J. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

**3.4 PROTECTION**

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
  - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
  - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 22 16 - NON-STRUCTURAL METAL FRAMING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Non-load-bearing steel framing systems for interior partition assemblies
  - 2. Suspension systems for interior gypsum ceilings, soffits, and grid system.
- B. Related Requirements:
  - 1. Section 05 40 00 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs; floor joists; and roof rafters and ceiling joists.
  - 2. Section 09 29 00 "Gypsum Board" for sound attenuation insulation.
- C. Nomenclature: Framing products provided under this Section are indicated on the Drawings as "steel studs." Structural framing specified in Section 05 40 00 "Cold-Formed Metal Framing" is indicated on the Drawings as "metal framing."

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Span and Deflection Design Criteria: Provide height to load deflection charts showing studs supplied conform to deflection limit scheduled and allowed per ASTM C 754.
  - 1. Mark on chart(s) showing all major partitions scheduled conformance with criteria.
  - 2. Submit manufacturer's certification of stud size, thickness, and spacing complying with performance requirements and selections made by architect are correct for application shown.
- B. Evaluation Reports: For firestop tracks, from ICC-ES.

**1.4 QUALITY ASSURANCE**

- A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Steel Stud Manufacturers Association.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Notify manufacturer of damaged materials received prior to installation.
- B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Performance Requirements: Provide metal framing assemblies to withstand the loads prescribed within the specified deflection limits.
  - 1. Horizontal Deflection: For wall assemblies per ASTM C 754: Allowing for 10 lbf/sq. ft. (480 Pa) lateral load.
    - a. Typical Finishes: L/240.
    - b. Tile, Plaster, Stone or Similar Finishes: L/360.
  - 2. Where partition heights exceed stud manufacturer's recommended unbraced spans, and to resist deflection limits, provide one of the following:
    - a. Heavier stud gage, except at walls with STC ratings.
    - b. Closer stud spacing.
    - c. Deeper stud size (space permitting, as determined by Architect).
    - d. Above-ceiling bracing, anchored to structure above
- B. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, in accordance with ASTM E119 by an independent testing agency.
- C. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.

**2.2 FRAMING SYSTEMS**

- A. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
  - 1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated
  - 2. Protective Coating: Comply with ASTM A 653/A 653M, G40; or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
- B. Studs and Runners: ASTM C645. Use either steel studs and runners or embossed steel studs and runners.
  - 1. Steel Studs and Runners: Steel Studs (can be embossed or dimple): Minimum steel tensile strength 33 KSI.
    - a. Base-Metal Thickness: 0.0179 Minimum and as indicated in the Partition Type schedule in the Drawings.
    - b. Depth: as indicated in the Partition Type schedule in the Drawings.
  - 2. Embossed Steel Studs and Runners:
    - a. Basis of Design Product: Clark Dietrich ProStud 20 or equal as determined by Architect.
      - 1) Products: Subject to prior approval of Architect through Substitution Form, available products that may be incorporated into the Work include the following:
        - a) MarinoWare; ViperStud.
        - b) CEMCO; ViperStud.
        - c) Telling Industries; ViperStud.
      - b. Depth: As indicated on Drawings.
- C. Slip-Type Head Joints: Where indicated, provide one of the following:
  - 1. Single Long-Leg Track System: Top track with 2-inch-deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
  - 2. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

- a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
  - 1) Dietrich Metal Framing; SLP-TRK Slotted Deflection Track.
  - 2) Telling Industries; True-Action Slotted Track.
  - 3) Steel Network Inc: VertiClip SLF or VTD.
- D. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
  - 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Fire Trak Corp.; Fire Trak System attached to studs with Fire Trak Posi Klip.
    - b. Metal-Lite, Inc.; The System.
- E. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
  - 1. Minimum Base-Steel Thickness: 0.053 inch.
- F. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
  - 1. Minimum Base-Steel Thickness: 0.018 inch.
  - 2. Depth: 7/8 inch.

### 2.3 SUSPENSION SYSTEMS

- A. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.
- B. Hanger Attachments to Concrete:
  - 1. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E 1190 by an independent testing agency.
- C. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.16 inch in diameter.
- D. Carrying Channels : Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.053 inch and minimum 1/2-inch-wide flanges.
  - 1. Depth: 1-1/2 inches.
- E. Furring Channels (Furring Members):
  - 1. Cold-Rolled Channels: 0.0538-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges, 3/4 inch deep.
  - 2. Hat-Shaped, Rigid Furring Channels: 7/8 inch deep.
    - a. Minimum Base-Steel Thickness: 0.0329 inch.
- F. Grid Suspension Systems for Gypsum Board Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Armstrong World Industries, Inc.; Drywall Grid Systems.
    - b. Chicago Metallic Company LLC, a division of ROCKFON; Drywall Grid System.
    - c. USG Corporation; Drywall Suspension System.

### 2.4 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.
  - 1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide the following:
  - 1. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 PREPARATION**

- A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
  - 1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
- B. Coordination with Sprayed Fire-Resistive Materials:
  - 1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
  - 2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that are required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

**3.3 INSTALLATION, GENERAL**

- A. Installation Standard: ASTM C 754.
  - 1. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.
- B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
- C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
- D. Install bracing at terminations in assemblies.
- E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

**3.4 INSTALLATION OF FRAMING SYSTEMS**

- A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
  - 1. Single-Layer Application: 16 inches o.c. unless otherwise indicated.
  - 2. Multilayer Application: 16 inches o.c. unless otherwise indicated.
  - 3. Tile Backing Panels: 16 inches o.c. unless otherwise indicated.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.

- D. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
  2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
    - a. Install two studs at each jamb unless otherwise indicated.
    - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
    - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
    - d. Provide box beam header at all door and framed openings larger than 3'-4" wide. Size header according to deflection and overall width of opening.
  3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
  4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
    - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
  5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
  6. Curved Partitions:
    - a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
    - b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs 6 inches o.c.
- E. Direct Furring:
1. Screw to wood framing.
  2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
- F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

### 3.5 INSTALLATION OF SUSPENSION SYSTEMS

- A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
1. Hangers: 48 inches o.c.
  2. Carrying Channels (Main Runners): 48 inches o.c.
  3. Furring Channels (Furring Members): 16 inches o.c.
- B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
- C. Suspend hangers from building structure as follows:
1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
    - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
  2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension

system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

- a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
  3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
  4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
  5. Do not attach hangers to steel roof deck.
  6. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
  7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
  8. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
- E. Seismic Bracing: Sway-brace suspension systems with hangers used for support.

### **3.6 INSTALLATION OF GRID SUSPENSION SYSTEMS**

- A. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

### **3.7 FIELD QUALITY CONTROL**

- A. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

**SECTION 09 29 00 - GYPSUM BOARD****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
1. Interior mold and mildew resistant gypsum board.
  2. Interior abuse-resistant gypsum board.
  3. Tile backing panels.
  4. Sound Batt Insulation.
  5. Tile backing panels.
- B. Related Requirements:
1. Section 06 16 00 "Sheathing" for gypsum sheathing for exterior walls.
  2. Section 07 92 19 "Acoustical Joint Sealants" for acoustical joint sealants installed in gypsum board assemblies.
  3. Section 09 22 16 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.
  4. Section 09 21 16.23 "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
  5. Section 09 30 13 "Tile" for cementitious backer units installed as substrates for ceramic tile.
  6. Section 09 91 23 "Interior Painting" for stipple painting to create gypsum board texture.

**1.2 ACTION SUBMITTALS**

- A. Product Data: Submit manufacturer's technical data for each type of gypsum board product, including related accessories. Furnish a material list with technical data documenting the location and primary function, quality, and performance of each material component or system to be used in the Work, or other such primary characteristics as required by the Drawing or Specifications.
1. Submit manufacturer's technical data for each gypsum drywall partition and each ceiling system.
- B. Shop Drawings: Show locations of gypsum board mounted to ceiling framing and control joint pattern. Show widths, details, and locations of expansion and control joints.

**1.3 DELIVERY, STORAGE AND HANDLING**

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

**1.4 FIELD CONDITIONS**

- A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
- B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, and mold damaged.
1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
  2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated in accordance with ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated in accordance with ASTM E 90 and classified in accordance with ASTM E 413 by an independent testing agency.
  - 1. Conform to applicable code for fire rated assemblies. Construct assemblies to achieve fire resistance ratings indicated on Drawings in accordance with UL, or other acceptable tested approved assemblies. Where no test number is referenced, utilize and submit a tested approved assembly that achieves the fire rating required by the Drawings, including the Life Safety Plan.

**2.2 GYPSUM BOARD, GENERAL**

- A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

**2.3 INTERIOR GYPSUM BOARD**

- A. Abuse-Resistant Gypsum Board: ASTM C1396/C1396M, with Level 3 surface abrasion resistance, Level 1 or better indentation resistance, and Level 2 or better soft body impact resistance.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. American Gypsum; M-Bloc AR Type X.
    - b. CertainTeed Corp.; AirRenew Extreme Abuse.
    - c. National Gypsum Company; Gold Bond Hi-Abuse XP.
    - d. USG Mold-Tough A/R.
  - 2. Core: 5/8 inch, Type X.
  - 3. Long Edges: Tapered.
  - 4. Mold Resistance: ASTM D 3273, score of 10.
- B. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
  - 1. Product: Subject to compliance with requirements, provide one of the following:
    - a. American Gypsum; M-BLOC Type X.
    - b. CertainTeed Corp.; ProRoc Moisture and Mold Resistant Type X.
    - c. Georgia-Pacific Gypsum LLC; ToughRock Fireguard X Mold-Guard.
    - d. Gold Bond Building; Gold Bond Brand XP Fire-Shield.
    - e. USG Corporation; Sheetrock Mold Tough Firecode Core.
  - 2. Core: 5/8 inch, Type X.
  - 3. Long Edges: Tapered.
  - 4. Mold Resistance: ASTM D3273, score of 10.
- C. Flexible Gypsum Board: ASTM C 1396 / ASTM C1396 M.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. American Gypsum.
    - b. CertainTeed Corp.
    - c. Georgia-Pacific Gypsum, LLC.
    - d. National Gypsum Company; Gold Bond High Flex.
    - e. USG Corporation.
  - 2. Core: 5/8 inch, Type X.
  - 3. Long Edges: Tapered.

4. Mold Resistance: ASTM D3273, score of 10.

## 2.4 TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A118.9 and ASTM C 1325, with manufacturer's standard edges.
  1. Products: Subject to compliance with requirements, provide one of the following:
    - a. FinPan, Inc; ProTEC Concrete Backer Board.
    - b. National Gypsum Company, Permabase Cement Board.
  2. Thickness: 5/8 inch.
  3. Mold Resistance: ASTM D 3273, score of 10.

## 2.5 TRIM ACCESSORIES

- A. Interior Trim: ASTM C 1047.
  1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet.
  2. Shapes:
    - a. Cornerbead.
    - b. Bullnose bead.
    - c. LC-Bead: J-shaped; exposed long flange receives joint compound.
    - d. L-Bead: L-shaped; exposed long flange receives joint compound.
    - e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
    - f. Expansion (control) joint.
    - g. Curved-Edge Cornerbead: With notched or flexible flanges.

## 2.6 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C 475/C 475M.
- B. Joint Compound for Interior Gypsum Board:
  1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
  2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
    - a. Use setting-type compound for installing paper-faced metal trim accessories.
  3. Fill Coat: For second coat, use setting-type, sandable topping compound.
  4. Finish Coat: For third coat, use setting-type, sandable topping compound.
  5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound.
- C. Joint Tape and Joint Compound : For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.
  1. Interior Gypsum Board: Open-weave glass mesh, 2" minimum width.
    - a. Compound: Ready Mix.
      - 1) Basis of Design: National Gypsum, Proform Multi-use Joint Compound.
  2. Interior Moisture and Mold Resistant Board: fiberglass mesh, 1.9" minimum width.
    - a. Compound: setting type.
  3. Joint Compound for Tile Backing Panels:
    - a. Tape: Alkali resistant tape, 2" minimum width.
      - 1) Basis of Design: National Gypsum, PermaBase Cement Board Tape.
    - b. Compound: Thin set mortar.
      - 1) Basis of Design:
        - a) Laticrete 254 Platinum per ASTM A 118.4.
        - b) Laticrete 211 and Laticrete 4237 per ASTM A 118.1

- D. Tile Backing Panel Finish Materials for Non-Tiled Applications: For high-humidity and wet non-tiled and painted surfaces, use cement board and comply with tile backing panel manufacturer's written instructions and filling joints as described above in joint compound.
1. Base and Skim Coats: Portland cement and polymer adhesive based materials comparable to one of the following, and acceptable to panel manufacturer:
    - a. Dryvit; Genesis DM, DS174.
    - b. Sto Corporation; F-477 Flexyl.
    - c. Parex; ParFlex.
    - d. Synergy; Xtra-Stop.
  2. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh, made from continuous multiend strands with retained mesh tensile strength of not less than 120 lbf/in. per ASTM E 2098; complying with ASTM D 578 and the following:
    - a. Surface Reinforcing Mesh: Not less than 4.0 oz./sq. yd.
    - b. Joint and Corner Reinforcing Mesh: 6 inch coated mesh tape.
  3. Epoxy Paint Finish: As indicated in the Finish Schedule and Legend and specified in Section 09 91 23 "Interior Painting."

## 2.7 AUXILIARY MATERIALS

- A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
- B. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
  2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
- C. Sound-Attenuation Blankets/Batts: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool. The depth of sound attenuation blanket to match the depth of the metal stud.
1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
  2. Products: Subject to compliance with requirements, provide one of the following:
    - a. Johns Mansville: MinWool or Sound & Fire Block batts.
    - b. Knauf: Ecose-fiberglas board
    - c. Owens Corning: PINK NEXT GEN fiberglass-Sound Attenuation Batts Fiber Glass.
- D. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Accumetric LLC; BOSS 826 Acoustical Sound Sealant.
    - b. GE Construction Sealants; RCS20 Acoustical.
    - c. Grabber Construction Products; Acoustical Sealant GSC.
    - d. PABCO Gypsum; Quiet Seal Pro.
    - e. Pecora Corporation; AIS-919.
    - f. Tremco, Incorporated; Tremco Acoustical Sealant.
    - g. USG Corporation; SHEETROCK Acoustical Sealant.
- E. Fire rated Joint Sealant: See Division 07.
- F. Thermal Insulation: As specified in Section 07 21 00 "Thermal Insulation."

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION AND FINISHING OF PANELS, GENERAL**

- A. Comply with ASTM C 840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
  - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
  - 2. Fit gypsum panels around ducts, pipes, and conduits.
  - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
- I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

- J. Fire-Rated Assemblies: UL Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of fire rated sealant that matches wall rating. Install sealant at both faces of partitions at perimeters. Refer to Division 07 for firestopping to be used at penetrations.
- K. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

### 3.3 INSTALLATION OF INTERIOR GYPSUM BOARD

- A. Install interior gypsum board in the following locations:
  - 1.
  - 2. Moisture and Mold-Resistant Type: All dry vertical and ceiling surfaces, unless otherwise indicated.
- B. Single-Layer Application:
  - 1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
  - 2. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
    - a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
    - b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
  - 3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
  - 4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.
- C. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written instructions and temporarily brace or fasten gypsum panels until fastening adhesive has set.

### 3.4 INSTALLATION OF TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A108.11, at at locations indicated to receive tile in areas subject to direct wetting (e.g. showers, hydrotherapy rooms, steam rooms), as a substrate for wall base at locations indicated to receive resinous flooring with integrally coved wall base, and where indicated.
- B. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.
- C. At resinous cove base locations, provide high cementitious backer units from floor to 6 inches above sub floor. Install scheduled board above cementitious backer band as noted on Drawings.

### 3.5 INSTALLATION OF TRIM ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Install control joints in accordance with ASTM C 840 and in specific locations approved by Architect for visual effect.
  - 1. Where possible, install vertical control joints at outer edge of door frame.
  - 2. At ceiling locations, describe on Shop Drawings prior to installation.

- C. Interior Trim: Install in the following locations:
  - 1. Cornerbead: Use at outside corners, unless otherwise indicated.
  - 2. LC-Bead: Use where gypsum panels are tightly abutted to other construction and back flange can be attached to framing or supporting substrate
  - 3. L-Bead: Use where edge trim can only be installed after gypsum panels are installed. U-Bead: Use where indicated.
  - 4. U-Bead: Use where indicated.
  - 5. Reveals and Other profiles: As indicated on Drawings.

### 3.6 FINISHING OF GYPSUM BOARD

- A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
  - 1. Use elastomeric sealant at door frames in lieu of joint compound.
- B. Prefill open joints, rounded or beveled edges, and damaged surface areas.
- C. At cove light locations, provide level 5 finish at horizontal ceiling surfaces illuminated by cove lighting. Adjacent vertical gypsum board inside the cove may be level 4.
- D. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
  - 1. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
    - a. Use setting-type compound for installing paper-faced metal trim accessories.
  - 2. Fill Coat: For second coat, use setting-type, sandable topping compound.
  - 3. Finish Coat: For third coat, use setting-type, sandable topping compound.
  - 4. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound, or high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish.
- E. Gypsum Board Finish Levels: Finish panels to levels indicated below and in accordance with ASTM C 840:
  - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
  - 2. Level 2: Panels that are substrate for tile and where indicated on Drawings.
  - 3. Level 4: At panel surfaces that will be exposed to view and scheduled to receive wall covering or flat paint finish (MPI Gloss Level 1), unless otherwise indicated. At curved partitions, partitions with continuous unbroken length of 20 feet or greater, horizontal and vertical surfaces of soffits, surfaces scheduled to receive paint finish with a sheen of Gloss Level 2 or greater, surfaces scheduled to receive wallcovering, and where indicated.
    - a. Primer and its application to surfaces are specified in Section 09 91 23 "Interior Painting."
    - b. Extend wall finish level into coves and reveals.
  - 4. Level 5: At curved partitions, partitions with continuous unbroken length of 20 feet or greater, horizontal and vertical surfaces of soffits, surfaces scheduled to receive paint finish with a sheen of Gloss Level 2 or greater, surfaces scheduled to receive graphic film, and where indicated.
    - a. Primer and its application to surfaces are specified in Section 09 91 23 "Interior Painting."
  - 5. Level 5: Provide Level 5 finish on gypsum partitions receiving wallcovering.
- F. Cementitious Backer Units: Finish according to manufacturer's written instructions.

- G. Tile Backing Panel Finish for High-Humidity and Wet Non-Tile Areas:
1. After filling joints with proper joint compound, apply base coat to exposed surfaces of tile backing panel in minimum thickness of 1/16-inch dry-coat thickness.
  2. Embed reinforcing mesh in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than 2-1/2 inches. Do not lap reinforcing mesh within 8 inches of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.
  3. Apply skim coat to completely embed mesh over entire surface and to achieve a fine sand texture.
  4. Epoxy Paint Finish: As specified in Section 09 91 23 "Interior Painting."

### 3.7 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
  2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

**SECTION 09 30 13 - TILE****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
1. Porcelain tile.
  2. Ceramic mosaic tile.
  3. Glazed wall tile.
  4. Thresholds.
  5. Floor underlayment.
  6. Waterproof membranes.
  7. Crack isolation membranes.
  8. Setting material.
  9. Trim and accessories.
  10. Grout materials.
  11. Miscellaneous materials.
  12. Elastomeric sealants.
- B. Related Requirements:
1. Section 07 92 00 "Joint Sealants" for sealing of movement joints in tile surfaces.
  2. Section 09 29 00 "Gypsum Board" for tile backing panels.
  3. Section 09 30 23 "Glass Tiling."

**1.2 DEFINITIONS**

- A. General: Definitions in ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. ANSI A108 Series: ANSI A108.01, ANSI A108.02, ANSI A108.1A, ANSI A108.1B, ANSI A108.1C, ANSI A108.4, ANSI A108.5, ANSI A108.6, ANSI A108.8, ANSI A108.9, ANSI A108.10, ANSI A108.11, ANSI A108.12, ANSI A108.13, ANSI A108.14, ANSI A108.15, ANSI A108.16, and ANSI A108.17, which are contained in its "Specifications for Installation of Ceramic Tile."
- C. Face Size: Actual tile size, excluding spacer lugs.
- D. Large Format Tile: Tiles with face size greater than 929 sqcm (144 sq. in.), or tiles with at least one side greater than 38cm (15 inches).
- E. Module Size: Actual tile size plus joint width indicated.
- F. Polished Finish: Smooth surface that produces sharp, mirrorlike reflections. Reflected images of overhead fluorescent tubes have straight lines without visible distortion when viewed at arm's length.
- G. Honed Finish: Smooth, nonreflective surface similar to that produced by grinding with a 400- to 1200-grit abrasive; with a gap not exceeding 0.127mm (0.005 inch) when faces are tested for flatness with a 610mm (24-inch) straightedge.
- H. Sand-Rubbed Finish: Uniform, fine-textured surface similar to that produced by grinding with a 40-grit abrasive; with a gap not exceeding 1/32 inch when faces are tested for flatness with a 610mm (24-inch) straightedge.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.
  - 2. Review joint locations and how each joint will be treated.
  - 3. Surface preparation.
  - 4. Oversized tile installation.
  - 5. Grouting materials and procedures.
  - 6. Cleaning and protecting of tile surfaces.

**1.4 SEQUENCING AND SCHEDULING**

- A. Sequence stone tile installation with other work to minimize possibility of damage and soiling during remainder of construction period.
- B. Install stone tile and accessories only after other finishing operations, including painting, are completed.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: Show locations for each type of tile and tile pattern. Show widths, details, and locations of movement, contractions, control, and isolation joints in tile substrates and finished tile surfaces.
- C. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated.
  - 1. For of each type tile that comes in color blend patterns, provide full sheets of each color blend.
  - 2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 12 inches square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
  - 3. Full-size units of each type of trim and accessory for each color and finish required.
  - 4. Metal flooring transitions 6-inch lengths.
  - 5. Grout samples for final color selection.

**1.6 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- C. Product Certificates: For each type of product.
- D. Product Test Reports:
  - 1. Tile-setting and -grouting products.
  - 2. Certified porcelain tile.

**1.7 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For dimension stone tile to include in maintenance manuals.

**1.8 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.
  2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

**1.9 QUALITY ASSURANCE**

- A. Installer Qualifications:
1. Individual installer(s) working for installing contractor are certified through Advanced Certifications for Tile Installers (ACT) for installation of Large Format Tile and Substrate Preparation.
  2. Installer meets the requirements of a program identified and approved by the architect with the criteria for such program similar to or exceeding Advanced Certifications for Tile Installers (ACT) for installation of Large Format Tile and Substrate Preparation, Membranes Shower Receptors or Ceramic Tile Education Foundation (CTEF) Certified Tile Installer Program or National Tile Contractors' Association (NTCA) Five Star Contractor Program or Tile Contractors' Association of America (TCAA) Trowel of Excellence Program.

**1.10 MOCKUPS**

- A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
1. Build mockup of each type of floor tile installation.
  2. Build mockup of each type of wall tile installation.
  3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.11 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.
- E. Oversized tiles have additional delivery and handling requirements and may require mechanized equipment; follow manufacturer's written recommendations.

**1.12 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in "Referenced Standards" Article in the Evaluations and manufacturer's written instructions.

**1.13 WARRANTY**

- A. System Warranty: Manufacturer's non-prorated comprehensive warranty that agrees to repair and replace defective installation areas, material, and labor that fail under normal usage within specified warranty period.
1. Warranty Period: 10 years from date of Product Purchase.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products by the following:
1. American Olean; a division of Dal-Tile Corporation.
  2. Ceramiche Campogalliano.
  3. Crossville, Inc.
  4. Daltile.
  5. Deutsche Steinzeug America, Inc.
  6. Endicott Tile LLC.
  7. Epro Tile, Inc.
  8. Florida Tile, Inc.
  9. Florim USA.
  10. Interceramic.
  11. Interstyle Ceramic & Glass.
  12. Iris Ceramic US, Inc.
  13. Jeffrey Court, Inc.
  14. Lone Star Ceramics; Elgin Butler.
  15. Marazzi USA.
  16. Metropolitan Ceramics.
  17. Olympia Tile & Stone
  18. Portobello America, Inc.
  19. Provenza Floors.
  20. Seneca Tiles, Inc.
  21. Sonoma Tilemakers.
  22. Vitromex USA.

**2.2 SOURCE LIMITATIONS**

- A. Source of Limitations Tile: Obtain tile of each type and color or finish from single source or producer.
1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.
1. Obtain setting and grouting materials, except for unmodified portland cement and aggregate, from single manufacturer.
  2. Obtain waterproof membrane, crack isolation, and other required membranes from manufacturer of setting and grouting materials.
- C. Source of Limitations to Other Products: Obtain each of the following products specified in this Section from a single manufacturer:
1. Waterproof membrane.
  2. Crack isolation membrane.
  3. Metal edge strips.

4. Joint Sealants.

### 2.3 PRODUCTS, GENERAL

- A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
  1. Provide tile complying with Standard Grade requirements unless otherwise indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.
- C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
- D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
  1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.

### 2.4 TILE PRODUCTS

- A. Tile:
  1. Certification: Porcelain tile certified by the Porcelain Tile Certification Agency.
  2. Dynamic Coefficient of Friction: For floor tile, not less than 0.42.
  3. Tile Color and Pattern: As indicated by manufacturer's designations.
  4. Grout Color: As indicated by manufacturer's designations.
  5. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile, unless otherwise indicated. Provide shapes as follows, unless otherwise indicated, selected from manufacturer's standard shapes:
    - a. Base for Thinset Mortar Installations: Straight.
    - b. Wainscot Cap for Thinset Mortar Installations: Surface bullnose.
    - c. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
    - d. External Corners for Thinset Mortar Installations: Surface bullnose.
    - e. Internal Corners: Field-buttet square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.

### 2.5 THRESHOLDS

- A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.

### 2.1 FLOOR UNDERLAYMENT

- A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Manufacturers: Basis-of-Design Product: Subject to compliance with requirements,
  1. Ardex: K15.
  2. Uzin:
    - a. NC 170: self leveling.
    - b. NC 888: trowelable.

- C. Provide floor underlayment below all tiles that are more than 457mm (18 inches) long in any direction. Pour floor underlayment to provide a minimum slope of 3/16 inch in 10'-0" and a maximum slope of 1/32" in 1'- 0". Install underlayment according to manufacturer's guidelines and before waterproofing and crack isolation membranes.
1. Compressive Strength: Minimum of 24.13 MPa (3,500 psi) @ 28 days per modified ASTM C109.

## 2.2 WATERPROOF MEMBRANES

- A. General: Manufacturer's standard product that complies with ANSI A118.10 and is recommended by manufacturer for application indicated. Include reinforcement and accessories recommended by manufacturer.
1. Vapor Permeance: Maximum 0.5 perms; ASTM E 96, Procedure E.

## 2.3 CRACK ISOLATION MEMBRANES

- A. General: Manufacturer's standard product that complies with ANSI A118.12 for high performance and is recommended by manufacturer for application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Where crack isolation and waterproof membranes are indicated for the same installation, a single membrane complying with requirements for both may be acceptable.

## 2.4 SETTING MATERIALS

- A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Custom Building Products.
    - b. Laticrete International, Inc.
    - c. MAPEI Corporation.
    - d. Merkrete by Parex USA Inc.
  2. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.

## 2.5 TRIM AND ACCESSORIES

- A. Ceramic Accessories: See schedule at the end of this Section.
- B. Non-Ceramic Transition Trim and reducers: Maximum change in level: 12.6mm (0-1/2 inch). Maximum slope: 1:2 Material and finish, style and dimensions to suit application, for setting using tile mortar or adhesive; use in the following locations:
1. Transition between floor finishes of different heights.
  2. Thresholds at door openings.
  3. Movement and Control Joints for floors and walls:
  4. See schedule at the end of this Section.

## 2.6 GROUT MATERIALS

- A. High-Performance Tile Grout: ANSI A118.7.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Custom Building Products.
    - b. Laticrete International, Inc.
    - c. MAPEI Corporation.

2. Polymer Type: Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.

## 2.7 MISCELLANEOUS MATERIALS

- A. Metal Edge Strips: Angle or L-shaped, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; stainless-steel, ASTM A 666, 300 Series exposed-edge material.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Blanke Corporation.
    - b. Ceramic Tool Company, Inc.
    - c. Schluter Systems L.P.
- B. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
- C. Grout Sealer: Grout manufacturer's standard product for sealing grout joints that does not change color or appearance of grout.
  1. Grout sealers shall comply with requirements of FloorScore certification.

## 2.8 ELASTOMERIC SEALANTS

- A. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Division 7 "Joint Sealants."
- B. Ensure sealant can physically and chemically withstand environmental conditions normally expected at installation areas.
  1. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.
  2. Ensure sealant is chemically compatible with tile, mortar, and grout.
  3. Joint Backing: Closed cell foam polyethylene  
Colors: Provide colors of exposed

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
  1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
  2. Verify that concrete substrates for tile floors installed with bonded mortar bed or thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
    - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
    - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
  3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.

4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Remove coatings, including curing compounds or other coatings, that are incompatible with tile-setting materials.
- B. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with thinset mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- C. Where indicated, prepare substrates to receive waterproof membrane by applying a reinforced mortar bed that complies with ANSI A108.1 and is sloped 1/4 inch per foot toward drains.
- D. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

### 3.3 INSTALLATION OF CERAMIC TILE SYSTEM

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F1869 (Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.
1. At inside corners of tile floors, base and walls, provide sealant joint. Joint width to match specified joint widths. Color of exposed sealant to match color of grout in tile.
- B. Install tile in accordance with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of ANSI A108 series that are referenced in TCNA installation methods and specified in tile installation schedules, and apply to types of setting and grouting materials used.
1. For the following installations, follow procedures in ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:
  2. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
  3. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
  4. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
  5. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
  6. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
    - a. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets, so joints between sheets are not apparent in finished Work.

- b. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
  - c. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
- 7. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:
  - a. Ceramic Mosaic Tile: 1.5mm (1/16 inch).
  - b. Pressed Floor Tile: 10mm (3/8 inch).
  - c. Glazed Wall Tile: 1.5mm (1/16 inch).
  - d. Large Format Tile: 6.35mm (1/4 inch).
- 8. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
- C. Metal Edge Strips and reducers: Install where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated.
- D. Movement Joints: Provide movement joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated on Drawings. Form joints during installation of setting materials, mortar beds, and tile. Keep joints free of dirt, debris, and setting materials prior to filling with sealants. Do not saw-cut joints after installing tiles.
  - 1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
- E. Thresholds: Install stone and solid surface thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
  - 1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in [modified dry-set] [improved modified dry-set] mortar (thinset).
  - 2. Do not extend [cleavage membrane] [waterproof membrane] [or] [crack isolation membrane] under thresholds set in [standard dry-set] [modified dry-set] [or] [improved modified dry-set] mortar. Fill joints between such thresholds and adjoining tile set on [cleavage membrane] [waterproof membrane] [or] [crack isolation membrane] with elastomeric sealant.
- F. Metal Flooring Transitions: Install where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile.
- G. Metal Wall Trim: Install at locations indicated on Drawings.
- H. Grout Sealer: Apply grout sealer to cementitious grout joints specified in this Section in accordance with manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

### 3.4 FIELD QUALITY CONTROL

- A. Water Test:
  - 1. Test of waterproofing membrane in showers and similar areas to be performed by Installation Contractor before setting tile.
    - a. Perform test after 24 hours of waterproof membrane installation.
    - b. Insert test plug in drain or waste line.
    - c. Fill shower base with water, high enough that the membrane-to-drain connection and floor-to-wall transition can be evaluated, and mark wall.
    - d. Check for leaks after 24 hours.
  - 2. Test to be witnessed by Architect and authorities having jurisdiction.
- B. Nonconforming Work:
  - 1. Waterproof membrane will be considered defective if water level has dropped.
  - 2. Remove and replace defective components and retest.

### 3.5 ADJUSTING AND CLEANING

- A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.
- B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
  - 1. Remove grout residue from tile as soon as possible.
  - 2. Clean grout smears and haze from tile in accordance with tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

### 3.6 PROTECTION

- A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

### 3.7 THRESHOLD AND TRANSITION SCHEDULE

- A. Thin Set Floor Tile Transitions: Stainless Steel unless otherwise noted in the Drawings and Finish Schedule.
  - 1. Level Transition: Schluter-SCHIENE or equal.
  - 2. Minor Sloped Transition: Schluter-RENO-TK or equal.
  - 3. Larger Sloped Transition: Schluter-RENO-U or equal.
  - 4. Movement or Control Joint edges: Schluter-SCHIENE or equal.
  - 5. Decorative Accents: Schluter-DECO or equal.
- B. Wall Tile Transitions: Stainless Steel unless otherwise noted in the Drawings and Finish Schedule.
  - 1. Tile Wall to Tile Floor Transition: Schluter®-DILEX-AHK or equal.
  - 2. Tile Wall to Non-Tile Floor Transition: Schluter®-DILEX-AHKA or equal.
  - 3. Tile to Tile Wall Outside Corner: Schluter®-QUADEC or equal.
  - 4. Trim at Base: Schluter®-JOLLY or equal.

### 3.8 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

- A. Interior Floor Installations, Concrete Subfloor:
  - 1. Ceramic Tile Installation: TCNA F113; thinset mortar, for slab-on-grade installations unless otherwise indicated.
    - a. Thin-Set Mortar: Latex- portland cement mortar, unless otherwise indicated.
      - 1) Large-Format Tile: Medium-bed, latex- portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.
  - 2. Ceramic Tile Installation: TCNA F122; thinset mortar on waterproof membrane, for areas subject to moisture (e.g. toilet rooms, food preparation areas), and areas subject to direct wetting (e.g. showers).
    - a. Thin-Set Mortar: Latex- portland cement mortar, unless otherwise indicated.
      - 1) Large-Format Tile: Medium-bed, latex- portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.

3. Ceramic Tile Installation: TCNA F125-Full; thinset mortar on crack isolation membrane, for dry, above-ground structural slab installations.
    - a. Thin-Set Mortar: Latex- portland cement mortar, unless otherwise indicated.
      - 1) Large-Format Tile: Medium-bed, latex- portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.
  4. Ceramic Tile Installation: TCNA F131; water-cleanable, tile-setting epoxy; epoxy grout, where indicated.
    - a. Grout and Tile Setting: Water-cleanable epoxy grout.
- B. Interior Wall Installations, Masonry or Concrete:
1. Ceramic Tile Installation: TCNA W202; thinset mortar.
    - a. Thinset Mortar: Latex- portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.
- C. Interior Wall Installations, Metal Studs or Furring:
1. Ceramic Tile Installation: TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units.
    - a. Thinset Mortar: Latex-portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide
  2. Ceramic Tile Installation: TCNA W245 or TCNA W248; thinset mortar on glass-mat, water-resistant gypsum backer board.
    - a. Thinset Mortar: Latex-portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.
- D. Shower Wall Installations, Metal Studs or Furring:
1. Ceramic Tile Installation: TCNA B412; thinset mortar on cementitious backer units.
    - a. Thinset Mortar: Latex-portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.
      - 2) Grout and Tile Setting: Water-cleanable epoxy grout.
- E. Shower Receptor and Wall Installations:
1. Ceramic Tile Installation: TCNA B415; thinset mortar on waterproof membrane over cementitious backer units.
    - a. Thinset Mortar: Latex- portland cement mortar.
    - b. Grout: High-performance sanded, unless otherwise indicated.
      - 1) High-performance unsanded grout for joints less than 1/8-inch wide.
      - 2) Grout and Tile Setting: Water-cleanable epoxy grout.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 51 00 - SUSPENDED CEILING SYSTEMS****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes suspended ceiling systems for interior applications consisting of:
  - 1. Acoustical panels with exposed and concealed suspension systems.
- B. Related Requirements:
  - 1. Division 09 Section "Gypsum Board Assemblies" for interior suspended gypsum board ceilings and soffits.

**1.2 DEFINITIONS**

- A. LR: Light Reflectance coefficient.
- B. NRC: Noise Reduction Coefficient.

**1.3 COORDINATION**

- A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

**1.4 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product specified.
- B. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
  - 1. Ceiling suspension system members.
  - 2. Method of attaching suspension system hangers to building structure.
  - 3. Ceiling-mounted items including light fixtures; air outlets and inlets; speakers; sprinklers; access panels; audio-visual equipment and mounting brackets; and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
  - 4. Ceiling perimeter and penetrations through ceiling; trim and moldings.
  - 5. Compression stud locations, spacings, and calculations.
  - 6. Minimum Drawing Scale: 1/8 inch = 1 foot.
- C. Samples for Verification: Full-size units of each type of ceiling assembly indicated; in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics.
  - 1. 6-inch-square samples of each acoustical panel type, pattern, and color.
  - 2. Set of 12-inch-long samples of exposed suspension system members, including moldings, for each color and system type required.
  - 3. Suspension System Members: 12-inch-long Sample of each type.
  - 4. Exposed Molding and Trim: Set of 12-inch-long Samples of each type, finish, and color.
  - 5. Filler Strips: Set of 12-inch-long Samples of each type, finish, and color.
  - 6. Sound Absorber: 12 inches long.
  - 7. End Cap: Full size.

- D. Delegated-Design Submittal: For design of attachment devices.

## 1.6 INFORMATIONAL SUBMITTALS

- A. Performance Data: For installed products indicated to comply with design loads and other criteria, include structural analysis and other analytical data signed and sealed by the qualified professional engineer responsible for their preparation.
- B. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- C. Product Test Reports: Indicate compliance of acoustical panel ceilings and components with requirements based on comprehensive testing of current products.
- D. Research/Evaluation Reports: Evidence of acoustical panel ceiling's and components' compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

## 1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For finishes to include in maintenance manuals.

## 1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Acoustical Ceiling Panels: Full-size panels equal to 2 percent of quantity installed.
  - 2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.
  - 3. Hold-Down Clips: Equal to 2 percent of quantity installed.
  - 4. Impact Clips: Equal to 1 percent of quantity installed.

## 1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer who has completed acoustical panel ceilings similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
- B. Source Limitations for Ceiling Units: Obtain each acoustical ceiling panel from one source with resources to provide products of consistent quality in appearance and physical properties without delaying the Work.
- C. Source Limitations for Suspension System: Obtain each suspension system from one source with resources to provide products of consistent quality in appearance and physical properties without delaying the Work.
- D. Fire-Test-Response Characteristics: Provide acoustical panel ceilings that comply with the following requirements:
  - 1. Fire-Resistance Characteristics: Where indicated, provide acoustical panel ceilings identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
    - a. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
    - b. Identify materials with appropriate markings of applicable testing and inspecting agency.

2. Surface-Burning Characteristics: Provide acoustical panels with the following surface-burning characteristics complying with ASTM E 1264 for Class A materials as determined by testing identical products per ASTM E 84:
  - a. Smoke-Developed Index: 450 or less.
- E. Mockups: Before installing acoustical panel ceilings, construct mockups for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for completed work:
  1. Locate mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
  2. Notify Architect seven days in advance of the dates and times when mockups will be constructed.
  3. Demonstrate the proposed range of aesthetic effects and workmanship.
  4. Obtain Architect's approval of mockups before starting construction of acoustical panel ceilings.
  5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    - a. When directed, demolish and remove mockups from Project site.
    - b. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.
- F. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 01 Section "Project Management and Coordination."

#### **1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.
- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

#### **1.11 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
  1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.
- B. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

### **PART 2 - PRODUCTS**

#### **2.1 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Exterior ceiling systems shall withstand exterior exposure and the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including pans and suspension system; noise or metal fatigue caused

by vibration, deflection, and displacement of ceiling units; or permanent damage to fasteners and anchors.

1. Wind Load in rooms with operable exterior window walls: Uniform pressure as indicated on Drawings, acting inward or outward.

## 2.2 MANUFACTURERS

- A. Basis-of-Design Product: The design is based on the products named in the Finish Legend. Subject to compliance with requirements, provide either the named products or comparable products by one of the other manufacturers specified. Comparable products are subject to review and approval through the submittal process specified. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:
1. Ceiling Panels:
    - a. American Gypsum.
    - b. Armstrong World Industries, Inc.
    - c. CertainTeed Corporation.
    - d. Rockfon (Roxul Inc.).
    - e. Tectum Inc.
    - f. United States Gypsum Company.
  2. Manufacturers Suspension Systems:
    - a. Armstrong World Industries, Inc.
    - b. CertainTeed Corporation.
    - c. Rockfon (Roxul, Inc).
    - d. United States Gypsum Company.

## 2.3 ACOUSTICAL PANELS

- A. Basis-of-Design Product: Refer to the Finish Legend. Subject to compliance with requirements, provide product indicated on Finish Legend or comparable product by one of the listed Manufacturer of Acoustical Panels:
- B. Ceilings (CL):
1. Refer to the Finish Legend for each Basis of Design product selection details.
- C. Source Limitations:
1. Acoustical Ceiling Panel: Obtain each type from single source from single manufacturer.
  2. Suspension System: Obtain each type from single source from single manufacturer.
- D. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system from single source from single manufacturer.
- E. Glass-Fiber-Based Panels: Made with binder containing no urea formaldehyde.
- F. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances unless otherwise indicated.
1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface according to ASTM E 795.
- G. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
1. Where appearance characteristics of acoustical panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by Architect from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.

## 2.4 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. High-Humidity Finish: Comply with ASTM C 635/C 635M requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.

## 2.5 METAL SUSPENSION SYSTEMS

- A. Basis-of-Design Product: Refer to the Finish Legend. Subject to compliance with requirements, provide product indicated on Finish Legend or comparable product by one of the following:
  - 1. Armstrong World Industries, Inc.
  - 2. CertainTeed Corporation.
  - 3. Chicago Metallic Corporation.
  - 4. Rockfon (Roxul, Inc.).
  - 5. United States Gypsum Company.
- B. Ceilings:
  - 1. Refer to the Finish Legend for each Basis of Design product selection details.
- C. Metal Suspension-System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635/C 635M.
  - 1. High-Humidity Finish: Comply with ASTM C 635/C 635M requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.
- D. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
  - 1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
    - a. Type: Postinstalled expansion and Postinstalled bonded anchors.
    - b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.
    - c. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchor.
    - d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.
  - 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
- E. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
  - 1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
  - 2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
  - 3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
  - 4. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch diameter wire.
- F. Hanger Rods and Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

- G. Angle Hangers: Angles with legs not less than 7/8 inch wide; formed with 0.04-inch-thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 coating designation; with bolted connections and 5/16-inch-diameter bolts.
- H. Compression Struts: Manufacturer's standard compression struts designed to accommodate wind forces.
- I. Hold-Down Clips: At all exterior locations, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees.

## 2.6 METAL EDGE MOLDINGS AND TRIM

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Armstrong World Industries, Inc.
  - 2. CertainTeed Corporation.
  - 3. Chicago Metallic Corporation.
  - 4. Fry Reglet Corporation.
  - 5. Gordon, Inc.
  - 6. United States Gypsum Company.
- B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
  - 1. Provide manufacturer's standard edge moldings that fit acoustical panel edge details and suspension systems indicated and that match width and configuration of exposed runners unless otherwise indicated.
  - 2. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
  - 3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
- C. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements and the following:
  - 1. Aluminum Alloy: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of aluminum extrusions complying with ASTM B 221 for Alloy and Temper 6063-T5.
  - 2. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
  - 3. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of 1.5 mils. Comply with ASTM C 635/C 635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

## 2.7 ACOUSTICAL SEALANT

- A. Acoustical Sealant for Exposed and Concealed Joints:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Pecora Corporation.
    - b. United States Gypsum Company.
- B. Acoustical Sealant for Concealed Joints:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. OSI Sealants; Henkel Corporation.

- b. Pecora Corporation.
  - c. Tremco, Inc.
- C. Acoustical Sealant: Manufacturer's standard sealant complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
- 1. Exposed and Concealed Joints: Nonsag, paintable, nonstaining latex sealant.
  - 2. Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates and structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage, and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

#### **3.3 INSTALLATION**

- A. General: Install acoustical panel ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
  - 1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.
- B. Suspend ceiling hangers from building's structural members and as follows:
  - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
  - 2. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
  - 3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
  - 4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
  - 5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
  7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
  8. Do not attach hangers to steel deck tabs.
  9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
  10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
  11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
  2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet Miter corners accurately and connect securely.
  3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. Arrange directionally patterned acoustical panels as follows:
    - a. As indicated on reflected ceiling plans.
  2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
  3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
  4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
  5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by manufacturer.
  6. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions unless otherwise indicated.
  7. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

### 3.4 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 61 13 - FLOOR SEALERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes penetrating liquid concrete floor treatment for the following locations:
  - 1. Areas indicated on the Drawings.
  - 2. Areas indicated in the Finish Schedule.
  - 3. Exterior concrete concourses.
- B. Related Requirements:
  - 1. Section 03 30 00 "Cast-in-Place Concrete" for concrete slabs.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For floor sealers to include in maintenance manuals. Include the following:
  - 1. Methods for maintaining floor sealers, including cleaning and stain-removal products.
  - 2. Precautions for cleaning materials and methods that could be detrimental to floor sealers.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
- B. Mockups: Apply floor sealer to set quality standards for materials and execution.
  - 1. Size: 100 sq. ft. of each type of substrate to demonstrate surface preparation, finish, and standard of workmanship.
    - a. The Owner shall be given the opportunity to accept or reject the slip resistance of the sealed concrete prescribed by the Owner's insurance and legal counsels.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**PART 2 - PRODUCTS****2.1 FLOOR DENSIFIERS**

- A. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; that penetrates, hardens, and densifies concrete surfaces.
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on the Finish Legend or comparable product by one of the following:
  - 1. Curecrete Distribution, Inc.
  - 2. Dayton Superior Corporation.
  - 3. Euclid Chemical Company (The), an RPM company; Diamond Hard.
  - 4. L&M Construction Chemicals, Inc.
- C. Performance Requirements:
  - 1. VOC Content: Sealer shall have a VOC content of 0 g/L.
  - 2. Abrasion Resistance to Revolving Disks: At least a 30% improvement over untreated samples when tested in accordance with ASTM C 779.
  - 3. Surface Adhesion: At least a 20% increase in adhesion for epoxy when tested in accordance with ASTM D 3359.
  - 4. Hardening: As follows when tested in accordance with ASTM C 39:
    - a. After 7 Days: An increase of at least 35% over untreated samples.
    - b. After 28 Days: An increase of at least 33% over untreated samples.
  - 5. Coefficient of Friction: Minimum 0.8 dry, 0.65 wet when tested in accordance with ASTM C 1028.

**PART 3 - EXECUTION****3.1 PREPARATION**

- A. Prepare floor according to manufacturer's written instructions.
  - 1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
  - 2. Do not use frozen material. Thaw and agitate prior to use.
  - 3. Repair cracked and eroded concrete in accordance with manufacturer's instructions. Remove and repair unsound substrates.

**3.2 APPLICATION**

- A. Apply penetrating liquid floor treatment according to manufacturer's written instructions.
  - 1. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.
  - 2. Keep surface wet with sealer for manufacturer's minimum soak-in period without allowing it to dry or become slippery.
- B. Protect installed floors during construction and until chemical reaction process is complete. Clean up spills during construction. Do not allow construction debris to remain on treated floor.

END OF SECTION

**SECTION 09 61 23 - HAZARD STRIPING****PART 1 - GENERAL****1.1 SUMMARY**

- A. This section includes the following:
  - 1. Hazard and safety striping at stair nosings in the seating bowl as indicated on the Drawings.
  - 2. Wheelchair spaces and other floor identifications as indicated on the Drawings.

**1.2 PERFORMANCE REQUIREMENTS**

- A. Slip Resistance: Provide finished surfaces with a verifiable slip resistance as recommended in the Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG), and as determined by the Owner and the Owner's insurance and legal counsels for slip and fall insurability and legal liability.

**1.3 SUBMITTALS**

- A. Product Data: Submit manufacturer's product data for coating materials, including surface preparation requirements.
- B. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated.
- C. Manufacturer's surface preparation inspection report.
- D. Contractor shall prepare a field survey of all the existing conditions at all aisles verifying the actual deviations from nosing to nosing in 1/8" tolerance. This drawing shall locate the contractor's understanding of placement of the safety v. hazard striping locations. Architect' review and approval of each striping pattern on each aisle is required before field application will be accepted.

**1.4 QUALITY ASSURANCE**

- A. Paint Manufacturer shall inspect surface preparation procedures and results prior to application of paint.
- B. Field Samples: Apply hazard-coating materials to 4 stair nosings and one wheelchair space to demonstrate surface preparation, joint and crack treatment, thickness, slip resistance texture, color, and standard of workmanship.
  - 1. If Architect determines that field sample does not meet requirements, reapply materials until the field sample is accepted.
  - 2. Keep the accepted field samples undisturbed during construction as a standard for judging completed work. Undamaged field samples may be incorporated into the Work.
  - 3. The Owner and the Owner's insurance and legal counsels shall determine from these field samples the acceptability of the demonstrated slip resistance of the applied coatings.
- C. Source Limitations: Obtain primers and undercoat materials, if required, for each coating system from the same manufacturer as the finish coats.
- D. Contractor will perform an "in-place" mock-up of each type of striping for field approval by the Architect.

**PART 2 - PRODUCTS****2.1 MATERIALS**

- A. Basis-of-Design Product: The design is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by another manufacturer. Comparable products are subject to review and approval through the submittal process specified.
  - 1. ITW American Safety Technologies, Inc. - "AS-150"
  - 2. PPG Industries, "MegaSeal - NSP-Pedestrian - Anti-Slip 99-6511."
  - 3. Sherwin Williams; "ResuGrip 150."
- B. Colors: To be selected by Architect from manufacturer's full line of custom and standard colors.
- C. VOC Content of Field-Applied Interior Paints and Coatings: Provide products that comply with the following limits for VOC content, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24); these requirements do not apply to paints and coatings that are applied in a fabrication or finishing shop:
  - 1. Floor Coatings: VOC not more than 100 g/L.
- D. VOC Compliance: Provide materials that comply with the Air Quality Control regulations of the local Air Quality Management District having jurisdiction over the location of the project or EPA Region II. In the event that local regulations are silent on specific applications, comply with the National Volatile Organic Compound Emission Standards for Architectural Coatings (40 CFR Part 59).
- E. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified. Paint-material containers not displaying manufacturer's product identification will not be acceptable.
  - 1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

**PART 3 - EXECUTION****3.1 PREPARATION**

- A. Cementitious Materials: Prepare concrete surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
  - 1. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
  - 2. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces where moisture content exceeds that permitted in manufacturer's written instructions.
  - 3. Provide uniform surface profile in areas to be painted
- B. Mask off edges to provide a straight edge around area to be painted.

**3.2 APPLICATION**

- A. Application: Apply painted stripe full width of each tread nosing. Edges shall be straight and uniform. Width of stripe shall be as indicated on the Drawings.
- B. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

- C. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate. Provide the total dry film thickness of the entire system as recommended by the manufacturer.
- D. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

### **3.3 CLEANING**

- A. Cleanup: At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from the site.
  - 1. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

### **3.4 PROTECTION**

- A. Protect work of other trades, whether being painted or not, against damage by painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.
- B. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in Painting and Decorating Contractors of America (PDCA) Specification P1.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 65 13 - RESILIENT BASE AND ACCESSORIES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes: Resilient base.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches long.
- C. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

**1.3 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

**1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

**1.5 FIELD CONDITIONS**

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive resilient products during the following periods:
  - 1. 48 hours before installation.
  - 2. During installation.
  - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Install resilient products after other finishing operations, including painting, have been completed.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. In areas where both base and transitions strips are located, provide base and transition strips from same manufacturer to ensure color match.

**2.2 THERMOSET-RUBBER BASE**

- A. Basis-of-Design Product: Refer to the Finish Legend in the Drawings. Subject to compliance with requirements, provide product indicated on Finish Legend or comparable product by one of the following:
  - 1. Burke Mercer Flooring Products, Division of Burke Industries Inc.
  - 2. Flexco.
  - 3. Johnsonite; A Tarkett Company
  - 4. Roppe Corporation, USA. Pinnacle
- B. Product Standard: ASTM F 1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).
  - 1. Style and Location:
    - a. Style A, Straight: Provide in areas with carpet.
    - b. Style B, Cove: Provide in areas with resilient flooring.
- C. Lengths: Coils in 120 foot length.
- D. Outside Corners: Preformed.
- E. Inside Corners: Preformed.
- F. Colors: As indicated on Finish Legend or as selected by Architect from full range of industry colors.

**2.3 RUBBER MOLDING ACCESSORY**

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Burke Mercer Flooring Products, Division of Burke Industries Inc.
  - 2. Flexco.
  - 3. Johnsonite; A Tarkett Company
  - 4. Roppe Corporation, USA.
  - 5. VPI, LLC, Floor Products Division.
- B. Description: Rubber nosing for carpet nosing for resilient flooring reducer strip for resilient flooring joiner for tile and carpet, and transition strips.
- C. Profile and Dimensions: As indicated.
- D. Locations: Provide rubber molding accessories in areas indicated.
- E. Colors and Patterns: As selected by Architect from full range of industry colors.
  - 1. Unless indicated, otherwise, match resilient accessory to adjacent higher surface material,

**2.4 INSTALLATION MATERIALS**

- A. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.
- B. Metal Edge Strips: Extruded aluminum with mill finish of width shown, of height required to protect exposed edges of flooring, and in maximum available lengths to minimize running joints.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
  - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
  - 1. Installation of resilient products indicates acceptance of surfaces and conditions.

**3.2 PREPARATION**

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- C. Do not install resilient products until materials are the same temperature as space where they are to be installed.
  - 1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
- D. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

**3.3 RESILIENT BASE INSTALLATION**

- A. Comply with manufacturer's written instructions for installing resilient base.
- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Preformed Corners: Install preformed corners before installing straight pieces.
- H. Job-Formed Corners:
  - 1. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches in length.
    - a. Form without producing discoloration (whitening) at bends.
  - 2. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches in length.
    - a. Miter or cope corners to minimize open joints.

**3.4 RESILIENT ACCESSORY INSTALLATION**

- A. Comply with manufacturer's written instructions for installing resilient accessories.
- B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

**3.5 CLEANING AND PROTECTION**

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
- B. Perform the following operations immediately after completing resilient-product installation:
  - 1. Remove adhesive and other blemishes from surfaces.
- C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION

**SECTION 09 65 16 - RESILIENT SHEET FLOORING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Unbacked vinyl sheet flooring.
  - 2. Vinyl sheet flooring with backing.
  - 3. Unbacked rubber sheet flooring.
  - 4. Rubber sheet flooring with backing.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of resilient sheet flooring.
  - 1. Include sheet flooring layouts, locations of seams, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
  - 2. Show details of special patterns.
- C. Samples: For each exposed product and for each color, texture, and pattern specified, in manufacturer's standard size, but not less than 6-by-9-inch sections.
  - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 9 inches long, of each color required.
- D. Samples for Verification: For each type of resilient sheet flooring, in manufacturer's standard size, but not less than 6-by-9-inch sections of each color, texture, and pattern required.
  - 1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 9 inches long, of each color required.
- E. Welded-Seam Samples: For seamless-installation technique indicated and for each resilient sheet flooring product, color, and pattern required; with seam running lengthwise and in center of 6-by-9-inch Sample applied to a rigid backing and prepared by Installer for this Project.
- F. Product Schedule: Use same designations indicated on Drawings.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each type of resilient sheet flooring to include in maintenance manuals.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Resilient Sheet Flooring: Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, in roll form and in full roll width for each type, color, and pattern of flooring installed.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: An entity that employs installers and supervisors who are competent in techniques required by manufacturer for resilient sheet flooring installation and seaming method indicated.
  - 1. Engage an installer who employs workers for this Project who are trained or certified by resilient sheet flooring manufacturer for installation techniques required.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Coordinate mockups in this Section with mockups specified in other Sections.
    - a. Size: Minimum 100 sq. ft. for each type, color, and pattern in locations directed by Architect.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Store resilient sheet flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store rolls upright.

**1.8 FIELD CONDITIONS**

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 85 deg F, in spaces to receive resilient sheet flooring during the following periods:
  - 1. 48 hours before installation.
  - 2. During installation.
  - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during resilient sheet flooring installation.
- D. Close spaces to traffic for 48 hours after resilient sheet flooring installation.
- E. Install resilient sheet flooring after other finishing operations, including painting, have been completed.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Test-Response Characteristics: For resilient sheet flooring, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
  - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

**2.2 UNBACKED VINYL SHEET FLOORING**

- A. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
  - 1. Armstrong World Industries, Inc.
  - 2. Forbo Industries, Inc.
  - 3. Gerflor.
  - 4. Johnsonite; A Tarkett Company.
  - 5. Mannington Mills, Inc.
  - 6. Polyflor, Ltd., Distributed by Gerbert Limited.
- B. Product Standard: ASTM F 1913.
- C. Thickness: 0.080 inch.
- D. Wearing Surface: Smooth.
- E. Sheet Width: As standard with manufacturer.
- F. Seamless-Installation Method: Heat welded.
- G. Colors and Patterns: Match Architect's samples.

**2.3 VINYL SHEET FLOORING WITH BACKING**

- A. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
  - 1. Altro Group.
  - 2. Armstrong World Industries, Inc.
  - 3. Congoleum Corporation.
  - 4. Forbo Industries, Inc.
  - 5. Gerflor.
  - 6. Lonseal, Inc.
  - 7. Mannington Mills, Inc.
  - 8. Polyflor, Ltd., Distributed by Gerbert Limited.
  - 9. TOLI International.
- B. Product Standard: ASTM F 1303.
  - 1. Type (Binder Content): Type I, minimum binder content of 90 percent.
  - 2. Wear-Layer Thickness: Grade 1.
  - 3. Overall Thickness: As standard with manufacturer.
  - 4. Interlayer Material: None.
  - 5. Backing Class: Class A (fibrous).
- C. Wearing Surface: Smooth.
- D. Sheet Width: As standard with manufacturer.
- E. Seamless-Installation Method: Heat welded.
- F. Colors and Patterns: Match Architect's samples.

**2.4 UNBACKED RUBBER SHEET FLOORING**

- A. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:

1. AB; American Biltrite.
  2. Flexco.
  3. Nora Systems, Inc.
  4. PRF USA, Inc.
  5. R.C.A. Rubber Company (The).
  6. VPI, LLC, Floor Products Division.
- B. Product Standard: ASTM F 1859.
1. Type: [Type I, homogeneous rubber sheet floor covering.
  2. Thickness: As standard with manufacturer.
  3. Hardness: Not less than required by ASTM F 1859.
- C. Wearing Surface: Smooth
1. Molded-Pattern Figure: Raised discs.
- D. Sheet Width: As standard with manufacturer.
- E. Seamless-Installation Method: Heat welded.
- F. Colors and Patterns: Match Architect's samples.

## 2.5 RUBBER SHEET FLOORING WITH BACKING

- A. Products: Subject to compliance with requirements, provide the following:
1. Nora Systems, Inc;.
- B. Product Standard: ASTM F 1860.
1. Type: Type I, homogeneous rubber sheet floor covering with backing.
  2. Wear-Layer Thickness: As standard with manufacturer.
  3. Overall Thickness: As standard with manufacturer.
  4. Interlayer Material: As standard with manufacturer.
  5. Backing: Fibrous.
  6. Hardness: Not less than required by ASTM F 1860.
- C. Wearing Surface: Smooth.
- D. Sheet Width: [As standard with manufacturer] [3.3 feet].
- E. Seamless-Installation Method: [Heat welded] [Chemically bonded].
- F. Colors and Patterns: Match Architect's samples.

## 2.6 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient sheet flooring manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by flooring and adhesive manufacturers to suit resilient sheet flooring and substrate conditions indicated.
- C. Seamless-Installation Accessories:
1. Heat-Welding Bead: Manufacturer's solid-strand product for heat welding seams.
    - a. Colors: Match flooring.
  2. Chemical-Bonding Compound: Manufacturer's product for chemically bonding seams.
- D. Integral-Flash-Cove-Base Accessories:
1. Cove Strip: 1-inch radius provided or approved by resilient sheet flooring manufacturer.
  2. Cap Strip: Tapered vinyl cap, provided or approved by resilient sheet flooring manufacturer.
  3. Corners: Metal inside and outside corners and end stops provided or approved by resilient sheet flooring manufacturer.

- E. Floor Polish: Provide protective, liquid floor-polish products recommended by resilient sheet flooring manufacturer.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
  - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient sheet flooring.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Prepare substrates according to resilient sheet flooring manufacturer's written instructions to ensure adhesion of resilient sheet flooring.
- B. Concrete Substrates: Prepare according to ASTM F 710.
  - 1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
  - 2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by resilient sheet flooring manufacturer. Do not use solvents.
  - 3. Alkalinity and Adhesion Testing: Perform tests recommended by resilient sheet flooring manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH.
  - 4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
    - a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft.] in 24 hours.
    - b. Relative Humidity Test: Using in-situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum [75] percent relative humidity level measurement.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install resilient sheet flooring until materials are the same temperature as space where they are to be installed.
  - 1. At least 48 hours in advance of installation, move flooring and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient sheet flooring.

#### **3.3 RESILIENT SHEET FLOORING INSTALLATION**

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F1869 (Standard Test Method for Measuring

Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.

- B. Comply with manufacturer's written instructions for installing resilient sheet flooring.
- C. Unroll resilient sheet flooring and allow it to stabilize before cutting and fitting.
- D. Lay out resilient sheet flooring as follows:
  - 1. Maintain uniformity of flooring direction.
  - 2. Minimize number of seams; place seams in inconspicuous and low-traffic areas, at least 6 inches away from parallel joints in flooring substrates.
  - 3. Match edges of flooring for color shading at seams.
  - 4. Avoid cross seams.
- E. Scribe and cut resilient sheet flooring to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- F. Extend resilient sheet flooring into toe spaces, door reveals, closets, and similar openings.
- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on resilient sheet flooring as marked on substrates. Use chalk or other nonpermanent marking device.
- H. Install resilient sheet flooring on covers for telephone and electrical ducts and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of flooring installed on covers and adjoining flooring. Tightly adhere flooring edges to substrates that abut covers and to cover perimeters.
- I. Adhere resilient sheet flooring to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- J. Seamless Installation:
  - 1. Heat-Welded Seams: Comply with ASTM F 1516. Rout joints and heat weld with welding bead to fuse sections permanently into a seamless flooring installation. Prepare, weld, and finish seams to produce surfaces flush with adjoining flooring surfaces.
- K. Integral-Flash-Cove Base: Cove resilient sheet flooring 6 inches up vertical surfaces. Support flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.
  - 1. Install metal corners at inside and outside corners.

### **3.4 CLEANING AND PROTECTION**

- A. Comply with manufacturer's written instructions for cleaning and protecting resilient flooring.
- B. Perform the following operations immediately after completing resilient sheet flooring installation:
  - 1. Remove adhesive and other blemishes from surfaces.
  - 2. Sweep and vacuum surfaces thoroughly.
  - 3. Damp-mop surfaces to remove marks and soil.
- C. Protect resilient sheet flooring from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, adhesive, and blemishes from flooring surfaces before applying liquid floor polish. Apply number of coats as recommended by flooring manufacturer.
- E. Cover resilient sheet flooring until Substantial Completion.

END OF SECTION

**SECTION 09 65 19 - RESILIENT TILE FLOORING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Rubber floor tile.
  - 2. Vinyl composition floor tile.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
- C. Shop Drawings: For each type of floor tile.
  - 1. Include floor tile layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
  - 2. Show details of special patterns.
- D. Samples: Full-size units of each color and pattern of floor tile required.
- E. Samples for Verification: Full-size units of each color and pattern of floor tile required.
- F. Product Schedule: Use same designations indicated on Drawings.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor tile installation and seaming method indicated.
  - 1. Engage an installer who employs workers for this Project who are trained or certified by floor tile manufacturer for installation techniques required.

- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Coordinate mockups in this Section with mockups specified in other Sections.
    - a. Size: Minimum 100 sq. ft. for each type, color, and pattern in locations directed by Architect.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

### 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

### 1.8 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor tile during the following periods:
  - 1. 48 hours before installation.
  - 2. During installation.
  - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.
- C. Close spaces to traffic during floor tile installation.
- D. Close spaces to traffic for 48 hours after floor tile installation.
- E. Install floor tile after other finishing operations, including painting, have been completed.

### 1.9 WARRANTY

- A. System Warranty: Manufacturer's non-prorated comprehensive warranty that agrees to repair and replace defective installation areas, material, and labor that fail under normal usage within specified warranty period.
  - 1. Warranty Period: 10 years from date of Product Purchase.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
  - 1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

### 2.2 SOLID VINYL FLOOR TILE

- A. Basis-of-Design Product: Refer to the Finish Legend in the Drawings. Subject to compliance with requirements, provide product indicated on Finish Legend or comparable product by one of the following:
  - 1. AB; American Biltrite.
  - 2. Altro Group.
  - 3. Amtico International Inc.

4. Armstrong World Industries, Inc.
  5. Burke Mercer Flooring Products, Division of Burke Industries Inc.
  6. Flexco, Inc.
  7. Gerflor.
  8. Johnsonite; A Tarkett Company.
  9. Polyflor, Ltd.
  10. Roppe Corporation, USA.
  11. TOLI International.
- B. Tile Standard: ASTM F 1700.
1. Class: Class I, Monolithic Vinyl Tile, unless indicated otherwise on Drawings.
  2. Type: A, Smooth Surface, unless indicated otherwise on Drawings.
- C. Thickness: 0.080 inch.
- D. Size: Refer to Finish Schedule.
- E. Seamless-Installation Method: [Heat welded] [Chemically bonded] <Insert requirements>.
- F. Colors and Patterns: Match Architect's samples.

### 2.3 RUBBER FLOOR TILE

- A. Basis-of-Design Product: Refer to the Finish Legend in the Drawings. Subject to compliance with requirements, provide product indicated on Finish Legend or comparable product by one of the following:
1. AB; American Biltrite.
  2. Burke Mercer Flooring Products, Division of Burke Industries Inc.
  3. Flexco.
  4. Johnsonite; A Tarkett Company.
  5. Mannington Mills, Inc.
  6. Mondo Rubber International, Inc.
  7. Nora Rubber Flooring, Freudenberg Building Systems, Inc.
  8. PRF USA Inc.
  9. R.C.A. Rubber Company (The).
  10. Roppe Corporation, USA.
  11. VPI, LLC, Floor Products Division.
- B. Tile Standard: ASTM F 1344, Class I-A, Homogeneous Rubber Tile, solid color.
- C. Hardness: Not less than 85 as required by ASTM F 1344, measured using Shore, Type A durometer according to ASTM D 2240.
- D. Wearing Surface: Smooth.
- E. Thickness: 0.125 inch.
- F. Size: As indicated by Finish Legend.
- G. Seamless-Installation Method: Heat welded.
- H. Colors and Patterns: As indicated by Finish Legend.

### 2.4 VINYL COMPOSITION FLOOR TILE (VCT)

- A. Basis-of-Design Product: Refer to the Finish Legend in the Drawings. Subject to compliance with requirements, provide product indicated on Finish Legend or comparable product by one of the following:
1. AB; American Biltrite.
  2. Armstrong World Industries, Inc.
  3. Congoleum Corporation.

4. Mannington Mills, Inc.
  5. Mohawk Flooring.
  6. Shaw Hard Surface, Shaw Industries, Inc.
- B. Tile Standard: ASTM F 1066, Class 2, through pattern.
  - C. Wearing Surface: Smooth.
  - D. Thickness: 0.125 inch.
  - E. Size: As indicated by Finish Legend.
  - F. Colors and Patterns: As indicated by Finish Legend.

## 2.5 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.
- C. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
  1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.
- B. Concrete Substrates: Prepare according to ASTM F 710.
  1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
  2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
  3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10pH.
  4. Moisture Testing: Proceed with installation only after substrates pass testing according to floor tile manufacturer's written recommendations, but not less stringent than the following:
    - a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.

- b. Relative Humidity Test: Using in-situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
- C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.
- D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- E. Do not install floor tiles until materials are the same temperature as space where they are to be installed.
  - 1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.
- F. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

### 3.3 FLOOR TILE INSTALLATION

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F 2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F 1869 (Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.
- B. Comply with manufacturer's written instructions for installing floor tile.
- C. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
  - 1. Lay tiles in pattern indicated.
- D. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.
- E. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
- F. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.
- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.
- H. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.
- I. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

**3.4 CLEANING AND PROTECTION**

- A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.
- B. Perform the following operations immediately after completing floor tile installation:
  - 1. Remove adhesive and other blemishes from surfaces.
  - 2. Sweep and vacuum surfaces thoroughly.
  - 3. Damp-mop surfaces to remove marks and soil.
- C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Floor Polish: Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish.
  - 1. Apply five coats (VCT).
- E. Cover floor tile until Substantial Completion.

END OF SECTION

**SECTION 09 66 23 - RESINOUS MATRIX TERRAZZO FLOORING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Thin-set, epoxy-resin terrazzo flooring and base.
  - 2. Precast epoxy-resin terrazzo units.
- B. Related Requirements:
  - 1. Section 07 92 00 "Joint Sealants" for sealants installed with terrazzo.
  - 2. Section 09 67 23 "Resinous Flooring" for decorative resinous flooring systems applied as self-leveling slurries or as troweled or screeded mortars.

**1.2 DEFINITIONS**

- A. Aggregate: Marble chips or other types of aggregate.
- B. NTMA: National Terrazzo and Mosaic Association, Inc.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to terrazzo including, but not limited to, the following:
    - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
    - b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
    - c. Review special terrazzo designs and patterns.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work. Show layout of the following:
  - 1. Divider strips.
  - 2. Control-joint strips.
  - 3. Accessory strips.
  - 4. Abrasive strips.
  - 5. Stair treads, risers, and landings.
  - 6. Precast terrazzo jointing and edge configurations.
  - 7. Terrazzo patterns.
- C. Samples: For each exposed product and for each color and texture specified, 6 inches in size.
- D. Samples for Initial Selection: NTMA's "Terrazzo Color Palette" showing the full range of colors and patterns available for each terrazzo type.

- E. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo Sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in sizes indicated below:
  - 1. Terrazzo: 6-inch- square Samples.
  - 2. Precast Terrazzo: 6-inch- square Samples.
  - 3. Accessories: 6-inch- long Samples of each exposed strip item required.

### **1.5 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
  - 1. Include list of 5 projects completed in last 5 years indicating name and location of project, name of Owner, name and contact information for General Contractor, and name and contact information for Architect.
  - 2. Include letter from NTMA with name of member that states current member status.
- B. Material Certificates: For each type of terrazzo material or product.
- C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.
- D. Preinstallation moisture-testing reports.

### **1.6 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For terrazzo to include in maintenance manuals.

### **1.7 QUALITY ASSURANCE**

- A. Installer Qualifications:
  - 1. Engage an installer who is a contractor member of NTMA.
  - 2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Build mockups for terrazzo including accessories.
    - a. Size: Minimum 100 sq. ft. of typical poured-in-place flooring and base condition for each color and pattern in locations directed by Architect.
    - b. Include first three stair treads.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.
- B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
  - 1. Epoxy components shall be stored in a space where the ambient temperature can be maintained 60 and 90 deg. F before use.

**1.9 FIELD CONDITIONS**

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
- B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.
- C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
- D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
  - 1. Maintain ambient temperatures in the area to receive terrazzo at not less than 60 deg. F.
- E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
- B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

**2.2 PERFORMANCE REQUIREMENTS**

- A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

**2.3 EPOXY-RESIN TERRAZZO**

- A. Epoxy-Resin Terrazzo: Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing.
  - 1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Crossfield Products Corp., Dex-O-Tex Division; Cheminert.
    - b. General Polymers; Sherwin Williams; Terrazzo 1100.
    - c. Key Resin Company; Key Epoxy Terrazzo.
    - d. Master Terrazzo Technologies LLC; Morricite.
    - e. Quadrant Chemical Corporation; Quadset Epoxy Terrazzo.
    - f. TEC Specialty; H.B. Fuller Construction Products Inc; Tuff-Lite Epoxy Terrazzo.
    - g. Terrazzo & Marble Supply Companies; Terroxy Resin Systems.
  - 2. Thickness: 3/8 inch nominal.
- B. Formulated Mix Color and Pattern: As selected by Architect from NTMA thin-set terrazzo plates.
- C. Custom Mix Color and Pattern: Match Architect's sample.

- D. Materials:
1. Flexible Reinforcing Membrane: Manufacturer's resinous membrane for substrate-crack preparation and reflective-crack reduction.
    - a. Reinforcement: Fiberglass scrim.
  2. Primer: Manufacturer's product recommended for substrate and use indicated.
  3. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.
    - a. Physical Properties without Aggregates:
      - 1) Hardness: 60 to 85 per ASTM D 2240, Shore D.
      - 2) Minimum Tensile Strength: 3000 psi per ASTM D638 for a 2-inch specimen made using a "C" die per ASTM D 412.
      - 3) Minimum Compressive Strength: 10,000 psi per ASTM D 695, Specimen B cylinder.
      - 4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D 1308.
        - a) Distilled water.
        - b) Mineral water.
        - c) Isopropanol.
        - d) Ethanol.
        - e) 0.025 percent detergent solution.
        - f) 1.0 percent soap solution.
        - g) 5 percent acetic acid.
        - h) 10 percent sodium hydroxide.
        - i) 10 percent hydrochloric acid.
        - j) 30 percent sulfuric acid.
    - b. Physical Properties with Aggregates: For resin blended with Georgia white marble, ground, grouted, and cured per requirements in NTMA's "Terrazzo Specifications and Design Guide"; comply with the following:
      - 1) Flammability: Self-extinguishing, maximum extent of burning 1/4 inch according to ASTM D 635.
      - 2) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F for temperature range of minus 12 to plus 140 deg F per ASTM D 696.
  4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
    - a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
    - b. 24-Hour Absorption Rate: Less than 0.75 percent.
    - c. Dust Content: Less than 1.0 percent by weight.
  5. Finishing Grout: Resin based.

## 2.4 STRIP MATERIALS

- A. Thin-Set Divider Strips: L-type angle, 1/4 inch deep.
  1. Material: As indicated.
  2. Top Width: As indicated.
- B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.
  1. Bottom-Section Material: As indicated.
  2. Top-Section Material: As indicated.
  3. Top-Section Width: As indicated.
- C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

- D. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
  - 1. Base-bead strips for exposed top edge of terrazzo base.
  - 2. Edge-bead strips for exposed edges of terrazzo.
  - 3. Nosings for terrazzo stair treads and landings.
- E. Abrasive Strips: Abrasive nosing strip and two-line abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
  - 1. Width: 1/2 inch.
  - 2. Depth: As required by terrazzo thickness.
  - 3. Length: As indicated.
  - 4. Color: As selected by Architect from full range of industry colors.

## 2.5 MISCELLANEOUS ACCESSORIES

- A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.
- B. Anchoring Devices:
  - 1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
  - 2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
- C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.
- F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
  - 1. Surface Friction: Not less than 0.6 according to ASTM D 2047.
  - 2. Acid-Base Properties: With pH factor between 7 and 10.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

### 3.2 PREPARATION

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

- B. Concrete Slabs:
1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
    - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
    - b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
    - c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.
- C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
1. Moisture Testing: Perform tests indicated below.
    - a. Calcium Chloride Test: Perform anhydrous calcium chloride test per ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
      - 1) Perform tests so that each test area does not exceed 200 sq. ft., and perform not less than two tests in each installation area and with test areas evenly spaced in installation areas.
      - 2) Report test results to Contractor and Architect.
    - b. In-Situ Probe Test: Perform relative-humidity test using in-situ probes per ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative-humidity-level measurement.
      - 1) Perform tests so that each test area does not exceed 200 sq. ft., and perform not less than two tests in each installation area and with test areas evenly spaced in installation areas.
      - 2) Report test results to Contractor and Architect.
    - c. Test Method: Test for moisture content by method recommended in writing by terrazzo manufacturer. Proceed with installation only after substrates pass testing.
- D. Preinstallation Moisture Testing:
1. Testing Agency: Owner will engage a qualified testing agency to perform tests.
  2. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
  3. Reinforce membrane with fiberglass scrim.
- E. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

### 3.3 EPOXY-RESIN TERRAZZO INSTALLATION

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F 2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F 1869 (Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.
- B. Comply with NTMA's written recommendations for terrazzo and accessory installation.

- C. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."
- D. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet; noncumulative.
- E. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
- F. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
- G. Flexible Reinforcing Membrane:
  - 1. Prepare and prefill substrate cracks with membrane material.
  - 2. Install membrane to produce full substrate coverage in areas to receive terrazzo.
  - 3. Reinforce membrane with fiberglass scrim.
  - 4. Prepare membrane according to manufacturer's written instructions before applying substrate primer.
- H. Primer: Apply to terrazzo substrates according to manufacturer's written instructions.
- I. Strip Materials:
  - 1. Divider and Control-Joint Strips:
    - a. Locate divider strips in locations indicated.
    - b. Install control-joint strips in locations indicated.
    - c. Install control-joint strips with 1/4-inch gap between strips, and install sealant in gap.
    - d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
  - 2. Accessory Strips: Install as required to provide a complete installation.
  - 3. Abrasive Strips: Install with surface of abrasive strip positioned 1/16 inch higher than terrazzo surface.

### 3.4 REPAIR

- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

### 3.5 CLEANING AND PROTECTION

- A. Cleaning:
  - 1. Remove grinding dust from installation and adjacent areas.
  - 2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.
- B. Sealing:
  - 1. Seal surfaces according to NTMA's written recommendations.
  - 2. Apply sealer according to sealer manufacturer's written instructions.
- C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 67 23 - RESINOUS FLOORING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. MMA Resinous flooring systems including integral coves and accessories. Formulas include the following types:
    - a. Methyl Methacrylate (MMA) Resin, Acrylic Floor Coating System.
- B. Related Sections:
  - 1. Refer to Finish Legend for color/pattern of finish product.
  - 2. Section 03 30 00 "Cast-in-Place Concrete."
  - 3. Section 09 29 00 "Gypsum Board" for cementitious backer wall panels used as substrate for integral cove bases.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review manufacturer's written instructions for substrate preparation and environmental conditions affecting resinous flooring installation. Manufacturer Rep required to be in attendance.
  - 2. Review details on drawings and manufacturers standard details of integral cove bases, floor drains and floor sinks.
  - 3. Review manufacturer's written instructions for installing resinous flooring systems.
  - 4. Review protection measures for adjacent construction and installed flooring, floor drainage requirements, curbs, base details, and so forth.
  - 5. Discuss mockups and establish location. Discuss mockup approval process.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include manufacturer's technical data, installation instructions, and recommendations for each resinous flooring component required.
- B. Shop Drawings: Include installation requirements. Include plans, elevations, sections, component details, and attachments to other work. Show layout of the following:
  - 1. Patterns and colors.
  - 2. Transitions and divider strips.
  - 3. Control joints.
- C. Samples: For each resinous floor system required and for each color and texture specified, 6 inches square in size, applied to a rigid backing by Installer for this Project.
- D. Samples for Initial Selection: For each type of exposed finish required.
- E. Samples for Verification: For each resinous flooring system required and for each color and texture specified, 6 inches square, applied to a rigid backing by Installer for this Project.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For manufacturer's on-site technical representative and for Installer.
- B. Material Certificates: For each resinous flooring component.
- C. Material Test Reports: For each resinous flooring system, by a qualified testing agency.

- D. Field quality-control reports.

### 1.5 SYSTEM DESCRIPTION

- A. The MasterTop 1853 SRS CQ floor topping system shall be 1/8" thick MasterTop SRS 61BC self-leveling (color and texture selected by owner), with appropriate Primer and Topcoat.
- B. The MasterTop 1853 SRS CQ topping system shall cure and be available to normal traffic in no more than 60 minutes at 68° F after application of last coat. It shall have a maximum water absorption value of 0.04 weight percent in accordance with ASTM D 570. It shall be chemically resistant to a wide range of acids, alkalis, salts, fats, oils, and other chemicals.
- C. The finished floor coating system shall be uniform in color, texture and appearance. All edges that terminate at walls, floor discontinuities, and other embedded items shall be sharp, uniform, and cosmetically acceptable with no thick or ragged edge. The Contractor shall work out an acceptable masking technique to ensure the acceptable finish of all edges.

### 1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For resinous flooring to include in maintenance manuals.

### 1.7 QUALITY ASSURANCE

- A. Source Limitations: Obtain primary acrylic floor coating materials, including primers, resins, hardening agents, and topcoats, through one source from a single manufacturer. Provide secondary materials, including patching and fill material, joint sealant, and repair materials from manufacturer or from source recommended by manufacturer.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to conduct field observations of permanent work at progress completions of 25, 50, and 75 percent. Submit written observation report to Contractor, Installer, Architect, and Owner within three calendar days of completion of each field observation.
- C. General Contractor: Trained in the same certification as the qualified installer.
- D. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
  - 1. Engage an installer who is certified in writing by resinous flooring manufacturer as qualified to apply resinous flooring systems indicated.
  - 2. Installer must have a minimum of 5 years of experience installing the specified flooring system and submit project references from projects of similar scale, scope and magnitude.
  - 3. Pre-qualification requirements: Each bidder for this project shall be prequalified as a Master Level Contractor by the material manufacturer at the time of bid submittal. Acceptability will include judgement on equipment, history, and financial strength. In no case will Master Builders Solutions permit the application of any of its materials by untrained, non-approved Contractor or personnel.
  - 4. Each approved installer shall have been trained by the Manufacturer in all phases of surface preparation and application of the specified flooring system(s).
  - 5. Each approved installer must have five years experience of installing the specified flooring system and submit a list of five projects/references as a prequalification requirement. All of the five projects/references must be with the specified product type, equal size, quantity, and magnitude to this project as a prequalification requirement. Owner and architect will personally inspect the projects/references to accept or reject any of the Contractors prior to bid time as a prequalification requirement.

- E. Manufacturer must document a minimum 10 year history of manufacturing MMA products for the Project type. Manufacturer must document a minimum of 10 projects with similar scale, scope and magnitude.
- F. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Apply full-thickness mockups on 200 sq. ft. floor area selected by Architect.
    - a. Include 96-inch length of integral cove base with inside and outside corner.
  - 2. Simulate finished lighting conditions for Architect's review of mockups.
  - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- G. Field Sample: Apply 200 square foot (18.5 square meters) of acrylic floor coating to an area selected by the Architect to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.
  - 1. If Architect determines that field sample does not meet requirements, reapply coating until the field sample is accepted.
  - 2. Simulate finished lighting conditions for Architect's review of mockups.
  - 3. Keep the accepted field sample undisturbed during construction as a standard for judging completed Work. The undamaged field sample may be incorporated into the Work.
  - 4. The Owner shall determine from field samples the size and amount of non-slip aggregate required to provide the slip resistance prescribed by the Owner's insurance and legal counsels.
- H. Bond Testing: Surface preparation shall be evaluated by conducting Bond Tests (for the approved system) at the site prior to application of the flooring systems. Bond testing shall be performed in the presence of the manufacturer. At least two bond tests shall be performed in each day. Locations of bond tests shall be documented on the record drawing and cross-referenced to the actual bond test specimen. Maintain test specimens at project office until completion of Work. Proceed only after acceptance of test results by manufacturer.

## **1.8 REFERENCE STANDARDS**

- A. ACI 308 – Standard Practice for Curing Concrete.
- B. ACI 302.1R-80 – Guide for Concrete Floor and Slab Construction.
- C. US Department of Agriculture (USDA) and Food and Drug Administration (FDA) authorization for incidental contact with foodstuffs.

## **1.9 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

## **1.10 FIELD CONDITIONS**

- A. Environmental Limitations: Comply with written installation recommendations for substrate temperature, ambient temperature, moisture, ventilation, and other conditions provided by resinous flooring manufacturer, but not less than 20 deg F or more than 90 deg F and not less than 20 or more than 90 percent relative humidity, for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

1. In all cases the temperature must be 5 degrees or more above dew point during application and for the length of time required by manufacturer.
- B. Concrete shall be moisture cured for a minimum of 7 days at 70 degrees F. The concrete must be fully cured for a minimum of 28 days prior to application of the coating system pending moisture testing.
  1. Surface contaminants such as curing agents, membranes, or other bond breakers should not be used.
  2. Concrete shall have a "broom finish" or a "steel trowel" finish in accordance with MMA manufacturer's instructions.
  3. Any drains should be placed at the level of the concrete grade rather than the finish grade of the topping as instructed by manufacturer's literature.
- C. Concrete shall have a moisture emission rate of no more than 5lbs. per 1000 sq.ft. per 24 hour period as determined by the Owner or his representatives.
- D. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring installation.
- E. Close spaces to traffic during resinous flooring installation and for 24 hours after installation unless manufacturer recommends a longer period.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Source Limitations: Obtain primary resinous flooring materials, including primers, resins, hardening agents, grouting coats, and topcoats, from single source from single manufacturer. Obtain secondary materials, including patching and fill material, joint sealant, and repair materials, of type and from manufacturer recommended in writing by manufacturer of primary materials.
  1. Acceptable Manufacturer: Master Builders Solutions Flooring, 32-2 Hamstead PI Pawleys Island SC 29585, 508-922-5769.

### **2.2 PERFORMANCE REQUIREMENTS**

- A. Verify flooring products comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Flammability: Self-extinguishing in accordance with ASTM D 635.
- C. Regulatory Requirements: Comply with applicable provisions in The Department of Justice's 2010 ADAAG Standards, and ICC A117.1 and other local accessibility standards including tests for slip resistance of flooring. Coordinate with Owner, Owner's insurance carrier, and Owner's legal counsel for additional slip resistance requirements.

### **2.3 RESINOUS FLOORING**

- A. Resinous Flooring System: Abrasion-, impact-, and chemical-resistant, aggregate-filled, resin-based monolithic floor surfacing designed to produce a seamless floor and integral cove base.
- B. Basis-of-Design Products: Subject to compliance with requirements, provide only MMA products per specification and per color indicated on the Finish Legend or equal products by the following manufacturers. Available manufacturers offering products that may be incorporated into the Work include:
  1. Sika, Master Builders Solutions Performance Sika Flooring, (Basis of Design Manufacturer).
  2. Duraflex. Inc.

3. Res-Tek.
- C. System Characteristics Seamless Flooring System (MasterTop 1853 SRS CQ):
  1. Color and Pattern: As indicated on the Finish Legend on Drawing.
  2. UV resistance.
  3. Fully cures in one hour.
- D. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested in accordance with test methods indicated:
  1. Compressive Strength: 6000 psi minimum in accordance with ASTM C 579.
  2. Tensile Strength: 1050 psi minimum in accordance with ASTM D 638.
  3. Water Absorption: 0.05 percent maximum in accordance with ASTM D 570.
  4. Hardness: 70, Shore D in accordance with ASTM D 2240.
- E. System Chemical Resistance: Test specimens of cured resinous flooring system are unaffected when tested in accordance with ASTM D 543, Procedure A, for immersion or ASTM C 267 for immersion in the following reagents for no fewer than seven days:
  1. Clorox.
  2. Cola.
  3. Ketchup.
  4. Mustard.
  5. Urine.
  6. Vinegar.
- F. Primer: Type recommended in writing by resinous flooring manufacturer for substrate and resinous flooring system indicated.
  1. Formulation Description: 100 percent solids.
- G. Body Coats:
  1. Resin: Methyl methacrylate.
  2. Formulation Description: 100 percent solids.
  3. Filler: Manufacturer's standard filler component.
  4. Type: Pigmented.
  5. Installation Method: Self-leveling slurry with broadcast aggregates.
    - a. Cove Bases: Manufacturer's non-self-leveling formula and filler to create cove bases.
  6. Number of Coats: One.
  7. Thickness of Coats: 1/8 inch.
  8. Aggregates: Colored quartz (ceramic-coated silica).
- H. Topcoats: Sealing or finish coats.
  1. Resin: Methyl methacrylate.
  2. Formulation Description: 100 percent solids.
  3. Type: Clear.
  4. Antimicrobial Additive: Manufacturer's standard.
  5. Non-slip Aggregate:
    - a. Glass beads (25-45 sieve) as required to meet field sample testing.
  6. Number of Coats: Two, or more as required by approved finish texture.

## 2.4 MATERIALS

- A. Basis of Design System: Mastertop 1853 SRS CQ Methyl- Methacrylate (MMA) Acrylic Resin Self-Leveling Flooring System with Decorative Quartz): (Anti-Slip, 2 top coat and 4" Integral Cove Base).
  1. Saturating Primer/Sealer Coat: MasterTop SRS 41P.
  2. Coving (if required: MasterTop SRS 61BC (with appropriate fillers).
  3. Overlay: MasterTop SRS 61BC.
  4. Patching /Slopping (if required): MasterTop 1817 SRS PC Polymer Concrete.

5. Topping: MasterTop SRS 61BC Self-Leveing, consisting of MasterTop SRS 61BC resin and MasterTop SRS 100SL with Colored Quartz broadcast.
6. Top Coat: MasterTop SRS 71TC Colorless Topcoat Resin.
7. SRS Colored Quartz for broadcasting: Chosen by Owner.

## 2.5 (BASIS OF DESIGN) PERFORMANCE CRITERIA (1853 SRS CQ)

- A. MasterTop SRS 41P Primer/Sealer
  1. Percentage Reactive Resin: 100 percent.
  2. Percentage Solids: 100 percent.
  3. Water Absorption, Wt percent (ASTM D 570): less than 0.06.
  4. Tensile Strength, psi (ASTM D 638) 3550.
  5. Tensile Modulus, psi X 10 to the 5th (ASTM D 638): 2.1.
  6. Coefficient of Thermal Expansion, in./in./deg.F (ASTM D 696): .000035.
  7. Electrical Resistivity (ASTM D 257):
    - a. Volume Resistance, ohm-cm: 10 to the 15th.
    - b. Surface Resistance, ohm: 10 to the 12th.
- B. MasterTop 1817 SRS PC Polymer Concrete
  1. Percentage Reactive Resin: 100 percent.
  2. Water Absorption, Wt percent (ASTM D 570): 0.02.
  3. Tensile Strength, psi (ASTM D 638): 1,200.
  4. Tensile Modulus, psi X 10 to the 5th (ASTM D 638): 1.2.
  5. Compressive Strength, psi (ASTM C 39): 7,000.
- C. MasterTop SRS 61BC Topping
  1. Percentage Reactive Resin: 100 percent.
  2. Percentage Solids: 100 percent.
  3. Water Absorption, Wt percent (ASTM D 570): 0.04.
  4. Compressive Strength, psi (ASTM C 109): 6,000-8,000.
  5. Tensile Strength, psi (ASTM D 638): 1,050.
  6. Tensile Modulus, psi (ASTM D 638): 720,000.
  7. Electrical Resistivity (ASTM D 25):
    - a. Volume Resistance, ohm-cm: 10 to the 14th.
  8. Compressive Strength: 8,000 psi.
- D. MasterTop SRS 71TC Colorless Topcoat Resin
  1. Percentage Reactive Resin: 100 percent.
  2. Percentage Solids: 100 percent
  3. Water Absorption, Wt. percent (ASTM D 570): 0.04.
  4. Tensile Strength, psi (ASM 638): 3,555.
  5. Tensile Modulus, psi (ASTM D 638): 210,000.
  6. Electrical Resistivity (ASTM D 257):
    - a. Volume Resistance, ohm-cm: 10 to the 15th.
    - b. Surface Resistance: ohm: 10 to the 12th.

## 2.6 INSTALLATION AND APPLICATION CRITERIA

- A. Pot Life at 68 degrees F: Follow manufacturer's instructions.
- B. Cure Time at 68 degrees F: Follow manufacturer's instructions.
- C. Recoat Time at 68 degrees F: Follow manufacturer's instructions.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, with Product Representative and Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
  - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resinous flooring systems.
- B. Proceed with installation only after unsatisfactory conditions have been corrected and proper preparation has been confirmed and signed off by product representative.

### 3.2 PREPARATION

- A. Prepare and clean substrates in accordance with resinous flooring manufacturer's written instructions, manufactures standard details and this specification for substrate indicated to ensure adhesion. Provide clean, dry substrate for resinous flooring application. No surfaces should contain any remnants of contaminates that are known to interfere with new flooring material adhesion. Provide manufacturers written approval of preparation of substrate prior to installation.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
  - 1. Roughen concrete substrates as follows:
    - a. Shot-blast surfaces to CSP of 4-5 with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
  - 2. Repair damaged and deteriorated concrete in accordance with resinous flooring manufacturer's written instructions.
  - 3. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
    - a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 5 lb of water/1000 sq. ft. in 24 hours for MMA systems.
    - b. Relative Humidity Test: Using in-situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent (90 percent acceptable for MMA systems only) relative humidity level measurement.
  - 4. Alkalinity and Adhesion Testing: Perform tests recommended in writing by resinous flooring manufacturer. Proceed with installation only after substrate alkalinity is not less than 6 or more than 8 pH unless otherwise recommended in writing by flooring manufacturer.
- C. Bond Testing: Manufacturer's recommended procedures for bond testing shall be performed at strategic locations prior to any placement of new flooring materials. Inform Owner/Architect if bond tests are not successful to manufacturer's standards.
- D. Patching and Filling: Use patching and fill material to fill holes and depressions in substrates in accordance with manufacturer's written instructions.
  - 1. Control Joint Treatment: Treat control joints and other nonmoving substrate cracks to prevent cracks from reflecting through resinous flooring in accordance with manufacturer's written instructions.
- E. Resinous Materials: Mix components and prepare materials in accordance with resinous flooring manufacturer's written instructions.

### 3.3 INSTALLATION

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F 2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F 1869 (Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.
- B. Apply components of resinous flooring system in accordance with manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness specified.
  - 1. Coordinate installation of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.
  - 2. Cure resinous flooring components in accordance with manufacturer's written instructions. Prevent contamination during installation and curing processes.
  - 3. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.
- C. Primer: Apply primer over prepared substrate at spreading rate recommended in writing by manufacturer.
- D. Integral Cove Base Accessories: Adhesively install precast accessories before applying flooring coats and in accordance with manufacturer's written instructions.
- E. Field-Formed Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring coats. Apply in accordance with manufacturer's written instructions and details, including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
  - 1. Integral Cove Base: 4 inches high or as indicated on Drawings.
- F. Self-Leveling Body Coats: Apply self-leveling slurry body coats in thickness specified for flooring system.
  - 1. Aggregates: Broadcast aggregates at rate recommended in writing by manufacturer. After resin is cured, remove excess aggregates to provide surface texture indicated.
- G. Non-Slip Aggregates: Broadcast aggregates at rate recommended by manufacturer and, after resin is cured, remove excess aggregates to provide surface texture indicated. Slip resistant aggregate is not required on cove bases.
- H. Topcoats: Apply topcoats in number indicated for flooring system specified, at spreading rates recommended in writing by manufacturer, and to produce wearing surface specified.

### **3.4 FIELD QUALITY CONTROL**

- A. Manufacturer's Technical Representative: Engage an authorized technical representative of manufacturer to observe and inspect preparation and installation on site.
- B. Bond Test: X. Second pour. Comply with ASTM D7234 and ASTM D4541.
- C. Material Sampling: Owner may, at any time and any number of times during resinous flooring installation, require material samples for testing for compliance with requirements.
  - 1. Owner will engage an independent testing agency to take samples of materials being used. Material samples will be taken, identified, sealed, and certified in presence of Contractor.
  - 2. Testing agency will test samples for compliance with requirements, using applicable referenced testing procedures or, if not referenced, using testing procedures listed in manufacturer's product data.
  - 3. If test results show applied materials do not comply with specified requirements, pay for testing, remove noncomplying materials, prepare surfaces coated with unacceptable materials, and reinstall flooring materials to comply with requirements.

- D. Core Sampling: At Owner's direction and at locations designated by Owner, take one core sample per 1000 sq. ft. of resinous flooring, or portion of, to verify thickness. For each sample that fails to comply with requirements, take two additional samples. Repair damage caused by coring. Correct deficiencies in installed flooring as indicated by testing.

### **3.5 PROTECTION**

- A. Protect resinous flooring from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by resinous flooring manufacturer.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 68 00 - CARPETING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Carpet Tile.
- B. Related Requirements:
  - 1. Section 01 32 00 "Construction Progress Documentation" for long lead and scheduling requirements.
  - 2. Section 09 30 13 "Tile" for transition strips between tile and carpet.
  - 3. Section 09 65 13 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet.
- C. Carpet could have a long lead time. Contractor is strongly urged to address this situation at the beginning of the Project and to incorporate the time line into the Project Schedule.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to carpet installation including, but not limited to, the following:
    - a. Review delivery, storage, and handling procedures.
    - b. Review ambient conditions and ventilation procedures.
    - c. Review subfloor preparation procedures.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For the following, including installation recommendations for each type of substrate:
  - 1. Carpet: For each type indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
- B. Shop Drawings: Show the following:
  - 1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
  - 2. Carpet type, color, and dye lot.
  - 3. Locations where dye lot changes occur.
  - 4. Seam locations, types, and methods.
  - 5. Type of subfloor.
  - 6. Type of installation.
  - 7. Pattern type, repeat size, location, direction, and starting point.
  - 8. Pile direction.
  - 9. Type, color, and location of edge, transition, and other accessory strips.
  - 10. Transition details to other flooring materials.
- C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Finish Legend on Drawings.
  - 1. Carpet: (1) Full size tile (24 x 24, 18 x 36, etc.).
  - 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch-long Samples.
  - 3. Carpet Seam: 6-inch Sample.
  - 4. Mitered Carpet Border Seam: 12-inch-square Sample. Show carpet pattern alignment.

- D. Product Schedule: For carpet. Use same designations indicated on Drawings.

#### **1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For qualified Installer.
- B. Product Test Reports: For carpet, for tests performed by a qualified testing agency.
- C. Sample Warranties: For special warranties.

#### **1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For carpet to include in maintenance manuals. Include the following:
  - 1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
  - 2. Precautions for cleaning materials and methods that could be detrimental to carpet.

#### **1.6 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

#### **1.7 QUALITY ASSURANCE**

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
  - 1. Build mockups at locations and in sizes shown on Drawings.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Comply with CRI 104.

#### **1.9 FIELD CONDITIONS**

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.
- B. Environmental Limitations: Do not deliver or install carpet until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.
- C. Do not install carpet over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer.
- D. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

#### **1.10 WARRANTY**

- A. Special Warranty for Carpet: Manufacturer agrees to repair or replace components of carpet installation that fail in materials or workmanship within specified warranty period.
  - 1. Warranty does not include deterioration or failure of carpet due to unusual traffic, failure of substrate, vandalism, or abuse.

2. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, loss of tuft bind strength, excess static discharge, and delamination.
3. Warranty Period: 10 years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Basis-of-Design Product (CA1, CA2, CA4, CA5, CA8): Refer to the Finish Legend.

### **2.2 MATERIALS**

- A. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height requires to protect exposed edge of carpet, and of maximum lengths to minimize running joints.
  1. Basis of Design: Schluter Systems LP.
  2. Provide all corners and connectors as required for a complete and detailed finished installation.

### **2.3 INSTALLATION ACCESSORIES**

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet manufacturer.
- B. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended or provided by carpet manufacturer.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance. Examine carpet for type, color, pattern, and potential defects.
- B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
  1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet manufacturer.
  2. Subfloor finishes comply with requirements specified in Section 03 30 00 "Cast-in-Place Concrete" for slabs receiving carpet.
  3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. General: Comply with CRI 104, Section 7.3, "Site Conditions; Floor Preparation," and with carpet manufacturer's written installation instructions for preparing substrates.
- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks,

holes and depressions 3mm (1/8 inch wide or wider, and protrusions more than 0.7mm (1/32 inch, unless more stringent requirements are required by manufacturer's written instructions.

- C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet manufacturer.
- D. Broom and vacuum clean substrates to be covered immediately before installing carpet.

### 3.3 INSTALLATION

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F 2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F 1869 (Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.
- B. General: Comply with CRI 104 and carpet manufacturer's written installation instructions for the following:
  - 1. Direct-Glue-Down Installation: Comply with CRI 104, Section 9, "Direct Glue-Down Installation."
- C. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.
- D. Do not bridge building expansion joints with carpet.
- E. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
- F. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
- G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.
- H. Maintain dye lot integrity. Do not mix dye lots in same area.
- I. Install carpet with pattern running in one direction for all rooms within each building.

### 3.4 CLEANING AND PROTECTING

- A. Perform the following operations immediately after installing carpet:
  - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
  - 2. Remove yarns that protrude from carpet surface.
  - 3. Vacuum carpet using commercial machine with face-beater element.
- B. Protect installed carpet to comply with CRI 104, Section 16, "Protecting Indoor Installations."
- C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

**SECTION 09 69 00 - ACCESS FLOORING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Low Profile Access Flooring structure.
  - 2. Access-flooring panels.
  - 3. Cementitious-core steel panel access flooring.
  - 4. Wood-core steel panel access flooring.
  - 5. Unfilled steel panel access flooring.
- B. Related Requirements:
  - 1. See Finish Legend for finish flooring. Flooring to be applied in the factory by the access flooring manufacturer.
  - 2. Section 23 36 00 "Air Terminal Units" for variable-air-volume diffusers.
  - 3. Section 26 05 26 "Grounding and Bonding for Electrical Systems" for connection to ground of access-flooring understructure.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review connections between access flooring and mechanical and electrical systems.
  - 2. Review requirements related to sealing the plenum.
  - 3. Review procedures for keeping underfloor space clean.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For access flooring:
  - 1. Include layout of access flooring and relationship to adjoining Work based on field-verified dimensions.
  - 2. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructures.
- C. Samples: For the following products:
  - 1. Floor Coverings: Full-size units for each color and texture specified.
  - 2. Exposed Metal Accessories: Approximately 10 inches in length.
  - 3. One full-size floor panel, pedestal, and understructure unit for each type of access flooring required.
- D. Samples for Verification: For the following products:
  - 1. Floor Coverings: Full-size units.
  - 2. Exposed Metal Accessories: Approximately 10 inches in length.
  - 3. One full-size floor panel, pedestal, and understructure unit for each type of access flooring required.
- E. Delegated Design Submittals: For seismic design of access flooring.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings:
  - 1. Coordinate mechanical and electrical work in underfloor cavity to prevent interference with access flooring.
  - 2. Mark pedestal locations on subfloor to enable mechanical and electrical work to proceed without interfering with access-flooring pedestals installed after mechanical and electrical work.
- B. Qualification Data: For Installer.
- C. Product Certificates: For each type of access flooring.
- D. Product Test Reports: For each type of access-flooring material and floor covering, performed by a qualified testing agency.
- E. Seismic Design Calculations: For seismic design of access flooring, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- F. Preconstruction Test Reports: For preconstruction adhesive field test.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Panels: 10.
  - 2. Gratings: 5.
  - 3. Pedestals: 8.
  - 4. Stringers: 4.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Build mockup of typical access flooring, as shown on Drawings. Size to be an area no fewer than five floor panels in length by five floor panels in width.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.7 PRECONSTRUCTION TESTING**

- A. Preconstruction Testing Service: Owner will engage a qualified testing agency to perform preconstruction testing on field mockups.
  - 1. Use personnel, materials, and methods of construction that will be used at Project site.
  - 2. Notify Architect seven days in advance of the dates and times when laboratory mockups will be tested.
- B. Preconstruction Adhesive Field Test: Before installing pedestals, field test their adhesion to subfloor surfaces by doing the following:
  - 1. In areas representative of each subfloor surface, set typical pedestal assemblies in same adhesive, and use methods required for the completed Work.
  - 2. Allow test installation to cure for manufacturer's recommended cure time, with a pressure of 25 lbf applied vertically to pedestals during this period.

3. After curing, apply lateral load against a straight steel bar inserted 2 inches into pedestal stems. Measure the force needed to cause adhesive failure of pedestal base.
4. Remove and discard failed pedestals, and clean pedestals of adhered residue.
5. Proceed with installation only after tests show compliance with performance requirement specified for pedestals' capability to resist overturning moment.

## 1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not install access flooring until spaces are enclosed, subfloor has been sealed, ambient temperature is between 50 and 90 deg F, and relative humidity is not less than 20 and not more than 70 percent.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design access flooring for seismic performance, including loads imposed on the access flooring by items and equipment installed on the access flooring.
- B. Seismic Performance: Access flooring to withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- C. Structural Performance: Provide access flooring capable of complying with the following performance requirements according to testing procedures in CISCA's "Recommended Test Procedures for Access Floors":
  1. Concentrated Loads: 1000 lbf with the following deflection and permanent set:
    - a. Top-Surface Deflection: 0.10 inch.
    - b. Permanent Set: 0.010 inch.
  2. Ultimate Loads: 2000 lbf.
  3. Rolling Loads: With local or overall deformation not to exceed 0.040 inch.
    - a. CISCA Wheel 1: 10 passes at 800 lbf.
    - b. CISCA Wheel 2: 10,000 passes at 800 lbf.
  4. Stringer Load Test: 225 lbf at center of span with a permanent set not to exceed 0.010 inch.
  5. Pedestal Axial Load Test: 5000 lbf.
  6. Pedestal-Overturning-Moment Test: 1000 lbf x inches.
  7. Uniform Load Test: 00 lbf/sq. ft. with a maximum top-surface deflection not to exceed 0.040 inch and a permanent set not to exceed 0.010 inch.
  8. Drop Impact Load Test: 125 lb.
- D. Fire Performance:
  1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame-Spread Index: 25 or less.
    - b. Smoke-Developed Index: 450 or less.
  2. Combustion Characteristics: ASTM E 136.
- E. Low Profile system:
  1. Each unit has mini pedestals on the underside, which distributes the load from the floor above evenly without instability across unit under rolling or shifting loads.
  2. Profile height: 2.25 inches minimum to 2.75 inches maximum:
    - a. Install self levelling cementitious screed in the 3 inch concrete floor recess to bring the installed system up to the required elevation and provide a leveled substrate.
- F. Static Resistance Requirements for flooring:
  1. Anti-static
  2. Static Dissipative

3. Static Conductive.

## 2.2 MANUFACTURERS

- A. Source Limitations: Obtain access-flooring system from single source from single manufacturer.

## 2.3 LOW PROFILE FLOOR SYSTEM

- A. Source Limitations: Obtain access-flooring system from single source from single manufacturer.
- B. Manufacturer: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
  1. DIRTT
  2. FreeAxez Manufacturing LLC, 1810 Underwood Blvd, (856) 764-0400, (856) 764-0700 fax, Delran, NJ 08075 System Designation: FreeAxez 70
  3. POWERFLOR USA, Inc., 1406 Waterford Drive – Bel Air, Maryland 21015 – Phone: (410) 893-0035 / email: powerflorusa@aol.com
  4. Tate Access Floors, Inc.
  5. Approved equal.
- C. Floor Panels, General: Provide low-profile access floor system consisting of a series of modular, removable, interchangeable steel or poly base units, corner plates, channel plates, border units and accessories that form an accessible under floor cavity to accommodate electrical, voice and data services. Modular panels shall be accessible and interchangeable with other field panels without disturbing adjacent panels or understructure.
  1. Size: Nominal 24 by 24 inches or 50cm by 50cm.
  2. Attachment to Understructure: By gravity.
- D. The panels are constructed with a modular matrix which provides high strength while remaining light and easy to handle. The panels are easy to customize by cutting out sections to fit around obstructions like columns, posts, walls and more, while retaining high structural integrity.
- E. Understructure: Low Profile (2.5 inch) multi pedestal system.
- F. Floor Panel Coverings: Refer to the Finish Legend, Finish Schedule and the Drawings.

## 2.4 ACCESS FLOOR PANELS

- A. Floor Panels, General: Provide modular panels interchangeable with other field panels without disturbing adjacent panels or understructure.
  1. Size: Nominal 24 by 24 inches.
  2. Attachment to Understructure: Bolted.
  3. One-to-One Carpet Tile: Fabricate panels to accept one-to-one carpet tile.
- B. Cementitious-Core Steel Panel Access Flooring: Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion using manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.
  1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. ASM Modular Systems, Inc.
    - b. Bergvik North America, Inc.
    - c. Camino Modular Systems, Inc.
    - d. Computer Environments, Inc.
    - e. Haworth, Inc.
    - f. Tate Access Floors, Inc.

- C. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
1. Base: Square or circular base with not less than 16 sq. in. of bearing area.
  2. Column: Of height required to bring finished floor to elevations indicated. Weld column to base plate.
  3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than 2 inches and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
  4. Head: Designed to support the floor panel indicated.
    - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
    - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- D. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.
1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.

## 2.5 WOOD-CORE STEEL PANEL ACCESS FLOORING

- A. Wood-Core Steel Panel Access Flooring: Fabricate panels with 1-inch-thick particleboard core laminated to top and bottom steel face sheets, and with a flame-spread index of 25 or less according to ASTM E 84. Provide core edges enclosed with upturned, die-formed, bottom-sheet edge or with perimeter steel channel welded to top sheet and welded or bonded to bottom sheet. Protect metal surfaces against corrosion by manufacturer's standard factory-applied finish.
1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. ASM Modular Systems, Inc.
    - b. Bergvik North America, Inc.
    - c. Camino Modular Systems, Inc.
    - d. Computer Environments, Inc.
    - e. Tate Access Floors, Inc.

## 2.6 UNFILLED STEEL PANEL ACCESS FLOORING

- A. Unfilled Steel Panel Access Flooring: Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion by manufacturer's standard factory-applied finish.
1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. ASM Modular Systems, Inc.
    - b. Bergvik North America, Inc.
    - c. Camino Modular Systems, Inc.
    - d. Computer Environments, Inc.
    - e. Tate Access Floors, Inc.
  2. Solid Panels: Flat, solid top surface.
- B. Perforated Panels: Perforated top surface with slots of number, spacing, and size standard with manufacturer to produce a nominal open area of 24 percent. Provide mechanical dampers with each panel unit.
1. Quantity: As shown on Drawings.

2. Finish: To match solid panels.
- C. Grates: Grating ribs arranged in manufacturer's standard pattern to produce a nominal open area of 50 percent. Provide mechanical dampers with each panel unit.
  1. Quantity: As shown on Drawings.
  2. Finish: To match solid panels.
- A. Exposed-Concrete-Surface Panels: Fabricated with bottom pan that is die formed from metallic-coated steel sheet and filled with lightweight concrete that is reinforced and bonded to pan by shear ties.
  1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Haworth, Inc.
    - b. Approved equal.
- B. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
  1. Base: Square or circular base with not less than 16 sq. in. of bearing area.
  2. Column: Of height required to bring finished floor to elevations indicated. Weld to base plate.
  3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than 2 inches and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
  4. Head: Designed to support the floor panel indicated.
    - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
    - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- C. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.
  1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.

## 2.7 FABRICATION

- A. Fabrication Tolerances:
  1. Size: Plus or minus 0.020 inch of required size.
  2. Squareness: Plus or minus 0.015 inch between diagonal measurements across top of panel.
  3. Flatness: Plus or minus 0.035 inch, measured on a diagonal on top of panel.
- B. Panel Markings: Clearly and permanently mark floor panels on their underside with panel type and concentrated-load rating.
- C. Bolted Panels: Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.
  1. Captive Fasteners: Provide fasteners held captive to panels.
- D. Cutouts: Fabricate cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with structural performance requirements.
  1. Number, Size, Shape, and Location: As indicated.
  2. Grommets: Where indicated, fit cutouts with manufacturer's standard grommets; or, if size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding with tapered top flange. Furnish removable covers for grommets.

3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.

## 2.8 ACCESSORIES

- A. Adhesives: Manufacturer's standard adhesive for bonding pedestal bases to subfloor.
- B. Post-Installed Anchors: For anchoring pedestal bases to subfloor, provide two post-installed expansion anchors made from carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (5 microns) for Class SC 1 (Mild), with the capability to sustain, without failure, a load equal to 1.5 times the loads imposed by pedestal-overturning moment on fasteners, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.
- C. Service Outlets: Standard UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:
  1. Structural Performance: Cover capable of supporting a [300-lbf] [800-lbf] [1000-lbf] concentrated load.
  2. Cover and Box Type: Hinged polycarbonate cover with opening for passage of cables when cover is closed and including frame and steel box or formed-steel plate for mounting electrical receptacles.
  3. Location: In center of panel quadrant unless otherwise indicated.
  4. Receptacles and Wiring:
    - a. Electrical receptacles and wiring for service outlets are specified elsewhere.
    - b. Equip each service outlet with power receptacles to comply with the following requirements:
      - 1) Type of Receptacle: Heavy-duty duplex, two-pole, three-wire grounding, 20 A, 125 V, NEMA WD 6, Configuration 5-20R unless otherwise indicated.
      - 2) Number of Receptacles for Outlet: [One] [Two] [Four].
      - 3) Factory Wired: For field hardwiring with armored cable, containing three insulated No. 12 AWG solid-copper conductors, terminated with a 6-inch-long pigtail.
      - 4) Power-in Connectors: Built into outlet housing, of type to fit power-in and power-out connectors of branch-circuit cables supplied with building electrical system.
- D. Floor Grilles: Standard load-bearing grilles formed from aluminum to produce removable one-piece unit precisely fitted in factory-prepared openings of standard field panels, with adjustable/removable dampers and complying with the following requirements:
  1. Air-Distribution Characteristics: 468 cfm at 0.10-inch wg static pressure.
  2. Structural Performance: Capable of supporting a 1000-lbf concentrated load.
  3. Fire-Test-Response Characteristics: Classified 94V-0 according to UL 94.
- E. Plenum-Wall Brush Grommets: Self-sealing cable brush grommet with 3-inch round usable area for passage of power and signal cables through plenum walls. Provide aluminum frame with passageway of interwoven nylon filaments and intermediate layer of EPDM. Provide units with plastic cable tray for support of cables and protection of wallboard.
- F. Cavity Dividers: Provide manufacturer's standard metal dividers located where indicated to divide underfloor cavities.
- G. Fascia Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal closure plates with manufacturer's standard finish.
- H. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, with raised-disc or textured rubber or vinyl-tile floor coverings, and of same materials, performance, and construction requirements as access flooring.
- I. Steps: Provide steps of size and arrangement indicated with floor coverings to match access flooring. Apply nonslip aluminum nosings to treads unless otherwise indicated.

- J. Railings: Standard extruded-aluminum railings at ramps and open-sided perimeter of access flooring where indicated. Include handrail, intermediate rails, posts, brackets, end caps, wall returns, wall and floor flanges, plates, and anchorages where required.
  - 1. Provide railings that comply with structural performance requirements specified in Section 05 52 13 "Pipe and Tube Railings."
- K. Panel Lifting Device: Panel manufacturer's standard portable lifting device for each type of panel required for each computer room.
- L. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates, with Installer and manufacturer's authorized representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
  - 1. Verify that substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of conditions and deleterious substances that might interfere with attachment of pedestals.
  - 2. Verify that concrete floor sealer and finish have been applied and cured.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches.
- B. Locate each pedestal, complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

#### **3.3 INSTALLATION**

- A. Contractor is required to achieve the specified concrete moisture content prior to installation of all flooring materials or use a flooring manufacture approved moisture barrier prior to installation of all flooring products. Contractor shall provide certified moisture testing results per ASTM F 2170 (Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes) in new construction or ASTM F 1869 (Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride) in renovations to Architect and Owner prior to floor installation. Acceptable moisture content of concrete subfloor shall be within approved manufacture limits or lower prior to installation.
- B. Install access flooring and accessories under supervision of access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.
- C. Adhesive Attachment of Pedestals: Set pedestals in adhesive, according to access-flooring manufacturer's written instructions, to provide full bearing of pedestal base on subfloor; and as required to meet seismic design requirements.
- D. Mechanical Attachment of Pedestals: Attach pedestals to subfloor with post-installed mechanical anchors as required to meet seismic design requirements.
- E. Adjust pedestals so installed panels are flat, level, and at the proper height.

- F. Stringer Systems: Secure stringers to pedestal heads according to access-flooring manufacturer's written instructions.
- G. Install flooring panels securely in place, leaving them properly seated with panel edges flush. Do not force panels into place.
- H. Scribe perimeter panels to provide a close fit, with adjoining construction having no voids greater than 1/8 inch where panels abut vertical surfaces.
  - 1. To prevent dusting, seal cut edges of steel-encapsulated, wood-core panels with sealer recommended in writing by panel manufacturer.
- I. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under installed access flooring.
- J. Grounded Access Flooring: Ground access flooring as recommended by manufacturer and as needed to comply with performance requirements for electrical resistance of floor coverings.
  - 1. Panel-to-Understructure Resistance: Not more than 10 ohms as measured without floor coverings.
- K. Underfloor Dividers: Scribe and install underfloor-cavity dividers to closely fit against subfloor surfaces, and seal with mastic.
- L. Closures: Scribe closures to closely fit against subfloor and adjacent finished-floor surfaces. Set in mastic and seal to maintain plenum effect within underfloor cavity.
- M. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area as installation of floor panels proceeds.
- N. Seal underfloor air cavities at construction seams, penetrations, and perimeter to control air leakage, according to manufacturer's written instructions.
- O. Install access flooring without change in elevation between adjacent panels and within the following tolerances:
  - 1. Plus or minus 1/16 inch in any 10-foot distance.
  - 2. Plus or minus 1/8 inch from a level plane over entire access flooring area.

### 3.4 PROTECTION

- A. Prohibit traffic on access flooring for 24 hours and removal of floor panels for 72 hours after installation, to allow pedestal adhesive to set.
- B. After completing installation, vacuum access flooring and cover with continuous sheets of reinforced paper or plastic. Maintain protective covering until time of Substantial Completion.
- C. Replace access-flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 72 00 - WALL COVERINGS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Vinyl wall covering.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include data on physical characteristics, durability, fade resistance, and fire-test-response characteristics.
- B. Shop Drawings: Show location and extent of each wall-covering type. Indicate pattern placement seams and termination points.
- C. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36 inches long in size.
  - 1. Wall-Covering Sample: From same production run to be used for the Work, with specified treatments applied.
    - a. Show complete pattern repeat.
    - b. Mark top and face of fabric.
- D. Samples for Verification: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by 36 inches long in size.
  - 1. Wall-Covering Sample: From same production run to be used for the Work, with specified treatments applied.
- E. Product Schedule: For wall coverings. Use same designations indicated on Drawings.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Product Test Reports: For each wall covering, for tests performed by a qualified testing agency.

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For wall coverings to include in maintenance manuals.

**1.6 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials, from the same production run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Wall-Covering Materials: For each type, color, texture, and finish, full width by length to equal to 5 percent of amount installed.

**1.7 QUALITY ASSURANCE**

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for installation.

1. Build mockups for each type of wall covering on each substrate required. Comply with requirements in ASTM F 1141 for appearance shading characteristics.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and HVAC system is operating and maintaining ambient temperature and humidity conditions at levels intended for occupants after Project completion during the remainder of the construction period.
- B. Lighting: Do not install wall covering until lighting that matches conditions intended for occupants after Project completion is provided on the surfaces to receive wall covering.
- C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates in accordance with test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame-Spread Index: 75 or less.
    - b. Smoke-Developed Index: 450 or less.
  2. Fire-Growth Contribution: No flashover and heat and smoke release when tested in accordance with NFPA 286.

### 2.2 VINYL WALL COVERING

- A. Basis-of-Design Product (WC1 – WC15): Refer to the Finish Legend on Drawings.
- B. Description: See the Finish Legend for product details.
  1. Provide vinyl products in rolls from same production run and complying with the following:
    1. CFFA-W-101 for Type II, Medium -Duty products.
    2. ASTM F793/F793M for strippable wall coverings.
      - a. Category: II, Decorative with Medium Serviceability.
- C. Width: See Finish Legend.
- D. Backing: Per manufacturer's product guidelines.
- E. Repeat: Per manufacturer's product recommendations.
- F. Mildew Resistance: Rating of zero or 1 when tested in accordance with ASTM G 21.
- G. Colors, Textures, and Patterns: Match Architect's samples.

### 2.3 ACCESSORIES

- A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.
  - 1. Adhesive shall have a VOC content of 50 g/L or less.
- B. Primer/Sealer: Mildew resistant, complying with requirements in Section 09 91 23 "Interior Painting" and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.
- C. Seam Tape: As recommended in writing by wall-covering manufacturer.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation surfaces being true in plane and vertical and horizontal alignment, maximum moisture content, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, and mildew.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unbound coatings, cracks, and defects.
  - 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
  - 2. Plaster: Allow plaster to cure for at least 90 days. Neutralize areas of high alkalinity. Apply primer/sealer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
  - 3. Metals: If not factory primed, clean and apply metal primer as recommended in writing by metal-primer manufacturer and wall-covering manufacturer.
  - 4. Gypsum Board: Apply primer/sealer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
  - 5. Painted Surfaces:
    - a. Check for pigment bleeding. Apply primer/sealer to areas susceptible to pigment bleeding as recommended in writing by primer/sealer manufacturer.
    - b. Sand gloss, semigloss, and eggshell finishes with fine sandpaper.
- D. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.
- E. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

#### **3.3 INSTALLATION OF WALL COVERING**

- A. Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated.
- B. Cut wall-covering strips in roll number sequence. Change the roll numbers at partition breaks and corners.
- C. Install strips in same order as cut from roll.

1. For solid-color, even-texture, or random-match wall coverings, reverse every other strip.
- D. Install wall covering without lifted or curling edges and without visible shrinkage.
- E. Match pattern 72 inches above the finish floor.
- F. Install seams vertical and plumb at least 6 inches from outside corners and 6 inches from inside corners unless a change of pattern or color exists at corner. Horizontal seams are not permitted.
- G. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without overlaps or gaps between strips.
- H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.

### **3.4 CLEANING**

- A. Remove excess adhesive at seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended in writing by wall-covering manufacturer.
- C. Replace strips that cannot be cleaned.
- D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION

**SECTION 09 72 19 - GRAPHIC WALL COVERINGS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Vinyl wall covering.
- B. Related Sections:
  - 1. Section 04 20 00 "Unit Masonry" for masonry materials.
  - 2. Section 09 72 00 "Wall Coverings" for other types of wall coverings.
  - 3. Section 09 91 23 "Interior Painting" for paint products installed on wall coverings.
  - 4. Section 10 14 00 "Signage" for graphic artwork, digital requirements and printing requirements for custom wallcoverings specified in this Section.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include data on physical characteristics, durability, fade resistance, and fire-test-response characteristics.
- B. Shop Drawings: Show location and extent of each wall-covering type. Indicate pattern placement (print proof), seams and termination points.
- C. Samples: For each type of wall covering and for each color, pattern, backing, texture, and finish specified, full width by 36-inch- long in size.
  - 1. Print Proof: Refer to Signage Section for printing requirements for custom artwork.
- D. Product Schedule: For wall coverings. Use same designations indicated on Drawings.
  - 1. Show roll identification on schedule.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Product Test Reports: For each wall covering, for tests performed by a qualified testing agency.

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For wall coverings to include in maintenance manuals.

**1.6 FIELD CONDITIONS**

- A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at levels intended for occupants after Project completion during the remainder of the construction period.
- B. Lighting: Do not install wall covering until lighting that matches conditions intended for occupants after Project completion is provided on the surfaces to receive wall covering.
- C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame-Spread Index: 76 or less.
    - b. Smoke-Developed Index: 450 or less.
  - 2. Fire-Growth Contribution: No flashover and heat and smoke release according to NFPA 286.

**2.2 VINYL WALL COVERING**

- A. Basis-of-Design Product: Refer to the Finish Legend in the Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable product by one of the following:
  - 1. Koroseal Digital Surfaces.
  - 2. Dreamscape.
- B. Description: See Signage Detail Manual for product detail.
- C. Provide mildew-resistant products in rolls from same production run and complying with the following:
  - 1. FS CCC-W-408D and CCC-W-408-D for Type II, Medium-Duty products.
  - 2. ASTM F 793 for strippable wall coverings.
    - a. Category: II, Decorative with Medium Serviceability.
- D. Total Weight: , excluding coatings.
- E. Width: 21 oz. per linear yard 54 inches.
- F. Backing: Osnaburg fabric.
  - 1. Fiber Content: Polycotton.
  - 2. Basis of Design: Koroseal, Linen backing.
- G. Colors, Textures, and Patterns: Artwork to be provided by Architect.

**2.3 ACCESSORIES**

- A. Adhesive: Mildew-resistant, nonstaining, strippable adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.
- B. Primer/Sealer: Mildew resistant, complying with requirements in Section 09 91 23 "Interior Painting" for Level 5 finish and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.
- B. Field verify all wall locations that Level 5 finish standard have been met.

- C. Review Signage specification for field verification for wall size, templating and provision of digital templates.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.
- C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.
  - 1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
  - 2. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
  - 3. Painted Surfaces: Treat areas susceptible to pigment bleeding.
- D. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items. Wallcovering contractor to reinstall all hardware and hardware accessories that they remove.
- E. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

### **3.3 WALL-COVERING INSTALLATION**

- A. Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated.
- B. Install wallcovering in same order according to Signage Template.
- C. Install wall covering without lifted or curling edges and without visible shrinkage.
- D. Match pattern 72 inches above the finish floor.
- E. Install seams vertical and plumb at least 6 inches from outside corners and 6 inches from inside corners unless a change of pattern or color exists at corner. Horizontal seams are not permitted.
- F. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without overlaps or gaps between strips.
- G. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.
- H. Install metal corner guards according to 10 26 00 "Wall and Door Protection" section.

### **3.4 CLEANING**

- A. Remove excess adhesive at seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended in writing by wall-covering manufacturer.
- C. Replace strips that cannot be cleaned.
- D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 84 33 - SOUND-ABSORBING WALL UNITS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following:
  - 1. Sound-absorbing wall panels.
  - 2. Perforated sound-absorbing metal wall panels.
- B. Related Requirements:
  - 1. Section 09 72 00 "Wall Coverings" for adhesively applied textile wall coverings.

**1.2 DEFINITIONS**

- A. NRC: Noise Reduction Coefficient.
- B. SAA: Sound Absorption Average.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include fabric facing, panel edge, core material, and mounting indicated.
- B. Shop Drawings: For unit assembly and installation.
  - 1. Include plans, elevations, sections, and mounting devices and details.
  - 2. Include details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge profile and core materials.
  - 3. Include details at cutouts and penetrations for other work.
  - 4. Include direction of fabric weave and pattern matching.
- C. Samples for Initial Selection: For each type of fabric facing.
  - 1. Include Samples of hardware and accessories involving color or finish selection.
- D. Samples for Verification: For the following products:
  - 1. Fabric: Full-width by approximately 36-inch- long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
  - 2. Panel Edge: 12-inch-long Sample(s) showing each edge profile, corner, and finish.
  - 3. Core Material: 12-inch-square Sample at corner.
  - 4. Mounting Devices: Full-size Samples.
  - 5. Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Electrical outlets, switches, and thermostats.
  - 2. Items penetrating or covered by units including the following:
    - a. Air outlets and inlets.
    - b. Speakers.
    - c. Alarms.
    - d. Sprinklers.
  - 3. Show operation of hinged and sliding components covered by or adjacent to units.
- B. Product Certificates: For each type of unit.
- C. Sample Warranty: For manufacturer's special warranty.

**1.6 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each type of unit to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.

**1.7 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fabric: For each fabric, color, and pattern installed, provide length equal to 10 percent of amount installed, but no fewer than 10 sq. yd., full width of bolt.
  - 2. Mounting Devices: Full-size units equal to 5 percent of amount installed, but no fewer than five devices, including unopened adhesives.

**1.8 QUALITY ASSURANCE**

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials, fabrication, and installation.
  - 1. Build mockup of typical wall area. Include intersection of wall and ceiling, corners, and perimeters.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.9 DELIVERY, STORAGE, AND HANDLING**

- A. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

**1.10 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Lighting: Do not install units until a permanent level of lighting is provided on surfaces to receive the units.
- C. Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
- D. Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.

**1.11 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace units and components that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to the following:
    - a. Acoustical performance.
    - b. Fabric sagging, distorting, or releasing from panel edge.
    - c. Warping of core.
  - 2. Warranty Period: Two years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain wall units specified in this Section from single source from single manufacturer.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
  - 1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame-Spread Index: 76 or less.
    - b. Smoke-Developed Index: 450 or less.
  - 2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.
- B. Acoustic Performance: Sound absorption NRC of not less than 0.80 according to ASTM C 423 for Type A mounting according to ASTM E 795.

**2.3 SOUND-ABSORBING WALL UNITS (INTERNAL LAYERS)**

- A. Sound-Absorbing Wall Panel: Manufacturer's standard panel construction consisting of inorganic glass fibers with a thermosetting resin binder and formed into semi-rigid or rigid rectangular boards.
- B. Basis-of-Design Product: Refer to the Finish Legend in the Drawings. Subject to compliance with requirements, provide Owens Corning company, Type 703 Fiberglas Insulation Boards or comparable product by one of the following:
  - 1. Acoustical Solutions, Inc.
  - 2. Decoustics Limited; a Saint Gobain company.
  - 3. Panel Solutions, Inc.
  - 4. Tectum Inc.
- C. Panel Requirements:
  - 1. Panel Shape: Flat.
  - 2. Mounting: Back mounted with manufacturer's recommended standard attachment to substrate.
  - 3. Nominal Core Thickness: As indicated on Drawings.
  - 4. Panel Width: As indicated on Drawings.
  - 5. Panel Height: As indicated on Drawings.

**2.4 SOUND-ABSORBING WALL UNITS (EXTERNAL LAYERS; FINISHED FACES)**

- A. Sound-Absorbing Wall Panel: Refer to Finish Legend in the Drawings. Manufacturer's standard panel construction consisting of inorganic glass fibers with a thermosetting resin binder and formed into semi-rigid or rigid rectangular boards.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Owens Corning Company; SelectSound Black Acoustic Boards or comparable product approved by architect.:
  - 2. Panel Shape: Flat.
  - 3. Mounting: Back mounted with manufacturer's recommended standard attachment to substrate or internal layer, as specified.
    - a. Finish Color at Exposed Edges: Black or as selected by Architect from manufacturer's full range.
  - 4. Edge Profile: Square.
  - 5. Nominal Core Thickness: As indicated on Drawings.
  - 6. Panel Width: As indicated on Drawings.
  - 7. Panel Height: As indicated on Drawings.

**2.5 MATERIALS**

- A. Core Materials: Manufacturer's standard.
  - 1. Glass-Fiber Board: ASTM C 612; of type standard with manufacturer; nominal density of 6 to 7 lb/cu. ft., unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
- B. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:
  - 1. Construction adhesive: Manufacturer's standard recommendation.
  - 2. Metal Clips or Bar Hangers: Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

**2.6 FABRICATION**

- A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated.
- B. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
  - 1. Thickness.
  - 2. Edge straightness.
  - 3. Overall length and width.
  - 4. Squareness from corner to corner.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- C. Align fabric pattern and grain with adjacent units.

**3.3 INSTALLATION TOLERANCES**

- A. Variation from Plumb and Level: Plus or minus 1/16 inch in 48 inches, noncumulative.
- B. Variation of Joint Width: Not more than 1/16-inch variation from hairline in 48 inches, noncumulative.

**3.4 CLEANING**

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 84 36 - SOUND-ABSORBING CEILING UNITS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following: Sound-absorbing ceiling panels.

**1.2 DEFINITIONS**

- A. NRC: Noise Reduction Coefficient.
- B. SAA: Sound Absorption Average.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For unit assembly and installation.
  - 1. Include reflected ceiling plans, elevations, sections, and mounting devices and details.
  - 2. Include details at joints and corners; and details at ceiling intersections and intersections with walls. Indicate panel edge profile and core materials.
  - 3. Include direction of fabric weave and pattern matching.
- C. Samples: For the following products:
  - 1. Fabric: Full-width by approximately 36-inch- long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
  - 2. Panel Edge: 12-inch-long Sample(s) showing each edge profile, corner, and finish.
  - 3. Core Material: 12-inch-square Sample at corner.
  - 4. Mounting Devices: Full-size Samples.
  - 5. Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Electrical outlets.
  - 2. Suspended ceiling components above ceiling units.
  - 3. Structural members to which suspension devices will be attached.
  - 4. Items penetrating or covered by units including the following:
    - a. Lighting fixtures.
    - b. Air outlets and inlets.
    - c. Speakers.
    - d. Alarms.
    - e. Sprinklers.
    - f. Access panels.
  - 5. Show operation of hinged and sliding components covered by or adjacent to units.

- B. Product Certificates: For each type of unit.
- C. Sample Warranty: For manufacturer's special warranty.

#### **1.6 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each type of unit to include in maintenance manuals. Include fabric manufacturer's written cleaning and stain-removal instructions.

#### **1.7 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Panels: For each fabric, color, and pattern installed, furnish length equal to 10 percent of amount installed, but no fewer than 10 sq. yd., full width of bolt.
  - 2. Mounting Devices: Full-size units equal to 5 percent of amount installed, but no fewer than five devices.

#### **1.8 QUALITY ASSURANCE**

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials, fabrication, and installation.
  - 1. Build mockup of typical ceiling area 96 inches wide by full width by truss spacing. Include intersection of wall and ceiling, corners, and perimeters.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### **1.9 DELIVERY, STORAGE, AND HANDLING**

- A. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

#### **1.10 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Lighting: Do not install units until a permanent level of lighting is provided on surfaces to receive the units.
- C. Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.
- D. Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.

**1.11 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace units and components that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Acoustical performance.
    - b. Fabric sagging, distorting, or releasing from panel edge.
    - c. Warping of core.
  - 2. Warranty Period: Two years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain ceiling units specified in this Section from single source from single manufacturer.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
  - 1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Class A.
    - b. Flame-Spread Index: 25 or less.
    - c. Smoke-Developed Index: 50 or less.
  - 2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 286.

**2.3 SOUND-ABSORBING CEILING UNITS**

- A. Sound-Absorbing Lapedary Ceiling Panel: Manufacturer's standard panel construction consisting of facing material wrapping over core and bonded at ends to stretcher bars for uniformly draped attachment to structure.
  - 1. Basis of Design Manufacturers: Subject to compliance with requirements, provide MBI Products model 4000S-2065-S or an equivalent product from one of the following:
    - a. Acoustical Panel Systems (APS, Inc.).
    - b. Acoustical Solutions, Inc.
    - c. Armstrong World Industries.
    - d. AVL Systems, Inc.
    - e. Benton Brothers Solutions, Inc.
    - f. Decoustics Limited; a Saint Gobain company.
    - g. Golterman & Sabo.
    - h. MBI Products Company, Inc.
    - i. Pinta Acoustic, Inc.
    - j. Rockfon (Roxul Inc.).
    - k. Sound Concepts Canada, Inc.
    - l. Sound Management Group LLC.
    - m. Wall Technology, Inc.; an Owens Corning company.
    - n. Wenger Corporation.

## 2. Acoustical Performance:

MBI Lapidary Panels Product Model	Absorption Coefficient - E 400 Mounting						
	<u>125</u>	<u>250</u>	<u>500</u>	<u>1000</u>	<u>2000</u>	<u>4000</u>	<u>NRC</u>
4000S-2065-S	0.83	1.02	1	1.04	0.64	0.39	0.95
(2" x 1.65# Core, Sailcloth, Stiffeners)							

3. Panel Shape: Lapidary blanket, rectangular.
4. Mounting: Aluminum end batten, secured to substrate.
5. Core: Glass-fiber blanket, 1.65 lb/sqft.
6. Edge Construction: Manufacturer's standard fully wrapped panel with anodized aluminum gripper bar, predrilled for attachment
7. End Attachment: (heavy duty plastic tie) (coated wire tie) (beam clamps) (washer plates) (cable)
8. Reveals between Panels: reveals as indicated on Drawings.
9. Facing Material: Sailcloth.
10. Nominal Thickness: 50mm (2 inches).
11. Panel Width: 1.2 meter (48 inches).
12. Panel Length: As indicated on Drawings.
13. Color: As selected by Architect from Manufacturer's full range.

**2.4 MATERIALS**

- A. Sustainable Design Requirements:
- B. Core Materials: Manufacturer's standard.
  1. Glass-Fiber Blanket: ASTM C 612, ASTM C 553, or ASTM C 665; of type standard with manufacturer; nominal density of 3 to 4 lb/cu. ft.; flexible; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
- C. Facing Material : Fabric from same dye lot; color and pattern as indicated by manufacturer's designations.

**2.5 FABRICATION**

- A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated, with facing material applied to face, edges, and back border of dimensionally stable core and with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Measure each area and establish layout of panels and joints of uniform size with balanced borders at opposite edges within a given area.
- C. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
  1. Square Corners: Tailor corners. Heat-seal vinyl fabric seams at corners.
  2. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
  3. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches adjacent units.
- D. Dimensional Tolerances of Finished Units: Plus or minus 1/16 inch for the following:
  1. Thickness.
  2. Edge straightness.
  3. Overall length and width.
  4. Squareness from corner to corner.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install units in locations indicated. Unless otherwise indicated, install units with edges in alignment with walls and other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.
- C. Align fabric pattern and grain with adjacent units.

**3.3 INSTALLATION TOLERANCES**

- A. Variation from Alignment with Surfaces: Plus or minus 1/16 inch in 48 inches, noncumulative.
- B. Variation from Level or Slope: Plus or minus 1/16 inch.
- C. Variation of Joint Width: Not more than 1/16 inch wide from hairline in 48 inches, noncumulative.

**3.4 CLEANING**

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 09 91 13 - EXTERIOR PAINTING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section includes surface preparation and the application of paint systems on the following exterior substrates:
1. Concrete.
  2. Fiber-cement board.
  3. Clay masonry.
  4. Concrete masonry units (CMUs).
  5. Steel and iron.
  6. Galvanized metal.
  7. Aluminum (not anodized or otherwise coated).
  8. Copper.
  9. Stainless steel.
  10. Wood.
  11. Fiberglass.
  12. Plastic.
  13. Portland cement plaster (stucco).
  14. Gypsum board.
  15. Cotton or canvas insulation covering.
  16. Bituminous-coated surfaces.
- B. Related Requirements:
1. Section 05 12 00 "Structural Steel Framing" for shop priming of metal substrates.
  2. Section 05 50 00 "Metal Fabrications" for shop priming metal fabrications.
  3. Section 05 51 16 "Metal Floor Plate Stairs" for shop priming metal floor plate stairs.
  4. Section 05 51 19 "Metal Grating Stairs" for shop priming metal grating stairs.
  5. Section 05 52 13 "Pipe and Tube Railings" for shop painting pipe and tube railings.
  6. Section 05 53 13 "Bar Gratings" for shop priming metal gratings.
  7. Section 09 96 00 "High-Performance Coatings" for tile-like coatings.
  8. Section 09 93 00 "Staining and Transparent Finishing" for surface preparation and the application of wood stains and transparent finishes on exterior wood substrates.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
1. Indicate VOC content.
- B. Samples for Initial Selection: For each type of topcoat product.
- C. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
1. Submit Samples on rigid backing, 8 inches (200 mm) square.
  2. Apply coats on Samples in steps to show each coat required for system.
  3. Label each coat of each Sample.
  4. Label each Sample for location and application area.

- D. Product List: Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

#### 1.4 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Paint: 5 percent, but not less than 1 gal. (3.8 L) of each material and color applied.

#### 1.5 QUALITY ASSURANCE

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
    - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
    - b. Other Items: Architect will designate items or areas required.
  - 2. Final approval of color selections will be based on mockups.
    - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
  - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F (7 deg C).
  - 1. Maintain containers in clean condition, free of foreign materials and residue.
  - 2. Remove rags and waste from storage areas daily.

#### 1.7 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F (10 and 35 deg C).
- B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F (3 deg C) above the dew point; or to damp or wet surfaces.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products from one of the approved manufacturers below:

1. ICI Paints World Group (ICI).
2. Devoe and Reynolds Co. (Devoe).
3. The Glidden Company (Glidden).
4. Benjamin Moore and Co. (Moore).
5. PPG Industries, Pittsburgh Paints (Pittsburgh).
6. Pratt and Lambert (P & L).
7. The Sherwin-Williams Company (S-W).
8. TNEMEC Company, Inc.

## 2.2 PAINT, GENERAL

- A. Material Compatibility:
1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
  2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
- B. Colors: As indicated in a color schedule on Drawings.

## 2.3 SOURCE QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
  2. Testing agency will perform tests for compliance with product requirements.
  3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
1. Concrete: 12 percent.
  2. Fiber-Cement Board: 12 percent.
  3. Masonry (Clay and CMUs): 12 percent.
  4. Wood: 15 percent.
  5. Portland Cement Plaster: 12 percent.
  6. Gypsum Board: 12 percent.
- C. Portland Cement Plaster Substrates: Verify that plaster is fully cured.
- D. Exterior Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- E. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.

- F. Proceed with coating application only after unsatisfactory conditions have been corrected.
  - 1. Application of coating indicates acceptance of surfaces and conditions.

### 3.2 PREPARATION

- A. Comply with manufacturer's written instructions applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
  - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
  - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer, but not less than the following:
  - 1. SSPC-SP 2
  - 2. SSPC-SP 3.
  - 3. SSPC-SP 7/NACE No. 4.
  - 4. SSPC-SP 11.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
  - 1. Scrape and clean knots. Before applying primer, apply coat of knot sealer recommended in writing by topcoat manufacturer for exterior use in paint system indicated.
  - 2. Sand surfaces that will be exposed to view, and dust off.
  - 3. Prime edges, ends, faces, undersides, and backsides of wood.
  - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- K. Plastic Trim Fabrication Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

### 3.3 APPLICATION

- A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."
  - 1. Use applicators and techniques suited for paint and substrate indicated.

2. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
  3. Paint both sides and edges of exterior doors and entire exposed surface of exterior door frames.
  4. Paint entire exposed surface of window frames and sashes.
  5. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
  6. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. Tint undercoats same color as topcoat, but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.
- C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
1. Paint the following work where exposed to view:
    - a. Equipment, including panelboards and switch gear.
    - b. Uninsulated metal piping.
    - c. Uninsulated plastic piping.
    - d. Pipe hangers and supports.
    - e. Metal conduit.
    - f. Plastic conduit.
    - g. Tanks that do not have factory-applied final finishes.

### 3.4 FIELD QUALITY CONTROL

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
1. Contractor shall touch up and restore painted surfaces damaged by testing.
  2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

### 3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

**3.6 EXTERIOR PAINT SCHEDULE:**

- A. General: Provide the following paint systems for the various substrates indicated.

**P-1: IRON AND STEEL SURFACES:**

1. ICI:
  - a. Primer: 4100, Alkyd Metal Primer.
  - b. Finish: 2516-XXXX, Exterior Alkyd Semi-Gloss Finish; 2 Coats.

**P-2: GALVANIZED STEEL AND ALUMINUM SURFACES:**

1. ICI:
  - a. Primer: 4160, Alkyd Multi-Purpose Primer.
  - b. Finish: 2516-XXXX, Exterior Alkyd Semi-Gloss Finish; 2 Coats.

**P-3: PAINTED STUCCO AND CONCRETE SURFACES:**

1. ICI:
  - a. Primer: 2220, Exterior Acrylic Flat Finish.
  - b. Finish: 2220-XXXX, Exterior Acrylic Flat Finish; 1 coat at Concrete, and 2 Coats at Stucco.

**P-4: CMU AND MASONRY SURFACES:**

1. ICI:
  - a. Primer: 4000, Acrylic Latex Block Filler; 2 Coats; Brush and Roller application only.
  - b. Finish: 2516-XXXX, Exterior Alkyd Semi-Gloss Enamel; 2 Coats; Brush and Roller application only.
  - c. All block pores shall be completely filled.

**P-5: PAINTED WOOD SURFACES - (Opaque Finish):**

1. ICI:
  - a. Primer - (for spot priming pine knots): 3210, Ultra-Hide Aquacrylic Gripper, Stain Killer Primer-Sealer.
  - b. Primer: 2110, Exterior Alkyd Primecoat.
  - c. Finish: 2516-XXXX, Exterior Alkyd Semi-Gloss Finish; 2 Coats.

**P-6: PAINTED PLYWOOD SURFACES:**

1. ICI:
  - a. Primer - (for spot priming pine knots): 3210, Ultra-Hide Aquacrylic Gripper, Stain Killer Primer-Sealer.
  - b. Primer: 2110, Exterior Alkyd Primecoat.
  - c. Finish: 2516-XXXX, Exterior Alkyd Semi-Gloss Enamel; 2 Coats.

END OF SECTION

**SECTION 09 91 23 - INTERIOR PAINTING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes: surface preparation and the application of paint systems on interior substrates.
- B. Related Requirements:
  - 1. Section 05 50 00 "Metal Fabrications" for shop priming metal fabrications.
  - 2. Section 09 29 00 "Gypsum Board" for painted finishes on non-tiled substrates in wet areas.

**1.1 DEFINITIONS**

- A. Gloss Level 1 (Flat): Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D 523.
- B. Gloss Level 2 (Velvet): Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.
- C. Gloss Level 3 (Eggshell): 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D 523.
- D. Gloss Level 4 (Satin): 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D 523.
- E. Gloss Level 5 (Semigloss): 35 to 70 units at 60 degrees, according to ASTM D 523.
- F. Gloss Level 6 (Gloss): 70 to 85 units at 60 degrees, according to ASTM D 523.
- G. Gloss Level 7 (High Gloss): More than 85 units at 60 degrees, according to ASTM D 523.
- H. Areas Subject to Moisture and Food Preparation: These spaces are those that have permanent plumbing connections and appliances. These include, but are not limited to, toilet rooms connected to shower areas, janitor's closets, locker rooms connected to shower rooms, shower rooms, steam rooms, training rooms, first aid rooms, concession stands, commissaries, kitchens, and laundries. These areas require epoxy painting systems.
  - 1. Toilet rooms consisting of toilets and sinks are not included in this definition.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
  - 1. Include Printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
  - 2. Indicate VOC content.
- B. Samples for Verification: For each type of paint system and each color and gloss of topcoat.
  - 1. Submit Samples on rigid backing, 8 inches square.
  - 2. Apply coats on Samples in steps to show each coat required for system.
  - 3. Label each coat of each Sample.
  - 4. Label each Sample for location and application area.
- C. Product Schedule: Use same designations indicated on Drawings and in the Interior Painting Schedule to cross-reference paint systems specified in this Section. Include color designations.

**1.3 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Paint Products: 5 percent, but not less than 1 gal. of each material and color applied.

**1.4 QUALITY ASSURANCE**

- A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system.
    - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
    - b. Other Items: Architect will designate items or areas required.
  - 2. Final approval of color selections will be based on mockups.
    - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
  - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- B. EPA VOC Regulations: All products supplied under this specification section for the locations listed below must be compliant with the VOC limits set in the following districts.
  - 1. Kentucky: Follow USEPA AIM VOC rules.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
  - 1. Maintain containers in clean condition, free of foreign materials and residue.
  - 2. Remove rags and waste from storage areas daily.

**1.6 FIELD CONDITIONS**

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures of less than 5 deg F above the dew point; or to damp or wet surfaces.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
  - 1. Benjamin Moore & Co.
  - 2. PPG Paints
  - 3. Sherwin Williams
  - 4. KEIM Mineral Coatings of America, Inc.
  - 5. Tnemec, Inc
- B. Source Limitations: Obtain each paint product from single source from single manufacturer.

**2.2 PAINT PRODUCTS, GENERAL**

- A. Material Compatibility:
  - 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
  - 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
- B. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction.
- C. Colors: As indicated in a color schedule.

**2.3 PAINT, PRODUCTS**

- A. See Interior Painting Schedule for full coating instructions based on substrate.
- B. Block filler: Provide at all new concrete and concrete masonry walls to be painted.
  - 1. Benjamin Moore: Masonry Interior /Exterior Hi-Build block filler
  - 2. PPG Professional: Perma-Crete LTC Concrete Block & Masonry Filler.
  - 3. Sherwin Williams: PrepRite block filler.
  - 4. KEIM Mineral Coatings of America, Inc.: Masonry Spackle.
- C. Concrete Stain: Provide at all new concrete and concrete masonry walls to be stained.
  - 1. KEIM Mineral Coatings of America, Inc.: KEIM CONCRETAL Pigmented Mineral Stain.
- D. Primer: Provide at all new wall construction as indicated in Interior Painting Schedule at the end of this Section.
  - 1. Gypsum and Plaster substrates: primers to be compatible with substrate and finish coat.
    - a. Benjamin Moore, Ultra Spec 500 Interior Primer.
    - b. PPG Professional, Pure Performance interior latex primer.
      - 1) PPG SpeedHide MaxBuild.
    - c. S-W, ProMar 200 zero VOC interior latex primer.
      - 1) SW, Tuff Stuff interior primer.
  - 2. Interior Metals: primers to be compatible with substrate and finish coat.
    - a. Benjamin Moore, Super Spec HP Acrylic Metal Primer.
    - b. PPG Professional, Corafon DTM Primer.
    - c. Sherwin Williams, Pro Industrial Pro-Cryl Universal Primer.
- E. Acrylic Latex
  - 1. Benjamin Moore, Ultra Spec 500.
  - 2. PPG Professional, Speedhide.
  - 3. Sherwin Williams, ProMar 200 zero VOC.
- F. Epoxy
  - 1. Benjamin Moore: Super Spec HP, waterborne polyamide epoxy.
  - 2. PPG Professional: Aquapon WB water based epoxy.
  - 3. Sherwin-Williams: Pro Industrial water based Catalyzed Epoxy.

**2.4 SOURCE QUALITY CONTROL**

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
  - 1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
  - 2. Testing agency will perform tests for compliance with product requirements.

3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
  1. Concrete: 12 percent.
    - a. Allow masonry to cure a minimum of 30 days prior to paint application regardless of moisture content readings.
  2. Masonry (Clay and CMUs): 12 percent.
  3. Allow masonry to cure a minimum of 30 days prior to paint application regardless of moisture content readings.
  4. Wood: 15 percent.
  5. Gypsum Board: 12 percent.
  6. Plaster: 12 percent.
- C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth and complies with the Level standard specified.
- D. Plaster Substrates: Verify that plaster is fully cured.
- E. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- F. Proceed with coating application only after unsatisfactory conditions have been corrected.
  1. Application of coating indicates acceptance of surfaces and conditions.

#### **3.2 PREPARATION**

- A. Comply with manufacturer's written instructions and recommendations applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
  1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
  1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- D. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.

- E. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- F. Un-primed Steel Substrates: Remove oil, grease, dust, dirt, rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:
  - 1. Shop Priming Preparation: SSPC-SP 7/NACE No. 4.
  - 2. Field Priming Preparation: SSPC-SP 11.
  - 3. Do not coat steel to be fireproofed with paint from this section.
- G. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
  - 1. Do not coat steel to be fireproofed with paint from this section.
- H. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- I. Aluminum Substrates: Remove loose surface oxidation.
- J. Wood Substrates:
  - 1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
  - 2. Sand surfaces that will be exposed to view, and dust off.
  - 3. Prime edges, ends, faces, undersides, and backsides of wood.
  - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- K. Cotton or Canvas Insulation Covering Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.
- L. Gypsum Board Substrates: Do not begin paint application until finishing compound is dry and sanded smooth. Exercise care to avoid raising nap of paper.

### 3.3 INSTALLATION

- A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
  - 1. Use applicators and techniques suited for paint and substrate indicated.
  - 2. Paint exposed surfaces, except where the Finish Schedule indicates that a surface or material is not to be painted or is to remain natural. If the schedule does not indicate color or finish, match adjacent materials or surfaces.
  - 3. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
  - 4. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
  - 5. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
  - 6. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- B. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- C. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

- D. Painting Fire-Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
1. Paint the following work where exposed in occupied spaces:
    - a. Equipment, including panelboards.
    - b. Uninsulated metal piping.
    - c. Uninsulated plastic piping.
    - d. Pipe hangers and supports.
    - e. Metal conduit.
    - f. Plastic conduit.
    - g. Duct, equipment, and pipe insulation having cotton or canvas insulation covering or other paintable jacket material.
    - h. Other items as directed by Architect.
  2. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.
- E. Stencil Painted Signs: Apply stencil painted signs on both sides of all fire rate Partitions. Locate bottom of the signs no more than 12 inches above removable ceilings. Repeat application of stencil at maximum horizontal spacing of 12 feet and at every intersecting room partition.
1. Use stencils with all capital letters that are 3" high. Color of sign letters is to be bright red. Font for stencils to be a sans serif font similar to Arial or Helvetica.
  2. Provide stencil painted signs with the following messages corresponding to the new walls. See Life Safety plans for wall ratings.
    - a. "1 HOUR RATED WALL"
    - b. "2 HOUR RATED WALL"
    - c. "3 HOUR RATED WALL"
    - d. "1 HOUR RATED WALL AND SMOKE BARRIER"
    - e. "2 HOUR RATED WALL AND SMOKE BARRIER"

### 3.4 FIELD QUALITY CONTROL

- A. Dry-Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry-film thickness.
1. Contractor shall touch up and restore painted surfaces damaged by testing.
  2. If test results show that dry-film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry-film thickness that complies with paint manufacturer's written recommendations.

### 3.5 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
1. Do not clean equipment with free-draining water and prevent solvents, thinners, cleaners, and other contaminants from entering into waterways, sanitary and storm drain systems, and ground.
  2. Dispose of contaminants in accordance with requirements of authorities having jurisdiction.
  3. Allow empty paint cans to dry before disposal.
  4. Collect waste paint by type and deliver to recycling or collection facility.
- B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

- D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

### 3.6 INTERIOR PAINTING SCHEDULE

- A. General: Provide the following paint systems for the various substrates, as indicated; unless noted otherwise in the Construction Documents.
1. Pipe and Equipment Identification Schedule:
    - a. Painting: Paint entire surface of pipe for mechanical and electrical services in accordance with schedule provided on mechanical and electrical drawings and/or contained in mechanical and electrical specifications.
    - b. Concrete Substrates, Nontraffic Surfaces: Not less than 2.5 mills dry, acrylic semi-gloss, over 1 coat of block filler and 1 coat of high performance acrylic concrete/masonry primer, unless otherwise indicated.
  2. Areas Subject to Moisture and Food Preparation: Not less than 3.0 mills dry, water-based 2 part catalyzed semi-gloss epoxy over 1 coat of epoxy filler and 1 coat of epoxy sealer.
- B. CMU Substrates: Not less than 2.5 mills dry, acrylic semigloss, over 1 coat of block filler and 1 coat of over high performance acrylic concrete/masonry primer, unless otherwise indicated.
1. Administrative Areas Finish Coats: Not less than 2.5 mills dry, zero VOC latex eggshell.
  2. Areas Subject to Moisture and Food Preparation: Not less than 3.0 mills dry, water-based 2 part catalyzed semi-gloss epoxy over 1 coat of epoxy filler and 1 coat of epoxy primer.
- C. Miscellaneous Steel Substrates: 1 coat of rust-inhibitive acrylic universal primer, and not less than 2.5 mills dry, zero VOC acrylic semi-gloss.
1. Include hollow metal doors and frames.
- D. Structural Steel Substrates (Unprotected): Primer and finish coating is specified in Section 09 96 00 "High Performance Coatings."
- E. Galvanized-Metal Substrates, Except Railings: Acrylic universal primer, and not less than 3 mills dry, zero VOC acrylic semi-gloss, see Exterior Painting for paint product.
- F. Galvanized-Metal Railings: High solids, high build, polyamide epoxy prime coat, with semi-gloss aliphatic acrylic polyurethane finish coat, see Exterior Painting for paint product.
- G. Aluminum Substrates: Acrylic universal primer, and not less than 3 mills dry, zero VOC acrylic semigloss.
- H. Wood Substrates; Opaque Finish: Latex system.
- I. Wood Substrates: Transparent Finish: Specified in Section 09 93 00 "Staining and Transparent Finishing."
- J. Gypsum Board Substrates:
1. Wall Primer: surfaces scheduled to receive paint finish with a sheen of Gloss Level 2 or greater shall receive ,
  2. Walls: Not less than 2.5 mills dry, zero VOC latex eggshell over zero VOC interior latex primer.
  3. Ceilings: Not less than 2.5 mills dry, zero VOC latex flat over zero VOC interior latex primer.
  4. Epoxy: Not less than 3.0 mills dry, water-based 2 part catalyzed semi-gloss epoxy over epoxy primer.
- K. Concrete Substrates, Vertical Surfaces: Locations indicated in Drawings to receive concrete stain, as indicated.
1. Manufacturer Basis-of-Design Product: Refer to the Finish Legend and the Drawings. Subject to compliance with requirements, provide KEIM CONCRETAL Pigmented Mineral Stain for Concrete or the following:

- a. Comparable products of other manufacturers approved by Architect.

END OF SECTION

**SECTION 09 93 00 - STAINING AND TRANSPARENT FINISHING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Primers
  - 2. Wood stains.
  - 3. Transparent finishes.
- B. Related Requirements:
  - 1. Section 09 91 23 "Interior Painting" for stains and transparent finishes on concrete floors.
  - 2. Section 09 96 00 "High-Performance Coatings" for transparent high-performance coatings on concrete floors and clay masonry.

**1.2 DEFINITIONS**

- A. Gloss Level 4 (Satin): 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D 523.
- B. Gloss Level 7 (High Gloss): More than 85 units at 60 degrees, according to ASTM D 523.

**1.3 ACTION SUBMITTALS**

- A. Product Data:
  - 1. For each type of product.
  - 2. Include preparation requirements and application instructions.
  - 3. Indicate VOC content.
- B. Samples for Initial Selection: For each type of product.
- C. Samples for Verification: Sample for each type of finish system and in each color and gloss of finish required on representative samples of actual wood substrates.
  - 1. Size: 8 inches square or 8 inches long.
  - 2. Apply coats on Samples in steps to show each coat required for system.
  - 3. Label each coat of each Sample.
  - 4. Label each Sample for location and application area.
- D. Product List: Cross-reference to finish system and locations of application areas. Use same designations indicated on Drawings and in schedules. Include color designations.

**1.4 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Stains and Transparent Finishes: 5 percent, but not less than 1 gal. of each material and color applied.

**1.5 MOCKUPS**

- A. Apply mockups of each finish system indicated and each color selected to verify preliminary selections made under Sample submittals to demonstrate aesthetic effects and to set quality standards for materials and execution.
  - 1. Architect will select one surface to represent surfaces and conditions for application of each type of finish system and substrate.
    - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
    - b. Other Items: Architect will designate items or areas required.
  - 2. Final approval of stain color selections will be based on mockups.
    - a. If preliminary stain color selections are not approved, apply additional mockups of additional stain colors selected by Architect at no added cost to Owner.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
  - 1. Maintain containers in clean condition, free of foreign materials and residue.
  - 2. Remove rags and waste from storage areas daily.

**1.7 FIELD CONDITIONS**

- A. Apply finishes only when temperature of surfaces to be finished and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply finishes when relative humidity exceeds 85 percent, at temperatures of less than 5 deg F above the dew point, or to damp or wet surfaces.
- C. Do not apply exterior finishes in snow, rain, fog, or mist.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Benjamin Moore & Co.
  - 2. Industria Chimica Adriatica SpA (ICA); distributed by Power Process Equipment, Inc.
  - 3. PPG Architectural Finishes, Inc.
  - 4. Sherwin-Williams Company (The).
- B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to products listed in wood finish systems schedules for the product category indicated.

**2.2 SOURCE LIMITATIONS**

- A. Source Limitations: Obtain each coating product from single source from single manufacturer.

**2.3 MATERIALS, GENERAL**

- A. Material Compatibility:
  - 1. Provide materials for use within each coating system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
  - 2. For each coat in a paint system, products shall be recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

- B. Stain Colors: As indicated in a color schedule.

## 2.4 SOURCE QUALITY CONTROL

- A. Testing of Materials: Owner reserves the right to invoke the following procedure:
  - 1. Owner will engage the services of a qualified testing agency to sample wood finishing materials. Contractor will be notified in advance and may be present when samples are taken. If materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
  - 2. Testing agency will perform tests for compliance with product requirements.
  - 3. Owner may direct Contractor to stop applying wood finishes if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying materials from Project site, pay for testing, and refinish surfaces finished with rejected materials. Contractor will be required to remove rejected materials from previously finished surfaces before refinishing with complying materials if the two finishes are incompatible or produce results that, in the opinion of the Architect, are aesthetically unacceptable.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Interior Wood Substrates: 10 percent, when measured with an electronic moisture meter.
- C. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
- D. Proceed with finish application only after unsatisfactory conditions have been corrected.
  - 1. Beginning finish application constitutes Contractor's acceptance of substrates and conditions.

### 3.2 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and finishing.
  - 1. After completing finishing operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.
- C. Clean and prepare surfaces to be finished according to manufacturer's written instructions for each substrate condition and as specified.
  - 1. Remove dust, dirt, oil, and grease by washing with a detergent solution; rinse thoroughly with clean water and allow to dry. Remove grade stamps and pencil marks by sanding lightly. Remove loose wood fibers by brushing.
  - 2. Remove mildew by scrubbing with a commercial wash formulated for mildew removal and as recommended by stain manufacturer.
- D. Interior Wood Substrates:
  - 1. Scrape and clean knots, and apply coat of knot sealer before applying primer.
  - 2. Apply wood filler paste to open-grain woods to produce smooth, glasslike finish.

3. Sand surfaces exposed to view and dust off.
4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dry.

### 3.3 APPLICATION

- A. Apply finishes according to manufacturer's written instructions.
  1. Use applicators and techniques suited for finish and substrate indicated.
  2. Finish surfaces behind movable equipment and furniture same as similar exposed surfaces.
  3. Do not apply finishes over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- B. Apply finishes to produce surface films without cloudiness, holidays, lap marks, brush marks, runs, ropiness, or other surface imperfections.

### 3.4 CLEANING AND PROTECTION

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing finish application, clean spattered surfaces. Remove spattered materials by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from finish application. Correct damage by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced finished wood surfaces.

### 3.5 INTERIOR WOOD-FINISH-SYSTEM SCHEDULE

- A. Wood Substrates, Wood Trim Architectural Woodwork and Wood Board Paneling:
  1. Polyurethane Varnish over Stain System:
    - a. Stain Coat: Stain, semitransparent, for interior wood.
      - 1) Sherwin-Williams Company; Wood Classics Interior Oil Stain - 250; A49-800 Series.
    - b. First Intermediate Coat: Polyurethane varnish matching topcoat.
    - c. Second Intermediate Coat: Polyurethane varnish matching topcoat.
    - d. Topcoat: Varnish, interior, polyurethane, water-based, satin (Gloss Level 4).
      - 1) Sherwin-Williams Company; Wood Classics Waterborne Polyurethane Varnish, A68 Series, Satin.
    - e. Topcoat: Varnish, interior, polyurethane, water-based, high gloss (Gloss Level 7).
      - 1) Sherwin-Williams Company; Wood Classics Waterborne Polyurethane Varnish, A68 Series, Gloss.
- B. Wood Countertops: Bar tops.
  1. Clear, Two-Component Polyurethane System, not less than 16 mils dry overall thickness:
    - a. Prime Coat: Two-component aliphatic acrylic polyurethane.
      - 1) Industria Chimica Adriatica SpA (ICA); FAC242 Clear Base Coat High Build.
    - b. Intermediate Coat: Two-component aliphatic acrylic polyurethane.
      - 1) Industria Chimica Adriatica SpA (ICA); FAC242 Clear Base Coat High Build.
    - c. Topcoat: Varnish, aliphatic acrylic polyurethane, two component.
      - 1) Industria Chimica Adriatica SpA (ICA); OAC363US Clear Matte with UV Filter.

END OF SECTION

**SECTION 09 96 00 - HIGH-PERFORMANCE COATINGS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes surface preparation and the application of high-performance coating systems on the following substrates:
  - 1. Structural Steel Framing, all exterior and exposed steel surfaces.
- B. Related Requirements:
  - 1. Section 09 91 13 "Exterior Painting" for special-use coatings general field painting.
  - 2. Section 09 91 23 "Interior Painting" for special-use coatings general field painting.

**1.2 DEFINITIONS**

- A. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D 523.
- B. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D 523.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
  - 1. Indicate VOC content.
- B. Structural Steel Coatings Procedure Manual: Prepared by manufacturer, specifying application and touch-up requirements specifically for this Project. Include the following:
  - 1. Weather and Dew Point.
  - 2. Method of Application (brush, roll or spray including what type of equipment).
  - 3. Dry film thickness and time between surface preparation and application of primer.
  - 4. Equipment cleanliness.
  - 5. Surface preparation prior to application of each coat.
  - 6. Drying time between primer and finish coat(s) and after application of finish coat.
  - 7. Pot Life.
  - 8. Thinning.
  - 9. General application techniques for critical areas to be coated.
  - 10. Maintenance and repair procedures providing a systematic process for inspection, record keeping and observation, coating application, and repair procedures.
  - 11. Types and extent of failures requiring repairs.
- C. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.
  - 1. Submit Samples on rigid backing, 8 inches square.
  - 2. Apply coats on Samples in steps to show each coat required for system.
  - 3. Label each coat of each Sample.
  - 4. Label each Sample for location and application area.

**1.4 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Coatings: 5 percent, but not less than of each material and color applied.

**1.5 QUALITY ASSURANCE**

- A. Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Architect will select one surface to represent surfaces and conditions for application of each coating system.
    - a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft..
    - b. Other Items: Architect will designate items or areas required.
  - 2. Final approval of color selections will be based on mockups.
    - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
  - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
  - 1. Maintain containers in clean condition, free of foreign materials and residue.
  - 2. Remove rags and waste from storage areas daily.

**1.7 FIELD CONDITIONS**

- A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply coatings when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
- C. Do not apply exterior coatings in snow, rain, fog, or mist.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, from systems listed in the Schedule at the end of this Section:
  - 1. Carboline Company.
  - 2. International Protective Coatings; an AkzoNobel Brand.
  - 3. PPG Protective & Marine Coatings.
  - 4. Sherwin-Williams Company Protective & Marine Coatings.
  - 5. Tnemec Company, Inc.

**2.2 HIGH-PERFORMANCE COATINGS, GENERAL**

- A. Material Compatibility:
  - 1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
  - 2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.

3. When unprimed surfaces are to be coated, entire coating system shall be by the same coating manufacturer to assure compatibility of coatings.
  4. When shop-painted surfaces are to be coated, ascertain whether finish materials will be compatible with shop coating. Inform Engineer/Architect of any unsuitable substrate or coating conditions.
  5. Products shall be of same manufacturer for each coat in a coating system.
- B. Colors: As selected by Architect from manufacturer's full range.
1. Paint (HC-1) Color: Black product to be selected for material compatibility from manufacturer's full range of products.

### 2.3 SURFACES NOT TO BE COATED

- A. Pre-finished metal wall panels and accessories.
- B. Aluminum, stainless steel, or other non-ferrous metals.
- C. Equipment name plates and testing labels.
- D. Electrical equipment.
- E. Plastic, rubber, or other synthetic materials.

### 2.4 METAL PRIMERS

- A. Shop Primer, Organic Zinc-Rich, with Epoxy or Urethane Binder:
  1. Minimum Volume Solids: 50 percent.
  2. Minimum Zinc Content: 80 percent.
  3. ASTM A 490 Class B Slip Coefficient.
  4. Dry Film Thickness: 2.5 to 3.5 mils.
- B. Touch-Up Primer: Manufacturer's recommended primer for field touchup over marginally prepared rusted steel, compatible with shop primer and finish coat.
  1. Minimum Recoat Window: 12 months.

### 2.5 EPOXY PRIMERS UNDER FIREPROOFING

- A. All primers under fireproofing must be tested with the fireproofing as an assembly and approved for use under the fireproofing being installed in the project.
  1. Bond strength test: maintain 150 lbs/sq. ft. per ASTM E736, Section (E).
- B. All primers for steel deck must be individually tested by UL.
- C. Cafco 300 AC SFRM spray-applied fireproofing: Primer to be Sherwin Williams MacroPoxy 646 or other equal product.
  1. For primed steel beams and columns.
- D. Grace Monocoat z146: Primer to be PPG Amerlock 2 or Amerlock 385.

### 2.6 POLYURETHANE COATINGS

- A. Polyurethane, High-Build Acrylic Polyurethane, Pigmented, Semigloss or Gloss (Gloss Levels 5 or 6):
  1. Minimum Volume Solids: 60 percent.
  2. Abrasion Resistance: ASTM D 4060; Not more than 75 mg loss after 1000 cycles.
  3. Adhesion: ASTM D 4541; Not less than 825 psi average of 3 trials.
  4. Corrosion Resistance: ASTM B 117; Not more than 1/32 inch rust creepage at scribe, and none at edges after 1000 hours.
  5. Dry Film Thickness: 3 to 5 mils.

## 2.7 SOURCE QUALITY CONTROL

- A. Testing of Coating Materials: Owner reserves the right to invoke the following procedure:
  - 1. Owner will engage the services of a qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
  - 2. Testing agency will perform tests for compliance with product requirements.
  - 3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. Contractor will be required to remove rejected materials from previously coated surfaces if, on recoating with complying materials, the two coatings are incompatible.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
  - 1. Concrete: 12 percent.
  - 2. Fiber-Cement Board: 12 percent.
  - 3. Masonry (Clay and CMUs): 12 percent.
  - 4. Wood: 15 percent.
  - 5. Gypsum Board: 12 percent.
  - 6. Plaster: 12 percent.
- C. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- D. Proceed with coating application only after unsatisfactory conditions have been corrected.
  - 1. Application of coating indicates acceptance of surfaces and conditions.

### 3.2 PREPARATION

- A. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
  - 1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce coating systems indicated.
- B. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:
  - 1. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
    - a. Minimum Surface Profile: 1.5 mils.
- C. Steel Substrates for Field Touch-Up Priming: Remove rust, loose mill scale, back to sound primer. Clean using methods recommended in writing by paint manufacturer but not less than the following:
  - 1. SSPC-SP 11/NACE No., "Power Tool cleaning to bare metal."
    - a. Minimum surface profile.

- D. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- E. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings.
  - 1. SSPC SP-3 Solvent Wipe for mechanically galvanized surfaces.

### 3.3 SHOP PRIMING

- A. Shop prime steel surfaces except the following:
  - 1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
  - 2. Surfaces to be field welded.
    - a. Hold back primer 6 inches from weld.
- B. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions, as indicated in Structural Steel Coatings Procedure Manual submitted, and at rate recommended to provide minimum dry film thickness. Use priming methods that result in full coverage of joints, corners, edges, bolted connections, and exposed surfaces.
  - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
  - 2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

### 3.4 FINISH COATING

- A. At the Contractor's option, finish coat may be applied in the shop or in the field after erection.
- B. Shop-Applied Finish Coat:
  - 1. Apply finish coat to primed structural steel surfaces except the following:
    - a. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
    - b. Surfaces to be field welded.
    - c. Surfaces to be high-strength bolted with slip-critical connections.
    - d. Surfaces to receive sprayed fire-resistive materials.
  - 2. After erection, clean field welds, bolted connections, and abraded areas according to manufacturer's instructions. Apply touch-up primer and finish coat according to manufacturer's instructions.
- C. Field-Applied Finish Coat:
  - 1. After erection, clean field welds, bolted connections, and abraded areas of shop paint according to manufacturer's instructions, and apply touch-up primer.
  - 2. Apply finish coat to primed structural steel surfaces except the following:
    - a. Surfaces to receive sprayed fire-resistive materials

### 3.5 APPLICATION

- A. Apply high-performance coatings according to manufacturer's written instructions and recommendations indicated in Structural Steel Coatings Procedure Manual submitted.
  - 1. Use applicators and techniques suited for coating and substrate indicated.
- B. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance.
- C. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

**3.6 FIELD QUALITY CONTROL**

- A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.
  - 1. Contractor shall touch up and restore coated surfaces damaged by testing.
  - 2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

**3.7 CLEANING AND PROTECTION**

- A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
- B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
- C. Protect work of other trades against damage from coating operation. Correct damage to work of other trades by cleaning, repairing, replacing, and recoating, as approved by Architect, and leave in an undamaged condition.
- D. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.
- E. All off-gassing must be complete prior to substantial completion.

**3.8 MAINTENANCE AND REPAIR**

- A. Responsibility:
  - 1. Contractor: Responsible for coating maintenance and repair established in the Structural Steel Coatings Procedure Manual prepared for this Project, from the date of Notice to Proceed to Final Completion of the Contract.
  - 2. Owner: Responsible for coating maintenance and repair established in the Structural Steel Coatings Procedure Manual prepared for this Project, after Final Completion of the Contract.

**3.9 HIGH-PERFORMANCE COATING SCHEDULE**

- A. Structural Steel Framing Substrates including metal decking:
  - 1. Pigmented Polyurethane over Organic Zinc-Rich Primer System:
    - a. Carboline Company:
      - 1) Shop Primer: Carbozinc 859
      - 2) Finish Coat: Carbothane 133 MC
    - b. International Protective Coatings; an AkzoNobel Brand:
      - 1) Shop Primer: Interzinc 315
      - 2) Finish Coat: Interthane 870UHS
    - \*\*\*\*\* OR \*\*\*\*\*
      - 3) Shop Primer: Catha-Coat 315
      - 4) Finish Coat: Devthane 378
    - c. PPG Protective & Marine Coatings:
      - 1) Shop Primer: Ameron 68HS
      - 2) Finish Coat: Durethane DTM.
    - d. Sherwin-Williams Company Protective & Marine Coatings:
      - 1) Shop Primer: Zinc-Clad 4100
      - 2) Finish Coat: Acrolon 218 HS Acrylic Polyurethane

- e. Tnemec Company, Inc:
  - 1) Shop Primer: Series 90-97 Tneme-Zinc
  - 2) Finish Coat: Series 1075U, Endura-Shield II

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 11 00 - VISUAL DISPLAY UNITS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Markerboards.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.3 ACTION SUBMITTALS**

- A. Product Data Submittals: For each type of product indicated.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.
- B. Shop Drawings: For visual display units.
  - 1. Include plans, elevations, sections, details, and attachment to other work.
  - 2. Show locations of panel joints.
  - 3. Show locations and layout of special-purpose graphics.
  - 4. Include sections of typical trim members.
- C. Samples for Verification: For each type of visual display unit indicated.
  - 1. Visual Display Panel: Not less than 8-1/2 by 11 inches, with facing, core, and backing indicated for final Work. Include one panel for each type, color, and texture required.
  - 2. Trim: 6-inch-long sections of each trim profile.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Sample Warranties: For manufacturer's special warranties.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

**1.6 FIELD CONDITIONS**

- A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Verify actual dimensions of construction contiguous with visual display units by field measurements before fabrication.
  - 1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

**1.7 WARRANTY**

- A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to repair or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Surfaces lose original writing and erasing qualities.
    - b. Surfaces exhibit crazing, cracking, or flaking.
  - 2. Warranty Period:
    - a. 10 years from date of Substantial Completion.
    - b. Life of the building.

**PART 2 - PRODUCTS****2.1 VISUAL DISPLAY BOARD ASSEMBLIES**

- A. Visual Display Board Assemblies:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide Deko Markerboards, phone: (844) 366-1545, [www.dekomarkerboards.com](http://www.dekomarkerboards.com); or comparable product by one of the following:
  - 1. Claridge Products and Equipment, Inc.
  - 2. Egan Visual Inc.
  - 3. Peter Pepper Products, Inc.
- C. Markerboard Panel: Porcelain-enamel-faced magnetic markerboard panel on core indicated.
  - 1. Color: As selected by Architect from full range of industry colors.
- D. Magnetic Tray: Manufacturer's standard.
  - 1. Box Type: Extruded aluminum with slanted front, and cast-aluminum end closures.
- E. Accessories:
  - 1. Starter Pack – 6 Erasable markers.
  - 2. Individual magnet units – package of 20.
    - a. Color: Silver.

**2.2 MARKERBOARD PANELS**

- A. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated magnetic markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with low-gloss finish.
  - 1. Face Sheet Thickness: 0.021 inch uncoated base metal thickness.
  - 2. Manufacturer's Standard Core: Minimum 1/4 inch thick, with manufacturer's standard moisture-barrier backing.
  - 3. MDF Core: 7/16 inch thick; with manufacturer's standard moisture-barrier backing.
  - 4. Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.

**2.3 MATERIALS**

- A. Porcelain-Enamel Face Sheet: PEI-1002, with magnetic face sheet per manufacturer's standard two- or three-coat process.
- B. Extruded Aluminum: ASTM B 221, Alloy 6063.

**2.4 GENERAL FINISH REQUIREMENTS**

- A. Comply with NAAMM/NOMMA AMP 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

**2.5 ALUMINUM FINISHES**

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine walls and partitions for proper preparation and backing for visual display units.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 PREPARATION**

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrates of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.

**3.3 INSTALLATION**

- A. General: Install visual display surfaces in locations indicated on Drawings. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
- B. Visual Display Board Assembly Mounting Heights: Install visual display units at mounting heights indicated on Drawings, or if not indicated, at heights indicated below.
  - 1. Mounting Height : 36 inches above finished floor to bottom of unit or as shown on Drawings.
- C. Install clear silicone caulk along entire top edge of all markerboards and tackboards where they meet the wall.

**3.4 CLEANING AND PROTECTION**

- A. Clean visual display units in accordance with manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.
- C. Cover and protect visual display units after installation and cleaning.

**3.5 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain motorized, sliding visual display units.

END OF SECTION

**SECTION 10 12 00 - DISPLAY CASES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Bulletin boards.
- B. Related Requirements:
  - 1. Section 09 77 23 "Fabric-Wrapped Panels" for tackable, fabric-covered wall panels.

**1.2 DEFINITIONS**

- A. Bulletin Board: Glazed cabinet with tackboard panel, without shelves, typically of shallow depth for display of paper documents.
- B. Display Case: Glazed cabinet with tackboard panel back surface and adjustable shelves.
- C. Tackboard Panel: A material for holding push-pins or tacks, typically consisting of a facing such as fabric, vinyl, or cork; adhered to a substrate such as fiberboard, hardboard, or particleboard.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data:
  - 1. Bulletin boards.
- B. Product Data Submittals: For each product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for bulletin boards. Include furnished specialties and accessories.
  - 2. Include electrical characteristics for illuminated bulletin boards.
- C. Shop Drawings: For bulletin boards.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Show location of seams and joints in tackboard panels.
  - 3. Include sections of typical trim members.
  - 4. Include diagrams for wiring of illuminated bulletin boards.
- D. Samples: For each exposed product and for each color and texture specified; not less than 8-1/2 by 11 inches for tackboard panels and 6 inches long for trim with factory finish.
- E. Samples for Initial Selection: For each type of exposed finish.
  - 1. Include Samples of tackboard panels and factory-finished trim involving color finish selection.
- F. Samples for Verification: For each type of exposed finish for the following:
  - 1. Tackboard Panel: Not less than 8-1/2 by 11 inches, with facing and substrate indicated for final Work. Include one panel for each type, color, and texture required.
  - 2. Trim: 6-inch-long sections of each trim profile.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Product Test Reports: For fabrics, tackboard panels, for tests performed by a qualified testing agency.

## 1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For bulletin boards to include in maintenance manuals.

## 1.7 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install bulletin boards for indoor installations until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

## PART 2 - PRODUCTS

### 2.1 SOURCE LIMITATIONS

- A. Obtain from single source from single manufacturer.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.
  - 2. Smoke-Developed Index: 450 or less.
- B. Electrical Components: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.3 BULLETIN BOARDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Claridge Products and Equipment, Inc.
  - 2. Ghent Manufacturing, Inc.
  - 3. Laurence, C. R. Co., Inc.
  - 4. U-Line.
- B. General: Factory-fabricated unit consisting of manufacturer's standard wall-mounted cabinet with tackboard panel on back inside surface and operable glazed doors at front.
  - 1. Frame and Cabinet Profile: Square frame section with square cabinet corners.
  - 2. Mounting: Surface mounted.
  - 3. Size:
    - a. As indicated on Drawings.
- C. Aluminum-Framed Cabinet: Manufacturer's standard baked-enamel or powder-coat finish.
  - 1. Color: As selected by Architect from manufacturer's full range.
- D. Wood-Framed Cabinet: Refr to Finish Schedule on Drawings for species with stained finish.
- E. Exterior Bulletin Boards: Aluminum-framed units of weather-resistant construction; with vents to dissipate trapped moisture, weather-resistant tackboard panel, and weather-stripped hinged doors.

- F. Glazed Sliding Doors: Tempered glass; unframed; with extruded-aluminum top and bottom track; supported on nylon or ball-bearing rollers; with plastic top guide and rubber bumpers. Equip each door with ground finger pull and adjustable cylinder lock with two keys.
  - 1. Thickness: Not less than 6 mm thick.
  - 2. Number of Doors: As indicated on Drawings.
- G. Glazed Hinged Doors: Tempered glass; set in frame matching cabinet material and finish. Equip each door with full-height continuous hinge and cylinder lock with two keys.
  - 1. Thickness: Not less than 6 mm thick.
  - 2. Number of Doors: As indicated on Drawings.
- H. Header Panel: Nonilluminated; with opaque acrylic sheet panel set within overall cabinet frame; with matching frame that separates header panel from bulletin board.
  - 1. Graphic Content and Style: Provide header panel copy that complies with requirements indicated on Drawings for size, style, spacing, content, height, location, material, and colors of graphics.
  - 2. Color: As selected by Architect from full range of industry colors.
- I. Illumination System: Concealed top-lighting system consisting of fluorescent-strip fixtures. Include lamps and internal wiring with single, concealed electrical connection to building system. Coordinate electrical characteristics with power supply provided.
  - 1. Ballasts: Low-temperature, high-power-factor, low-energy, fluorescent lamp ballasts that comply with Certified Ballast Manufacturers Association standards and carry its label. Provide exterior ballasts for exterior bulletin boards.
    - a. Electrical Characteristics: Single-phase, 120 V.
- J. Back Panel: Manufacturers standard vinyl-fabric-faced tackboard panel.
- K. Vinyl Back Panel: Vinyl-fabric-faced tackboard panel.

## 2.4 TACKBOARD PANELS

- A. Vinyl-Fabric-Faced Tackboard Panel:
  - 1. Vinyl fabric factory laminated to 1/2-inch- thick, fiberboard backing.
  - 2. 1/16-inch-thick, vinyl-fabric-faced-cork sheet factory laminated to 3/8-inch-thick, fiberboard backing.
  - 3. 1/8-inch-thick, vinyl-fabric-faced-cork sheet factory laminated to 3/8-inch-thick, fiberboard backing.
  - 4. 1/4-inch-thick, vinyl-fabric-faced-cork sheet factory laminated to 1/4-inch-thick, hardboard backing.

## 2.5 MATERIALS

- A. Hardboard: ANSI A135.4, tempered.
- B. Fiberboard: ASTM C208.
- C. Particleboard: ANSI A208.1, Grade M-1 , made with binder containing no urea formaldehyde.
- D. Hardwood Plywood: HPVA HP-1, made with adhesive containing no urea formaldehyde.
- E. Vinyl Fabric: ASTM F 793/F 793M, Type II, burlap weave; weighing not less than 13 oz./sq. yd.; with flame-spread index of 25 or less when tested in accordance with ASTM E 84.
- F. Extruded-Aluminum Bars and Shapes: ASTM B2 21, Alloy 6063.
- G. Aluminum Tubing: ASTM B 429/B 429M, Alloy 6063.
- H. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.

- I. Transparent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished), colorless sheet with visible light transmittance of 92 percent measured in accordance with ASTM D 1003.
- J. Opaque Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet).
- K. Translucent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), with Finish 1 (smooth or polished). Provide white-colored sheet unless otherwise indicated, of density required to produce uniform brightness and minimum halation effects.
- L. High-Pressure Plastic Laminate: ISO 4586-3.
- M. Fasteners: Provide screws, bolts, and other fastening devices made from same material as items being fastened, except provide hot-dip galvanized, stainless steel, or aluminum fasteners for exterior applications. Provide types, sizes, and lengths to suit installation conditions. Use security fasteners where exposed to view.

## 2.6 FABRICATION

- A. Fabricate bulletin boards to requirements indicated for dimensions, design, and thickness and finish of materials.
- B. Use metals and shapes of thickness and reinforcing required to produce flat surfaces, and to impart strength for size, design, and application indicated.
- C. Fabricate cabinets and door frames with reinforced corners, mitered to a hairline fit, with no exposed fasteners.
- D. Fabricate shelf standards plumb and at heights to align shelf brackets for level shelves.

## 2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM/NOMMA AMP 500 for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.8 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
- B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.
- C. Baked-Enamel or Powder-Coat Finish: AAMA 2603, except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine walls, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical power systems to verify actual locations of connections before installation of illuminated units.

- C. Examine walls and partitions for proper backing for bulletin boards.
- D. Examine walls and partitions for suitable framing depth if recessed units will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Prepare recesses for display cases as required by type and size of unit.

### **3.3 INSTALLATION**

- A. General: Install units in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.
  - 1. Mounting Height: 72 inches above finished floor to top of cabinet.
- B. Bulletin Boards: Attach units to wall surfaces with concealed clips, hangers, or grounds.
- C. Comply with requirements specified elsewhere for connecting illuminated bulletin boards.
- D. Install display case shelving level and straight.

### **3.4 ADJUSTING AND CLEANING**

- A. Adjust doors to operate smoothly without warp or bind and so contact points meet accurately. Lubricate operating hardware as recommended in writing by manufacturer.
- B. Touch up factory-applied finishes to restore damaged areas.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 14 00 - SIGNAGE****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes engineering, furnishing, and installing the following signage and support systems:
  - 1. Signs and supports.
  - 2. Wayfinding signs, directories, and room identification signs.
  - 3. Dimensional characters and icons.
- B. Related Sections:
  - 1. Section 05 05 13 – Decorative Metal Coatings.
- C. Sign and display locations are indicated on the Sign Location plans. Sign and display details are indicated in the Signage Detail Manual. Both are under separate cover.

**1.2 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Provide signs and anchorage points capable of withstanding the effects of gravity, wind, snow, and seismic loads and stresses, as indicated in the General Notes of the Structural Drawings determined according to the local building code and authorities having jurisdiction, reference specification section 01 40 00 Quality for Engineer.
  - 1. Deflection of signs and supports in vertical and horizontal direction shall be no greater than 1/360 of clear span or .75-inch (19 mm) (19 mm), whichever is smaller.
- B. Thermal Movements: Provide post and panel signs that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
  - 1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

**1.3 SUBMITTALS**

- A. Required with the Bid:
  - 1. Provide per Unit Prices for each item type.
  - 2. Provide Unit Price as a square foot cost breakdown for graphic vinyl wall graphics & wall coverings.
- B. Product Data: Submit manufacturer's technical data, assembly methods, and installation instructions relative to materials, dimensions of individual components, profiles, and finishes for each type of material required.
- C. Shop Drawings: Submit shop drawings for fabrication including installation/mounting method for each typical sign type or display type. Include plans, elevations, Isometric views, and large-scale details of each element. Include large scale sections of typical members and other components. Show fabrication joints, seams, grain direction and fasteners. Show anchors, grounds, reinforcement, accessories, layout, and installation details. All products and components shall be identified, including manufacturer, series, model/part number.
  - 1. Shop drawing submittals shall not be created from replicating the Contract Documents views or details. All views shall specifically show project-specific information.
  - 2. Field dimensions shall be indicated, and those awaiting verification shall clearly be notated their status.

3. For items requiring coordination – the specific requirements and schedule requirements shall be indicated in submittals.
  4. For items required to comply with design loads, include structural analysis data signed and sealed by the licensed professional engineer responsible in this jurisdiction for their preparation.
  5. Submit graphic layouts for verification, including outline of sign face, character spacing, line spacing, and copy composition. Submit sign layouts for all signs within each sign type.
  6. Engineering, document & sample review, fabrication, and construction schedule.
  7. For signs supported by or anchored to permanent construction, provide setting drawings, full-size spacing templates, and directions for installation of anchor bolts and other appropriate anchors to be installed.
  8. Provide sealed engineering calculations for each mounting condition including substrate and anchor type.
  9. Submit drawings in 11-inch by 17-inch format unless otherwise requested by the Architect.
  10. Provide a full-color printed proof of all final artwork (digital proofs are not sufficient). Proofs to be printed on the specified material for each item, using the same print or application processes that will be used for the final installed items. Proofs are to include a swatch of the 100% full size graphic at least 8"x8", as well as a scaled version of the entire artwork. Approved print proofs will function as control samples for color, resolution and print quality.
- D. Samples: Submit three 6-inch (150 mm) square samples of each material showing finishes, colors, surface textures and qualities of manufacturer and design of each component including graphics. One sample set to be kept by Architect, contractor, and client as a record to later match against items in the field.
1. Submit full-size sample first article units, per Section 3.6, before production run is commenced. Acceptable units may be installed as part of the work.
- E. Provide method of translation and written documentation that the braille translation included on the manufacturer's signage provided in this section has been evaluated by a Braille translator certified in writing by either The Library of Congress or the National Federation for the Blind, and is, in their opinion, correct and compliant with ADAAG.
- F. Maintenance Data: Provide a Maintenance and Operating Manual comprised of cleaning and operations needs for each sign/graphic/display type. This shall include information on repair due to common vandalism, changing of messages and parts replacement needs. Include manufacturers' brochures and parts lists describing the actual materials used in the work, including metal alloys, finishes, electrical components, and other major components. Provide working art file templates to the owner for future use.

#### 1.4 QUALITY ASSURANCE

- A. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for design and installations of signs, and miscellaneous supports and anchor types that are similar to those indicated for this Project in material, design, and extent.

- B. **Manufacturer Qualifications:** All fabrication within this section shall be performed by a manufacturer with a minimum of five (5) years-experience producing and installing architectural signs, and a minimum of five (5) years-experience producing compliant signs as specified in ANSI 117.1 (1986), Minimum Guidelines and Requirements for Accessible Design (MGRAD), Uniform Federal Accessibility Standards (UFAS) and Americans with Disabilities Act Accessibility Guidelines (ADAAG).
- C. **Drawings and Specifications:** The Architect will provide electronic files of typical sign layout drawings in Adobe Illustrator CC format. For electronic files requested in any format other than Adobe Illustrator CC, the Contractor shall reimburse the Owner, for additional services required of the Architect for converting the electronic files. Architect will provide electronic files indicating fonts, icons, designs, and key visual parameters of the design intent. Fabricator shall develop and produce final, high-resolution production-ready artwork based on these guides and the details on the Drawings – this includes any up-sampling or interpolation required for large scale photo-based graphics.
1. Drawings and specifications indicate spacing of members, sizes of components, profile, dimensions, materials, and design, assembly, and fabrication requirements for the signs.
  2. Requests for deviations from indicated dimensions and profiles will be considered provided that the intended aesthetic effect is not modified, as judged and approved solely by Architect. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
- D. **Uniformity of Manufacturer:** For each separate type of material, finish or sign or display type, obtain signs from a single manufacturer to ensure consistency.
1. Manufacturer's name, trade name, or trade mark shall not appear on any visible surface.
- E. **Adhesion Testing –** For all applied graphic films and vinyl products, perform adhesion tests on accordance with manufacturer's specifications. Provide results of adhesion testing to the Architect and the contractor for approval.
- F. **Fire-Test-Response Characteristics:** Provide banners and flags constructed of fabrics that are identical to products that pass Test Method 1 of NFPA 701 performed by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
1. Flame-Spread Index: 25 or less.
  2. Smoke-Developed Index: 450 or less.
- G. **Welding Standards:** Qualify procedures and personnel according to the following:
1. AWS D1.1, "Structural Welding Code--Steel."
  2. AWS D1.2, "Structural Welding Code--Aluminum."
  3. AWS D1.3, "Structural Welding Code--Sheet Steel."
  4. AWS D1.6, "Structural Welding Code--Stainless Steel."
- H. **Aesthetic Requirements:** Provide copy with straight and true edges; space characters with tracking and leading as indicated; reproduce typefaces accurately with square corners and even curves; provide uniform letters and symbols; and provide smooth finishes with no visible imperfections.
- I. **Regulatory Requirements –** Comply with applicable requirements of the applicable laws and authorities. Obtain necessary approvals and permits from all such authorities as required.
- J. **ADA Accessibility Guidelines:** All signage shall comply with the ADA Accessibility Guidelines where applicable. Characters and graphics, including but not limited to, copy height, letter stroke, symbols, materials, and finishes indicated on the Drawings are intended as guidelines for compliance. Implement each applicable ADA Guideline. Should conflicts arise, notify the Architect before proceeding.

- K. Mockups: Provide one mockup sign of each type indicated in the schedule at the end of this Section, to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and fabrication.
  - 1. Approved mockups may be forwarded to the Project site and may become part of the completed Work.
- L. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

### 1.5 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions of install locations for all items by field measurement before fabrication and indicate measurements, and any obstructions on Shop Drawings.
  - 1. Wall Graphic Dimensions. Field verify dimensions and provide digital templates to the Architect for all applied wall graphics. Note all obstructions (fire strobes, hatches, panels, electrical boxes, exit signs, columns, etc.), and as-built dimensions. These templates are to be used in the preparation of all production-ready art files. Where required, the artwork is to be modified to eliminate any conflicts obstructions, or variations in install size. The Architect is to review and approve all such necessary changes to the artwork before fabrication.
  - 2. Established Dimensions: Every effort shall be made to verify dimensions in the field before production. In the case where field measurements cannot be made without significantly delaying the Work, the Fabricator is to review the established installation location and dimensions with the Contractor and the Architect. The Contractor is responsible to provide an installation surface that accommodates the established dimensions identified.
  - 3. Existing Utilities and other below-grade obstacles: Verify all existing below grade utilities, and/or other below grade obstacles such as abandoned footings and foundations within the footprint of new sign foundations.
  - 4. Every effort shall be made to verify conflicts including potholing to confirm depth, nature, and plan location of all utilities that may be impacted by the signage foundations
  - 5. Confirm substrate conditions are acceptable for sign type support requirements and anchorage type per sign type.

### 1.6 COORDINATION AND SCHEDULE

- A. Installation: Coordinate installation with the Contractor. For items supported by or anchored to permanent construction, coordinate specific requirements for types and placement of anchorage devices and similar items to be used for attaching signs and displays.
  - 1. For any items supported by, anchored to or mounted to permanent construction, furnish templates to the Contractor for installation of blocking, anchorage devices, and electrical conduits.
  - 2. For any wall coverings that require a level 5 finish furnish templates to the Contractor and coordinate wall preparation in keeping with the product manufacturers specifications.
- B. Prepare a schedule indicating engineering, sample, and material reviews, print proofs, fabrication, delivery, installation, and final inspection of the Work. Submit this schedule to the Architect and Owner for approval and coordination with other work at the Project Site.
- C. Coordinate location of remote transformers with building construction. Ensure that transformers are accessible and tied into building control system per Owner preference on location after completion of Work.

**1.7 DELIVERY, STORAGE AND HANDLING**

- A. Package material in like groups and label accordingly.
- B. Protect items during transit, delivery, handling, and storage to prevent damage, soiling, and deterioration. Minor damage to finishes may be repaired provided the final finishes are equal to the original finishes, are without noticeable flaws, and are acceptable to the Architect. If not in like-new condition, or if not acceptable to the architect, remove and replace damaged items with new signs.
- C. Coordinate delivery and storage of sign materials with the Contractor in advance. Schedule delivery to minimize storage requirements. Materials stored at the Project Site without prior approval may have to be relocated at the Fabricator's expense.

**1.8 MAINTENANCE**

- A. Furnish a list of cleaning materials appropriate for maintenance of signs, graphics and displays to both the Owner and the Contractor. Provide written instructions for proper maintenance, electrical access, and character and lighting replacement procedures. Include recommended methods for removal of residual adhesives from wall surfaces after removal of adhered items.

**PART 2 - PRODUCTS****2.1 MATERIALS, GENERAL**

- A. Use materials of size and thickness indicated or, if not indicated as required to produce strength and durability in finished product for use intended. Work to dimensions shown or accepted on shop drawings, using proven details of fabrication and support. Use type of materials shown or specified for various components of work.
- B. All materials shall be free from defects impairing strength, durability, and appearance. No fabrication or installation materials or procedures shall be used that will in any way change the usual quality or in any manner have an adverse effect on existing materials and surfaces. All materials shall be new stock, unless the Architect has specified a reclaimed or recycled material.
- C. Graphic Content and Style: Provide graphic layouts and sign copy that complies with requirements indicated in the Signage Detail Manual and Signage Message Schedule and on preliminary artwork supplied by Architect for size, fonts, style, spacing, content, mounting height and location, materials, finishes, and colors.
  - 1. Contractor shall incorporate any requested final naming changes, including but not limited to room or level numbering conventions, room names/descriptions, and sponsorship or rebranding.

**2.2 MATERIALS**

- A. General: For the fabrication of exposed metal work, use only materials which are smooth and free of surface blemishes including pitting, roughness, seam marks roller marks, and trade names. Do not use materials which have stains or discolorations.
  - 1. Provide stretcher leveled standard of flatness.
- B. Aluminum Sheet and Plate: ASTM B 209 (ASTM B 209M) (ASTM B 209 (ASTM B 209M)), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with at least the strength and durability properties of alloy 5005-H15.
  - 1. Thickness: Provide aluminum sheets and plates in sizes specified or indicated on the Drawings.

- C. Aluminum Extrusions: ASTM B 221 (ASTM B 221M) (ASTM B 221 (ASTM B 221M)M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with at least the strength and durability properties of alloy 6063-T5.
- D. Stainless Steel: Grade and type designated below for each form required:
  - 1. Tubing: ASTM A 554, Grade MT 316.
  - 2. Pipe: ASTM A 312/A 312M, Grade TP 316.
  - 3. Castings: ASTM A 743/A 743M, Grade CF 8M.
  - 4. Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 316.
  - 5. Bars and Shapes: ASTM A 276, Type 316.
- E. Metal Laminate: Grade 83 (.25-inch (0.7mm)) solid metals and solid metal strips. Solid aluminum mechanically etched sheet with light epoxy protection.
  - 1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following for specific applications:
    - a. Wilsonart International
    - b. ChemMetal
    - c. NuMetal
    - d. Formica
    - e. Moz Metals

### 2.3 PLASTIC

- A. General: Plastic shall be free of imperfections from forming or fabrication. All surfaces shall be free from scratches and shall be cleaned and polished per manufacturer's instructions at completion of installation. Edges shall be flame polished, free of saw marks and chips, and be eased, unless otherwise noted.
- B. Monolithic Acrylic Sheet (methylmethacrylate): ASTM D 4802, Category A-1 (cell-cast sheet), Type UVF (UV filtering), of thickness indicated, with Finish 1 (smooth or polished finish) and Finish 3 (abrasion resistant coating) as indicated.
  - 1. Transparent: Provide colorless sheet with visible light transmittance of 92 percent measured per ASTM D 1003.
    - a. Provide Finish 3.
  - 2. Translucent: Provide white translucent sheet of density required to produce uniform brightness and minimum halation effects.
    - a. Provide Finish 1.
  - 3. Opaque: Provide colors and finishes indicated or, if not indicated, as selected by Architect from manufacturer's full range.
    - a. Provide Finish 1.
- C. Colored Coatings for Acrylic Sheet: For copy and background and frame colors, provide Pantone Matching System (PMS) colored coatings, including inks and paints, that are recommended by acrylic manufacturers for optimum adherence to acrylic surface and are nonfading for application intended.

### 2.4 GRAPHIC FILM

- A. General: Provide vinyl graphic film suitable for interior and exterior applications of types indicated below.
  - 1. Vinyl Thickness: 2-mil (0.05 mm), minimum.
  - 2. Adhesive: Clear, pressure sensitive, permanent adhesive (unless removable adhesive is specified).
  - 3. Overlamine: Include a Matte overlamine for all interior vinyl graphic films unless otherwise indicated in the Signage Detail Manual.
  - 4. Installation: Use minimum overlapping seams advised by the manufacturer.

- B. Basis-of-Design Products: The design is based on the products named. Subject to compliance with requirements, provide either the named products or comparable product by one of the other specified manufacturers. Comparable products are subject to review and approval through the submittal process specified. Note: All film/vinyl materials require an adhesion test prior to printing to confirm successful adhesion.
1. Opaque Vinyl Film: Non-reflective, pre-spaced die-cut letters and film, supplied in specified typeface, color, and spacing on a quick-release backing sheet.
  2. Transparent Vinyl Film: 3M Scotchcal™ Clear Graphic Film 8626 ES.
  3. Translucent Vinyl Film: 3M Scotchcal™ Translucent Graphic Film 8628 ES.
  4. Opaque Imaging Media for smooth surfaces: 3M Controltac Graphic Film with Comply v3 Adhesive IJ180CV3-10 with 3M Scotchcal Matte Overlamine 8510M
    - a) Provide alternate pricing for 3M Scotchcal Graphic Film with Comply Adhesive IJ40C-10R with 3M Scotchcal Matte Overlamine 8510M
  5. 3M Scotchcal™ for Textured Surfaces; Series IJ8624 with 3M Luster Overlamine 8524.
  6. 3M Panaflex™ Awning and Sign Facing; Series 945GPS.
  7. 3M Vinyl 8150 with 7 Year Lifespan for window graphics.
- C. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. 3M
  2. Avery Dennison Graphics Division
  3. Orocal/Orofol Graphic Products

## 2.5 HARDWARE, FASTENERS, AND ADHESIVES

- A. Fasteners: Unless otherwise indicated, use concealed fasteners fabricated from metals that are non-corrosive to either the sign material or the mounting surface. If concealed fasteners are not practical or possible, provide vandal-resistant fasteners.
- B. Fabricate brackets and fittings for bracket-mounted signs from materials compatible with panel sign construction and mounting conditions indicated. Factory-paint brackets in color matching background color of panel sign.
1. Steel Tubing: Cold-formed steel tubing complying with ASTM A 500, Grade B.
  2. Structural Steel Shapes, Plates, and bars: Cold formed steel fabrications complying with ASTM A 36.
- C. Anchors and Inserts: Use non-ferrous metal or hot-dipped galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete or masonry work.
1. For attachment to metal panels, use #12 stainless steel, Type 410, self-tapping screws with integral neoprene washers.
- D. Adhesives: Provide products equal to "Depend 330" as manufactured by Loctite Acrylic Adhesives. (216)881-2828. Fabricator shall verify with painting manufacturer compatibility of the adhesive to the paint.
- E. Very High Bond (VHB) Tape: Provide 3M (or approved equal) VHB tape at the appropriate thickness/strength required for the weight and size of each item installed.
- F. Silicone Adhesive: Provide liquid silicone adhesive (sealant) with a methanol or acetic cure as recommended by the sign fabricator.
- G. VOC Content of Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
- a) Architectural Sealants: 250 g/L.
  - b) Sealant Primers for Nonporous Substrates: 250 g/L.
  - c) Sealant Primers for Porous Substrates: 775 g/L.

- H. Spacers: Provide Manufacturer's standard spacers when necessary.

## 2.6 GRAPHIC REQUIREMENTS, GENERAL

- A. General: Type style shall be as indicated in the Signage Detail Manual.
1. Typeface, numerals, icons and designs shall be consistent to the design intent shown in the Signage Detail Manual. Some variation in tracking and character width to ensure messages fit, may be acceptable. Any variations to be reviewed and approved by the Architect.
  2. Characters indicated on the Drawings are intended as guidelines for layouts and font size only, and are based on scale calculations of the message lengths within given and estimated sign areas. The actual copy required on individual signs is indicated in the signage message schedule. Should conflicts arise in the final message layout, notify the Architect before proceeding.
  3. Spelling and punctuation shall be correct. Should an error in spelling or punctuation be found, or the spelling appears questionable, notify the Architect before proceeding.
  4. Align letter forms to maintain a baseline parallel to the sign format, unless otherwise indicated. Maintain uniform margins in sign layouts.
  5. Suite Identification Signs, and Signs with Name Inserts: Owner will determine names for each individual suite or office.
  6. Provide digital proofs of final signage layouts to the Architect for approval before fabrication.
- B. Tactile and Braille Copy: Manufacturer's standard process for producing copy complying with ADA Accessibility Guidelines and ICC/ANSI A117.1, TAS or CCR Title 24. Text shall be accompanied by Grade 2 braille. Produce precisely formed characters with square cut edges free from burrs and cut marks.
1. Raised-Copy Thickness: Not less than .03125-inch (0.8 mm)(0.8 mm).
  2. For Grade 2 Braille copy, coordinate messages in conjunction with Graphic and Sign Schedule. Braille copy contained on drawings is for size and position only and shall not be used for full message.
  3. Symbols and other ADA required symbols, (International Symbol of Accessibility; Symbol of Access for Hearing Loss; International TDD Symbol; and Symbol of Volume Control), which are referenced in the documents, are available from Architect in Adobe Illustrator formats.
- C. Production-Ready Artwork: The Signage Detail Manual includes specifications for all visual elements including, but not limited to, type, symbols, logos, photography, artwork, and arrows. The Fabricator is to create final production-ready artwork necessary to complete all signs and graphics based on the design intent included in the Signage Detail Manual.
1. Production-ready artwork is to be high enough resolution to provide crisp edges and lines for all vector artwork, and to avoid any visible blurring or pixilation of photographic images. Fabricator to interpolate and up-sample photographic artwork as required for the installation location and viewing distance. Do not use the construction documents as production art. The Fabricator is to provide printed proofs of all graphics to ensure color and resolution are acceptable – samples to include a swatch of the 100% full size graphic as well as a scaled version of the entire artwork – printed on the specified substrate.
  2. Silkscreens shall be executed from photoscreens or negatives. Pattern cut screens may be used where non-repeat copy is required; however, copy mask shall be equivalent to photoscreen quality. Do not use the construction documents as production art.

## 2.7 FABRICATION, GENERAL

- A. General: Fabricate signs to comply with requirements indicated on drawings for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction.
1. Form exposed faces and sides of signs to produce surfaces free from warp, distortion, and "oil canning."

- a) Include internal bracing for stability and attachment of mounting accessories as required.
  - b) Cut metal edges on a continuous line and sand smooth. Seams shall be straight and symmetrical.
  - c) Form exposed connections with hairline joints, flush, and smooth.
  - d) Form exposed work true to line and level with sharp angles, surfaces, and edges. Ease exposed edges to a radius of approximately .03125-inch (0.8 mm) unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or cracking of applied finishes.
2. Welding, when necessary, shall be of the appropriate type to minimize permanent distortions of flat surfaces. Remove welding flux, oxides and discolorations by pickling or grinding, so that these areas match the finish of the adjacent areas. Repair damage caused by the fabrication by grinding, polishing, or buffing.
    - a) Weld corners and seams continuously, complying with AWS recommendations. At connections, grind exposed welds smooth and flush to match and blend with adjoining surfaces.
    - b) Unless otherwise specified, all seams to be indiscernible; filled, and ground smooth. Finishes requiring paint or other enamel are required to be primed and sanded prior to painting. Exposed alloy finishes (brushed, polished, etc.) to have tight tolerance seams that are indiscernible.
  3. Cut, reinforce, drill, and tap miscellaneous metal work as indicated to receive finish hardware and similar items.
  4. Produce smooth, even, level sign panel surfaces, constructed to remain flat under installed conditions within a tolerance of plus or minus one percent measured diagonally from corner to corner.
  5. Fabricate, brackets and fittings for signs to suit sign panel construction and mounting conditions indicated. Connections, angles, shapes and details shown are suggestive and are to be sized, reinforced, detailed and engineered as required. Details not shown are to be equal in quality to those detailed. Factory paint brackets in color matching background color of sign panel.
  6. Provide concealed access to internally illuminated signs for relamping and service. Service access shall be waterproof and secured against vandalism.
  7. Conceal union, fabricator, or other labels.
  8. For sign panel units in exterior applications provide standard weatherproofing construction, including weather-stripping, weeping, and venting provisions for condensation control.
- B. Metal signs facing and cladding shall be aluminum unless otherwise indicated or specified in the Signage Detail Manual.
  - C. Where galvanized steel and aluminum meet, the materials shall be materially isolated from one another to prevent electrolytic action. Aluminum joints and connections shall be heli-arc welded and flush, true, ground, and polished smooth and without defects. Character forms shall be cut true to typeface with no burns or imperfections of any kind.
  - D. Internal Structure: Provide completely hidden, internal structures for support and anchorage, unless indicated otherwise on the drawings. Primary support structure shall be hot dipped galvanized steel or aluminum.

## 2.8 PANEL SIGNS

- A. Exterior Plaque Sign: Unless otherwise specified in the Signage Detail Manual, provide products fabricated from 0.125-inch aluminum plate with 0.030 inch thick double face tape mounting and silicone adhesive. Sign copy shall be raised 1/32 inch from plaque first surface by manufacturer's standard photochemical process. Provide opaque graphics and Braille to comply with ADA regulations. All exterior signage is to include weep/drain holes as required.
  1. Finish: As indicated in the Signage Detail Manual.
  2. Graphics: As indicated in the Signage Message Schedule.

- B. Interior Plaque Sign: Unless otherwise specified in the Signage Detail Manual, provide products fabricated from 0.125-inch-thick acrylic with exterior grade polyamide resin sign face and 0.011-inch carrier with 0.030-inch double face tape mounting and silicone adhesive. Sign copy shall be raised 1/32 inch from plaque first surface by manufacturer's standard photomechanical stratification process. Provide opaque graphics and Braille to comply with ADA regulations.
1. Finish: Manufacturer's custom color with matte texture.
  2. Graphics: As indicated on the Drawings.
- C. Chemically-etched Zinc Sign Panels: Unless otherwise specified in the Signage Detail Manual, sign copy shall be raised 1/32 inch from plaque first surface. Provide opaque graphics and Braille to comply with ADA regulations.
1. Thickness: 0.125 inch (3.2 mm) (3.2 mm).
  2. Zinc Finish: Manufacturer's sandblasted with horizontal grain.
  3. Background Texture: Smooth, matte finish.
  4. Graphics: As indicated on the Drawings.
  5. Manufacturer: Dixie Graphics.
- D. Framed Hollow-Box-Type Panels:
1. Panel Material: Unless otherwise specified in the Signage Detail Manual, 0.125-inch- (3.2-mm-) (3.2-mm-) thick aluminum sheet.
  2. Panel Finish: Unless otherwise specified in the Signage Detail Manual, baked enamel.
    - a) Panel Finish: Manufacturer's standard semigloss finish with UV inhibitors.
    - b) Provide clips welded to back of panels for installation without visible fasteners.
  3. Frame Material: Unless otherwise specified in the Signage Detail Manual, extruded aluminum, fabricated to profile indicated; comply with the following:
    - a) Frame Finish: High-performance organic coating.
    - b) Corner Condition: Corners rounded to radius indicated.
  4. Illuminated-Sign Units: Unless otherwise specified in the Signage Detail Manual, provide internal illumination using concealed, internally wired, LED system to illuminate message panels uniformly with minimum halation and without light leaks. Include LED's, transformers, and other components necessary for complete systems. Make provisions for servicing and concealing transformers and connections to building electrical system. Coordinate electrical characteristics with those of power supply provided.
    - a. All power drivers to be compatible with universal primary circuit voltage (120-277). Acceptable products include GE - GEPS12-60U-NA (for 12V LED systems), and GE - GEPS24-100U-NA (for 24V LED systems). Other universal power supplies from the same manufacturer with different wattage or 0-10v dimming features are acceptable when used with compatible LED systems.
      - a) Acceptable Manufacturers:
        - 1) GE Lighting
        - 2) Sloan LED
        - 3) Magnitude Lighting
      - b. Loading shall be verified by following the testing procedures recommended by the LED-systems manufacturer.
        - a) Color: refer to Signage Detail Manual for color temperature
        - b) Population: Maximum 4-inch spacing between LED strips or segments.
      - c. Electrical Requirements:
        - a) All LEDs to use constant current technology.
        - b) All LEDs to be IP67 rated for interior environments, and IP68 in exterior or open air environments.
        - c) Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that shall be incorporated into the Work include:
          - 1) Bitro Group
          - 2) Sloan LED
          - 3) GE Lighting

**2.9 FABRICATED LETTERS AND NUMBERS**

- A. Channel Characters: Fabricate letters and numbers to the required sizes and styles, using metals and thicknesses indicated below. Form exposed faces and sides of characters to produce surfaces free from warp and distortion. Include internal bracing for stability and attachment of mounting accessories as required. Fabricate by the heliarc welding process.
1. Aluminum Sheet: Not less than 0.090 inch thick.
  2. Finish: Manufacturer's custom color urethane.
    - a. Color: As indicated on the Drawings.
    - b. Unless otherwise specified, all seams to be indiscernible; filled, and ground smooth. Finishes requiring paint or other enamel are required to be primed and sanded prior to painting. Exposed alloy finishes (brushed, polished, etc.) to have tight tolerance seams that are indiscernible.
- B. Reverse Channel Characters: Fabricate letters and numbers to the required sizes and styles, using metals and thicknesses indicated below. Form exposed faces and sides of characters to produce surfaces free from warp and distortion. Include internal bracing for stability and attachment of mounting accessories as required. Fabricate by the heliarc welding process.
1. Aluminum Sheet: Not less than 0.090 inch thick.
  2. Finish: Manufacturer's custom color urethane.
    - a. Color: As indicated on the Drawings.
    - b. Unless otherwise specified, all seams to be indiscernible; filled, and ground smooth. Finishes requiring paint or other enamel are required to be primed and sanded prior to painting. Exposed alloy finishes (brushed, polished, etc.) to have tight tolerance seams that are indiscernible.
- C. Illuminated LED Channel Characters: Provide LED illuminated channel character systems for exterior applications as indicated on the drawings. Include LED's, transformers, and other components necessary for complete systems. Make provisions for servicing and concealing transformers and connections to building electrical system. Coordinate electrical characteristics with those of power supply provided.
- a. All power drivers to be compatible with universal primary circuit voltage (120-277). Acceptable products include GE - GEPS12-60U-NA (for 12V LED systems), and GE - GEPS24-100U-NA (for 24V LED systems). Other universal power supplies from the same manufacturer with different wattage or 0-10v dimming features are acceptable when used with compatible LED systems.
    - a) Acceptable Manufacturers:
      - 1) GE Lighting
      - 2) Sloan LED
      - 3) Magnitude Lighting
    - b. Loading shall be verified by following the testing procedures recommended by the LED-systems manufacturer.
      - a) Color: refer to Signage Detail Manual for color temperature
      - b) Population: Maximum 4-inch spacing between LED strips or segments.
    - c. Electrical Requirements:
      - a) All LEDs to use constant current technology.
      - b) All LEDs to be IP67 rated for interior environments, and IP68 in exterior or open air environments.
      - c) Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that shall be incorporated into the Work include:
        - 1) Bitro Group
        - 2) Sloan LED
        - 3) GE Lighting

**2.10 FINISHES, GENERAL**

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.
- D. Preparation: Substrates shall be smooth, clean and free of dust, grease, finger prints, or other foreign matter. If necessary to obtain true color application, surface shall be "primed" before final color application is applied. Artwork shall be accurately reproduced with all edges straight and true and all finishes smooth and with no visible imperfections
  - 1. Surface preparation: Follow paint manufacturer's instructions for preparing surfaces before applying primers or graphics.
- E. Corrosion Protection: Coat concealed surfaces which will be in contact with concrete, stone, masonry, wood, or dissimilar metals, in exterior work and work to be built into exterior and below grade walls and decks, with a heavy coat of bituminous paint. Do not extend coating onto exposed surfaces.
- F. Colors and Surface Textures: For exposed sign material that requires selection of materials with integral or applied colors, surface textures or other characteristics related to appearance, provide custom color matches as selected by the Architect.
  - 1. Aluminum: Acrylic polyurethane paint as specified in this Section.

## 2.11 ALUMINUM FINISHES

- A. Aluminum: Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
  - 1. Class I, Clear Anodic Finish: AA-M12C22A41; Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.7 mil (18  $\mu$ m or thicker) complying with AAMA 611.
  - 2. Class I, Color Anodic Finish: AA-M12C22A42/A44; Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrodeposited color coating 0.7 mil (18  $\mu$ m or thicker) complying with AAMA 611.
    - a. Color: Match Architect's sample.
    - b. Color: As selected by Architect from the full range of industry colors and color densities.
- B. Baked-Enamel Finish: Manufacturer's standard baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.
  - 1. Color: Match Architect's sample.

## 2.12 STAINLESS-STEEL FINISHES

- A. Remove tool and die marks and stretch lines or blend into finish.
- B. Unless otherwise indicated, grind and polish surfaces to produce uniform finish indicated, free of cross scratches.
  - 1. Run grain of directionally textured finishes with long dimension of each piece, unless otherwise indicated in the Signage Detail Manual.
- C. Stainless Steel Finishes:
  - 1. Directional Satin Finish: No. 4
  - 2. Dull Satin Finish : No. 6
  - 3. Reflective, Directional Polish : No. 7

4. Mirrorlike Reflective, Non Directional Polish : No. 8
- D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

### 2.13 PAINT MATERIALS

- A. Primer: High build, two-part polyamide epoxy.
- B. Opaque Finish Coat: Two-part, satin finish acrylic polyurethane paint. Provide products equal to Matthews Paint Company's "Low VOC Satin MAP - Acrylic Polyurethane," custom colors with gloss between 11 and 19 units at 60 degrees. Apply a protective topcoat of Matthews Paint Company's MAP Low VOC Satin Clearcoat on all painted surfaces.
- C. Powder Coating: Polyester based powder coating type finish for sheet steel.
- D. Silkscreen: Use fast drying opaque enamel silkscreen ink.
  1. Colors and Sheen: High gloss color not limited to manufacturer's standard colors.
- E. Bituminous Paint: Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. General: Examine area, surfaces and conditions under which the work is to be installed. Notify the Contractor in writing of conditions detrimental to the proper and timely completion of the work. Starting work implies acceptable surfaces and conditions.

### 3.2 INSTALLATION

- A. General: Locate signs, graphics and displays where shown on Sign Location Plan, and Signage Detail Manual, attaching to substrates in accordance with manufacturer's instructions, unless otherwise indicated.
  1. Install signs level, plumb, and at heights indicated, with surfaces free from distortion and other defects in appearance.
  2. Interior Room Identification Signs: Unless otherwise specified in the Signage Detail Manual, install signs on walls adjacent to latch side of door where applicable. Where not indicated or possible, such as double doors, and not otherwise indicated, install signs on nearest adjacent walls. Locate to allow approach within 3 inches (75 mm) (75 mm) of sign without encountering protruding objects or standing within swing of door.
  3. Install signs so they do not protrude or obstruct according to the ADAAG.
  4. Before installation, verify that wall and sign surfaces are clean and free of materials or debris that would impair installation.
  5. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- B. Surfaces under adhesive applied units shall be smooth, clean, and free of dust, grease, fingerprints, or other foreign matter. All adhesives required shall be used in accordance with recommendations made by the manufacturer of the material to be laminated or adhered. No adhesives that will fade, discolor, or delaminate because of ultraviolet light or heat shall be used. Adhesives shall not change the color of or deteriorate the materials to which they are to be applied. The adhesives shall be of a non-staining, non-yellowing quality. All visible joints shall be free from air bubbles and other defects.
- C. Mill joints to a tight, hairline fit. Form joints exposed to the weather to exclude water penetration.
- D. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
    - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
    - b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.
  2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
    - a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.
    - b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.
  3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
  4. Z clips and Brackets: Remove loose debris from substrate surface and install Z clip or bracket supports in position so that signage is correctly located and aligned.
  5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position, and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
  6. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.
- E. Wall-Mounted Panel Signs: Attach panel signs to wall surfaces using methods indicated below:
1. Flush-Mounting: Mount panel signs with backs in contact with wall surface.
  2. VHB Tape Mounting: Use VHB tape to mount signs to smooth, nonporous surfaces. Do not use this method for vinyl-covered or rough surfaces.
  3. Hook-and-Loop Tapes: Use hook-and-loop tapes to mount signs to smooth, nonporous surfaces.
  4. Magnetic Tape: Use magnetic tape to mount signs to smooth, nonporous surfaces.
  5. Silicone-Adhesive Mounting: Use liquid-silicone adhesive recommended in writing by sign manufacturer to attach signs to irregular, porous, or vinyl-covered surfaces. Use VHB tape where recommended in writing by sign manufacturer to hold sign in place until adhesive has fully cured.
  6. Shim Plate Mounting: Provide 1/8-inch-(3-mm)-(3-mm-) thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other mounting methods are not practicable. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach panel signs to plate using method specified above.
  7. Mechanical Fasteners: Use tamperproof mechanical fasteners placed through predrilled holes. Attach signs with fasteners and anchors suitable for secure attachment to substrate as recommended in writing by sign manufacturer.
  8. Where panel signs are scheduled or indicated to be mounted on glass (As per the Signage Detail Manual and/or Signage Location Plan), provide opaque vinyl film on opposite side of glass to conceal mounting materials. Color of vinyl to be 3M Scotchcal 7725 "Pearl Grey" unless otherwise noted in the Signage Detail Manual.

- F. Dimensional Characters: Mount characters using standard fastening methods recommended in writing by manufacturer for character form, type of mounting, wall construction, and condition of exposure indicated. Provide heavy paper template to establish character spacing and to locate holes for fasteners.
  - 1. Pin Mounting: A minimum of three threaded studs (1/8 inch diameter by 1/2 inch long minimum) welded to back or bottom of character with no distortions or discolorations to sign face.
  - 2. Flush Mounting: Mount characters with backs in contact with wall surface.
  - 3. Projected Mounting: Mount characters at projection distance from wall surface indicated.
- G. Bracket-Mounted or Suspended Units: Use custom fabricated brackets, fittings and hardware as appropriate for mounting signs which project at right angles from supporting elements or suspended from structural members. Attach brackets and fittings with concealed fasteners and anchoring devices, unless otherwise indicated, to comply with the manufacturer's directions.
- H. Illuminated Panels, Displays & Signage:
  - 1. Run wires into wall construction through conduit, seal ends. Use insulators as necessary for neon lighting wiring. For conditions at Fire-rated walls – coordinate appropriate installation with Contractor.
  - 2. Exposed-to-view wiring or conduit is not permitted in any form.
  - 3. Engage a licensed electrician to connect wiring to power source.

### 3.3 FIELD QUALITY CONTROL

- A. Within one week of scheduled completion of installation, prepare a punch list itemizing:
  - 1. Uppercase letters instead of lowercase or vice-versa.
  - 2. Improper alignment of letters on sign panel.
  - 3. Improper alignment of signs.
  - 4. Chipped or scratched finishes.
  - 5. Unpainted exposed fasteners.
  - 6. Fabricator's label displayed.
  - 7. Improper cleaning of sign surfaces or surrounding wall areas.
  - 8. Damage to surrounding surfaces.
  - 9. Missing signs, graphics, displays.
  - 10. Incorrect install locations.
  - 11. Missing trim, corner guards, or other finishing.
  - 12. Any areas that require touch up paint.
- B. Repair or replace damaged units as required after Architect's final inspection.

### 3.4 PATCH AND ADJUST

- A. Patch existing surfaces damaged because of work under this section. Patch with same materials as existing. Fabricator shall paint and harmoniously blend and contour all repairs to match adjoining conditions so that they are not noticeable to view.
- B. Touch-up any mars or nicks in painted finishes of all signs and adjacent structures. Touch-up shall be the same paint product as used for this sign finish. Touch up areas should blend with surrounding areas and not be noticeable to view.
- C. Corrosion Protection: Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint.
- D. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780, Annex A2.

### 3.5 CONSTRUCTION WASTE MANAGEMENT

- A. Construction Waste shall be managed in accordance with provisions of Section 01 74 19 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that section.

### **3.6 CLEANING AND PROTECTION**

- A. At completion of installation, clean exposed surfaces in accordance with the manufacturer's instructions. All items shall be free of glue, fingerprints, dirt, grease, or any other imperfections.
- B. Evidence of installation work or damages incurred on other surfaces shall be cleaned or repaired prior to completion of work. Protect units from damage until acceptance by Owner.
- C. Remove all packing and construction materials from site. Leave premises clean, ready for work under other contracts or ready for use.
- D. Instruct the Owner in writing as to the correct operation and maintenance of all signs and sign components.
- E. Demonstrate to the Owner the operation of all access panels, and replacement of lamps, ballasts, and transformers as applicable.
- F. Furnish Owner with a pint of each paint and finish material used on sign.

### **3.7 SCHEDULE OF MOCKUPS**

- A. Provide a mock-up (partial for large items; complete for smaller items) of each sign/display type requested at the fabrication facility for review. The requested mock-ups shall be coordinated with architect. Mock-ups once approved may be used towards final install count.
- B. When accepted, mock-up shall serve as the standard for materials, workmanship, and appearance for the work throughout the project.
- C. Provide work-in-progress sign elements reviews. Scheduled or unscheduled viewings at the Fabrication Facility may be initiated by the Owner's Representative as deemed necessary to ensure continued quality control and make any adjustments required during fabrication. Unsatisfactory items are to be corrected by the Fabricator as directed by the Owner or owner's representative.
- D. Samples: Submit three 6-inch (150 mm) (150 mm) square samples of each material showing finishes, colors, surface textures and qualities of manufacturer and design of each component including graphics. One sample set to be kept by Architect, contractor, and client as a record to later match against items in the field.
- E. Scaled mock up of graphic artwork + Full size print swatch of all graphic prints
  1. All printed pattern graphics and glass applied graphics.

### **3.8 WARRANTY**

- A. Submit to the Owner's Representative a 1-year written warranty (effective the date of final acceptance) covering all signs contractor will agree to repair or replace defective signs. Upon notification of such defective signs within the warranty period, make necessary repairs or replacement at the convenience of the Owner's Representative.
- B. Submit to the Owner's Representative a 1 year written warranty, warranting that the factory-applied finishes will not develop excessive fading or excessive non-uniformity of color or shade, and will not crack, peel, pit, corrode or otherwise fail because of defects in materials or workmanship within the following defined limits. Upon notification of such defects within the warranty period, make necessary repairs at the convenience of the owner's representative.

END OF SECTION

**SECTION 10 21 13.14 - STAINLESS STEEL TOILET COMPARTMENTS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Stainless steel toilet compartments configured as toilet enclosures and urinal screens.
- B. Related Requirements:
  - 1. Section 10 28 00 "Toilet, Bath, and Laundry Accessories" for accessories mounted on toilet compartments.

**1.2 COORDINATION**

- A. Coordinate requirements for overhead supports, blocking, reinforcing, and other supports concealed within wall and ceiling to ensure that toilet compartments can be supported and installed as indicated.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for toilet compartments.
- B. Shop Drawings: For toilet compartments.
  - 1. Include plans, elevations, sections, details, and attachment details.
  - 2. Show locations of cutouts for compartment-mounted toilet accessories.
  - 3. Show locations of reinforcements for compartment-mounted grab bars and locations of blocking for surface-mounted toilet accessories.
  - 4. Show locations of centerlines of toilet fixtures.
  - 5. Show locations of floor drains.
- C. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated:
  - 1. Each type of material, color, and finish required for toilet compartments, prepared on 6-inch-square Samples of same thickness and material indicated for Work.
  - 2. Each type of hardware and accessory.
- D. Product Schedule: For toilet compartments, prepared by or under the supervision of supplier, detailing location and selected colors for toilet compartment material.
- E. Delegated Design Submittals: For grab bars mounted on toilet compartment panels, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
  - 1. Include structural design calculations indicating compliance with specified structural-performance requirements.

**1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For toilet compartments.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock Material: Furnish extra materials to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Door Hinges: One hinge(s) with associated fasteners.
  - 2. Latch and Keeper: One latch(es) and keeper(s) with associated fasteners.
  - 3. Door Bumper: One door bumper(s) with associated fasteners.
  - 4. Door Pull: One door pull(s) with associated fasteners.
  - 5. Fasteners: 10 fasteners of each size and type.

**1.6 FIELD CONDITIONS**

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements, and coordinate before fabrication.

**PART 2 - PRODUCTS****2.1 SOURCE LIMITATIONS**

- A. Obtain stainless steel toilet compartments from single source from single manufacturer.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 75 or less.
  - 2. Smoke-Developed Index: 450 or less.
- B. Structural Performance: Where grab bars are mounted on toilet compartments, design panels to comply with the following requirements:
  - 1. Panels are able to withstand a concentrated load on grab bar of at least 250 lbf applied at any direction and at any point, without deformation of panel.
- C. Regulatory Requirements: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1 for toilet compartments designated as accessible.

**2.3 STAINLESS STEEL TOILET COMPARTMENTS**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Finish Legend on Drawings or comparable product by one of the following:
  - 1. Accurate Partitions Corporation.
  - 2. All American Metal Corp.
  - 3. American Sanitary Partition Corporation.
  - 4. Ampco, Inc.
  - 5. Bradley Corporation; Mills Partitions.
  - 6. Flush Metal Partition Corp.
  - 7. General Partitions Mfg. Corp.
  - 8. Hadrian Manufacturing Inc.
  - 9. Knickerbocker Partition Corporation.
  - 10. Marlite.
  - 11. Metpar Corp.
- B. Toilet-Enclosure Style: Floor mounted, overhead braced.
- C. Urinal-Screen Style: Wall hung flat panel.

- D. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.
  - 1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch for doors and panels and 1-1/4 inches for pilasters.
  - 2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units of size and material adequate for panel to withstand applied downward load on grab bar of at least 250 lbf, when tested according to ASTM F 446, without deformation of panel.
  - 3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.
- E. Entrance-Screen Construction: Matching panel construction.
- F. Urinal-Screen Construction:
  - 1. Flat-Panel Urinal Screen: Matching panel construction.
- G. Facing Sheets and Closures: Stainless steel sheet of nominal thicknesses as follows:
  - 1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than 0.038 inch.
  - 2. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than 0.050 inch.
  - 3. Panels: 0.038 inch.
  - 4. Doors: Manufacturer's standard thickness, but not less than 0.031 inch.
  - 5. Flat-Panel Urinal Screens: Thickness matching panels.
- H. Pilaster Shoes: Formed from stainless steel sheet, not less than 0.031-inch nominal thickness and 3 inches high, finished to match hardware.
- I. Pilaster Sleeves (Caps): Formed from stainless steel sheet, not less than 0.031-inch nominal thickness and 3 inches high, finished to match hardware.
- J. Brackets (Fittings):
  - 1. Full-Height (Continuous) Type: Manufacturer's standard design; stainless steel.
- K. Stainless Steel Finish: No. 4 bright, directional polish on on exposed faces. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.

## 2.4 HARDWARE AND ACCESSORIES

- A. Door Hardware and Accessories: Manufacturer's operating hardware and accessories.
  - 1. Hinges:
    - a. Manufacturer's minimum 0.062-inch-thick stainless-steel continuous, cam type that swings to a closed or slightly open position, allowing emergency access by lifting door. Mount with through-bolts.
  - 2. Latch and Keeper: Manufacturer's heavy-duty surface-mounted cast-stainless-steel latch unit designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through-bolts.
  - 3. Coat Hook: Manufacturer's heavy-duty combination cast-stainless-steel hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories. Mount with through-bolts.
  - 4. Door Bumper: Manufacturer's heavy-duty rubber-tipped cast-stainless-steel bumper at out-swinging doors. Mount with through-bolts.

5. Door Pull: Manufacturer's heavy-duty cast-stainless-steel pull at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on
- B. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel anchors compatible with related materials.

## 2.5 MATERIALS

- A. Aluminum Extrusions: ASTM B 221.
- B. Stainless Steel Sheet: ASTM A 666, Type 304, stretcher-leveled standard of flatness.
- C. Stainless Steel Castings: ASTM A 743/A 743M.

## 2.6 FABRICATION

- A. Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories and solid blocking within panel where required for attachment of toilet accessories.
- B. Floor-Mounted, Overhead-Braced Units: Manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Door Size and Swings: Unless otherwise indicated, provide 24-inch-wide inswinging doors for standard toilet enclosures and 36-inch-wide outswinging doors with a minimum 32-inch-wide clear opening for toilet enclosures designated as accessible.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
  1. Confirm location and adequacy of blocking and supports required for installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Coordinate layout and installation of supports, inserts, and anchors built into other units of work for toilet compartment anchorage.

### 3.2 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
  1. Maximum Clearances:
    - a. Pilasters and Panels or Screens: 1/2 inch.
    - b. Panels or Screens and Walls: 1 inch.
  2. Full-Height (Continuous) Brackets: Secure panels or screens to walls and to pilasters with full-height brackets.
    - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
    - b. Align brackets at pilasters with brackets at walls.

- B. Floor-mounted, Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

### **3.3 ADJUSTING**

- A. Hardware Adjustment: Adjust and lubricate hardware in accordance with hardware manufacturer's written instructions for proper operation. Set hinges on inswinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on outswinging doors to return doors to fully closed position.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 21 16 - SHOWER AND DRESSING COMPARTMENTS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Shower compartments fabricated from stainless steel.
  - 2. Dressing compartments fabricated from stainless steel.
  - 3. Shower receptors.
- B. Related Sections:
  - 1. Section 05 50 00 "Metal Fabrications" for supports that attach floor-and-ceiling-anchored compartments to overhead structural system.
  - 2. Section 06 10 53 "Miscellaneous Rough Carpentry" for blocking.
  - 3. Section 10 28 00 "Toilet, Bath, and Laundry Accessories" for grab bars, purse shelves, and similar accessories.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For shower and dressing compartments. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Show locations of cutouts for compartment-mounted accessories.
  - 2. Show locations of reinforcements for compartment-mounted grab bars.
  - 3. Show locations of centerlines of drains.
  - 4. Show ceiling grid and overhead support or bracing locations.
- C. Samples for Initial Selection: For each type of compartment indicated. Include Samples of hardware and accessories for material and color selection.
- D. Samples for Verification: For the following products, in manufacturer's standard sizes unless otherwise indicated:
  - 1. Each type of material, color, and finish required for compartments, prepared on 6-inch-square Samples of same thickness and material indicated for the Work.
  - 2. Each type of hardware and accessory.
  - 3. Curtain Fabric: 12-inch-square swatch or larger as required to show complete pattern repeat, from dye lot used for the Work, with specified treatments applied. Mark top and face of material.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Product Certificates: For each type of shower and dressing compartment, from manufacturer.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For shower and dressing compartments to include in maintenance manuals.

**1.5 QUALITY ASSURANCE**

- A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84, or another standard acceptable to authorities having jurisdiction, by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.

2. Smoke-Developed Index: 450 or less.
- B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural and Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and for shower and dressing compartments designated as accessible.

## 1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify actual locations of walls, columns, ceilings, and other construction contiguous with shower and dressing compartments by field measurements before fabrication.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Aluminum Castings: ASTM B 26/B 26M.
- B. Aluminum Extrusions: ASTM B 221.
- C. Brass Castings: ASTM B 584.
- D. Brass Extrusions: ASTM B 455.
- E. Steel Sheet: ASTM A 653/A 653M, either hot-dip galvanized or galvanized; mill phosphatized and selected for smoothness.
- F. Stainless-Steel Sheet: ASTM A 666, Type 304, stretcher-leveled standard of flatness.
- G. Stainless-Steel Castings: ASTM A 743/A 743M.
- H. Particleboard: ANSI A208.1, Grade M-2 with 45-lb density, made with binder containing no urea formaldehyde.
- I. Plastic Laminate: NEMA LD 3, general-purpose HGS grade, 0.048-inch nominal thickness.
- J. Adhesives: Manufacturer's standard product that complies with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

### 2.2 STAINLESS-STEEL COMPARTMENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. All American Metal Corp.
  2. General Partitions Mfg. Corp.
  3. Global Steel Products Corp.
  4. Metpar Corp.
  5. Rockville Partitions Incorporated.
  6. Sanymetal; a Crane Plumbing company.
- B. Configuration: As shown on Drawings.
- C. Enclosure Style: Overhead braced.

- D. Panel and Pilaster Construction: Seamless metal facing sheets, pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures and with corners secured by welding or clips and exposed welds ground smooth. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.
  - 1. Core Material: Manufacturer's standard, sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch for panels and 1-1/4 inches for pilasters.
  - 2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on compartments.
  - 3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to compartments.
- E. Door Construction: Match panels; 1-inch finished thickness.
- F. Facing Sheets and Closures: Stainless-steel sheet of nominal thicknesses as follows:
  - 1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than 0.038 inch.
  - 2. Panels: Manufacturer's standard thickness, but not less than 0.031 inch.
  - 3. Doors: Manufacturer's standard thickness, but not less than 0.031 inch.
- G. Pilaster Shoes and Sleeves (Caps): Formed from stainless-steel sheet, not less than 0.031-inch nominal thickness and 3 inches high, finished to match hardware.
- H. Brackets (Fittings):
  - 1. Full-Height (Continuous) Type: Manufacturer's standard design; clear-anodized aluminum.
  - 2. Stirrup Type: Ear or U-brackets; stainless steel.
  - 3. Dressing-Compartment Brackets: Match toilet-compartment brackets.
- I. Stainless-Steel Finish: Match stainless-steel toilet-compartment finish on exposed faces. Protect exposed surfaces from damage by applying strippable, temporary protective covering before shipment.

### 2.3 SHOWER RECEPTORS

- A. General: Manufacturer's standard, prefabricated, terrazzo receptor complete with integral drain.
  - 1. Curb: Not less than 2 inches and not more than 9 inches deep when measured from the top of the curb to the top of the drain; with curb threshold not less than 1 inch below the sides and back of the receptor; and with a ramped entrance surface for accessible compartments.
  - 2. Floor: Finished, sloping uniformly toward the drain and not less than 1/4 unit vertical in 12 units horizontal and not more than 1/2 inch.
  - 3. Drain Strainer: Manufacturer's standard, removable stainless-steel strainer.
  - 4. Drain Gasket: Manufacturer's standard gasket sized to fit waste pipe.
  - 5. Waterstop: Manufacturer's standard, continuous galvanized-steel flange or rabbeted groove to receive panels and create a waterstop when panels are in place.
- B. Finish: Manufacturer's standard finish on exposed surfaces, contrasting with the enclosure panels, as selected by Architect from manufacturer's full range and with slip-resistant floor surface texture.

### 2.4 ACCESSORIES

- A. Door Hardware and Accessories: Manufacturer's standard design, heavy-duty, operating hardware, and accessories.
  - 1. Material: Stainless steel.

2. Hinges: Manufacturer's standard, paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees.
  3. Latch and Keeper: Manufacturer's standard, surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at each compartment, accessible or not.
  4. Clothing Hooks: Manufacturer's standard clothing hooks in each dressing compartment; include one combination hook and rubber-tipped bumper at in-swinging doors, sized to prevent door from hitting wall panel or compartment-mounted accessories.
  5. Door Bumper: Manufacturer's standard, rubber-tipped bumper at out-swinging doors.
  6. Door Pull: Manufacturer's standard unit at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.
- B. Overhead Bracing: Manufacturer's standard, continuous, extruded-aluminum head rail or cap with antigrip profile; in manufacturer's standard finish.
- C. Head Rail with Hooks: Manufacturer's standard, continuous, extruded-aluminum head rail or cap with curtain hooks running in concealed track; with antigrip profile; in manufacturer's standard finish.
- D. Curtain Rod with Hooks: Manufacturer's standard, 1-inch-diameter, stainless-steel curtain rod with matching hooks.
- E. Curtain: Flame-resistant, manufacturer's standard fabric that is stain resistant, self-sanitizing, antistatic, and antimicrobial; launderable to a temperature of not less than 90 deg F.
1. Flame Resistance: Passes NFPA 701 tests when tested by a testing and inspecting agency acceptable to authorities having jurisdiction.
  2. Labeling: Identify fabrics with appropriate markings of applicable testing and inspecting agency.
  3. Curtain Grommets: Two-piece, rolled-edge, rustproof, nickel-plated brass; spaced not more than 6 inches o.c.; machined into top hem.
  4. Length: Where curtain extends to a floor surface, size so that bottom hem clears finished floor by not more than 1 inch and not less than 1/2 inch above floor surface. Where curtains extend to a shower-receptor curb, size so that bottom hem hangs above curb line and clears curb line by not more than 1/2 inch.
  5. Color and Pattern: Match Architect's sample.
- F. Soap Holder: Surface-mounted, seamless [stainless-steel] <Insert material> soap dish.
- G. Seats: Manufacturer's standard, wall-mounted benches.
1. Material: Solid phenolic.
  2. Operation: Folding.
  3. Finish: As selected by Architect from manufacturer's full range.
- H. Anchorages and Fasteners: Manufacturer's standard, exposed fasteners of stainless steel, chrome-plated steel, or solid brass, finished to match the items they are securing; with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel.

## 2.5 FABRICATION

- A. Overhead-Braced Compartments: Provide manufacturer's standard, corrosion-resistant supports, leveling method, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling method.

- B. Floor-and-Ceiling-Anchored Compartments: Provide manufacturer's standard, corrosion-resistant anchoring assemblies at pilasters and walls with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.
- C. Door Sizes and Swings: Unless otherwise indicated, provide 24-inch-wide, in-swinging doors for standard shower and dressing compartments, and 36-inch-wide, out-swinging doors with a minimum 32-inch-wide, clear opening for compartments designated as accessible.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. General: Comply with manufacturer's written installation instructions. Install compartments rigid, straight, level, and plumb. Secure compartments in position with manufacturer's recommended anchoring devices.
  - 1. Maximum Clearances for Dressing Compartment:
    - a. Pilasters and Panels: 1/2 inch.
    - b. Panels and Walls: 1 inch.
  - 2. Stirrup Brackets: Secure panels to walls and to pilasters with no fewer than three brackets attached at midpoint and near top and bottom of panel.
    - a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
    - b. Align brackets at pilasters with brackets at walls.
- B. Overhead-Braced Compartments: Secure pilasters to floor, and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Curtains: Install curtains to specified length and verify that they hang vertically without stress points or diagonal folds.
- D. Shower Receptors: Install prefabricated shower receptors with drain gasket compression fit to outside diameter of waste pipe.

#### **3.2 ADJUSTING**

- A. Curtain Adjustment: After hanging curtains, test and adjust each track or rod to produce unencumbered, smooth operation. Steam and dress down curtains as required to produce crease- and wrinkle-free installation. Remove and replace curtains that are stained or soiled or that have stress points or diagonal folds.
- B. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 22 26.13 - ACCORDION FOLDING PARTITIONS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Manually operated, accordion folding partitions.
  - 2. Manually operated, fire-rated accordion folding partitions.
  - 3. Electrically operated, accordion folding partitions.
  - 4. Electrically operated, fire-rated accordion folding partitions.
- B. Related Sections:
  - 1. Section 05 50 00 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.
  - 2. Section 08 35 13 "Folding Doors" for small-size, non-acoustically rated, fire-rated, and non-fire-rated accordion folding doors.
  - 3. Section 08 71 00 "Door Hardware" for hardware to the extent not specified in this Section.

**1.2 DEFINITIONS**

- A. NIC: Noise Isolation Class.
- B. NRC: Noise Reduction Coefficient.
- C. SAA: Sound Absorption Average.
- D. STC: Sound Transmission Class.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
  - a. .
- B. Shop Drawings: For accordion folding partitions.
  - 1. Include plans, elevations, sections, and attachment details to other work.
  - 2. Indicate storage and operating clearances.
  - 3. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
  - 4. Indicate facing-material seam locations if any.
  - 5. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of exposed material, facing material, and finish indicated.
  - 1. Include similar Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed material, facing material, and finish indicated, prepared on Samples of size indicated below:
  - 1. Textile Facing Material: Full width by not less than 36-inch-long section of fabric and carpet from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat.

2. Facing Material Other Than Textile: Manufacturer's standard-size unit, not less than 3 inches square.
  3. Edge Material: Not less than full width by 3 inches long.
  4. Hardware: Manufacturer's standard exposed door-operating device.
- E. Delegated-Design Submittal: For seismic bracing of accordion folding partitions indicated to comply with performance requirements and design criteria, including analysis data and calculations signed and sealed by the qualified professional engineer responsible for their preparation.
1. Include design calculations for seismic restraints that brace tracks to structure above.

## 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Partition track, track supports and seismic bracing, switches, turning space, and storage layout.
  2. Suspended ceiling components.
  3. Structural members to which suspension systems will be attached.
  4. Size and location of initial access modules for acoustical tile.
  5. Items penetrating finished ceiling, including the following:
    - a. Lighting fixtures.
    - b. HVAC ductwork, outlets, and inlets.
    - c. Speakers.
    - d. Sprinklers.
    - e. Smoke detectors.
    - f. Access panels.
  6. Plenum fire, smoke and acoustical barriers.
- B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.
- C. Qualification Data: For manufacturer, installer and testing agency.
- D. Seismic Qualification Certificates: For accordion folding partitions, accessories, and components, from manufacturer.
- E. Product Certificates: For each type of accordion folding partition, from manufacturer.
- F. Material Certificates: For each textile dye lot, signed by manufacturers.
- G. Product Test Reports: For each accordion folding partition, for tests performed by a qualified testing agency.
- H. Field quality-control reports.
- I. Sample Warranty: For manufacturer's special warranty.

## 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For accordion folding partitions to include in maintenance manuals.
1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Facing materials and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
    - b. Seals, hardware, track, carriers, and other operating components.
    - c. Electric operator and controls.

**1.7 QUALITY ASSURANCE**

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

**1.8 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of accordion folding partitions that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Faulty operation of accordion folding partitions.
    - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
  - 2. Warranty Period: Five years from date of Substantial Completion.
  - 3. Warranty Period for Pantographic Frames, Trolleys, and Tracks: 10 years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. General Requirements for Accordion Folding Partitions: Partitions shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

**2.2 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design seismic bracing of tracks to structure above, according to the seismic performance requirements.
- B. Seismic Performance: Accordion folding partitions shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- C. Acoustical Performance: Provide accordion folding partitions tested by a qualified testing agency for the following acoustical properties, according to test methods indicated:
  - 1. Sound-Transmission Requirements: Accordion folding partition assembly tested in a laboratory for sound-transmission loss performance according to ASTM E 90, calculated according to ASTM E 413, and rated for not less than the STC value indicated.
  - 2. Noise-Reduction Requirements: Accordion folding partition assembly, identical to partition tested for STC, tested for sound-absorption performance according to ASTM C 423, and rated for not less than the NRC indicated.
  - 3. Noise-Isolation Requirements: Installed accordion folding partition assembly, identical to partition tested for STC, tested for NIC according to ASTM E336, determined by ASTM E413, and rated for [10 dB less than STC value indicated].
  - 4. Acoustical Performance Requirements: Installed accordion folding partition assembly, identical to partition tested for STC, tested for NIC according to ASTM E 336, determined by ASTM E 413, and rated for 10 dB less than STC value indicated.
- D. Fire-Test-Response Characteristics: Provide partitions with finishes complying with one of the following, as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:
  - 1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

- a. Flame-Spread Index: 25 or less.
- b. Smoke-Developed Index: 450 or less.
2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 286.
- E. Fire Resistance: Provide fire-rated accordion folding partitions complying with NFPA 80, based on testing according to UL 10B for fire-rated door assemblies.
  1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.3 ACCORDION FOLDING PARTITION

- A. Accordion Folding Partition: Accordion folding frame with hinged sections designed for horizontal extension and retraction, covered with decorative facing material, reinforced for hardware attachment, supported by overhead suspension system, and equipped with manufacturer's standard air-release method to prevent billowing.
  1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Cornell Iron Works, Inc.
    - b. Curtition; a division of T&C Industries, Inc.
    - c. Holcomb & Hoke Mfg. Co., Inc.
    - d. Hufcor, Inc.; a KWIK-Wall Company.
    - e. KWIK-WALL Company.
    - f. Moderco Inc.
    - g. Modernfold, Inc.; a DORMA Group company.
    - h. Panelfold Inc.
    - i. Won-Door Corporation.
    - j. Woodfold Mfg., Inc.
- B. Partition Type: As indicated on Drawings with the following hardware:
  1. Lead Post Latching Hardware: Latch on one side secured to recessed jamb striker.
  2. Lead Post Locking Hardware: Key-operated lock cylinder, keyed to master key system, operable from latch side of post.
  3. Lead Post Locking Hardware: Deadlock to receive cylinder, operable from latch side of post. See Section 08 71 00 "Door Hardware" and Section 08 71 11 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.
  4. Meeting Post: Attached, with meeting/closing arrangement as indicated on Drawings.
  5. Intermediate Post: For intersecting partition on one side of partition.
  6. Storage-End Hardware: Anchor post, secured to opening jamb.
  7. Pendant Pull: Near top of lead post in addition to standard pull handle/latch for units more than 10 feet high or 20 feet wide, or both.
  8. Foot Bolt: On lead post(s) where indicated; secured to post without interference with seals.
- C. STC: 45.
- D. NRC: Not less than 0.70.
- E. Dimensions: Fabricate partitions to form an assembled system of dimensions indicated on Drawings and verified by field measurements.
  1. Stack Width (Stored): Maximum 8-1/2-inch thickness from one side of the partition to the other.

2. Width When Extended: Maximum 5-inch thickness from one side of the partition to the other.
  3. Total Stack Depth (Stored): Maximum 38 inches.
- F. Electric Controls: Remote-control station, Obstruction-detection device and emergency release mechanism.
- G. Facing Material: Refer to Finish Schedule on Drawings.
1. Color/Pattern: As selected by Architect from manufacturer's full range.

## 2.4 FIRE-RATED ACCORDION FOLDING PARTITION

- A. Fire-Rated Accordion Folding Partition: Accordion folding frame with pantograph sections designed for horizontal extension and retraction, covered with decorative facing material, reinforced for hardware attachment, supported by overhead suspension system, and equipped with manufacturer's standard air-release method to prevent billowing.
1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Cornell Iron Works, Inc.
    - b. Modernfold, Inc.; a DORMA Group company.
    - c. Won-Door Corporation.
- B. Partition Type: As indicated on Drawings with the following hardware:
1. Lead Post Latching Hardware: Latch on one side secured to recessed jamb striker.
  2. Lead Post Locking Hardware: Key-operated lock cylinder, keyed to master key system, operable from latch side of post.
  3. Lead Post Locking Hardware: Deadlock to receive cylinder, operable from latch side of post. See Section 08 71 00 "Door Hardware" and Section 08 71 11 "Door Hardware (Descriptive Specification)" for lock cylinder and keying requirements.
  4. Storage-End Hardware: Sliding jamb within storage pocket.
  5. Pendant Pull: Near top of lead post in addition to standard pull handle/latch for units more than 10 feet high or 20 feet wide, or both.
  6. Foot Bolt: On lead post; secured to post to avoid interference with seals.
- C. Fire Rating: As indicated on Drawings.
- D. STC: 44.
- E. NRC: 70.
- F. Dimensions: Fabricate partitions to form an assembled system of dimensions indicated on Drawings and verified by field measurements.
1. Stack Width (Stored): Maximum 11-1/2-inch thickness from one side of the partition to the other.
  2. Width When Extended: Maximum 13-3/4-inch thickness from one side of the partition to the other.
  3. Total Stack Depth (Stored): Maximum 38 inches.
- G. Electric Controls: Remote-control station, Obstruction-detection device and emergency release mechanism.
- H. Facing Material: As indicate on Finish Schedule on Drawings.
1. Color/Pattern: As selected by Architect from manufacturer's full range.

## 2.5 COMPONENTS

- A. Posts and Seals: Provide types of posts and seals that produce accordion folding partitions complying with performance requirements.

1. Posts: Steel or aluminum; formed with deep-nesting and interlocking interfaces and fabricated to ensure rigidity of accordion folding partition.
  2. Perimeter Seals: Manufacturer's standard vinyl, neoprene, or woven silica vertical seals, horizontal top and bottom seals, and closures for lead posts and jams. Seals and closures at fire-rated partitions shall be identical to products tested for fire rating indicated and shall form an effective smoke and draft seal.
- B. Hardware: Manufacturer's standard manually operated pulls, latches, locks, and bolts as required to operate accordion folding partitions; with decorative, protective finish.
- C. Trim: Manufacturer's standard with decorative, protective finish.
- D. Tiebacks: As required to maintain accordion folding partitions in stacked position; with manufacturer's standard finish.

## 2.6 SUSPENSION SYSTEMS

- A. Tracks: Steel or aluminum, mounted directly to overhead structural support, designed for operation, size, and weight of accordion folding partition indicated. Size track to support partition operation and storage without damage to suspension system, accordion folding partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
1. Track: Recessed.
    - a. Head Closure Trim: Integral with track for protecting overhead surfaces; with factory-applied, decorative, protective finish.
    - b. Head Closure Trim and Track Channel Pocket: For protecting overhead surfaces and enclosing overhead track opening; with factory-applied, decorative, protective finish.
- B. Carriers: Trolley system as required for size and weight of partition and for easy, quiet operation; with manufacturer's standard] ball-bearing carriers at lead post and manufacturer's standard ball-bearing carriers at intermediate partition supports.
1. Wheels: Manufacturer's standard.
- C. Track Switches and Accessories: Manufacturer's standard switches as required for type of operation, storage, track configuration, and layout indicated.
- D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- E. Steel Finish: Factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

## 2.7 ELECTRIC OPERATORS

- A. Factory-assembled electric operation system of size and capacity recommended and provided by accordion folding partition manufacturer for partition specified; with electric motor and factory-prewired motor controls, speed reducer, chain drive, remote-control stations, control devices, and accessories required for operation. Include wiring from control stations to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
- B. Comply with NFPA 70.
- C. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor; complying with NEMA MG 1. Also comply with the following:
1. Voltage: NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected.

2. Horsepower: Manufacturer's standard.
  3. Efficiency: Premium.
  4. Enclosure: Manufacturer's standard.
  5. Duty: Continuous duty at ambient temperature of 105 deg F and at altitude of 3300 feet above sea level.
  6. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
  7. Phase: Single.
- D. Motor Electrical Characteristics:
1. Horsepower: Manufacturer's standard.
  2. Volts: 115.
  3. Phase: Single phase.
  4. Hertz: 60.
- E. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.
- F. Remote-Control Station: For partitions indicated, provide manufacturer's standard key-operated, constant-pressure, three-position control station labeled "Open," "Close," and "Stop." Provide two keys per station.
- G. Obstruction-Detection Device: For partitions indicated, provide automatic safety sensor indicated that causes operator to immediately stop and reverse direction.
1. Sensor Edge: Contact-pressure-sensitive safety edge along partition's leading edge.
- H. Limit Switches: Provide each partition with adjustable switches, interlocked with motor controls and set to automatically stop accordion folding partition at fully extended and fully stacked positions.
- I. Electric Interlock: Provide each partition with safety interlocks to prevent operation of accordion folding partition under the following conditions:
1. On partition, to prevent operation when partition is extended and locked.
  2. On storage pocket door, to prevent partition operation if door is not in fully open position.
  3. On partitions, at location of convergence by another partition, to prevent operation if merging partitions are in place.
- J. Emergency Release Mechanism: For partitions indicated, provide quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.

## 2.8 FACING MATERIALS

- A. Provide facing materials with appropriate backing that comply with indicated fire-test-response characteristics, and that are factory attached to accordion folding partitions with concealed fasteners.
1. Factory-apply facing material free of air bubbles, wrinkles, blisters, and other defects; [in one piece, seamless; and with no gaps or overlaps. Tightly secure and conceal raw and selvage edges of facing material for finished appearance. Horizontal butted edges or seams are not permitted.
  2. Where facing material with directional or repeating patterns or directional weave are indicated, mark facing-material top and attach facing material in same direction.
  3. Match facing pattern 72 inches above finished floor unless otherwise indicated.
- B. Carpet Wall Covering: Manufacturer's standard nonwoven, needle-punched carpet with fibers fused to backing, from same dye lot, treated to resist stains.
- C. Woven Fabric: Manufacturer's standard 100 percent polyolefin woven fabric, from same dye lot, treated to resist stains.
- D. Fabric: Manufacturer's standard fabric, from same dye lot, treated to resist stains.
- E. Vinyl-Coated Fabric: Manufacturer's standard mildew-resistant, washable, vinyl-coated fabric wall covering; complying with WA-101, Type II-Medium Duty; Class A.

1. Total Weight: Refr to Drawings.
  2. Antimicrobial Treatment: Additives capable of inhibiting growth of bacteria, fungi, and yeasts.
- F. Vinyl Film: Manufacturer's standard vinyl film laminated to partition substrate.
- G. Plastic Laminate: High-pressure decorative laminate; NEMA LD 3, Grade HGS.
- H. Wood Veneer: Laminated to fire-retardant-treated wood core with moisture-resistant adhesive.
1. Wood Species and Finish: As selected by Architect from manufacturer's full range.
- I. Paint: Manufacturer's standard baked enamel.

## 2.9 STORAGE POCKET DOORS

- A. Storage Pocket Door : Full height at end of partition runs to conceal stacked partition; of same materials, finish, construction, thickness, and acoustical qualities as partition; complete with operating hardware and acoustical seals at soffit, floor, and jambs. Hinges in finish to match other exposed hardware.
1. Pocket-door manufacturer's standard method to secure storage pocket door in closed position.
  2. Manufacturer's standard method to secure storage pocket door in closed position.
  3. Rim Lock: Key-operated lock cylinder, keyed to master key system, to secure storage pocket door in closed position. Include two keys per lock.
  4. Rim Lock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See Section 08 71 00 "Door Hardware" for lock cylinder and keying requirements.
- B. Electric Interlock: Provide each pocket door for an electrically operated, accordion folding partition with electric interlocks to prevent operation of accordion folding partition if pocket door is not in fully open position.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine flooring, floor levelness, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of accordion folding partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. General: Comply with ASTM E 557 except as otherwise required by accordion folding partition manufacturer's written installation instructions. Install accordion folding partitions level and plumb, with tight joints and uniform appearance, and free of deformation and surface and finish irregularities.
- B. Install accordion folding partitions, seismic bracing, and accessories after other finishing operations, including painting, have been completed in area of partition installation.
- C. Broken, cracked, chipped, deformed, or unmatched sections are unacceptable.
- D. Broken, cracked, deformed, or unmatched seals or seals with gaps at butted ends are unacceptable.
- E. Light-Leakage Test: Illuminate one side of partition installation, and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals. Perform test and make adjustments before NIC testing.

**3.3 FIELD QUALITY CONTROL**

- A. NIC Testing: Owner will engage a qualified testing agency to perform tests and inspections.
  - 1. Testing Extent: Testing agency shall randomly select one accordion folding partition installation(s) for testing.
  - 2. Testing Methodology: Perform testing of installed accordion folding partition for noise isolation according to ASTM E336, determined by ASTM E413, and rated for not less than NIC indicated. Adjust and fit partitions to comply with NIC test method requirements.
- B. Accordion folding partitions will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

**3.4 ADJUSTING**

- A. Adjust accordion folding partitions to operate smoothly, without warping or binding. Lubricate hardware and other moving parts as recommended by manufacturer.
- B. Adjust storage pocket doors to operate smoothly and easily, without binding or warping. Check and readjust operating hardware. Confirm that latches and locks engage accurately and securely without forcing or binding.
- C. Electrically Operated Partitions: Adjust electric interlocks to properly control partition operation.
- D. Verify that safety devices are properly functioning.

**3.5 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain accordion folding partitions.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 22 29 - UPFOLDING PANEL PARTITIONS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Electrically operated vertical lift acoustical panel partitions.
- B. Related Requirements:
  - 1. Section 05 12 00 "Structural Steel Framing" for primary structural support and miscellaneous steel.
  - 2. Section 05 50 00 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.
  - 3. Section 09 29 00 "Gypsum Board" for fire-rated assemblies and sound barrier construction above the ceiling at track.
  - 4. Section 10 22 26.13 "Accordion Folding Partitions" for accordion-type folding partitions having a pantograph mechanism and outer flexible covering, or narrow, vertically hinged segments.
  - 5. Section 10 22 39 "Folding Panel Partitions" for conventional horizontal-folding operable panel partitions.
  - 6. Section 10 22 39.13 "Folding Glass-Panel Partitions" for operable panel partitions made of glass panels.
  - 7. Electrical and communications Sections for electrical service and connections for motor operators, controls, and limit switches and for system disconnect switches.

**1.2 DEFINITIONS**

- A. NIC: Noise Isolation Class.
- B. NRC: Noise Reduction Coefficient.
- C. STC: Sound Transmission Class.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For upfolding panel partitions.
  - 1. Include plans, elevations, sections, details, numbered panel installation sequence, and attachments to other work.
  - 2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
  - 3. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of exposed material, finish, covering, or facing.
  - 1. Include Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed material, finish, covering, or facing, prepared on Samples of size indicated below:
  - 1. Textile Facing Material: Full width by not less than 36-inch-long section of material from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat.

2. Panel Facing Material: Manufacturer's standard-size unit, not less than 3 inches square.
  3. Panel Edge Material: Not less than 3 inches long.
  4. Chair Rail: Manufacturer's standard-size unit, 6 inches long.
  5. Glass: Units 12 inches square.
  6. Hardware: One of each exposed door-operating device.
- E. Delegated-Design Submittal: For upfolding panel partitions.
1. Include design calculations for seismic restraints.

### 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Partition track, track supports and bracing, switches, turning space, and storage layout.
  2. Suspended ceiling components.
  3. Structural members to which suspension systems are attached.
  4. Size and location of initial access modules for acoustical tile.
  5. Items penetrating finished ceiling, including the following:
    - a. Lighting fixtures.
    - b. HVAC ductwork, outlets, and inlets.
    - c. Speakers.
    - d. Sprinklers.
    - e. Smoke detectors.
    - f. Access panels.
  6. Plenum fire, smoke and acoustical barriers.
- B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.
- C. Qualification Data: For qualified Installer testing agency, manufacturer, and vendor.
- D. Seismic Qualification Certificates: For upfolding panel partitions, tracks, accessories, and components, from manufacturer. Include seismic capacity of partition assemblies to remain in vertical position during a seismic event and the following:
1. Basis for Certification: Indicate whether certification is based on analysis, testing, or experience data, according to ASCE/SEI 7.
  2. Detailed description of partition anchorage devices on which the certification is based and their installation requirements.
- E. Product Certificates: For each type of upfolding panel partition.
1. Include approval letter signed by manufacturer acknowledging Owner-furnished panel facing material complies with requirements.
- F. Product Test Reports: For each upfolding panel partition, for tests performed by a qualified testing agency.
- G. Field quality-control reports.
- H. Sample Warranty: For manufacturer's special warranty.

### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For upfolding panel partitions to include in maintenance manuals.
1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Panel finish facings and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
    - b. Seals, hardware, track, track switches, carriers, and other operating components.

- c. Electric operator and controls.

### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same production run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Panel Finish-Facing Material: Furnish full width in quantity to cover both sides of two panels when installed.

### 1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- C. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

### 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

### 1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of upfolding panel partitions that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Faulty operation of upfolding panel partitions.
    - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
  - 2. Warranty Period: 10 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design seismic bracing of tracks to structure above.
- B. Seismic Performance: Upfolding panel partitions shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the partition panels will remain in place without separation of any parts from the system when subjected to the seismic forces specified."
- C. Acoustical Performance: Provide upfolding panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:
  - 1. Sound-Transmission Requirements: Upfolding panel partition assembly tested for laboratory sound-transmission loss performance according to ASTM E 90, determined by ASTM E 413, and rated for not less than the STC indicated.
  - 2. Noise-Reduction Requirements: Upfolding panel partition assembly, identical to partition tested for STC, tested for sound-absorption performance according to ASTM C 423, and rated for not less than the NRC indicated.

3. Noise-Isolation Requirements: Installed upfolding panel partition assembly, identical to partition tested for STC, tested for NIC according to ASTM E 336, determined by ASTM E 413, and rated for 10 dB less than STC value indicated.
- D. Fire-Test-Response Characteristics: Provide panels with finishes complying with one of the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
  1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame-Spread Index: 25 or less.
    - b. Smoke-Developed Index: 450 or less.
  2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.2 UPFOLDING ACOUSTICAL PANELS

- A. Upfolding Acoustical Panels: Partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
  1. Basis-of-Design Product: Subject to compliance with requirements, provide Skyfold or comparable product by one of the following:
    - a. Advanced Equipment Corporation.
    - b. FolDoor.
    - c. Hufcor, Inc.; a KWIK-Wall Company.
    - d. KWIK-WALL Company.
    - e. Moderco Inc.
    - f. Modernfold, Inc.
    - g. Panelfold Inc.
- B. Basis of Design model:
  1. Skyfold® Zenith Premium 55™: System STC 55 (Rw 54), Panel Construction STC 61 (Rw 60)
- C. Panel Operation: Electrically operated, continuously hinged panels.
- D. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- E. Dimensions: Fabricate upfolding acoustical panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
  1. Panel Width: As indicated.
- F. STC: Not less than 50.
- G. NRC: Not less than 0.90.
- H. Panel Weight: 10 lb/sq. ft. maximum.
- I. Panel Thickness: Not less than 3 inches.
- J. Panel Materials:
  1. Steel Frame: Steel sheet, manufacturer's standard nominal minimum thickness for uncoated steel.

2. Steel Face/Liner Sheets: Tension-levleed steel sheet, manufacturer's standard minimum nominal thickness for uncoated steel.
  3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; ASTM B 221 for extrusions; manufacturer's standard strengths and thicknesses for type of use.
    - a. Frame Reinforcement: Manufacturer's standard steel or aluminum.
  4. Gypsum Board: ASTM C 1396/C 1396M, with moisture- and mold-resistant core and paper surfaces.
    - a. Mold Resistance: ASTM D 3273, score of 10.
  5. Cement Board: ASTM C 1288.
  6. Particleboard: ANSI A208.1, made with binder containing no urea formaldehyde.
  7. Medium-Density Fiberboard: ANSI A208.2, made with binder containing no urea formaldehyde.
  8. Plywood: DOC PS 1; made with adhesive containing no urea formaldehyde.
- K. Panel Closure: Manufacturer's standard unless otherwise indicated.
1. Initial Closure: Flexible, resilient PVC, bulb-shaped acoustical seal.
- L. Hardware: Manufacturer's standard as required to operate upfolding panel partition and accessories; with decorative, protective finish.
1. Hinges: Manufacturer's standard.

### 2.3 SEALS

- A. General: Provide seals that produce upfolding panel partitions complying with performance requirements and the following:
1. Manufacturer's standard seals unless otherwise indicated.
  2. Seals made from materials and in profiles that minimize sound leakage.
  3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between upfolding panel partition perimeter and adjacent surfaces, when upfolding panel partition is extended and closed.
- B. Horizontal Top Seals: Continuous-contact, extruded-PVC seal exerting uniform constant pressure on track.
- C. Horizontal Bottom Seals: PVC-faced, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.
1. Mechanically Operated for Acoustical Panels: Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than 2-1/2 inches between retracted seal and floor finish.

### 2.4 PANEL FINISH FACINGS

- A. General: Provide finish facings for panels that comply with indicated fire-test-response characteristics and that are factory applied to upfolding panel partitions with appropriate backing, using mildew-resistant nonstaining adhesive as recommended by facing manufacturer's written instructions.
1. Apply one-piece, seamless facings free of air bubbles, wrinkles, blisters, and other defects, with no gaps or overlaps. Horizontal butted edges are not permitted. Tightly secure and conceal raw and salvage edges of facing for finished appearance.
  2. Where facings with directional or repeating patterns or directional weave are indicated, mark facing top and attach facing in same direction.
  3. Match facing pattern 72 inches above finished floor.
- B. Fabric Wall Covering: Manufacturer's standard fabric, from same dye lot, treated to resist stains.
1. Color/Pattern: As selected by Architect from manufacturer's full range.

- C. Cap-Trimmed Edges: Protective perimeter-edge trim with tight hairline joints concealing edges of panel and finish facing, finished as follows:
  - 1. Steel, Painted: Finished with manufacturer's color as selected by Architect from manufacturer's full range.
  - 2. Aluminum: Finished with manufacturer's standard color anodic finish.
- D. Trimless Edges: Fabricate exposed panel edges so finish facing wraps uninterrupted around panel, covering edge and resulting in an installed partition with facing visible on vertical panel edges, without trim, for minimal sightlines at panel-to-panel joints.

## 2.5 SUSPENSION SYSTEMS

- A. Tracks: Steel or aluminum mounted directly to overhead structural support, with adjustable steel hanger rods for overhead support, designed for operation, size, and weight of upfolding panel partition indicated. Size track to support partition operation and storage without damage to suspension system, upfolding panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
  - 1. Panel Guide: Aluminum guide on both sides of the track to facilitate straightening of the panels; finished with factory-applied, decorative, protective finish.
  - 2. Head Closure Trim: As required for acoustical performance; with factory-applied, decorative, protective finish.
- B. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- C. Steel Finish: Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

## 2.6 ELECTRIC OPERATORS

- A. General: Factory-assembled electric operation system of size and capacity recommended and provided by upfolding panel partition manufacturer for partition specified; with electric motor and factory-prewired motor controls, speed reducer, chain drive, control stations, control devices, and accessories required for operation. Include wiring from control stations to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
- B. Comply with NFPA 70.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.
- D. Motor Electrical Characteristics:
  - 1. Horsepower: Manufacturer's standard.
  - 2. Volts: 120.
  - 3. Phase: Single.
  - 4. Hertz: 60.
- E. Control Stations: Two single-key-operated, constant-pressure control stations located remotely from each other on opposite sides and opposite ends of partition run. Wire in series to require simultaneous activation of both key stations to operate partition. Each three-position control station labeled "Open," "Close," and " Stop." Furnish two keys per station.
- F. Obstruction-Detection Devices: Equip each motorized upfolding panel partition with indicated automatic safety sensor that causes operator to immediately stop and reverse direction.
  - 1. Sensor Edge: Contact-pressure-sensitive safety edge along partition's leading edge.
  - 2. Sensor Mat: Electrically operated, contact-weight-sensitive safety mat in storage pocket area.

3. Infrared Sensor System: Designed to detect an obstruction in partition's path and sound an audible alarm, without obstruction contacting partition.
- G. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop upfolding panel partition at fully extended and fully stacked positions.
- H. Emergency Release Mechanism: Quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.
- I. Electric Interlock: Equip each motorized upfolding panel partition with electric interlocks at locations indicated, to prevent operation of upfolding panel partition under the following conditions:
  1. On storage pocket door, to prevent operation if door is not in fully open position.
  2. On partitions at location of convergence by another partition, to prevent operation if merging partitions are in place.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine flooring, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of upfolding panel partitions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. General: Comply with ASTM E 557 except as otherwise required by upfolding panel partition manufacturer's written installation instructions.
- B. Install upfolding panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.
- C. Install panels from marked packages in numbered sequence indicated on Shop Drawings.
- D. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.
- E. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.
- F. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals. Perform test and make adjustments before NIC testing.

#### **3.3 FIELD QUALITY CONTROL**

- A. NIC Testing: Owner will engage a qualified testing agency to perform tests and inspections.
  1. Testing Extent: Testing agency shall randomly select one upfolding panel partition installation(s) for testing.
  2. Testing Methodology: Perform testing of installed upfolding panel partition for noise isolation according to ASTM E 336, determined by ASTM E 413, and rated for not less than NIC indicated. Adjust and fit partitions to comply with NIC test method requirements.
- B. An upfolding panel partition installation will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

**3.4 ADJUSTING**

- A. Adjust upfolding panel partitions, hardware, and other moving parts to function smoothly, and lubricate as recommended by manufacturer.
- B. Verify that safety devices are properly functioning.

**3.5 MAINTENANCE SERVICE**

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by manufacturer's authorized service representative. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper upfolding-partition operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

**3.6 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain upfolding panel partitions.

END OF SECTION

**SECTION 10 22 39 - FOLDING PANEL PARTITIONS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Manually operable acoustical panel partitions.
  - 2. Electrically operated, acoustical partitions.
  - 3. Manually operable fire-rated panel partitions.
- B. Related Requirements:
  - 1. Section 05 50 00 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.
  - 2. Section 09 29 00 "Gypsum Board" for fire-rated assemblies and sound barrier construction above the ceiling at track.
  - 3. Section 10 22 39.13 "Folding Glass-Panel Partitions" for operable panel partitions made of glass panels.
  - 4. Electrical and communications Sections for electrical service and connections for motor operators, controls, and limit switches and for system disconnect switches.

**1.2 DEFINITIONS**

- A. NIC: Noise Isolation Class.
- B. NRC: Noise Reduction Coefficient.
- C. STC: Sound Transmission Class.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For operable panel partitions.
  - 1. Include plans, elevations, sections, attachment details, and numbered panel installation sequence.
  - 2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
  - 3. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of exposed material, finish, covering, or facing.
  - 1. Include Samples of accessories involving color selection.
- D. Samples for Verification: For each type of exposed material, finish, covering, or facing, prepared on Samples of size indicated below:
  - 1. Textile Facing Material: Full width by not less than 36-inch-long section of fabric and carpet from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat.
  - 2. Panel Facing Material: Manufacturer's standard-size unit, not less than 3 inches square.
  - 3. Panel Edge Material: Not less than 3 inches long.
  - 4. Chair Rail: Manufacturer's standard-size unit, 6 inches long.
  - 5. Glass: Units 12 inches square.
  - 6. Hardware: One of each exposed door-operating device.

- E. Delegated Design Submittals: For operable panel partitions.
  - 1. Include design calculations for seismic restraints that brace tracks to structure above.

### 1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Partition track, track supports and bracing, switches, turning space, and storage layout.
  - 2. Suspended ceiling components.
  - 3. Structural members to which suspension systems will be attached.
  - 4. Size and location of initial access modules for acoustical tile.
  - 5. Items penetrating finished ceiling including the following:
    - a. Lighting fixtures.
    - b. HVAC ductwork, outlets, and inlets.
    - c. Speakers.
    - d. Sprinklers.
    - e. Smoke detectors.
    - f. Access panels.
  - 6. Plenum fire, smoke and acoustical barriers.
- B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.
- C. Qualification Data: For Installer, testing agency, manufacturer, and vendor.
- D. Seismic Qualification Certificates: For operable panel partitions, tracks, accessories, and components, from manufacturer. Include seismic capacity of partition assemblies to remain in vertical position during a seismic event and the following:
  - 1. Basis for Certification: Indicate whether certification is based on analysis, testing, or experience data, in accordance with ASCE/SEI 7.
  - 2. Detailed description of partition anchorage devices on which the certification is based and their installation requirements.
- E. Product Certificates: For each type of operable panel partition.
  - 1. Include approval letter signed by manufacturer acknowledging Owner-furnished panel facing material complies with requirements.
- F. Product Test Reports: For each operable panel partition, for tests performed by a qualified testing agency.
- G. Field quality-control reports.
- H. Sample Warranty: For manufacturer's special warranty.

### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For operable panel partitions to include in maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Panel finish facings and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
    - b. Seals, hardware, track, track switches, carriers, and other operating components.
    - c. Electric operator and controls.

**1.7 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials, from the same production run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Panel Finish-Facing Material: Furnish full width in quantity to cover both sides of two panels when installed.

**1.8 QUALITY ASSURANCE**

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- C. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

**1.9 DELIVERY, STORAGE, AND HANDLING**

- A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

**1.10 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of operable panel partitions that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Faulty operation of operable panel partitions.
    - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
  - 2. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design seismic bracing of tracks to structure above.
- B. Seismic Performance: Operable panel partitions are to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
  - 1. The term "withstand" means "the partition panels will remain in place without separation of any parts when subjected to the seismic forces specified."
- C. Acoustical Performance: Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties in accordance with test methods indicated:
  - 1. Sound-Transmission Requirements: Operable panel partition assembly tested for laboratory sound-transmission loss performance in accordance with ASTM E 90, determined by ASTM E 413, and rated for not less than the STC indicated.
  - 2. Noise-Reduction Requirements: Operable panel partition assembly, identical to partition tested for STC, tested for sound-absorption performance in accordance with ASTM C 423, and rated for not less than the NRC indicated.
  - 3. Noise-Isolation Requirements: Installed operable panel partition assembly, identical to partition tested for STC, tested for NIC in accordance with ASTM E 336, determined by ASTM E 413, and rated for 10 dB less than STC value indicated.

- D. Fire-Test-Response Characteristics: Provide panels with finishes complying with one of the following as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:
  - 1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
    - a. Flame-Spread Index: 25 or less.
    - b. Smoke-Developed Index: 450 or less.
  - 2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested in accordance with NFPA 265 Method B Protocol.
- E. Fire Resistance: Provide fire-rated operable panel partition assemblies complying with NFPA 80, based on testing in accordance with UL 10B for fire-rated door assemblies.
  - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
  - 2. Pass doors in fire-rated operable panel partition assemblies are to meet positive-pressure requirements.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.2 OPERABLE ACOUSTICAL PANEL PARTITIONS

- A. Operable Acoustical Panel Partitions: Partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Modernfold, Inc. or comparable product by one of the following:
    - a. Advanced Equipment Corporation.
    - b. Hufcor, Inc.; a KWIK-Wall Company.
    - c. FolDoor.
    - d. KWIK-WALL Company.
    - e. Moderco Inc.
    - f. Panelfold Inc.
- B. Panel Operation: Manually operated, individual panels.
- C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- D. Dimensions: Fabricate operable acoustical panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
  - 1. Panel Width: As indicated.
- E. STC: Not less than 50.
- F. NRC: Not less than 0.90.
- G. Panel Weight: 10 lb/sq. ft. maximum.
- H. Panel Thickness: Minimum dimension of 3 inches

- I. Panel Materials:
  - 1. Steel Frame: Steel sheet, manufacturer's standard nominal minimum thickness for uncoated steel.
  - 2. Steel Face/Liner Sheets: Tension-levleed steel sheet, manufacturer's standard minimum nominal thickness for uncoated steel.
  - 3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; ASTM B221 for extrusions; manufacturer's standard strengths and thicknesses for type of use.
    - a. Frame Reinforcement: Manufacturer's standard steel or aluminum.
  - 4. Gypsum Board: ASTM C 1396/C 1396M, with moisture-and mold-resistant core and papers surfaces.
  - 5. Cement Board: ASTM C1288.
  - 6. Particleboard: ANSI A208.1, made with binder containing no urea formaldehyde.
  - 7. Medium-Density Fiberboard: ANSI A208.2.
  - 8. Plywood: DOC PS 1; made with adhesive containing no urea formaldehyde.
- J. Panel Closure: Manufacturer's standard unless otherwise indicated.
  - 1. Initial Closure: Resilient, bulb-shaped acoustical seal.
  - 2. Final Closure: Constant-force, lever-operated mechanical closure expanding from panel edge to create a constant-pressure acoustical seal.
- K. Hardware: Manufacturer's standard as required to operate operable panel partition and accessories; with decorative, protective finish.
  - 1. Hinges: Manufacturer's standard.
- L. Finish Facing: Refer to Finish Schedule on Drawings..

### 2.3 OPERABLE FIRE-RATED PANEL PARTITIONS

- A. Operable Fire-Rated Panel Partitions: Fire-rated, acoustical panel partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Modernfold, Inc. or comparable product by one of the following:
    - a. Advanced Equipment Corporation.
    - b. KWIK-WALL Company.
    - c. Moderco Inc.
    - d. Panelfold Inc.
- B. Panel Operation: Manually operated, individual panels.
- C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.
- D. Dimensions: Fabricate operable fire-rated panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
  - 1. Panel Width: As indicated.
- E. Fire Rating: 1 hour(s).
- F. STC: Not less than 50.
- G. NRC: Not less than 0.90.
- H. Panel Weight: 10 lb/sq. ft. maximum.
- I. Panel Thickness: Minimum dimension of 3 inches.
- J. Panel Materials:

1. Steel Frame: Steel sheet, manufacturer's standard nominal minimum thickness for uncoated steel.
  2. Steel Face/Liner Sheets: Tension-leveled steel sheet, manufacturer's standard nominal thickness for uncoated steel.
- K. Panel Closure: Manufacturer's standard fire-rated closure unless otherwise indicated.
1. Initial Closure: Resilient, bulb-shaped acoustical seal.
  2. Final Closure: Fire-rated, constant-force, lever-operated mechanical closure expanding from panel edge to create a constant-pressure acoustical seal.
- L. Hardware: Manufacturer's standard as required to operate fire-rated operable panel partition and accessories; with decorative, protective finish.
1. Hinges: Manufacturer's standard.
- M. Finish Facing: Refer to Finish Schedule on Drawings.

## 2.4 SEALS

- A. Description: Seals that produce operable panel partitions complying with performance requirements and the following:
1. Manufacturer's standard seals unless otherwise indicated.
  2. Seals made from materials and in profiles that minimize sound leakage.
  3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended and closed.
- B. Vertical Seals: Deep-nesting, interlocking steel astragals mounted on each edge of panel, with continuous, resilient acoustical seal.
- C. Horizontal Top Seals: Continuous-contact, resilient seal exerting uniform constant pressure on track.
- D. Horizontal Bottom Seals:
1. Manufacturer's standard continuous-contact seal exerting uniform constant pressure on floor.
  2. Resilient, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.
    - a. Mechanically Operated for Acoustical Panels: Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than 2-1/2 inches between retracted seal and floor finish.
    - b. Mechanically Operated for Fire-Rated Panels: Extension and retraction of bottom seal by operating handle or built-in operating mechanism, with operating range not less than 2-1/2 inches between retracted seal and floor finish.

## 2.5 PANEL FINISH FACINGS

- A. Description: Finish facings for panels that comply with indicated fire-test-response characteristics and that are factory applied to operable panel partitions with appropriate backing, using mildew-resistant nonstaining adhesive as recommended by facing manufacturer's written instructions.
1. Apply one-piece, seamless facings free of air bubbles, wrinkles, blisters, and other defects, with edges tightly butted, and with no gaps or overlaps. Horizontal butted edges seams are not permitted. Tightly secure and conceal raw and selvage edges of facing for finished appearance.
  2. Where facings with directional or repeating patterns or directional weave repeating are indicated, mark facing top and attach facing in same direction.
  3. Match facing pattern 72 inches above finished floor.

- B. Vinyl-Coated Fabric Wall Covering: Manufacturer's standard, mildew-resistant, washable, vinyl-coated fabric wall covering; complying with WA-101, Type II-Medium Duty; Class A.
  - 1. Antimicrobial Treatment: Additives capable of inhibiting growth of bacteria, fungi, and yeasts.
  - 2. Color/Pattern: As selected by Architect from manufacturer's full range.
- C. Carpet Wall Covering: Manufacturer's standard nonwoven, needle-punched carpet with fibers fused to backing, from same dye lot, treated to resist stains.
  - 1. Color/Pattern: As selected by Architect from manufacturer's full range.
- D. Fabric Wall Covering: Manufacturer's standard fabric, from same dye lot, treated to resist stains.
  - 1. Color/Pattern: As selected by Architect from manufacturer's full range.
- E. High-Pressure Decorative Laminate: ISO 4586-3, Horizontal grade.
  - 1. Color/Pattern: As selected by Architect from manufacturer's full range.
- F. Wood Veneer: Laminated to fire-retardant-treated wood core with moisture-resistant adhesive.
  - 1. Species and Cut: As selected by Architect from manufacturer's full range.
  - 2. Matching of Adjacent Veneer Leaves: Book match.
  - 3. Veneer Matching within Panel Face: Running match.
  - 4. Panel-Matching Method: Select and arrange panels for similarity of grain pattern and color between adjacent panels.
  - 5. Vertical Panel-Matching Method: Continuous match; veneer leaves of upper panels are continuations of veneer leaves of lower panels.
  - 6. Wood-Veneer Finish:
    - a. As selected by Architect from manufacturer's full range, as follows:
      - 1) Type: Transparent finish over stain over wood variety indicated.
- G. Paint: Manufacturer's standard factory-painted finish.
  - 1. Color: As selected by Architect from manufacturer's full range.
- H. Cap-Trimmed Edges: Protective perimeter-edge trim with tight hairline joints concealing edges of panel and finish facing, finished as follows:
  - 1. Steel, Painted: Finished with manufacturer's color as selected by Architect from manufacturer's full range.
  - 2. Aluminum: Finished with manufacturer's standard color anodic finish.
- I. Trimless Edges: Fabricate exposed panel edges so finish facing wraps uninterrupted around panel, covering edge and resulting in an installed partition with facing visible on vertical panel edges, without trim, for minimal sightlines at panel-to-panel joints.

## 2.6 SUSPENSION SYSTEMS

- A. Tracks: Steel or aluminum mounted directly to overhead structural support, designed for operation, size, and weight of operable panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.
  - 1. Panel Guide: Aluminum guide on both sides of the track to facilitate straightening of the panels; finished with factory-applied, decorative, protective finish.
  - 2. Head Closure Trim: As required for acoustical performance; with factory-applied, decorative, protective finish.
- B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
  - 1. Multidirectional Carriers: Capable of negotiating intersections without track switches.

- C. Track Intersections, Switches, and Accessories: As required for operation, storage, track configuration, and layout indicated for operable panel partitions, and compatible with partition assembly specified. Fabricate track intersections and switches from steel or aluminum.
  - 1. Curve-and-Diverter Switches: Allow radius turns to divert panels to an auxiliary track.
  - 2. L Intersections: Allow panels to change 90 degrees in direction of travel.
  - 3. T Intersections: Allow panels to pass through or change 90 degrees to another direction of travel.
  - 4. X Intersections: Allow panels to pass through or change travel direction full circle in 90-degree increments, and allow one partition to cross track of another.
  - 5. Multidirectional Switches: Adjustable switch configuring track into L, T, or X intersections and allowing panels to be moved in all pass-through, 90-degree change, and cross-over travel direction combinations.
  - 6. Center carrier stop.
- D. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
- E. Steel Finish: Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

## 2.7 ELECTRIC OPERATORS

- A. Factory-assembled electric operation system of size and capacity recommended and provided by operable panel partition manufacturer for partition specified; with electric motor and factory-prewired motor controls, speed reducer, chain drive, control stations, control devices, and accessories required for operation. Include wiring from control stations to motor. Coordinate operator wiring requirements and electrical characteristics with building electrical system.
- B. Comply with NFPA 70.
- C. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.
- D. Motor Electrical Characteristics:
  - 1. Horsepower: Manufacturer's standard.
  - 2. Volts: 115.
  - 3. Phase: Single phase.
  - 4. Hertz: 60.
- E. Control Stations: Two single-key-operated, constant-pressure control stations located remotely from each other on opposite sides and opposite ends of partition run. Wire in series to require simultaneous activation of both key stations to operate partition. Each three-position control station labeled "Open," "Close," and "Stop." Furnish two keys per station.
- F. Obstruction-Detection Devices: Equip each motorized operable panel partition with indicated automatic safety sensor that causes operator to immediately stop and reverse direction.
  - 1. Sensor Edge: Contact-pressure-sensitive safety edge along partition's leading edge.
  - 2. Sensor Mat: Electrically operated, contact-weight-sensitive safety mat in storage pocket area.
  - 3. Infrared Sensor System: Designed to detect an obstruction in partition's path and sound an audible alarm, without obstruction contacting partition.
- G. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop operable panel partition at fully extended and fully stacked positions.
- H. Emergency Release Mechanism: Quick disconnect-release of electric-motor drive system, permitting manual operation in event of operating failure.
- I. Electric Interlock: Equip each motorized operable panel partition with electric interlocks at locations indicated, to prevent operation of operable panel partition under the following conditions:

1. On storage pocket door, to prevent operation if door is not in fully open position.
2. On partitions at location of convergence by another partition, to prevent operation if merging partitions are in place.

## 2.8 ACCESSORIES

- A. Pass Doors: Swinging door built into and matching panel materials, construction, acoustical qualities, fire rating, finish and thickness, complete with frames and operating hardware. Hinges finished to match other exposed hardware.
  1. Accessibility Standard: Fabricate doors to comply with applicable provisions in [the USDOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1.
  2. Single Pass Door: 36 by 84 inches.
  3. Double Pass Door: 72 by 84 inches.
  4. Pass-Door Hardware: Equip pass door with the following:
    - a. Door Seals: Mechanically operated floor seal on panels containing pass doors.
    - b. Panic hardware.
    - c. Concealed door closer.
    - d. Door Viewer: Installed with view in direction of swing.
    - e. Exit Sign: Recessed, self-illuminated.
    - f. Latchset: Passage set.
    - g. Lock, Key Operated: Key-operated lock with cylinder, keyed to master key system, operable from both sides of door. Include two keys per lock.
    - h. Lock, Deadlock: Deadlock to receive cylinder, operable from both sides of door. See Section 08 71 00 "Door Hardware" for lock cylinder and keying requirements.
- B. Storage Pocket Door: Full height at end of partition runs to conceal stacked partition; of same materials, finish, construction, thickness, and acoustical qualities as panels; complete with operating hardware and acoustical seals at soffit, floor, and jambs. Hinges in finish to match other exposed hardware.
  1. Manufacturer's standard method to secure storage pocket door in closed position.
  2. Rim Lock, Key Operated: Key-operated lock cylinder, keyed to master key system, to secure storage pocket door in closed position. Include two keys per lock.
  3. Rim Lock, Deadlock: Deadlock to receive cylinder, to secure storage pocket door in closed position. See Section 08 71 00 "Door Hardware" for lock cylinder and keying requirements.
- C. Windows: Manufacturer's standard.
  1. Glass: Safety glass as selected by Architect from manufacturer's full range.
  2. Safety Glass Standard for Partition Panels: Glass products complying with testing requirements in 16 CFR 1201, Category II, or in ANSI Z97.1, Class A.
  3. Safety Glass Standard for Pass Doors: Glass products complying with testing requirements in 16 CFR 1201, Category II.
- D. Work Surfaces: Quantities, placement, and size indicated.
  1. Surface: Porcelain steel marker/projection surface.
  2. Surface Color: As selected by Architect from manufacturer's full range.
  3. Size: As indicated on Drawings.
  4. Trim: Aluminum slip-on or snap-on trim with no visible screws or exposed joints and with corners mitered to a neat, hairline joint.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine flooring, floor levelness, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable panel partitions.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION OF OPERABLE PANEL PARTITIONS**

- A. General: Comply with ASTM E 557 except as otherwise required by operable panel partition manufacturer's written installation instructions.
- B. Install operable panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.
- C. Install panels in numbered sequence indicated on Shop Drawings.
- D. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.
- E. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.
- F. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals. Perform test and make adjustments before NIC testing.

### **3.3 FIELD QUALITY CONTROL**

- A. NIC Testing: Owner will engage a qualified testing agency to perform tests and inspections.
  - 1. Testing Extent: Testing agency is to randomly select one operable panel partition installation(s) for testing.
  - 2. Testing Methodology: Perform testing of installed operable panel partition for noise isolation in accordance with ASTM E336, determined by ASTM E413, and rated for not less than NIC indicated. Adjust and fit partitions to comply with NIC test method requirements.
- B. An partition installation will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### **3.4 ADJUSTING**

- A. Adjust operable panel partitions, hardware, and other moving parts to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust pass doors and storage pocket doors to operate smoothly, without binding or warping.
- C. Verify that safety devices are properly functioning.

### **3.5 MAINTENANCE SERVICE**

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service is to include 12 months' full maintenance by manufacturer's authorized service representative. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operable-partition operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.

### **3.6 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain operable panel partitions.

END OF SECTION

**SECTION 10 26 00 - WALL AND DOOR PROTECTION****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Corner guards.
- B. Related Requirements:
  - 1. Section 05 50 00 "Metal Fabrications" for steel angle corner guards and pipe guards.
  - 2. Section 05 73 00 "Decorative Metal Railings" for metal handrails without plastic bumpers.
  - 3. Section 06 40 23 "Interior Architectural Woodwork" for solid-wood handrails, bumper rails, chair rails, or corner moldings without plastic bumpers.
  - 4. Section 08 71 00 "Door Hardware" for protective trim units, according to BHMA A156.6, used for armor, kick, mop, and push plates.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For each type of wall and door protection showing locations and extent.
  - 1. Include plans, elevations, sections, and attachment details.
- C. Samples for Verification: For each type of exposed finish on the following products, prepared on Samples of size indicated below:
  - 1. Corner Guards: 12 inches long. Include example top caps.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Product Certificates: For each type of handrail.
- B. Material Certificates: For each type of exposed plastic material.
- C. Sample Warranty: For special warranty.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For each type of wall and door protection product to include in maintenance manuals.
  - 1. Include recommended methods and frequency of maintenance for maintaining best condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to finishes and performance.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Corner-Guard Covers: Full-size plastic covers of maximum length equal to 2 percent of each type, color, and texture of cover installed, but no fewer than two, 48-inch- long units.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Store wall and door protection in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
  - a. Store corner-guard covers in a vertical position.

**1.7 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of wall- and door-protection units that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures including detachment of components from each other or from the substrates, delamination, and permanent deformation beyond normal use.
    - b. Deterioration of metals, metal finishes, plastics, and other materials beyond normal use.
  - 2. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain wall- and door-protection products of each type from single source from single manufacturer.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 50 or less.
  - 2. Smoke-Developed Index: 450 or less.
- B. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1.

**2.3 CORNER GUARDS**

- A. Surface-Mounted, Metal Corner Guards: Fabricated as one piece from formed or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. American Floor Products Company, Inc.
    - b. Babcock-Davis.
    - c. Balco, Inc.
    - d. Boston Retail Products.
    - e. Construction Specialties, Inc.
    - f. Hiawatha, Inc; a division of the Activar Construction Products Group.
    - g. InPro Corporation (IPC).
    - h. JL Industries, Inc.; a division of the Activar Construction Products Group.
    - i. Korogard Wall Protection Systems; a division of RJF International Corporation.
    - j. Nystrom, Inc.
    - k. Pawling Corporation.
    - l. Tepromark International, Inc.

2. Material: Stainless-steel sheet, Type 304.
  - a. Thickness: Minimum 0.0500 inch.
  - b. Finish: Directional satin, No. 4.
3. Material: Extruded aluminum, minimum 0.0625 inch thick, with clear anodic finish.
4. Wing Size: Nominal 3/4 by 3/4 inches or 1 by 1 inches.
5. Corner Radius: 1/8 inch.
6. Mounting: Flat-head, countersunk screws through factory-drilled mounting holes.

## 2.4 MATERIALS

- A. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.
- B. Adhesive: As recommended by protection product manufacturer and with a VOC content of 70 g/L or less.

## 2.5 FABRICATION

- A. Fabricate wall and door protection according to requirements indicated for design, performance, dimensions, and member sizes, including thicknesses of components.
- B. Factory Assembly: Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.
- C. Quality: Fabricate components with uniformly tight seams and joints and with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

## 2.6 FINISHES

- A. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine walls to which wall and door protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
  1. For wall and door protection attached with adhesive, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Complete finishing operations, including painting, before installing wall and door protection.
- B. Before installation, clean substrate to remove dust, debris, and loose particles.

**3.3 INSTALLATION**

- A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
- B. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.
  - 1. Provide anchoring devices and suitable locations to withstand imposed loads.
  - 2. Where splices occur in horizontal runs of more than 20 feet, splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches apart.

**3.4 CLEANING**

- A. Immediately after completion of installation, clean plastic covers and accessories using a standard ammonia-based household cleaning agent.
- B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION

**SECTION 10 28 00 - TOILET, BATH, AND LAUNDRY ACCESSORIES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Washroom, shower, and custodial accessories.
  - 2. Baby changing stations.
  - 3. Underlavatory guards.
- B. Related Requirements:
  - 1. Section 08 83 00 "Mirrors" for frameless mirrors.
  - 2. See Division 10, Toilet Compartments, for hooks on toilet partitions unless hooks are noted otherwise within this Section.
  - 3. Section 22 07 00 "Plumbing Insulation" for piping insulation used as underlavatory guards to prevent direct contact with and burns from piping.

**1.2 COORDINATION**

- A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
- B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  - 2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
  - 3. Include electrical characteristics.
- B. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
  - 1. Identify locations using room designations indicated.
  - 2. Identify accessories using designations indicated.
- C. Delegated Design Submittals: For grab bars and shower seats.
  - 1. Include structural design calculations indicating compliance with specified structural-performance requirements.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Sample Warranty: For manufacturer's special warranties.

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For accessories to include in maintenance manuals.

**1.6 WARRANTY**

- A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, visible silver spoilage defects.
  - 2. Warranty Period: Fifteen (15) years from date of Substantial Completion.
- B. Manufacturer's Special Warranty for Toilet-Compartment Occupancy-Indicator Systems: Manufacturer agrees to repair or replace toilet-compartment occupancy-indicator systems that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five (5) years from date of Substantial Completion.
- C. Manufacturer's Special Warranty for Hand Dryers: Manufacturer agrees to repair or replace hand dryers that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five (5) years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 OWNER-FURNISHED MATERIALS**

- A. Owner-Furnished Materials: To be Determined.

**2.2 MANUFACTURERS**

- A. Source Limitations: Obtain accessories from single source from single manufacturer.
  - 1. When Basis of Design product is listed below, provide comparable quality and aesthetically consistent product from the available manufacturers listed below.
- B. Washrooms, Showers, and Custodial Accessories Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. AJW Architectural Products.
  - 2. American Specialties, Inc.
  - 3. Bobrick Washroom Equipment, Inc.
  - 4. Bradley Corporation.
  - 5. Brey-Krause Manufacturing Co.
  - 6. GAMCO Specialty Accessories; a division of Bobrick.
  - 7. InPro Corporation
  - 8. Seachrome Corporation.
  - 9. Tubular Specialties Manufacturing, Inc.
  - 10. Sloan Valve Company
- C. Baby Changing Station Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. American Specialties, Inc.
  - 2. Diaper Deck & Company, Inc.
  - 3. Foundations Children's Products.
  - 4. GAMCO Specialty Accessories; a division of Bobrick.
  - 5. Global Industrial.
  - 6. Koala Kare Products.
  - 7. SafeStrap Company, Inc. (SSC, Inc.).
  - 8. Tubular Specialties Manufacturing, Inc.
- D. Under Lavatory Guard Manufacturers: Subject to compliance with requirements, provide products by one of the following
  - 1. Plumberex Specialty Products, Inc.
  - 2. Truebro by IPS Corporation.

**2.3 PERFORMANCE REQUIREMENTS**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Structural Performance: Design accessories and fasteners to comply with the following requirements:
  - 1. Grab Bars: Installed units are able to resist 250 lbf concentrated load applied in any direction and at any point.
  - 2. Shower Seats: Installed units are able to resist 360 lbf concentrated load applied in any direction and at any point.

**2.4 WASHROOM, SHOWERS, AND CUSTODIAL ACCESSORIES**

- A. Source Limitations: Obtain accessories from single source from single manufacturer.
- B. Not all numbers are used.
- C. TA01 to TA08 Paper Towel Dispensers and Waste Receptacles
  - TA01 Recessed Paper Towel (Folded) Dispenser:
    - 1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-359 ClassicSeries.
    - 2. Mounting: Recessed.
    - 3. Minimum Capacity: 300 C-fold or 475 multifold towels.
    - 4. Material and Finish: Stainless steel, No. 4 finish (satin).
    - 5. Lockset: Tumbler type.
  - TA02 Surface Mounted Paper Towel (Folded) Dispenser:
    - 1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-262 ClassicSeries.
    - 2. Mounting: Surface mounted.
    - 3. Minimum Capacity: 400 C-fold or 525 multifold towels.
    - 4. Material and Finish: Stainless steel, No. 4 finish (satin).
    - 5. Lockset: Tumbler type.
    - 6. Refill Indicators: Pierced slots at sides.
  - TA03 Recessed Combination Paper Towel (Folded) Dispenser:
    - 1. Basis-of-Design Product: Bradley Corp.; Elvari, 2B5.
    - 2. Mounting: Surface mounted.
    - 3. Minimum Capacity: 800 C-fold.
    - 4. Material and Finish: Brushed Brass (BR).
    - 5. Lockset: Bradlock, magnetic key system.
  - TA04 Recessed Combination Paper Towel (Folded) Dispenser:
    - 1. Basis-of-Design Product: Bradley Corp.; Elvari, 2B5.
    - 2. Mounting: Surface mounted.
    - 3. Minimum Capacity: 800 C-fold.
    - 4. Material and Finish: Stainless steel, Brushed Black (BB).
    - 5. Lockset: Bradlock, magnetic key system.
  - TA05 Recessed Combination Towel (Folded) Dispenser:
    - 1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-3944 ClassicSeries.
    - 2. Description: Combination unit for dispensing C-fold or multifold towels, with removable waste receptacle.
    - 3. Mounting: Recessed with projecting receptacle.
      - a. Designed for nominal 4-inch wall depth.
    - 4. Minimum Towel-Dispenser Capacity: 600 C-fold or 800 multifold paper towels.
    - 5. Minimum Waste-Receptacle Capacity: 12 gal.
    - 6. Material and Finish: Stainless steel, No. 4 finish (satin).
    - 7. Liner: Reusable, vinyl waste-receptacle liner.
    - 8. Lockset: Tumbler type for towel-dispenser compartment and waste receptacle.

TA06 Not Used

TA07 Semi-Recessed Waste Receptacle:

1. Basis-of-Design Product: Bradley Corp.; Elvari, 3B1-10.
2. Mounting: Semi-recessed.
3. Minimum Capacity: 12 gal.
4. Material and Finish: Stainless steel, Brushed Brass (BR).
5. Liner: Reusable vinyl liner.
6. Lockset: Tumbler type for waste-receptacle.

D. TA20 to TA23 Toilet Tissue Dispensers

TA20 Multi-Roll Toilet Tissue Dispenser:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-2888 ClassicSeries.
2. Description: Roll-in-reserve dispenser with hinged front secured with tumbler lockset.
3. Mounting: Surface mounted.
4. Operation: Noncontrol delivery with heavy duty, theft-resistant spindle.
5. Capacity: Designed for up to 5-1/4-inch-diameter tissue rolls.
6. Material and Finish: Stainless steel, No. 4 finish (satin).
7. Lockset: Tumbler type.

TA21 Recessed Multi-Roll Toilet Tissue Dispenser:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-3888 ClassicSeries.
2. Description: Roll-in-reserve dispenser with hinged front secured with tumbler lockset.
3. Mounting: Recessed.
4. Operation: Noncontrol delivery with heavy duty, theft-resistant spindle.
5. Capacity: Designed for up to 5-1/4-inch-diameter tissue rolls.
6. Material and Finish: Stainless steel, No. 4 finish (satin).
7. Lockset: Tumbler type.

TA22 Surface Mounted Double Roll Toilet Tissue Holder:

1. Basis-of-Design Product: Kohler; K-78384.
2. Mounting: Surface mounted.
3. Capacity: Designed for 5-1/8 inch-diameter tissue rolls (two rolls).
4. Material and Finish: Stainless steel, Vibrant Brushed Moderne Brass.

TA23 Surface Mounted Double Roll Toilet Tissue Holder:

1. Basis-of-Design Product: Kohler; K-78384.
2. Mounting: Surface mounted.
3. Capacity: Designed for up to 5-1/8 inch-diameter tissue rolls (two rolls).
4. Material and Finish: Stainless steel, Matte Black.

E. TA26 to TA32 Seat Cover Dispensers; Napkin/Tampon Vendors and Disposal Units; and Tissue Dispensers

TA26 Surface Mounted Toilet Seat-Cover Dispenser:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-221 ClassicSeries.
2. Mounting: Surface Mounted.
3. Minimum Capacity: 500 seat covers.
4. Exposed Material and Finish: Stainless steel, No. 4 finish (satin).
5. Lockset: N/A

TA27 Recessed Toilet Seat-Cover Dispenser:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-301 ClassicSeries.
2. Mounting: Recessed.
3. Minimum Capacity: 500 seat covers.
4. Exposed Material and Finish: Stainless steel, No. 4 finish (satin).
5. Lockset: Tumbler type.

TA28 Recessed Toilet Seat-Cover Dispenser:

1. Basis-of-Design Product: Bradley Corp.; Elvari, 5B-0-36.

2. Mounting: Recessed.
3. Capacity: 500 seat covers.
4. Exposed Material and Finish: Stainless steel, Brushed Brass (BR).
5. Lockset: BradLock, magnetic key system.

TA29 Recessed Toilet Seat-Cover Dispenser

1. Basis-of-Design Product: Bradley Corp.; Elvari, 5B-0-36.
2. Mounting: Recessed.
3. Capacity: 500 seat covers.
4. Exposed Material and Finish: Stainless steel, Brushed Black (BB).
5. Lockset: BradLock, magnetic key system.

TA30 Partition Mounted Sanitary-Napkin Disposal Unit:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-354 ClassicSeries.
2. Mounting: Partition mounted, dual access.
3. Door or Cover: Self-closing, disposal-opening cover and hinged face panel with tumbler lockset.
4. Receptacle: Removable.
5. Material and Finish: Stainless steel, No. 4 finish (satin).

TA31 Surface Mounted Sanitary-Napkin Disposal Unit:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-254 ClassicSeries.
2. Mounting: Surface mounted.
3. Door or Cover: Self-closing, disposal-opening cover and hinged face panel with tumbler lockset.
4. Receptacle: Removable.
5. Material and Finish: Stainless steel, No. 4 finish (satin).

TA32 Surface Mounted Sanitary-Napkin Disposal Unit:

1. Basis-of-Design Product: Bradley Corp.; Elvari, 4B2-11.
2. Mounting: Surface mounted.
3. Door or Cover: Self-closing, disposal-opening cover and hinged face panel with tumbler lockset.
4. Receptacle: Removable.
5. Material and Finish: Stainless steel, Brushed Brass (BR).

F. TA39 to TA49 Grab Bars

TA39 Grab Bars:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-6806 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, No. 4 finish (satin).
4. Outside Diameter: 1-1/2 inches.
5. Configuration and Length: As indicated on Drawings.

TA40 Grab Bar, Shower:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-6806 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, No. 4 finish (satin) on ends and slip-resistant texture in grip area.
4. Outside Diameter: 1-1/2 inches.
5. Configuration and Length:
  - a. Horizontal: 2-wall right angle for shower stall; 19-3/4 by 34-3/4 inches overall. (B-6861).
  - b. Vertical: 18 inches tall. (B-6806x18).

TA41 Grab Bars (18 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.

3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, No. 4 finish (satin).
4. Outside Diameter: 1-1/2 inches.
5. Configuration: As indicated on Drawings.
6. Length: 18 inches.

## TA42 Grab Bars (42 inches):

7. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
8. Mounting: Flanges with concealed fasteners.
9. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, No. 4 finish (satin).
10. Outside Diameter: 1-1/2 inches.
11. Configuration: As indicated on Drawings.
12. Length: 42 inches.

## TA43 Grab Bars (48 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, No. 4 finish (satin).
4. Outside Diameter: 1-1/2 inches.
5. Configuration: As indicated on Drawings.
6. Length: 48 inches.

## TA44 Grab Bars (18 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, Brushed Brass (BR).
4. Outside Diameter: Oval, 1-9/16 x 1-3/64 inches.
5. Configuration: As indicated on Drawings.
6. Length: 18 inches.

## TA45 Grab Bars (42 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, Brushed Brass (BR).
4. Outside Diameter: Oval, 1-9/16 x 1-3/64 inches.
5. Configuration: As indicated on Drawings.
6. Length: 42 inches.

## TA46 Grab Bars (48 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, Brushed Brass (BR).
4. Outside Diameter: Oval, 1-9/16 x 1-3/64 inches.
5. Configuration: As indicated on Drawings.
6. Length: 48 inches.

## TA47 Grab Bars (18 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, Brushed Black (BB).
4. Outside Diameter: Oval, 1-9/16 x 1-3/64 inches.
5. Configuration: As indicated on Drawings.
6. Length: 18 inches.

## TA48 Grab Bars (42 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, Brushed Black (BB).
4. Outside Diameter: Oval, 1-9/16 x 1-3/64 inches.
5. Configuration: As indicated on Drawings.
6. Length: 42 inches.

## TA49 Grab Bars (48 inches):

1. Basis-of-Design Product: Bradley Corp.; Elvari 8B1 Series.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch thick.
  - a. Finish: Smooth, Brushed Black (BB).
4. Outside Diameter: Oval, 1-9/16 x 1-3/64 inches.
5. Configuration: As indicated on Drawings.
6. Length: 48 inches.

## A. TA50 to TA56 Soap Dispensers and Dishes

## TA50 Wall Mounted Liquid-Soap Dispenser:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-42 ClassicSeries.
2. Description: Designed for dispensing soap in liquid or lotion form.
3. Mounting: Vertically oriented, surface mounted.
4. Capacity: 40 oz.
5. Material and Finish: Stainless steel, No. 4 finish (satin).
6. Lockset: Hinged lid with special key.
7. Refill Indicator: Window type.

## TA51 Counter Mounted Liquid-Soap Dispenser:

1. Basis-of-Design Product: Bradley Corp.; Metro Series, Verge Soap Dispenser 6-3300.
2. Description: Designed for dispensing soap in liquid or lotion form.
3. Mounting: Deck mounted on lavatory.
4. Capacity: 70.5 oz.
5. Material and Finish: Stainless steel, Brushed Stainless (BS).
6. Lockset: Hinged lid with special key.
7. Refill Indicator: Translucent glow ring at base to indicate low battery or low soap.

## TA52 Counter Mounted Liquid-Soap Dispenser:

1. Basis-of-Design Product: Bradley Corp.; Metro Series, Verge Soap Dispenser 6-3300.
2. Description: Designed for dispensing soap in liquid or lotion form.
3. Mounting: Deck mounted on lavatory.
4. Capacity: 70.5 oz.
5. Materials: Stainless steel, Brushed Brass (BR).
6. Refill Indicator: Translucent glow ring at base to indicate low battery or low soap

## TA53 Counter Mounted Liquid-Soap Dispenser:

1. Basis-of-Design Product: Bradley Corp.; Metro Series, Verge Soap Dispenser 6-3300.
2. Description: Designed for dispensing soap in liquid or lotion form.
3. Mounting: Deck mounted on lavatory.
4. Capacity: 70.5 oz.
5. Material Stainless steel, Brushed Black (BB).
6. Refill Indicator: Translucent glow ring at base to indicate low battery or low soap.

## TA54 Surface Mounted Soap Dish:

1. Basis-of-Design Product: GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc. 76807.
2. Description: Without washcloth bar.

3. Mounting: Surface mounted.
4. Material and Finish: Stainless steel, No. 4 finish (satin).

TA55 Counter Mounted Liquid-Soap Dispenser:

1. Basis-of-Design Product: Kohler; Components K-28293.
2. Description: Designed for dispensing soap in liquid or lotion form.
3. Mounting: Deck mounted on lavatory.
4. Capacity: 16 oz.
5. Material Stainless steel, Vibrant Brushed Moderne Brass.

TA56 Counter Mounted Liquid-Soap Dispenser:

6. Basis-of-Design Product: Kohler; Components K-35761.
7. Description: Designed for dispensing soap in liquid or lotion form.
8. Mounting: Deck mounted on lavatory.
9. Capacity: 16 oz.
10. Material Stainless steel, Matte Black.

B. TA61 to TA63 Changing Stations

TA61 Surface Mounted Stainless Steel Changing Station, Horizontal:

1. Basis-of-Design Product: Koala Kare Products KB310-SSWM.
2. Description: Horizontal unit that opens by folding down from stored position and with child-protection strap.
  - a. Engineered to support a minimum of 100-lb static load when opened.
3. Mounting: Surface Mounted.
4. Operation: By pneumatic shock-absorbing mechanism.
5. Material and Finish: Stainless steel, No. 4 finish (satin), exterior shell with rounded plastic corners; HDPE interior in manufacturer's standard color.
6. Liner Dispenser: Built in.

TA62 Recessed Stainless Steel Changing Station, Horizontal:

1. Basis-of-Design Product: Koala Kare Products KB310 SSRE.
2. Description: Horizontal unit that opens by folding down from stored position and with child-protection strap.
3. Engineered to support a minimum of 200-lb static load when opened.
4. Mounting: Recessed, with unit projecting not more than 1 inch from wall when closed.
5. Operation: By pneumatic shock-absorbing mechanism.
6. Material and Finish: Stainless steel, No. 4 finish (satin), exterior shell with rounded plastic corners; HDPE interior in manufacturer's standard color.
7. Liner Dispenser: Built in.

TA63 Surface Mounted Adjustable Height Changing Station, Horizontal:

1. Basis-of-Design Product: Koala Kare Products KB3000-AHL.
2. Description: Horizontal unit that opens by folding down from stored position with electronically height adjustable surface with integral controls.
  - a. Engineered to support up to 500-lb static load when opened.
3. Mounting: Surface Mounted
4. Operation: By pneumatic shock-absorbing mechanism and electronically controlled height.
5. Material and Finish: White UHMW PE sheet bed surface, with stainless steel retaining bars. Powder coated 2 inch square steel tube changing surface frame, Stainless steel wall unit covering, with 6 mm thick plastic cover hinge mechanism.

C. TA70 to TA77 Mirrors

TA70 and TA71 Glass Mirror with Stainless Steel Angle Frame:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-290 Series.
2. Frame: Stainless-steel angle, 0.05 inch thick, beveled inside edge.
  - a. Corners: Welded and ground smooth.

3. Hangers: Produce rigid, tamper- and theft-resistant installation, using method indicated below.
  - a. Manufacturer's screw locking design wall bracket.
4. Size:
  - a. TA70: 18 by 36 inches.
  - b. TA71: 24 by 72 inches.

## TA72 Metal Framed Mirror (No Shelf):

1. Basis-of-Design Product: Bradley Corp.; Elvari 7B1.
2. Frame: Brushed Stainless (BS)
3. Size: 24 by 36 inches.

## TA73 Metal Framed Mirror (No Shelf):

1. Basis-of-Design Product: Bradley Corp.; Elvari 7B1.
2. Frame: Brushed Brass (BR)
3. Size: 24 by 36 inches.

## TA74 Metal Framed Mirror (No Shelf):

1. Basis-of-Design Product: Bradley Corp.; Elvari 7B1.
2. Frame: Brushed Black (BB)
3. Size: 24 by 36 inches.

## TA75 Metal Framed Mirror:

1. Basis-of-Design Product: Rejuvenation, Capsule Metal Framed Mirror.
2. Frame: Aged Brass
3. Size: 24 by 36 inches.

## TA76 Metal Framed Mirror:

1. Basis-of-Design Product: Rejuvenation, Capsule Metal Framed Mirror.
2. Frame: Oil Rubbed Bronze
3. Size: 24 by 36 inches.

## TA77 Metal Framed Mirror:

1. Basis-of-Design Product: Kohler, Capsule Framed Mirror, K-26051.
2. Frame: Moderne Brushed Gold
3. Size: 24 by 40 inches.

## D. TA78 to TA79 Shelves

## TA78 Stainless Steel Shelf:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-295 x 16.
2. Description: With exposed edges turned down not less than 3/4 inch and supported by two triangular brackets welded to shelf underside.
3. Size: 16 inches long by 5 inches deep.
4. Material and Finish: Not less than nominal 0.05-inch-thick stainless steel, No. 4 finish (satin).

## TA79 Stainless Steel Shelf:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-298 x 18.
2. Description: With exposed edges turned down not less than 1/2 inch and supported by two triangular brackets welded to shelf underside.
3. Size: 18 inches long by 8 inches deep.
4. Material and Finish: Not less than nominal 0.05-inch-thick stainless steel, No. 4 finish (satin).

## E. TA80 to TA87 Hooks, Mop Holder, Laundry Pass Through, and Shower Accessories

## TA80 Towel Pin:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-6777.
2. Description: Projecting minimum of 3 inches from wall surface.
3. Mounting: Unit secured to concealed wall plate with setscrews.

4. Material and Finish: Stainless steel, No. 4 finish (satin).

TA81 Utility Hook (At family toilets and back-of-house showers):

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-6827.
2. Description: Single-prong unit.
3. Mounting: Unit secured to concealed wall plate with setscrews.
4. Material and Finish: Stainless steel, No. 4 finish (satin).

TA82 Mop and Broom Holder:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-223 x 36.
2. Length: 36 inches.
3. Mop/Broom Holders: Four, spring-loaded, rubber hat, cam type.
4. Material and Finish: Stainless steel, No. 4 finish (satin).

TA83 Laundry Pass-Through Unit:

1. Custom fabricated through-wall angle frame with top hinged inward acting gravity-return door.
2. Interior Size: 12 inches by 12 inches.
3. Configuration: Unit placed within wall opening with full-depth sleeves and 2 inch wide angle returns on both sides of wall. Provide 6 inch long by 12 inch wide "laundry deflector" along bottom of opening.
4. Material: Minimum 0.0475-inch thick stainless steel, No. 4 finish (satin).

TA84 Folding Shower Seat:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-517 (Right-Hand) and B-518 (Left-Hand).
2. Configuration: Rectangular shaped seat, designed for wheelchair access.
3. Seat: Matte finish melamine on phenolic core.
4. Mounting Mechanism: Stainless steel, No. 4 finish (satin).
5. Dimensions: Size varies per plan configuration.

TA85 Shower Curtain Rod:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-6047 ClassicSeries.
2. Description: 1-1/4-inch OD; fabricated from nominal 0.05-inch-thick stainless steel.
3. Mounting Flanges: Stainless-steel flanges designed for exposed fasteners.
4. Finish: No. 4 (satin).
5. Length: As indicated on Drawings.

TA86 Shower Curtain and Hooks:

1. Basis-of-Design Product: Bobrick Washroom Equipment, Inc.; B-204 Series.
2. Size: Minimum 12 inches wider than opening by 72 inches high.
3. Material: Vinyl, minimum 0.008 inch thick, opaque, matte, with integral antibacterial and flame retardant agents.
4. Color: White.
5. Grommets: Corrosion resistant at minimum 6 inches o.c. through top hem.
6. Shower Curtain Hooks: Chrome-plated or stainless-steel, spring wire curtain hooks with snap fasteners, sized to accommodate specified curtain rod. Provide one hook per curtain grommet.

TA87 Robe Hook:

1. Basis-of-Design Product: Kohler; Purist K-14443
2. Description: 1-3/8 inch OD; Solid Brass Construction.
3. Mounting Flanges: Unit secure to concealed wall plate with setscrews.
4. Material and Finish: Solid Brass Construction, Matte Black Finish.

TA87 Robe Hook:

1. Basis-of-Design Product: Kohler; Purist K-14443
2. Description: 1-3/8 inch OD; Solid Brass Construction.
3. Mounting Flanges: Unit secure to concealed wall plate with setscrews.
4. Material and Finish: Solid Brass Construction, Moderne Brushed Gold.

**2.5 UNDERLAVATORY GUARDS**

- A. Underlavatory Guard:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
    - a. Plumberex Specialty Products, Inc.
    - b. Truebro by IPS Corporation.
  - 2. Description: Insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
  - 3. Material and Finish: Antimicrobial, molded plastic, white.

**2.6 MATERIALS**

- A. Stainless Steel: ASTM A 666, Type 304, 0.031-inch-minimum nominal thickness unless otherwise indicated.
- B. Brass: ASTM B 19, flat products; ASTM B16/B16M, rods, shapes, forgings, and flat products with finished edges; or ASTM B 30, castings.
- C. Galvanized-Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.
- D. Fasteners: Screws, bolts, and other devices of same material as accessory unit, , and tamper and theft resistant where exposed, and of galvanized steel where concealed.
- E. Chrome Plating: ASTM B 456, Service Condition Number SC 2 (moderate service).
- F. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.
- G. ABS Plastic: Acrylonitrile-butadiene-styrene resin formulation.

**2.7 FABRICATION**

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

**PART 3 - EXECUTION****3.1 INSTALLATION**

- A. Install accessories in accordance with manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
- B. Coordinate cutouts in reinforced CMU walls to avoid structural grouted cells. Relocate unit as necessary. Verify required relocation with Architect.
- C. Secure mirrors to walls in concealed, tamper-resistant manner with special hangers, toggle bolts, or screws. Set units level, plumb, and square at locations indicated, according to manufacturer's written instructions for substrate indicated.
- D. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to ASTM F 446.
- E. Shower Seats: Install to comply with specified structural-performance requirements.

**3.2 ADJUSTING AND CLEANING**

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.
- C. Clean and polish exposed surfaces in accordance with manufacturer's written instructions.

END OF SECTION

**SECTION 10 28 19 - TUB AND SHOWER ENCLOSURES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Framed shower doors and enclosures.
  - 2. Frameless shower doors and enclosures.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for shower doors and enclosures.
- B. Shop Drawings: For tub and shower doors and enclosures.
  - 1. Include plans, elevations, sections, and attachment details.
- C. Samples for Initial Selection: For each type of exposed finish.
- D. Samples for Verification: For tub and shower doors and enclosures.
  - 1. Each type of mounting and operating hardware; full size.
  - 2. Glass and glazing; 12 inches square.
  - 3. Trim; 12-inch lengths.
- E. Product Schedule: For tub and shower doors and enclosures. Use same designations indicated on Drawings.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Sample Warranty: For manufacturer's special warranty.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For tub and shower doors and enclosures to include in maintenance manuals.

**1.5 QUALITY ASSURANCE**

- A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
  - 1. Build mockup of tub and shower doors and enclosure as shown on Drawings.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.6 FIELD CONDITIONS**

- A. Verify dimensions by field measurements before fabrication and indicate on Shop Drawings.

**1.7 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of tub and shower doors and enclosures that fail in materials or workmanship within specified warranty period, without monetary limitation.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures including excessive deflection.
    - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
  - 2. Warranty Period: Three years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 FRAMED ENCLOSURES**

- A. Glass panels with full perimeter frames of extruded aluminum with screw-fastened corners. Minimum 3/8-inch penetration of glass into frame. Framing members of thickness required to support imposed loads.
- B. Frames, Hardware, and Trim: Manufacturer's standard units as indicated and as required for a complete installation.
  - 1. Materials: Aluminum; ASTM B 221.
  - 2. Finish: As indicated on Drawings.
  - 3. Color: As indicated on Drawings.
- C. Bypassing Doors: Sliding units suspended from top track by fully adjustable ball-bearing rollers. Self-draining sill tracks with nylon panel guides. Molded jamb bumpers with concealed fasteners.
  - 1. Door Pulls: Full-door-width, single-sided towel bars.
- D. Swinging Doors: Full-height piano hinge. Manufacturer's standard pulls and latch.
- E. Glazing:
  - 1. Clear fully tempered. Comply with requirements in Section 08 80 00 "Glazing."
  - 2. Safety glazing materials complying with 16 CFR 1201, Category II, with permanently etched identification acceptable to authorities having jurisdiction.
    - a. Glass Nominal Thickness: 6 mm.
    - b. Clear Glass: ASTM C 1048, Type I, Quality-Q3, Class I (clear), Kind FT.
    - c. Protective, Self-Cleaning, Glass Coating: Clear float glass with a coating on first surface having both photocatalytic and hydrophilic properties that act to loosen dirt and to cause water to sheet evenly over the glass instead of beading.
- F. Fasteners: Manufacturer's standard stainless steel or other noncorrosive fasteners.
- G. Sealant: Mildew-resistant, single-component, nonsag, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 25, for Use NT.

**2.2 FRAMELESS ENCLOSURES**

- A. Frameless glass panels with mounting and operating hardware of types and sizes required to support imposed loads.
- B. Hardware and Trim: Manufacturer's standard units as indicated and as required for complete installation.
  - 1. Materials:
    - a. Aluminum:
      - 1) Finish: Baked enamel or powder coat.
      - 2) Color: As selected by Architect.
    - b. Brass:
      - 1) Finish: As selected by Architect.

- c. Stainless Steel Sheet and Plate:
  - 1) Finish: As selected by Architect.
- d. Stainless Steel Tubing:
  - 1) Finish: As selected by Architect.
    - a) Polished and Buffed Finish: Buff to match Architect's sample.
- C. Bypass Doors: Sliding units suspended from extruded-aluminum header track by fully adjustable, sealed, heavy-duty ball-bearing rollers. Self-draining sill tracks with nylon panel guides. Molded jamb bumpers with concealed fasteners.
  - 1. Door Pulls: Full-door-width, single-sided towel bars.
  - 2. Safety Clip System: Manufacturer's standard safety device designed to prevent doors from falling off sliding track.
- D. Sliding Door and Fixed In-Line Panel: Sliding unit with exposed, adjustable, heavy-duty rollers operating above full-span header bar. Door bottom guide, antilift fittings, stoppers, and mounts for fixed panel and header bar.
  - 1. Door Pulls: Back-to-back, D-pull.
  - 2. Sill Strip: Manufacturer's standard sill strip designed to direct dripping water back into the enclosure.
- E. Swinging Doors: Hinged for 90 degrees outwards swing, self-closing. Soft bulb seal or wipes; affixed to door to direct water back into enclosure and provide a tight water seal.
  - 1. Hinges: Full-height piano.
  - 2. Door Pulls: Back-to-back.
    - a. Towel Bar Length: 24 inches.
- F. Fixed Panels: Sidemounts; match hinges in material and finish.
- G. Ventilating Transom: Rotating clamps centered on transom.
- H. Glazing:
  - 1. Clear fully tempered. Comply with requirements in Section 08 80 00 "Glazing."
  - 2. Safety glazing materials complying with 16 CFR 1201, Category II, with permanently etched identification acceptable to authorities having jurisdiction.
    - a. Glass Nominal Thickness: As determined by manufacturer based on panel size.
    - b. Clear Glass: ASTM C 1048, Type I, Quality-Q3, Class I (clear), Kind FT.
      - 1) Obscured Panels: Acid etched.
    - c. Tinted Glass: ASTM C 1048, Type I, Quality-Q3, Class II, Kind FT.
      - 1) Color: Bronze.
    - d. Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II, Class 1 (clear), Form 3; Quality-Q6, Finish F1 (patterned, one side).
      - 1) Pattern: Manufacturer's standard.
    - e. Protective, Self-Cleaning, Glass Coating: Clear float glass with a coating on first surface having both photocatalytic and hydrophilic properties that act to loosen dirt and to cause water to sheet evenly over the glass instead of beading.
- I. Fasteners: Manufacturer's standard stainless steel or other noncorrosive fasteners.
- J. Sealant: Mildew-resistant, single-component, nonsag, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
- K. Materials:
  - 1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
    - a. Sheet and Plate: ASTM B 209.
    - b. Extrusions: ASTM B 221.
  - 2. Stainless Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 302 or 304.
  - 3. Stainless Steel Bars and Shapes: ASTM A 276/A 276M, Type 302 or 304.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Prepare and install per manufacturer's written instructions unless more stringent requirements are contained in NGA's "GANA Glazing Manual."
- B. Clean substrates, removing projections, filling voids, and sealing joints.
- C. Set units level, plumb, and true to line, without warp or rack of frames and panels, and anchor securely in place.
- D. Fasten components securely in place, with provisions for thermal movement. Install with concealed fasteners unless otherwise indicated.
- E. Install components to drain and return water to tub or shower.
- F. Install doors to produce smooth operation and tight fit at contact points.
- G. Repair, refinish, or replace components damaged during installation.

**3.2 ADJUSTING AND CLEANING**

- A. Adjust operating parts and hardware for smooth, quiet operation and watertight closure. Lubricate hardware and moving parts.
- B. Remove nonpermanent labels, and clean surfaces immediately after installation.

END OF SECTION

**SECTION 10 35 00 - FLAGPOLES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.
- B. Related work specified elsewhere includes:
  - 1. Section 033100 - "Concrete"

**1.2 SUMMARY**

- A. Extent and location of each type of flagpole is shown on drawings; Two (2) required.
- B. Work under this Section includes ground set flagpole, base, lightning protection and ground, fittings, accessories, concrete footing, and all other items necessary or required for a complete and properly functioning installation.

**1.3 SUBMITTALS**

- A. Product Data: Submit manufacturer's technical data accessories, finishes and installation instructions for each type of flagpole required.

**1.4 QUALITY ASSURANCE**

- A. Manufacturing Standards: Provide each flagpole as a complete unit produced by a single manufacturer, including fittings accessories, bases and anchorage devices.
- B. Design Criteria: Provide flagpoles and installations constructed to withstand a **140-mph** wind velocity minimum when flying one flag of appropriate size. Use heavy pipe sizes if required for flagpole type and height shown.
- C. Pole Construction: Construct pole and ship to site in one piece if possible. If more than one piece is necessary, provide snug- fitting, precision joints with self-aligning, internal splicing sleeve arrangement for weather-tight, hairline field joints.

**1.5 DELIVERY, STORAGE AND HANDLING**

- A. Spiral wrap flagpoles with heavy Kraft paper or other protective wrapping and prepare for shipment in hard fiber tube or other protective container.
- B. Deliver flagpoles and accessories completely identified for installation procedure. Handle and store flagpoles to prevent damage or soiling.

**PART 2 - PRODUCTS****2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
  - 1. Aabec Pole Div., Morgan-Francis Div., ICC Mfg., Inc.
  - 2. Acme Flagpole Div., Lingo Inc.
  - 3. American Flagpole, Div. of Kearney-National, Inc.
  - 5. Concord Industries, Inc.
  - 6. Eder Flag Manufacturing Co.

7. Morgan and Co.

## 2.2 FLAGPOLE TYPE

- A. Aluminum Flagpoles: Fabricate aluminum flagpoles from seamless extruded tubing complying with ASTM B 241, alloy 6063-T6, having a minimum wall thickness indicated, tensile strength not less than 35,000 psi and a yield point of 30,000 psi. Heat-treat and age-harden flagpoles after fabrication.
1. Provide cone tapered aluminum flagpoles; For flying one flag.
  2. Exposed Height/Quantity: Two (2) each at 30'-0" finished / exposed height.
  3. Manufacturer - Basis of Design: American Flagpole, Abingdon, VA; Phone: 1-800-368-7171 or (540) 628-4188, or equivalent by another manufacturer named above. Provide complete with all standard and specified accessories.

<b>30' HEIGHT</b>
Catalog number: <b>ESR30D52-AA</b>
Exposed height: 30 ft.
Butt diameter: 5 in.
Wall thickness: 0.188 in.
Set depth: 3 ft.
Total length: 33 ft.
Taper: 11'-0"
Top diameter: 3"
Wind speed: 110 mph
Flag size: US Flag, 5' x 8'
Standard Finish:
Satin, 80 Grit, Clear Anodized

## 2.3 FLAGPOLE MOUNTING

- A. Provide manufacturer's standard base system for the type of flagpole installation required.
1. Foundation Tube: For ground-set flagpoles, provide 16 gage minimum galvanized corrugated steel tube, or 12 gage minimum rolled steel tube, sized to suit flagpole and installation. Furnish complete with welded steel bottom base and support plate, lighting ground spike, and steel centering wedges, all welded construction. Provide loose hardwood wedges at top for plumbing pole after erection. Galvanize steel parts after assembly, including foundation tube.
    - a. Provide manufacturer's standard flash collar, finished to match flagpole.

## 2.4 SHAFT FINISH

- A. Aluminum: Fine, directional, mechanical SATIN polish (NAAMM-32), finished as follows:
1. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm, or thicker.

## 2.5 FITTINGS

- A. Finial Ball: Manufacturer's standard flush seam ball, size as indicated or, if not indicated, to match pole butt diameter.
1. Spun aluminum, with Class I gold anodized finish.
- B. Truck: Ball-bearing non-fouling, revolving, double-track assembly of cast metal, finished to match pole shaft.
- C. Cleats: One 9" cast aluminum cleats with stainless steel fasteners, finished to match pole shaft.
- D. Halyards: Provide one continuous halyard for each flagpole, as follows:
1. Nylon, braided, with metal core; Size: 3/8" (No. 12).
- E. Halyard Flag Snaps: Provide 2 swivel snaps per halyard; Chromium-plated bronze.

**PART 3 - EXECUTION****3.1 INSTALLATION**

- A. Excavation: Excavate for foundation concrete to neat clean lines in undisturbed soil. Provide forms where required due to unstable soil conditions. Remove wood, loose soil, rubbish and other foreign matter from excavation, and moisten earth before placing concrete.
- B. Concrete: Refer to Section 033100 - "Concrete," for 3,000 psi concrete and related requirements.
  - 1. Place concrete immediately after mixing. Perform chuting to avoid segregation of mix. Compact concrete in place by use of vibrators to consolidate. Moist-cure exposed concrete for not less than 7 days, or use a non-staining curing compound in freezing weather.
  - 2. Finish trowel exposed concrete surfaces to smooth, dense surface. Provide positive slope for water runoff to base perimeter.
- C. Flagpole Installation: Install flagpoles as shown and in compliance with final shop drawings and manufacturer's current written instructions and recommendations.
  - 1. Provide positive lightning ground for each flagpole installation.
    - a. Paint portions of ground-set flagpole below grade with a heavy coat of bituminous paint, and allow to properly dry and cure, prior to setting in place and pouring concrete base.

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 43 13 - DEFIBRILLATOR CABINETS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes defibrillator cabinets.
- B. Related Requirements:
  - 1. Section 10 43 14 "Automated External Defibrillators" for AEDs.

**1.2 PREINSTALLATION CONFERENCE**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to defibrillator cabinets including, but not limited to, the following:
    - a. Schedules and coordination requirements.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed-, semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.
- B. Shop Drawings: For defibrillator cabinets. Include plans, elevations, sections, details, and attachments to other work.
- C. Product Schedule: For defibrillator cabinets. Indicate whether recessed, semirecessed, or surface mounted. Coordinate final defibrillator cabinet schedule with defibrillator schedule to ensure proper fit and function. Use same designations indicated on Drawings.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For defibrillator cabinets to include in maintenance manuals.

**1.5 COORDINATION**

- A. Coordinate size of defibrillator cabinets to ensure that type and capacity of automated external defibrillators indicated are accommodated.
- B. Coordinate sizes and locations of defibrillator cabinets with wall depths.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Rated Defibrillator Cabinets: Listed and labeled to comply with requirements in ASTM E 814 for fire-resistance rating of walls where they are installed.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

**2.2 DEFIBRILLATOR CABINET**

- A. Cabinet Type: Suitable for automated external defibrillators.

1. Products: Subject to compliance with requirements, provide products by one of the following:
  - a. JL Industries, Inc.; a division of the Activar Construction Products Group.
  - b. Modern Metal Products, Division of Technico Inc.
- B. Cabinet Construction: Nonrated and fire rated for fire-resistance rating of walls where they are installed.
  1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.043-inch-thick cold-rolled steel sheet lined with minimum 5/8-inch-thick fire-barrier material. Provide factory-drilled mounting holes.
- C. Cabinet Material: Cold-rolled steel sheet.
- D. Semi-recessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
  1. Square-Edge Trim: 1-1/2-inch backbend depth.
- E. Cabinet Trim Material: Stainless-steel sheet.
- F. Door Material: Stainless-steel sheet.
- G. Door Style: Fully glazed panel with frame.
- H. Door Glazing: Acrylic sheet.
  1. Acrylic Sheet Color: Clear transparent acrylic sheet.
- I. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
  1. Provide projecting door pull and friction latch.
  2. Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.
- J. Accessories:
  1. Identification: Lettering and graphic complying with authorities having jurisdiction.
    - a. Identify defibrillator cabinet with words and graphic applied to cabinet glazing.
  2. Alarm Contacts: Manufacturer's standard contact device for connecting to building security system that actuates when defibrillator cabinet door is opened.
- K. Materials:
  1. Cold-Rolled Steel: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.
    - a. Finish: Baked enamel or powder coat.
    - b. Color: Manufacturers standard white.
  2. Stainless Steel: ASTM A 666, Type 304.
    - a. Finish: No. 4 directional satin finish.
  3. Transparent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), 6 mm thick, with Finish 1 (smooth or polished).

### 2.3 FABRICATION

- A. Defibrillator Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
  1. Weld joints and grind smooth.
  2. Provide factory-drilled mounting holes.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles.
  1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
  2. Miter and weld perimeter door frames.
- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

**2.4 GENERAL FINISH REQUIREMENTS**

- A. Comply with NAAMM's AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of defibrillator cabinets from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish defibrillator cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine walls and partitions for suitable framing depth and blocking where semi-recessed cabinets will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 PREPARATION**

- A. Prepare recesses for semi-recessed defibrillator cabinets as required by type and size of cabinet and trim style.

**3.3 INSTALLATION**

- A. General: Install defibrillator cabinets in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.
- B. Defibrillator Cabinets: Fasten cabinets to structure, square and plumb.
  - 1. Fasten mounting brackets to inside surface of defibrillator cabinets, square and plumb.
- C. Identification: Apply decals at locations indicated.

**3.4 ADJUSTING AND CLEANING**

- A. Remove temporary protective coverings and strippable films, if any, as defibrillator cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust defibrillator cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of defibrillator cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace defibrillator cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by defibrillator cabinet and mounting bracket manufacturers.
- E. Replace defibrillator cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 43 14 - AUTOMATED EXTERNAL DEFIBRILLATORS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes automated external defibrillators (AEDs).
- B. Related Requirements:
  - 1. Section 10 43 13 "Defibrillator Cabinets" for cabinets housing AEDs.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.

**1.3 CLOSEOUT SUBMITTALS**

- A. Operation and maintenance data.

**1.4 WARRANTY**

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of AEDs that fail in materials or workmanship within specified warranty period.
  - 1. Device: 10 years from date of Substantial Completion.
  - 2. Accessories: 1 year from date of Substantial Completion.
  - 3. Batteries: 4 years from date of Substantial Completion.
  - 4. Defibrillator pads: Expiration date indicated on pads package.

**PART 2 - PRODUCTS****2.1 AUTOMATED EXTERNAL DEFIBRILLATORS**

- A. Automated External Defibrillators (AEDs): Designed for use by layperson first responders with no training, on patients of any age.
  - 1. Products: Subject to compliance with requirements, available products include, but are not limited to, the following:
    - a. Phillips Medical Systems; HeartSmart OnSite Defibrillator.
    - b. Physio Control; Lifepak.
    - c. Zoll; AED Plus.
  - 2. Weight: 3.3 lbs.
  - 3. Guided audio instructions for device use and CPR coaching.
  - 4. Senses application of pads to patient, and changes voice instructions.
  - 5. Patient Analysis: Evaluates patient ECG to determine if a rhythm is shockable.
  - 6. Shock Time: 8 seconds after CPR interval; less than 20 seconds shock-to-shock.
  - 7. Preinstalled pads cartridge; spare pads cartridge in case.
  - 8. Retrievable summary of care from internal memory: First 15 minutes of ECG and the entire incident's events and analysis decisions.

9. Self-Tests: Automatic, daily.
  - a. Internal circuitry.
  - b. Waveform delivery system.
  - c. Pads cartridge.
  - d. Battery capacity.
10. Battery: 9 Volt DC, non-rechargeable lithium.
11. Meets AAMI DF80 guidelines and AHA recommendations for adult defibrillation.

### **PART 3 - EXECUTION**

#### **3.1 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain units.

END OF SECTION

**SECTION 10 44 13 - FIRE PROTECTION CABINETS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Fire-protection cabinets for the following:
    - a. Portable fire extinguisher.
- B. Related Requirements:
  - 1. Section 10 44 16 "Fire Extinguishers" for portable, hand-carried fire extinguishers accommodated by fire-protection cabinets

**1.2 PREINSTALLATION CONFERENCE**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to fire-protection cabinets, including, but not limited to, the following:
    - a. Schedules and coordination requirements.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed-, semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.
  - 2. Show location of knockouts for hose valves.
- B. Shop Drawings: For fire-protection cabinets.
  - 1. Include plans, elevations, sections, details, and attachments to other work.
- C. Product Schedule: For fire-protection cabinets. Indicate whether recessed, semirecessed, or surface mounted. Coordinate final fire-protection cabinet schedule with fire-extinguisher schedule to ensure proper fit and function. Use same designations indicated on Drawings.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For fire-protection cabinets to include in maintenance manuals.

**1.5 COORDINATION**

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers, fire hoses, hose valves, and hose racks indicated are accommodated.
- B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain fire-protection cabinets, accessories, and fire extinguishers from single source from single manufacturer.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.3 FIRE-PROTECTION CABINET

- A. Cabinet Type: Suitable for fire extinguisher.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Guardian Fire Equipment, Inc.; Series 1800.
    - b. JL Industries, Inc.; a division of the Activar Construction Products Group; Panorama Series.
    - c. Larsens Manufacturing Company; Architectural Series.
    - d. Potter Roemer LLC; Alta Series.
  - 2. Slim profile Extinguisher Cabinet: For use with slim profile fire extinguishers. Cabinet must fit into 3 5/8" stud wall. Constructed of powder coated, cold rolled steel with acrylic glazed door.
    - a. JL Activar, FX2 Fire Rated Extinguisher Cabinet.
    - b. Oval Fire Products, Inc.; Flush Recessed Cabinet.
- B. Cabinet Construction: Rated and nonrated cabinets matching fire-resistance rating of walls where they are installed]
  - 1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.043-inch-thick cold-rolled steel sheet lined with minimum 5/8-inch-thick fire-barrier material. Provide factory-drilled mounting holes.
- C. Cabinet Material: Cold-rolled steel sheet with manufacturer's standard baked enamel or powder coat.
- D. Recessed Cabinet:
  - 1. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
- E. Semi-recessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
  - 1. Square-Edge Trim: 1-1/4- to 1-1/2-inch backbend depth.
  - 2. Rolled-Edge Trim: 2-1/2-inch backbend depth.
- F. Cabinet Trim Material: Same material and finish as color.
- G. Door Material: Aluminum sheet.
- H. Door Style: Fully glazed panel with frame.
  - 1.
- I. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
  - 1. Provide projecting lever handle with cam-action latch or projecting door pull and friction latch.
  - 2. Provide continuous hinge, of same material and finish as trim,, permitting door to open 180 degrees.
- J. Accessories:
  - 1. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated.
    - a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."

- 1) Location: Applied to cabinet glazing.
  - 2) Application Process: Pressure-sensitive vinyl letters.
  - 3) Lettering Color: White.
  - 4) Orientation: Vertical.
2. Alarm: Manufacturer's standard alarm that actuates when fire-protection cabinet door is opened and that is powered by low voltage, complete with transformer.
- K. Materials:
1. Aluminum: ASTM B 221 for extruded shapes and aluminum sheet, with strength and durability characteristics of not less than Alloy 6063-T5 for aluminum sheet.
    - a. Finish: Clear anodic.
  2. Stainless Steel: ASTM A666, Type 304.
    - a. Finish: ASTM A480/A480M No. 4 directional satin finish,.
  3. Transparent Acrylic Sheet: ASTM D 4802, Category A-1 (cell-cast sheet), 1.5 mm thick, with Finish 1 (smooth or polished).
  4. Tempered Float Glass: ASTM C 1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

## 2.4 FABRICATION

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
  1. Weld joints and grind smooth.
  2. Provide factory-drilled mounting holes.
- B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles.
  1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
  2. Miter and weld perimeter door frames and grind smooth.
- C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

## 2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces of fire-protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish fire-protection cabinets after assembly.
- D. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine walls and partitions for suitable framing depth and blocking where recessed and semirecessed cabinets will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Prepare recesses for fire-protection cabinets as required by type and size of cabinet and trim style.

### **3.3 INSTALLATION**

- A. General: Install fire-protection cabinets in locations and at mounting heights indicated
- B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
- C. Identification:
  - 1. Apply vinyl lettering at locations indicated.

### **3.4 ADJUSTING AND CLEANING**

- A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.
- E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

**SECTION 10 44 16 - FIRE EXTINGUISHERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.
- B. Related Requirements:
  - 1. Section 10 44 13 "Fire Protection Cabinets."

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to fire extinguishers including, but not limited to, the following:
    - a. Schedules and coordination requirements.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.
- B. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function. Use same designations indicated on Drawings.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Warranty: Sample of special warranty.

**1.5 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

**1.6 COORDINATION**

- A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

**1.7 WARRANTY**

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Failure of hydrostatic test according to NFPA 10 when testing interval required by NFPA 10 is within the warranty period.
    - b. Faulty operation of valves or release levers.
  - 2. Warranty Period: Six years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
- B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.
  - 1. Provide fire extinguishers approved, listed, and labeled by FM Global.

**2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS**

- A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet and indicated.
  - 1. Source Limitations: Obtain fire extinguishers, fire-protection cabinets, and accessories, from single source from single manufacturer.
  - 2. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B.
- B. Multipurpose Dry-Chemical Type: UL-rated 2-A:10-B:C, 5-lb nominal capacity, with monoammonium phosphate-based dry chemical in manufacturer's standard enameled container.
- C. Wet-Chemical Type: UL-rated 2-A:K, 2.5-gal. nominal capacity, with potassium acetate-, potassium citrate-, or potassium carbonate-based chemical in stainless-steel container; with pressure-indicating gage.
  - 1. Cabinet or Surface Mounted:
    - a. JL Orbit, Model Saturn 25; Class K.
    - b. Badger, Model WC-250-1.

**2.3 SLIM PROFILE PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS**

- A. Definition:
  - 1. Fire extinguisher that when wall mounted on a bracket projects less than 4 inches from the face of wall. Complies with protruding object guidelines from ADA and ANSI A117.1.
  - 2. Recessed wall cabinet and extinguisher that projects less than 1 inch from the face of wall and overall depth is less than 4" deep to fit in gypsum board wall assembly using 3 5/8" studs. Complies with protruding object guidelines from ADA and ANSI A117.1.
- B. Location: As indicated on Drawings.
- C. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.
  - 1. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B.
- D. Multipurpose Dry-Chemical Type: UL-rated 4-A:80-B:C, 10-lb nominal capacity, with monoammonium phosphate-based dry chemical in manufacturer's standard enameled container. See Drawings for mounting types.
  - 1. Surface Mounted:
    - a. Oval Brand Model 10HABC.
    - b. JL Orbit, Model FE10V or FE10VB.
  - 2. Cabinet Mounted:
    - a. Oval Brand Model 10JABC.
    - b. JL Orbit, Model FE10V.

**2.4 MOUNTING BRACKETS**

- A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or black baked-enamel finish.
  - 1. Source Limitations: Obtain mounting brackets and fire extinguishers from single source from single manufacturer.
- B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
  - 1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.
    - a. Orientation: Vertical.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine fire extinguishers for proper charging and tagging.
  - 1. Remove and replace damaged, defective, or undercharged fire extinguishers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.
- B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.
  - 1. Mounting Height: As indicated on Drawings.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 51 13 - METAL LOCKERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Wardrobe Locker Configurations, as shown on the Drawings, or:
    - a. Three-tier wardrobe lockers; 12 inch wide by 12 inch deep by 72 inch high units.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker and bench.
- B. Shop Drawings: For metal lockers.
  - 1. Include plans, elevations, sections, and attachment details to other Work.
  - 2. Show locker fillers, trim, base, slopping tops, and accessories.
  - 3. Include locker identification system and numbering sequence.
- C. Samples for Initial Selection: Manufacturer's color charts showing the full range of standard and premium colors available for units with factory-applied color finishes.
- D. Samples for Verification: For the following products, in manufacturer's standard sizes, showing the full range of color, texture, and pattern variations expected. Prepare Sample from the same material to be used for the Work.
  - 1. Lockers and equipment.
  - 2. Locker benches.
- E. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals specified in Division 01.
- F. Warranty: Sample of special warranty.
- G. Product Schedule: For lockers. Use same designations indicated on Drawings.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Sample Warranty: For special warranty.

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

**1.6 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. The following metal locker hardware items equal to 10 percent of amount installed for each type and finish installed, but no fewer than five units:
  - a. Locks.
  - b. Blank identification plates.
  - c. Hooks.

### **1.7 QUALITY ASSURANCE**

- A. Regulatory Requirements: Where metal lockers and benches are indicated to comply with accessibility requirements, comply with the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)."
  1. Provide not less than 1 shelf located no higher than 54 inches (1372 mm) above the floor for side reach.
  2. Provide 1 shelf located at bottom of locker no lower than 9 inches (230 mm) above the floor for side reach.
  3. Provide hardware that does not require tight grasping, pinching, or twisting of the wrist, and that operates with a force of not more than 5 lbf (22.2 N).

### **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.
- B. Protect lockers from damage during delivery, handling, storage, and installation.
- C. Deliver master and control keys and combination control charts to Owner.

### **1.9 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

### **1.10 COORDINATION**

- A. Coordinate sizes and locations of concrete bases for metal lockers. Concrete, reinforcement, and formwork requirements are specified in other Sections to ensure that metal lockers can be supported and installed as indicated.
- B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

### **1.11 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
  1. Failures include, but are not limited to, the following:
    - a. Structural failures.
    - b. Faulty operation of latches and other door hardware.
  2. Damage from deliberate destruction and vandalism is excluded.
  3. Warranty Period for Welded Metal Lockers: 10 years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Source Limitations: Obtain metal lockers, locker benches, and accessories from single source from single locker manufacturer.
  - 1. Obtain locks from single lock manufacturer.
- B. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
  - 1. All Welded Wardrobe Lockers (Heavy Duty Applications):
    - a. Art Metal Products; Bulldog or Champ Corridor Lockers.
    - b. DeBourgh Mfg. Co.; Sentry Corridor/Personnel Lockers.
    - c. List Industries Inc.; Marquis Protector.
    - d. Lyon Workspace Products, LLC; All-Welded Lockers.
    - e. Penco Products, Inc.; All-Welded Lockers.
  - 2. Accessible Lockers: Provide accessible lockers as indicated on the Drawings, but at least one locker in each Locker Room.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Accessibility Standard: For lockers and locker benches indicated to be accessible, comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design", IBC, and ICC A117.1 or other locally enforced accessibility standards.

**2.3 MATERIALS**

- A. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.
- B. Expanded Metal: ASTM F 1267, Type II (flattened), Class I, 3/4-inch (19-mm) steel mesh, with at least 70 percent open area.
- C. Steel Tube: ASTM A 500, cold rolled.
- D. Fasteners: Zinc- or nickel-plated steel, slotless-type exposed bolt heads, and self-locking nuts or lock washers for nuts on moving parts.
- E. Anchors: Material, type, and size required for secure anchorage to each substrate.
  - 1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls, and elsewhere as indicated, for corrosion resistance.
  - 2. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

**2.4 WARDROBE LOCKERS**

- A. Body: Assembled by welding body components together. Fabricate from unperforated, cold-rolled steel sheet with thicknesses as follows:
  - 1. Tops, Bottoms, and Sides: 0.0528 inch (1.35 mm) thick.
  - 2. Backs: 0.0428 inch (1.1 mm) thick.
  - 3. Shelves: 0.0528 inch (1.35 mm) thick, with double bend at front and single bend at sides and back.
  - 4. Size: 12" wide x 12" deep x 72" tall Three tier or as shown on the Drawings.

- B. Frames: Channel formed; fabricated from 0.0528-inch- (1.35-mm-) thick, cold-rolled steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
- C. Locker Base: Structural channels, formed from 0.0528-inch- (1.35-mm-) thick, cold-rolled steel sheet; welded to front and rear of side-panel frames.
- D. Doors: One-piece; fabricated from 0.0677-inch- (1.7-mm-) thick, cold-rolled steel sheet; formed into channel shape with double bend at vertical edges, and with right-angle single bend at horizontal edges. Fabricate to prevent springing when opening or closing, and to swing 180 degrees. Comply with the following:
- E. Hinges: Welded to door and attached to door frame with not less than 2 factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
  - 1. Continuous Hinges: Manufacturer's standard, steel continuous hinge.
- F. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry resistant.
  - 1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks or padlocks; positive automatic and prelocking.
    - a. Latch Hooks: Equip doors less than 48 inches (1219 mm) high with 2 latch hooks; fabricated from minimum 0.1116-inch- (2.8-mm-) thick steel; welded to full-height door strikes; with resilient silencer on each latch hook.
    - b. Latching Mechanism: Manufacturer's standard rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

## 2.5 LOCKER ACCESSORIES

- A. Interior Equipment: Furnish each locker with the following items, unless otherwise indicated:
  - 1. Hooks: Manufacturer's standard zinc-plated, ball-pointed steel. Provide one double-prong ceiling hook, and not fewer than two single-prong wall hooks for single-, double-, and triple-tier units. Attach hooks with at least two fasteners.
  - 2. Coat Rods: Fabricated from 1-inch-(25-mm-) diameter steel; chrome finished.
- B. Number Plates: Manufacturer's standard aluminum number plates with numerals at least 3/8 inch (9 mm) high. Number lockers in sequence indicated. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
- C. Continuous Metal Base: Minimum 0.0598-inch- (1.50-mm-) thick steel sheet, channel or zee profiled for stiffness, fabricated in lengths as long as practicable to enclose base and base ends of lockers, and finished to match lockers.
  - 1. Height: 4 inches (102 mm).
- D. Continuously Sloping Tops: Manufacturer's standard, fabricated from minimum 0.0359-inch- (0.90-mm-) thick steel sheet, for installation over lockers with separate flat tops. Fabricate tops in lengths as long as practicable, without visible fasteners at splice locations, finished to match lockers. Provide fasteners, filler plates, supports, and closures, as follows:
  - 1. Closures: Vertical-end type.
  - 2. Sloped top corner fillers, mitered.
- E. Recess Trim: Manufacturer's standard; fabricated from minimum 0.0478-inch- (1.20-mm-) thick steel sheet, minimum 2-1/2-inch (64-mm) face width, and finished to match lockers. Fabricate trim in lengths as long as practicable.

- F. Filler Panels: Manufacturer's standard; fabricated from minimum 0.0478-inch- (1.20-mm-) thick steel sheet in an unequal leg angle shape, and finished to match lockers. Provide slip joint filler angle formed to receive filler panel.
- G. Finished End Panels: Manufacturer's standard; fabricated from minimum 0.0239-inch- (0.60-mm-) thick steel sheet, finished to match lockers, and designed for concealing exposed ends of nonrecessed lockers.
  - 1. Provide one-piece panels for double-row (back-to-back) locker ends.
- H. Boxed End Panels: Manufacturer's standard; fabricated from minimum 0.0598-inch- (1.50-mm-) thick steel sheet, with 1-inch- (25-mm-) wide edge dimension, finished to match lockers, and designed for concealing exposed ends of nonrecessed lockers

## 2.6 FABRICATION

- A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
  - 1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
  - 2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.
- B. Unit Principle: Fabricate each locker with an individual door and frame, individual top, bottom, back, and shelves, and common intermediate uprights separating compartments.
- C. All-Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.
- D. Accessible Lockers: Fabricate as follows:
  - 1. Locate bottom shelf no lower than 15 inches above the floor.
  - 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.

## 2.7 FINISHES, GENERAL

- A. Finish all steel surfaces and accessories, except prefinished stainless-steel and chrome-plated surfaces.
- B. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.8 STEEL SHEET FINISHES

- A. Surface Preparation: Clean surfaces of dirt, oil, grease, mill scale, rust, and other contaminants that could impair paint bond. Use manufacturer's standard methods.
- B. Powder Coated Finish: Immediately after cleaning and pretreating, apply manufacturer's standard powder coated finish consisting of a thermosetting topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film

thickness of 1.4 mils (0.036 mm) on doors, frames, and legs, and 1.1 mils (0.028 mm) elsewhere.

1. Colors and Gloss: As selected by Architect from manufacturer's full range of standard colors.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine walls and floors or support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Install lockers level, plumb, and true; shim as required, using concealed shims.
  1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
  2. Anchor single rows of metal lockers to walls near top of lockers and to floor.
  3. Anchor back-to-back metal lockers to floor.
- B. Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
  1. Attach recess trim to recessed lockers with concealed clips.
  2. Attach sloping top units to lockers.
- C. Attach finished end panels with fasteners only at perimeter to conceal exposed ends of nonrecessed lockers.
- D. Attach boxed end panels with concealed fasteners to conceal exposed ends of nonrecessed lockers.
- E. Anchor locker benches pedestals to floors and uniformly space pedestals not more than 36 inches (915 mm) apart. Securely fasten bench top to pedestal.

#### **3.3 ADJUSTING**

- A. Adjust doors and latches to operate easily without binding.
- B. Clean interior and exposed exterior surfaces and polish stainless-steel surfaces.
- C. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding. Verify that integral locking devices operate properly.

#### **3.4 PROTECTION**

- A. Protect metal lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- B. Touch up marred finishes, or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION

**SECTION 10 51 19 - PHENOLIC LOCKERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes phenolic open-front athletic lockers .

**1.2 REFERENCES**

- A. American Society for Testing and Materials:
1. ASTM E 84 Standard Test Method for Surface Burning Characteristics of Building Material
  2. ASTM D 6578 Standard Practice for Determination of Graffiti Resistance
  3. ASTM D 1037 Direct Screw Withdrawal Test
  4. ASTM D 570 Standard Test Method for Water Absorption

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of phenolic locker.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of phenolic locker and bench.
- B. Shop Drawings: For phenolic lockers and benches.
1. Include plans, elevations, sections, details, and attachments to other work.
  2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
  3. Show locations and sizes of cutouts and holes for items installed in phenolic lockers.
  4. Show phenolic locker fillers, trim, base, sloping tops, and accessories.
  5. Show phenolic locker numbering sequence.
- C. Samples for Initial Selection: For the following:
1. Thermoset decorative overlay panels.
- D. Samples for Verification: For the following products:
1. Thermoset decorative-overlay-surfaced panels, not less than 8 by 10 inches, for each type, color, pattern, and surface finish.
  2. Corner pieces of phenolic locker front frame joints between stiles and rail, as well as exposed end pieces, not less than 18 inches wide by 18 inches high by 6 inches deep.
  3. Exposed cabinet hardware and accessories, one unit for each type and finish.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For qualified Installer.
- B. Sample Warranty: For special warranty.

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For adjusting, repairing, and replacing phenolic locker doors and latching mechanisms to include in maintenance manuals.

**1.6 MAINTENANCE MATERIAL SUBMITTALS**

- A. Extra Stock: Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Full-size phenolic locker doors, complete with specified door hardware. Furnish no fewer than five doors of each type and color installed.
  - 2. Full-size units of the following phenolic locker hardware items equal to 10 percent of amount installed for each type and finish installed, but no fewer than five units:
    - a. Hinges.
    - b. Pulls.
    - c. Shelf rests.
    - d. Cylinder locks.
- B. Locker body: The locker, including shelves, shall incorporate shrink pin or comparable construction and shall be mechanically fastened with stainless steel fasteners.
- C. Water absorption requirements: When tested in accordance with ASTM D 570, locker materials shall have a water absorption rate of less than 0.37%.
- D. Graffiti resistance requirements: When tested in accordance with ASTM D 6578, locker materials shall prove resistant to all chemicals tested for a period of 1 to 10 minutes and shall leave no mar or blemish on the surface when cleaned. Locker materials shall have guaranteed surface clean ability from permanent markers and shall have non-ghosting properties.
- E. Scratch resistance requirements: When tested in accordance with ASTM D 2197, locker materials shall prove to be scratch resistant when maximum load values in excess of 10 kilograms.
- F. Flame spread: When tested in accordance with ASTM E 84, lockers, athletic lockers, wardrobe cabinets, school cubbies and locker bench materials shall meet or exceed all requirements for Class B flame spread rating and smoke developed.
- G. Flame spread shall not exceed 75.
- H. Smoke developed shall not exceed 450.
- I. Impact resistance requirements: When tested in accordance with ASTM D 2794, locker materials shall withstand an impact force value in excess of 45 inch/lbs.
- J. Screw holding strength: When tested in accordance with ASTM D 1037, direct screw withdrawal test, locker materials shall withstand a direct pull force that exceeds 2,500 lbs per fastener.
- K. Tensile strength: locker materials shall have a modulus of elasticity of 1.55 million psi.
- L. Shear strength: locker materials shall have a shear strength of 2,000 psi minimum.
- M. Compression strength: locker materials shall have a compression strength of 24,000 PSI minimum.
- N. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Do not deliver phenolic lockers until painting and similar operations that could damage phenolic lockers have been completed in installation areas. If phenolic lockers must be stored in other-than-installation areas, store only in areas where environmental conditions are the same as those in final installation location, and comply with requirements specified in "Field Conditions" Article.

**1.8 FIELD CONDITIONS**

- A. Environmental Limitations: Do not deliver or install phenolic lockers until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 43 and 70 percent during the remainder of the construction period.
- B. Field Measurements: Where phenolic lockers are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
  - 1. Locate concealed framing, blocking, and reinforcements that support phenolic lockers by field measurements before being enclosed, and indicate measurements on Shop Drawings.

**1.9 COORDINATION**

- A. Coordinate sizes and locations of concealed phenolic support bases.
  - 1. Requirements are specified in Section 06 10 53 "Miscellaneous Rough Carpentry."
- B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that phenolic lockers can be supported and installed as indicated.

**1.10 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of phenolic lockers that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures.
    - b. Faulty operation of locks or hardware.
    - c. Deterioration of phenolic, phenolic finishes, and other materials beyond normal use.
  - 2. Warranty Period: 20 years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Accessibility Requirements: For phenolic lockers indicated to be accessible, comply with The Department of Justice 2010 ADA Standards, and IBC and ICC/ANSI A117.1 or other locally enforced accessibility standards.

## 2.2 PHENOLIC LOCKERS

- A. Basis-of-Design Manufacturer: Phenolic lockers are based on products of Columbia Lockers. Subject to compliance with requirements, provide products by the basis-of-design manufacturer or comparable products by one of following:
  - 1. Foreman Locker Systems.
  - 2. ASI Storage Solutions.
  - 3. Summit Lockers.
- B. Construction Style: As indicated.
  - 1. Reveal Dimension: As indicated.

## 2.3 LOCKER TYPES

- A. Player's and Coach's Lockers: Open front athletic lockers- Refer to Drawings for configurations. Lockers are to be integrated into surrounding wall and ceiling construction. Lockers are to include top & bottom shelves, clothes rod, coat hooks; size 24" W x 24" D x 72" H; curb mounted.
- B. Official's Lockers: Open front athletic lockers- Refer to Drawings for configurations. Lockers are to be integrated into surrounding wall and ceiling construction. Lockers are to be two-tier and include lockable storage compartment, top & bottom shelves, clothes rod, coat hooks; size 18" W x 18" D x 72" H; curb mounted.

## 2.4 MATERIALS

- A. Panel Material: Decorative papers impregnated with the melamine resin on faces with a clear protective overcoat and integrally compression molded within a core consisting of solid phenolic impregnated kraft papers.
  - 1. Required Fire Resistance Rating: ASTM E 84, Class B.
- B. Material Thicknesses:
  - 1. Doors, End Panels, and Toe Kick Plates – Minimum .50" (13 mm) inches.
  - 2. Locker boxes, tops, bottoms, and shelves – Minimum .375" (10 mm) inches.
  - 3. Sides and Locker Backs – Minimum .3125" (8 mm) inches.
  - 4. Bench Tops – Minimum .75" (19 mm) inches.
- C. Colors and Patterns: As selected by Architect from manufacturer's full range.
- D. Locker Doors: Locker door shall be the full width of the locker box and shall be frameless, allowing access to the entire width of the Locker.
- E. Locker Body: Locker shall incorporate Shrink Pin or comparable construction for alignment and will be mechanically fastened with stainless steel fastener. Hinges will be attached to the locker box with stainless steel theft proof torx-head screws. Lockers shall arrive at construction site fully assembled.
- F. End panels, and toe kick plates: shall be manufactured of the same color, thickness, and material as the locker doors.
- G. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.
- H. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.
- I. Wood Support Base: 2-by-4-inch, nominal-size lumber treated with manufacturer's standard preservative-treatment, pressure process.

**2.5 HARDWARE**

- A. General: Provide manufacturer's standard phenolic locker hardware complying with the requirements in this Section.
- B. Digital Keypad Locks (Players and Coaches Lockers): Battery-powered electronic keypad with reprogrammable manager and owner codes that override access. Three consecutive incorrect code entries shall disable lock for three minutes.
  - 1. Designed for shared or temporary access by multiple users, with user-defined code to lock and unlock. Provide LED indicator to show when lock is in use.
- C. Cylinder Locks (Officials Lockers): Built-in, flush cam locks with five-pin tumbler keyway, keyed separately and master keyed. Furnish two change keys for each lock and two master keys.
  - 1. Key Type: Flat, with minimum 2-by-2.68-inch key head for accessible lockers.
- D. Hinges: hinges shall be concealed and shall be made of 14 gauge type 304 stainless steel and have a satin finish. Hinge shall have five (5) knuckles and shall allow door to open 90°.
- E. Wire Pulls: Back mounted; 4 inches long, 5/16 inch in diameter.
- F. Shelf Rests: BHMA A156.9, B04013.
- G. Drawer Slides: Side-mounted, full-extension, zinc-plated steel drawer slides with steel ball bearings, and rated for a load of 75 lbf.
- H. Hooks: Manufacturer's standard, ball-pointed aluminum or steel; finished to match other phenolic locker hardware. Attach hooks with at least two fasteners.
  - 1. Provide hooks as indicated on Drawings.
- I. Coat Rods: 3/4-inch- diameter steel; finished to match other phenolic locker hardware.
  - 1. Provide coat rods as indicated on Drawings.
- J. Exposed Hardware Finishes: Satin chrome unless otherwise indicated.

**2.6 ACCESSORIES**

- A. Number Plates: 1-1/2-inch-diameter, etched, embossed, or stamped, aluminum plates with black numbers and letters at least 1/2 inch high. Identify phenolic lockers in sequence indicated on Drawings. Finish plates to match other phenolic locker hardware.

**2.7 FABRICATION**

- A. Fabricate each phenolic locker as a single unit with shelves, an individual door and frame, an individual top, a bottom, and a back, and with individual uprights.
  - 1. Fabricate phenolic lockers to dimensions, profiles, and details indicated.
  - 2. Ease edges of corners of solid-phenolic members to 1/16-inch radius.
- B. Fabricate components square, rigid, without warp, and with finished faces flat and free of scratches and chips. Accurately factory machine components for attachments. Make joints tight and true.
  - 1. Fabricate phenolic lockers using manufacturer's standard construction.
- C. Accessible Lockers: Fabricate as follows:
  - 1. Locate bottom shelf no lower than 15 inches above the floor.
  - 2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.
- D. Venting: Fabricate phenolic lockers with space between doors and locker assembly of not less than 3/4 inch, with painted metal security screen attached to each shelf between doors.
- E. Number Plates: Inlay plates flush in each phenolic locker, locations as indicated.

- F. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
  - 1. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended, and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- G. Shop cut openings, to maximum extent possible, to receive hardware, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify that furring is attached to concrete and masonry walls that are to receive phenolic lockers.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Condition phenolic lockers to average prevailing humidity conditions in installation areas before installation.
- B. Before installing phenolic lockers, examine factory-fabricated work for completeness and complete work as required, including removal of packing.

#### **3.3 INSTALLATION**

- A. Install wood support base with 1/2-inch-thick plywood top.
- B. Install phenolic lockers level, plumb, and true; use concealed shims.
- C. Connect groups of phenolic lockers together with manufacturer's standard fasteners, through predrilled holes, with no exposed fasteners on face frames. Fit phenolic lockers accurately together to form flush, tight, hairline joints.
- D. Install phenolic lockers without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings, providing unencumbered operation. Complete installation of hardware and accessory items as indicated.
  - 1. Installation Tolerance: No more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line. Shim as required with concealed shims.
- E. Locker Anchorage:
- F. Comply with manufacturer's recommendations for attachment of lockers to floors, walls, bases, and adjacent lockers. Provide concealed fasteners unless exposed fasteners are standard fastening method.

#### **3.4 ADJUSTING, CLEANING, AND PROTECTION**

- A. Clean, lubricate, and adjust hardware. Adjust doors to operate easily without binding. Verify that integral locking devices operate properly.
- B. Protect phenolic lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.
- C. Touch up marred finishes, or replace phenolic lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by phenolic locker manufacturer.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 51 20 – CUSTOM WOOD LOCKERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. This section includes the following:
  - 1. Custom Wood Lockers, filler panels, operable stainless steel panels with full-length stainless steel hinges, perforated stainless steel inserts, built-in USB ports, magnetic plate with stainless steel finish, stainless steel shoulder pad bracket, and accessories.

**1.2 RELATED SECTIONS**

- A. Section 01 33 00 – Submittal Procedures: Shop Drawings and product data.

**1.3 REFERENCES**

- A. Architectural Woodwork Institute: AWI - Quality Standards Illustrated.

**1.4 SUBMITTALS**

- A. Product Data: Available upon request, including:
  - 1. Preparation instructions and recommendations.
  - 2. Storage and handling requirements and recommendations.
  - 3. Installation methods.
  - 4. Product data specific to materials used in construction of locker.
- B. Shop Drawings: Indicate locker plan layout for locker installations, component profiles and elevations, schedule of finishes, and accessories.
- C. Mock-Up: After shop drawings have been reviewed and approved by Architect, provide a full-sized mock-up of a typical locker unit consisting of two lockers with a shared bench seat. Include all specified accessories. Deliver the mock-up to the jobsite. The mock-up may be incorporated into the work if it is determined to be acceptable.

**1.5 QUALITY ASSURANCE**

- A. Perform work in accordance with AWI (Architectural Woodwork Institute) Architectural Woodwork Quality Standards Illustrated.

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Store products in a dry, ventilated area until ready for installation.
- B. Protect finishes from moisture, soiling, and damage during handling.

**1.7 PROJECT CONDITIONS**

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.
- B. During and after installation, maintain same temperature and humidity conditions in building spaces as will occur after occupancy.
- C. Protect locker finish and adjacent surfaces from damage.

**PART 2 - PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Dains Custom Athletic Lockers, Shell City, MO, Phone: (417) 432-1190, Fax: (417) 432-1041, Contact: Mike Dains or Steve Dains.
  - 2. Legacy Lockers, 4433 Bronze Way, Dallas, TX, 75236, Toll Free (866) 937-1088, Local (972) 937-1088, Fax (972) 937-1089.
  - 3. Broward Custom Woodwork, Inc., 17520 SW 103 Place, Archer, FL, 32618, Contact Bill Koebel, (312) 495-9490, Fax (352) 495-9532.
  - 4. Columbus Cabinet Co., 6047 Coca Cola, Columbus, GA 31909, (706) 561-6497.
- B. Requests for substitutions will be considered in accordance with provisions of Section 01330.

**2.2 LOCKER**

- A. Materials: Exposed Surfaces: NIST PS 1; APA A-A Grade, 3/4" thick, hardwood veneer panels.
- B. Hardwood Faced Panels: HPVA HP-1; graded in accordance with AWI/AWMAC Architectural Woodwork Quality Standards Illustrated, hardwood face veneer, interior rated adhesives, core of medium density fiberboard or engineered plywood.
  - 1. Exposed Surfaces: Grade AA, Maple, plain sliced, book-matched.
  - 2. Semi-Exposed Surfaces: Grade A, Maple, plain sliced, random-matched.
  - 3. Concealed Surfaces: Grade B, Maple, rotary cut, random-matched.
- C. Wood Veneer: Provide solid wood edge banding to closely match wood veneer.
- D. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.
- E. Finish: Custom Finish. All wood surfaces are to be finished with a stain, catalyzed lacquer applied in two coats with hand sanding between coats, and sealed with a moisture resistant top coat.
  - 1. Color: Finish stain shall be "Cherry". Match architect's sample.
- F. Accessories:
  - 1. Hardware: SS Hook (2 per locker), SS Retractable Jersey Hook (1 per locker), (2) Port USB Outlet, SS Pulls and Continuous Hinges, SS Shoulder Pad Bracket, Perforated SS Insert and Magnetic Face with SS Finish.
  - 2. Grommets: Provide precut openings and finished grommets at locations indicated for shoe dryers. Shoe dryers shall be provided by the Owner. Coordinate with electrical drawings for exact outlet locations.
  - 3. Details: Refer to drawings for further locker details and dimensions. Refer to contract drawings for locker layout and filler panel locations.

**2.3 FABRICATION**

- A. Locker shall be fabricated using doweled and glued assembly process.
- B. Fabricate locker parts square, rigid and without warp, with the finished faces flat and free of scratches and chips.
- C. Machine attachment holes accurate and free of chips. Attach fasteners as standard with manufacturer.
- D. Fabricate corners and fillers as required for installation.

**PART 3 - PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Do not begin installation until adjacent substrates and finishes have been properly prepared.
- B. Verify prepared bases are in correct position and configuration.
- C. If preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

**3.2 PREPARATION**

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
- C. Verify adequacy of backing and support framing.

**3.3 INSTALLATION**

- A. Work in this section requires close coordination with Work specified in Division 16. Coordinate all Work to assure an orderly progress in the Project, without removal of previously installed Work, and so as to prevent damage to finishes and products.
- B. Install in accordance with manufacturer's instructions.
- C. Install, plumb, level, true and straight with no distortions. Shim as required, using concealed shims. Scribe tops as necessary for close and accurate fit.
- D. Secure lockers with anchor devices to suit substrate materials. Minimum Pullout Force: 100 lb.
- E. Install end panels, filler panels, tops and bases as indicated on the approved shop drawings. Where required, assemble units into one integral unit with joints flush, tight, and uniform. Align similar adjoining units to a tolerance of 1/16 inch.
- F. Install accessories as indicated and as recommended by manufacturer.
- G. Use concealed joint fasteners to align and secure adjoining cabinet units.
- H. Conceal screw heads to match locker finish

**3.4 ADJUSTING**

- A. Adjust moving or operating parts to function smoothly and correctly.

**3.5 CLEANING**

- A. Clean locker interiors and exterior surfaces.

**3.6 PROTECTION**

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 10 53 00 - WALKWAY COVERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. Related work specified elsewhere includes:
  - 1. Section 03 31 00 - "Concrete"
  - 2. Section 05 50 00 - "Metal Fabrications"
  - 3. Section 06 10 00 - "Rough Carpentry"
  - 4. Section 07 60 00 - "Flashing and Sheet Metal"
  - 5. Section 07 90 00 - "Joint Sealers"

**1.2 SUMMARY**

- A. This Section includes prefinished, preformed, aluminum, manufactured walkway assemblies and all related work, as indicated on the Drawings and including in part the following:
  - 1. Water-tight canopy system, including in part, extruded aluminum columns, support system, combination structural fascia/gutter system, with integral internal drainage, "Flat" roof deck, vertical closures between columns at canopy steps, related flashings and trim, accessories, and all related work.
  - 2. Standard or custom color, non-metallic baked enamel finish; color(s) selected by Architect after bidding; See "Metal Finishes" article below.
- B. Scope: The work in the Section includes all labor, materials, accessories, services and incidentals necessary for designing, supplying, installing and testing of the metal roofing, drainage, and systems described herein. Provide all flashing, fascia, caps, closures, trim, etc., which are associated with and/or come in contact with walkway canopy systems, in same metal and finish as roofing panels where exposed and where concealed, and make watertight junctions with work of other trades.
  - 1. Finish for concealed sides of all metal shall be manufacturer's standard color baked enamel, in color(s) selected by Architect after bidding; See "Metal Finishes" article below.

**1.3 SYSTEM PERFORMANCE REQUIREMENTS**

- A. Provide certified test results by a recognized testing laboratory or agency in accordance with specified test methods for each system, upon request.
- B. Water Penetration: Provide roof and similar wall panel systems with no water penetration as defined in the test method, when tested in accordance with ASTM E 331 at a static air pressure differential of not less than 6.24 psf and not more than 12.0 psf.
- C. Structural Performance: Manufacturer shall design and supply walkway canopies to withstand severe icing, heavy hail, and project site design wind loads required by applicable building codes and regulations.

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections.
- B. Product data including manufacturer's complete and current product specifications, standard details, certified product test results, installation instructions, and general recommendations, as applicable to materials and finishes for each component and for total walkway canopy system.

- C. Samples for Verification Purposes of Roof Panels, Vertical Panels and Trim, and Fascia/Gutter Sections.
  - 1. Provide sample panels 12-inches long by actual panel width, in the profile, style, color, and texture indicated. Include clips, battens, fasteners, closures, and other panel accessories.
- D. Shop Drawings showing layouts of structural support system and canopy system, roof and vertical panels, details of edge conditions, joints, corners, panel profiles, miscellaneous supports, anchorages, trim, flashings, closures, and special details. Distinguish between factory and field assembly work. The manufacturer's design Structural Engineer and technical engineering department shall approve the drawings before they are submitted.
  - 1. Shop Drawings shall be certified by manufacturer's Structural Engineer and bear his/her current, signed and dated Alabama registration seal.
- E. Qualification data for Professional Engineer, fabricator, and installer.

### 1.5 QUALITY ASSURANCE

- A. Wind Uplift: Provide roof and vertical panel systems including supports meeting requirements of Underwriters Laboratories, Inc. for Class 90 wind uplift resistance.
  - 1. Minimum Code Wind Load at Site: **120 mph minimum**, unless higher wind load is indicated on Structural Drawings or required by applicable Codes.
  - 2. Uniform pressure of **20 psf minimum**, acting upward or downward.
- B. Field Measurements: Where possible, prior to fabrication of walkway canopy system and panels, take field measurements of structure or substrates to receive panel system. Allow for trimming panel units where final dimensions cannot be established prior to fabrication.
- C. Refer to Division 1 Section "Special Conditions" for additional information and minimum experience requirements.

### 1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with manufacturer's current written instructions and recommendations.
- B. Deliver panels and other components so they will not be damaged or deformed. Package extruded components, vertical and roof panels for protection against transportation damage.
- C. Handling: Exercise care in unloading, storing, and erecting support system, panels, and other system components to prevent bending, warping, twisting, and surface damage.
- D. Stack materials on platforms or pallets, covered with tarpaulins or other suitable weathertight ventilated covering. Store metal panels so that they will not accumulate water. Do not store panels or other system components in contact with other materials that might cause staining, denting, or other surface damage.
- E. Deliver accessories, such as reglets, inserts, etc., which are to be installed by other trades and/or in conjunction with the work of other trades, far enough in advance so as not to delay the Work on the project.
- F. Refer to Division 1 Sections "Summary of Work" and "Special Conditions" for additional information and requirements regarding stored materials.

### 1.7 WARRANTIES

- A. Warranty: The manufacturer and installer shall jointly and severably, in writing, warrant that the walkway canopy system shall remain intact (without perceptible deformation) and completely leak free for a period of **10-years** from the date of acceptance of the project (this warranty need not cover damage from winds exceeding the velocities and/or loading required by the International Building Code as generated by a design velocity based on the 100-year probability wind speed).
  - 1. Paint Finish Warranty, "Kynar 500": **20 years** from date of Substantial Completion. Failures include, but are not limited to, cracking, deforming, fading, or otherwise deteriorating beyond

normal weathering, and as otherwise indicated. Fading is defined as loss of color, after cleaning with product recommended by manufacturer, of more than 4 color-difference units as measured according to ASTM D 2244, and as otherwise indicated.

2. Repairs that become necessary, such as for leaks, wind damage or temperature stress while sunshade system is under warranty, shall be performed by the installer or manufacturer within 7-days of notification. Should for any reason, the installer not be able to perform the repairs, it shall be incumbent upon the manufacturer to do so. If repairs are not begun on time, Owner shall have work done by others and costs will be charged to the Contractor, with no detrimental effect or cancellation of the warranty.
- B. This warranty shall be in addition to, shall be in effect simultaneously with, and shall not alter other required project or product warranties or guarantees, and shall not limit other remedies available to the Owner.

## 1.8 PROJECT CONDITIONS

- A. Weather: Proceed with walkway canopy system work when existing and forecasted weather conditions permit work to be performed in accordance with manufacturers' current written instructions, recommendations, and warranty requirements.
- B. Substrate Conditions: Do not begin roofing or vertical panel installation until substrates have been inspected and are determined to be in satisfactory condition.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following, equivalent in quality and design as "Basis of Design" canopy system, and as otherwise indicated:
1. American Walkway Covers, LLC
  2. Mapes Industries, Inc.
  3. Mason
  4. Mitchell Metals, LLC
  5. Peachtree Protective Covers, Inc.
  6. Polyvision Corporation
  7. Superior Metal Products Co.
  8. Tennessee Valley Metals, Inc. (*Basis of Design, and quality standard*)
  9. Texas Aluminum Industries, Inc.
- B. Product/Manufacturer: Subject to compliance with requirements, provide water-tight walkway canopy system and all related components equivalent to standard "20-lb Live Load Unit System", **increased as required for project site wind loads**, as manufactured by Tennessee Valley Metals, Inc.; Birmingham, Alabama; Phone: (205) 853-1125, by one of the above named manufacturers, or other pre-approved manufacturer - properly submitted at least ten (10) days prior to original bid date in accordance with requirements of Section 01015 - "Special Conditions," and subsequently accepted in writing or by addendum, and as follows:
1. Flat Pan Roof Deck Panels: Roll-formed aluminum, nominal 6-inches wide x approximately 3-inches high, with minimum thickness of 0.025-inch. All panels shall interlock together with no exposed fasteners. Finish shall be factory baked enamel, in non-metallic standard color(s) selected by Architect from manufacturer's standard full line of color selections, including in part, dark or medium bronze.
  2. Vertical Panels: Similar to traditional Flat-Pan roof deck panels, except 2-inches high.
  3. Fascia/Gutter: Extruded aluminum, at least 7-inches high x 4-inches wide. Minimum metal thickness of 0.094-inch. Finish shall be factory baked enamel, in non-metallic standard color(s) selected by Architect from manufacturer's standard full line of color selections, including in part, dark or medium bronze.

4. Columns: Extruded aluminum, at least 4-inches x 4-inches, with minimum metal thickness of 0.125-inch thick. Corners shall be rounded. Finish shall be factory baked enamel, in non-metallic standard color(s) selected by Architect from manufacturer's standard full line of color selections, including in part, dark or medium bronze.
5. Drainage: All drainage shall drain internally from the deck to the fascia/gutter to the columns, spouting out at ground level with a deflector plate. The hole for the deflector plate shall be cut in the column with the cut straight and neat. Prior to setting deflector plate, fill any internal voids of column with non-metallic non-shrink grout product acceptable to walkway canopy system manufacturer.
6. Flashings and Trim: Same metal and finish as roof deck, unless other metal thickness not less than 0.040-inch is permitted by walkway canopy manufacturer.
7. Sealants: As recommended in writing by walkway canopy manufacturer, or if not recommended by walkway canopy manufacturer, as specified in Section 07900 - "Joint Sealers."

## 2.2 MATERIALS

- A. Fasteners: All fasteners in the plane of the roof deck, wall panels and fascia/gutter shall be concealed wherever possible. No exposed fasteners which would penetrate the panels, flashings, etc., will be permitted. Penetrating type fasteners will be allowed only in the vertical plane (i.e. fastening of flashings, battens, trim, etc., and then only if neoprene washers are used externally). Materials used in all fasteners shall be non-magnetic (stainless steel). All exposed fasteners shall match adjacent material, finish and/or color. Length and diameter of screws shall be sufficient to meet design criteria.
- B. Closures: Precut closures as standard with walkway canopy manufacturer, fabricated from same metal as that receiving closure(s), or from gray cross-linked closed-cell polyethylene composition foam, to the exact profile of the members with which it is to function.
- C. Sealants: Non-skinning, non-hardening, non-oxidizing butyl sealant, designed for metal-to-metal concealed joints. Field applied adhesive tape sealants shall be extruded polymeric butyl tape, non-skinning. Use no exposed sealants. Comply with minimum installation requirements of sealant manufacturer and Section 07900 - "Joint Sealers."
- D. Bituminous Coating: Cold-Applied asphalt mastic, SSPC-12, compounded for 15-mil dry film thickness per coat, and approved for the intended use by both the mastic and roofing manufacturers.
- E. Aluminum Extrusions (minimum): Alloy and temper recommended by manufacturer for use intended and as required for proper application of finish indicated but not less than the strength and durability properties specified in ASTM B 221 for 6063-T6.
- F. Aluminum Sheet (minimum): Alloy and temper recommended by manufacturer for use intended and as required for proper application of finish indicated but with not less than the strength and durability properties specified in ASTM B 209 for 5005-H15.
- G. Non-Metallic Shrinkage-Resistant Grout:
  1. Pre-mixed, non-metallic, non-corrosive, non-staining product containing selected silica sands, portland cement, shrinkage compensating agents, plasticizing and water reducing agents, complying with CRD-621.
  2. Products offered by manufacturer to comply with requirements for non-metallic, non-shrink grout include the following:
    - a. Euco N.S.; Euclid Chemical Company
    - b. Crystex; L & M Construction Chemicals.
    - c. Masterflow 713; Master Builders.
    - d. Five Star Grout; U.S. Grout Corp.
    - e. Upcon; Upco Chemical Division, USM Corp.
    - f. Propak; Protex Industries, Inc.

### 2.3 METAL FINISHES

- A. General: Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes.
- B. Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.
- C. Finishes:
  - 1. High Performance Organic Coating: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: chemical conversion coating, acid chromate-fluoride-phosphate pretreatment; Organic Coating: as specified below); Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's instructions.
  - 2. Fluorocarbon Coating System - Fluoropolymer Coating: Manufacturer's standard **2-COAT** (i.e.: primer and color coat), and note that the finish system may be a traditional liquid or powder coat, complying with AAMA 2605; thermo-cured, full-strength 70 percent resin "Kynar 500" coating and 30 percent reflective gloss when tested in accordance with ASTM D 523; Dry film thickness of 1.6-mils, minimum. Provide 2-coat finish on underside of panels where exposed to view in the finished work, and manufacturer's standard primer and wash coating at concealed locations.
  - 3. Color and Gloss: As selected by Architect, from manufacturer's full line of standard non-metallic colors; 15 colors to select from minimum, to include white, silver (similar to clear anodized), and color(s) to match storefront framing or metal roofing.

### 2.4 FABRICATION

- A. General: Fabricate and finish panels, extrusions, and accessories at the factory, by manufacturer's standard procedures and processes, as required to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and dimensional requirements and with structural requirements.
- B. Apply bituminous coating or other permanent separation materials on concealed panel surfaces where panels would otherwise be in direct contact with substrate materials that are noncompatible or could result in corrosion or deterioration of either material or finishes.

## PART 3 - EXECUTION

### 3.1 GENERAL

- A. Installer shall examine all substrates and verify that they are acceptable, which will be acknowledged and accepted by his beginning work. Installer shall verify that all expansion joints, blocking, etc., are securely anchored into place, and that substrate is clean and free of all debris or other substance detrimental to the walkway canopy system work.
  - 1. Notify the Contractor in writing of conditions requiring corrections, for proper completion of the Work. Do not proceed until unsatisfactory conditions have been satisfactorily completed.
- B. The use of square head nails, staples, and pneumatic or electric nail guns are strictly prohibited.

### 3.2 PANEL SUPPORTS AND ANCHORAGE

- A. All volume, fascia/gutter, and other secondary structural panel support members and anchorage shall be installed in strict accordance with manufacturer's current written instructions and recommendations, and their Structural Engineer's Shop Drawings.

### 3.3 INSTALLATION

- A. General: Comply with manufacturer's current written instructions and recommendations for installation, as applicable to project conditions and supporting substrates. Anchor panels and other components of the work securely in place, with provisions for thermal and structural movement.
  - 1. Field cutting of panels and any other component by torch is not permitted.
- B. Accessories: Install all components required for a complete walkway canopy, roof and vertical panel system, including in part, trim, copings, fascia/gutters, soffits, stops, mullions, corner units, closures, clips, seam covers, battens, flashings, sealants, gaskets, fillers, closure strips, and similar items.
  - 1. Install water-tight flashing and counterflashings at all locations where canopy system abuts buildings.
- C. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of walkway canopy panel systems and accessories. Provide types of gaskets, sealants, and fillers indicated or, if not otherwise indicated, types recommended by walkway canopy manufacturer.
  - 1. Flash and seal panels to exclude weather.
  - 2. Counter flash over otherwise exposed flashings with metal and finish to match adjacent metal.
  - 3. Refer to other sections of these specifications for product and installation requirements applicable to indicated joint sealers.
- D. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4-inch in 20'-0" on level/plumb/slope and location/line as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

### 3.4 CLEANING AND PROTECTION

- A. Damaged Units: Replace panels and other components of the work that have been damaged or have deteriorated beyond successful repair by means of finish touch-up or similar minor repair procedures, as determined solely by the Architect.
- B. Cleaning: Remove temporary protective coverings and strippable films as soon as each panel is installed. Upon completion of panel installation, clean finished surfaces as recommended in writing by walkway canopy system manufacturer, and maintain in a clean condition during construction.

END OF SECTION

**SECTION 11 13 13 - LOADING DOCK BUMPERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes loading dock bumpers.
- B. Related Requirements:
  - 1. Section 11 13 19 "Stationary Loading Dock Equipment" for loading dock bumpers that are integral with dock levelers.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of loading dock bumper.
- B. Shop Drawings: For dock bumpers. Include plans, elevations, sections, and attachment details.

**PART 2 - PRODUCTS****2.1 LOADING DOCK BUMPERS**

- A. General: Surface-mounted bumpers; of type, size, and construction indicated; designed to absorb kinetic energy and minimize damage to loading dock structure.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Beacon Industries, Inc.
    - b. Chalfant Dock Equipment.
    - c. Kelley; 4Front Engineered Solutions, Inc.
    - d. Pioneer Dock Equipment.
    - e. Rite-Hite Holding Corporation.
    - f. Rotary Products Inc.
    - g. Serco; Entrematic.
    - h. Super Seal Mfg. Ltd.
    - i. Vestil Manufacturing Corp.
  - 2. Source Limitations: Obtain from single source from single manufacturer.
- B. Laminated-Tread Loading Dock Bumper: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch-diameter, steel supporting rods that are welded at one end to 1/4-inch-thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch of tread plies extending beyond the face of closure angles.
  - 1. Thickness: 6 inches.
  - 2. Horizontal Style: 12 inches high by length indicated on Drawings.
- C. Anchorage Devices: Galvanized-steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten bumpers securely in place and to suit installation type indicated. Hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329/F 2329M.
- D. Materials: ASTM A 36/A 36M for steel plates, shapes, and bars. Hot-dip galvanize according to ASTM A 123/A 123M.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION, GENERAL**

- A. Loading Dock Bumpers: Attach loading dock bumpers to face of loading dock in a manner that complies with requirements indicated for spacing, arrangement, and position relative to top of platform and anchorage.
  - 1. Welded Attachment: Plug-weld anchor holes in contact with steel inserts and fillet weld at other locations.
  - 2. Bolted Attachment: Attach dock bumpers to preset anchor bolts embedded in concrete or to cast-in-place inserts or threaded studs welded to embedded-steel plates or angles. If preset anchor bolts, cast-in-place inserts, or threaded studs welded to embedded-steel plates or angles are not provided, attach dock bumpers by drilling and anchoring with expansion anchors and bolts.
  - 3. Screw Attachment: Attach dock bumpers to wood construction with lag bolts as indicated.

**3.3 ADJUSTING**

- A. After completing installation of exposed, factory-finished dock bumpers, inspect exposed finishes and repair damaged finishes.

END OF SECTION

**SECTION 11 13 16 - LOADING DOCK SEALS AND SHELTERS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Frame-type loading dock shelters.

**1.2 COORDINATION**

- A. Coordinate sizes and configurations of dock seals with finish grade slopes, walls, dock configuration, doors, dock bumpers, and other adjacent construction.
- B. Coordinate sizes, configurations, and mounting of transparent-strip door curtains with walls, doors, dock levelers, and other adjacent construction.
- C. Electrical System Roughing-in: Coordinate layout and installation of motor/blower and activation switch with connections to power supplies and interlock to other dock equipment.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  - 2. Include electrical characteristics of inflatable blower motor.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Detail assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, and location and size of anchors and field connection.
  - 3. Include diagrams for power, signal, and control wiring of inflatable blower motor.
- C. Samples: For each exposed product and for each color and texture specified.

**1.4 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of dock openings and contiguous construction by field measurements before fabrication.

**PART 2 - PRODUCTS****2.1 FRAME-TYPE LOADING DOCK SHELTERS**

- A. General: Dock shelters designed to form a seal with sides and top of truck body while leaving entire width and height of truck's rear opening unobstructed; of type, size, and construction indicated.
  - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Beacon Industries, Inc.
    - b. Chalfant Dock Equipment.
    - c. Kelley; Entrematic.
    - d. Pioneer Dock Equipment.
    - e. Rite-Hite Holding Corporation.

- f. Rotary Products Inc.
  - g. Serco; Entrametic.
  - h. Super Seal Mfg. Ltd.
  - i. Vestil Manufacturing Corp.
2. Source Limitations: Obtain from single source from single manufacturer.
- B. Rigid-Frame Type: Fabricated from fabric-covered side and top panels attached to fixed supporting framework. Provide head and side curtains with built-in flexible stays, wind straps between head curtain and side frame, pleated protectors, reinforcing, and guide strips. Slope head frame from center for drainage. Provide replaceable, fabric-covered, tapered, foam-bottom pads and protective steel bumpers of size and type required for application shown.
- C. Construction: Fabricate framework, pads, bumpers, fabric for curtains and panels, and other components to sizes and shapes indicated or required to fit door-opening sizes shown, and allow for not less than 18 inches of truck-body penetration when truck is docked.
- 1. Steel Framework: Zinc-plated steel tubing of size and thickness standard with manufacturer, with joints welded.
  - 2. Top and Side Panels: White, translucent vinyl, weighing 14 oz./sq. ft..
  - 3. Tapered Side Panels: Taper side panels to angle required to accommodate sloped loading dock approach grades, and make sealing edge of dock shelter parallel to back edge of truck. Taper for approach indicated on Drawings.
  - 4. Guide Strips: 4-inch-wide, coated, nylon guide strips on side curtains.
  - 5. Pleated Protectors: On head curtain of overlapping layers of coated fabric attached to base fabric.
  - 6. Reinforcing: Manufacturer's standard reinforcing over cover fabric on side curtains [and top cover ]of dock shelter.
- D. Fabric:
- 1. Vinyl-Coated Nylon Cover Fabric: Minimum total weight of 40 oz./sq. yd..
    - a. Color: As selected by Architect from manufacturer's full range.
  - 2. Pleated Protectors: Same fabric as cover.
- E. Accessories:
- 1. Buffer flaps.
  - 2. Bottom filler curtain.
  - 3. Bottom seal pads.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION, GENERAL**

- A. Coordinate electrical connections with Division 26 Sections.

#### **3.3 INSTALLATION OF FRAME-TYPE LOADING DOCK SHELTERS**

- A. Attach dock shelters securely to building structure in proper relation to openings, dock bumpers, and dock levelers to ensure an effective seal of dock-shelter curtains with sides and top of truck body when trucks are positioned against dock bumpers.

**3.4 ADJUSTING**

- A. After completing installation, inspect exposed factory finishes and repair damaged finishes.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 11 13 19 - STATIONARY LOADING DOCK EQUIPMENT****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Recessed loading dock levelers.
  - 2. Truck restraints.
  - 3. Light communication systems.
- B. Related Requirements:
  - 1. Section 05 50 00 "Metal Fabrications" for curb angles at edges of recessed pits and loading dock platform edge channels.
  - 2. Section 08 33 23 "Overhead Coiling Doors" for coiling overhead doors electrically interlocked to dock levelers.
  - 3. Section 11 13 13 "Loading Dock Bumpers" for loading dock bumpers that are not integral with loading dock levelers.
  - 4. Section 11 13 16 "Loading Dock Seals and Shelters" for loading dock seals and shelters.

**1.2 DEFINITIONS**

- A. Operating Range: Maximum amount of travel above and below the loading dock level.
- B. Working Range: Recommended amount of travel above and below the loading dock level for which loading and unloading operations can take place.

**1.3 COORDINATION**

- A. Coordinate size and location of loading dock equipment indicated to be attached to or recessed into concrete or masonry, and furnish anchoring devices with templates, diagrams, and instructions for their installation
- B. Coordinate installation of cast-in-place items. Furnish setting drawings and templates.
- C. Electrical System Roughing-in: Coordinate layout and installation of loading dock equipment with connections to power supplies and interlocked equipment.

**1.4 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
  - 2. Review sequence of operation for each type of loading dock equipment.
  - 3. Review coordination of interlocked equipment specified in this Section and elsewhere.
  - 4. Review required testing, inspecting, and certifying procedures.

**1.5 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for stationary loading dock equipment.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

- B. Shop Drawings: For stationary loading dock equipment.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of anchors and each field connection.
  - 3. Include diagrams for power, signal, and control wiring.

## 1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.
- C. Product Test Reports: For each dock leveler, for tests performed by manufacturer and witnessed by a qualified testing agency.
  - 1. Indicate compliance of dock levelers with requirements in MH 30.1 for determining rated capacity based on comprehensive testing within last two years of current products.
  - 2. Submittal Form: According to MH 30.1.
- D. Sample Warranty: For manufacturer's special warranty.

## 1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For stationary loading dock equipment to include in operation and maintenance manuals.

## 1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
  - 1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

## 1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of construction contiguous with stationary loading dock equipment, including recessed pit dimensions slopes of driveways and heights of loading docks, by field measurements before fabrication.

## 1.10 WARRANTY

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace dock levelers that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures including cracked or broken structural support members, load-bearing welds, and front and rear hinges.
    - b. Faulty operation of operators, control system, or hardware.
    - c. Deck plate failures including cracked plate or permanent deformation in excess of 1/4 inch between deck supports.
    - d. Hydraulic system failures including failure of hydraulic seals and cylinders.
  - 2. Warranty Period for Structural Assembly: 10 years from date of Substantial Completion.
  - 3. Warranty Period for Hydraulic System: Five years from date of Substantial Completion.

4. Warranty shall be for unlimited usage of leveler for the specified rated capacity over the term of the warranty.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.2 RECESSED LOADING DOCK LEVELERS

- A. General: Recessed, hinged-lip-type dock levelers designed for permanent installation in concrete pits preformed in the edge of loading platform; of type, function, operation, capacity, size, and construction indicated; and complete with controls, safety devices, and accessories required.
  1. Basis-of-Design Product: Subject to compliance with requirements, provide 4Front Engineered Solutions - KELLEY; HK Series Hydraulic Dock Leveler or comparable product by one of the following:
    - a. Beacon Industries, Inc.
    - b. Dock Equipment.
    - c. Pioneer Dock Equipment.
    - d. Rite-Hite Corporation.
    - e. Rotary Products Inc.
    - f. Serco; Entrematic.
    - g. Super Seal Mfg. Ltd.
    - h. Vestil Manufacturing Company.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Standard: Comply with MH 30.1, except for structural testing to establish rated capacity.
- D. Rated Capacity: Capable of supporting total gross load of 80,000 lb without permanent deflection or distortion.
- E. Platform: Not less than 3/8- inch-thick, nonskid steel plate.
  1. Platform Width: As indicated on Drawings.
  2. Platform Length: As indicated on Drawings.
  3. Frame: Manufacturer's standard.
  4. Toe Guards: Equip open sides of dock leveler over range indicated with steel toe guards.
    - a. Toe-Guard Range: Entire upper operating range.
- F. Hinged Lip: Not less than 3/4- inch-thick, nonskid steel plate.
  1. Hinge: Full-width, piano-type hinge with heavy-wall hinge tube and grease fittings, with gussets on lip and ramp for support.
  2. Safety Barrier Lip: Designed to protect material-handling equipment from an accidental fall from loading platform edge of the dock leveler when the leveler is not in use.
- G. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.
  1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:
    - a. Above Adjoining Platform: 18 inches.
    - b. Below Adjoining Platform: 14 inches.
  2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.

3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 4 inches over width of ramp.
  4. Lip Operation: Manufacturer's standard mechanism, which automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck and automatically retracts lip when truck departs.
    - a. Length of Lip Extension: Not less than 12 inches 20 inches measured from ramp edge.
  5. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs.
  6. Interlock: Leveler does not operate while truck restraint is not engaged.
- H. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Include means for lowering ramp below platform level with lip retracted behind dock bumpers. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 3 inches.
1. Remote-Control Station with Emergency Stop: Weatherproof multi-button control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, Type 4 box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. Ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.
    - a. Master Panel: Control panel with integral fused disconnecting means for operating dock leveler, dock door, and truck restraints.
  2. Independent Lip Operation: Electric-powered hydraulic raising and hydraulic lowering of lip, controlled independent of raising and lowering of ramp.
- I. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- or formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.
1. Cross-Traffic Support: Manufacturer's standard method of supporting ramp at platform level in stored position with lip retracted. Provide a means to release supports to allow ramp to descend below platform level.
  2. Maintenance Strut: Integral strut to positively support ramp in up position during maintenance of dock leveler.
- J. Integral Laminated-Tread Dock Bumpers: Fabricated from 6- inch-thick, multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 3/4-inch-diameter, steel supporting rods that are welded at one end to 1/4-inch-thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 1 inch of tread plies extending beyond the face of closure angles.
- K. Materials:
1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
  2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55.
  3. Steel Tubing: ASTM A 500/A 500M, cold formed.
  4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

- L. Dock-Leveler Finish: Manufacturer's standard finish.
  - 1. Toe Guards: Paint toe guards to comply with ANSI Z535.1.
- M. Accessories:
  - 1. Curb Angles: 3-by-3-by-1/4-inch galvanized-steel curb angles for edge of recessed leveler pit, with 1/2-inch-diameter by 6-inch-long concrete anchors welded to angle at 6 inches o.c.
  - 2. Self-Forming Pan: Manufacturer's standard prefabricated, self-forming steel form system for poured-in-place construction of concrete pit.
  - 3. Night Locks: Manufacturer's standard means to prevent extending lip and lowering ramp when overhead doors are locked.
  - 4. Side and rear weatherseals.
  - 5. Foam insulation under dock-leveler platform.
  - 6. Abrasive skid-resistant surface.

### 2.3 TRUCK RESTRAINTS

- A. General: Manufacturer's standard device designed to engage truck's rear-impact guard and hold truck at loading dock. Restraint shall consist of an iron or steel restraining arm that raises until contacting rear-impact guard. Arm shall move vertically, automatically adjusting to varying height of truck due to loading and unloading operations.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide 4Front Engineered Solutions – KELLEY; Star 4 Vehicle Restraint System with Integrated Trailer Restraint Controls or comparable product by one of the following:
    - a. Beacon Industries, Inc.
    - b. Chalfant Sewing Fabricators, Inc.
    - c. Pioneer Dock Equipment.
    - d. Rite-Hite Corporation.
    - e. Rotary Products Inc.
    - f. Serco; Entrematic.
    - g. Super Seal Mfg, Ltd.
    - h. Vestil Manufacturing Company.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Standard: Comply with MH 30.3.
- D. Rated Capacity: Capable of supporting total gross load of 32,000 lb without permanent deflection or distortion.
- E. Operating Range: Capable of restraining rear-impact guards within a range from:
  - 1. Vertical Range: Minimum of 30 inches above driveway.
  - 2. Horizontal Range: 12 inches in front of dock bumpers.
- F. Power Operating System: Manufacturer's standard electromechanical or hydraulic unit.
  - 1. Remote-Control Station: Single-button station of the constant-pressure type, enclosed in NEMA ICS 6, Type 12 box. Restraint is engaged by depressing and holding button; restraint is released by releasing button.
  - 2. Interlock: Leveler does not operate while truck restraint is not engaged.
- G. Mechanical Operating System: Restraint operates by use of a lifting rod or hook to raise engagement device.
- H. Rear-Impact-Guard Sensor: Detects presence of rear-impact guard and automatically returns to stored position if rear-impact guard is not engaged.

- I. Caution Signs: Exterior, surface mounted; designed to inform both dock attendant and truck driver; with sign copy as follows. Provide one sign at each truck-restraint location.
  - 1. Sign Copy in Forward and Reverse Text: Manufacturer's standard text permitting truck movement with green light.
  - 2. Interior Sign Copy: Manufacturer's standard text permitting truck movement with green light.
- J. Light Communication System: Red and green illuminated signal-light sets, with lens approximately 4 inches in diameter, designed to indicate status to both dock attendant and truck driver. Equip system with steel control panel located at interior of dock that includes illuminated lights indicating status of exterior signal lights. Provide signal-light set and control panel at each location indicated for light communication system. Enclose exterior signal-light sets in steel or plastic housing with sunshade.
  - 1. Automatic Operation: System is activated automatically when device engages rear-impact guard. Provide on-off switch located on truck-restraint control panel.
  - 2. Mounting: Wall.
- K. Alarm: Audible system indicating that rear-impact guard is not engaged, with manual reset.
- L. Materials:
  - 1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
  - 2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55.
  - 3. Steel Tubing: ASTM A 500/A 500M, cold formed.
  - 4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- M. Truck-Restraint Finish: Manufacturer's standard finish.
- N. Accessories: Interlock to dock leveler and key switch.

## 2.4 LIGHT COMMUNICATION SYSTEMS

- A. General: Communication system consisting of signal-light sets, caution signs, alarms, and controls for each location indicated.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Kelley; 4Front Engineered Solutions, Inc. or comparable product by one of the following:
    - a. Beacon Industries, Inc.
    - b. Nordock Inc.
    - c. Rite-Hite Corporation.
    - d. Serco; 4Front Engineered Solutions, Inc.
    - e. Vestil Manufacturing Company.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Caution Signs: Surface mounted; designed to inform both dock attendant and truck driver; with sign copy as follows:
  - 1. Exterior Sign Copy in Forward and Reverse Text: [Manufacturer's standard text permitting truck movement with green light] <Insert text>.
  - 2. Interior Sign Copy: Manufacturer's standard text permitting truck movement with green light.
  - 3. Mounting: Wall

- D. Signal-Light Sets: Red and green illuminated signal-light sets, with lens approximately 4 inches in diameter, designed to indicate status to both dock attendant and truck driver. Equip system with steel control panel that includes illuminated lights indicating status of exterior signal lights; locate control panel at interior of dock. Provide signal-light set and control panel at each location indicated for light communication system. Enclose signal lights in steel or plastic housing, with exterior signal-light sets equipped with sunshade.
1. Manual Operation: Lights are activated by push button or switch located on interior signal-light enclosure.
  2. Automatic Operation: Lights are activated automatically by limit switch mounted on overhead door track. Provide on-off switch located on control panel.
  3. Mounting: Wall
- E. Materials:
1. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
  2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 55.
  3. Steel Tubing: ASTM A 500/A 500M, cold formed.
  4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

## 2.5 FINISH REQUIREMENTS

- A. Finish loading dock equipment after assembly and testing.
- B. Hot-Dip Galvanizing: Comply with the following:
1. ASTM A 123/A 123M for iron and steel loading dock equipment.
  2. ASTM A 153/A 153M or ASTM F 2329/F 2329M for iron and steel hardware for loading dock equipment.
- C. Baked-on Factory Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
1. Color: Manufacturer's standard.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for electrical systems for loading dock equipment to verify actual locations of connections before equipment installation.
- C. Examine walls and floors of pits for suitable conditions where recessed loading dock equipment is to be installed. Pits shall be plumb and square and properly sloped for drainage from back to front of loading dock.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Coordinate size and location of loading dock equipment indicated to be attached to or recessed into concrete or masonry, and furnish anchoring devices with templates, diagrams, and instructions for their installation.
- B. Set curb angles in concrete edges of dock-leveler recessed pits with tops flush with loading platform. Fit exposed connections together to form hairline joints.

- C. Place self-forming pan system for recessed dock levelers in proper relation to loading platform before pouring concrete.
- D. Clean recessed pits of debris.

### **3.3 INSTALLATION, GENERAL**

- A. Install loading dock equipment as required for a complete installation.
  - 1. Rough-in electrical connections.

### **3.4 INSTALLATION OF RECESSED LOADING DOCK LEVELERS**

- A. Attach dock levelers securely to loading dock platform, flush with adjacent loading dock surfaces and square to recessed pit.

### **3.5 INSTALLATION OF TRUCK RESTRAINTS**

- A. Attach truck restraints in a manner that complies with requirements for arrangement and height required for device to engage vehicle rear-impact guard. Interconnect control panel and signals with dock leveler.
  - 1. Driveway-Mounted Units: Anchor truck restraints to driveway with expansion anchors and bolts.

### **3.6 ADJUSTING**

- A. Adjust loading dock equipment to function smoothly and safely, and lubricate as recommended by manufacturer.
- B. Test dock levelers for vertical travel and adjust to maintain operating range indicated.
- C. After completing installation of exposed, factory-finished loading dock equipment, inspect exposed finishes and repair damaged finishes.

### **3.7 MAINTENANCE SERVICE**

- A. Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of loading dock equipment Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper loading dock equipment operation at rated speed and capacity. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

### **3.8 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain loading dock equipment.

END OF SECTION

**SECTION 11 23 00 - COMMERCIAL LAUNDRY EQUIPMENT****PART 1 - GENERAL****1.1 DESCRIPTIONS****A. Definitions**

1. The extent of the Laundry Equipment is shown on the drawings, equipment schedule, and specification of this Section of Contract Documents.
  - a. This typed Specification will be closely correlated with the Drawings and Schedule. Each complements the other and cross reference will be necessary to fulfill the requirements of the Specifications,
  - b. All information shown on Drawings and listed in schedules shall be incorporated as part of the written Specifications.
2. The plans indicate the location of the equipment, and slight changes due to the varying dimensions of equipment and wall construction will be permitted with approval by the Architect.
  - a. Conflict in plans and specifications where changes, alterations, additions, or deductions are necessary, or where exceptions are taken with regard to sizes, locations, and other details shown on plans, shall be reported for decision by the Architect.
3. The Laundry Equipment Contractor shall be responsible in seeing that the equipment can be entered through openings before doors and walls are finished.

**B. Interface**

1. The Building Contractor shall furnish all water lines and other necessary work as specified in Mechanical Sections, including final connections to equipment.
2. The Building Contractor shall furnish all electrical supply lines and other work as specified in Electrical Sections, as well as making final connections to equipment.
3. The Building Contractor shall furnish all ducts to exhaust fan as specified in (HVAC) Mechanical Sections, including those specified in this section of Specifications.
4. The Building Contractor shall furnish all faucets, special switches, valves, traps, labor and materials to make final connection to equipment, as so specified in other sections of the Architect's Contract Specifications, unless specifically specified herein this section.

**C. Performance**

1. At the start of operation of equipment, the LEC is to devote one full working day, showing personnel the operation and adjusting of equipment supplied.
2. The LEC is to supply the Architect with an affidavit, signed by Owner(s) and Laundry Manager, that this service was rendered and performed.

**1.2 QUALITY ASSURANCE****A. Permits and Certificates:**

1. All laws, codes, ordinances and regulations relating to the conduct of the work as drawn and specified shall be complied with by the Laundry Equipment Contractor and they shall give all notices required.

2. Any work upon which an inspection certificate by local authorities, and/or any governing body is required, such inspection certificate or certificates shall be obtained and paid by Owners.
- B. Certificates of acceptance or of completion as required and issued by the State, Municipal, or other authorities shall be procured and delivered to the Owner; and the Owner may withhold payments which are due, or which may become until the necessary certificates are procured and delivered to him.
- C. Safety devices are required to comply with the aforementioned regulations shall be furnished, regardless of whether or not specifically specified or called for in the following technical divisions of the equipment list schedule.
- D. Where applicable electrical equipment shall conform to the standards of the National Electrical Manufacturers' Association,
  1. This equipment shall have conveniently located control switches, enclosed case type, and shall comply with State of Alabama Electric Codes and bear the UL or approved Electrical Testing Laboratory (ETL) label.
- E. Electrically heated and motor driven fixtures shall be for the current shown in the Mechanical and Electrical plans, and these items of equipment shall have mounted motor starters, switches and controls.
  1. All the above shall be required for each fixture or complete section of a fixture, or as specified.
- F. Gas burning equipment shall be designed for operation with the type of gas supplied and shall be approved by the American Gas Association.
  1. The label or listing of the American Gas Association will be accepted as conforming to this requirement.
  2. Installation of equipment shall conform to the standards as set forth by the American Gas Association.
  3. All gas equipment shall be furnished with electronic ignition or with a safety pilot and one hundred percent safety cut-off protection where required.
- G. The Laundry Equipment Contractor shall be held responsible and liable for any and all changes or variances from Contract Documents, i.e. Plans, Specs, Addendums, without written authorization from Architect for said changes or variances.

### 1.3 REFERENCES

- A. The drawings indicate the desired basic arrangement and dimensions of the equipment
- B. Minor deviations may be substituted for approval provided basic requirements are met and no major rearrangement of services to the equipment is required to affect the proposed alteration.
  1. Such deviations shall be made without expense to the Owners.
  2. Should there be any questions, Architects shall be contacted for written instructions.
- C. The Laundry Equipment Contractor shall be responsible for the satisfactory operation of the assembled equipment.
  1. Tests of the installed equipment shall be required.
    - a. Defects or deficiencies noted as a result of tests shall be corrected at the expense of the LEC.
- D. LEC is to consult the mechanical and electrical drawings and their accompanying specifications to determine additional requirements of the work and shall cooperate with all trades to insure a completely satisfactory installation.
  1. Verify all electrical requirements form electrical plans and specifications.

**1.4 SUBMITTALS**

- A. Refer to Division 01 requirements for Submittals
- B. LEC shall verify all field measurements on the job site to insure proper fitting of all equipment. Within four (4) weeks after award of contract,
- C. LEC is to electronically submit PDF format to the Architect, for tentative approval, all dimensioned rough-in drawings, equipment submittal brochures, fabrication and manufacturer's shop drawings.
  - 1. Partial submittals will not be accepted and will be stamped Revise / Resubmit. Reproduction of original contract documents are not acceptable for use as submittal.
- D. After initial review of submittal data, revise and resubmit only the data sheet, coversheets or rough-in and shop drawings that have been modified or revised.
  - 1. The entire submittal is not required for a resubmission.
- E. After two resubmissions, the LEC may be charged a fee for Camacho's continuous re-evaluation.
  - 1. This will be billed as an additional service.
- F. Field Measurements:
  - 1. Measurements required to size and place Laundry Equipment are to be verified with onsite field dimensions.
    - a. Do not rely on or measure drawings for actual on-site dimensions.
    - b. Dimensions shall be taken from the actual structure, giving due consideration to any architectural, structural or mechanical discrepancies that may occur during construction of building.
    - c. Field dimensions shall be taken at the earliest opportunity so as not to delay deliveries.
    - d. Notify Laundry Equipment Consultant of the earliest date and time.
    - e. The LEC shall be responsible for proper fit of all equipment furnished under this section of the contract.
      - 1) Gaps over ¼" wide are not acceptable.
- G. Rough-In Drawings:
  - 1. Prepare and submit, rough-in drawings showing all utility rough-ins for kitchen equipment items including items listed as "Future, Existing-Relocate, and/or Owner Furnished" (min. scale of 1/4"=1'-0").
  - 2. Drawings to indicate size and location of all utilities, floor depressions, raised bases and wall openings for equipment.
  - 3. The item numbers shown on the rough-in drawings shall be the same as shown on contract documents.
  - 4. Drawings shall be dimensioned to the stub up or stub out, not to the connection on the equipment.
    - a. The LEC shall be responsible for conforming to these conditions with equipment and connections; in the event rough-in has been completed before award of contract,
    - b. The LEC shall thoroughly investigate, and field verify the provided rough-in locations and provide equipment to suit building conditions.
  - 5. The LEC to provide equipment floor plan with itemized equipment, to include all utility loads.
  - 6. Electrical rough-in plans are to be dimensioned to indicate above finished floor (AFF) height.

- a. Verify all NEMA plug types, length of cords, equipment connections lengths. Length is to be of adequate distance for outlets available and to allow equipment to be placed as shown on contract documents.
  - 1) 90° plug heads are recommended where available.
- b. Show convenience receptacle locations on the MEP plans & Elevations.
7. Plumbing rough-in plans are to be dimensioned to indicate above finished floor (AFF) height.
8. Ventilation rough-in plans are to be dimensioned and indicate above finished floor (AFF) height.
9. Special conditions plan indicating dimensions and locations of:
  - a. Mechanical plan, not special conditions.
  - b. Raised pads.
  - c. Wall openings for pass through equipment.
  - d. Floor drains.
  - e. Electrical plan, not special conditions.
  - f. Wall backing.
  - g. Recessed or wall mounted control panels.
10. Provide a refrigeration system schematic piping plan indicating line size, elevation, trap locations and all specified components required for the refrigeration system installation.
  - a. The plan is to include equipment and parts provided by the Refrigeration Equipment Manufacturer.
  - b. Verify refrigeration sizing is proper for line lengths determined by actual field conditions.
11. Equipment Cut Sheets:
12. The following instructions for Rough-In and Equipment submittal are in addition to any requirements given elsewhere in the Documents.
  - a. Prepare and submit equipment cutsheets showing all manufacturer's data sheets describing equipment as specified. Include items listed as "Future, Existing-Relocate, and/or Owner Furnished".
    - 1) The item numbers shown on the submittal shall be the same as shown on contract documents.
  - b. The equipment cut sheets are to be provided using Auto Quotes format or similar including coversheets for each item.
  - c. Where a piece of equipment is used and specified with multiple item numbers assigned, the first item is to be provided with a cover sheet and data sheet.
    - 1) For additional identical items provide cover sheets only.
  - d. Provide the following information on the coversheets:
    - 1) Project name.
    - 2) LEC name.
    - 3) Consultant name.
    - 4) Item Number.
    - 5) Equipment description.
    - 6) Quantity.
    - 7) Written Specification / Description of equipment provided.
    - 8) Accessories.
    - 9) Utilities.

H. LEED Submittals:

1. Provide product cutsheets noting ENERGY STAR rating for ENERGY STAR eligible equipment.
- I. Shop Drawings
  1. Shop drawings shall be provided on similar size drawing sheets as contract documents.
    - a. All shop drawings shall be detailed and fully dimensioned to a minimum scale of  $3/4" = 1'-0"$ .
    - b. Elevations and sections to be detailed to a minimum scale of  $1-1/2" = 1'-0"$ .
  2. Show all materials, gauges and methods of construction, including relation to adjoining and related work when cutting or close fitting is required.
  3. Show all reinforcements, wall plates and backing, anchorage, other work required for a complete installation of fixtures.
  4. Drawings to show item number and quantity required for each detail.
  5. Show adjacent walls, columns, and identify countertop equipment showing item numbers and description.
  6. Show all components that are included in fabricated equipment.
  7. For equipment with load centers (panels), indicate total electrical calculations including circuits.
    - a. Provide electrical diagram for onsite electrician.
  8. Provide color, pattern or finishes for laminated, fiberglass, paint, or stain for approval by the Architect/Owner.
  9. Omissions and discrepancies on approved drawings shall not relieve the LEC of providing items as specified and shown on contract drawings

### **1.5 DELIVERY, STORAGE AND HANDLING**

- A. All equipment herein specified shall be delivered to the job site, uncrated, assembled and set in proper area; ready for final connections, where required, as specified in Sections 23 00 00 and 26 00 00 of Contract Documents.
- B. Protect metal finishes from damage during shipping storage, handling, installation and construction of other work in the same spaces.
  1. Wrap and crate each item of equipment as needed for protection from damage.

### **1.6 SEQUENCE/SCHEDULING**

- A. Schedules And Reports:
  1. Establish earliest and latest job site delivery dates of Owner furnished and Contractor installed items.

### **1.7 WARRANTY**

- A. Workmanship And Guarantees:
  1. All material as specified shall be new, of the best quality, perfect, and without flaw. Equipment shall be delivered in an undamaged condition upon completion. All workmanship and labor shall be of the best in their respective field and skilled mechanics of the trades involved.
  2. All equipment as specified herein this Section shall be guaranteed for a period of one year from the time of Substantial Completion.

- a. If at any time within this warranty period of one year any items of equipment that is found to be faulty due to poor workmanship, or inferior, and/or defective materials, replace said pieces or correct each defective part at no cost to Owner.

## 1.8 SUBSTITUTIONS

- A. Substitution of materials and equipment:
  1. Whenever a material, article, or piece of equipment is identified on the Drawings or in the Specifications by reference to manufacturers' or vendors' names, trade names, catalog numbers, or the like, it is so identified for the purpose of establishing a standard. and any material, article, or piece of equipment of other manufacturers or vendors which will perform adequately the applications required by the general design will be considered equally acceptable, provided, in the opinion of the Architects, it is of comparable substance, appearance and function.
  2. The substituted equipment shall not be purchased or installed without the proper written approval.
    - a. All substitutes shall be submitted for approval at least 10 days before Bid Date.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Refer to the Laundry Equipment Plan for the location of equipment:

**ITEM # ELL-1                      LAUNDRY SINK W/FAUCET**  
**Quantity:                        One (1)**  
**Manufacturer:                  Mustee**  
**Model:                             19CF**

- a. Model 19CF Furnish and install as shown on plans, UTILATUB® Laundry/Utility Tub model 19CF, as manufactured by E.L. Mustee & Sons, Inc. Tub shall be one-piece molded construction using structural thermoplastics with matched metal molds under extreme heat and pressure. Tub to include integrally molded drain assembly for connection to standard 1-1/2" P or S-trap, stopper and wall mounting hardware or heavy gauge steel legs with built-in levelers. 18-gallon capacity tub, 13" deep. Shall meet ANSI Specification Z 124-2011. Color: White.
- b. PROVIDE WITH FAUCET - MODEL NO. 93.600

**ITEM # ELL-2                      EYE WASH, PEDESTAL MOUNTED**  
**Quantity:                        One (1)**  
**Manufacturer:                  GUARDIAN**  
**Model:                             G1825BC**

- a. Model G1825BC Free standing, pedestal mounted eyewash. The unit has stainless steel cover to protect bowl from dust, dirt and other contaminants. Two GS-Plus spray-type spray heads deliver a flood of water for rinsing eyes. Two GS-Plus spray heads. Each head has an internal flow control and filter to remove impurities from the water flow.

**ITEM # ELL-3                      75 LB TUMBER DRYER**  
**Quantity:                        One (1)**  
**Manufacturer:                  Unimac**  
**Model:                             UT075G**

- a. Model UT075G 75 LB DRYER  
UNIMAC Model No. UT075G  
NATURAL GAS - 165,000 BTU  
208V - 3PH  
FAN MOTOR - 0.5 HP  
CYLINDER MOTOR - 0.5 HP  
AIR OUTLET - 8" DIAMETER

**ITEM # ELL-4                      DUCT MOUNT LINT FILTER**  
**Quantity:                      One (1)**  
**Manufacturer:                  Energenics**  
**Model:                              AF-1**

- a. Model AF-1 Air Free Duct Mounted Filter - Self Cleaning.  
No energy or utility required.

**ITEM # ELL-5                      65 LB. WASHER EXTRACTOR**  
**Quantity:                      One (1)**  
**Manufacturer:                  Unimac**  
**Model:                              UWT065D4**

- a. Model UWT065D4 65 LB. WASHER  
UNIMAC Model No. UWT065D4  
HARDMOUNT  
208V - 3PH  
5 HP  
65 LB. DRY WEIGHT CAPACITY

**ITEM # ELL-6                      WASHER DRAIN TROUGH**  
**Quantity:                      One (1)**  
**Manufacturer:                  Provided by GC**

- a. PROVIDED BY GENERAL CONTRACTOR
- b. VERIFY LOCATION WITH STRUCTURAL

**ITEM # ELL-7                      HAND SINK**  
**Quantity:                      One (1)**  
**Manufacturer:                  Advance Tabco**  
**Model:                              7-PS-60**

- a. Model 7-PS-60 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20-gauge 304 stainless steel, with splash mounted heavy duty gooseneck faucet, basket drain, wall bracket, NSF, cCSAus.

**ITEM # ELL-8                      SPARE NO.**

**ITEM # ELL-9                      DUCT MOUNT LINT FILTER**  
**Quantity:                      One (1)**  
**Manufacturer:                  Energenics**  
**Model:                              AF-1**

- a. Model AF-1 Air Free Duct Mounted Filter - Self Cleaning.  
No energy or utility required.

**ITEM # ELL-10                    75 LB. TUMBLE DRYER**  
**Quantity:                      One (1)**

**Manufacturer:** Unimac  
**Model:** UT075G

- a. Model UT075G 75 LB DRYER  
 UNIMAC Model No. UT075G  
 NATURAL GAS - 165,000 BTU  
 208V - 3PH  
 FAN MOTOR - 0.5 HP  
 CYLINDER MOTOR - 0.5 HP  
 AIR OUTLET - 8" DIAMETER

**ITEM # ELL-11**            **WASHER DRAIN TROUGH**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Provided by GC**  
**Model:**                **CUSTOM**

- a. Model CUSTOM PROVIDED BY GC

**ITEM # ELL-12**            **65 LB. WASHER EXTRACTOR**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Unimac**  
**Model:**                **UWT065D4**

- a. Model UWT065D4 65 LB. WASHER  
 UNIMAC Model No. UWT065D4  
 HARDMOUNT  
 208V - 3PH  
 5 HP  
 65 LB. DRY WEIGHT CAPACITY

**ITEM # ELL-13**            **EYE WASH, PEDESTAL MOUNTED**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **GUARDIAN**  
**Model:**                **G1825BC**

- a. Model G1825BC Free standing, pedestal mounted eyewash. Unit has stainless steel cover to protect bowl from dust, dirt and other contaminants. Two GS-Plus spray-type spray heads deliver a flood of water for rinsing eyes. Two GS-Plus spray heads. Each head has an internal flow control and filter to remove impurities from the water flow.

**ITEM # ELL-14**            **LAUNDRY SINK W/FAUCET**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Mustee**  
**Model:**                **19CF**

- a. Model 19CF Furnish and install as shown on plans, UTILATUB® Laundry/Utility Tub model 19CF, as manufactured by E.L. Mustee & Sons, Inc. Tub shall be one-piece molded construction using structural thermoplastics with matched metal molds under extreme heat and pressure. Tub to include integrally molded drain assembly for connection to standard 1-1/2" P or S-trap, stopper and wall mounting hardware or heavy gauge steel legs with built-in levelers. 18-gallon capacity tub, 13" deep. Shall meet ANSI Specification Z 124-2011. Color: White.
- b. PROVIDE WITH FAUCET - MODEL NO. 93.600

**ITEM # ELL-15**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **7-PS-60**

- a. Model 7-PS-60 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20-gauge 304 stainless steel, with splash mounted heavy duty gooseneck faucet, basket drain, wall bracket, NSF, cCSAus

**ITEM # ELL-16**                    **CLEAN LAUNDRY CART**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **Dandux**  
**Model:**                        **51-2301**

- a. Model 51-2301 CLEAN LAUNDRY CART  
Poly shelf truck, polyethylene body, powder coated reinforced tubular steel base, (4) 6" castes (bolted to welded caster plates), blue, Shelves swing down in front to make a bulk truck, drain holes.

**ITEM # ELL-17**                    **SOILED LAUNDRY CART**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **Dandux**  
**Model:**                        **40070016**

- a. Model 40070016 SOILED LAUNDRY CART  
High tensile sprint steel, water and ear resistant band, riveted stress points, reinforced wear points, rust resistant welded steel bottom support, quality casters rubber or composition, hardwood runners, ID pocket, handle and electro welded construction.

### **PART 3 - EXECUTION**

#### **3.1 DEMONSTRATION AND INSTRUCTION BOOKLETS:**

- A. At such time as designated by the Architect or Owner(s), demonstrate to proper personnel the use, care, and maintenance of equipment.
- B. Submit to Owner at time of demonstrations complete booklets, in hard binders, containing instructions, warranties, and parts list of all bought out items furnished under this section.
  1. Include in the binders a list of names, addresses and telephone numbers of local servicing agencies authorized to make necessary repairs and/or adjustments of the equipment furnished under this Section of Contract Documents.

#### **3.2 INSTALLATION**

- A. Laundry Equipment shall be delivered to job site, freight prepaid.
- B. Uncrate, assemble and install, or erect where required, all items of Laundry Equipment. Shall connect such items, as necessary for use, to building utility systems.
- C. The final hook-up and equipment connections shall be made by the project's Plumbers, HVAC personnel and Electrician.
- D. Provide on-site testing of equipment.
  1. LEC shall make modifications or corrections as necessary for the intended operation and use of specified equipment.

- E. On completion of installation and testing, remove all packaging and debris from site, clean all items of equipment as recommended by manufacturer and leave equipment ready for use by Owners.
- F. The Laundry Equipment Contractor shall have a competent Laundry Equipment Foreman on the premises to assist in furnishing information to tradespersons and supervising installation of equipment under this section.

END OF SECTION

**SECTION 11 31 00 - RESIDENTIAL APPLIANCES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Cooking appliances.
    - a. Microwave countertop ovens.
    - b. Microwave ovens.
    - c. Microwave drawers.
  - 2. Refrigeration appliances.
    - a. Refrigerators.
    - b. Undercounter refrigerators
    - c. Freezers.
    - d. Undercounter freezers.
  - 3. Cleaning appliances
    - a. Dishwashers.
- B. Related Requirements:
  - 1. Division 12 for Countertops.
  - 2. Division 22 for Plumbing Fixtures.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Product Data Submittals: For each type of product indicated.
  - 1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- C. Product Schedule: For appliances. Use same designations indicated on Drawings.
  - 1. Indicate appliances status using one of the following descriptions:
    - a. Contractor Furnished-and-Installed (CFCI).
    - b. Owner-Furnished, Contractor-Installed (OFCI).
    - c. Owner-Furnished-and-Installed (NIC) (not in contract).

**1.4 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For manufacturer.
- B. Product Certificates: For each type of appliance.
- C. Field quality-control reports.
- D. Sample Warranties: For manufacturers' special warranties.

**1.5 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

**1.6 QUALITY ASSURANCE**

- A. Manufacturer Qualifications: Maintains, within 200 of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.

**1.7 WARRANTY**

- A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period except as qualified below:
  - 1. Warranty Period: Two years from date of Substantial Completion.
- B. Microwave Oven: Limited warranty, including parts and labor for first year and parts thereafter, for on-site service on the magnetron tube.
  - 1. Warranty Period: Five years from date of Substantial Completion.
- C. Refrigerator/Freezer, Freezer, and Sealed System: Full warranty, including parts and labor, for on-site service on the product.
  - 1. Warranty Period: Three years from date of original installation.
  - 2. Warranty Period for Sealed Refrigeration System: Six years from date of original installation unless noted otherwise.
- D. Dishwasher: Limited warranty, including parts and labor for first year and parts thereafter, for on-site service on the product.
  - 1. Warranty Period for Deterioration of Tub and Metal Door Liner: Five years from date of Substantial Completion.
  - 2. Warranty Period for Other Components: Two years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 SOURCE LIMITATIONS**

- A. Obtain residential appliances from single source.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design and ADA Standards for Accessible Design and [ICC A117.1.

**2.3 COOKING APPLIANCES**

- ~~A. Microwave Oven:~~
  - ~~1. Mounting: Undercabinet.~~
  - ~~2. Type: Convection.~~
  - ~~3. Dimensions:~~
    - ~~a. Width: As indicated on Drawings.~~
    - ~~b. Depth: As indicated on Drawings.~~
    - ~~c. Height: As indicated on Drawings.~~
  - ~~4. Capacity: 2.0 cu. ft.~~
  - ~~5. Oven Door: Door with observation window and pull handle.~~
  - ~~6. Exhaust Fan: Variable speed fan, nonvented, recirculating type with charcoal filter and with manufacturer's standard capacity.~~
  - ~~7. Microwave Power Rating: Manufacturer's standard.~~

- ~~a. Convection Element Power Rating: Manufacturer's standard.~~
  - ~~8. Electric Power Supply: 120 V, 60 Hz, 1 phase, 15 A.~~
  - ~~9. Controls: Digital panel controls and timer display.~~
  - ~~10. Other Features: Turntable.~~
  - ~~11. Material: Stainless steel.~~
- B. Microwave Drawer:
1. Basis of Design: ZLINE 24", 1.2 Cu Ft, Stainless Steel Microwave Drawer, Model #MWD-TK-30.
  2. Mounting: Drawer style mounted in base cabinet.
  3. Type: Top loading.
  4. Dimensions:
    - a. Width: 29-3/4".
    - b. Depth: 23-3/8".
    - c. Height: 15-3/4".
  5. Capacity: 1.2 cu. ft..
  6. Oven Door: With observation window.
  7. Intuitive Control Panel: 45 degree angle design.
  8. Microwave Power Rating: 1000W.
    - a. Convection Element Power Rating: Manufacturer's standard.
  9. Electric Power Supply: 120 V, 60 Hz, 1 phase, 15 A.
  10. Controls: Touch screen.
  11. Other Features: Auto-touch Open and Close door.
  12. Material: Stainless steel, brushed.

## 2.4 REFRIGERATION APPLIANCES

- A. Manufacturers: Subject to compliance with requirements, provide Perlick or comparable products by the following:
1. Kenmore
  2. Summit
  3. LG
  4. True
  5. Samsung
- B. Refrigerator (Glass Front): Built-in undercounter refrigerator, ADA compliant.
1. Basis of Design Product: Perlick; Model HA24RB-4-3R/L.
  2. Type: Built-in
  3. Dimensions:
    - a. Width: 23.87 inches.
    - b. Depth: 24.00 inches.
    - c. Height: 32.00 inches.
  4. Storage Capacity: 4.8 cu. ft.
  5. Refrigerator Features:
    - a. Adjustable shelving.
    - b. Glass door.
    - c. Digital temperature control.
  6. Front Panel(s): Stainless steel trim glass door.
  7. Appliance Color/Finish: Black.
- ~~C. Refrigerator (Millwork Front): Built-in undercounter refrigerator, ADA compliant.~~
- ~~1. Basis of Design Product: Perlick; Model HA24RB-3R.~~
  - ~~2. Type: Built-in~~
  - ~~3. Dimensions:~~
    - ~~a. Width: 23.87 inches.~~
    - ~~b. Depth: 24.00 inches.~~
    - ~~c. Height: 32.00 inches.~~

- ~~4. Storage Capacity: 4.8 cu. ft.~~
  - ~~5. Refrigerator Features:~~
    - ~~a. Adjustable shelving.~~
    - ~~b. Wood overlay door.~~
    - ~~c. Digital temperature control.~~
  - ~~6. Front Panel(s): Wood overlay to be selected by Architect.~~
  - ~~7. Appliance Color/Finish: Black.~~
- D. Ice Storage (Two Drawer): Built-in undercounter freezer drawer, ADA compliant.
1. Basis of Design Product: Perlick; Model HA24FB-5.
  2. Type: Built-in
  3. Dimensions:
    - a. Width: 23.87 inches.
    - b. Depth: 24.00 inches.
    - c. Height: 32.00 inches.
  4. Storage Capacity: 4.8 cu. ft.
  5. Freezer Features:
    - a. Smooth glide self closing drawers.
    - b. Digital temperature control.
  6. Front Panel(s): Wood overlay to be selected by Architect.
  7. Appliance Color/Finish: Black.
- E. Refrigerator: Counter depth French door refrigerator, ADA compliant.
1. Basis of Design Product: Samsung; Model RF18A5101SR.
  2. Type: Free standing counter depth
  3. Dimensions:
    - a. Width: 32.125 inches.
    - b. Depth: 28.125 inches.
    - c. Height: 70 inches.
  4. Storage Capacity (Combined): 17.5 cu. ft.
  5. Refrigerator Features:
    - a. Adjustable glass shelving.
    - b. Door storage.
    - c. Humidity controlled crispers.
    - d. Interior LED light.
  6. Freezer Features:
    - a. Automatic icemaker.
    - b. Interior LED light.
  7. Front Panel(s): Stainless steel.
  8. Appliance Color/Finish: Stainless Steel.
- F. Refrigerator: Standard style, top freezer, ADA compliant.
1. Basis of Design Product: GE; ModelGIE18GCN/GSN/GTN.
  2. Type: Free standing counter depth
  3. Dimensions:
    - a. Width: 28 inches.
    - b. Depth: 26.75 inches.
    - c. Height: 67.50 inches.
  4. Storage Capacity (Combined): 17.5 cu. ft.
  5. Refrigerator Features:
    - a. Adjustable glass shelving.
    - b. Door storage.
    - c. Humidity controlled crispers.
    - d. Interior LED light.
  6. Freezer Features:
    - a. Automatic icemaker.
    - b. Interior LED light.

7. Front Panel(s): Stainless steel.
8. Appliance Color/Finish: Stainless Steel.

## 2.5 CLEANING APPLIANCES

- A. Dishwasher: Complying with AHAM DW-1.
  1. Basis-of-Design Product: Subject to compliance with requirements, provide GE ADA Compliant Dishwasher; GDT225SGL/SSL or comparable product by acceptable to Architect.
  2. Type: Built-in undercounter.
  3. Dimensions:
    - a. Width: 23-3/4 inches.
    - b. Depth: 23-1/2 inches.
    - c. Height: 34 inches.
  4. Sound Level: Maximum 51dB.
  5. Tub and Door Liner: Manufacturer's standard stainless steel with sealed detergent and automatic rinsing-aid dispensers.
  6. Rack System: PVC-coated sliding dish racks, with removable cutlery basket.
  7. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
  8. Front Panel: Manufacturer's standard.
    - a. Panel Color: Stainless steel.
  9. Appliance Color/Finish: Stainless steel.

## 2.6 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.
- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.

- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

### **3.3 FIELD QUALITY CONTROL**

- A. Perform the following tests and inspections:
  - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
  - 2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: After installation, start units to confirm proper operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- B. An appliance will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### **3.4 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION

**SECTION 11 40 00 - FOOD SERVICE EQUIPMENT****PART 1 - GENERAL****1.1 DEFINITIONS**

- A. The following definitions are intended to clarify the relationships involved in this document and are used as a definition throughout this food service specification.
- B. Food Service Equipment Contractor (FEC) - The FEC is the party responsible for supplying, delivering (including freight, staging, and local warehousing as required), assembling, setting in place, installing, cleaning, sanitizing, and polishing any foodservice item(s) included in this contract, but not limited to all required materials and labor, pursuant to the guidelines and timelines scheduled and rescheduled by the Owner, Architect and Camacho, Incorporated.
- C. Sub-Contractors - The FEC may contract Sub-Contractors to perform any portion of the contract, but the final responsibility for the proper performance of the contract rests solely with the FEC.
- D. General Contractor (G.C) - The G.C. / Construction Manager (C.M.) has the responsibility for overall installation, scheduling, deliveries, coordination of various trades, rough-in and connection of utilities, including but not limited to all labor and materials for said rough-ins and connections for all equipment in this contract unless otherwise specified, by item, within the equipment data specification sections of this contract. The FEC must coordinate its activities and needs with the G.C. / C.M. in a timely manner so as not to delay the project.
- E. Food Service Designer / Consultant – Camacho Foodservice Design and Consulting (Camacho) is the food service designer/consultant for this project.
- F. The FEC is the party responsible for all taxes, tariffs, duties, and/or customs fees and permits where applicable, as may be required. The FEC is contracted by the Owner.
- G. N.I.F.C. - Whenever the abbreviation N.I.F.C. is used in this contract, it shall mean the item or items are not part of the Food Service Equipment Contract.
- H. The assignments and responsibilities as outlined in this section are subject to change at the Owner/Architect's discretion.

**1.2 RELATED DOCUMENTS**

- A. All drawings, general, special, and/or supplementary conditions, Division 01000, specifications, and related documents apply to this specification. The Foodservice Consultant for this project is Camacho. The consultant is responsible to the Project Architect and the Owner to ascertain that the FEC complies with all the requirements of this section.
- B. All work included under this section is subject to Architect's provisions covering Invitation to Bid, Proposal Form, Instructions to Bidders, General Conditions, and all other Supplementary General Conditions as may be added.

**1.3 INTERPRETATIONS****A. PLANS AND SPECIFICATIONS**

- B. The extent of the Food Service Equipment is on the drawings, Equipment Schedule, and Specifications of this Section of Performance Criteria. Each model number includes the code \*C013 and \*C014 as a suffix. This code is known as the Specifier Identification System. It is not

to be removed by the bidders. Its purpose is to identify the specifier to the vendors providing the equipment when it is necessary to communicate questions, clarifications, and comments from before the bid award through the final purchase. It is to be used on all correspondence, including fax and e-mail, when communicating with manufacturer representatives and factories.

- C. The plans indicate the location of the equipment. Slight changes due to the varying dimensions of equipment and wall construction shall be permitted with approval by the Architect.
- D. Conflict in Plans and Specifications where changes, alterations, additions, or deductions are necessary, or where exceptions are concerning sizes, locations, and other details shown on plans, shall be reported in writing for a decision by the Architect.
- E. The Contractor shall be responsible for seeing that the equipment can be entered through openings before the doors and walls are finished.
- F. Should it appear that the work intended to be described or any of the matters relative thereto are not sufficiently detailed or explained on the drawings or in the specifications, the Contractors shall apply to Camacho / Architect for such drawings or explanations as may be necessary and shall conform to them as far as they shall be consistent with original drawings.
- G. If any question arises regarding the true meaning of the drawings, specifications, and/or typographical errors, reference shall be made to Camacho / Architect, whose decision shall be conclusive.
- H. In no instance shall a bid be submitted, or any work started with any uncertainty.
- I. Before doing any work or ordering any materials, the Contractors shall verify all measurements of any work and shall be responsible for their correctness. Any differences which may be found shall be submitted to Camacho / Architect for consideration before proceeding with the work.
- J. Extra compensation will not be allowed because of differences between actual dimensions and measurements indicated on the working drawings.
- K. Where a conflict occurs between or within standards, specifications, codes, ordinances, and working drawings, the more stringent or higher quality requirements shall apply.

#### **1.4 APPLICABLE DOCUMENTS**

- A. Bidding Documents, Contract Forms, and related materials issued by Camacho, the Project Architect, G.C. / C.M., and the Owner before awarding a contract apply to this section.
- B. Architectural, Mechanical, Electrical, and Structural Plans and other Specifications, including all supplements issued thereto and other pertinent documents issued by Camacho, the Project Architect, C.M., and/or the Owner, are a part of these Specifications and the accompanying food service equipment plans and shall be complete within every respect. All the above included herewith will be issued separately by C.M. or is on file at Camacho / Project Architect's office and shall not relieve the Contractors of responsibility or be used as a basis for additional compensation due to omission(s) of Architectural, Structural, Mechanical, Plumbing or Electrical details from food service equipment documents.

#### **1.5 BASE BIDS AND SUBSTITUTIONS**

- A. Substitution of Materials and Equipment:
  - 1. Where equipment is specified by the name of the manufacturer and model number, it is intended that the designated name and number represent a standard of quality and is not intended to restrict competition in any way. The Architect reserves the right to accept or reject each proposed substitution, and such decision shall be final and binding upon all parties. All proposed equipment substitutions shall be submitted at least ten (10) days

- prior to the date of the bid to the Architect, and all substitutions must acquire pre-bid approval. It is, furthermore, the intention of these specifications to produce a set of Foodservice Equipment to meet the needs of the Owner. Among the primary requirements are sanitation, ready accessibility for cleaning, low-cost maintenance and operation, strength, and ruggedness. Any construction detail or evasion of any of the specification requirements shall be cause for rejection. Plans and specifications are based on the products or systems of the first-named manufacturer. Any modifications and substitutions other than the first name that require changes in plumbing, mechanical, or electrical shall be coordinated and paid for by the FEC, as noted in this section.
2. Acceptance of proposed substitution is entirely at the discretion of the Owner or their Representative and subject to the following qualifications:
    - a. Equal in quality of material used in structural strength and details of construction.
    - b. Equal in performance, mechanically, and productivity.
    - c. Equal in the finish or in characteristics permitting specified finish to be applied.
    - d. Availability of replacement parts and maintenance service.
  3. The bid price for each proposed substitute shall include all money required to incorporate the substitute into the project. Later requests for additional monies for substitutes will not be considered.
- B. Bidders recommending substitutions are cautioned to examine the plumbing, mechanical, and electrical plans, and conditions at the building site to determine if such substitution will require changes in plumbing, mechanical and electrical connections already planned or installed. If the proposed substitutions require such changes, the bidder shall include the cost of the same in their bid and call it to the attention of the Architect by including a descriptive notation in the request for approval.
- C. Engage a firm experienced in manufacturing food service equipment similar to that indicated for this project and with a record of successful in-service performance. It is required that all "Fabricated Special" items of equipment such as food service units, tables, sinks, countertops, etc., described in the following specifications other than by name and catalog numbers, be manufactured by a Foodservice Equipment Fabricator who has the manufacturing plant, personnel, and engineering facility to properly design, detail and manufacture high-quality foodservice equipment, NSF and UL approved. The manufacturer shall be subject to the approval of the Architect and Owner. All work in the above category shall be manufactured by one manufacturer and shall be of standard unit assembly and of uniform design and finish.
- D. The manufacturer of this equipment must be able to show that they have, for the past seven years, been engaged in the manufacture of and distribution of equipment as required by the Contractor as their principal product.
- E. All submittals for proposed substitutions must be submitted with an equipment data sheet for each item. The data sheet shall consist of the project name, the Project Architect, the Foodservice Consultant, the firm submitting, the item number, the manufacturer, the manufacturer's model number, a complete written description of what is to be provided, and accessories and options list of what is to be provided, finishes, dimensions, utility requirements as provided (i.e., GAS: NAT or LP, electrical: voltage/phase and amps, plumbing/mechanical: water/sewer, etc.) as well as the type of connection.
- F. The data sheet shall have a blank space (3-1/2"w x 5"h) in the lower right corner of the sheet for stamping, etc. This information must be submitted not less than ten (10) days from the bid due date to be considered as an alternate.
- G. Where substitutions are made by the FEC with the written approval of Camacho / Project Architect, the FEC shall be responsible for and pay all costs of any consequential modifications which may result from the substitution.

- H. If the FEC decides to submit an alternate manufacturer and receives a written response from Camacho / Project Architect accepting this change, then all resulting expenses incurred in the changes or additions to the food service equipment work as well as other contractor's work, shall be the sole responsibility of the FEC and shall be considered as part of the base bid with no additional compensation permitted.
- I. Accepted substitutions will be noted in an addendum issued by the PA/E. No other substitutions and deviations from the primary manufacturer will be permitted subsequent to the date of the Bid Opening except by specific change order and only with sufficient cause. The approval of substitution does not approve, relieve or change the Contractors' responsibilities as outlined herein.
- J. Task/Responsibility
1. Project Coordination: GC/CM\*
  2. Permits (Health Department): ARCH/OWNER
  3. Construction Schedule: GC/CM/ARCH
  4. Coordination of Inspections (Foodservice): FEC
  5. Demolition of Kitchen Equipment (If required): FEC
  6. Wall Repairs (If required): GC/CM
  7. Rough-In Drawings: FEC
  8. Rough-Ins (Required Service to Utility Connections noted on FEC Rough-In Drawings): PC/EC/MC
  9. Tile Work: GC/CM
  10. Stainless Steel Wall Panels: FEC
  11. FRP (Wall Panels): GC/CM
  12. Furnish of Specified Equipment: FEC
  13. Liquor Dispensing System (If Required): FEC
  14. Beverage Raceway and Conduits (If Required): FEC
  15. Beer Systems (If Required): FEC
  16. Bulk CO2 System (If Required): FEC
  17. Indirect Wastes Extend from Equipment to Drains: PC
  18. Installation of Foodservice Equipment: FEC
  19. Final Utility Connection: PC/EC/MC
  20. Utility Interconnections: PC/EC/MC
  21. Trim and Seal Foodservice Equipment: FEC
  22. Clean-Up of Foodservice Areas: FEC
  23. Walk-In Refrigeration Floor Insulation: FEC
  24. Walk-In Refrigeration Sub-Floor and Finished Floor: GC/CM
  25. Walk-In Refrigeration Lighting: FEC Furnished, EC Installed
  26. Ceilings: GC/CM
  27. Floor Troughs: FEC Furnished, PC Installed
  28. Floor Sinks, Floor Drains, Funnel Floor Drains: PC
  29. Mop Sinks, Hand Sinks: PC (Unless otherwise specified)
  30. Bar Scupper Trough (Located by FEC): MWC
  31. Foodservice Sneeze Guards FEC (Unless otherwise Specified)
  32. Insulation of Piping: PC

\*Or as specified in general specifications as prepared by the Architect.

## 1.6 INTENT

- A. It is the intent of the Contract Documents for each/every item and component to be complete with all required devices and standard features necessary for that item and component to function properly.

- B. It is the intent of the Contract Documents for each/every item and component to function and perform in a manner equal to the Primary Manufacturer's intent. FEC is required to notify Camacho / Project Architect in writing of any or all discrepancies or omissions of any components prior to submitting the bid.
- C. Failure of the FEC to report any discrepancies and/or omissions prior to submitting his bid shall not relieve the FEC of his responsibilities for providing complete, functioning, workable systems in full accordance with the intent of the Contract Documents.

## 1.7 RESPONSIBILITY MATRIX

- A. The following represents the basic contractor responsibilities for this project. The assignments and responsibilities as outlined in this section are subject to change at the Owner/Architect's discretion.
  - 1. Abbreviations:
    - a. CM - Construction Manager
    - b. GC - General Contractor
    - c. FEC - Food Service Equipment Contractor
    - d. PC- Plumbing Contractor
    - e. EC - Electrical Contractor
    - f. MC - Mechanical Contractor
    - g. MWC - Millwork Contractor

## PART 2 - SCOPE OF WORK

### 2.1 WORK INCLUDED

- A. Work required under this section consists of providing all necessary services, tools, equipment, material, and labor required to provide the continuous installation (the term installation shall mean the complete installation including, but not limited to, the delivery of all food service equipment items and necessary components complete with transportation charges and taxes prepaid by the FEC to the job site's location) as designated on the food service equipment plan, uncrated, erected, set in place, leveled and made ready for final connection, by G.C., to plumbing, gas, electrical and steam utilities, as specified in Divisions 22000 and 26000 of Performance Criteria and properly anchored and trimmed as may be required.
- B. FEC is to deliver all parts and components, which are to be built into cast-in-place concrete and masonry, in ample time for inclusion in the concrete and masonry work. Furnish necessary setting plans and instructions, oversee the installation of all parts in the masonry and concrete, and be responsible for the correctness and accuracy of the location and installation.
- C. FEC to provide holes, ferrules, and stainless-steel chases on equipment for pipes, drains, electrical outlets, conduits, and similar items as may be required to coordinate and accommodate the installation of the food service equipment in connection with the work of other contractors.
- D. FEC to provide the necessary materials, labor, services, and incidentals necessary for the completion of these sections of work, including but not limited to adhesive, caulking, sealing, trim strips, chases, corner guards, corner trims, and closure panels.
- E. FEC to provide items and components hereinafter specified and shown on plans, completely assembled, or erected in locations indicated, ready for final connections to service by the respective trades. The labor and material(s) required for final connections are the responsibility of G.C. / C.M.

- F. FEC will provide and install where required fasteners, flashing, trim strips, filler panels, can't strips, and caulking and sealant required to complete the installation.
- G. All roof, wall, and floor assemblies, including finishes (as specified herein), penetrations, openings, curbs, platforms, and dunnage pursuant to the requirements of the food service ventilation and refrigeration items are to be provided and installed by the G.C. unless specified otherwise.
- H. All roof, wall, and floor assemblies, including finishes (as specified herein), penetrations, openings, curbs, platforms, and dunnage pursuant to the requirements of the food service ventilation and refrigeration items are to be provided and installed by the G.C. unless specified otherwise.
- I. Keep premises clean and remove from the site all crates, cartons, and other debris resulting from the work. Leave all areas "broom cleaned" and all equipment items and furnishings "construction clean." Final cleaning, sanitizing, and polishing of all equipment items and furnishings shall be done by the FEC. Further, it is the FEC's responsibility to provide protective coverings for all equipment items delivered to the job site during construction.

## 2.2 RELATED WORK OF OTHER CONTRACTORS

- A. Division 01 0000 - General Construction
  - 1. All floor assemblies, including finishes, openings, depressions, sleeves, curbs, and bases.
  - 2. All wall and partition assemblies, including finishes, openings, recesses, sleeves, furring, and backing.
  - 3. All ceiling assemblies include finishes, openings, soffits, access panels, fire separation, and sleeves.
  - 4. All roof assemblies, including finishes, openings, curbs, platforms, and dunnage.
  - 5. All structural supports or grounds for hanging or fastening food service equipment and assemblies as may be described in this section.
  - 6. G.C. to provide on-site storage trailer(s) and security for the Owner's existing and FEC-provided food service equipment to be used on this project, if applicable.
- B. Division 22 0000 - Mechanical
  - 1. Water, gas, and steam supply systems, as required.
  - 2. Sanitary and grease-laden drainage systems.
  - 3. Final plumbing connections include mounting drains, faucets, pre-rinses, hoses, and piping from the point of connection on equipment to building plumbing systems and interconnections between equipment components. Install all hoses from utility raceways to connection points on equipment.
  - 4. Grease traps.
  - 5. Indirect drain line runs from equipment items to the nearest floor drain or floor sink as required.
  - 6. Gas, water, steam pressure-reducing valves, and all other fittings as required. .
  - 7. Gas shut-off valve(s) as required for ventilator fire suppression system and gas regulators on individual pieces of gas-fired equipment in accordance with the manufacturer's recommendations are to be provided by the FEC and installed by the G.C.
  - 8. FEC to furnish faucets with nipples, elbows, supply lines, valve stops, drains, splash-mounted vacuum breakers, etc., for each equipment item as specified herein. Items to be installed by the G.C.
  - 9. All exposed plumbing related to or in connection with food service items is to be chrome plated.

10. Indirect wastes shall be chrome plated and are to drip over and into floor drains and floor sinks. Where drains and supply lines run under equipment, provide the proper support from the underside of the equipment to eliminate interference with cleaning and maintenance.
  11. When the Exhaust Hood Systems are to be furnished and installed by Division 22000 and are not to be included as part of the FEC work, Division 22000 shall provide and install the gas valve in the main supply line serving the cooking equipment to shut off gas service to the cooking equipment in the event of fire system actuation. This work must be coordinated with the FEC and in accordance with NFPA 17A and NEC. This work shall be further provided in accordance with this specification.
- C. Division 23 0000 - H.V.A.C. .
1. G.C. to provide and install all necessary components as may be required for the exhaust/make-up air system(s) and condensate exhaust air system, including but not limited to the fans (unless provided by the FEC), ducting, gas shut-off valve(s), curbs, penetrations, dampers, controls, and switches unless otherwise specified herein.
  2. G.C. to provide and install as required rated chase(s) as well as other separations as may be required.
  3. G.C. to provide and install all heating, ventilating, and air conditioning systems except as otherwise specified in this section.
- D. Division 26 0000 - Electrical
1. All electrical distribution, lighting, and power systems except otherwise specified in this section.
  2. Final electrical connections and interconnections, including labor and materials from point of connection on equipment to building electrical systems and required interconnections between equipment components.
  3. All electrical materials, including wire, conduit, over-current protection, main switches, safety cut-outs, shunt-trip breakers, disconnect switches, lighting control devices, surge protectors, uninterruptible power units, and controllers.
  4. Shunt-trip breakers and contactors and all conduits for shut down of electrically operated cooking equipment and ventilation equipment as required for the ventilator fire suppression system.
  5. Empty conduit systems for refrigeration system, as specified and shown on food service drawings.
  6. Empty conduit system for point-of-sale system, as specified and shown on food service drawings.
  7. Empty conduit system for fire suppression system, as specified and shown on food service drawings.
  8. FEC shall furnish all electrically operated portable and movable equipment items with factory-installed 3-wire or 4-wire heavy-duty insulated cords with a grounded plug with one leg of the cord grounded to a conductible portion of the item's frame.
  9. Furnish and install switches and disconnects within the equipment, contractors, and combination starters with fused disconnects, controls, and similar items necessary for the safe and proper operation of the equipment and for compliance with all N.E.C. and local AHJ requirements.
  10. All switches, disconnects, and control devices shall be safely accessible without reaching across or over any hot and hazardous equipment items.
  11. FEC to secure cords, to the underside of the equipment, on portable and movable equipment to allow ease of maintenance or as required by the owner.
  12. Install all electrical cord sets as provided by the FEC as part of the food service equipment and install all cord sets from utility raceways to connection points on equipment.

13. When the Exhaust Hood Systems are to be furnished and installed by Division 220000 and are not to be included as part of the FEC work, Division 260000 shall furnish and install automatic power disconnect devices (shunt trip breakers or definite purpose contactors) with interlock to fire system micro switch, to shut off all power below the hood (including control voltage) in the event of fire system actuation. This work must be coordinated with the FEC and in accordance with NFPA 17A and NEC.
- E. All Plumbing, Steam, Electrical, and Ventilation Work required in connection with this section shall be done by the other Contractor unless specifically called for in the itemized Equipment Specifications. Work of others shall include but not be limited to exhaust fans and ductwork associated with the ventilation of the hood, roughing-in to points indicated on the mechanical, plumbing, and electrical plans, and final connections from rough-in locations to various pieces of equipment requiring such connections and the supplying of all necessary materials and labor for this work except as specified or scheduled.
- F. Tile adhered to bases below the specified equipment is by others.
- G. Refrigeration Work to be performed under this Section, except for electrical and plumbing connection to compressors, blower coils controls, etc., provided by others, is as listed in the itemized specifications.
- H. All line and disconnect switches, safety cutouts, control panels, fuse boxes, or other electrical controls, fittings, and connections shall be furnished and installed by others. Starting switches shall be provided by Food Service Equipment Supplier as specified under General Specifications. Those starting switches furnished loose as standardized by Food Service Equipment Supplier manufacturers (other than fabricated items) shall be installed and connected by others.
- I. Any sleeves or conduit required for refrigeration and tubing lines shall be furnished and installed by others. Refrigeration alarm system connection by others.
- J. Plumbing and Steam Fitting Trades shall confirm that all lines are flushed free of foreign matter before connecting equipment.
- K. The electrical sub-contractor shall make all final connections to the equipment shown on Drawings or specified. It shall be the responsibility of the electrical subcontractor to check all equipment to determine where starters, contractors, switches, and other items are required.
- L. The plumbing-sub-contractor shall make all final connections to the equipment shown on Drawings or specified, and it shall be the responsibility of the plumbing sub-contractor to provide traps, tailpieces, fittings, water piping, floor drains, shut-off valves, and all other necessary fittings. The Food Equipment Supplier shall provide faucets and all lever waste drains, and hose reels with mixing valves to the plumbing subcontractor for connection and installation.
- M. The mechanical sub-contractor shall make final connections to the equipment shown on Drawings or specified, and it shall be the responsibility of the mechanical sub-contractor to provide and install necessary ventilation facilities of sufficient capacity to operate the equipment. Mechanical work to be done by the Food Service Equipment Supplier is listed in the itemized equipment specifications.
- N. The General Contractor shall provide openings and passageways of sufficient to sustain the weight of the Food Service Equipment Supplier, and he shall provide openings and passageways of sufficient size to permit the delivery and erection of the equipment to their respective locations without dismantling. Coordination of these openings is critical for the equipment installation. The General Contractor shall provide a depressed floor for drains grates and a walk-in cooler/freezer when noted.

### 2.3 RELATED WORK BY OWNERS

- A. Install Owner furnished equipment in accordance with the installation section of this document unless otherwise specified herein.

## 2.4 REFERENCES

- A. The Drawings indicate the desired basic arrangement and dimensions of the equipment. Minor deviations may be substituted for approval provided basic requirements are met and no significant rearrangement of service to the equipment is required to affect the proposed alteration. These deviations shall be made without expense to the Owner.
- B. Operational and functional tests of the installed equipment are required. Defects or deficiencies shall be corrected to the satisfaction of the Architect or Owners at the expense of the Contractor. Consult the Mechanical and Electrical Connections Drawings and their accompanying Specifications to determine additional requirements of the work and shall cooperate with all trades to ensure a satisfactory installation.
- C. The electrical wiring of motors, motor starters, switches, and thermostats of the equipment shall be an integral part of the unit, which shall contain a junction box for the connection of electrical service. All motor-driven equipment shall have thermal overload and underload protection.
- D. Furnish each motor-driven appliance or electrically heated unit; a suitably mounted control switch or starter of proper type per UL or ETL Codes. All controls mounted on vertical surfaces of fixtures shall be set into recessed die-stamped stainless-steel cups or otherwise indented to prevent damage to the control switch.

## PART 3 - QUALITY ASSURANCE

### 3.1 FOOD SERVICE CONSULTANT

- A. The Owner has employed Camacho, Incorporated as the Food Service Consultant. The "chain of command" shall be the Food Service Equipment Contractor, to the General Contractor / Construction Manager, to the Project Architect (PA / E), to the Food Service Consultant, and vice versa in all matters concerning the food service equipment.

### 3.2 EQUIPMENT

- A. Equipment, except for "buy-out" or standard catalog items, shall be fabricated in a plant bearing the name of a recognized food service equipment fabricator. This fabricating firm shall have been in business for at least five years, with a suitable organization to design, engineer, manufacture, deliver and install the equipment. Said installation shall be in accordance with local union conditions when applicable. Such firms shall be able to refer to other successful installations of similar operating conditions. Further, the fabricator shall be able to UL classify and list the items that they fabricated.
  - 1. Under no circumstances shall the FEC sublet any portion of the fabricated equipment to any subcontractor without Camacho's written approval. All fabricated food service equipment with inter-wiring and pre-wired equipment and refrigeration shall be manufactured by a fabricator that can UL list (or other applicable AHJ listing) and classifies their own work.

### 3.3 LABOR

- A. All labor shall be performed by experienced mechanics in this type of work. All work on the premises shall be done at such time as to promote the proper conduct of the project. Provide a

competent on-site superintendent to supervise the work and to provide other trades with the information necessary to maintain proper conduct and timely completion of the work.

### 3.4 FOOD SERVICE EQUIPMENT CONTRACTORS

- A. Pre-approved Food Service Equipment Contractors include:
1. Thompson and Little Foodservice Equipment & Supplies: 910-484-1128
  2. Trimark Foodservice Equipment Supplies & Design 708-496-1700
  3. Edward Don & Company: 1-800-777-4366
  4. Manning Brothers Food Equipment Co.: 1-800-554-3004
  5. Boelter Foodservice Design, Equipment & Supply: 800-263-5837
  6. Birmingham Restaurant Supply, Inc. (Bresco) 205.252.0076 / 800.344.2455
  7. Mobile Fixture 251.342.0455 / 800.345.6458
  8. H & R Restaurant Supply 205.409.0097 / 888.364.4080

## PART 4 - CODES, LAWS, AND STANDARDS

### 4.1 GENERAL REQUIREMENTS

- A. The equipment furnished under this section is to be supplied by one Food Service Equipment Contractor.
- B. Permits and Certificates:
1. All laws, codes, ordinances, and regulations bearing on the conduct of the work as drawn up and specified shall be complied with and given all notices required. For any work upon which an inspection certificate by local authorities or any governing body is required, such Inspection Certificate or Certificates shall be obtained and paid.
- C. Certificates of acceptance or completion as required and issued by the State, Municipal, or other authorities shall be procured and delivered to the Owners. The Owners may withhold payments that are due, or that may become due until the necessary Certificates are obtained and delivered to the Owners.
- D. All safety devices and all accessories required to comply with regulations and governing codes shall be provided, regardless of whether specified or called for in the following technical divisions of the equipment list portion of this Section of Specifications.
- E. Applicable Manufacturing Standards:
1. Special fabrication items shall be manufactured in compliance with Standard No. 2 of the National Sanitation Foundation Testing Laboratory and shall bear the NSF Seal of Approval.
- F. Equipment pieces shall be manufactured in compliance with Standards No. 3, 4, 5, 6, 7, 8, 12, 13, 18, 20, 21, 25, 29, 35, 37, 51, 59, and 61, where applicable, of NSF Testing Laboratories and bear the Seal of Approval. This shall include any pending standards, which shall become applicable at the time the equipment is delivered.
- G. Except as modified by governing codes and by the Contract Documents, comply with the applicable provisions and recommendations of the following:
1. National Fire Protection Association (NFPA)
  2. NFPA 96-Installation of equipment for removal of smoke and grease-laden vapors from commercial cooking equipment, current edition
  3. NFPA 13 - Installation of Sprinkler Systems, current edition
  4. NFPA 17 - Dry chemical extinguishing systems, current edition.
  5. NFPA 17A - Wet chemical extinguishing systems, current edition

6. NFPA 70 - National Electric Code.
  7. NFPA 96 - Ventilation Control and Fire Protection
  8. National Sanitation Foundation (NSF)
  9. Underwriter's Laboratories, Inc. (UL), including but not limited to UL-300
  10. National Electric Manufacturers Association (NEMA)
  11. American Gas Association (AGA)
  12. American Society for Mechanical Engineers for Steam Equipment
  13. National Fuel Gas Code (NFGC)
  14. State Board of Health Regulations (10-D-13)
- H. All electrically operated and heated equipment, fabricated or otherwise, shall conform to the latest standards of the National Electric Manufacturer's Association (NEMA) and the Underwriter's Laboratories, Inc. (UL or ETL), where applicable standards have been set up by that agency, or otherwise, such as to be acceptable to authorities having jurisdiction. This shall include any pending standards, which shall become applicable at the time the equipment is delivered.
- I. Electrically heated and motor-driven fixtures shall be for the current shown in the Mechanical and Electrical plans. These items of equipment shall have mounted motor starters, switches, and controls. All shall be required for each fixture or complete section of a fixture or as specified.
- J. Gas burning equipment to be designed for operation with the type of gas furnished and approved by the American Gas Association. The label or listing of the American Gas Association shall be accepted as conforming to this requirement. Installation of equipment shall conform to the standards as set forth by the American Gas Association and the National Plumbing Code. Where required, all gas equipment shall be furnished with a safety pilot, one hundred percent safety cut-off, and automatic pilot ignition.
- K. NFPA Codes 13, 17, 17A, and 96 standards shall be complied with for the exhaust system. Provide all safety devices on all accessories required to comply with regulations and governing codes.
- L. Miscellaneous Requirements:
1. Plumbing:
    - a. Provide chrome-plated faucets specified and certified to NSF standard 61, Section 9. All backsplash-mounted faucets shall be provided with double male nipples having locknuts for rigidly securing the faucet to the backsplash. Nipple-locknut assembly shall be provided under this Section as part of the faucet.
    - b. Provide all wastes incorporated in the custom-built fabricated Food Service Equipment. Provide all waste with a chrome-plated tailpiece.
  2. Electrical:
    - a. Interwiring of Food Service Equipment between heating elements, switches, starters, thermostats, outlets, motors, and solenoids shall be complete to the junction box, terminal box, or disconnect switch (should Specifications call for disconnect switch to be provided in this section).
    - b. Provide grounded receptacles specified under Item No. of detail Specifications or as shown on the Contract Drawings. All receptacles are to be as specified and furnished with stainless steel faceplates.
    - c. All electrically operated equipment to be per the codes, regulations, and laws of the State in which the project is located.
- M. Safety:

1. All Food Service Equipment provided under this Contract shall be manufactured and installed in conformance with the Williams-Steiger Occupational Safety Health Act of 1970.
- N. Coordination:
1. Coordinate with the project's plumbers and electricians to assist in cutting or knocking out holes in the stainless-steel tables, counters, and cabinet bases to allow for efficient utility connections to equipment.
- O. The Contractor shall be held responsible and liable for all changes or variances in Performance Criteria without written authorization from the Architect for said changes or variations.

## **PART 5 - SUBMITTALS**

### **5.1 GENERAL REQUIREMENTS**

- A. FEC shall verify all field measurements on the job site to ensure proper fitting of all equipment. Within four (4) weeks after the G.C. / C.M. has been awarded a contract by the Owner, the FEC is to electronically submit PDF format to the Architect for tentative approval, all dimensioned rough-in drawings, equipment submittal brochures, fabrication, and manufacturer's shop drawings in one package. Partial submittals will not be accepted and will be stamped Revise / Resubmit. The reproduction of original contract documents is not acceptable for use as a submittal.
- B. After the initial review of submittal data, revise and resubmit only the datasheet, coversheets, or rough-in and shop drawings that have been modified or changed. The entire submittal is not required for a resubmission. After two resubmissions, the FEC may be charged a fee for Camacho's continuous re-evaluation. This will be billed as an additional service.
- C. Field measurements required to size and place Food Service Equipment are to be verified with on-site field dimensions. Do not rely on or measure drawings for actual on-site dimensions. Dimensions shall be taken from the actual structure, giving due consideration to any architectural, structural, or mechanical discrepancies that may occur during the construction of the building. Field dimensions shall be taken at the earliest opportunity so as not to delay deliveries. Notify the Foodservice Consultant of the earliest date and time. FEC shall be responsible for the proper fit of all equipment furnished under this Section of the Contract. Gaps over ¼" wide are not acceptable.

### **5.2 SAMPLES**

- A. Provide all samples of materials requested by Camacho / Architect for test purposes or comparisons.
- B. Samples used for testing shall not be used on the work without the written approval of Camacho / Architect.
- C. Samples may be retained by Camacho, the Project Architect, or the Owner as a matter of record without any additional compensation to the Contractors.
- D. Owner to provide all samples as required to FEC to ensure proper sizing of dispensing equipment hereinafter specified (cups, glasses, dishware, etc.).

### **5.3 BROCHURES**

- A. Prepare and submit equipment cut sheets showing all manufacturer's data sheets describing equipment as specified. Include items listed as "Future, Existing-Relocate, or Owner

Furnished." The item numbers shown on the submittal shall be the same as those shown on the contract documents. The equipment cut sheets are to be provided using Auto Quotes format or similar, including coversheets for each item. Where a piece of equipment is used and specified with multiple item numbers assigned, the first item is to be provided with a cover sheet and datasheet. For additional identical items, provide cover sheets only.

- B. Provide the following information on the coversheets:
  - 1. Project name.
  - 2. FEC name.
  - 3. Foodservice Consultant name.
  - 4. Item Number.
  - 5. Equipment description.
  - 6. Quantity.
  - 7. Written specification/description of equipment provided.
  - 8. Accessories.
  - 9. Utilities.
- C. Record copy brochures, which shall be delivered at the demonstration and start-up, are to be bound in booklet form in three-ring binders.

#### 5.4 ROUGH-IN AND MECHANICAL CONNECTION DRAWINGS

- A. FEC is to prepare and submit rough-in drawings showing all utility rough-ins for kitchen equipment items, including items listed as "Future, Existing-Relocate, or Owner Furnished" (min. scale of  $\frac{1}{4}'' = 1'-0''$ ). Drawings to indicate the size and location of all utilities, floor depressions, raised bases, and wall openings for equipment. The item numbers shown on the rough-in drawings shall be the same as those shown on contract documents. Drawings shall be dimensioned to the stub up or stub out, not to the connection on the equipment. The FEC shall be responsible for conforming to these conditions with equipment and connections thereto. In the event rough-in has been completed before the award of the Contract, the FEC shall thoroughly investigate, and field verify the provided rough-in locations and provide equipment to suit building conditions. FEC to provide an equipment floor plan with itemized equipment, to include all utility loads.
- B. Electrical rough-in plans are to be dimensioned to indicate the above-finished floor (AFF) height. 90o plug heads where available. Verify all NEMA plug types, lengths of cords, and equipment connection lengths. Lengths are to be of adequate distance for outlets available and to allow equipment to be placed as shown on contract documents. Show convivence receptacle location.
- C. Plumbing rough-in plans are to be dimensioned to indicate the above-finished floor (AFF) height.
- D. Ventilation rough-in plans are to be dimensioned and indicate the above-finished floor (AFF) height.
- E. Special conditions plan indicating dimensions and locations of:
  - 1. Raised pads.
  - 2. Wall openings for pass-through equipment.
  - 3. Floor drains.
  - 4. Wall backing.
  - 5. Recessed or wall-mounted control panels.
- F. Provide a refrigeration system schematic piping plan indicating line size, elevation, trap locations, and all specified components required for the refrigeration system installation. The plan is to include equipment and parts provided by the Refrigeration Equipment Manufacturer. Verify that refrigeration sizing is proper for line lengths determined by actual field conditions.

## 5.5 SHOP DRAWINGS

- A. Custom stainless-steel equipment, walk-in cooler/freezer and refrigeration, exhaust hoods, dishwashers, scullery equipment, and other shop drawings shall be provided on similar size drawing sheets as contract documents. All shop drawings shall be detailed and fully dimensioned to a minimum scale of  $3/4" = 1' - 0"$ . Elevations and sections are to be detailed to a minimum scale of  $1-1/2" = 1' - 0"$ ). Show all materials, gauges, and methods of construction, including relation to adjoining and related work when cutting or close-fitting is required. Show all reinforcements, wall plates, backing, anchorage, needed other work needed for a complete installation of fixtures. Drawings to show the item number and quantity required for each detail. Omissions and discrepancies on approved drawings shall not relieve the FEC of providing items as specified and shown on contract drawings.
1. Show adjacent walls and columns and identify countertop equipment showing item numbers and descriptions.
  2. Show all components that are included in fabricated equipment.
  3. For equipment with load centers (panels), indicate total electrical calculations, including circuits. Provide an electrical diagram for on-site electricians.
  4. Provide color, pattern, or finishes for laminated, fiberglass, paint, or stain for approval by the Architect/Owner.
- B. Shop drawings showing the plan and elevations shall be  $3/4" = 1' - 0"$  scale, and sections shall be  $1-1/2" = 1' - 0"$  scale covering all fabricated items. Drawings are to show the location of equipment to be coordinated with each item, such as boosters mounted to the underside of the dish table and garbage disposers under sink compartments. The verbiage 'By Others' is not acceptable and should be defined by trade.
- C. Fabrication details must identify all metal gauges, hardware, trim, electrical parts, special fitting, and other components by manufacturer's name and model number.
- D. Foodservice Submittal Documents are to be signed by the FEC to indicate they have been reviewed and coordinated with submittals by electrical, plumbing, mechanical, millwork, or other trades, and meet all contract requirements. Foodservice Submittal Documents, which are not stamped and approved by the FEC, will be returned as "NOT REVIEWED." The FEC will be required to resubmit after review, as stated above.
- E. Verify size and weight information of the service ware (glasses, plates, trays, cups, etc.) for self-level dispensing, ware washing, and mobile equipment with the Owner. Verify that carts, racks, and dollies can fit into fixed equipment (roll-in refrigeration, combi ovens, walk-ins, counters, etc.).

## 5.6 CHECKING

- A. Checking of rough-in drawings, shop drawings, details, and equipment by Camacho is for design concept only and does not relieve the FEC or G.C. / C.M. of responsibility for compliance with design drawings, details, and specifications, verification of utilities with equipment requirements for conformity and location and verification of all dimensions of the equipment, building conditions or reasonable adjustments due to deviations. Drawings shall be prepared on the Food Service Equipment Contractor's sheets and by his employees. Drawings of any part thereof created by photograph, paste-up, or other methods using Camacho and Architect drawing(s) and details are a violation of federal copyright laws and will be returned for re-submittal. FEC will assume responsibility for the proper locations and sizing of sleeves, conduits, and depressions for the various equipment requirements.
- B. FEC is responsible for making multiple field inspections to verify the rough-in locations prior to the pouring of concrete, the closing of walls, etc. FEC shall compensate other trades for any relocation of rough-ins.

**5.7 HANDLING AND STORAGE**

- A. Protect metal and millwork product finishes from damage during shipping, storage, handling, installation, and construction of other work in the same spaces. Wrap and crate each item of equipment as needed for protection from damage.
- B. Cover exposed stainless-steel surfaces and millwork surfaces with a self-adhesive protective paper of a type recommended by the metal and millwork manufacturer, and do not remove until work is installed and ready for cleaning and start-up

**5.8 SCHEDULING**

- A. Schedules and Reports:
  - 1. Establish the earliest and latest job site delivery dates for FEC-provided equipment.
- B. Delivery of Owner furnished equipment for installation shall take place at a time to be determined by Owners, but not necessarily during regular working hours.
- C. Workmanship and Guarantees:
  - 1. Equipment shall be delivered in an undamaged condition upon completion. All workmanship and labor shall be of the best in their respective fields and skilled mechanics of the trades involved.
- D. All equipment, as specified in this section, shall be guaranteed for one year from the time of substantial completion. If, at any time within this warranty period of one year, any equipment is found to be faulty due to poor workmanship, or inferior or defective materials, replace said pieces or correct each defective part at no cost to the Owner.
  - 1. Refrigerated items shall have an additional four-year warranty on the compressor unit. On an extended compressor warranty, only labor charges after the first year shall be paid.
- E. At the end of the first year, assign extended warranties to Owners on equipment having more than one year warranty from the manufacturer.

**5.9 WORKMANSHIP AND GUARENTEES**

- A. Equipment shall be delivered in an undamaged condition upon completion. All workmanship and labor shall be of the best in their respective fields and skilled mechanics of the trades involved.
- B. All equipment specified in this section shall be guaranteed for one year from substantial completion. If, at any time within this warranty period of one year, any equipment is found to be faulty due to poor workmanship or inferior or defective materials, replace said pieces or correct each defective part at no cost to the Owner.
- C. Refrigerated items shall have an additional four-year warranty on the compressor unit. Only labor charges after the first year shall be paid on an extended compressor warranty.
- D. At the end of the first year, assign extended warranties to owners on equipment that have more than one year's warranty from the manufacturer.

**PART 6 - PRODUCTS****6.1 PREFABRICATED EQUIPMENT**

- A. Where reference is made to a manufacturer's model number and manufacturer specifications, it is intended that the specification of that primary manufacturer is utilized as a basis of design and specification standards and has become a part of these Specifications and Documents.
- B. Items and component parts of any item referred to by manufacturer's name and model number shall be furnished complete with all standard equipment of the manufacturer used as a basis of design and specification standards plus all extras and modifications hereinafter specified and required.
- C. Similar type items and similar type components shall be product by the same manufacturer to facilitate maintenance and convenience and reduce the Owner's spare parts inventory.
- D. Modifications to the standard equipment specified shall be made by the original manufacturer when required.

## 6.2 PRODUCT OR MANUFACTURER APPROVAL

- A. The product of the primary manufacturer named, where more than one manufacturer is listed, was used for the basis of design and specification standards and sets the standard of quality, appearance, performance, aspect, capacities, and function for that item.
- B. Only products of listed primary manufacturers will be accepted unless requests for substitutions and submittals of alternate manufacturers are submitted to Camacho in accordance with stated conditions. Alternate manufacturers are approved as a manufacturer; however, each item for an alternate manufacturer must be submitted to Camacho for approval/rejection. Refer to Section 1.5, BASE BIDS AND SUBSTITUTIONS.
- C. Other manufacturers must modify their products if necessary to comply with the quality, physical and functional characteristics of the primary manufacturer and must be approved by Camacho.
- D. All manufacturers listed may not be able to supply an equipment item, pursuant to the specifications, as standardized by the primary manufacturer whose name and model number were utilized herein as the basis of the design standard for this project, in which case, the listed alternate manufacturers may elect to modify an item to meet the specifications.

## 6.3 CONSTRUCTION

- A. GENERAL
  - 1. The materials, components, and techniques describe the construction of items of the Food Service Equipment.
- B. Deviation and extra refinements peculiar to any one item will be described and indicated.
  - 1. It is required that all custom/fabricated items in these plans and specifications, other than by manufacturer name and model number, shall meet the requirements of the American Iron and Steel Institute Designations and be constructed of Type 304 stainless steel, and be manufactured by a fabricator that can UL list and/or classify their own products. Type 430 Stainless steel (straight chrome - no nickel) shall not be acceptable for custom-built fabricated equipment.
  - 2. All sheets shall have a natural mill finish of not less than commercial No. 4 on the exposed side and not less than No. 2 on the unexposed side. All stainless steel shall be stretcher leveled, with a thickness of:
    - a. 14 Gauge - Not less than 0.075 Inch.
    - b. 16 Gauge - Not less than 0.063 Inch.
    - c. 18 Gauge - Not less than 0.050 Inch.
    - d. 20 Gauge - Not less than 0.038 Inch.

- C. Welding shall be of electric arc or oxy-acetylene gas. Welding shall be done with a rod of the same material and full penetration the entire length of the joint. Welds to be flat without buckles, voids, or imperfections. All welds shall be ground flush with adjacent surfaces, conditioned to eliminate slippery surfaces. All shear cuts or bends that tend to open the surface of the metal shall be rewelded, ground, and polished. All edges are to be ground and filed to eliminate sharp or rough edges.
- D. When stainless steel sheets have the grain running in different directions, the sheets shall be so jointed, and welds run and finished in such a manner as to make the sheets appear as one continuous product.
- E. Gauges:
  - 1. All Gauges of metals, where specified, shall be manufactured to the standards set forth by the US. Standard for Sheet Metal.
  - 2. Unless specified, no material shall be finished lighter than 20 gauge for custom-built fabricated equipment.
- F. All exposed surfaces of equipment shall be free of bolts, screws, and rivets. Wherever these fasteners are used they shall be an approved type constructed of stainless steel.
- G. All tops, sink bowls, drain boards, and troughs are to be sound-deadened. Sound-deadening to be no less than 1/8 inch thick and allowed to dry thoroughly before being finished with two coats of paint. Component Hardware, Model Q75-1366 NSF approved gray latex sound deadener for brush or spray application, Model Tacky Tape for worktop application between top and hat channel reinforcing.

#### 6.4 TABLE AND COUNTERTOPS

- A. All tops are to be fabricated with 14-gauge, Type 304 stainless steel one-piece construction with all seams, butt joints, and corners welded, ground, and polished smooth, resulting in a one-piece top without joints and crevices. All intersections of three (3) or planes shall be covered. Tops to be free of all deflection, reinforced with 1" x 5" x 1" inverted 14-gauge stainless steel channels with 1" flanges, stud welded to the underside of tops in a vermin-proof manner. Two (2) channels running lengthwise under tops up to 30" wide (tops over 30" wide, channels spaced maximum of 30" on center). One (1) channel running from front to rear at legs and/or not more than 6'-0" on center. All intersections of channel reinforcing shall be fully welded and sealed.
- B. Tops with open edges shall have 1-3/4" on the bull-nose edge, or 2-inch rolled down the edge with all exposed corners rounded on a 2-1/2-inch radius or bull-nose corner. Where the table borders on or is adjacent to the wall, there is to be a 4" high backsplash with a 1-inch turn back to the wall with welded enclosed ends, unless otherwise specified. See Drawings for typical.
  - 1. Sleeves: Where legs, standards, pipes, or pipe chases come through a work area or tabletop, they shall pass through 3" high stainless-steel sleeves, with the periphery fully welded and polished to match adjacent surfaces.
- C. Where the tops are adjacent to walls, columns, equipment, enclosures, etc., they shall have a splash. The standard splash shall be in accordance with specifications.
- D. Where holes are punched through the top to accommodate equipment, said holes shall be ferruled and provided with a rubber grommet.
- E. Ends adjacent to similar equipment shall have a common end post.
- F. Bases shall be open-type construction, 1-5/8" O.D. stainless steel tubular legs spaced 60" on center, fitted with stainless steel bullet type, adjustable feet, and enclosed conical gussets unless otherwise specified. Cross bracing shall be 1-5/8" O.D. stainless steel tubular members fully welded to legs as required. Where undershelves are provided, they shall be constructed of

16-gauge stainless steel, fully welded to tubular legs, ground smooth, 10" above the finished floor. The braces shall be constructed to form rectangular, or "H" frames, and there shall be at least one brace welded to each leg.

1. Gussets shall be stainless steel NSF-approved, cylindrical type with a setscrew. Leg gussets are to be welded to the underside of tables, reinforcing channels, and underside of sinks. Gussets shall be Model No. A20-0206 manufactured by Component Hardware Group Inc. or comparable stainless-steel gussets manufactured by Standard- Keil Hardware Manufacturing Company, United Showcase, Component Hardware, and Kason Food Service.
2. Feet shall be stainless steel adjustable bullet shape, fully enclosed, tightly fitting the leg. Provide 1-inch up and down adjustment from the central position, at no time exposing any threads. Adjustments are to be easily made by hand without the use of tools. For counters and cabinet bases, the feet shall be the same as for above. Feet having comparable quality to Component Hardware Group, Inc. and Kason Food Service are approved. Legs for the cabinet base shall be 8 inches high, including feet. Freestanding sinks shall be supported on legs and feet as specified, with bracing from front to rear only.
3. When legs are furnished with stainless steel flanged feet, they shall be sealed and secured to the finished floor with stainless steel threaded anchor bolts. Anchor bolts are to be set 3" into the finished slab and extended to a minimum height above the finished floor as required for securing equipment. Equipment to be fastened down with stainless steel lock washers and nuts. Flange feet are to be set in a bed of FDA-approved clear silicone sealant prior to securing to the finished floor. Providing a bead of sealant after securing feet is not acceptable.

G. Casters:

1. Plate Type: Provide stainless steel swivel plate casters. Provide 5-inch Ply-Loc gray wheels with 1-1/4" tread, Zerk grease fittings, and seals and a 250-pound capacity. Front casters to have brakes manufactured by Component Hardware Model No. CMPI- 5RPB or equal manufactured by Jarvis Casters or Colson Caster.
2. Stem Type: Plate Type: Provide stainless steel swivel plate casters. Provide 5-inch Ply-Loc gray wheels with 1-1/4" "tread, Zerk grease fittings, and seals and a 250-pound capacity. Front casters to have brakes manufactured by Component Hardware Model No. CM54-5RPB or equal manufactured by Jarvis Casters or Colson Caster.

- H. When cross bracing is furnished with stainless steel flanged feet, they shall be sealed and secured to the finished wall and/or stainless-steel cabinet bases with stainless steel lock washers and nuts. Flange feet are to be set in a bed of FDA-approved clear silicone sealant prior to securing to the finished wall and/or equipment. Providing a bead of sealant after securing feet is not acceptable.
- I. All ends and edges that are rough or sharp shall be filed and ground to a safe, smooth finish before delivery to the job site.

## 6.5 TABLE WITH BAKER TOP

- A. The top is to be constructed of 3" thick maple hardwood with a 4" x 1" stainless steel channel subframe connected to the base.
- B. Table base, cross bracings, undershelves, splashes. etc. shall be provided as hereinbefore noted under Section 6.3.2 Table and Counter Tops, and hereinafter specified.

## 6.6 TABLE WITH POLY TOP

- A. The top is to be constructed of a 1-1/2" thick white anti-bacterial cutting surface with a 1" X 5" x 1" stainless steel channel subframe connected to the base. Top to be removable for cleaning.
- B. Table base, cross bracings, undershelves, splashes. etc. shall be provided as hereinbefore noted under Section 6.3.2 Table and Counter Tops, and hereinafter specified.

## 6.7 ENCLOSED BASES

- A. Closed base fixtures shall have rigid welded frames enclosed on all sides except where shelves and/or doors are required. The cabinet body shall be constructed of 16-gauge stainless steel.
- B. Tops shall be cross-braced with 1-1/2" X 1-1/2" X 1/8" galvanized angles spaced at 2'-0" O.C. maximum, reinforced with 14-gauge stainless steel 1" X 5" X 1" channels wherever necessary for rigidity.
- C. Leg channels shall be 1" X 5" X 1" 14-gauge stainless steel channels spaced 4'-0" O.C. maximum, on the bottom, to receive legs.
- D. Closed base fixtures shall be mounted on casters, or stainless-steel adjustable counter legs, as indicated on plans and/or item specifications.
- E. Shelf supports shall be continuous 1-1/2" X 1-1/2" X 1/8" galvanized angles welded to the frame. There shall be no exposed galvanized steel channels or supports.
- F. Utility chases shall be 18-gauge stainless steel with removable access or service panels.
- G. Partitions shall be 18-gauge stainless steel.
- H. Exterior panels shall be FRP plastic laminate as a part of millwork, or stainless steel with vertical grain as specified in item specifications.
- I. Non-exposed panels adjacent to walls or closed base fixtures shall be 18-gauge stainless steel.
- J. Interior shelf units shall be 16-gauge stainless steel, edges turned up 2" at sides and rear, down 1-1/2" at the front, and where shelves butt together, corners to be welded. The shelf is to be fixed and constructed in accordance with details (removable 2'-0" max. sections to be provided when specified for ease of removal and cleaning).
- K. Compressor compartments shall have removable louvered panels with 2" X 3/4" X 18-gauge stainless steel double channel perimeter frames, 1/2" X No. 16 Niles flat stainless steel expanded metal guards, 14-gauge galvanized steel compressor mounting channels, and enclosure panels.
- L. Recessed areas shall be lined with 18-gauge stainless steel.
- M. Plastic laminated panels shall have a 3/4" thick exterior plywood base veneered on all exposed sides and edges with Wilsonart, Formica, or Westinghouse Micarta plastic applied or laminated in strict accordance with the manufacturer's recommendations. Plastic laminated panels shall be without joints, and grain and pattern material, color, pattern, and/or texture shall be as approved by Project Architect.
- N. The trim shall be 18-gauge stainless steel with vertical grain.
- O. Stainless steel and brass trim shall have flush welded joints.
- P. Control panel recesses, valve handle recesses, and individual control knob recesses shall be 18-gauge stainless steel. Depth must be sufficient to prevent the control from protruding past the face of the body panel.
- Q. Legs shall be provided as specified. Weld to framing members of the counter. Provide 3-1/2" square 12-gauge galvanized steel top plate welded on legs that are bolted onto equipment. Secure with four (4) 1/4-20 stainless steel bolts.

- R. Cashier's stations shall have 18-gauge stainless steel liners, cash drawer liners, and 14-gauge stainless steel 30 degrees sloping footrests with 10" wide level tops.

#### 6.8 COLD PANS

- A. The interior shall be 16-gauge stainless steel one (1) piece construction with all corners coved on a 3/4" radius pitched to a 1" stainless steel drain fitting welded to the shell. Pipe drain line to the bottom of the cabinet.
- B. Exposed exteriors shall be 18-gauge stainless steel, and concealed exteriors shall be 18-gauge stainless steel.
- C. The entire pan shall be insulated with 2" thick urethane foam. Provide a non-toxic high-impact plastic breaker strip around the entire opening to prevent condensation.
- D. Refrigerated cold pan coils shall be 1/2" O.D., type K copper tube with wrought copper fittings and silver soldered joints. Space runs of the coil at 1-1/2" O.C. parallel to the long axis of the cold pan bottom and sides and solder in place. Runs equally spaced at 4" O.C. securing the coils to the pan. After the coils are secured to the pan, cover the entire bottom and sides with thermal mastic and apply a waterproof covering.

#### 6.9 UNDER COUNTER REFRIGERATORS / FREEZERS

- A. Refrigerators/freezers shall be all metal construction with no wood. The outer shell is to be constructed with 18-gauge stainless steel and be fully welded to form a vapor-proof seal. The inner shell is to be no less than 20-gauge stainless steel with coved corners pitched to a 1" stainless steel drain fitting welded to the shell. The drain should be located as close as possible to the blower coil.
- B. The entire compartment shall be insulated with 2" thick approved urethane insulation on all sides, top and bottom. Provide a non-toxic, high-impact plastic breaker strip around the entire cabinet opening perimeter. Provide the same heaters in freezer doors. A vinyl magnetic gasket shall be installed around the full perimeter of the cabinet opening for a positive seal. Flush mount a 2-1/2" diameter dial thermometer in the face of the cabinet.
- C. Interior shelving to be stainless steel wire shelves mounted on adjustable clips providing four-point support. Shelves shall be removable for cleaning. Provide one (1) bottom shelf and one (1) intermediate shelf unless otherwise specified.
- D. Doors shall be fabricated 1-1/2" thick with approved foam urethane insulation. Doors shall be 18-gauge stainless steel double pan type construction with flat sides for edge-mounted hardware secured to internal tapping strips in the door body. Provide each door with self-closing cam lift hinges. Door(s) to actuate an incandescent shatter-proof light. Light to be mounted so as not to interfere with storage space.
- E. Drawers, if specified, shall be mounted on stainless steel self-closing roller-bearing tracks with positive stops. A vinyl magnetic gasket is to be provided around the entire perimeter of the drawer front for a positive seal. Drawer fronts to be 18-gauge stainless steel double pan construction with urethane insulation. Provide condensate-proof heating wires in the cabinet mullion and the entire perimeter of the drawer opening.
- F. The refrigeration system shall be properly sized to maintain refrigerated food products at 38 degrees to 40 degrees Fahrenheit and frozen food at 0 degrees Fahrenheit.
- G. Where under-counter refrigerators are specified, and the top is to have an opening to receive stainless steel pans, the openings shall be die stamped. The top shall be provided with an 18-gauge stainless steel double pan removable cover with urethane insulation. Cover to be

furnished with gasket, stainless steel lift handle, and lid cover bracket assembly, as manufactured by Component Hardware, Keil, Grant, or Knape.

#### **6.10 UNDER COUNTER REFRIGERATION SYSTEMS**

- A. Evaporator coils for fabricated under-counter refrigerators/freezers shall be blower-type coils and installed for accessibility and replacement.
- B. All temperature controls, expansion valves, sight glass, and solenoid valves are to be installed at the time of manufacturing and mounted for easy adjustment and service.
- C. Refrigeration circuits shall have automatic expansion valves, dual high-low pressure switches, high-pressure line sight glass, and line vibration eliminators.
- D. Evaporator coils shall have the condensate drain line routed to and furnished with a condensate evaporator, as manufactured by Component Hardware, Keil, Grant, or Knape. Provide wall mounting brackets if required.
- E. Each condensing unit shall have a separate control switch with a pilot light and an engraved phenolic plastic identification sign.
- F. Refrigeration lines are to be Type ACR copper with cast fittings assembled by silver soldering joints. Silver soldering or silver brazing shall be done in the presence of nitrogen (oil pumped) in tubing to prevent oxidation and scale formation. The refrigeration system shall be evacuated three (3) times to a pressure of 500 microns maximum and flushed between each evacuation with refrigerant. Refrigeration lines shall be insulated with Armstrong Armaflex insulation.
- G. Refrigeration systems shall operate on Freon R-22 in high and medium temperatures and Type 448A in low-temperature applications.
- H. On remote refrigeration systems, all refrigeration piping is to be pre-piped at the time of manufacturing and routed to one (1) central location ready for a one (1) point hook-up by the Refrigeration Contractor.

#### **6.11 REFRIGERATION**

- A. All refrigeration systems (piping, hangers, compressors, evaporators, installation, etc.) shall comply with Division 22000 and be factory installed by a properly licensed heating and air conditioning contractor. The Contractor must have three (3) years of experience with projects of this size. Upon completion of testing, the manufacturer shall provide the Architect with a written certificate of acceptance, showing that all quality standards have been met and the complete system is operating properly.
- B. Provide start-up and one-year service and maintenance contracts in addition to a regular one-year guarantee for self-contained refrigeration systems.
- C. The refrigeration system shall be pre-packaged, pre-engineered, factory assembled, air-cooled, remote refrigeration system. Verify the location of the system. Provide weather-proof housing.
- D. System to be complete with all refrigeration equipment and accessories required to make a complete refrigeration system that will maintain temperatures indicated. The system is to be provided with low ambient controls consisting of all required condenser fan controls, thermostat time clocks, and crankcase heaters. Refrigerator and freezer condensing units and coils shall be as called for in the itemized specifications and as shown on the plan.
- E. Refrigeration units shall be provided with single-stage compressors with air-cooled condensers operating at such speed within the recommended range of suction and discharge pressures for walk-in coolers and freezers and with required BTU specifications. Each compressor unit shall

be equipped with a compressor, large pump down the capacity receiver with two shut-off valves, liquid line drier, sight glass, suction and discharge vibration eliminator, high-low pressure control, crankcase heater, and flood back head pressure control for low ambient - all factory assembled. Provide all new units of the same manufacturer, factory assembled, to operate with Refrigerant R-448 for the cooler and R-448 for the freezer, 100 degrees F., ambient air, capacities selected on 16 hours running time basis.

- F. Hook-up: Room thermostat and liquid line solenoid valves (for pump down cycle operation) and refrigerant lines (insulated as required) to be provided by FEC All electrical interconnection and control wiring between blowers and compressors is to be provided by the Electrical Contractor. FEC to provide manufacturer's literature and data to electrical contractors in coordinating this work.
- G. System to be pressure tested (both high and low side) with dry nitrogen at 300 psi. After evacuating the system and charging it with refrigerant, test piping with a halide torch and prove tight under actual operating conditions.
- H. Refrigerant Piping and Accessories: FEC to extend refrigerant lines from condensing units to evaporators until completely hooked up and made ready for operation. The system shall be complete and sized to conform to current ACRMA standards. Refrigerant, drain, and condensate water piping shall be Type "L" hard-drawn copper ACR refrigerant tubing with long radius wrought copper solder joint fittings.
  - 1. Provide wall sleeves, hangers, and escutcheons as specified for typical piping. Make-up joints with high-temperature silver-solder (SIL-FOR or equal) suitable for 300 psi working pressure. Pass dry nitrogen gas through the pipe while joints are soldered.
  - 2. All refrigerant suction lines shall be insulated with UL fire, and smoke-rated nominal 3/4" thick flexible foamed plastic, closed-cell pipe insulation equal to Rubatex R-180-FS. Insulation shall have a "k" factor of not more than 0.26 at 70 degrees F mean temperature and a water vapor transmission rate of 0.1 per-inch or less. Slip onto the pipe prior to erection and seal butt joints with #373 adhesive. Insulate sweat fittings with miter-cut pieces of insulation the same size as on adjacent piping. Insulate screwed fittings with sleeved fitting covers fabricated from miter-cut pieces of insulation according to the manufacturer's sleeving size recommendations, overlap, and seal to the adjacent pipe insulation.
  - 3. Paint all insulation with two coats of Rubatex 374 white finish. Condensate drain lines are the same as refrigerant suction lines except for 3/4" thickness.
- I. Sleeves: FEC to provide drawings showing locations and sizes of all necessary sleeves for refrigeration lines, drain lines, etc. Actual penetration through building walls and floors is to be provided by the General Contractor.
- J. Freezer drain lines are to be wrapped in electric heater cable to prevent freezing of condensate in drain lines. All drain lines to exit compartments, as shown on the plan. Secure approval of drain line routing from the Architect prior to installation. The freezer is equipped with an electric defrost unit complete with a timer and built-in thermostat to return systems to the freezing cycle and delay the start of the circulating fan until the heat in the coil has been removed. Timer to stop the defrost cycle in case of thermostat failure. Extend drains from coils in copper tubing through walls to drip over and into a floor drain.
- K. Control Panel: The package shall have factory mounted and pre-wired control panel complete with interlocked main fused disconnect, compressor circuit breakers, contractors, and time clocks wired for single-point electrical connection. The electrical Contractor shall provide and install main power lines to the panel and use wire harness wiring for control and defrost heater between the defrost clock and the refrigeration fixtures, all in accordance with the wiring diagram and local codes. The temperature for each unit shall be controlled by means of a thermostat wired to actuate a solenoid valve in the liquid line, with the compressor operation

controlled by the low-pressure cutout switch. The thermostat and low-pressure controls shall be adjusted to maintain the room temperatures as specified.

- L. Service Contract to Cover Guarantees: Emergency refrigeration service shall be placed with a reliable local refrigeration company maintaining 24-hour service for the life of guarantees and warranties.
- M. Pipe Rack: Compressors shall be furnished with the manufacturer's standard factory-assembled rack unless otherwise specified. Rigidly mount compressor unit motors on the unit or cast base to effect quiet operation.
- N. Provide an electrical phase protector.

#### **6.12 DISH TABLES AND SINK SECTION TOPS**

- A. Tops, troughs, sinks, and back and end splashes shall be 14-gauge stainless steel, integral all welded construction. Tops shall be reinforced with 1"x5"x1" inverted 14-gauge stainless steel channels. Edges shall be constructed per details, 3" high. Back and end splashes at walls, per details, 8" high, 3" return on 45 degrees, 1" turn down at the wall. Top shall slope to dish machine, sinks, troughs, cones, and drainers a minimum of 1/4" per foot with backsplashes and table edges remaining level. When the tabletop attaches to the dish machine, turn it down into the machine and anchor securely, using only stainless-steel fasteners. The front edge and rear splash at the dish machine are to be watertight and welded closed. All sinks, disposer cones, sumps, troughs, or chutes shall be integrally welded with a top to give a one-piece appearance.
- B. Bases shall be open-type construction, 1-5/8" O.D. stainless steel tubular legs, fitted with stainless steel bullet type, adjustable feet, and enclosed conical gussets. Cross-bracing shall be 1-5/8" O.D. stainless steel tubular members welded to legs as required.
- C. When legs are furnished with stainless steel flanged feet, they shall be sealed and secured to the finished floor with stainless steel threaded anchor bolts. Anchor bolts are to be set 3" into the finished slab and extended to a minimum height above the finished floor as required for securing equipment. Equipment to be fastened down with stainless steel lock washers and nuts. Flange feet are to be set in a bed of FDA-approved clear silicone sealant prior to securing to the finished floor. Providing a bead of sealant after securing feet is not acceptable.
- D. When cross bracing is furnished with stainless steel flanged feet, they shall be sealed and secured to the finished wall and/or stainless-steel cabinet bases with stainless steel lock washers and nuts. Flange feet are to be set in a bed of FDA-approved clear silicone sealant prior to securing to the finished wall and/or equipment. Providing a bead of sealant after securing feet is not acceptable.

#### **6.13 DOORS AND REMOVABLE PANELS**

- A. Metal doors shall have 18-gauge stainless steel exteriors and interiors. Form 1-1/2" X 90-degree edges on all sides and welded corners. Rear panels must slip inside front panels and form a double pan assembly with tight joints. Doors and panels are to be easily removable without tools and constructed per details. All doors are to be provided with locking hardware with stainless steel face No. P20-0490 Component Hardware, Keil, Grant, or Knape.
- B. The insulation between panels shall be 1-1/2" rigid fiberglass. Secure to both panels where hardware and other screw fastenings are required.
- C. Metal doors shall have 12-gauge steel tap-in plates welded to the inside of panels where hardware or other screw fastenings are required.
- D. Sliding door tracks shall be No. 1357 Series Keil, Component Hardware, Grant, or Knape. Secure with 1/4"-stainless steel bolts. Sliding door roller assemblies shall be No. 1358-1212-

1000 Keil, Component Hardware, Grant or Knappe, and Vogt. Sliding and hinged door pulls to be full grip, stainless steel No. P46-1012 Component Hardware, Keil, Grant, or Knappe.

- E. Hinged doors to be hung on two (2) stainless steel lift-off type hinges No. R74-800RH and R74-8000LH Component Hardware. Doors are to be fitted with fabricated integral full-grip horizontal stainless steel pulls. Doors to be furnished with flush mounted, concealed type, magnetic catch No. M35-1000 or M35-2000 Component Hardware. For doors measuring more than 24" wide, furnish additional catch at the bottom of doors. For all hardware, Keil, Grant, or Knappe are acceptable.
- F. Louvered doors shall be constructed the same as the door except the center section shall be provided with 18-gauge stainless steel fabricated louvers tack welded flush with the door surface.
- G. Removable panels shall be constructed the same as the door and in accordance with details.

#### **6.14 SINKS**

- A. Construct sinks of 14-gauge stainless steel forming corners with a 3/4" radius, both horizontal and vertical. Sink sizes established on the drawings by Camacho shall be inside measurements.
- B. Provide double-wall partitions between sink compartments with 3/4" radius corners, 3/4" radius top edge, integrally welded in place, ground smooth and polished. Fronts, bottoms, and backs of multiple sinks shall be one piece with no overlapping joints and/or open crevices. The bottom of each sink shall be creased to the center and fitted with a lever-operated rotary waste drain with a strainer plate, chrome-plated tailpiece, and overflow pipe.
- C. The rotary waste drains shall be set into a 1/2" deep recess assuring complete draining. Overflows shall be fitted in the back of the sink to maintain a constant water level 1" below the sink's top edge.
- D. Where sinks occur in tables, sinks are to be integrally welded and polished as above.
- E. Provide all required holes for faucets, vacuum breakers, chemical supply lines, etc.

#### **6.15 SINKS (DROP-IN TYPE)**

- A. Construct sinks of 14-gauge stainless steel forming corners with a 3/4" radius, both horizontal and vertical, and a 1-1/2" wide perimeter flange. Sink sizes established on the drawings by Camacho shall be inside measurements. The bottom of each sink shall be creased to the center and fitted with a lever-operated rotary waste drain with a strainer plate, chrome-plated tailpiece, and overflow pipe. The rotary waste drains shall be set into a 1/2" deep recess assuring complete draining. Overflows shall be fitted in the back of the sink to maintain a constant water level 1" below the sink's top edge.

#### **6.16 DRAWERS**

- A. Drawer shall be constructed per detail. Drawer liners shall be 18-gauge stainless steel; 20"x20"x5" deep removable insert pan No. S81-2020 for tool drawers; 20"x20"x10" deep No. S83-2020 for bread drawers, as manufactured by Component Hardware. Pans to be easily removable without removing the frame or un-tracking the drawer.
- B. Supporting drawer frame shall be 14-gauge stainless steel welded channel. Drawer faces are to be 18-gauge stainless steel double wall construction fully welded with insulation between. Face to be welded to drawer supporting frame. Drawers furnished to be fitted with fabricated integral horizontal full grip, stainless steel pulls per details.

- C. All drawers shall be provided with adjustable replaceable rubber stops.
- D. Drawers are to be enclosed in 16-gauge stainless steel housing under open base tables to make them vermin-proof.
- E. Drawer slides shall be Component Hardware No. S52 Series, 14-gauge stainless steel slides mounted on 14-gauge stainless steel supporting channel frame fitted with stainless steel ball-bearing wheels. Slides to be of a self-closing type of sufficient length to allow drawer liner to be removed without removing slides. The drawer shall support a minimum of 150 pounds capacity in a fully opened position.
- F. The drawer shall have keyed, locking hardware, stainless steel faced No. P30-4700 Series as manufactured by Component Hardware.
- G. Anti-Bacteria, NSF approved cutting board to be Chef's Edge with Microban 18"x24" with 4"x1" handle slot as manufactured by C&K Manufacturing or approved equal. Cutting board to be mounted on 14-gauge stainless steel channels.

#### 6.17 DRAINER PANS

- A. Drainer pans shall be constructed of 14-gauge stainless steel welded integral with tops. Drainer pans shall be a recessed integral part of the top with cove corner bodies that slope to drains per details.
  - 1. Drainer with the disposer.
  - 2. Drainer with removable strainer for pot and pan sinks without disposer.
  - 3. Drainer with removable strainer for countertops.
  - 4. Drop-in drainer with removable strainer for countertops.
  - 5. Drainer with removable strainer secured with tamper-proof fasteners.
- B. Drainer pans recess fitted with strainers located below each glass filler, urn faucet, beverage dispenser, ice dispenser, or draft beer spigot.
- C. Drip pan strainers shall be No. 1580 Series Keil heavy-duty stainless steel drip plates with three (3) 3/4" wide louvers X 90% total strainer length, two (2) No. 1586-1010-1318 Keil finishing rings in each section, 1" X 90-degree angle edges, and welded corners. Component Hardware is an approved equal.
- D. Drip pan strainer shall be constructed in equal length, removable sections.

#### 6.18 ELECTRICAL

- A. Electrical conductors shall be run in rigid conduit to a junction box on the exterior the of fixture and have a minimum 12" pigtail.
- B. Flexible conduit shall not be used except for motor connections.
- C. Motors shall have a flexible conduit vibration section, at least 12" long and not over 24" long, with a ground wire running through the conduit.
- D. Wiring in prefabricated and/or manufactured equipment shall be U.L. approved construction by the equipment manufacturer.
- E. Wiring in custom-built equipment, areas, locations, or compartments where the temperature may exceed 150 degrees F. shall be of Type A1 moisture-proof range and appliance lead wire with nickel conductors, with an approved insulation and braided cover.
- F. Wiring in custom-built equipment, areas, locations, or compartments that will be exposed to moisture or high humidity shall be Type THW-75C machine wool wire with copper conductors

and thermoplastic insulation. All internal wiring in custom-built equipment shall be terminated in one (1) junction box that is accessible for connection and service.

- G. All wiring shall be permanently marked by color coding. A permanent wiring diagram shall be attached to each piece of equipment. Conductors connected to terminals shall have T & B Sta-Kon rings.
- H. Conductors connected together shall have Buchanan Crimp connectors including splash caps and insulators.
- I. Conductors of multi-wire branch circuits shall have two (2) wire circuits with one (1) black and one (1) white: three (3) wire circuits with one (1) black, one (1) white, and one (1) blue.
- J. Neutral conductors shall be white.
- K. Grounding conductors shall be green.
- L. Electrically operated portable equipment shall have a cord and plug.
- M. Service cords shall be Type SJO with grounding conductor securely fastened to the body or frame of equipment.
- N. Plugs shall be grounding type with service cord grounding conductor connected to grounding blade.
- O. Receptacle grounding contacts must be clearly labeled with instructions for the electrician to connect this terminal or contact the branch circuit grounding conductor.
- P. Electric motors shall have control switches for starters.
- Q. Electric motors and electrically heated equipment directly connected to the building electric system shall have a positive disconnect that will open all conductors and meet NEMA standard KS-1-1957 for Type H.D. switches.
- R. Combination starters and disconnects installed in a single NEMA enclosure shall have the same type of components as individual starter switches, fused switches, and breakers.
- S. Starters, transformers, and disconnects shall have NEMA enclosures in dry areas and watertight NEMA 4 or 5 cast enclosures in wet areas.
- T. Each light fixture or group of light fixtures in the same system shall have No. 1251-1 Hubbell or equivalent Arrow-Hart or Pass and Seymour double pole press switch.
- U. All equipment specified or detailed where light fixtures are specified shall LED. All LED lighting fixtures furnished as part of the food service equipment contract shall have a CRI value greater than 90 each, dimmable when specified. LED fixtures are to be provided and installed by the FEC.
- V. Recessed receptacles and switches with pilot lights shall be stainless steel finish, Model R73-1210 and R-73-1212 by Component Hardware, or approved equal, specified with stainless steel faceplates.
- W. Two (2) or more receptacles of the same voltage in the same equipment shall be pre-wired to a common junction box for one (1) final connection, providing the total load does not exceed 30 amps. All pre-wiring shall be done in rigid conduit with all wires color-coded and tagged.
- X. When counters are specified to be pre-wired to circuit breaker panel(s),
  - 1. FEC shall provide 'Square D' breaker panel(s), or approved equal, sized as required to meet the equipment loads as well as local and state codes. Each panel shall be mounted within the counter cabinet body behind the hinged stainless-steel door as located and shown on the plan.

2. Panel(s) to have individual breakers as required and main breaker; all utilities to be on separate breakers. All wires shall be tagged, numbered, color-coded, run through an approved conduit, and located in cabinet utility chase. All breakers shall be labeled, and the unit shall be supplied with wiring schematics.
3. For counters requiring delivery in sections for re-assembly in the field, each section the of counter shall be pre-wired and wire ends supplied with snap-lock type connectors ready for reconnection in the field.
4. Providing rolls of wiring with a counter is unacceptable. The counter shall be complete, and ready for one (1) final connection to each circuit breaker panel by Division 16.

#### **6.19 HANGER ASSEMBLIES**

- A. Framing members for hoods, hoists, or other equipment with a live load of 500 pounds or weighing over 500 pounds shall be 2" X 2" X 1/4" steel angles spaced at 36" O.C. maximum.
- B. Hangers for piping, refrigerant lines, and beverage dispenser conduit shall be Power-Strut metal framing with Series PS-300 channels, Series PS-10 spring clamping nuts, 1/2" diameter hanger rods, brackets, beam clamps, conduit clamps for each pipe or line and fasteners.
- C. The horizontal runs of two or more pipes or lines shall have Power-Strut trapeze hanger and/or surface mounting assemblies spaced at 60" O.C. for lines smaller than 3/4" O.D., 72" O.C. for lines 3/4" to 1-1/2" O.D. for lines 1-5/8" O.D. or larger.
- D. Horizontal and vertical runs adjacent to building walls shall have surface-mounted assemblies with the same spacing and trapeze assembly.

#### **6.20 ELEVATED SHELVES**

- A. Shelves shall be constructed of 14-gauge stainless steel, as applicable.
- B. Shelves shall be level and plumb, underbraced same as top hereinbefore specified when exceeding 48" in length.

#### **6.21 OVERSHELVES**

- A. Over shelves shall be fabricated of 16-gauge stainless steel with edges rolled down or up and supported as specified.
- B. Over shelves mounted on tabletops shall be supported by 16-gauge stainless steel tubular legs. Legs are to be securely fastened to the tabletop with fasteners similar to Model No. 1655000272, manufactured by Kason Food Service or an approved Manufacturer.

#### **6.22 WALL SHELVES**

- A. Wall Shelves shall be fabricated of 16-gauge stainless steel and the same construction as "Over shelves." Secure brackets to the wall with stainless steel screws with expansion shields. Brackets shall be spaced on a maximum of 4 feet on center.
- B. Wall shelves shall be supported on the table's extended rear legs with cantilevered supports of 14-gauge stainless steel flag brackets.

#### **6.23 TROUGH / DISPOSER INSTALLATION**

- A. Fit end(s) of the trough with one (1) chrome-plated water inlet, Component Hardware No. K36-6000, with gate valve control. Minimum connection to unit 1/2". Additional water inlets shall be provided as shown in the drawings and as specified in the itemized specifications.

- B. Each sump, cone, or sink with a disposer mounted in the bottom shall be fitted with a water inlet as specified above, located to direct waste into the disposer with a minimum splash.
- C. All connections shall be made in accordance with the manufacturer's recommendations (FEC shall show schematics on rough-in drawings).
- D. Entire trough/sump combination shall be integral with top to give a one-piece appearance; designed to transfer waste into disposer without accumulation or restriction. Trough/sump to be provided with integral stainless-steel silver saver adjacent to disposer entrance. Silver-saver to be furnished with drain, per Detail DET-37.02
- E. Furnish 14-gauge stainless steel, flush, removable disposer cover with perimeter edge turned down 1/2" at sump/cone.

#### **6.24 STAINLESS STEEL CHANNEL BASE FRAMES.**

- A. Constructed of 12-gauge stainless steel channels.
- B. Stainless steel channel base to be constructed of u-shaped 2" x6"x2" 12-gauge Type 304 stainless steel fully welded, to be secured to equipment cabinet base and finished floor with 3/8" stud bolt at each corner and 4'-0"o.c. with expansion anchor in the concrete slab. Provide cross bracing and notch to suit floor drains and mobile equipment as required. Channel base to be sized to meet equipment requirements to ensure proper clearances, toe kicks, and utility access relative to equipment specified and provided, disassembled, and reassembled in the field, set in place prior to setting equipment in place. Channel base to be epoxy coated and/or finished as specified by the project architect or interior designer or as required by the authority having jurisdiction, secured, and sealed to the floor.
- C. Channel base to be filled with concrete by General Contractor with a sealed top (as required) and cove base. PSI rating of concrete is to be verified by General Contractor with the project architect and/or structural engineer.
- D. Upon installation of equipment, FEC to secure and silicone equipment base to channel frame.

#### **6.25 PASS-THRU TRIM**

- A. Where pass-thru refrigerators, freezers, and/or hot food cabinets are installed through the wall, FEC shall trim both sides of the opening, full perimeter, with trim matching the finish of the units installed. Trim to have a continuous appearance, secured with concealed type fasteners. When units are furnished with 6" high stainless-steel legs, FEC shall provide a removable kick plate (toe base) to match the finish of units, unless otherwise specified. The trim shall be fully sealed to the wall. Exposed fasteners are not acceptable.

#### **6.26 BOOSTER HEATERS**

- A. Booster heaters to be furnished complete with water pressure/temperature relief valve, water pressure regulating valve, low water protection, shock absorber, water treatment system, adjustable thermostat set to provide required supply of 185-degree hot water at dish machine spray nozzles, and two (2) temperature/pressure indicating thermometers (one located on the incoming water line to the booster and one on the outgoing line to the dish machine).
  - 1. FEC shall verify all the above items have been installed and are in a location to provide ease of access to all controls, valves, stops, etc., without moving the heater and/or other equipment.

#### **6.27 DISPOSERS**

- A. The disposer is to be furnished complete with line strainers, chrome plated vacuum breaker, and flow control valves (15GPM of water flow into the base of disposer; 10 GPM water flow into the end of the trough). Provide 14-gauge stainless steel cover plates for trough at cone or sink, and 14-gauge stainless steel control panel mounting bracket. Unit shall be located so that the body and/or legs are positioned a minimum of 2" back from the front edge of the table.

#### **6.28 FIRE PROTECTION SYSTEMS**

- A. Provide as shown and described on contract documents.

#### **6.29 SODA/JUICE SYSTEM**

- A. Soda/ice juice dispensers are to be furnished by Owner's vendor or as described in contract documents.

#### **6.30 BEER DISPENSING TOWER SYSTEM**

- A. Draft Beer System sized as per manufacturer's requirements to include all necessary components, accessories and fittings required for a complete and operating system.

#### **6.31 LIQUOR SYSTEM**

- A. Liquor System sized as per manufacturer's requirements to include all necessary components for a complete system.

#### **6.32 BEVERAGE CONDUIT AND RACEWAY**

- A. Acceptable manufacturer: Conduit – Kelly Bevway, HP Products, or equal.
- B. Raceway – Evolution Stainless Products, or equal.
- C. All beverage raceways are to be sized to accept multiple beverage runs for soda, beer and liquor.
- D. Raceway to be constructed of #14 and #16 gauge stainless steel with removable cover.
- E. Size and routing as per design drawings. FEC is to verify all routing and coordinate with all trades as the routing of the raceway and/or conduit.
- F. All conduits are to be minimum of 6" O.D. tubing. See drawing for size and material.
- G. FEC is to provide shop drawings indicating all starting and ending points with access and pull points indicated on the drawings and a note as to the content of the raceway or conduit shown unless specified otherwise.

#### **6.33 MISCELLANEOUS ACCESSORIES**

- A. Water Filters:
  - 1. Provide water filters for all ice-making, hot and cold beverage equipment, and all steam boilers. All filter units are to be provided with shut-off valves and quick-change filters.
  - 2. FEC to ensure water supply is comprehensively tested, and that the water filter specified effectively treats water within the manufacturer's water standards.
- B. Stainless Steel Enclosures:
  - 1. Provide 20-gauge stainless steel trim to fill in wall openings at Pass-Thru Cabinets. Trim will overlap the wall by approximately 2 inches and be within 1/2 inch of cabinets on the side. Provide for a 3-inch opening between the top of the cabinet and wall.

- C. Stainless Steel Ceiling Panels:
  - 1. Provide 20-gauge stainless steel ceiling panels around the perimeter of the Exhaust Hood. Panels shall extend a minimum of 18 inches away from Exhaust Hood. Verify actual panel sizes from Architect's reflective ceiling plan.

#### **6.34 OWNER VENDOR SUPPLIED ITEMS**

- A. FEC to fully coordinate all Owner furnished items, verify utility requirements, and indicate on shop drawings and utility rough ins, as required.

### **PART 7 - PROCEDURES**

#### **7.1 WORKMANSHIP**

- A. Entire procedure, including materials, workmanship, details, fabrication, and fastening methods shall comply with applicable standards.
- B. Workmanship and finishes shall be in accordance with the best practices of the trade. Only skilled workers shall be employed in the fabrication and erection of the work of this section.
- C. Work shall be provided complete in every detail and the finished work shall be strong, rigid, neat in appearance, and free from defects as may be determined by the Owner / Project Architect and/or Camacho.

#### **7.2 WELDING**

- A. Joints in stainless steel shall be electrically welded using stainless steel electrodes. All welds shall be free of pits and flaws. Acetylene welding or silver soldering will not be acceptable.
- B. Joints in galvanized material shall be electrically welded using electrodes designed to weld galvanized metal. All welds shall be free of pits and flaws.
- C. Acetylene welding will not be acceptable. Materials spot welded together shall have welds equally spaced in straight parallel or perpendicular lines. Spot welding procedure or technique is to be in strict accordance with the recommendations of the material and/or welding machine manufacturer.

#### **7.3 FINISHING**

- A. Joints in stainless steel that have been welded shall be ground smooth and polished to a No. 4 finish. The grain shall be blended into the grain of surrounding surfaces.
- B. Joints in galvanized material that have been welded shall be thoroughly cleaned and finished with one coat of zinc-rich paint (70% minimum). Galvanized steel shall be washed with mineral spirits, primed with Pratt and Lambert Effecto Primer or approved substitute, then spray painted with two (2) coats of Pratt and Lambert Effecto Enamel, or approved substitute of color selected by Camacho / Project Architect. Allow eight hours minimum drying time between the coat of paint and primer.
- C. Powder-coated items shall have a fifteen-year warranty against chipping, cracking, fading, scratching and/or damage due to temperature. Colors to be selected by Project Architect. Finish and materials to be approved for food service use by all governing agencies.

#### **7.4 LUBRICATION – OIL AND GREASE**

- A. Each moving part in the entire food facilities installation shall be provided with suitable bearings with provision for greasing, or with grease gun connections suited to a high-pressure gun for distributing heavy oil or light grease. Points of lubrication shall be readily accessible.

## **PART 8 - MATERIALS**

### **8.1 HARDWARE**

- A. Hardware used in the construction of custom-built equipment shall be standard products of an approved hardware manufacturer and/or as approved by Camacho / Project Architect. Hardware shall be heavy-duty chrome plated brass (walk-in door hardware shall be Kason or approved equal) or stainless steel where specified, by Component Hardware, Keil, Grant, or Knape. All locks specified on equipment shall be of the same manufacturer, keyed alike unless otherwise requested by the Owner.

### **8.2 STAINLESS STEEL COMPONENTS**

- A. Flat sheets shall be type 304 with no.3 finish, in accordance with ASTM-A-167-70 standard. Materials shall be new, of prime quality, and of full gauge thickness. Stainless steel shall be type 304, 18-8 series, with a content of from 17% to 19% chrome, 7% to 10% nickel and a maximum carbon content of 0.09. The exposed surface shall be interpreted to include all inside surfaces exposed to view when the item is open.
- B. Structural shapes shall be type 304 with no.3 finish on all exposed surfaces.
- C. Hardware and fittings shall be the standard product of the manufacturer named as a standard.
- D. Tubes shall be type 304, ornamental grade, with no. 4 finish, 16 gauge minimum, seamless drawn.

### **8.3 GALVANIZED STEEL COMPONENTS**

- A. Flat sheets shall be type 1, class D, in accordance with FF-QQ-S-775D standard.
- B. Structural shapes shall be galvanized by the hot dip process in accordance with ASTM- A-123-69 standards.
- C. Tubes shall be welded steel, structural grade, with a hot dipped galvanized finish applied after fabrication.
- D. Pipes shall be type S, grade B, schedule 40, in accordance with ASTM-A-53-69 standard.

### **8.4 BRASS COMPONENTS**

- A. Flat sheets shall be 70% copper and 30% zinc alloy in accordance with ASTM B19, B36, alloy 260 half-hard finish.
- B. Brass tops are to be B & S gauge as specified.
- C. Structural sheets are to be B & S 18 gauge and seamless.
- D. Brass flat surfaces and structural shapes are to have a mirror finish.
- E. Welds are to be restored to a mirror finish and shall blend into the surface of the surrounding surfaces.

### **8.5 COPPER COMPONENTS**

- A. Flat sheets shall be hard copper ASTM B152, type ETP. 48 ounces per square foot.

#### **8.6 STRUCTURAL STEEL SHAPES**

- A. Angles, channels, rods, and bars used as framing members shall be extruded shapes that are uniform in cross-section, ductile in quality, and free from hard spots, runs, checks, or other defects.
- B. Structural shapes shall conform to ASTM-A-36-70 standards.
- C. Bent or formed sheet metal will not be accepted as a substitute for structural materials unless prior approval in writing is obtained from Camacho / Project Architect.
- D. Where brakes are specified, they shall be adjustable, cam acting, side lever with positive brake shoe on the wheel tread.

#### **8.7 INSULATION**

- A. Fiberglass batts shall be Johns-Manville, Owens-Corning, or W.R. Grace Zonolite blanket insulation.
- B. Plastic foam board insulation shall be Dupont urethane or an approved substitute.
- C. Insulation thickness indicated shall be foamed in place or constructed from multiple layers of board insulation of batts with staggered joints and perpendicular seams.

#### **8.8 WOOD**

- A. Lumber shall be free from knots, pitchy seams, or other imperfections, thoroughly air-seasoned and Kiln dried. Cover all exposed surfaces with two coats of odorless waterproof coating.
- B. Plywood shall be marine grade or exterior APA grade with closed grain and thickness specified.
- C. Exposed wood surfaces to be Birch, interiors to be Cypress, Spuce, or Northern White Pine. Frame casing and jambs to be clear Douglas Fir.

#### **8.9 FIBERGLASS (FRP)**

- A. Fiberglass Reinforced Polyester (FRP) shall be molded with permanent color, minimum thickness, 1/8", glass content 33% minimum, Barcol hardness at least 55, a flexural strength of 30,000 PSI minimum, tensile strength 25,000 PSI. All FRP parts shall be by manufacturer and color as selected by the Project Architect and/or Owner.
- B. Where finished FRP parts are used in conjunction with casters or other metallic parts which impart concentrated stress at specific points, these points shall be reinforced with stainless steel battens, bars, or other required shapes.
- C. Fire ratings shall be as specified by the Project Architect.

#### **8.10 PLASTIC LAMINATING**

- A. Plastic laminated panels shall be constructed of 3/4" thick marine grade plywood veneered on all exposed surfaces with a plastic laminate of pattern and color as selected by Architect / Interior Designer, Seal all unexposed sides with 1/8" Masonite.
- B. Plastic and Masonite shall be pressure laminated to plywood with mastic recommended by the plastic manufacturer.

- C. No joints shall be permitted when standard sheet size will permit panels to be constructed without joints.
- D. Grain on upright surfaces shall run vertically. All inside corners are to be sealed with an approved sealer as per above.

### 8.11 CASTERS

- A. Casters on prefabricated equipment shall be the equipment manufacturer's standard product as specified under the itemized equipment list.
- B. Casters on custom-built equipment shall be Jarvis N.S.F. non-marking polyurethane or approved substitute or as specified under itemized specifications.
- C. Casters shall have wheel sizes indicated.
- D. Standard duty (S.D.) casters shall be No. 5-25-111 swivel plate casters or No. 5-30-113.
- E. Heavy duty (H.D.) casters shall be No. 5-30-113 plate casters.
- F. Secure plate casters with four (4) 1/4-20 stainless steel bolts, stainless steel lock washers, and stainless-steel nuts.

### 8.12 FAUCETS, SPRAY UNITS, AND ACCESSORIES

- A. All faucets, spray units, and accessories shall be chrome-plated, heavy-duty brass, equipped with removable seats and aerators, manufactured by T&S Brass. Approved manufacturer Fisher. Each faucet shall be furnished with 4" wrist action handles unless otherwise noted in the itemized specifications. One (1) faucet shall be provided for each sink bowl unless otherwise shown on drawings and noted in the itemized specifications.
  1. Backsplash mounted faucet No. B-0231-CR with 12" swing faucet and 1/2" inlet.
  2. Backsplash mounted faucet No. B-0290 with 12" swing spout and 3/4" inlet.
  3. Backsplash mounted pre-rinse/faucet assembly No. B-0133-12A-CBJST with 12" swing spout and 1/2" inlet (vegetable prep and pot wash sinks).
  4. Backsplash mounted pre-rinse/faucet No. B-0287 with 12" swing spout and 3/4" inlet
  5. Backsplash mounted pre-rinse assembly No. B-0133-CR with 1/2" inlet (ware wash sink).
  6. Top or deck-mounted faucet No. B-0300-CR with 12" swing spout and 1/2" inlet.
  7. Top or deck-mounted faucet No. B-0325-CR with 1/2" inlet (hand sinks only).
  8. Top or deck-mounted faucet No. B-1142-04-CR with 1/2" inlet (servery sinks only).
  9. Top or deck-mounted electronic faucet No. EC-3100-HG with 1/2" inlet (servery sinks only).
  10. Service sink faucet No. B-0665-BSTP-CR
- B. All units to be complete with check valves.
  1. Vertical No. B-CW1-2 with 1/2" inlet.
  2. Horizontal No. B-CVH1-2 with 1/2" inlet.
  3. Vertical No. B-CW3-4 with 3/4" inlet.
  4. Horizontal No. B-CVH3-4 with 3/4" inlet.
- C. Pot fill faucet assembly (wall mounted) No. B-2312 as manufactured by T&S Brass.
- D. Fill faucet assembly (serving counter) No. B-101-A modified with No. 013E-84 flexible stainless-steel hose, No. B-KF built-in flange and No. B-0512 mixing valve complete with check valves.
- E. Cart washer spray unit (wall mounted) No. MV-0771-12R complete with check valves.

- F. Hose reel assembly, closed, No. B-7132-U01-WS8T-C with 50'-0" hose (unless otherwise specified), stainless steel surface mount control box.
- G. Hose reel assembly, open, No. B-7142-02 with 50'-0" hose (unless otherwise specified).
- H. Small undermount hose reel assembly No. B-7161-C with No. B-0512 mixing valve.
- I. Vacuum breakers shall be mounted neatly above the tabletop or backsplash as required. Provide No B-0455-04 (for a flat surface) and B-0455-M3991 (for a 45-degree surface) with 1/2".

### 8.13 SINK DRAINS

- A. Sink drains shall be a minimum of 2" IPS, or as specified, complete with a rear-connected overflow for each sink bowl and 4" long chrome plated tailpiece. Interconnect multiple same-size drains with chrome-plated continuous waste assembly, where two (2) or more drains are mounted immediately adjacent to each other.
- B. All sinks drain units shall be quick opening type No. B-3950 and No. B-3950-01 stainless steel rotary drain with stainless steel twist handle assembly (unless otherwise specified) and overflow assembly. Furnish overflow assembly in accordance with sink depth as required.
- C. Where specified furnish Component Hardware No. D34-Y011 stainless steel box pattern waste with stainless steel basket and cover for floor troughs.
- D. Sink Bowls containing 180-190 degrees hot water shall be provided with an 8"x10" red plastic warning sign on the wall above the sink compartment. The sign shall have white incised letters and shall read as follows:
  - 1. "WARNING: THIS SINK BOWL (and or faucet) CONTAINS VERY HOT 190 DEGREE WATER – USE EXTREME CARE".

### 8.14 QUICK DISCONNECT ASSEMBLIES

- A. Each of the following gas hose kits shall consist of a stainless-steel braided hose with extruded coating, quick disconnect fitting, two (2) full-flow swivel link connectors, one (1) 90-degree street elbow (when required), one (1) AGA certified gas ball valve, one (1) Sure link restraining cable and all necessary hardware as manufactured by T&S Brass or Dormont.
  - 1. No. HG-4C-\*SK with 1/2" gas inlet.
  - 2. No. HG-4D-\*SK with 3/4" gas inlet.
  - 3. No. HG-4E-\*SK with 1" gas inlet.
  - 4. No. HG-4F-\*SK with 1-1/4" gas inlet.
- B. Each of the following water hose kits shall consist of a stainless-steel braided hose with extruded coating, quick disconnect fitting, two (2) full-flow swivel link connectors, one (1) 90-degree street elbow (when required), one (1) Sure link restraining cable and all necessary hardware as manufactured by T&S Brass or Dormont.
  - 1. No. HW-4B-\*SK with 3/8" water inlet.
  - 2. No. HW-4C-\*SK with 1/2" water inlet.
  - 3. No. HW-4D-\*SK with 3/4" water inlet.
- C. Each of the following flexible coiled water hose kits are for use with coffee and tea makers and similar applications requiring smaller diameter hoses for cold water connections only not to exceed 70 degrees, as manufactured by T&S Brass or Dormont.
  - 1. No. CW-2A-60 or CW-4A-60 with No. AW-5A-SS stainless steel quick disconnect; 1/4" inlet.

2. No. CW-2B-60 or CW-4B-60 with No. AW-5B-SS stainless steel quick disconnect; 3/8" outlet.
- D. FEC to field verify the hose length required for each application to ensure the hose does not rest on the floor and equipment can be moved for cleaning.

## **PART 9 - INSTALLATION**

### **9.1 UTILITIES, DELIVERY, STORAGE, AND SPECIAL HANDLING**

- A. GC/CM shall provide and pay for the temporary power and light, openings, and storage space to permit the scheduled delivery of equipment. See section 015000 for further clarification.
- B. The FEC shall verify door openings, passages, and conditions at the building. All special handling equipment charges shall be paid by the FEC.
- C. Foodservice equipment to be delivered in factory-fabricated containers designed to protect equipment and finish until final installation.
- D. Make arrangements to receive equipment at the project site, or to hold equipment in a secure warehouse until delivery can be made to the job site. Coordinate all site deliveries with GC/CM.
- E. Store food service equipment in original containers, and in a location to provide adequate protection to equipment while not interfering with other construction operations.
- F. Handle food service equipment carefully to avoid damage to component enclosures and finish. Do not install damaged food service equipment; return damaged components to the equipment manufacturer and replace them as required.
- G. Make arrangements for receiving equipment and make delivery into the building. Do not consign any equipment to the Owners or any other Contractor unless written acceptance from them and satisfactory arrangements have been made for the payment of freight and all handling charges.

### **9.2 CONDITIONS AND PREPARATION**

- A. Verify all pertinent field dimensions of the building and examine conditions affecting the proper execution of this section, giving due consideration to any Architectural, Mechanical, or Structural discrepancies which may occur during the construction of the building. No extra compensation shall be allowed for any difference between the actual dimensions secured at the job site and the measurements indicated on the Contract Drawings. Any differences that may be found during field measurements shall be submitted to the Architect for consideration before proceeding with the fabrication or supplying of any equipment.
- B. Evaluate access to various areas for moving in of equipment and coordinate with GC/CM.
- C. Verify water pressure requirements and coordinate the required reducing valve with Plumbing Contractor.
- D. Inspect flooring and raised concrete bases, and wall finishes; verify the existence of required mechanical and electrical rough-ins; check painting, ceiling installation, and all kitchen equipment.
- E. Coordinate with the project superintendent for the proper sequence for installation of equipment and wall finish.
- F. Sweep and clean all floor areas and tops of raised concrete bases before setting equipment in place; remove any spillage or foreign matter.
- G. Dispose of all packaging and debris per Construction Waste Management Plan.

**9.3 PLACEMENT**

- A. Do all fitting and fastening necessary to install fixed items or sub-items in a permanent position as shown on plans.
- B. Place all portable items or sub-items which do not require plumbing or electrical services as shown on plans or as directed by Camacho / Project Architect.

**9.4 ERECTION**

- A. Work shall be erected plumb, square, and unwrapped by experienced personnel.
- B. Protect all metal surfaces in contact with masonry, concrete and/or dissimilar metals with an acceptable nonabsorbent tape and/or gasket material.
- C. Work shall be erected in correct horizontal and vertical alignment at the locations shown on the drawings.
- D. Frames shall be anchored in place with sufficient anchorage to withstand live load with no apparent movement or tendency to fail.
- E. Installation screws and fasteners shall be installed carefully to avoid scratching and/or damaging adjacent surfaces and/or fastener heads and shall be stainless steel.
- F. At the completion of erection work, finished surfaces shall be free of hammer and tool marks, scratches, blemishes, rust, and stains.
- G. Equipment shall be suitably protected by FEC during installation to prevent damage by other trades.
- H. Provide general &/or seismic restraining devices in areas requiring such, as per local codes.

**9.5 CLEARANCE**

- A. Edges of splashes on open base fixtures that are adjacent to walls shall have a 3" cleaning clearance or be sealed, seal bead not to exceed 3/8", against a wall.
- B. Edges of splashes on closed base fixtures that are adjacent to a wall or other solid fixtures higher than the splash shall form tight hairline joints. Seal joints with transparent Geoprene, General Electric, or Dow silicone sealant. All excess sealant is to be cleaned out to a smooth radius fillet.

**9.6 FIELD JOINTS**

- A. Field joints in stainless steel and/or brass tops shall be welded, ground, polished and finished as specified herein.
- B. Body joints shall be drawn type with hairline joints. Provide angle bracing on each side of the body joint, 3/8" stainless steel diameter draw bolts, a lock washer and lock nuts.

**9.7 UTILITY SERVICE CONNECTIONS**

- A. Plumbing, electrical and mechanical furnished by the FEC shall be limited to that which is built-in or is an integral part of the equipment itself.
- B. Final utility installation and connections shall be by related trades and is to be included in the G.C. / C.M. contracts.
- C. Provide restraining devices with mobile cooking equipment as required.

**9.8 CONTRACTOR COOPERATION**

- A. Cooperate with and render all necessary assistance to other Contractors concerned with roughing-in and final connection of utility services for this contract.
- B. After final utility connections are made, thoroughly clean, sanitize, polish, and inspect the proper function of all items.
- C. Report malfunctioning, incomplete, or missing items, Owner furnished equipment or components to CAMACHO / Project Architect.

**9.9 COORDINATION**

- A. It shall be the responsibility of FEC to keep up to date with progress made in the field and installation of all necessary utility rough-ins required to accommodate all equipment specified, as shown on drawings, and to make as many visits to the job site as is necessary to check and assure all rough-ins are being properly installed to accommodate this equipment.
- B. FEC to cooperate with all trades so that the end results of this work will be a professional, complete, approved, and accepted installation. Written reports of each visit shall be sent promptly to the Project Architect and Camacho.
- C. Progress of construction is of paramount importance in the execution of this project.
- D. FEC is to carry out its work so that no delay in the completion of this project is incurred.
- E. FEC is to procure all specified equipment and coordinate installation as required by the project schedule.

**9.10 NOT USED****9.11 RESERVATIONS AND CONDITIONS**

- A. It is the intent of this specification to complete the installation of all equipment covered herein in all phases ready for operation.
- B. The FEC shall carefully examine the plans and the specifications for building construction contracts and determine therefrom the extent of its operations in all respects. All labor and materials not included in building construction contracts necessary to accomplish the intent are hereby included in this contract.
- C. The FEC shall make all arrangements for receiving equipment and make delivery into the building.
- D. TheFEC shall not consign any equipment to the Owner or any other Contractor unless written acceptance from them and satisfactory arrangements have been made for the payment of freight and all handling charges.
- E. The FEC shall attend the first job meeting and subsequent job meetings, as required, for the purpose of coordinating his work with other trades.
- F. All equipment shall be delivered into the building fully protected, uncrated, assembled, level, and fully protected. It will be the responsibility of the FEC to protect the equipment until completely installed and accepted.
- G. The FEC to set equipment temporarily in its final locations, permitting the mechanical and electrical trades to take the necessary measures for the connection of the service lines; then move the equipment sufficiently to allow the installation of such service lines. After which realign the equipment level and plumb, making the final erection as shown on the Contract Drawings. All equipment shall be installed to eliminate objectionable vibration.

- H. The FEC shall do all things and furnish all material necessary to carry out the full intent and meaning of these specifications.
- I. The FEC is to be proactive in their involvement with the project and shall have a competent Food Service Equipment foreman on the premises to assist in furnishing information and supervising the installation of Food Service Equipment under this Section.
  - 1. This foreman shall verify the correct locations for Rough-Ins, shall monitor work in progress, and coordinate their work as required to meet all scheduled dates.

#### **9.12 ACCEPTANCE**

- A. Camacho will inspect the completed work connected with this section for compliance with the Contract Documents, upon notification by the Owner, Project Architect, or FEC whichever occurs first.
- B. Prior to acceptance of the work of this Section, FEC shall clean, sanitize, polish, and treat all stainless steel, cast iron, enamel porcelain, and other type surfaces in accordance with the manufacturer's recommendations and/or procedures.
- C. Prior to acceptance of this Section, FEC shall clean and retouch all painted surfaces, powder-coated surfaces that have been damaged must be re-finished by an established powder-coating firm.
- D. NOTE: In addition to the stipulated retainage of payment as required, the Owner shall retain an additional (10%) ten percent of the line item applicable to "Food Service Equipment" as listed in the Contractor's Schedule of Values. This additional retainage will be released only after the requirements of this section of these specifications are met and approved in their entirety to the complete satisfaction of the Consultant and Owner's Project Manager.

#### **9.13 TESTING, DEMONSTRATING, AND INSTRUCTING**

- A. FEC shall at the completion of this work remove all debris, crating, packaging materials, and implements associated with this work leaving the area broom clean.
- B. FEC shall provide and maintain protective covering for finished surfaces and other parts of equipment and/or cooler/freezer assemblies subject to damage during and after installation.
- C. Clean, test, adjust, and calibrate by factory-authorized service agency all food service equipment and fixtures to make them ready for operation when the facility is turned over to the Owner.
- D. After the above is complete, FEC shall devote one (1) full working day to monitoring all items furnished under this Contract are operational and thoroughly tested to ensure proper safe operation. The Owner, the Food Service Consultant, the G.C. and/or C.M. shall be notified of this testing and is to be provided with a copy of the service agencies' report.
- E. When the food service equipment has been cleaned and tested and is operating properly, the FEC shall arrange and coordinate to have equipment furnished under this section of the contract demonstrated, pursuant to the availability of the Owner and its representatives, by authorized representatives who are to instruct the Owner's designated personnel in the use, care, and maintenance of the equipment. NOTE: Attendance at the demonstration meeting is required of all manufacturers' designated representatives providing equipment under this Contract and is to occur at one meeting.
- F. Coordinate start-up of equipment with testing and balancing of the HVAC system. Ensure that the HVAC will be operating correctly, even during maximum equipment use.

- G. The FEC shall be responsible for scheduling the demonstration meeting. Each manufacturer's representative shall be present at this meeting:
1. Demonstrate to and instruct the Owner's designated personnel as to the operation, use, care, cleaning, and maintenance of all items of equipment supplied and respond to all questions and concerns by written response. Supply the Architect with an affidavit signed by the Owners or Food Service Manager/Director that this service was rendered and performed.
  2. Provide the Owner's designated representative with the name, address, and telephone number of a designee of each manufacturer and state which designee shall be responsible for quickly responding to warranty work 24 hours a day, 365 days a year. This is to be direct contact.
  3. The Owner may contact such warranty representative's designee directly, and such designee may respond without voiding any responsibility or warranties of the manufacturer, the FEC, the G.C. and/or the C.M. Service charges for this warranty representative, no matter what the resolution of the problem may be, shall be the responsibility of the manufacturer, the FEC, the G.C and/or the C.M.
  4. In any event, the FEC shall be responsible to immediately pay upon invoice, charges by the warranty representative in order to keep the warranty representative responsive. Whether the plumbing, electrical, food service equipment, or other sub-contractors (or even the Owner) should be back charged will be resolved later.
  5. Provide the Owner's representative with two (2) booklets for each item of equipment furnished under this contract. This set shall be neatly bound in a three-ring binder, by FEC with the delivery of this booklet receipted at the time of delivery. The booklets shall contain:
    - a. Operation Maintenance Manuals.
    - b. Instructions.
    - c. Warranties.
    - d. Part lists of all bought-out items provided under this section.
    - e. List of names, addresses, telephone numbers, and emails of local authorized service agencies.
    - f. Where available, provided videos to show and detail the proper care and maintenance of equipment.
  6. Attendance at the one demonstration meeting is required of all manufacturers' representatives providing equipment under this contract. If for any reason an additional meeting must be scheduled the FEC will be responsible for all additional fees and costs incurred.
- H. After all connections to equipment have been completed, conduct the final test or tests of equipment in the presence of the Architect or authorized representative for a period of one.
- I. (1) hour minimum. Adjust and lubricate as required. Each piece of equipment with a heating device shall be tested for temperature control and/or thermostat functions; thermostats shall be re-calibrated as needed.
- J. Provide a training program by a Serve Safe certified culinary chef to consist of one (1) day within ten days of a start-up, showing all equipment and how it works with demonstrations.
1. The trainer shall monitor employees and demonstrate how to properly use equipment with live cooking.
  2. The service provided shall include abbreviated classes in Serve Safe and HACCP and the proper method for receiving and storing product.
  3. Training consists of a total of four (4) hours.

- K. The Contractor shall issue a letter, signed by all sub-contractors involved, and co-signed by the Owner's representative, stating the Owner or the Food Service Manager/Director and/or staff have been satisfactorily instructed in the use, operation, and minor maintenance of the equipment.

## **PART 10 - CORRECTION OF DEFECTS, SERVICES, GUARANTEES, AND RESPONSIBILITIES**

### **10.1 GENERAL**

- A. All equipment shall be delivered in an undamaged condition upon completion. FEC shall replace, at the Owner's, CAMACHO's and/or the Project Architect's discretion, or make satisfactory repairs to any item of equipment that fails to conform to the requirements of the Contract at the time and shall remedy any defects due to faulty materials or workmanship which appear within a period of one (1) year from start-up and demonstration of equipment.
- B. Items shall be tested and adjusted by skilled mechanics and this Contractor shall guarantee the material and workmanship of the equipment furnished by him under these specifications, for a period of one (1) year after acceptance by the Owner.
- C. All equipment, refrigeration systems, and ice makers shall have start-up and a two (2) year extended service warranty for parts and labor and a five (5) year extended warranty on compressors which will start on the date of Owner's acceptance. All additional warranties as noted in the itemized specification shall be factory-purchased warranties for each item; proof of warranties shall be provided. The cost of all warranties shall be included in the bid proposal and contract sum and shall serve as a prepaid service contract.
- D. Contractors who do not normally maintain local refrigeration service personnel shall be required to provide the Owner with a refrigeration service policy in writing from a local refrigeration service company that maintains a twenty-four (24) hour call service and that is acceptable to the Owner for a period of one (1) year at no additional expense to the Owner.
- E. Provide the Owner a listing of factory-authorized service agencies and copies of written service and warranty agreements on all items of equipment provided under this contract, excluding Owner furnished and/or existing items.
- F. Service contracts on refrigeration systems must be contracted by the FEC with authorized local service organizations capable of providing prompt and efficient service. Submit six copies of all service contracts, as specified herein, upon completion of the installation of the equipment to the Owner.

### **10.2 EXAMINATION OF PLANS AND SPECIFICATIONS**

- A. Plans and specifications are furnished for the use of the FEC in preparing an itemized cost estimate and indicating the design intent of Camacho.
- B. It is the responsibility of the FEC to examine all documents, which include the contract drawings and specifications, to ensure there are no typographical errors, discrepancies in quantities, drafting errors, utility information, manufacturer and model numbers, options, etc. which would affect the outcome of a complete and professional bid. Should a model number no longer be available and/or has been replaced, the latest model shall be provided. All discrepancies and verification requests shall be brought to the attention of Camacho / Project Architect (PA) prior to the submittal of the bid and are to be addressed in the form of a written RFI to Camacho with a copy to the PA for interpretation. In the case these discrepancies and verifications are not brought to the attention of Camacho / Project Architect prior to the submittal of the bid, the FEC will be fully responsible to furnish and provide the equipment as represented by Camacho, within reason, at no additional cost to the Owner.

**PART 11 - MISCELLANEOUS REQUIREMENTS****11.1 UNIFORM QUALITY**

- A. Custom-built items must be constructed by the same fabricator to ensure uniform quality and appearance.
- B. Similar type items of manufacture and/or prefabricated equipment must be the product of the same manufacturer.

**11.2 IDENTIFICATION PLATES**

- A. Each piece of equipment must have a suitable nameplate supplied by the manufacturer that is to include the name of the manufacturer and the electrical and/or utility demands.
- B. Each switch and/or control device shall have an approved nameplate indicating its function or purpose such as display shelf lights, frost plate compressor, and plate warmer.
- C. Indicator dials and other standard components of prefabricated equipment will be considered acceptable identification of their physical location clearly indicating the warmers and/or other equipment items that they control.
- D. All nameplates must be non-corrosive metal with engraved letters or have acid etched, phenolic and/or painted letters.

**PART 12 - FOODSERVICE EQUIPMENT NOTES**

- A. In each item of equipment hereinafter specified under the 'Itemized Specifications', these specifications shall identify each respective item by name, model number, accessories, required utilities, brochure data sheets, as well as list various component parts and warranty requirements provided for same.
- B. These items and their component parts shall be of material (mounted where applicable) constructed and furnished in strict accordance with that described in the General Specifications for these items and integrally constructed where applicable. It shall be intended that where buy-out (prefabricated) items are specified, the same shall be furnished with all the accessories as normally furnished by the manufacturer for these items.
  - 1. Also, in strict accordance with the current manufacturer's engineering data sheet for each respective item.
- C. It is the responsibility of the FEC to ensure that any products by manufacturers listed as being acceptable to the original specification meet the design and performance specifications of the prime specification in every way.
- D. The intent of the prime specification is to set forth the level of quality and features/options that are desired by the Owner. All features and options of the prime specification must be included with, and product substituted from the list of approved manufacturers.
- E. All cooking equipment shall have stainless steel exterior (unless otherwise specified).
- F. All gas fired equipment to have rear gas connects where applicable and automatic ignition.
- G. Provide POSI-SET devices at all rear casters of mobile cooking line equipment located below exhaust hoods.
- H. Reference Kitchen Floor Plan for the location of equipment. Obtain equipment of like families through the same manufacturer.

**PART 13 - ITEMIZED SPECIFICATIONS****B1 – EVENT LEVEL BALLROOM 1**

**ITEM # B1-1**                    **UNDER-COUNTER BUFFET WARMER**  
**Quantity:**                    **Ten (10)**  
**Manufacturer:**              **CookTek**  
**Model:**                        **660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # B1-2**                    **COLD SHELF, UNDERMOUNT**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **Hatco**  
**Model:**                        **CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P, standard

**ITEM # B1-3**                    **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BBS108**

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus  
b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P  
c. Stainless steel top - no tapping holes  
d. Condensing unit location: Left  
e. Condensing unit cover finish: Black vinyl coated  
f. End finish: Stainless steel, unfinished, both sides, standard  
g. Door type, first: solid, black vinyl/field laminated  
h. Door hinge location, first: Left  
i. Door handle, first: full length stainless steel handle, 24"  
j. Shelving style, first: (3) flat shelves  
k. Door type, second: solid, black vinyl/field laminated  
l. Door hinge location, second: Left  
m. Door handle, second: full length stainless steel handle, 24"  
n. Shelving style, second: (3) flat shelves  
o. Door type, third: solid, black vinyl/field laminated  
p. Door hinge location, third: Right  
q. Door handle, third: full length stainless steel handle, 24"  
r. Shelving style, third: (3) flat shelves  
s. Door type, fourth: solid, black vinyl/field laminated  
t. Door hinge location, fourth: Right  
u. Door handle, fourth: full length stainless steel handle, 24"

- v. Shelving style, fourth: (3) flat shelves
- w. Crisp White LED
- x. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # B1-4**                      **PORTABLE BAR**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **Perlick Corporation**  
**Model:**                         **MOBS-66TE-S**

- a. Model MOBS-66TE-S Signature Series Mobile Bar, with hand sink, 66" total bartending width, 30" ice chest, 12" insulated bottle well, (1) 12" drainboard, 42" curved speed rail, 12" hand sink, LED bartender task lighting, 1.5 gallon water heater, water pump, fresh water tank, grey water tank, ice melt drain tank, 5" stainless steel casters (locking), 120v/60/1-ph, 13.3 amps, NEMA 5-15P, NSF
- b. Exterior color to be selected by arch / interiors.
- c. Bar top material & color to be selected by arch / interiors.

**ITEM # B1-5**                      **POINT OF SALE**  
**Quantity:**                      **Three (3)**  
**Manufacturer:**                **BY OPERATIONS**  
**Model:**                         **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # B1-6**                      **BACK BAR COOLER, 3 DOOR**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Perlick Corporation**  
**Model:**                         **BBS84**

- a. Model BBS84 Refrigerated Back Bar Cabinet, three-section, 84"W, self-contained refrigeration, 24.8 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Stainless steel top - no tapping holes
- d. Condensing unit location: Right
- e. Condensing unit cover finish: Black vinyl coated
- f. End finish: Stainless steel, unfinished, both sides, standard
- g. Door type, first: solid, black vinyl/field laminated
- h. Door hinge location, first: Left
- i. Door handle, first: full length stainless steel handle, 24"
- j. Shelving style, first: (3) flat shelves
- k. Door type, second: solid, black vinyl/field laminated
- l. Door hinge location, second: Right
- m. Door handle, second: full length stainless steel handle, 24"
- n. Shelving style, second: (3) flat shelves
- o. Door type, third: solid, black vinyl/field laminated
- p. Door hinge location, third: Right
- q. Door handle, third: full length stainless steel handle, 24"
- r. Shelving style, third: (3) flat shelves
- s. Crisp White LED
- t. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # B1-7**                    **BACK BAR COOLER, 2 DOOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BBS60**

- a. Model BBS60 Refrigerated Back Bar Cabinet, two-section, 60"W, self-contained refrigeration, 16 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/5 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 2.5 amps, NEMA 5-15P
- c. Stainless steel top - no tapping holes
- d. Condensing unit location: Right
- e. Condensing unit cover finish: Black vinyl coated
- f. End finish: Stainless steel, unfinished, both sides, standard
- g. Door type, first: solid, black vinyl/field laminated
- h. Door hinge location, first: Left
- i. Door handle, first: full length stainless steel handle, 24"
- j. Shelving style, first: (3) flat shelves
- k. Door type, second: solid, black vinyl/field laminated
- l. Door hinge location, second: Right
- m. Door handle, second: full length stainless steel handle, 24"
- n. Shelving style, second: (3) flat shelves
- o. Crisp White LED
- p. Model 57786 Casters, 3-3/4", set of (4)

**ITEM # B1-8**                    **CLASSIC TABLE WITH HIDDEN RANGES**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **Spring USA**  
**Model:**                        **CLASSIC TABLE**

- a. Model CLASSIC TABLE 84"L x 30"W x 34"H CLASSIC TABLE  
SMARTSTONE TOP WITH WOOD EDGE  
CHOICE IN COLOR AND FINISH OF SMARTSTONE  
WILSONART 7954-12 NATURAL RIFT LAMINATE  
(3) SM-651SS HIDDEN WARMERS - 5.4 AMPS EACH  
20 AMP DEDICATED CIRCUIT REQUIRED  
(1) POWERSTRIP  
HIDDEN CONTROLS  
GROMMET HOLE IN BOTTOM OF TABLE FOR CORDS  
CASTERS

#### **BC – EVENT LEVEL BUNKER CLUB**

**ITEM # BC-1**                    **UNDERBAR HANDSINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12HS**

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.

- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # BC-2**                      **UNDERBAR SINK UNITS**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Perlick Corporation**  
**Model:**                         **TS48M3-DBL**

- a. Model TS48M3-DBL TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 48"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on the left, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet (replaces TS43R)
- b. 6" backsplash
- c. (2) Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
- e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # BC-3**                      **POINT OF SALE**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **BY OPERATIONS**  
**Model:**                         **POS**

- a. Two (2) Model POS PROVIDED BY OPERATIONS

**ITEM # BC-4**                      **UNDERBAR STORAGE CABINET**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Perlick Corporation**  
**Model:**                         **TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF Listed (replaces SC24)
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model DR24SC Field reversible door and lock set for 24"W storage cabinets
- f. Model SC-ES-L End Splash, left, for storage cabinets
- g. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # BC-4.1**                    **UNDERBAR STORAGE CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF18DB**

- a. Model TSF18DB TSF Series Underbar Drainboard, 18"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet (replaces TSF18 TSD18)
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032573-18 TSF Series 18"W Flat Top Drainboard Insert, no perforations, stainless steel construction.

**ITEM # BC-5**                    **UNDERBAR BLENDER STATION W/SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet (replaces TS12BLW)
- b. 6" Backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # BC-6**                    **UNDERBAR ICEWELL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS36IC**

- a. Model TS36IC TS Series Underbar Ice Bin/Cocktail Unit, modular, 36"W x 18-9/16"D, approximately 85-lb. ice capacity, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash
- c. Model ICC36 Ice Chest Covers, 2-piece sliding assembly, 36"W, front & back, stainless steel.

**ITEM # BC-6.1**                **SPEED RAIL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **SR-D36A**

- a. Model SR-D36A Speed Rail, double, 36" W, stainless steel construction, factory installed.

**ITEM # BC-7**                    **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BBS108**

- b. BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- c. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Right
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # BC-8**                    **EXPRESSO MACHINE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **By Owner**

**ITEM # BC-9**                    **DROP-IN ICE WELL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **DI24IC**

- a. Model DI24IC Ice Chest, drop-in, 26"W x 19-1/4"D, 50 lb. ice capacity, includes 2-piece stainless steel sliding cover, 1/2" drain, stainless steel top & interior, galvanized exterior, NSF.

**ITEM # BC-10**                  **UNDER-COUNTER BUFFET WARMER**  
**Quantity:**                    **Five (5)**  
**Manufacturer:**              **CookTek**  
**Model:**                        **660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # BC-11**                    **COLD SHELF**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **Hatco**  
**Model:**                        **CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P, standard

### **CKA – EVENT LEVEL COMMISSARY KITCHEN - AREA A**

**ITEM # CKA-1**                    **WALK-IN BULK FREEZER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Thermo-Kool**  
**Model:**                        **WIF**

- a. Model WIF THERMO-KOOL Walk-in Cooler/Freezer  
25' 1" x 36' 6" x 9' 6" High  
Insulation: 4" DURATHANE, all-urethane foamed-in-place (Class 1)  
Exterior: Stucco Aluminum  
Interior Walls: Stucco Aluminum  
Interior Ceilings: White Stucco Aluminum  
Interior Floors: Galvanized Steel  
Cooler, Freezer with Floor - recessed by 8" for tile & grout  
(1) 36" x 80" Flush Mounted Entrance Door(s), with hardware, Pilot light & switch assembly, vapor proof light & dial thermometer. NSF LISTED  
(1) 5' 0" x 6' 8"H " Framed Opening  
(2) Kason # 1806 LED light fixture at door(s)  
(1) dial thermometer  
(2) Center light above door  
(2) Thermo-Kool TK4700 walk-in monitor system with TK4 panic switch, motion detector, battery backups, dry contacts and thermostatically controlled heater wires  
(1) Stainless Steel to Interior & Exterior of Door & Frame  
(1) Door(s) with (3) Hinges per door  
(1) 14" x 14" peep window w/ heated frame & glass  
(1) 48"H 1/8" Aluminum Treadplate kickplates and jamb guards int & ext  
(1) Foot treadle(s)  
(1) Curtron Polar Pro model PP-C-080-3680-IP vinyl swing door(s) w/ impact plates  
(2) Pressure relief vent(s)  
(6) Kason 48" LED light fixture(s)  
(1) 8' x 100' Roll(s) of 6 mil polyethylene sheeting  
Angle Walls  
(1) Bluezone 2400  
Ceiling & floor Splice  
Ceiling suspension  
Enclosure panels w/ removable access panel

Trim  
 1/8" Treadplate wainscot on exp. exterior 48" high (shipped loose for field installation)  
 (1) Curtron PP-C-080-6080- vinyl swing door w/ impact plates

**ITEM # CKA-1.1**            **FREEZER EVAPORATOR COIL**  
**Quantity:**                **Two (2)**  
**Manufacturer:**        **Thermo-Kool**  
**Model:**                    **RL6E090DDA**

- a. (2) Model RL6E090DDA RL6E090DDA 208-230/60/1 coil (1.0 fan amps, 9.8 heater amps) with Dual Speed EC motor.  
 Accessories:  
 KE2 Evaporator Defrost Control w/ LLSV.

**ITEM # CKA-1.2**            **FREEZER CONDENSING UNIT**  
**Quantity:**                **Two (2)**  
**Manufacturer:**        **Thermo-Kool**  
**Model:**                    **RW0650L4SEA**

- a. (2) Model RW0650L4SEA 3 1/2 HP, Remote Pre-Assembled Refrig. System Model RWO350L4SEA 208-230/60/3  
 Low Temperature, base, Scroll, Water-cooled, R448A, Std. Defrost Kit (10.9 Compressor RLA) each with 1 RL6E090DDA 208-230/60/1 coil (1.0 fan amps, 9.8 heater amps) with Dual.  
 Accessories:  
 - Heat Exchanger  
 - Suction line components  
 - Sealed Filter  
 - Water-regulating valve

**ITEM # CKA-2**                **WALK-IN BULK COOLER**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Thermo-Kool**  
**Model:**                    **WIC**

- a. Model WIC SEE ITEM CKA-1

**ITEM # CKA-2.1**            **COOLER EVAPORATOR COIL**  
**Quantity:**                **Two (2)**  
**Manufacturer:**        **Thermo-Kool**  
**Model:**                    **RL6A141ADA**

- a. (2) Model RL6A141ADA RL6A141ADA 115/60/1 coil (2.4 amps) with Dual Speed EC motor.  
 Accessories:  
 (2) KE2 Evaporator Defrost Control w/ LLSV

**ITEM # CKA-2.2**            **COOLER CONDENSING UNIT**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Thermo-Kool**  
**Model:**                    **RW0400E4SEA**

- a. Model RW0400E4SEA 4 HP, Remote Pre Assembled Refrig. System Model RWO400E4SEA 208-230/60/3

Medium Temperature, base, Scroll, Water-cooled, R448A, Air Defrost Timer (18.4 Compressor RLA).

Accessories:

- Heat Exchanger
- Suction line components
- Sealed Filter
- Water-regulating valve

**ITEM # CKA-2.3            FOOD PRESERVATION UNIT**  
**Quantity:                One (1)**  
**Manufacturer:          Evo America, LLC**  
**Model:                    10-BZ-2400FP**

- a. Model 10-BZ-2400FP Bluezone Food Preservation for Walk-in Coolers, treats up to 15,000 cu. ft. of air per unit, (4) ozone generating UV bulbs, digital display screen, control panel, mounting rails/feet, 250 watts, 120v/60/1-ph, 3 amps, cETLus, ETL-Sanitation

**ITEM # CKA-3            SPARE NO.**

**ITEM # CKA-4            DUNNAGE RACK**  
**Quantity:                Seven (7)**  
**Manufacturer:          Channel Manufacturing**  
**Model:                    ES2048**

- a. Model ES2048 Dunnage Rack, Tubular Dunnage Rack, Stainless Series, 48"W x 20"D x 12"H, Stainless Steel Construction, (4,000) lb. distributed weight capacity per shelf, Made in USA, NSF

**ITEM # CKA-5            COLD STORAGE SHELVING**  
**Quantity:                Sixty (60) – (15 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:          Metro**  
**Model:                    2160NK3**

- a. Model 2160NK3 Quick Ship - Super Erecta® Shelf, wire, 60"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (60) Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKA-5.1        COLD STORAGE SHELVING**  
**Quantity:                Thirty-Two (32) – (8 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:          Metro**  
**Model:                    2148NK3**

- a. Model 2148NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (32) Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKA-5.2**            **COLD STORAGE SHELVING**  
**Quantity:**            **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**       **Metro**  
**Model:**                **2142NK3**

- a. Model 2142NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (4) Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKA-5.3**            **COLD STORAGE SHELVING**  
**Quantity:**            **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**       **Metro**  
**Model:**                **2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (4) Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKA-6**            **PALLET STORAGE**  
**Quantity:**            **Two (2)**  
**Manufacturer:**       **By Owner**

- a. PROVIDED BY OWNER

**ITEM # CKA-7**            **CAN RACK**  
**Quantity:**            **Three (3)**  
**Manufacturer:**       **Channel Manufacturing**  
**Model:**                **CSR-156M**

- a. Model CSR-156M Can Rack, First In / First Out - Mobile, Heavy-Duty Series, 25.5"W x 42.25"D x 79"H, Aluminum Construction, (156) #10 Cans, Heavy-Duty 5"x2" Plate Casters (front are swivel : rear are rigid) model # CPS25U, Made in USA, NSF, 185lbs.
- b. Model /022 Accessories, Corner Bumper (Set of 2).
- c. Model /5B Accessories, Caster Brakes, Heavy-Duty (Set of 2).

**ITEM # CKA-8**            **DRY STORAGE SHELVING**  
**Quantity:**            **Fourty (40) – (8 COMPLETE UNITS 5 SHELVES EACH)**  
**Manufacturer:**       **Metro**  
**Model:**                **2160NK3**

- a. Model 2160NK3 Quick Ship - Super Erecta® Shelf, wire, 60"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (32) Model 86PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 86-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double

grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKA-9                    SPARE NO.**

**ITEM # CKA-10                SPARE NO.**

**ITEM # CKA-90                STORAGE SHELVING**  
**Quantity:                    Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:                Metro**  
**Model:                        2148NK3**

- a. Model 2148NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**CKB – EVENT LEVEL COMMISSARY KITCHEN – AREA B**

**ITEM # CKB-11                EXHAUST HOOD W/FIRE SYSTEM**  
**Quantity:                    One (1)**  
**Manufacturer:                Accurex**  
**Model:                        XBEW-474.00-S**

- a. Model XBEW-474.00-S
  - A. Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided. The hood(s) exterior shall be constructed of a minimum of 18-gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. Front panels shall be of single wall construction. An integral 3-inch air space is provided to meet NFPA® 96 clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight. Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be constructed of a minimum 18-gauge corrosion resistant stainless steel including, but not limited to ducts, plenum, and brackets.
  - B. The hood(s) shall include a filter housing constructed of the same material as the hood. The filters shall be stainless steel baffle type (non-stick coating optional), U.L. 1046 Classified, and in sufficient number and size to ensure optimum performance. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 28% at 8 microns (16% from 3-10 microns) and static pressure drop of 0.5-0.6 in WC. Vapor proof, U.L.

- C. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.
- D. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the necessary data that confirms compliance with the code authorities listed above.
- E. Continuous Capture - UL listed connection to join multiple sections.
- F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.
- G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.
- H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor
- I. 304 Stainless Steel inside and out. No galvanized metal.
- J. Provide fire cabinet on right end of hood.
- K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood where applicable.
- L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling.

**ITEM # CKB-12                    ISLAND WORK TABLE**  
**Quantity:                        One (1)**  
**Manufacturer:                  Atlanta Custom Fabricators**  
**Model:                             IWT**

- a. Model IWT Island work table, all stainless steel construction, 3'-0" long X 2'-6" wide X 36" high. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges. Table to be fully welded construction with all welds ground and polished to a uniform finish. Table to be provided with stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet.
- b. (1) Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
**APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.**

**ITEM # CKB-13                    FRENCH FRY WARMER**  
**Quantity:                        One (1)**  
**Manufacturer:                  Merco**  
**Model:                             MCG2727NNN**

- a. Model MCG2727NNN CrispyMax™ Crisp & Ready Serving Station, countertop, triple lane, low profile, heated Therma-Lock™ convective airflow, on/off switch, LED indicator, removable food tray & crumb tray, includes (2) dividers, stainless steel construction, cULus, UL EPH Classified, Made in USA

**ITEM # CKB-14                      GAS FRYER, BATTERY**  
**Quantity:                              Two (2)**  
**Manufacturer:                        Henny Penny**  
**Model:                                    OFG322.0**

- a. Model OFG322.0 OFG-322 Open Fryer, gas, 2 wells, 65 pound fat and 15 pound food capacity per well, stainless steel construction and rectangular fry pot, built-in filter system, basket supports, (4) casters (2 locking), cULus, UL EPH, CE, ENERGY STAR®
- b. Natural gas
- c. Station 1 control: C1 C1000 Computron = Computron® 1000 control with melt mode, idle mode, two 4-character LED displays per control
- d. Station 2 control: C1 C1000 Computron = Computron® 1000
- e. Without direct connect shortening disposal system plumbing
- f. Station 1: Full Basket, per well
- g. Station 2: Full Basket, per well
- h. Model 03629 Fryer Pot Cover, 32x full pot
- i. Model 03622 Crumb Catcher, for (2) and (3) well drain pans
- j. T&S Brass Model HG-2D-48SK-PS Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) SwiveLink fittings, 360° rotatable hex nut, with 90° elbow & installation kit (includes restraining cable & ball valve), Posi-Set, 215,000 BTU/ hr minium flow capacity

**ITEM # CKB-15                      REFRIGERATED EQUIPMENT STAND**  
**Quantity:                              One (1)**  
**Manufacturer:                        Delfield**  
**Model:                                    F2996CP**

- a. Model F2996CP Refrigerated Low-Profile Equipment Stand, 96-1/4"W x 31-47/50"D x 24"H, three-section, (6) drawers (pans not included), marine edge stainless steel top & drawer fronts, front non-spill edge, ABS interior sides, 4" casters, side-mounted refrigeration system with electric condensate evaporator, R290 Hydrocarbon refrigerant, 1/4 hp, cUL, UL, NSF

**ITEM # CKB-16                      GRIDDLE**  
**Quantity:                              One (1)**  
**Manufacturer:                        Vulcan**  
**Model:                                    VCCG48-AR**

- a. Model VCCG48-AR Heavy Duty Griddle, countertop, gas, 48" W x 24" D cooking surface, 1" thick chrome plate, (4) burners, solid state thermostat every 12", atmospheric type "U" shaped aluminized steel burners, electronic spark ignition & pilot protection, wire knob guards, (1) drawer, includes: palmetto brush, scraper & blade, stainless steel front, sides, front top ledge, front grease trough, 4" back & tapered side splashes, 4" adjustable legs, 120,000 BTU, CSA, ENERGY STAR®, NSF
- b. Natural gas
- c. 120v/50/60/1-ph, 2 amp, NEMA 5-15P
- d. T&S Brass Model HG-2D-48SK Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) Swivelink fittings, (1) 90° elbow,

ball valve, necessary hardware, with Surelink restraining cable adjustable for 3' to 5', 215,000 BTU/ hr minium flow capacity

- e. T&S Brass Model POSI-SET Safe-T-Link Posi-Set Appliance Locating Device, for positive placement of mobile kitchen equipment, includes set of (2) units, mounting screws (#10-24) & screw anchors, heat & impact resistant plastic

**ITEM # CKB-17**                    **CHARBROILER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Vulcan**  
**Model:**                        **VACB47**

- a. Model VACB47 Achiever Charbroiler, countertop, 46-7/8", (8) 17,000 BTU cast iron burners, infinite heat control valves, fully welded chassis, (2) drip trays, stainless steel front, sides & top trim, backsplash & grease trough, 4" adjustable legs, 136,000 BTU, CSA, NSF
- b. Natural gas
- c. T&S Brass Model HG-2D-48SK Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) Swivelink fittings, (1) 90° elbow, ball valve, necessary hardware, with Surelink restraining cable adjustable for 3' to 5', 215,000 BTU/ hr minium flow capacity
- d. T&S Brass Model POSI-SET Safe-T-Link Posi-Set Appliance Locating Device, for positive placement of mobile kitchen equipment, includes set of (2) units, mounting screws (#10-24) & screw anchors, heat & impact resistant plastic

**ITEM # CKB-18**                    **HD RANGE, 36", 6 OPEN BURNERS**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Vulcan**  
**Model:**                        **V6B36C**

- a. Model V6B36C V Series Heavy Duty Range, gas, 36", (6) 35,000 BTU open burners, cast iron grates, convection oven, stainless steel front, front top ledge, sides, base, burner box & stub back, 6" adjustable legs, 242,000 BTU, CSA, NSF
- b. Natural gas (specify elevation if over 2,000 ft.)
- c. Model PRESREG-NA11/4 1-1/4" NPT pressure regulator (Natural gas)
- d. 1-1/4" rear gas connection, standard
- e. Rear gas connection: cap & cover, both ends
- f. 115v/60/1-ph, 4.0 amp, fan motor voltage, cord & plug, standard
- g. Model V36RR Reinforced Riser, for standard or convection ovens.
- h. Model CASTERS-ADJRR4 Casters, 6", adjustable (set of 4) (2 with locks)
- i. T&S Brass Model HG-2F-48SK Safe-T-Link Gas Connector Kit, 1-1/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) Swivelink fittings, (1) 90° elbow, ball valve, necessary hardware, with Surelink restraining cable adjustable for 3' to 5', 818,000 BTU/ hr minium flow capacity
- j. T&S Brass Model POSI-SET Safe-T-Link Posi-Set Appliance Locating Device, for positive placement of mobile kitchen equipment, includes set of (2) units, mounting screws (#10-24) & screw anchors, heat & impact resistant plastic

**ITEM # CKB-19**                    **SALAMANDER BROILER, GAS**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Vulcan**  
**Model:**                        **36IRB-N**

- a. Model 36IRB-N Salamander Broiler, natural gas, 36" wide, 30,000 BTU heavy duty infrared burner, dual control, (6) grid positions, removable pan, stainless steel front, top & sides, 3/4" gas connection & pressure regulator
- b. Range mount
- c. Model V36RR Reinforced Riser, for standard or convection ovens
- d. Model PLUMBIN-KIT Inter-plumbing gas connection kit (requires rear gas connection on range), for connecting 36RB/36IRB to heavy duty V-Series ranges
- e. Model BOTTOM-SLMNDR Stainless bottom panel (required with wall bracket)
- f. Model BACK-SLMNDR Stainless back panel
- g. T&S Brass Model HG-2D-48SK Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) Swivelink fittings, (1) 90° elbow, ball valve, necessary hardware, with Surelink restraining cable adjustable for 3' to 5', 215,000 BTU/ hr minium flow capacity.

**ITEM # CKB-20                      TILTING SKILLET BRAISING PAN, ELECTRIC**  
**Quantity:                            One (1)**  
**Manufacturer:                      Cleveland Range**  
**Model:                                SEL40T1**

- a. Model SEL40T1 PowerPan™ Tilting Skillet, electric, 40-gallon capacity, bead blasted cooking surface, 10° tilt cooking feature, with easy manual hand tilt, spring-assisted cover with vent, gallon & liter markings, stainless steel construction with open leg frame, 208v/60/3-ph, UL, CE, NSF
- b. 480v/60/3-ph, 18kW, 21.7 amp
- c. Standard controls, temperature control dial, LED ON indicator light, main power switch, standard
- d. Model TD2SK 2" tangent draw-off valve, front mounted left side
- e. Model PCS Pan Carrier, for floor models
- f. Model DKFS Double Pantry Skillet Filler, with 60" hose
- g. Model FBST1 Faucet Bracket for T1 series floor model skillets
- h. Model FSSK Food Strainer, 30 & 40 gallon, for braising pans

**ITEM # CKB-21                      FLOOR TROUGH**  
**Quantity:                            One (1)**  
**Manufacturer:                      Atlanta Custom Fabricators**  
**Model:                                FT**

- a. Model FT Stainless steel floor trough, 9'-0" long x 2'-0" wide, 5" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., stainless steel subway grating of 3/16" X 1" bar anti-splash drain pan with built-in pitch toward drain. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-22                      MULTI-COOK OVEN**  
**Quantity:                            Two (2)**  
**Manufacturer:                      Alto-Shaam**  
**Model:                                VMC-F3E**

- a. Model VMC-F3E Vector® F Series Multi-Cook Oven, electric, (3) individually controlled cooking chambers, holds (6) half-size sheet pans (3) full sized sheet pans, programmable touch screen controls with Structured Air Technology®, double pane glass door, interior

LED cavity lighting, includes: (1) wire rack & (2) jet plates per cooking chamber, USB port, stainless steel construction, 4" adjustable legs, cULus, UL EPH Classified, Made in USA

- b. 208-240v/60/3-ph, 11.1-14.4 kW, 31-35 amps, No cord & plug
- c. Simple controls, standard
- d. Model 5031521 Stacking Bracket, for F-Series
- e. Stacking with legs, standard

**ITEM # CKB-22.1      MULTI-COOK OVEN**

**Quantity:**            **Two (2)**  
**Manufacturer:**    **Alto-Shaam**  
**Model:**              **VMC-F4E**

- a. Model VMC-F4E Vector® F Series Multi-Cook Oven, electric, (4) individually controlled cooking chambers, holds (8) half-size sheet pans (4) full sized sheet pans, programmable touch screen controls with Structured Air Technology®, double pane glass door, interior LED cavity lighting, includes: (1) wire rack & (2) jet plates per cooking chamber, USB port, stainless steel construction, 4" adjustable legs, cULus, UL EPH Classified
- b. 208-240v/60/3-ph, 14.8-19.2 kW, 41-46 amps, No cord & plug
- c. Simple controls, standard
- d. Model 5031521 Stacking Bracket, for F-Series
- e. Model 5025815 Mobile Base, 6"H (15cm), stainless steel, with casters, for all models

**ITEM # CKB-23      SPARE NO.**

**ITEM # CKB-24      SPARE NO.**

**ITEM # CKB-25      SPARE NO.**

**ITEM # CKB-26      1 COMPARTMENT SINK PREP TABLE**

**Quantity:**            **One (1)**  
**Manufacturer:**    **Atlanta Custom Fabricators**  
**Model:**              **1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 8'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 18" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Stainless steel sink cover. Provide stainless steel skirt to cover sink bowl.
- c. (1) Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-26.1      FAUCET**  
**Quantity:            One (1)**  
**Manufacturer:        T&S Brass**  
**Model:                B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CKB-27            ISLAND WORK TABLE**  
**Quantity:            One (1)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                IWT**

- a. Model IWT Island work table, all stainless steel construction, 6'-0" long X 2'-6" wide X 36" high. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges. Table to be fully welded construction with all welds ground and polished to a uniform finish. Table to be provided with stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet.
- b. (1) Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-28            REFRIGERATED PREP TABLE**  
**Quantity:            Two (2)**  
**Manufacturer:        Delfield**  
**Model:                18672PDLP**

- a. Model 18672PDLP LiquiTec® Refrigerated Pizza Table, two-section, 72" W, (6) 12" x 20" pan capacity, (2) doors, (2) 1/1 GN shelves, stainless steel removable hinged covers, 17" polyurethane cutting board, flush mount LiquiTec® raised rails, on/off switch, 18 gauge stainless steel top, stainless steel construction, 4" casters, self-contained side-mounted refrigeration system, R290 refrigerant, 1/5 & 1/3 HP, cUL, UL, NSF
- b. 115v/60/1-ph, 12.7 amps, NEMA 5-20P, standard
- c. Model 505B-72 Stainless steel back, for 72" table

**ITEM # CKB-29            REACH-IN FREEZER**  
**Quantity:            One (1)**  
**Manufacturer:        Delfield**  
**Model:                GAF2P-S**

- a. Model GAF2P-S Specification Line® Freezer, Reach-In, two-section, 46.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), (6) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.68 HP, 115v/60/1-ph, 10.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Model AS000-AXC-003P Stainless steel back (2 section)
- d. Set of (4) 5" locking casters, standard

**ITEM # CKB-30**                    **WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WT**

- a. Model WT Work table, all stainless steel construction, 4'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 4" left end splash with 1" return on 45 degree angle, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. (1) Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**Manufacturer:**              **T&S Brass**  
**Model:**                        **B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CKB-32**                    **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**

**Model: WMO**

- a. Model WMO Wall mounted over shelf, 7'-0" long X 12"deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-32.1 WALL MOUNTED OVER SHELF**

**Quantity: One (1)**  
**Manufacturer: Atlanta Custom Fabricators**  
**Model: WMO**

- a. Model WMO Wall mounted over shelf, 7'-0" long X 14"deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-33 REFRIGERATED PREP TABLE**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: 18672PDLP**

- a. Model 18672PDLP LiquiTec® Refrigerated Pizza Table, two-section, 72" W, (6) 12" x 20" pan capacity, (2) doors, (2) 1/1 GN shelves, stainless steel removable hinged covers, 17" polyurethane cutting board, flush mount LiquiTec® raised rails, on/off switch, 18 gauge stainless steel top, stainless steel construction, 4" casters, self-contained side-mounted refrigeration system, R290 refrigerant, 1/5 & 1/3 HP, cUL, UL, NSF.

**ITEM # CKB-34 WALL MOUNTED OVER SHELF**

**Quantity: One (1)**  
**Manufacturer: Fabricated**  
**Model: WMO**

- a. Model WMO Wall mounted over shelf, 6'-0" long X 14"deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

c.

**ITEM # CKB-35 REACH-IN REFRIGERATOR**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: GAR2P-S**

- a. Model GAR2P-S Specification Line® Refrigerator, Reach-In, two-section, 46.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), (6) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon

refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®

- b. Left door hinged on left, right door hinged on right, standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CKB-36**            **HAND SINK**  
**Quantity:**            **Three (3)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CKB-37**            **WORK TABLE**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Atlanta Custom Fabricators**  
**Model:**                **WT**

- a. Model WT Work table, all stainless steel construction, 7'-6" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash and left end splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. (1) Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WMO**

- a. Model WMO Wall mounted over shelf, 4'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-44**                    **HOSE REEL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **T&S Brass**  
**Model:**                        **B-7242-10**

- a. Model B-7242-10 Hose Reel System, open, 3/8" x 50' hose with extended spray wand, with ratcheting system & adjustable hose bumper, epoxy coated steel
- b. Model B-1433-LR Hose Reel Supply System, 8" wall mount mixing faucet, adjustable centers, quarter-turn Eterna cartridges with spring checks, lever handles with color coded indexes, EasyInstall 16" and rigid 40" risers, continuous pressure vacuum breaker, 3/8"NPT x 36" flexible water hose connector with stainless steel quick disconnect, (2) 2-3/8" wall brackets, 1/2" NPT

**ITEM # CKB-45**                    **FLOOR TROUGH**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **FT**

- a. Model FT Stainless steel floor trough, 4'-0" long X 1'-6" wide, 2" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., removable washable 1" X 1/4" fiber grate. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-46**                    **ICE MACHINE FLAKER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Hoshizaki**  
**Model:**                        **F-1501MWJ**

- a. Model F-1501MWJ Ice Maker, Flake-Style, 30"W, water-cooled, self-contained condenser, production capacity up to 1624 lb/24 hours at 70°/50° (1410 lb AHRI certified at 90°/70°), stainless steel finish, Advanced CleanCycle24™, R-404A refrigerant, 208-230v/60/1-ph, 15.4 amps, NSF, UL
- b. Model B-1500SS ITEM 46.1 - Ice Bin, 60"W, hinged bottom door & top view windows, 1500-lb ice storage capacity, for top-mounted ice maker, stainless steel construction, universal top included, stainless steel legs, protected with H-GUARD Plus Antimicrobial Agent, ETL, ETL-Sanitation
- c. Model HS-2111 Stainless Cover/Separator, 11.3" x 26.2"
- d. Model LP-6 LEG Leg Package, (4) x 6" stainless steel legs
- e. Model HS-5607 Scoop Holder Kit

- f. Model H9320-51 ITEM 46.2 - Water Filtration System, single configuration

**ITEM # CKB-47**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CKB-48**                    **OYSTER SHUCKING WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Atlanta Custom Fabricators**  
**Model:**                        **OSWT**

- a. Model OSWT Oyster shucking work table, all stainless steel construction, 8'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash and left end splash 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flange feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Table to be provided with insulated oyster shucking iced pan, 3'-2" long X 2'-0" wide X 12" deep, NSF7 approved. Unit to be constructed of 16 gauge type 304 stainless steel interior and exterior with 2" thick insulation, 1" drain fitting and 16 gauge stainless steel removable perforated false bottom (18" long sections max). Unit top to be fully welded to and integral with stainless steel counter top provided with 1-1/2" stainless steel perimeter flange. Interior to be provided with (2) 16 gauge stainless steel removable dividers with hemmed edges to be set in stainless steel fixed channels set in iced pan.
- c. Table to be provided with insulated oyster sink, 20" long X 18" wide X 14" deep, all type 304 stainless steel construction, double pan with 1-1/2" insulation, integrally welded to top. Interior to be 14 gauge stainless steel, exterior to be 16 gauge stainless steel. Tank to be provided with a removable stainless steel scrap basket set in a recessed stainless steel housing with a T&S Brass #B-3950-01 waste valve twist handle and overflow assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide sink with stainless steel removable perforated false bottom (18" long sections max.).
- d. Table to be provided with cutting board, size per plan X 1" thick anti-bacteria white composite. Cutting board to be non-porous, high density material for food processing applications designed with scratch resistance, to not absorb moisture, bacteria or odors. Material to be NSF, FDA and USDA compliant. Cutting board to be provided with 4"X1" cut-out, 1" from edge and centered.
- e. To store cutting board under counter, provide 2 sets of 16 gauge type 304 stainless steel 1" U-shaped channels welded to legs at location shown on drawings. Channels to be length of cutting board with closed end to act as stop.
- f. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- g. Provide 8" x 8" cut out in undershelf for plumbing drain at oyster sink.
- h. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-48.1**      **PRE-RINSE W/ FAUCET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **T&S Brass**  
**Model:**                **B-0133-12ACBJST**

- a. Model B-0133-12ACBJST Pre-Rinse Unit, with add-on faucet, splash/wall mount, 8" OC, 44" flexible stainless steel hose with B-0107-J-SMV spray valve, 18" riser, add-on faucet with 12" swing spout (includes 2.2 gpm VR aerator), lever handles, Cerama cartridges with check valves, 6" wall bracket, accessory fitting tee & pre-rinse swivel, low lead

**ITEM # CKB-49**      **UNIVERSAL ROLL-IN RACK**  
**Quantity:**            **Twenty-Three (23)**  
**Manufacturer:**      **Cres Cor**  
**Model:**                **207UA12AC**

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF  
b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans  
c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # CKB-50**      **WALK-IN COOLER (SEAFOOD)**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Thermo-Kool**  
**Model:**                **WIC**

- a. Model WIC 9' 6" x 21' 0" x 9' 6" High  
Insulation: 4" DURATHANE, all-urethane foamed-in-place (Class 1)  
Exterior: Stucco Aluminum  
Interior Walls: Stucco Aluminum  
Interior Ceilings: White Stucco Aluminum  
Interior Floors: Galvanized Steel  
Coolers with Floor - recessed by 8" for tile & grout  
(3) 36" x 80" Flush Mounted Entrance Door(s), with hardware, Pilot light & switch assembly, vapor proof light & dial thermometer. NSF LISTED  
(3) Stainless Steel to Interior & Exterior of Door, Stainless Steel to Interior & Exterior of Frame  
(3) Door(s) with (3) Hinges per door  
(3) Kason # 1806 LED light fixture at door(s)  
(3) Thermo-Kool TK4700 walk-in monitor system with TK4 panic switch, motion detector, battery backups, dry contacts and thermostatically controlled heater wires  
(3) 14" x 14" peep window w/ heated frame & glass  
(3) 48"H 1/8" Aluminum Treadplate kickplates and jamb guards int & ext  
(3) Foot treadle(s)  
(3) Curtron Polar Pro model PP-C-080-3680-IP vinyl swing door(s) w/ impact plates  
(3) Center light above door  
(3) 48" LED light fixture(s) w/ bulbs  
(1) 8' x 100' Roll(s) of 6 mil polyethylene sheeting  
(2) Bluezone 2400  
Enclosure panels w/ removable access panel  
Trim  
1/8" Treadplate wainscot on exp. exterior 48" high (shipped loose for field installation)

**ITEM # CKB-50.1      COOLER EVAPORATOR COIL**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                RL6A094ADA**

- a. Model RL6A094ADA RL6A094ADA 115/60/1 coil (1.6 amps) with Dual Speed EC motor.  
 Accessories:  
 KE2 Evaporator Defrost Control w/ LLSV

**ITEM # CKB-50.2      COOLER CONDENSING UNIT**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                RWO151E4SEA**

- a. Model RWO151E4SEA 1 1/2 HP, Remote Pre-Assembled Refrig. System Model RWO150E4SEA 208-230/60/3  
 Medium Temperature, base, Scroll, Water-cooled, R448A, Air Defrost Timer (9.3 Compressor RLA).  
 Accessories:  
 - Heat Exchanger.  
 - Water-regulating valve  
 - Suction line components  
 - Sealed Filter

**ITEM # CKB-50.3      FOOD PRESERVATION UNIT**  
**Quantity:            One (1)**  
**Manufacturer:        Evo America, LLC**  
**Model:                10-BZ-2400FP**

- a. Model 10-BZ-2400FP Bluezone Food Preservation for Walk-in Coolers, treats up to 15,000 cu. ft. of air per unit, (4) ozone generating UV bulbs, digital display screen, control panel, mounting rails/feet, 250 watts, 120v/60/1-ph, 3 amps, cETLus, ETL-Sanitation

**ITEM # CKB-51        WALK-IN COOLER (DAILY USE)**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                WIC**

- a. Model WIC SEE ITEM 50

**ITEM # CKB-51.1      COOLER EVAPORATOR COIL**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                RL6A094ADA**

- a. Model RL6A094ADA RL6A094ADA 115/60/1 coil (1.6 amps) with Dual Speed EC motor.  
 Accessories:  
 KE2 Evaporator Defrost Control w/ LLSV

**ITEM # CKB-51.2      COOLER CONDENSING UNIT**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                RWO151E4SEA**

- a. Model RWO151E4SEA 1 1/2 HP, Remote Pre Assembled Refrig. System Model RWO150E4SEA 208-230/60/3  
Medium Temperature, base, Scroll, Water-cooled, R448A, Air Defrost Timer (9.3 Compressor RLA).  
Accessories:  
- Heat Exchanger.  
- Water-regulating valve  
- Suction line components  
- Sealed Filter

**ITEM # CKB-51.3      FOOD PRESERVATION UNIT**  
**Quantity:            One (1)**  
**Manufacturer:       Evo America, LLC**  
**Model:                10-BZ-2400FP**

- a. Model 10-BZ-2400FP Bluezone Food Preservation for Walk-in Coolers, treats up to 15,000 cu. ft. of air per unit, (4) ozone generating UV bulbs, digital display screen, control panel, mounting rails/feet, 250 watts, 120v/60/1-ph, 3 amps, cETLus, ETL-Sanitation

**ITEM # CKB-52        COLD STORAGE SHELVING**  
**Quantity:            Sixteen (16) (4 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:       Metro**  
**Model:                2148NK3**

- a. Model 2148NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF  
b. (16) Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKB-52.1     COLD STORAGE SHELVING**  
**Quantity:            Four (4) (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:       Metro**  
**Model:                2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF  
b. (4) Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CKB-53        ROLL-IN HEATED CABINET**  
**Quantity:            One (1)**  
**Manufacturer:       Delfield**  
**Model:                GAHRI2-S**

- a. Model GAHRI2-S Specification Line® Heated Cabinet, Roll-In, two-section, 76.5 cubic feet capacity, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, 1" tall

- stainless steel ramp, stainless steel exterior front, sides & interior, 208-240v/60/1-ph, 10.5 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
  - c. Full height solid doors, standard
  - d. Model AS269-AFJ-0043 Raised Ramp, for roll in/roll thru, standard

**ITEM # CKB-54**                    **WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WT**

- a. Model WT Work table, all stainless steel construction, 7'-6" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-55**                    **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WMO**

- a. Model WMO Wall mounted over shelf, 7'-6" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-55.1**                **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WMO**

- a. Model WMO Wall mounted over shelf, 7'-6" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-56**                    **1 COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 8'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Provide stainless steel skirt to cover sink bowl.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-56.1      FAUCET**  
**Quantity:            One (1)**  
**Manufacturer:        T&S Brass**  
**Model:                B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CKB-57      ELECTRIC FOOD CUTTER**  
**Quantity:            One (1)**  
**Manufacturer:        Hobart**  
**Model:                84186-1**

- a. Model 84186-1 Food Cutter with #12 attachment hub, 18" diameter stainless steel bowl 20 RPM, double stainless steel knives 1725 RPM, bowl cover with safety interlock, push/pull on/off switch, one-piece burnished aluminum housing, 3" legs, 115v/60/1-ph, 1 HP, 6' cord with plug

**ITEM # CKB-58      HAND SINK**  
**Quantity:            One (1)**  
**Manufacturer:        Advance Tabco**  
**Model:                7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CKB-59      SPARE NO.**

**ITEM # CKB-60      SPARE NO.**

**ITEM # CKB-61      DISPOSER**  
**Quantity:            One (1)**  
**Manufacturer:        Salvajor**  
**Model:                200-SA-6-WSP**

- a. Model 200-SA-6-WSP Water Saving Package with Operator Sensor, Disposer, Sink Assembly, 6-1/2" sink collar, 2 Hp motor, start/stop push button, drain/flush/time delay, automatic reversing & water saving with safety line disconnect ARSS-LD control, includes fixed nozzle, chrome plated vacuum breaker, solenoid valve, sink stopper & flow control, heat treated aluminum alloy housing, UL, CE
- b. 208v/60/3-ph, 6.6 amps
- c. Model 980105 Mounting bracket for ARSS-2, ARSS, ARSS-LD & WSP
- d. Model DP Stainless steel dejamming prong

**ITEM # CKB-62**                    **SALAD / VEGETABLE DRYER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **SALD-1**

- a. Model SALD-1 Shelleymatic® Salad Dryer, capacity (20) gallons, stainless steel exterior & lid, polyurethane interior, unit completely enclosed, watertight motor, 1-1/2" drain, adjustable on/off timer with cycles up to 5 minutes, cord & plug included, 4" locking stem casters, 1/6 HP, 115v/60/1-ph, 2.7 amp, NEMA 5-15P, cUL, UL, NSF

**ITEM # CKB-63**                    **FOOD PROCESSOR, BENCHTOP / COUNTERTOP**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Robot Coupe**  
**Model:**                        **R2N**

- a. Model R2N Commercial Food Processor, 3 liter gray polycarbonate bowl with handle, vegetable prep attachment with external ejection, kidney-shaped opening, includes: (1) "S" blade (27055), (1) 2mm grating disc (27577), (1) 4mm slicing disc (27566), continuous feed, bowl attachment designed for vertical cutting & mixing, on/off & pulse switch, single speed, 1725 RPM, 120v/60/1-ph, 7.0 amps, 1 HP, NEMA 5-15P, cETLus, ETL-Sanitation

**ITEM # CKB-64**                    **2-COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **2CSPT**

- a. Model 2CSPT Prep table with 2-Compartment Sink, 10'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sinks to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. Disposer option:  
Right sink to be 10" deep with modified drain opening to accept disposer and mounting hardware, Item #CKB-61, as shown on plan and hereinafter specified. Lever handle waste and rear connect overflow to be deleted from sink.
- d. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree

angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.

- e. Unit to be further constructed in accordance with shop drawings.

APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-64.1      PRE-RINSE W/ FAUCET**

**Quantity:            One (1)**

**Manufacturer:      T&S Brass**

**Model:                B-0133-12ACBJST**

- a. Model B-0133-12ACBJST Pre-Rinse Unit, with add-on faucet, splash/wall mount, 8" OC, 44" flexible stainless steel hose with B-0107-J-SMV spray valve, 18" riser, add-on faucet with 12" swing spout (includes 2.2 gpm VR aerator), lever handles, Cerama cartridges with check valves, 6" wall bracket, accessory fitting tee & pre-rinse swivel, low lead

**ITEM # CKB-65      WALL MOUNTED OVER SHELF**

**Quantity:            One (1)**

**Manufacturer:      Atlanta Custom Fabricators**

**Model:                WMO**

- a. Model WMO Wall mounted over shelf, 3'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.

- b. Unit to be further constructed in accordance with shop drawings.

APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-65.1    WALL MOUNTED OVER SHELF**

**Quantity:            Two (2)**

**Manufacturer:      Atlanta Custom Fabricators**

**Model:                WMO**

- a. Model WMO Wall mounted over shelf, 3'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.

- b. Unit to be further constructed in accordance with shop drawings.

APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-66      POT FILLER**

**Quantity:            One (1)**

**Manufacturer:      T&S Brass**

**Model:                B-0605-CR**

- a. Model B-0605-CR Pot & Kettle Filler Faucet, wall mount, single hole, 4-arm handle, ceramic cartridge, vacuum breaker, 68" stainless steel hose, self closing hook, low lead, 1/2" NPT, NSF

**ITEM # CKB-67      VERTICAL CUTTER/MIXER**

**Quantity:            One (1)**

**Manufacturer:      Hobart**

**Model:                HCM450-3**

- a. Model HCM450-3 460/60/3 (requires 20 amp service, 11 amps drawn); Cutter Mixer; includes Cut-Mix attachment, Knead-Mix attachment, Strainer Basket, & Mixing Baffle arm.

**ITEM # CKB-68**                    **FLOOR TROUGH**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **FT**

- a. Model FT Stainless steel floor trough, 3'-0" long x 1'-0" wide, 5" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., stainless steel subway grating of 3/16" X 1" bar anti-splash drain pan with built-in pitch toward drain. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-69**                    **SLICER TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Bizerba**  
**Model:**                        **SLICER-TABLE-315**

- a. Model SLICER-TABLE-315 Equipment Stand, mobile, 27.9"W x 32.25"D x 31.75"H, 600 lb. capacity, coved-upward edge on all four sides of table-top, 14-gauge stainless steel top, (4) predrilled mounting holes, combination handle/remote sharpener holder, (6) 18" x 26" pan capacity, 2.375" tray slide spacing, side lift arm for mobility or lock in place, (1) fixed stainless steel bottom shelf with 3" center drain, stainless steel welded construction, (4) high friction pad feet with retractable casters, NSF, Made in USA.

**ITEM # CKB-70**                    **MEAT SLICER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Bizerba**  
**Model:**                        **GSP HD I 150-GCB**

- a. Model GSP HD I 150-GCB Automatic Heavy Duty Illuminated Safety Slicer, 13" Grooved Cheese Blade, product fence, 3-speeds, 3-strokes, servo assist, 8-safety interlocks, seamless anodized aluminum construction, high carriage 25° incline towards operator, 40° gravity feed, thumb guard 5.8" W, remote sharpener with spring-loaded dial, slice thickness 0-0.94", VFD-motor, 120v/60/1-ph, 2.6 amps, 0.24kW, cord with NEMA 5-15P, ETL-Sanitation, UL-157 gaskets & seals, cETLus, DGUV safety tested

**ITEM # CKB-71**                    **2-COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **2CSPT**

- a. Model 2CSPT Prep table with 2-Compartment Sink, 10'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.

- b. Sinks to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. (2) Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-71.1      FAUCET**  
**Quantity:            One (1)**  
**Manufacturer:        T&S Brass**  
**Model:                B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CKB-72        WALL MOUNTED OVER SHELF**  
**Quantity:            One (1)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                WMO**

- a. Model WMO Wall mounted over shelf, 10'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-72.1     WALL MOUNTED OVER SHELF**  
**Quantity:            Two (2)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                WMO**

- a. Model WMO Wall mounted over shelf, 10'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-73        SPARE NO.**

**ITEM # CKB-74        SPARE NO.**

**ITEM # CKB-75        MOBILE WORK TABLE**  
**Quantity:            Four (4)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                MWT**

- a. Model MWT Mobile work table, all stainless steel construction, 6'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edge. Stainless steel cross bracing, stainless steel legs and (4) 5" diameter non-marking polyurethane swivel casters, (2) with brakes.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-76**            **CAN OPENER**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Edlund**  
**Model:**                **1**

- a. Model 1 Can Opener, manual, #1™ with plated base (for cans up to 11" tall) "Old Reliable"™

**ITEM # CKB-77**            **PORTION SCALE**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Alfa International**  
**Model:**                **APW-10**

- a. Model APW-10 CAS Portion Control Scale, compact, portable, 10 lb. x 0.005 lb., 9.4" x 8.9" stainless steel platter, LCD display, AC adapter 1.5v or (6) "C" battery operated (not included), ABS plastic & metal housing, replaces OEM PWII-10

**ITEM # CKB-78**            **HAND SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CKB-79**            **60 QT MIXER**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Hobart**  
**Model:**                **HL600C-2STD**

- a. Model HL600C-2STD 380-460/50/60/3 Mixer; with bowl, beater, "D" whip, & spiral dough arm; US Correctional Facility configuration - Legacy Correctional Planetary Mixer, 3.0 HP, 60 quart, (4) fixed speeds plus stir speed, gear-driven transmission, 20-Minute SmartTimer™, power bowl lift, stainless steel bowl, "B" beater, "D" wire whip, "ED" dough hook, stainless steel bowl guard
- b. Model TRUCK-HL1486 Legacy® Mixer Bowl Truck.

**ITEM # CKB-80**            **EQUIPMENT STAND**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**

**Model: MT-MS-300**

- a. Model MT-MS-300 Mixer Table, mobile, 30"W x 30"D x 28H" 14/304 stainless steel top, stainless steel base, aluminum pan rack with 2" spacing, pan rack accommodates (6) 18" x 26" pans, (4) 5" swivel casters (2 braked), NSF

**ITEM # CKB-81            20 QT MIXER**  
**Quantity:                One (1)**  
**Manufacturer:           Hobart**  
**Model:                    HL200-1STD**

- a. Model HL200-1STD 100-120/50/60/1; Bench type mixer; with bowl, beater, whip & spiral dough arm, US/EXP configuration - Legacy Planetary Mixer, Bench, 20 quart, (3) fixed speeds plus stir speed, gear-driven transmission, 15-minute SmartTimer™, #12 taper hub, manual bowl lift, stainless steel bowl, aluminum "B" beater, stainless steel "D" wire whip, aluminum "ED" spiral dough arm, stainless steel bowl guard, 1/2 hp, cord with plug.

**ITEM # CKB-82            BAKER'S WORK TABLE**  
**Quantity:                One (1)**  
**Manufacturer:           Atlanta Custom Fabricators**  
**Model:                    BWT**

- a. Model BWT Work table, all stainless steel construction, 8'-0" long X 3'-0" deep X 36" high. Top to be 14 gauge type 304 stainless steel with an 8" back and end splashes with 2" return on 45 degree angle, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet (stainless steel flange feet as required). Front edge to be provided with 14 gauge type 304 stainless steel reverse 3" deep X 1-1/2" rolled rim flour catch running the full length of table. All exposed back and end splashes to be enclosed, fully welded, ground and polished. Table to be fully welded construction with all welds ground and polished to a uniform finish.
- b. Model TMOS Stainless steel table mounted over shelf, 8'-0" long X 1'-0" wide. Shelf to be 14 gauge type 304 stainless steel, supported by stainless steel tubular uprights fully welded to shelves, to pass through backsplash and secured to table framework using stainless steel fasteners and sealed to backsplash, with flanges fully welded to table top, ground and polished.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-83            INGREDIENT BIN**  
**Quantity:                Four (4)**  
**Manufacturer:           Cambro**  
**Model:                    IBS20148**

- a. Model IBS20148 Ingredient Bin, mobile, 21 gallon capacity, molded polyethylene with sliding cover, scoop holder included (scoop sold separately), (4) 3" heavy duty casters (2 front swivel, 2 fixed), with bin securely attached to base plate, white with clear cover, NSF
- b. Model SCP12CW135 Camwear® Scoop, 12 oz., polycarbonate, clear, NSF

**ITEM # CKB-84            EXHAUST HOOD W/ FIRE SYSTEM**  
**Quantity:                One (1)**  
**Manufacturer:           Accurex**  
**Model:                    XXEW-174**

- a. Model XXEW-174

A. Grease-X-Tractor™ Filter Canopy Hood, Wall Style, Exhaust Only with Single Wall Front. Kitchen Ventilation hood(s) shall be of the Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided.

B. The hood(s) exterior shall be constructed of a minimum of 18 gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. An integral 3-inch air space is provided to meet NFPA® clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be constructed of a minimum 18-gauge corrosion resistant steel including, but not limited to ducts, plenum, and brackets.

C. The hood(s) shall include a filter housing constructed of the same material as the hood. The Grease-X-Tractor high efficiency stainless steel filters shall be U.L. 1046 Classified and NSF Certified as manufactured by Accurex, in sufficient number and size to ensure optimum performance. Grease-X-Tractor filters shall direct the exhaust airflow through individual cyclone chambers, utilizing centrifugal impingement grease extraction technology. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 69% at 8 microns (51% from 3-10 microns) and static pressure drop of 0.7-0.8 inWC.

D. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.

E. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the necessary data that confirms compliance with the code authorities listed above.

F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.

G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.

H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor

I. 304 Stainless Steel inside and out. No galvanized metal.

J. Provide fire cabinet on left end of hood.

K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood where applicable.

L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling.

**ITEM # CKB-85**                    **SMOKER OVEN**  
**Quantity:**                    **One (1)**  
**Manufacturer:**               **Cookshack**  
**Model:**                        **FEC750SS**

- a. Model FEC750SS Fast Eddy's™ Rotisserie Smoker, wood pellets, 750 lbs. per load capacity, IQ5 digital controller with (8) programs, alarm cycle & USB, auto-start, (2) convection fan, (15) stainless steel rotisserie grills/racks, 80 lbs. hopper, stainless steel construction, includes: (5) grill rack baskets, (4) casters, 160 lbs. pellets, foot pedal & Cookshack Spice Kit, 1800 watts, 15.0 amps, 120v, 108,000 BTU pellet burner, power cord, NSF, cULus. UNIT IS FULLY ELECTRIC.

**ITEM # CKB-86**                    **ROLL-IN COMBI OVEN**  
**Quantity:**                    **One (1)**  
**Manufacturer:**               **RATIONAL**  
**Model:**                        **ICP 20-FULL E 480V 3 PH (LM100GE)**

- a. Model ICP 20-FULL E 480V 3 PH (LM100GE) (CG1ERRA.0000228) iCombi Pro® 20-Full Size Combi Oven, electric, (20) 18" x 26" sheet pan or (40) 12" x 20" steam pan or (20) 2/1 GN pan capacity, mobile oven rack & (10) stainless steel grids included, intelligent cooking system with (4) assistants; iDensityControl, iCookingSuite, iProductionManager, & iCareSystem, (6) operating modes, (5) cooking methods, (3) manual operating modes, 85° to 572°F temperature range, quick clean, care control, eco mode, 6-point core temperature probe, retractable hand shower, Ethernet interface, Wi-Fi enabled, 480v/60Hz/3-ph, 81.7 amps, 67.9 kW, IPX5, UL, cULus, NSF, ENERGY STAR-®
- b. Model CAP Chef Assistance Program, a RATIONAL certified Chef conducts 4 hours/location specialized application training with personnel, no charge
- c. Model 9999.2002 Pre-Installation Site Consultation, provides an installation consultation to ensure the site has proper space and connections for gas, electric, drain & water, one (1) Consultation is needed for every four (4) cooking systems, includes 100 miles (200 miles round trip).
- d. Model 9999.2202 RCI RATIONAL Certified Installation, new certified installation for each electric floor iCombi, 100 miles (200 round-trip) included.
- e. Model 8720.1563US Installation Kit, for electric iCombi/SCC/CMP 62 (208/60Hz/3ph & 240/60Hz/3ph); electric iCombi/SCC/CMP 202 (480/60Hz/3ph)
- f. Model 1900.1158US Water Filtration Double Cartridge System, for full-size Combi-Duos or if used for more than (2) units, includes: (1) double head with pressure gauge, (2) R95-CLX filter & (1) filter installation kit (for each additional unit add (1) additional head & additional cartridge. Maximum (4) cartridges)
- g. Model 9999.2271 RCI RATIONAL Certified Installation, additional installation cost for a RATIONAL Water Filter System is available when purchased with Certified Installation of RATIONAL unit
- h. Model 42.00.162 RATIONAL USB Data Memory Stick, for transferring of cooking programs and HACCP data between units & computers.
- i. Model 60.22.490 (Mobile Oven Rack, type 20-full size Pro/Classic, (20) 24" x 20" pan capacity, 2-1/2" spacing.
- j. Model 60.22.392 Sheet Pan Adapter, top, for 20-full size mobile racks with (20) racks, allows use of full size sheet pans without stainless steel grid  
Model 60.22.393 Sheet Pan Adapter, below, for 20-full size mobile racks with (20) racks, allows use of full size sheet pans without stainless steel grid.

**ITEM # CKB-87**                    **ROLL-IN BLAST CHILLER**  
**Quantity:**                    **One (1)**

**Manufacturer:** Alto-Shaam  
**Model:** QC3-100

- a. Model QC3-100 Quickchiller™ Blast Chiller, roll-in, self-contained with dual refrigeration systems, (40) 12" x 20" pan capacity, touch control with (20) preset menu options, (3) product temperature probes, quick freeze soft-chill hard-chill and holding modes, automatic defrost cycle, HACCP, stainless steel interior and exterior, (4) adjustable legs (NOT installed at factory), includes: One (1) Roll-in pan cart, (20) non-tilt pan support rails, 22-13/16" (678mm) horizontal width & 2-9/16" (65mm) vertical spacing between rails, (10) stainless steel shelves, (1) removable drip tray & (1) cart handle , cULus, NSF
- b. 115/208-230v/60/3-ph, 16.0 amps, 3.68 kW, 5 wire direct connection, no cord or plug
- c. Left-hand door swing
- d. Model 5026385 Roll-In Pan Cart, (20) shelf pan trolley (shelves/pans sold separately), 2-9/16" vertical spacing, fits 20-20E, 20-20G, 20-20MW and QC3-100, stainless steel construction, (4) casters (2 locking)

**ITEM # CKB-88** ICE MACHINE, CUBE  
**Quantity:** Two (2)  
**Manufacturer:** Hoshizaki  
**Model:** KM-1301SWJ

- a. Model KM-1301SWJ Ice Maker, Cube-Style, 48"W, water-cooled, self-contained condenser, production capacity up to 1247 lb/24 hours at 70°/50° (1230 lb AHRI certified at 90°/70°), crescent cube style, stainless steel exterior, R-404A refrigerant, 208-230v/60/1-ph, 8.2 amps, NSF, UL

**ITEM # CKB-88.1** ICE BIN, W/CART  
**Quantity:** Two (2)  
**Manufacturer:** Follett Products, LLC (Middleby)  
**Model:** DEV1475SG-60-75

- a. Model DEV1475SG-60-75 Ice-DevIce™ with SmartCART™ 75, 1490 lb. bin storage capacity, with front chute, poly liner, SmartGATE ice shield, poly door with PowerHinge™ door hinge, full stainless steel exterior and base, ABS/poly top custom cut for ice machine, includes 82 oz plastic ice scoop, paddle and rake set, and (1) polyethylene cart with hinged lid and (3) polyethylene Totes ice carriers, each carrier holds 25 lb/75 lb total per cart, for cube or Chewblet ice only, NSF
- b. Model ABICEPADDL46 Ice Paddle, high density poly, 46-1/2" long, for slope front bin, single door upright bin, and single door Ice DevIce ice storage and dispensing system

**ITEM # CKB-88.2** WATER FILTER  
**Quantity:** Two (2)  
**Manufacturer:** Hoshizaki  
**Model:** H9320-53

- a. Model H9320-53 Water Filtration System, triple configuration

**ITEM # CKB-88.3** ICE CART  
**Quantity:** Two (2)  
**Manufacturer:** Follett Products, LLC  
**Model:** 00112771

- a. Model 00112771 SmartCART™ 75, mobile, polyethylene, includes 3 totes, 75-lb capacity, NSF

**ITEM # CKB-89**                    **FLOOR TROUGH**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Atlanta Custom Fabricators**  
**Model:**                        **FT**

- a. Model FT Stainless steel floor trough, 9'-0" long X 2'-6" wide, 2" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., removable washable 1" X 1/4" fiber grate. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-90**                    **STORAGE SHELVING**  
**Quantity:**                    **Eight (8) – (2 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:**            **Metro**  
**Model:**                        **2148NK3**

- a. Model 2148NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (4) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (4) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CKB-91**                    **MOBILE HEATED CABINET**  
**Quantity:**                    **Fourteen (14)**  
**Manufacturer:**            **FWE**  
**Model:**                        **ETC-UA-12HD**

- a. Model ETC-UA-12HD Heated Transport Cabinet, full height, (12) removable & adjustable universal tray slides 4-1/2" OC, capacity (12) 18" x 26" or (24) 12" x 20" pans, (1) insulated door, stainless steel interior & exterior, recessed hand grip, cULus, UL EPH Classified, IPX4, CE
- b. 120v/60/1-ph, 13 amps, 1565 watts, cord with NEMA 5-15P (USA)
- c. Manual Control, standard
- d. Standard door(s)
- e. Cord Winding Bracket

**ITEM # CKB-92**                    **DOLLY TRUCK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **New Age**  
**Model:**                        **50112**

- a. Model 50112 Bulk Sheet Pan Dolly, 140 pan capacity, 27-3/4"W x 73"H x 28-1/2"D, (4) 8" x 2" plate swivel casters (C526), Made in USA.

**ITEM # CKB-93**            **HOSE REEL**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **T&S Brass**  
**Model:**                **B-7242-10**

- a. Model B-7242-10 Hose Reel System, open, 3/8" x 50' hose with extended spray wand, with ratcheting system & adjustable hose bumper, epoxy coated steel
- b. Model B-1433-LR Hose Reel Supply System, 8" wall mount mixing faucet, adjustable centers, quarter-turn Eterna cartridges with spring checks, lever handles with color coded indexes, EasyInstall 16" and rigid 40" risers, continuous pressure vacuum breaker, 3/8"NPT x 36" flexible water hose connector with stainless steel quick disconnect, (2) 2-3/8" wall brackets, 1/2" NPT.

**ITEM # CKB-94**            **HAND SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CKB-95**            **SPARE NO.**

**ITEM # CKB-96**            **SPARE NO.**

**ITEM # CKB-97**            **3-COMPARTMENT SINK SCULLERY TABLE**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Fabricated**  
**Model:**                **3CSST**

- a. Model 3CSST Scullery table with 3-Compartment Sink, 9'-0" long X 2'-10" wide X 36" high, all 14 gauge type 304 stainless steel construction, size and shape per plan. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, 3" high X 1-3/4" rolled edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Each sink to be 28" long X 20" wide X 14" deep, provided with T&S Brass #B-3950-01 Waste Valve, twist handle and overflow assembly for 3-1/2" sink opening, 2" drain outlet and stainless steel lever waste bracket. Provide stainless steel skirt to cover sink bowls. Crease bottom of sink bowl to pitch to the drain.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-97.1**        **FAUCET**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **T&S Brass**  
**Model:**                **B-0290**

- a. Model B-0290 Sink Mixing Faucet, wall mount, 8" adjustable centers, 12" Big-Flo swing nozzle with plain end outlet, 4-arm kitchen handles with color coded indexes, 00LL street elbows with 3/4" female NPT inlets, ADA Compliant

**ITEM # CKB-97.2      PRE-RINSE W/ FAUCET**  
**Quantity:            One (1)**  
**Manufacturer:        T&S Brass**  
**Model:                B-0287-427-B**

- a. Model B-0287-427-B Big-Flo Pre-Rinse Unit, 8" wall mount mixing faucet, adjustable centers, spring action gooseneck, check valves, 4-arm handles with color coded indexes, 18" riser, 44" flexible stainless steel hose, Big-Flo compression spindles, 1.15 GPM spray valve, 6" adjustable wall bracket, 3/4" NPT, low lead, NSF, cCSAus

**ITEM # CKB-98        POT RACK**  
**Quantity:            One (1)**  
**Manufacturer:        Advance Tabco**  
**Model:                SW-96**

- a. Model SW-96 Pot Rack, wall-mounted, double bar design, 96"W x 12"D, constructed of 1/4" x 2" stainless steel, includes: (18) plated double pot hooks, NSF

**ITEM # CKB-99        HAND SINK**  
**Quantity:            One (1)**  
**Manufacturer:        Advance Tabco**  
**Model:                7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CKB-100      WALL MOUNTED SLANTED RACK SHELF**  
**Quantity:            One (1)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                WMSRS**

- a. Model WMSRS Wall mounted slanted rack shelf, all stainless steel construction, 7'-8" long X 1'-8" wide. Shelf to be fully welded construction with all welds ground and polished to a uniform finish. Shelf to be constructed of 14 gauge type 304 stainless steel, supported by 14 gauge stainless steel cantilever brackets, mounted using stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-100.1    WALL MOUNTED SLANTED RACK SHELF**  
**Quantity:            One (1)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                WMSRS**

- a. Model WMSRS Wall mounted slanted rack shelf, all stainless steel construction, 4'-0" long X 1'-8" wide. Shelf to be fully welded construction with all welds ground and polished to a uniform finish. Shelf to be constructed of 14 gauge type 304 stainless steel, supported by 14 gauge stainless steel cantilever brackets, mounted using stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-101                    U-SHAPED SOILED DISH TABLE WITH LEDGE**  
**Quantity:                        One (1)**  
**Manufacturer:                    Atlanta Custom Fabricators**  
**Model:                             USDTL**

- a. Model USDTL U-Shaped Soiled dish table with ledge, all stainless steel construction, 4'-6" x 10'-7" x 15'-2" long X 2'-6" wide X 34" high. Ledge to be 7'-2" long X 12" wide and fully welded continuously with table. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, 3" high X 1-3/4" rolled edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Scrapping Sink, 14 gauge type 304 stainless steel construction, 21"long X 21"wide X 6"D, integrally welded to top. Crease bottom of sink bowl to pitch to the drain. Sink to be provided with 14 gauge stainless steel removable rack guide to rest flush with table top.
- c. Disposer:  
Sink to have a modified drain opening to accept disposer and mounting hardware, Item #102, as shown on plan and hereinafter specified.
- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-101.1                PRE-RINSE**  
**Quantity:                        One (1)**  
**Manufacturer:                    T&S Brass**  
**Model:                             B-0133**

- a. Model B-0133 EasyInstall Pre-Rinse Unit, wall mount mixing faucet with 8" adjustable centers, quarter-turn Eterna cartridges with spring checks, lever handles with color-coded indexes, 18" EasyInstall riser, 44" flexible stainless steel hose with heat-resistant gray handle & hold down ring, 1.15 GPM spray valve (B-0107), finger hook, polished chrome-plated brass faucet body, 1/2" NPT female inlets, CSA

**ITEM # CKB-102                DISPOSER**  
**Quantity:                        One (1)**  
**Manufacturer:                    Salvajor**  
**Model:                             200-SA-6-WSP**

- a. Model 200-SA-6-WSP Water Saving Package with Operator Sensor, Disposer, Sink Assembly, 6-1/2" sink collar, 2 Hp motor, start/stop push button, drain/flush/time delay, automatic reversing & water saving with safety line disconnect ARSS-LD control, includes fixed nozzle, chrome plated vacuum breaker, solenoid valve, sink stopper & flow control, heat treated aluminum alloy housing, UL, CE
- b. 208v/60/3-ph, 6.6 amps
- c. Model 980105 Mounting bracket for ARSS-2, ARSS, ARSS-LD & WSP
- d. Model DP Stainless steel dejamming prong

**ITEM # CKB-103                CONVEYOR DISH MACHINE**  
**Quantity:                        One (1)**  
**Manufacturer:                    Hobart**  
**Model:                             CL66-BAS ELECTRIC - RL**

- a. Model CL66-BAS ELECTRIC - RL Conveyor Dishwasher, single tank with power scrapper; (202) racks/hour, .45 gallon/rack, Complete Delime with Booster Guard, Touch

Screen Controls with diagnostics, troubleshooting, and SmartConnect App, capless wash arms, NSF Pot & Pan mode, pumped rinse, insulated hinged doors, cULus, NSF, ENERGY STAR®, Factory Startup - Free for installations within 100 miles (accessible by public roadway) of a Hobart Service Office during normal business hours with appropriate notice; Installation beyond 100 miles or those not accessible by public roadway will be quoted by Service.

- b. Maintenance Inspection
- c. Model CL66BAS-HTE15K Electric tank heat 15kW
- d. Model CL66BAS-ELE0CD 480v/60/3-ph Single point connection standard
- e. Model CL66BAS-HGTHS Higher than Standard 24"H x22"W opening, fits large oval trays, tall drink dispensers
- f. Model CL66BAS-ERH18K With 18 kW Booster
- g. Model CL66BAS-DIR0RL Right to left operation
- h. Model DWT-CL Drain water tempering kit for CL models
- i. Installation of DWT kit
- j. Model VNTSTK-EXTND 21" Adjustable vent stack extension, field installed
- k. Model TBLLIM-CL Table limit switch for CL & CLEN series
- l. (3) Model FLGFT-CLE\*3 Flanged Feet, all CLeN Models require quantity of 3 sets (6 feet)

**ITEM # CKB-104            EXHAUST DUCT RISER**  
**Quantity:                One (1)**  
**Manufacturer:          Atlanta Custom Fabricators**  
**Model:                    EDR**

- a. Model EDR Exhaust duct riser, constructed of 16 gauge type 304 stainless steel, fully welded and polished with stainless steel ceiling collar, size and shape per plan to fit dish machine. Unit to be constructed and installed per plan. All labor and materials included but not limited to ducting and access panels by a factory authorized licensed mechanical contractor. Installation shall conform but is not limited to section 15600.
- b. NOTE:
  - 1. GC to provide and install all rated chases with required access panels and all ducting. Installation shall include all ducting, chases, fans, and curbs as provided by the FEC, access panels, roof penetrations and comply with all governing agencies.
  - 2. GC to provided continuous welded stainless steel ducting from pantleg to exhaust fan.
  - 3. GC is also to interconnect fan w/ contact in dish machine controls.
- c. Unit to be further constructed in accordance with shop drawings.  
 APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-104.1        EXHAUST DUCT RISER**  
**Quantity:                One (1)**  
**Manufacturer:          Atlanta Custom Fabricators**  
**Model:                    EDR**

- a. Model EDR Exhaust duct riser, constructed of 16 gauge type 304 stainless steel, fully welded and polished with stainless steel ceiling collar, size and shape per plan to fit dish machine. Unit to be constructed and installed per plan. All labor and materials included but not limited to ducting and access panels by a factory authorized licensed mechanical contractor. Installation shall conform but is not limited to section 15600.
- b. NOTE:
  - 1. GC to provide and install all rated chases with required access panels and all ducting. Installation shall include all ducting, chases, fans, and curbs as provided by the FEC, access panels, roof penetrations and comply with all governing agencies.

2. GC to provided continuous welded stainless steel ducting from pantleg to exhaust fan.
3. GC is also to interconnect fan w/ contact in dish machine controls.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-105            CLEAN DISH TABLE**  
**Quantity:                One (1)**  
**Manufacturer:            Fabricated**  
**Model:                    CDT**

- a. Model CDT Clean dish table, all stainless steel construction, 10'-0" long X 2'-6" wide X 34" high. Top to be 14 gauge type 304 stainless steel with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel z-clips, 3" high X 1-3/4" rolled edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. Provide accommodations for table limit switch. Table to be fully welded construction with all welds ground and polished to a uniform finish. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-106            WALL MOUNTED SLANTED RACK SHELF**  
**Quantity:                One (1)**  
**Manufacturer:            Atlanta Custom Fabricators**  
**Model:                    WMSRS**

- a. WMSRS Wall mounted slanted rack shelf, all stainless steel construction, 7'-0" long X 1'-8" wide. Shelf to be fully welded construction with all welds ground and polished to a uniform finish. Shelf to be constructed of 14 gauge type 304 stainless steel, supported by 14 gauge stainless steel cantilever brackets, mounted using stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-107            POT STORAGE SHELVING**  
**Quantity:                Eight (8) – (2 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:            Metro**  
**Model:                    2142NK3**

- a. Model 2142NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (4) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (4) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CKB-108            FLOOR TROUGH**  
**Quantity:                One (1)**  
**Manufacturer:            Atlanta Custom Fabricators**  
**Model:                    FT**

- a. Model FT Stainless steel floor trough, 10'-0" long x 1'-0" wide, 5" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., stainless steel subway grating of 3/16" X 1" bar anti-splash drain pan with built-in pitch toward drain. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CKB-109            SPARE NO.**

**ITEM # CKB-110            SPARE NO.**

**ITEM # CKB-111            SPARE NO.**

**ITEM # CKB-112            DISH CART / DOLLY**  
**Quantity:                Eight (8)**  
**Manufacturer:            Metro**  
**Model:                    PCD11A**

- a. Model PCD11A Quick Ship - Poker Chip Dish Dolly, 26-5/8"W x 26-5/8"D x 31-15/16"H, adjustable, dish size 4-1/4" to 11-3/4", removable dividers & towers, two-handed access, recessed handles, 5"Dia. swivel casters with neoprene wheels (2 with brakes), chip-resistant polymer shell with Microban® antimicrobial protection, aesthetic blue, vinyl dust/water splash cover, NSF

**ITEM # CKB-113            RACK DOLLY**  
**Quantity:                Eight (8)**  
**Manufacturer:            Metro**  
**Model:                    D2121C**

- a. Model D2121C Dolly, for Cup/Glass Rack, platform design, single stack, designed for 20" x 20" racks, all aluminum construction, without bumpers & handle

**ITEM # CKB-114            MOP SINK CABINET**  
**Quantity:                One (1)**  
**Manufacturer:            Advance Tabco**  
**Model:                    9-OPC-84DL**

- a. Model 9-OPC-84DL Cabinet with Mop Sink, 50-3/8"W x 22-3/4"D x 84"H O.A., double hinged doors, left side mop sink 20"W x 16"D front to back x 12" deep (drain included), storage for mop bucket to roll in on right, (2) mop holders, (4) fixed intermediate shelves (3 on right, 1 on left above sink), slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series sink bowl apron, 18/430 series stainless steel cabinet, NSF
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

### **CRK – EVENT LEVEL CREW KITCHEN**

**ITEM # CRK-1**                    **1 COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Atlanta Custom Fabricators**  
**Model:**                      **1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 8'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CRK-1.1**                **FAUCET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **T&S Brass**  
**Model:**                      **B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CRK-2**                    **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Atlanta Custom Fabricators**  
**Model:**                      **WMO**

- a. Model WMO Wall mounted over shelf, 8'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CRK-2.1**                **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **Atlanta Custom Fabricators**  
**Model:**                      **WMO**

- a. Model WMO Wall mounted over shelf, 8'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.

- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CRK-3**                    **HAND SINK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CRK-4**                    **REACH-IN FREEZER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAF1P-SH**

- a. Model GAF1P-SH Specification Line® Freezer, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) half-height hinged solid doors (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.55 HP, 115v/60/1-ph, 7.2 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Door hinged on right standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CRK-5**                    **VENTLESS FRYER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perfect Fry Company**  
**Model:**                        **PFA500**

- a. Model PFA500 Ventless Automatic Deep Fryer, countertop, 2.9 gallon oil capacity, 3lb product load, front loading and dispensing, oil drainage kit, Built in Fire Suppression, interactive touchscreen control, WiFi enabled, USB port for recipe sharing and data transfer, RapidFry technology, cETLus, ETL -Sanitation, NSF
- b. Model MDD-1001 Open Kitchen bundle, includes - 1 x ConnectWare module, 1 x Secure Access Point (SAP), 3 year subscription for Open Kitchen
- c. 208v/60/3ph, 5.0 KW, 14 amps NEMA 15-30P

**ITEM # CRK-6**                    **WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Fabricated**  
**Model:**                        **WT**

- a. WT Work table, all stainless steel construction, 5'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 4" back splash with 1" return on 45 degree angle, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CRK-7**                    **ELECTRIC GRIDDLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Evo America, LLC**  
**Model:**                        **10-0148-EVT**

- a. Model 10-0148-EVT Evo® EVent® 48E Full Metal Surround Cooking Station, electric, 48"W x 24"D rectangular steel cooktop surrounded with black granite, self-contained ventilation, multi-stage filtration system, integrated fire suppression system, 100° F to 550° F (38° C to 288° C) temperature range, touch panel display, includes: cleaning kit, (2) stainless steel spatulas, (1) stainless steel scraper, UL, UL EPH Classified, Made in USA
- b. 208v/60/1-ph, 32.0 amps, 6.7 kW, 8-foot cord, NEMA 6-50P
- c. Model 10-0150-EVT-FMS Customization for 10-0148-EVT: Metal surround, stainless steel enclosure
- d. Model 10-0150-EVT-36 Caster Kit, for 36" working height, standard

**ITEM # CRK-8**                    **REACH-IN HEATED CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAH1-S**

- a. One (1) Model GAH1-S Specification Line® Heated Cabinet, Reach-In, one-section, 21.0 cubic feet capacity, (1) full-height hinged solid door (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, 208-240v/60/1-ph, 6.0 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Model 0460003CN 3 year parts & labor warranty, standard
- c. Door hinged on left
- d. Full height solid door, standard
- e. Set of (4) 5" locking casters, standard

**ITEM # CRK-9**                    **WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WT**

- a. Model WT Work table, all stainless steel construction, 7'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CRK-10**                  **DRY STORAGE SHELVING**  
**Quantity:**                    **Twelve (12) (3 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:**              **Metro**

**Model: 1848NK3**

- a. Model 1848NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 18"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 86PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 86-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CRK-11 REACH-IN REFRIGERATOR**  
**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: GAR1P-S**

- a. Model GAR1P-S Specification Line® Refrigerator, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.22 HP, 115v/60/1-ph, 4.2 amps, NEMA 5-15P, NSF, cULus
- b. Door hinged on right standard
- c. Model AS359-CT7-0035 Stainless steel back
- d. Set of (4) 5" locking casters, standard

**ITEM # CRK-12 MEGA TOP SANDWICH / SALAD PREPARATION REFRIGERATOR**  
**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: D4448NP-12M**

- a. Model D4448NP-12M Mega Top Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (4) drawers, stainless steel top with polyethylene cutting board & (12) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-contained refrigeration, standard

**ITEM # CRK-13 CHEF'S COUNTER**  
**Quantity: One (1)**  
**Manufacturer: Atlanta Custom Fabricators**  
**Model: CC**

- a. Model CC Chef's counter, all stainless steel and cabinet base construction 9'-10" long x 4'-0" wide X 36" high. Top to be 14 gauge type 304 stainless steel. Counter to be fully welded construction with all welds ground and polished to a uniform finish. All exposed back and end panels to be enclosed, fully welded, ground and polished.
- b. Provide cut-out in counter for roll-in equipment as indicated on plan. (Item 12)
- c. Undermount work sink to be constructed of 14 gauge type 304 stainless steel. Unit to be 20" long X 20" wide X 12" deep with 1-1/2" wide stainless steel perimeter flange. Sink to be provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain.

- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CRK-13.1      DECK MOUNT FAUCET**  
**Quantity:            One (1)**  
**Manufacturer:        T&S Brass**  
**Model:                B-0325-CC-CR**

- a. Model B-0325-CC-CR Mixing Faucet, deck mount, 4" adjustable centers, 5-3/4" swivel gooseneck spout with Series 1 stream regulator outlet (includes lock washer to convert to rigid), lever handles with color coded indexes, quarter-turn Cerama cartridges with check valves, polished chrome plated brass body, 1/2" NPT male inlets, low lead, cCSAus, ADA Compliant

**ITEM # CRK-14      SPARE NO.**

**ITEM # CRK-15      SPARE NO.**

**ITEM # CRK-16      WALK-IN COOLER**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                WIC**

- a. Model WIC 12' 0" x 8' 8" x 9' 6" High  
 Insulation: 4" DURATHANE, all-urethane foamed-in-place (Class 1)  
 Exterior: Stucco Aluminum  
 Interior Walls: Stucco Aluminum  
 Interior Ceilings: White Stucco Aluminum  
 Interior Floors: Galvanized Steel  
 Cooler, Freezer with Floor - recessed by 8" for tile & grout  
 (2) 36" x 80" Flush Mounted Entrance Door(s), with hardware, Pilot light & switch assembly, vapor proof light & dial thermometer. NSF LISTED  
 (2) Stainless Steel to Interior & Exterior of Door & Frame  
 (2) Door(s) with (3) Hinges per door  
 (2) Kason # 1806 LED light fixture at door(s)  
 (2) Thermo-Kool TK4700 walk-in monitor system with TK4 panic switch, motion detector, battery backups, dry contacts and thermostatically controlled heater wires  
 (2) 14" x 14" peep window w/ heated frame & glass  
 (2) 48"H 1/8" Aluminum Treadplate kickplates and jamb guards int & ext  
 (2) Foot treadle(s)  
 (2) Curtron Polar Pro model PP-C-080-3680-IP vinyl swing door(s) w/ impact plates  
 (2) Center light above door  
 (2) Pressure relief vent(s)  
 (2) Kason 48" LED light fixture(s)  
 (1) 8' x 100' Roll(s) of 6 mil polyethylene sheeting  
 (1) Bluezone 2400  
 Enclosure panels w/ removable access panel  
 Trim  
 1/8" Treadplate wainscot on exp. exterior 48" high (shipped loose for field installation)

**ITEM # CRK-16.1      COOLER EVAPORATOR**  
**Quantity:            One (1)**  
**Manufacturer:        Thermo-Kool**  
**Model:                RL6A094ADA**

- a. Model RL6A094ADA RL6A073ADA 115/60/1 coil (1.6 amps) with Dual Speed EC motor.  
Accessories:  
KE2 Evaporator Defrost Control w/ LLSV.

**ITEM # CRK-16.2      COOLER CONDENSING UNIT**  
**Quantity:            One (1)**  
**Manufacturer:       Thermo-Kool**  
**Model:                RW0130E4SEA**

- a. Model RW0130E4SEA 1 1/3 HP, Remote Pre-Assembled Refrig. System Model RWO130E4SEA 208-230/60/3  
Medium Temperature, base, Scroll, Water-cooled, R448A, Air Defrost Timer (7.2 Compressor RLA).  
Accessories:  
- Heat Exchanger  
- Suction line components  
- Sealed Filter  
- Water-regulating valve

**ITEM # CRK-16.3      FOOD PRESERVATION UNIT**  
**Quantity:            One (1)**  
**Manufacturer:       Evo America, LLC**  
**Model:                10-BZ-2400FP**

- a. Model 10-BZ-2400FP Bluezone Food Preservation for Walk-in Coolers, treats up to 15,000 cu. ft. of air per unit, (4) ozone generating UV bulbs, digital display screen, control panel, mounting rails/feet, 250 watts, 120v/60/1-ph, 3 amps, cETLus, ETL-Sanitation

**ITEM # CRK-17        WALK-IN FREEZER**  
**Quantity:            One (1)**  
**Manufacturer:       Thermo-Kool**  
**Model:                WIF**

- a. Model WIF SEE ITEM CRK-16

**ITEM # CRK-17.1      FREEZER EVAPORATOR**  
**Quantity:            One (1)**  
**Manufacturer:       Thermo-Kool**  
**Model:                ASLE35070DDA**

- a. Model ASLE35070DDA ASLE35070DDA 208-230/60/1 coil (0.9 fan amps, 8 heater amps) with EC motor.

**ITEM # CRK-17.2      FREEZER CONDENSING UNIT**  
**Quantity:            One (1)**  
**Manufacturer:       Thermo-Kool**  
**Model:                RW0250L4SEA**

- a. Model RW0250L4SEA 2 1/2 HP, Remote Pre-Assembled Refrig. System Model RWO250L4SEA 208-230/60/3  
Low Temperature, base, Scroll, Water-cooled, R448A, Std. Defrost Kit (8.7 Compressor RLA).  
Accessories:

- Heat Exchanger
- Water-regulating valve
- Suction line components
- Sealed Filter.

**ITEM # CRK-18**                    **COLD STORAGE SHELVING**  
**Quantity:**                    **Sixteen (16) – (4 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:**                **Metro**  
**Model:**                        **1842NK3**

- a. Model 1842NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 18"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CRK-18.1**                **COLD STORAGE SHELVING**  
**Quantity:**                    **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**                **Metro**  
**Model:**                        **1848NK3**

- a. Model 1848NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 18"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CRK-18.2**                **COLD STORAGE SHELVING**  
**Quantity:**                    **Eight (8) – (2 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:**                **Metro**  
**Model:**                        **1836NK3**

- a. Model 1836NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 18"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 74-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # CRK-19**                    **3 COMPARTMENT SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge

304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
OMIT FAUCET

- b. (2) Model K-472 Faucet hole revision
- c. Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # CRK-19.1      WALL / SPLASH MOUNT FAUCET**

**Quantity:**           **Two (2)**  
**Manufacturer:**   **T&S Brass**  
**Model:**               **5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CRK-20      WALL SHELF W/ POT RACK**

**Quantity:**           **One (1)**  
**Manufacturer:**   **Advance Tabco**  
**Model:**               **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CRK-21      STORAGE SHELVING**

**Quantity:**           **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**   **Metro**  
**Model:**               **2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CRK-22      MOP SINK CABINET**

**Quantity:**           **One (1)**  
**Manufacturer:**   **Advance Tabco**  
**Model:**               **9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF.
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**GR – EVENT LEVEL GREEN ROOM/FAMILY LOUNGE**

**ITEM # GR-1                      UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                  CookTek**  
**Model:                             660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # GR-2                      COLD SHELF**  
**Quantity:                        One (1)**  
**Manufacturer:                  Hatco**  
**Model:                             CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P, standard.

**ITEM # OMR-1                    CLASSIC TABLE WITH HIDDEN RANGES**  
**Quantity:                        One (1)**  
**Manufacturer:                  Spring USA**  
**Model:                             CLASSIC TABLE**

- a. Model CLASSIC TABLE 84" L x 30"W x 34"H CLASSIC TABLE  
SMARTSTONE TOP WITH WOOD EDGE  
CHOICE IN COLOR AND FINISH OF SMARTSTONE  
WILSONART 7954-12 NATURAL RIFT LAMINATE  
(3) SM-651SS HIDDEN WARMERS - 5.4 AMPS EACH  
20 AMP DEDICATED CIRCUIT REQUIRED  
(1) POWERSTRIP  
HIDDEN CONTROLS  
GROMMET HOLE IN BOTTOM OF TABLE FOR CORDS  
CASTERS

**M1 – EVENT LEVEL MARKET ONE**

**ITEM # M1-1                      POS, SELF-CHECKOUT**  
**Quantity:                        Two (2)**  
**Manufacturer:                  BY OPERATIONS**  
**Model:                             POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # M1-2                      REFRIGERATED MERCHANDISER**  
**Quantity:                        One (1)**  
**Manufacturer:                  True**  
**Model:                             GDM-49-HC~TSL01**

- a. Model GDM-49-HC~TSL01 Refrigerated Merchandiser, two-section, True standard look version 01, (8) shelves, (2) double pane thermal insulated glass hinged doors, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1/2 HP, 115v/60/1-ph, 8.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA, ENERGY STAR®
- b. Exterior: Black powder coated steel, standard
- c. Interior: White aluminum, with white shelving, standard
- d. Left door hinged left, right door hinged right standard
- e. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # M1-3**                    **COLD FOOD WELL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **N8156BP**

- a. Model N8156BP Drop-In Mechanically Cooled Pan, 56-1/4" W x 26" D, 4-pan size, 1" dia. drain, insulated pan, stainless steel inner liner & top, galvanized steel outer liner, includes adapter bars, self-contained refrigeration, R290 Hydrocarbon refrigerant, 2/7 hp, (55-1/4" x 25" cutout required), cUL, UL, NSF
- b. 115v/60/1-ph, 3.1 amps, NEMA 5-15P, standard

**ITEM # M1-4**                    **DISPLAY MERCHANDISER, HEATED, FOR MULTI-PRODUCT**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Hatco**  
**Model:**                        **GR3SDS-39DCT**

- a. Model GR3SDS-39DCT Glo-Ray® Designer Slant Display Warmer, with curved canopy top, (14) rods, countertop, dual shelf, adjustable thermostat, hardcoated heated base, heated glass shelves, tempered glass side panels, LED display lights, built-in front sign holder (sign not included), 2-1/2" legs, cULus, UL EPH Classified, Made in USA, CE
- b. 120/208-240v/60/1-ph, 2130 watts, 12.8 amps, NEMA L14-20P
- c. Model STANDARD Black designer color, standard
- d. Model 4"LEGS 4-inch adjustable legs, set of 4

**ITEM # M1-5**                    **HOT FOOD CABINET**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Cambro**  
**Model:**                        **PCU800HH615**

- a. Model PCU800HH615 Pro Cart Ultra™ Hot Food Pan Carrier, electric, touch screen, front loading, (2) active hot compartment, Nylon paddle-style latches, spring loaded magnetic door catch, 21.9"W x 34"D x 59"H, (4) 6"heavy duty casters (2 total locking, 2 no lock pin), (8) 4" deep GN 1/1 food pans, 115V/50/60/1-ph, 507 watts, 4.43 amps, cETLus, NSF

**ITEM # M1-6**                    **COLD FOOD CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Cambro**  
**Model:**                        **PCU800CC615**

- a. Model PCU800CC615 Pro Cart Ultra™ Cold Food Pan Carrier, electric, touch screen, front loading, 2 cold compartments, Nylon paddle-style latches, spring loaded magnetic door catch, 21.9"W x 34"D x 59"H, (4) 6"heavy duty casters (2 total locking, 2 no lock pin), (8) 4" deep GN 1/1 food pans, 115V/50/60/1-ph, 507 watts, 4.43 amps, cETLus

**ITEM # M1-7**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus
- b. Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

### **GHB – EVENT LEVEL GRAND HALL BAR**

**ITEM # GHB-1**                    **UNDERBAR HANDSINK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12HS**

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # GHB-2**                    **BRIDGE TRASH MODULE**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # GHB-3**                    **UNDERBAR DRAIN BOARD**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12DB**

- a. Model TSF12DB TSF Series Underbar Drainboard, 12"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.

- b. 6" backsplash
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Two (2) Model 1032968-12 TSF Series 12"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # GHB-4**                    **POS**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**            **BY OPERATIONS**  
**Model:**                        **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # GHB-5**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **TS24IC10**

- a. Model TS24IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 24"W x 18-9/16"D, approximately 50-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC24 Ice Chest Covers, 2-piece sliding assembly, 24"W, front & back, stainless steel.

**ITEM # GHB-5.1**                **SPEED RAIL / RACK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **SR-D24A**

- a. Model SR-D24A Speed Rail, double, 24" W, stainless steel construction, factory installed

**ITEM # GHB-6**                    **SODA GUN FILLER SECTION**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **TSF4SGB**

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # GHB-7**                    **UNDERBAR BLENDER STATION W/ SINK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # GHB-8**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS30IC10**

- a. Model TS30IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 30"W x 18-9/16"D, approximately 70-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC30 Ice Chest Covers, 2-piece sliding assembly, 30"W, front & back, stainless steel.

**ITEM # GHB-8.1**                **SPEED RAIL / RACK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **SR-D30A**

- a. Model SR-D30A Speed Rail, double, 30" W, stainless steel construction, factory installed

**ITEM # GHB-9**                    **UNDERBAR STORAGE CABINET**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF.
- b. 6" backsplash
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model SC-ES-L End Splash, left, for storage cabinets
- f. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # GHB-10                      UNDERBAR 3 COMPARTMENT SINK**  
**Quantity:                              One (1)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    TS60M3-DB**

- a. Model TS60M3-DB TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 60"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on left & right, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. (2) Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
- e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # GHB-11                      BACK BAR CABINET, REFRIGERATED**  
**Quantity:                              Two (2)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    BBS108**

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Left
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # GHB-11.1      BACK BAR CABINET, REFRIGERATED**  
**Quantity:              One (1)**  
**Manufacturer:        Perlick Corporation**  
**Model:                 BBS108**

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus

- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # GHB-12      FROZEN DRINK MACHINE**  
**Quantity:              Four (4)**  
**Manufacturer:        Taylor Company**  
**Model:                 432**

- a. Model 432 Two flavor frozen beverage freezer, counter model, gravity fed, air-cooled, self-contained, (2) 12 QT hopper, (2) 4 QT freezing cylinders, indicator lights, automatic consistency control, lighted display, stainless steel finish, R449A, (2) 1/4 HP beater motor, NSF, cULus listed.
- b. Air-cooled
- c. (1) 208-230V/60/1-ph, Air-Cooled, (1) 14 amp

**ITEM # GHB-13      BAG-IN-BOX RACK**  
**Quantity:              One (1)**  
**Manufacturer:        By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # GHB-13.1      CARBONATOR**  
**Quantity:            One (1)**  
**Manufacturer:        By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # GHB-14        ICE MACHINE**  
**Quantity:            One (1)**  
**Manufacturer:        Hoshizaki**  
**Model:                KM-660MWJ**

- a. Model KM-660MWJ Ice Maker, Cube-Style, 22"W, water-cooled, self-contained condenser, production capacity up to 647 lb/24 hours at 70°/50° (630 lb AHRI certified at 90°/70°), stainless steel finish, crescent cube style, R-404A refrigerant, 115v/60/1-ph, 12.35 amps, NSF, UL

**ITEM # GHB-14.1     ICE BIN**  
**Quantity:            One (1)**  
**Manufacturer:        Hoshizaki**  
**Model:                B-500SF**

- a. Model B-500SF Ice Bin, 30"W, top-hinged front-opening door, 500-lb ice storage capacity, for top-mounted ice maker, stainless steel exterior, painted legs included, protected with H-GUARD Plus Antimicrobial Agent, ETL, ETL-Sanitation  
b. Model HS-2033 Top Kit, 8", ABS  
c. Model LP-6 LEG Leg Package, (4) x 6" stainless steel legs  
d. Model HS-5607 Scoop Holder Kit

**ITEM # GHB-14.2     WATER FILTER**  
**Quantity:            One (1)**  
**Manufacturer:        Hoshizaki**  
**Model:                H9320-51**

- a. Model H9320-51 Water Filtration System, single configuration, 18.4" H

**ITEM # GHB-15        FLOOR TROUGH**  
**Quantity:            One (1)**  
**Manufacturer:        Atlanta Custom Fabricators**  
**Model:                FT**

- a. Model FT Stainless steel floor trough, 2'-6" long X 1'-0" wide, 2" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., removable washable 1" X 1/4" fiber grate. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.  
b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # GHB-16        MOP SINK CABINET**  
**Quantity:            One (1)**  
**Manufacturer:        Advance Tabco**  
**Model:                9-OPC-84DL**

- a. Model 9-OPC-84DL Cabinet with Mop Sink, 50-3/8"W x 22-3/4"D x 84"H O.A., double hinged doors, left side mop sink 20"W x 16"D front to back x 12" deep (drain included), storage for mop bucket to roll in on right, (2) mop holders, (4) fixed intermediate shelves (3 on right, 1 on left above sink), slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series sink bowl apron, 18/430 series stainless steel cabinet, NSF
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**CB1 – CONCOURSE LEVEL BAR 1**

**ITEM # CB1-1                      UNDERBAR BLENDER STATION W/ SINK**  
**Quantity:                            One (1)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CB1-2                      BRIDGE TRASH MODULE**  
**Quantity:                            One (1)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # CB1-3                      UNDERBAR ICE WELL**  
**Quantity:                            One (1)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TS24IC**

- a. Model TS24IC TS Series Underbar Ice Bin/Cocktail Unit, modular, 24"W x 18-9/16"D, approximately 50-lb. ice capacity, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard

- c. Model ICC24 Ice Chest Covers, 2-piece sliding assembly, 24"W, front & back, stainless steel.

**ITEM # CB1-3.1**            **SPEED RAIL**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Perlick Corporation**  
**Model:**                **SR-D24A**

- a. Model SR-D24A Speed Rail, double, 24" W, stainless steel construction, factory installed

**ITEM # CB1-4**            **UNDERBAR DRAINBOARD**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Perlick Corporation**  
**Model:**                **TSF12DB**

- a. Model TSF12DB TSF Series Underbar Drainboard, 12"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-12 TSF Series 12"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CB1-5**            **POS**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **BY OPERATIONS**  
**Model:**                **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CB1-6**            **UNDERBAR 3 COMPARTMENT SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Perlick Corporation**  
**Model:**                **TS48M3-DBL**

- a. Model TS48M3-DBL TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 48"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on the left, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. (2) Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
- e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # CB1-7**            **UNDERBAR HANDSINK**  
**Quantity:**            **One (1)**

**Manufacturer:** Perlick Corporation  
**Model:** TSF12HS

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CB1-8**                    **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BBS108**

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Left
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # CB1-9**                    **FROZEN DRINK MACHINE**  
**Quantity:**                    **One (1)**

**Manufacturer:** Taylor Company  
**Model:** 432

- a. Model 432 Two flavor frozen beverage freezer, counter model, gravity fed, air-cooled, self-contained, (2) 12 QT hopper, (2) 4 QT freezing cylinders, indicator lights, automatic consistency control, lighted display, stainless steel finish, R449A, (2) 1/4 HP beater motor, NSF, cULus listed.
- b. Air-cooled
- c. 208-230v/60/1-ph, 14.0 amps

## **CB2 – CONCOURSE LEVEL BAR 2**

**ITEM # CB2-1**                    **UNDERBAR HANDSINK**  
**Quantity:** Two (2)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF12HS

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6", for TS or TSF series
- f. Model 7054L End Splash, left, 6", for TS or TSF series

**ITEM # CB2-2**                    **BRIDGE TRASH MODULE**  
**Quantity:** Two (2)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF12BTB

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # CB2-3**                    **SODA GUN STATION**  
**Quantity:** Two (2)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF4SGB

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows

concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # CB2-4**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS30IC10**

- a. Model TS30IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 30"W x 18-9/16"D, approximately 70-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC30 Ice Chest Covers, 2-piece sliding assembly, 30"W, front & back, stainless steel.

**ITEM # CB2-4.1**                **SPEED RAIL**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **SR-D30A**

- a. Model SR-D30A Speed Rail, double, 30" W, stainless steel construction, factory installed

**ITEM # CB2-5**                    **UNDERBAR DRAINBOARD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12DB**

- a. Model TSF12DB TSF Series Underbar Drainboard, 12"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet (replaces TSF12 TSD12)
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-12 TSF Series 12"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CB2-6**                    **UNDERBAR STORAGE CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF.
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs

- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model DR24SC Field reversable door and lock set for 24"W storage cabinets, Factory Installed
- f. Model SC-ES-L End Splash, left, for storage cabinets
- g. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # CB2-7**                    **POS**  
**Quantity:**                    **Two (2)**

**Model:**                        **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CB2-8**                    **UNDERBAR BLENDER STATION**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6", for TS or TSF series
- f. Model 7054L End Splash, left, 6", for TS or TSF series

**ITEM # CB2-9**                    **UNDERBAR 3 COMPARTMENT SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **TS48M3-DBL**

- a. Model TS48M3-DBL TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 48"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on the left, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
- e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # CB2-10**                  **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**

**Manufacturer:** Perlick Corporation  
**Model:** BBS108

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Right
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left

### **CB3 – CONCOURSE LEVEL BAR 3**

**ITEM # CB3-1                      UNDERBAR HANDSINK**  
**Quantity:                              Two (2)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    TSF12HS**

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6", for TS or TSF series
- f. Model 7054L End Splash, left, 6", for TS or TSF series

**ITEM # CB3-2                      BRIDGE TRASH MODULE**  
**Quantity:                              Three (3)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8"

opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)

- b. 6" Backsplash standard

**ITEM # CB3-3                      UNDERBAR BLENDER STATION W/ SINK**  
**Quantity:                      Four (4)**  
**Manufacturer:                  Perlick Corporation**  
**Model:                          TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (8) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CB3-4                      SODA GUN STATION**  
**Quantity:                      Four (4)**  
**Manufacturer:                  Perlick Corporation**  
**Model:                          TSF4SGB**

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # CB3-5                      UNDERBAR ICE WELL**  
**Quantity:                      Four (4)**  
**Manufacturer:                  Perlick Corporation**  
**Model:                          TS36IC10**

- a. Model TS36IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 36"W x 18-9/16"D, approximately 85-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC36 Ice Chest Covers, 2-piece sliding assembly, 36"W, front & back, stainless steel.

**ITEM # CB3-5.1                  SPEED RAIL**  
**Quantity:                      Four (4)**

**Manufacturer:** Perlick Corporation  
**Model:** SR-D36A

- a. Model SR-D36A Speed Rail, double, 36" W, stainless steel construction, factory installed

**ITEM # CB3-6**                    **UNDERBAR STORAGE CABINET**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF.
- b. 6" backsplash
- c. (8) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model DR24SC Field reversable door and lock set for 24"W storage cabinets
- f. Model SC-ES-L End Splash, left, for storage cabinets
- g. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # CB3-7**                    **POS**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **BY OPERATIONS**  
**Model:**                        **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CB3-8**                    **UNDERBAR DRAINBOARD**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12DB**

- a. Model TSF12DB TSF Series Underbar Drainboard, 12"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-12 TSF Series 12"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction.

**ITEM # CB3-9**                    **UNDERBAR 3 COMPARTMENT SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS60M3-DB**

- a. Model TS60M3-DB TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 60"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on left & right, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes

- 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
  - c. Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
  - d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
  - e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # CB3-10**                    **BACK BAR COOLER, 3 DOOR**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BBS84**

- a. Model BBS84 Refrigerated Back Bar Cabinet, three-section, 84"W, self-contained refrigeration, 24.8 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Right

**Model:**                        **TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF Listed (replaces SC24)
- b. 6" backsplash
- c. (6) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model DR24SC Field reversable door and lock set for 24"W storage cabinets.
- f. Model SC-ES-L End Splash, left, for storage cabinets
- g. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # CB4-6**                    **POS**  
**Quantity:**                    **Three (3)**  
**Manufacturer:**              **BY OPERATIONS**  
**Model:**                        **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CB4-7**                    **UNDERBAR BLENDER STATION W/ SINK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CB4-8**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS30IC10**

- a. Model TS30IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 30"W x 18-9/16"D, approximately 70-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC30 Ice Chest Covers, 2-piece sliding assembly, 30"W, front & back, stainless steel.

**ITEM # CB4-8.1**                **SPEED RAIL**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **SR-D30A**

- a. Model SR-D30A Speed Rail, double, 30" W, stainless steel construction, factory installed

**ITEM # CB4-9**                    **UNDERBAR 3 COMPARTMENT SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS48M3-DBL**

- a. Model TS48M3-DBL TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 48"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on the left, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash

- c. Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
- e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # CB4-10**                    **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BBS108**

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Right
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # CB4-11**                    **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**

**ITEM # CB4-13                    FROZEN DRINK MACHINE**  
**Quantity:                        Three (3)**  
**Manufacturer:                    Taylor Company**  
**Model:                             432**

- a. Model 432 Two flavor frozen beverage freezer, counter model, gravity fed, air-cooled, self-contained, (2) 12 QT hopper, (2) 4 QT freezing cylinders, indicator lights, automatic consistency control, lighted display, stainless steel finish, R449A, (2) 1/4 HP beater motor, NSF, cULus listed.
- b. Air-cooled
- c. 208-230v/60/1-ph, 14.0 amps

#### **CCM – CONCOURSE CORNER MARKET**

**ITEM # CCM-1                    REFRIGERATED MERCHANDISER**  
**Quantity:                        One (1)**  
**Manufacturer:                    True**  
**Model:                             GDM-49-HC~TSL01**

- a. Model GDM-49-HC~TSL01 Refrigerated Merchandiser, two-section, True standard look version 01, (8) shelves, (2) double pane thermal insulated glass hinged doors, LED

interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1/2 HP, 115v/60/1-ph, 8.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA, ENERGY STAR®

- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinged left, right door hinged right standard
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CCM-2                      REFRIGERATED DISPLAY**

**Quantity:                      One (1)**

**Manufacturer:                Structural Concepts**

**Model:                         B57R**

- a. Model B57R Oasis® Refrigerated Self-Service Case, 59-5/8"W x 34-1/4"D x 82-1/4"H, Warmest average product temperature of 40°F or less, LED top light, (4) metal shelves, Breeze with self-contained refrigeration, condensate pan, magnetic air filter, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, R290 Hydrocarbon refrigerant, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant)
- c. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- d. Lower Front Panel Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- e. Rear Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- f. Base support: Casters (non-locking) w/ levelers
- g. End Panel Left: Full with stainless steel mirror interior, standard
- h. End Panel Right: Full with stainless steel mirror interior, standard
- i. Cover/Curtain: Roll-down security cover, locking.
- j. Rear Doors: None (solid back panel), standard
- k. Shelving: Metal shelves (4), lighted (LED 4000K)
- l. Top Light: LED 4000K, standard
- m. Electrical Connection: 6' Straight blade power cord, standard
- n. Clean Sweep: None, standard
- o. Refrigeration: Breeze-E (Type II) self-contained refrigeration, standard
- p. Refrigerant: Hydrocarbon refrigerant (R290)
- q. Thermometer: Spirit filled thermometer, standard
- r. Heat Treated Crating: None, standard
- s. Vinyl Graphics: None, standard

**ITEM # CCM-3                      HEATED MERCHANDISER, OPEN DISPLAY**

**Quantity:                      One (1)**

**Manufacturer:                Structural Concepts**

**Model:                         B3632H**

- a. Model B3632H Oasis® Self-Service Heated Merchandiser, 36-3/4"W, high profile, flat upper front panel & header, open front, (4) lighted stainless steel shelves, top light, stainless steel interior, full end panels with mirror, casters, 6 ft cord, cETLus, ETL-Sanitation
- b. Exterior Color: Laminate standard color 909-58 Black
- c. Model GRAIN DIRECTION Standard laminate grain directions (when applicable):  
- Front Panels (Upper Header and Lower Panels): Horizontal grain direction

- End Panels: Vertical grain direction
- Blend & Reveal Cases Only: Horizontal grain direction on front and end panels
- d. Rear Doors: None (solid back panel), standard
- e. Rear Exterior Color: Black, standard
- f. Shelving: Individually controlled solid heated shelves
- g. Lower Front Panel Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- h. End Panel Left: Full with stainless steel mirror interior, standard
- i. End Panel Right: Full with stainless steel mirror interior, standard

**ITEM # CCM-4**                    **AMBIENT MERCHANDISER, OPEN DISPLAY**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Structural Concepts**  
**Model:**                        **B37D**

- a. Model B37D Oasis® Self-Service Case, non-refrigerated, 35-5/8"W x 34-1/4"D x 82-1/4"H, LED top light, (4) metal shelves, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant)

**ITEM # CM1-6**                    **CONDIMENT CADDY**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Dispense-Rite**

**Model: NLO-STK-1BT**

- a. Model NLO-STK-1BT Lid, Straw & Condiment Organizer, 7-1/8" H x 8" W x 19-1/8" D, narrow, removable section dividers, polystyrene, black

**ITEM # CM1-7 POS, SELF-CHECKOUT**

**Quantity: Four (4)**  
**Manufacturer: BY OPERATIONS**  
**Model: POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CM1-8 ROLL-IN REFRIGERATOR**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: GARRI1P-S**

- a. Model GARRI1P-S Specification Line® Refrigerator, Roll-In, one-section, 37.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Full height solid door, standard
- c. Door hinged on left

**ITEM # CM1-9 ROLL-IN HEATED CABINET**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: GAHRI2-S**

- a. Model GAHRI2-S Specification Line® Heated Cabinet, Roll-In, two-section, 76.5 cubic feet capacity, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, 208-240v/60/1-ph, 10.5 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Full height solid doors, standard
- d. Model AS269-AFJ-0043 Raised Ramp, for roll in/roll thru, standard

**ITEM # CM1-10 UNIVERSAL ROLL-IN RACK**

**Quantity: Three (3)**  
**Manufacturer: Cres Cor**  
**Model: 207UA12AC**

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF
- b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans
- c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # CM1-11 HAND SINK**

**Quantity: One (1)**  
**Manufacturer: Advance Tabco**

**Model:** 7-PS-66

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CM1-12**                    **STORAGE SHELVING**  
**Quantity:**                    **Five (5) – (1 COMPLETE UNIT 5 SHELVES)**  
**Manufacturer:**              **Metro**  
**Model:**                        **2142NK3**

- a. Model 2142NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (4) Model 86PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 86-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

## **CM2 – CONCOURSE LEVEL MARKET 2**

**Manufacturer:**              **True**  
**Model:**                        **GDM-72F-HC~TSL01**

- a. Model GDM-72F-HC~TSL01 Freezer Merchandiser, three-section, True standard look version 01, -10°F, (12) shelves, (3) triple-pane thermal glass hinged door, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, All Units Manufactured Before April 4th, 2021 are pre-wired at the factory and is ready for final connection to a single 115/208-230/60Hz single phase, NEMA 14-20R dedicated outlet. All Units Manufactured After April 4th, 2021 are pre-wired at the factory and is ready for final connection to a single 115/60Hz single phase, NEMA 5-20R dedicated outlet cULus, UL EPH Classified, Made in USA
- b. Self-contained refrigeration standard
- c. Exterior: White powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinged left, center & right doors hinged right, standard
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM2-3                      REFRIGERATED MERCHANDISER**  
**Quantity:                          Three (3)**  
**Manufacturer:                      True**  
**Model:                                GDM-49-HC~TSL01**

- a. Model GDM-49-HC~TSL01 Refrigerated Merchandiser, two-section, True standard look version 01, (8) shelves, (2) double pane thermal insulated glass hinged doors, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1/2 HP, 115v/60/1-ph, 8.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA, ENERGY STAR®
- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinged left, right door hinged right standard
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM2-4                      POS, SELF-CHECKOUT**  
**Quantity:                          Four (4)**  
**Manufacturer:                      BY OPERATIONS**  
**Model:                                POS**

- a. Model POS PROVIDED BY OPERATIONS

### **CM3 – CONCOURSE LEVEL MARKET 3**

**ITEM # CM3-1                      HAND SINK**  
**Quantity:                          Two (2)**  
**Manufacturer:                      Advance Tabco**  
**Model:                                7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus
- b. Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

**ITEM # CM3-2                      WORK TABLE**  
**Quantity:                          One (1)**  
**Manufacturer:                      Atlanta Custom Fabricators**

**Model:** **WT**

- a. Model WT Work table, all stainless steel construction, 5'-6" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 4" back splash and left end splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM3-2.1** **WALL MOUNTED OVER SHELF**  
**Quantity:** **One (1)**  
**Manufacturer:** **Atlanta Custom Fabricators**  
**Model:** **WMO**

- a. Model WMO Wall mounted over shelf, 5'-6" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM3-3** **HOT FOOD HOLDING CABINET**  
**Quantity:** **One (1)**  
**Manufacturer:** **Alto-Shaam**  
**Model:** **750-CTUS**

- a. Model 750-CTUS Halo Heat® Hot Food Storage Unit, 1-compartment, capacity (6) 12" x 20" full-size pans, French doors with (2) positive latch door handles, ON/OFF adjustable thermostat, indicator light, exterior temperature gauge, thermostat for 60° F - 200° F, stainless steel exterior & interior, EcoSmart®, cULus, NSF
- b. 120v/50/60/1-ph, 18.8 amps, 2.25kW, NEMA L5-30P
- c. Model 14227 Casters, 3" (76mm), set of (4)

**ITEM # CM3-4** **EXHAUST HOOD**  
**Quantity:** **One (1)**  
**Manufacturer:** **Accurex**  
**Model:** **XBEW-104-S**

- a. Model XBEW-104-S  
 A. Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided. The hood(s) exterior shall be constructed of a minimum of 18-gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. Front panels shall be of single wall construction. An integral 3-inch air space is provided to meet NFPA® 96 clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight. Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be

constructed of a minimum 18-gauge corrosion resistant stainless steel including, but not limited to ducts, plenum, and brackets.

B. The hood(s) shall include a filter housing constructed of the same material as the hood. The filters shall be stainless steel baffle type (non-stick coating optional), U.L. 1046 Classified, and in sufficient number and size to ensure optimum performance. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 28% at 8 microns (16% from 3-10 microns) and static pressure drop of 0.5-0.6 in WC. Vapor proof, U.L.

C. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.

D. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the necessary data that confirms compliance with the code authorities listed above.

E. Continuous Capture - UL listed connection to join multiple sections.

F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.

G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.

H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor

I. 304 Stainless Steel inside and out. No galvanized metal.

J. Provide wall mounted fire cabinet.

K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood we applicable.

L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling

**ITEM # CM3-4.1**      **FIRE SYSTEM**  
**Quantity:**      **One (1)**  
**Manufacturer:**      **Accurex**  
**Model:**      **ANSUL**

a. Model ANSUL WALL MOUNT - INCLUDED WITH HOOD

**ITEM # CM3-5**      **HIGH VOLUME GRIDDLE**  
**Quantity:**      **One (1)**  
**Manufacturer:**      **Southbend**  
**Model:**      **HDG-48V**

- a. Model HDG-48V High Volume Griddle, countertop, gas, 48", 1" thick polished steel plate, thermostatic controls, battery spark ignition, flame failure safety device, stainless steel front, sides, towel bar & integrated stand, 120,000 BTU, CSA, NSF
- b. Natural Gas
- c. T&S Brass Model HG-2D-48SK-PS Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) SwiveLink fittings, 360° rotatable hex nut, with 90° elbow & installation kit (includes restraining cable & ball valve), Posi-Set, 215,000 BTU/ hr minium flow capacity

**ITEM # CM3-6**                    **FRYER**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **Henny Penny**  
**Model:**                        **OFE321.0**

- a. Model OFE321.0 OFE-321 Open Fryer, floor model, electric, 1 well, stainless steel construction, rectangular fry pot, includes filter drain pan, stainless steel Max oil filtration system, 2 PHT filter envelopes, 4" swiveling casters (2 locking), basket support included in each vat, BUILT-TO-ORDER CONFIGURATION, ENERGY STAR®
- b. F Full well configuration, standard
- c. 480v/60/3-ph, 14.4 kW, 17.0 amps, 3+G wires
- d. C1 Computron® 1000 control with melt mode, idle mode, two 4-character LED displays per control
- e. Without direct connect shortening disposal system plumbing
- f. Full Size Basket
- g. Model 180156 Crumb Catcher, for single well drain pans
- h. Model 03629 Fryer Pot Cover, 32x full pot

**ITEM # CM3-7**                    **REACH-IN FREEZER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Delfield**  
**Model:**                        **GAF1P-SH**

- a. Model GAF1P-SH Specification Line® Freezer, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) half-height hinged solid doors (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.55 HP, 115v/60/1-ph, 7.2 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Door hinged on left
- c. Set of (4) 5" locking casters, standard

**ITEM # CM3-8**                    **REFRIGERATED PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Delfield**  
**Model:**                        **4448NP-12**

- a. Model 4448NP-12 Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (2) doors, stainless steel top with polyethylene cutting board & (12) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-contained refrigeration, standard

- d. Door(s) standard
- e. Telescoping lid, standard
- f. MUST confirm the quantity of lids required per cutout

**ITEM # CM3-9                    SPARE NO.**

**ITEM # CM3-10                    STORAGE SHELVING**  
**Quantity:                        Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:                    Metro**  
**Model:                             2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CM3-11                    3 COMPARTMENT SINK**  
**Quantity:                        One (1)**  
**Manufacturer:                    Advance Tabco**  
**Model:                             K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # CM3-11.1                FAUCET**  
**Quantity:                        Two (2)**  
**Manufacturer:                    T&S Brass**  
**Model:                             5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CM3-12                    WALL SHELF W/ POT RACK**  
**Quantity:                        One (1)**  
**Manufacturer:                    Advance Tabco**  
**Model:                             PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CM3-13**                    **1 COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 5'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM3-13.1**              **FAUCET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **T&S Brass**  
**Model:**                        **B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CM3-14**                    **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WMO**

- a. Model WMO Wall mounted over shelf, 5'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM3-15**                    **REACH-IN REFRIGERATOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAR2P-S**

- a. Model GAR2P-S Specification Line® Refrigerator, Reach-In, two-section, 46.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), (6) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel

exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®

- b. Left door hinged on left, right door hinged on right, standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CM3-16                    SPARE NO.**

**ITEM # CM3-17                    SPARE NO.**

**ITEM # CM3-18                    FREEZER MERCHANDISER**

**Quantity:                        One (1)**

**Manufacturer:                    True**

**Model:                             GDM-26F-HC~TSL01**

- a. Model GDM-26F-HC~TSL01 Freezer Merchandiser, one-section, True standard look version 01, -10°F, (4) shelves, (1) triple-pane thermal glass hinged door, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1 HP, 115v/60/1-ph, 9.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA
- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinging
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM3-19                    REFRIGERATED MERCHANDISER**

**Quantity:                        One (1)**

**Manufacturer:                    True**

**Model:                             GDM-49-HC~TSL01**

- a. Model GDM-49-HC~TSL01 Refrigerated Merchandiser, two-section, True standard look version 01, (8) shelves, (2) double pane thermal insulated glass hinged doors, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1/2 HP, 115v/60/1-ph, 8.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA, ENERGY STAR®
- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinged left, right door hinged right standard
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM3-20                    DECORATIVE HEAT LAMP**

**Quantity:                        Three (3)**

**Manufacturer:                    Hatco**

**Model:                             DLH-725**

- a. DLH-725 Decorative Heat Lamp, High Wattage, (1) bulb type (not included), 8-1/2"H x 9-1/2" diameter shade, 375 watt max, CE, cULus, UL EPH Classified, Made in USA
- b. 120v/60/1-ph, 375 watt, standard
- c. Model WHITE-CTD-120H Lamp Bulb, 375 Watt clear, coated
- d. Model SPECIFY Finish to be selected by arch / interiors.
- e. Model SPECIFYN/C Finish to be selected by arch / interiors.

- f. Model RCT Mounting Style - Retractable mount to track adapter (specify cord & track color) - retractable Straight cord mount, 8-1/2" Shade adjusts from 27" to 77" & 10-1/2" Shade adjusts from 29" to 77"
- g. Model R Switch Location - Remote
- h. Model DL-CORD-BK Black Cord, standard,
- i. (1) Model DL-TRACK-4B Track Mount Bar, 4', black
- j. Model DL-ADAPT-BK Black Track Adapter

**ITEM # CM3-21                    HEATED SHELF FOOD WARMER**  
**Quantity:                    One (1)**  
**Manufacturer:                Hatco**  
**Model:                        GRSB-60-O**

- a. Model GRSB-60-O Glo-Ray® Drop In Heated Shelf with Recessed Top, 61-1/2" x 31-1/2", 1/2" deep recessed surface area, hardcoat aluminum top, control thermostat, illuminated on/off switch & mounting bracket, NSF, CE, cUL, UL, UL EPH Classified, CSA
- b. 120v/60/1-ph, 1750 watts, 14.6 amps, NEMA 5-20P (domestic voltage), standard
- c. Thermostat control with lighted rocker switch.

**ITEM # CM3-22                    DISPLAY MERCHANDISER, HEATED, FOR MULTI-PRODUCT**  
**Quantity:                    Two (2)**  
**Manufacturer:                Hatco**  
**Model:                        GR3SDS-39DCT**

- a. Model GR3SDS-39DCT Glo-Ray® Designer Slant Display Warmer, with curved canopy top, (14) rods, countertop, dual shelf, adjustable thermostat, hardcoated heated base, heated glass shelves, tempered glass side panels, LED display lights, built-in front sign holder (sign not included), 2-1/2" legs, cULus, UL EPH Classified, Made in USA, CE
- b. 120/208-240v/60/1-ph, 2130 watts, 12.8 amps, NEMA L14-20P
- c. Model STANDARD Black designer color, standard
- d. Model 4"LEGS 4-inch adjustable legs, set of 4

**ITEM # CM3-23                    POS, SELF-CHECKOUT**  
**Quantity:                    Four (4)**  
**Manufacturer:                BY OPERATIONS**  
**Model:                        POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CM3-24                    LANDING TABLE**  
**Quantity:                    One (1)**  
**Manufacturer:                Advance Tabco**  
**Model:                        TFMS-123**

- a. Model TFMS-123 Equipment Filler Table, 12"W x 36"D, 16 gauge 304 stainless steel top with 1-1/2"H rear up-turn, stainless steel legs & adjustable bullet feet, NSF.

**ITEM # CM3-25                    MOP SINK CABINET**  
**Quantity:                    One (1)**  
**Manufacturer:                Advance Tabco**  
**Model:                        9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate

- shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF.
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
  - c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only.

#### **CM4 – CONCOURSE LEVEL MARKET 4**

**ITEM # CM4-1**                      **REACH-IN REFRIGERATOR**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Delfield**  
**Model:**                            **GAR1P-S**

- a. Model GAR1P-S Specification Line® Refrigerator, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.22 HP, 115v/60/1-ph, 4.2 amps, NEMA 5-15P, NSF, cULus
- b. Door hinged on left
- c. Set of (4) 5" locking casters, standard

**ITEM # CM4-2**                      **EXHAUST HOOD W/FIRE SYSTEM**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Accurex**  
**Model:**                            **XBEW-56.00-S**

- a. Model XBEW-56.00-S
  - A. Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided. The hood(s) exterior shall be constructed of a minimum of 18-gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. Front panels shall be of single wall construction. An integral 3-inch air space is provided to meet NFPA® 96 clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight. Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be constructed of a minimum 18-gauge corrosion resistant stainless steel including, but not limited to ducts, plenum, and brackets.
  - B. The hood(s) shall include a filter housing constructed of the same material as the hood. The filters shall be stainless steel baffle type (non-stick coating optional), U.L. 1046 Classified, and in sufficient number and size to ensure optimum performance. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 28% at 8 microns (16% from 3-10 microns) and static pressure drop of 0.5-0.6 in WC. Vapor proof, U.L.
  - C. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.
  - D. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the

necessary data that confirms compliance with the code authorities listed above.

E. Continuous Capture - UL listed connection to join multiple sections.

F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.

G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.

H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor

I. 304 Stainless Steel inside and out. No galvanized metal.

J. Provide fire cabinet on right end of hood.

K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood we applicable.

L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling.

**ITEM # CM4-3**                      **PRESSURE FRYER**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Henny Penny**  
**Model:**                         **PFE561.0**

- a. Model PFE561.0 PFE-561 Pressure Fryer, Electric, 69 pound oil capacity, 18 pound food capacity, 12 psi o.p., safety valve @ 14.5 psi, stainless steel construction, stainless steel rectangular frypot, aluminum lid, stainless steel Max oil filter system with 2 PHT envelopes
- b. 480v/60/3-ph
- c. COMPUTRON 1000 Control, with melt mode, idle mode, time and 4-character LED display
- d. Short frame with (4) casters (2-locking)
- e. Without rinse hose attachment
- f. Standard basket, full-size basket and basket handle

**ITEM # CM4-4**                      **FRYER**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Henny Penny**  
**Model:**                         **OFE321.0**

- a. Model OFE321.0 OFE-321 Open Fryer, floor model, electric, 1 well, stainless steel construction, rectangular fry pot, includes filter drain pan, stainless steel Max oil filtration system, 2 PHT filter envelopes, 4" swiveling casters (2 locking), basket support included in each vat, BUILT-TO-ORDER CONFIGURATION, ENERGY STAR®
- b. F Full well configuration, standard
- c. 480v/60/3-ph, 14.4 kW, 17.0 amps, 3+G wires

- d. C1 Computron® 1000 control with melt mode, idle mode, two 4-character LED displays per control
- e. Without direct connect shortening disposal system plumbing
- f. Full Size Basket
- g. Model 180156 Crumb Catcher, for single well drain pans
- h. Model 03629 Fryer Pot Cover, 32x full pot

**ITEM # CM4-4.1**            **LANDING TABLE**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **TFMS-153**

- a. Model TFMS-153 Equipment Filler Table, 15"W x 36"D, 16 gauge 304 stainless steel top with 1-1/2"H rear up-turn, stainless steel legs & adjustable bullet feet, NSF.

**ITEM # CM4-5**            **REACH-IN FREEZER**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Delfield**  
**Model:**                **GAF1P-SH**

- a. Model GAF1P-SH Specification Line® Freezer, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) half-height hinged solid doors (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.55 HP, 115v/60/1-ph, 7.2 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Door hinged on right standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CM4-6**            **STORAGE SHELVING**  
**Quantity:**            **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**      **Metro**  
**Model:**                **2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CM4-7**            **3 COMPARTMENT SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain
- d. Model K-454 Side splash, integral (welded), for NSF sinks & dish tables, height matches backsplash height - LEFT SIDE

**ITEM # CM4-7.1**            **FAUCET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**       **T&S Brass**  
**Model:**                **5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CM4-8**            **WALL SHELF W/ POT RACK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CM4-9**            **HAND SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CM4-10**         **SPARE NO.**

**ITEM # CM4-11**         **CONVEYOR TOASTER**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Antunes**  
**Model:**                **GST-2H-9210962**

- a. Model GST-2H-9210962 Gold Standard Toaster, horizontal, (2) lanes, dual-belt, moving conveyor, electronic temperature controller, programmable temperature & motor speed, 6 ft. grounded power cord, 2000 watts, 208v/50/60/1-ph, NEMA 6-20P, cETLus, ETL-Sanitation, CE

**ITEM # CM4-12**         **WORK TABLE**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Atlanta Custom Fabricators**  
**Model:**                **WT**

- a. Model WT Work table, all stainless steel construction, 6'-5" long X 2'-0" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished. Omit back splash at pass through window and coordinate height for a smooth transition. Provide trim strip and / or seal transition edge at pass through as required.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM4-13**                    **WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WT**

- a. Model WT Work table, all stainless steel construction, 7'-0" long X 2'-0" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM4-14**                    **DECORATIVE HEAT LAMP**  
**Quantity:**                    **Five (5)**  
**Manufacturer:**              **Hatco**  
**Model:**                        **DLH-725**

- a. Model DLH-725 Decorative Heat Lamp, High Wattage, (1) bulb type (not included), 8-1/2"H x 9-1/2" diameter shade, 375 watt max, CE, cULus, UL EPH Classified, Made in USA
- b. 120v/60/1-ph, 375 watt, standard
- c. Model WHITE-CTD-120H Lamp Bulb, 375 Watt clear, coated
- d. Model SPECIFY Finish to be selected by arch / interiors.
- e. Model SPECIFYN/C Finish to be selected by arch / interiors.
- f. Model RCT Mounting Style - Retractable mount to track adapter (specify cord & track color) - retractable Straight cord mount, 8-1/2" Shade adjusts from 27" to 77" & 10-1/2" Shade adjusts from 29" to 77"
- g. Model R Switch Location - Remote
- h. Model DL-CORD-BK Black Cord, standard,
- i. (1) Model DL-TRACK-8B Two 4' Track Mount Bars with Coupler, Black
- j. Model DL-ADAPT-BK Black Track Adapter

**ITEM # CM4-15            SPARE NO.**

**ITEM # CM4-16            SPARE NO.**

**ITEM # CM4-17            SPARE NO.**

**ITEM # CM4-18            REFRIGERATED DISPLAY**  
**Quantity:                Two (2)**  
**Manufacturer:            Structural Concepts**  
**Model:                    B47R**

- a. Model B47R Oasis® Refrigerated Self-Service Case, 47-5/8"W x 34-1/4"D x 82-1/4"H, Warmest average product temperature of 40°F or less, LED top light, (4) metal shelves, Breeze with self-contained refrigeration, condensate pan, magnetic air filter, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, R290 Hydrocarbon refrigerant, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black
- c. Interior Color: Powder coated SCC Standard Silversan Black
- d. Lower Front Panel Color: Powder coated SCC Standard Silversan Black
- e. Rear Exterior Color: Powder coated SCC Standard Silversan Black
- f. Base support: Casters (non-locking) w/ levelers
- g. End Panel Left: Full with stainless steel mirror interior, standard
- h. End Panel Right: Full with stainless steel mirror interior, standard
- i. Cover/Curtain: Roll-down security cover, locking (Requires two end panels (full or cutaway) per case) (One cover/curtain type per model)
- j. Rear Doors: Rear loading hinged doors, locking
- k. Shelving: Metal shelves (4), lighted (LED 4000K)
- l. Top Light: LED 4000K, standard
- m. Electrical Connection: 6' Straight blade power cord, standard
- n. Clean Sweep: None, standard
- o. Refrigeration: Breeze-E (Type II) self-contained refrigeration, standard
- p. Refrigerant: Hydrocarbon refrigerant (R290)
- q. Thermometer: Spirit filled thermometer, standard
- r. Vinyl Graphics: None, standard

**ITEM # CM4-19            HEATED MERCHANDISER**  
**Quantity:                Three (3)**  
**Manufacturer:            Hatco**  
**Model:                    GR3SDS-39DCT**

- a. Model GR3SDS-39DCT Glo-Ray® Designer Slant Display Warmer, with curved canopy top, (14) rods, countertop, dual shelf, adjustable thermostat, hardcoated heated base, heated glass shelves, tempered glass side panels, LED display lights, built-in front sign holder (sign not included), 2-1/2" legs, cULus, UL EPH Classified, Made in USA, CE
- b. 120/208-240v/60/1-ph, 2130 watts, 12.8 amps, NEMA L14-20P
- c. Model STANDARD Black designer color, standard
- d. Model 4"LEGS 4-inch adjustable legs, set of 4

**ITEM # CM4-20            REFRIGERATED SELF-SERVICE ISLAND**  
**Quantity:                One (1)**  
**Manufacturer:            Structural Concepts**  
**Model:                    FSI660R**

- a. Model FSI660R Oasis® Refrigerated Self-Service Island, 60"H, open air screen, (3) non-lit non-adjustable metal shelves, top light, black interior, includes price tag moulding (matches interior color), laminated exterior, levelers, Breeze-E (Type II) with EnergyWise self-contained refrigeration system, cETLus, ETL-Sanitation
- b. Refrigeration: Breeze self-contained refrigeration, standard
- c. Electrical Connection: 6' NEMA 6-30P, 208-240v/60/1-ph straight blade power cord, standard
- d. Base Support: Casters with levelers (self-cont.), standard
- e. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- f. Exterior Color: Laminate standard color 909-58 Black
- g. Model GRAIN DIRECTION Standard laminate grain directions (when applicable):
  - Front Panels (Upper Header and Lower Panels): Horizontal grain direction
  - End Panels: Vertical grain direction
  - Blend & Reveal Cases Only: Horizontal grain direction on front and end panels
- h. Thermometer: Digital fahrenheit thermometer, standard
- i. Shelving: (3) LED Lighted non-adjustable metal shelves
- j. Vinyl Graphics: None, standard

**ITEM # CM4-21                    ICE MAKER**  
**Quantity:                        Two (2)**  
**Manufacturer:                 Ice-O-Matic**  
**Model:                            CIM0836FA**

- a. CIM0836FA Elevation Series™ Modular Cube Ice Maker, air-cooled, self-contained condenser, dual exhaust top/side air discharge, 30" W, approximately 896 lb production/24 hours at 70°/50° (711 lb at 90°/70°), full-size cubes, PURE ICE® built-in antimicrobial protection, LED status display, one touch sanitize/descaling controls, dishwasher safe food zone components, cULus, NSF, CE, BPA Free
- b. 208-230v/60/1-ph, 13.4 amps, standard

**ITEM # CM4-21.1                SODA DISPENSER**  
**Quantity:                        Two (2)**  
**Manufacturer:                 By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM4-21.2                WATER FILTER**  
**Quantity:                        Two (2)**  
**Manufacturer:                 Ice-O-Matic**  
**Model:                            IFQ2**

- a. Model IFQ2 Water Filter Manifold, dual filter designed for ice makers producing between 1050 & 1400 lbs. (476.3 to 635 Kg.) of ice per day, 3.0 gpm maximum flow rate, IsoNet® scale inhibitor, .5 micron particle reduction.

**ITEM # CM4-22                    UNDERCOUNTER SODA SYSTEM SYRUP RACK**  
**Quantity:                        One (1)**  
**Manufacturer:                 By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM4-22.1                CARBONATOR**  
**Quantity:                        One (1)**  
**Manufacturer:                 By Product Supplier**

## a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM4-23**                    **CONDIMENT CADDY**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **Dispense-Rite**  
**Model:**                        **NLO-STK-1BT**

- a. Model NLO-STK-1BT Lid, Straw & Condiment Organizer, 7-1/8" H x 8" W x 19-1/8" D, narrow, removable section dividers, polystyrene, black

**ITEM # CM4-24**                    **POS, SELF-CHECKOUT**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**                **BY OPERATIONS**  
**Model:**                        **POS**

- a. Model POS PROVIDED BY OPERATIONS

**CM5 – CONCOURSE LEVEL MARKET 5**

**ITEM # CM5-1**                    **PIZZA PREP TABLE**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **Delfield**  
**Model:**                        **18672PDLP**

- a. Model 18672PDLP LiquiTec® Refrigerated Pizza Table, two-section, 72" W, (6) 12" x 20" pan capacity, (2) doors, (2) 1/1 GN shelves, stainless steel removable hinged covers, 17" polyurethane cutting board, flush mount LiquiTec® raised rails, on/off switch, 18 gauge stainless steel top, stainless steel construction, 4" casters, self-contained side-mounted refrigeration system, R290 refrigerant, 1/5 & 1/3 HP, cUL, UL, NSF
- b. 115v/60/1-ph, 12.7 amps, NEMA 5-20P, standard

**ITEM # CM5-2**                    **PIZZA PAN RACK**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**                **Admiral Craft Equipment Corp.**  
**Model:**                        **PZ-19029**

- a. Model PZ-19029 Pizza Rack, 27" high, 15 slots, holds pans 9" to 18" diameter, 1-3/8" spacing, chrome plated steel rods.  
 TO BE WALL MOUNTED

**ITEM # CM5-3**                    **PIZZA DECK OVEN**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **PizzaMaster**  
**Model:**                        **PM 823ED**

- a. Model PM 823ED PizzaMaster® 800 Series Pizza Oven, deck-type, electric, (3) decks, 32.3" W x 32.3" D internal dimensions per deck, (4) 16" pizza capacity per deck, digital display with electronic controls, 932°F max operating temperature, (2) 16"W stones per deck, timer, halogen lighting, Turbo-Start, oven door with heat-reflecting glass, retractable front loading shelf, stainless steel front, legs with locking casters, 9.0kW (per deck), UL,UL EPH Classified
- b. 480v/60/3-ph+N, 10.9 amps, per deck, custom order
- c. Stainless steel front, standard

- d. Model 80072 High temperature control, 500°C/932°F, per deck
- e. Model 80054-01 Extra retractable frontal unloading shelf PM 820

**ITEM # CM5-4**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus
- b. Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

**ITEM # CM5-5**                    **3 COMPARTMENT SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision.
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # CM5-5.1**                **FAUCET**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **T&S Brass**  
**Model:**                        **5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CM5-6**                    **WALL SHELF W/ POT RACK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CM5-7**                    **STORAGE SHELVING**  
**Quantity:**                    **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**              **Metro**  
**Model:**                        **2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF

- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CM5-8**                    **REACH-IN REFRIGERATOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAR1P-S**

- a. Model GAR1P-S Specification Line® Refrigerator, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.22 HP, 115v/60/1-ph, 4.2 amps, NEMA 5-15P, NSF, cULus
- b. Door hinged on left
- c. Set of (4) 5" locking casters, standard

**ITEM # CM5-9**                    **MOP SINK CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF.
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**ITEM # CM5-10**                **SPARE NO.**

**ITEM # CM5-11**                **SPARE NO.**

**ITEM # CM5-12**                **HEATED SHELF WARMER**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Hatco**  
**Model:**                        **GR2S-72**

- a. Model GR2S-72 Heated Shelf, Designer, free-standing, (5) 12" x 20" pan capacity, hardcoat aluminum top & blanket type foil element, designer exterior panels & corner caps, 4" legs, CE, cULus, UL EPH Classified, Made in USA
- b. 120v/60/1-ph, 1100 watts, 9.2 amps, NEMA 5-15P, standard
- c. Model STANDARD Clear Anodized Aluminum housing, finish, standard
- d. Model STANDARDBLACK Black, designer inset panel color, standard
- e. Model BLACK Black, designer corner cap color

**ITEM # CM5-13**                    **HEATED MERCHANDISER**  
**Quantity:**                    **Three (3)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **GR3SDS-39DCT**

- a. Model GR3SDS-39DCT Glo-Ray® Designer Slant Display Warmer, with curved canopy top, (14) rods, countertop, dual shelf, adjustable thermostat, hardcoated heated base, heated glass shelves, tempered glass side panels, LED display lights, built-in front sign holder (sign not included), 2-1/2" legs, cULus, UL EPH Classified, Made in USA, CE
- b. 120/208-240v/60/1-ph, 2130 watts, 12.8 amps, NEMA L14-20P
- c. Model STANDARD Black designer color, standard
- d. Model 4"LEGS 4-inch adjustable legs, set of 4

**ITEM # CM5-14**                    **REFRIGERATED DISPLAY**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **Structural Concepts**  
**Model:**                        **B57R**

- a. Model B57R Oasis® Refrigerated Self-Service Case, 59-5/8"W x 34-1/4"D x 82-1/4"H, Warmest average product temperature of 40°F or less, LED top light, (4) metal shelves, Breeze with self-contained refrigeration, condensate pan, magnetic air filter, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, R290 Hydrocarbon refrigerant, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant)
- c. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- d. Lower Front Panel Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- e. Rear Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- f. Base support: Casters (non-locking) w/ levelers
- g. End Panel Left: Full with stainless steel mirror interior, standard
- h. End Panel Right: Full with stainless steel mirror interior, standard
- i. Cover/Curtain: Roll-down security cover, locking (Requires two end panels (full or cutaway) per case) (One cover/curtain type per model)
- j. Rear Doors: None (solid back panel), standard
- k. Shelving: Metal shelves (4), lighted (LED 4000K)
- l. Top Light: LED 4000K, standard
- m. Electrical Connection: 6' Straight blade power cord, standard
- n. Clean Sweep: None, standard
- o. Refrigeration: Breeze-E (Type II) self-contained refrigeration, standard
- p. Refrigerant: Hydrocarbon refrigerant (R290)
- q. Thermometer: Spirit filled thermometer, standard
- r. Vinyl Graphics: None, standard

**ITEM # CM5-15**                    **REFRIGERATED MERCHANDISER**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **True**  
**Model:**                        **GDM-49-HC~TSL01**

- a. Model GDM-49-HC~TSL01 Refrigerated Merchandiser, two-section, True standard look version 01, (8) shelves, (2) double pane thermal insulated glass hinged doors, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290

Hydrocarbon refrigerant, 1/2 HP, 115v/60/1-ph, 8.5 amps, NEMA 5-15P, cULus, UL EPH  
Classified, Made in USA, ENERGY STAR®

- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinged left, right door hinged right standard
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM5-16**                    **FREEZER MERCHANDISER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **True**  
**Model:**                      **GDM-23F-HC~TSL01**

- a. Model GDM-23F-HC~TSL01 Freezer Merchandiser, one-section, True standard look version 01, -10°F, (4) shelves, (1) triple-pane thermal glass hinged door, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1 HP, 115v/60/1-ph, 9.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA
- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinging
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM5-17**                    **AMBIENT SELF SERVICE CASE**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**            **Structural Concepts**  
**Model:**                      **NR3647DSSV**

- a. Model NR3647DSSV Reveal® Self-Service Non-Refrigerated Case, freestanding, 35-3/4"W, 47-1/8"H, (2) removable & adjustable clear glass shelving, LED top & shelf lights, full end panels, solid rear panel, one piece formed ABS plastic tub, black exterior & interior, adjustable locking casters, cETLus, ETL-Sanitation
- b. Electrical: 110-120v/60/1-ph, 0.70 amps, 11.0 watts, standard
- c. Electrical Connection: 6' Straight blade power cord with NEMA 5-15P, standard
- d. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant)
- e. Frame Exterior: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- f. Panel Exterior Color: Laminate standard color 909-58 Black
- g. Model GRAIN DIRECTION Standard laminate grain directions (when applicable):  
- Front Panels (Upper Header and Lower Panels): Horizontal grain direction  
- End Panels: Vertical grain direction  
- Blend & Reveal Cases Only: Horizontal grain direction on front and end panels
- h. End Panel Left: Full end panel
- i. End Panel Right: Full end panel
- j. Lower Front Panel Color: Powder coated SCC Standard Silversan Black
- k. Lower Rear Panel Color: Powder coated SCC Standard Silversan Black
- l. Rear Doors: None (solid back panel), standard
- m. Lights: LED 3500K with frost lens, standard
- n. Removable clear acrylic security cover, locking
- o. Base Support: Adjustable, locking casters (self-cont.), standard
- p. Base Support: Adjustable, locking casters, standard

**ITEM # CM5-18**            **ICE MAKER**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **Ice-O-Matic**  
**Model:**                **CIM0836FA**

- a. Model CIM0836FA Elevation Series™ Modular Cube Ice Maker, air-cooled, self-contained condenser, dual exhaust top/side air discharge, 30" W, approximately 896 lb production/24 hours at 70°/50° (711 lb at 90°/70°), full-size cubes, PURE ICE® built-in antimicrobial protection, LED status display, one touch sanitize/descaling controls, dishwasher safe food zone components, cULus, NSF, CE, BPA Free
- b. 208-230v/60/1-ph, 13.4 amps, standard

**ITEM # CM5-18.1**        **SODA DISPENSER**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM5-18.2**        **WATER FILTER**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **Ice-O-Matic**  
**Model:**                **IFQ2**

- a. Model IFQ2 Water Filter Manifold, dual filter designed for ice makers producing between 1050 & 1400 lbs. (476.3 to 635 Kg.) of ice per day, 3.0 gpm maximum flow rate, IsoNet® scale inhibitor, .5 micron particle reduction

**ITEM # CM5-19**            **CONDIMENT CADDY**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **Dispense-Rite**  
**Model:**                **NLO-STK-1BT**

- a. Model NLO-STK-1BT Lid, Straw & Condiment Organizer, 7-1/8" H x 8" W x 19-1/8" D, narrow, removable section dividers, polystyrene, black

**ITEM # CM5-20**            **UNDERCOUNTER SODA SYSTEM SYRUP RACK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM5-20.1**        **CARBONATOR**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM5-21**            **POS, SELF-CHECKOUT**  
**Quantity:**            **Three (3)**  
**Manufacturer:**      **BY OPERATIONS**  
**Model:**                **POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CM5-21.1**      **POS, SELF-CHECKOUT**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **BY OPERATIONS**  
**Model:**                **POS**

- a. Model POS PROVIDED BY OPERATIONS

### **CM6 – CONCOURSE LEVEL MARKET 6**

**ITEM # CM6-1**            **WORK TABLE**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Atlanta Custom Fabricators**  
**Model:**                **WT**

- a. Model WT Work table, all stainless steel construction, 5'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-2**            **COUNTER TOP HEATED WELL**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Hatco**  
**Model:**                **CHW-43**

- a. Model CHW-43 Food Warmer/Cooker, electric, countertop, (4) 1/3 pan capacity, wet/dry operation, thermostatic controls, stainless steel construction, 1800 watts, 15.0 amps, CE, cULus, UL EPH Classified
- b. 120v/60/1-ph, 1800 watts, 15.0 amps, NEMA 5-15P, standard

**ITEM # CM6-3**            **WALL MOUNTED OVER SHELF**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Atlanta Custom Fabricators**  
**Model:**                **WMO**

- a. Model WMO Wall mounted over shelf, 5'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-3.1**        **WALL MOUNTED OVER SHELF**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Atlanta Custom Fabricators**  
**Model:**                **WMO**

- a. Model WMO Wall mounted over shelf, 5'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-4**                    **1 COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 8'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash and left end splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-4.1**              **FAUCET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **T&S Brass**  
**Model:**                        **B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CM6-5**                    **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WMO**

- a. Model WMO Wall mounted over shelf, 8'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-5.1**              **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**

**Manufacturer:** Atlanta Custom Fabricators  
**Model:** WMO

- a. Model WMO Wall mounted over shelf, 8'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
 APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-6**                    **ROLL-IN HEATED CABINET**  
**Quantity:** One (1)  
**Manufacturer:** Delfield  
**Model:** GAHRI2-S

- a. Model GAHRI2-S Specification Line® Heated Cabinet, Roll-In, two-section, 76.5 cubic feet capacity, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, 208-240v/60/1-ph, 10.5 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Full height solid doors, standard
- d. Model AS269-AFJ-0043 Raised Ramp, for roll in/roll thru, standard

**ITEM # CM6-7**                    **UNIVERSAL ROLL-IN RACK**  
**Quantity:** Three (3)  
**Manufacturer:** Cres Cor  
**Model:** 207UA12AC

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF
- b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans
- c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # CM6-8**                    **HAND SINK**  
**Quantity:** One (1)  
**Manufacturer:** Advance Tabco  
**Model:** 7-PS-66

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CM6-9**                    **REACH-IN REFRIGERATOR**  
**Quantity:** One (1)  
**Manufacturer:** Delfield  
**Model:** GAR1P-S

- a. Model GAR1P-S Specification Line® Refrigerator, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front,

- sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.22 HP, 115v/60/1-ph, 4.2 amps, NEMA 5-15P, NSF, cULus
- b. Door hinged on left
  - c. Set of (4) 5" locking casters, standard

**ITEM # CM6-10**                    **MOP SINK CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF.
- b. Model CAB-R Change door to right-side hinge
- c. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose
- d. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**ITEM # CM6-11**                    **SPARE NO.**

**ITEM # CM6-12**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus
- b. Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

**ITEM # CM6-13**                    **WORK TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WT**

- a. Model WT Work table, all stainless steel construction, 7'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-14**                    **WALL MOUNTED OVER SHELF**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **WMO**

- a. Model WMO Wall mounted over shelf, 7'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-15**                    **REFRIGERATED PREP TABLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **4448NP-18M**

- a. Model 4448NP-18M Mega Top Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (2) doors, (2) 1/1 GN shelves, stainless steel top with polyethylene cutting board & (18) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-Contained refrigeration, standard
- d. Door(s) standard
- e. Model 44CLEARLID Clear plexi lid (per opening)
- f. MUST confirm the quantity of lids required per cutout

**ITEM # CM6-16**                    **SPARE NO.**

**ITEM # CM6-17**                    **SPARE NO.**

**ITEM # CM6-18**                    **REACH-IN FREEZER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAF1P-SH**

- a. Model GAF1P-SH Specification Line® Freezer, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) half-height hinged solid doors (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.55 HP, 115v/60/1-ph, 7.2 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Door hinged on right standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CM6-19**                    **EXHAUST HOOD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Accurex**  
**Model:**                        **XBEW-104.00-S**

- a. Model XBEW-104.00-S

- A. Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided. The hood(s) exterior shall be constructed of a minimum of 18-gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. Front panels shall be of single wall construction. An integral 3-inch air space is provided to meet NFPA® 96 clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight. Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be constructed of a minimum 18-gauge corrosion resistant stainless steel including, but not limited to ducts, plenum, and brackets.
- B. The hood(s) shall include a filter housing constructed of the same material as the hood. The filters shall be stainless steel baffle type (non-stick coating optional), U.L. 1046 Classified, and in sufficient number and size to ensure optimum performance. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 28% at 8 microns (16% from 3-10 microns) and static pressure drop of 0.5-0.6 in WC. Vapor proof, U.L.
- C. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.
- D. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the necessary data that confirms compliance with the code authorities listed above.
- E. Continuous Capture - UL listed connection to join multiple sections.
- F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.
- G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.
- H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor
- I. 304 Stainless Steel inside and out. No galvanized metal.
- J. Provide wall mounted fire cabinet.
- K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood we applicable.
- L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling.

**ITEM # CM6-19.1      FIRE SYSTEM**  
**Quantity:              One (1)**

**Manufacturer:** Accurex  
**Model:** ANSUL

- a. Model ANSUL WALL MOUNTED - INCLUDED WITH HOOD

**ITEM # CM6-20**            **FRYER**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **Henny Penny**  
**Model:**                **OFE321.0**

- a. Model OFE321.0 OFE-321 Open Fryer, floor model, electric, 1 well, stainless steel construction, rectangular fry pot, includes filter drain pan, stainless steel Max oil filtration system, 2 PHT filter envelopes, 4" swiveling casters (2 locking), basket support included in each vat, BUILT-TO-ORDER CONFIGURATION, ENERGY STAR®
- b. F Full well configuration, standard
- c. 480v/60/3-ph, 14.4 kW, 17.0 amps, 3+G wires
- d. TC1 Computron® 1000 control with melt mode, idle mode, two 4-character LED displays per control
- e. Without direct connect shortening disposal system plumbing
- f. Full Size Basket
- g. Model 180156 Crumb Catcher, for single well drain pans
- h. Model 03629 Fryer Pot Cover, 32x full pot

**ITEM # CM6-21**            **GRIDDLE, HIGH VOLUME**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Southbend**  
**Model:**                **HDG-48V**

- a. Model HDG-48V High Volume Griddle, countertop, gas, 48", 1" thick polished steel plate, thermostatic controls, battery spark ignition, flame failure safety device, stainless steel front, sides, towel bar & integrated stand, 120,000 BTU, CSA, NSF
- b. T&S Brass Model HG-2D-48SK-PS Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) SwiveLink fittings, 360° rotatable hex nut, with 90° elbow & installation kit (includes restraining cable & ball valve), Posi-Set, 215,000 BTU/ hr minium flow capacity

**ITEM # CM6-22**            **REACH-IN REFRIGERATOR**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Delfield**  
**Model:**                **GAR1P-S**

- a. Model GAR1P-S Specification Line® Refrigerator, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.22 HP, 115v/60/1-ph, 4.2 amps, NEMA 5-15P, NSF, cULus
- b. Door hinged on left
- c. Set of (4) 5" locking casters, standard

**ITEM # CM6-23**            **REFRIGERATED PREP TABLE**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Delfield**  
**Model:**                **4448NP-18M**

- a. Model 4448NP-18M Mega Top Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (2) doors, (2) 1/1 GN shelves, stainless steel top with polyethylene cutting board & (18) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-contained refrigeration, standard
- d. Model AS000-B4V-003E Stainless steel back panel
- e. Model 4400EXTHERM Exterior Digital thermometer
- f. Door(s) standard
- g. Model 44CLEARLID Clear plexi lid (per opening)
- h. MUST confirm the quantity of lids required per cutout
- i. Model AS000-AQS-0032 Overshelf, Single Tier, 48Lx16Wx20H

**ITEM # CM6-24                    HOT FOOD HOLDING CABINET**  
**Quantity:                        Three (3)**  
**Manufacturer:                  Alto-Shaam**  
**Model:                             750-CTUS**

- a. Model 750-CTUS Halo Heat® Hot Food Storage Unit, 1-compartment, capacity (6) 12" x 20" full-size pans, French doors with (2) positive latch door handles, ON/OFF adjustable thermostat, indicator light, exterior temperature gauge, thermostat for 60° F - 200° F, stainless steel exterior & interior, EcoSmart®, cULus, NSF
- b. 120v/50/60/1-ph, 18.8 amps, 2.25kW, NEMA L5-30P
- c. Model 14227 Casters, 3" (76mm), set of (4)

**ITEM # CM6-25                    DROP-IN SINK W/ FAUCET**  
**Quantity:                        One (1)**  
**Manufacturer:                  Advance Tabco**  
**Model:                             DI-1-10**

- a. Model DI-1-10 Drop-In Sink, 1-compartment, 10" wide x 14" front-to-back x 10" deep bowl, 20 gauge 304 stainless steel, with deck mounted gooseneck faucet, basket drain, NSF
- b. Model K-614B Removable 3-sided splash for counter-mount drop in sink, 8" tall, includes posts to be installed in countertop.

**ITEM # CM6-26                    SPARE NO.**

**ITEM # CM6-27                    1 COMPARTMENT SINK PREP TABLE**  
**Quantity:                        One (1)**  
**Manufacturer:                  Atlanta Custom Fabricators**  
**Model:                             1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 7'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high left end splash splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter

and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.

- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM6-27.1      FAUCET**  
**Quantity:            One (1)**  
**Manufacturer:        T&S Brass**  
**Model:                B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CM6-28        STORAGE SHELVING**  
**Quantity:            Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:        Metro**  
**Model:                2136NK3**

- a. Model 2136NK3 Quick Ship - Super Erecta® Shelf, wire, 36"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CM6-29        3 COMPARTMENT SINK**  
**Quantity:            One (1)**  
**Manufacturer:        Advance Tabco**  
**Model:                K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # CM6-29.1      FAUCET**  
**Quantity:            Two (2)**  
**Manufacturer:        T&S Brass**  
**Model:                5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CM6-30**                    **WALL SHELF W/ POT RACK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CM6-31**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CM6-32**                    **ROLL-IN REFRIGERATOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Delfield**  
**Model:**                        **GARRI1P-S**

- a. Model GARRI1P-S Specification Line® Refrigerator, Roll-In, one-section, 37.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Full height solid door, standard
- c. Door hinged on left

**ITEM # CM6-33**                    **SPARE NO.**

**ITEM # CM6-34**                    **REFRIGERATED DISPLAY**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Structural Concepts**  
**Model:**                        **B57R**

- a. Model B57R Oasis® Refrigerated Self-Service Case, 59-5/8"W x 34-1/4"D x 82-1/4"H, Warmest average product temperature of 40°F or less, LED top light, (4) metal shelves, Breeze with self-contained refrigeration, condensate pan, magnetic air filter, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, R290 Hydrocarbon refrigerant, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant)
- c. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- d. Lower Front Panel Color: Powder coated SCC Standard Silversan Black
- e. Rear Exterior Color: Powder coated SCC Standard Silversan Black
- f. Base support: Casters (non-locking) w/ levelers
- g. End Panel Left: Full with stainless steel mirror interior, standard
- h. End Panel Right: Full with stainless steel mirror interior, standard

- i. Cover/Curtain: Roll-down security cover, locking (Requires two end panels (full or cutaway) per case) (One cover/curtain type per model)
- j. Rear Doors: Rear loading hinged doors, locking
- k. Shelving: Metal shelves (4), lighted (LED 4000K)
- l. Top Light: LED 4000K, standard
- m. Electrical Connection: 6' Straight blade power cord, standard
- n. Clean Sweep: None, standard
- o. Refrigeration: Breeze-E (Type II) self-contained refrigeration, standard
- p. Refrigerant: Hydrocarbon refrigerant (R290)
- q. Thermometer: Spirit filled thermometer, standard
- r. Vinyl Graphics: None, standard

**ITEM # CM6-35**                    **HEATED MERCHANDISER**  
**Quantity:**                    **Three (3)**  
**Manufacturer:**              **Hatco**  
**Model:**                        **GR3SDS-39DCT**

- a. Model GR3SDS-39DCT Glo-Ray® Designer Slant Display Warmer, with curved canopy top, (14) rods, countertop, dual shelf, adjustable thermostat, hardcoated heated base, heated glass shelves, tempered glass side panels, LED display lights, built-in front sign holder (sign not included), 2-1/2" legs, cULus, UL EPH Classified, Made in USA, CE
- b. 120/208-240v/60/1-ph, 2130 watts, 12.8 amps, NEMA L14-20P
- c. Model STANDARD Black designer color, standard
- d. Model 4"LEGS 4-inch adjustable legs, set of 4

**ITEM # CM6-36**                    **REFRIGERATED MERCHANDISER**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **True**  
**Model:**                        **GDM-49-HC~TSL01**

- a. Model GDM-49-HC~TSL01 Refrigerated Merchandiser, two-section, True standard look version 01, (8) shelves, (2) double pane thermal insulated glass hinged doors, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, 1/2 HP, 115v/60/1-ph, 8.5 amps, NEMA 5-15P, cULus, UL EPH Classified, Made in USA, ENERGY STAR®
- b. Exterior: Black powder coated steel, standard
- c. Interior: White aluminum, with white shelving, standard
- d. Left door hinged left, right door hinged right standard
- e. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM6-37**                    **FREEZER MERCHANDISER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **True**  
**Model:**                        **GDM-49F-HC~TSL01**

- a. Model GDM-49F-HC~TSL01 Freezer Merchandiser, two-section, True standard look version 01, -10°F, (8) shelves, (2) triple-pane thermal glass hinged door, LED interior lights, powder coated steel exterior, white interior with stainless steel floor, R290 Hydrocarbon refrigerant, All Units Manufactured Before April 4th, 2021 are pre-wired at the factory and is ready for final connection to a single 115/208-230/60Hz single phase, NEMA 14-20R dedicated outlet. All Units Manufactured After April 4th, 2021 are pre-wired at the factory and is ready for final connection to a single 115/60Hz single phase, NEMA 5-20R dedicated outlet. \*\*\*Please contact the factory to verify your unit's electrical specifications\*\*\*, cULus, UL EPH Classified, Made in USA, ENERGY STAR®

- b. Self-contained refrigeration standard
- c. Exterior: Black powder coated steel, standard
- d. Interior: White aluminum, with white shelving, standard
- e. Left door hinged left, right door hinged right standard
- f. Illuminated sign decal: S-TS-02 "TRUE Stripe" graphic, standard

**ITEM # CM6-38**                    **POS, SELF-CHECKOUT**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **BY OPERATIONS**  
**Model:**                        **POS**

- a. Model POS PROVIDED BY OPERATIONS

### **CM7 – CONCOURSE LEVEL MARKET 7**

**ITEM # CM7-1**                    **MOBILE HEATED CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Winston Foodservice**  
**Model:**                        **HOV5-14SP**

- a. Model HOV5-14SP CVap® Holding Cabinet, mobile, full-size, insulated, convection holding, accommodates (14) 18" x 26" sheet pans or (28) 13" x 18" sheet pans or (14) 12" x 20" hotel pans, load limit 65 lbs (29.25 kg) per rack, (2) field reversible hinged solid dutch doors, magnetic door handle, C-Touch control with processor, HACCP temperature downloads, USB & audio ports, manual water fill, stainless steel interior & exterior, CE, UL EPH ANSI/NSF4, cUL, UL-Sanitation
- b. 120v/60/1-ph, 2292 watts, 19.1 amps, NEMA 5-20P
- c. Left hand
- d. Window in both upper & lower front doors
- e. 5" Plate casters (2) with locking, standard
- f. Full-perimeter bumpers with 5" casters (2 locking, 2 non-locking)
- g. Allows cord to be wrapped on rear of cabinet

**ITEM # CM7-2**                    **1 COMPARTMENT SINK PREP TABLE**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Atlanta Custom Fabricators**  
**Model:**                        **1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 8'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.

- d. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM7-2.1**            **FAUCET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**        **T&S Brass**  
**Model:**                **B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CM7-3**            **WALL MOUNTED OVER SHELF**  
**Quantity:**            **Two (2)**  
**Manufacturer:**        **Atlanta Custom Fabricators**  
**Model:**                **WMO**

- a. Model WMO Wall mounted over shelf, 8'-0" long X 12"deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM7-4**            **MOBILE HEATED CABINET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**        **Winston Foodservice**  
**Model:**                **HOV5-14SP**

- a. Model HOV5-14SP CVap® Holding Cabinet, mobile, full-size, insulated, convection holding, accommodates (14) 18" x 26" sheet pans or (28) 13" x 18" sheet pans or (14) 12" x 20" hotel pans, load limit 65 lbs (29.25 kg) per rack, (2) field reversible hinged solid dutch doors, magnetic door handle, C-Touch control with processor, HACCP temperature downloads, USB & audio ports, manual water fill, stainless steel interior & exterior, CE, UL EPH ANSI/NSF4, cUL, UL-Sanitation
- b. 120v/60/1-ph, 2292 watts, 19.1 amps, NEMA 5-20P
- c. Right hand
- d. Window in both upper & lower front doors
- e. 5" Plate casters (2) with locking, standard
- f. Full-perimeter bumpers with 5" casters (2 locking, 2 non-locking)
- g. Allows cord to be wrapped on rear of cabinet

**ITEM # CM7-5**            **REACH-IN REFRIGERATOR**  
**Quantity:**            **One (1)**  
**Manufacturer:**        **Delfield**  
**Model:**                **GAR2P-S**

- a. Model GAR2P-S Specification Line® Refrigerator, Reach-In, two-section, 46.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), (6) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard

- c. Set of (4) 5" locking casters, standard

**ITEM # CM7-6**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus  
 Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

**ITEM # CM7-7**                    **EXHAUST HOOD W/ FIRE SYSTEM**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Accurex**  
**Model:**                        **XBEW-155.00-S**

- a. Model XBEW-155.00-S  
 A. Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided. The hood(s) exterior shall be constructed of a minimum of 18-gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. Front panels shall be of single wall construction. An integral 3-inch air space is provided to meet NFPA® 96 clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight. Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be constructed of a minimum 18-gauge corrosion resistant stainless steel including, but not limited to ducts, plenum, and brackets.  
 B. The hood(s) shall include a filter housing constructed of the same material as the hood. The filters shall be stainless steel baffle type (non-stick coating optional), U.L. 1046 Classified, and in sufficient number and size to ensure optimum performance. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 28% at 8 microns (16% from 3-10 microns) and static pressure drop of 0.5-0.6 in WC. Vapor proof, U.L.  
 C. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.  
 D. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the necessary data that confirms compliance with the code authorities listed above.  
 E. Continuous Capture - UL listed connection to join multiple sections.  
 F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen

space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.

G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.

H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor

I. 304 Stainless Steel inside and out. No galvanized metal.

J. Provide fire cabinet on right end of hood.

K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood we applicable.

L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling.

**ITEM # CM7-8**                      **CONVECTION STEAMER W/ KETTLE**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Crown**  
**Model:**                         **ECX-10-10**

- a. Model ECX-10-10 Convection Steamer/Kettle, electric, (2) compartment, (1) 10 gallon kettle, (5) 12" x 20" x 2-1/2" pan capacity per compartment, 48" cabinet base, automatic blowdown, 60 minute timer per compartment, deck mount faucet valve, swing nozzle & integral sink, CSD-1 code package, includes water filter system, 316 stainless steel interior, 304 stainless steel exterior, 6" legs with adjustable flanged feet, cCSAus, NSF
- b. Model EBVS-2 480V-3PH - 57.7 AMPS
- c. Drain tempering valve, for 140 degree temperature requirement. Requires 1/2" cold water connection.
- d. Model C-10 Cover, lift off, for 10 gallon kettle

**ITEM # CM7-8.1**                **FILTER SYSTEM**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Crown**  
**Model:**                         **71528211**

- a. Model 71528211 TruH2O Water Treatment System (multi-stage pack), neutralizes scale, up to 99% chlorine reduction, 5 micron filtration, quick disconnect, easy cartridge change out

**ITEM # CM7-9**                      **FRYER BANK**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **Henny Penny**  
**Model:**                         **OFE342.0**

- a. Model OFE342.0 OFE-342 Open Fryer, electric, 2 wells, 80 pound fat and 18 pound food capacity per well, stainless steel construction and rectangular fry pot, built-in filter, (2) basket supports, (4) casters (2 locking)
- b. 480v/60/3-ph, 22 kW, 26.5 amps, 3-wire + ground connections (USA option) (left)
- c. 480v/60/3-ph, 22 kW, 26.5 amps, 3-wire + ground connections (USA option) (right)
- d. C1 Computron® 1000 control with melt mode, idle mode, two 4-character LED displays per control, standard

- e. Without direct connect system, standard
- f. Station 1: Full Size Basket
- g. Station 2: (2) Half Baskets
- h. Filter drain pan, two well capacity
- i. Model 03552 Filter Pan Dolly, for open fryers, compatible with two well capacity filter pan of OGA/OEA/OFG/OFE-342 open fryer
- j. Model 03638 Fryer Pot Cover, 34x full pot

**ITEM # CM7-10**            **REACH-IN FREEZER**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Delfield**  
**Model:**                **GAF1P-SH**

- a. Model GAF1P-SH Specification Line® Freezer, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) half-height hinged solid doors (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.55 HP, 115v/60/1-ph, 7.2 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Door hinged on right standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CM7-11**            **SPARE NO.**

**ITEM # CM7-12**            **SPARE NO.**

**ITEM # CM7-13**            **REACH-IN FREEZER**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Delfield**  
**Model:**                **6151XL-SH**

- a. Model 6151XL-SH Freezer, Reach-In, two-section, 41.5 cubic feet capacity, top-mounted self-contained refrigeration system, (4) half-height hinged solid door (locking), (6) adjustable chrome wire shelves, digital thermometer with visual high/low temp alarms, LED interior lighting, stainless steel front shroud & sides, Seamless, Delrite® ABS interior liner 30 molded shelf supports spaced 3" (76mm) apart, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.68 HP, 115v/60/1-ph, 12.0 amps, NEMA 5-15P, NSF, cULus, UL, ENERGY STAR®

**ITEM # CM7-14**            **REACH-IN REFRIGERATOR**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Delfield**  
**Model:**                **GAR2P-S**

- a. Model GAR2P-S Specification Line® Refrigerator, Reach-In, two-section, 46.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), (6) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CM7-15**                    **STORAGE SHELVING**  
**Quantity:**                    **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**                **Metro**  
**Model:**                        **2148NK3**

- a. Model 2148NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CM7-16**                    **ICE MACHINE, FLAKER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hoshizaki**  
**Model:**                        **F-1002MWJ**

- a. Model F-1002MWJ Ice Maker, Flake-Style, 22"W, water-cooled, self-contained condenser, production capacity up to 955 lb/24 hours at 70°/50° (833 lb AHRI certified at 90°/70°), stainless steel finish, Advanced CleanCycle24™, infrared bin sensor, R-404A refrigerant, 115v/60/1-ph, 13.7 amps, NSF, UL

**ITEM # CM7-16.1**                **ICE BIN**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hoshizaki**  
**Model:**                        **B-800SF**

- a. Model B-800SF Ice Bin, 48"W, top-hinged front-opening door, 800-lb ice storage capacity, for top-mounted ice makers, stainless steel exterior, painted legs included, protected with H-GUARD Plus Antimicrobial Agent, ETL, ETL-Sanitation
- b. Model HS-2035 Top Kit, 22", ABS
- c. Model HS-2032 Top Kit, 4", ABS
- d. Model LP-6 LEG Leg Package, (4) x 6" stainless steel legs
- e. Model HS-5607 Scoop Holder Kit

**ITEM # CM7-16.2**                **WATER FILTER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hoshizaki**  
**Model:**                        **H9320-51**

- a. Model H9320-51 Water Filtration System, single configuration.

**ITEM # CM7-17**                    **FLOOR TROUGH**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Atlanta Custom Fabricators**  
**Model:**                        **FT**

- a. Model FT Stainless steel floor trough, 4'-0" long X 1'-0" wide, 2" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., removable washable 1" X 1/4" fiber grate. Grating flat bars to be parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM7-18**            **HAND SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CM7-19**            **3 COMPARTMENT SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision.
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # CM7-19.1**        **WALL / SPLASH MOUNT FAUCET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**       **T&S Brass**  
**Model:**                **5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CM7-20**            **WALL SHELF W/ POT RACK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CM7-21**            **ROLL-IN REFRIGERATOR**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Delfield**  
**Model:**                **GARRI2P-S**

- a. Model GARRI2P-S Specification Line® Refrigerator, Roll-In, two-section, 76.5 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid

doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.38 HP, 115v/60/1-ph, 6.5 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®

- b. Full height solid door, standard
- c. Door hinged on left standard
- d. Door hinged on right standard

**ITEM # CM7-22                      UNIVERSAL ROLL-IN RACK**  
**Quantity:                              Two (2)**  
**Manufacturer:                        Cres Cor**  
**Model:                                    207UA12AC**

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF
- b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans
- c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # CM7-23                      1 COMPARTMENT SINK PREP TABLE**  
**Quantity:                              One (1)**  
**Manufacturer:                        Atlanta Custom Fabricators**  
**Model:                                    1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 7'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished. Cut out top to accommodate drop-in ice well, item 23.2.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM7-23.1                    FAUCET**  
**Quantity:                              One (1)**  
**Manufacturer:                        T&S Brass**  
**Model:                                    B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CM7-23.2                    DROP-IN ICE WELLS**  
**Quantity:                              One (1)**

**Manufacturer:** Hatco  
**Model:** IWB-2

- a. Model IWB-2 Drop-In Cold Food Unit, iced cold pan, 32"L x 27"D, (2) pan size (pans not included), insulated, bezel design, 1" brass drain with screen, stainless steel construction, Made in USA

**ITEM # CM7-24**            **WALL MOUNTED OVER SHELF**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Atlanta Custom Fabricators**  
**Model:**                **WMO**

- a. Model WMO Wall mounted over shelf, 7'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CM7-25**            **HAND SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Advance Tabco**  
**Model:**                **7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus
- b. Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

**ITEM # CM7-26**            **SPARE NO.**

**ITEM # CM7-27**            **SPARE NO.**

**ITEM # CM7-28**            **SPARE NO.**

**ITEM # CM7-29**            **DROP-IN ICE WELL**  
**Quantity:**            **Two (2)**  
**Manufacturer:**       **Hatco**  
**Model:**                **IWB-6**

- a. Model IWB-6 Drop-In Cold Food Unit, iced cold pan, 84"L x 27"D, (6) pan size (pans not included), insulated, bezel design, 1" brass drain with screen, stainless steel construction, Made in USA
- b. Model 6FB8 False Bottom, (3) 3-pan inserts, allows 8" ice depth, attaches to pan bottom, for IWB-6
- c. Model IWB-6SLANT Slant option, for IWB-6
- d. Model BEZELGASKET-6 Rubber Gasket, for (6) pan size drop-in food wells, factory installed, eliminates the need for silicone or other sealants

**ITEM # CM7-30**            **DROP-IN ICE WELL**  
**Quantity:**            **One (1)**  
**Manufacturer:**       **Hatco**

**Model: IWB-3**

- a. Model IWB-3 Drop-In Cold Food Unit, iced cold pan, 45"L x 27"D, (3) pan size (pans not included), insulated, bezel design, 1" brass drain with screen, stainless steel construction, Made in USA
- b. Model 3FB8 False Bottom, (1) 1-pan insert & (1) 2-pan insert, allows 8" ice depth, attaches to pan bottom, for IWB-3
- c. Model IWB-3SLANT Slant option, for IWB-3
- d. Model BEZELGASKET-3 Rubber Gasket, for (3) pan size drop-in food wells, factory installed, eliminates the need for silicone or other sealants

**ITEM # CM7-31 REFRIGERATED DISPLAY****Quantity: Two (2)****Manufacturer: Structural Concepts****Model: B57R**

- a. Model B57R Oasis® Refrigerated Self-Service Case, 59-5/8"W x 34-1/4"D x 82-1/4"H, Warmest average product temperature of 40°F or less, LED top light, (4) metal shelves, Breeze with self-contained refrigeration, condensate pan, magnetic air filter, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, R290 Hydrocarbon refrigerant, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black (FDA compliant)
- c. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- d. Lower Front Panel Color: Powder coated SCC Standard Silversan Black
- e. Rear Exterior Color: Powder coated SCC Standard Silversan Black
- f. Base support: Casters (non-locking) w/ levelers
- g. End Panel Left: Full with stainless steel mirror interior, standard
- h. End Panel Right: Full with stainless steel mirror interior, standard
- i. Cover/Curtain: Roll-down security cover, locking (Requires two end panels (full or cutaway) per case) (One cover/curtain type per model)
- j. Rear Doors: Rear loading hinged doors, locking
- k. Shelving: Metal shelves (4), lighted (LED 4000K)
- l. Top Light: LED 4000K, standard
- m. Electrical Connection: 6' Straight blade power cord, standard
- n. Clean Sweep: None, standard
- o. Refrigeration: Breeze-E (Type II) self-contained refrigeration, standard
- p. Refrigerant: Hydrocarbon refrigerant (R290)
- q. Thermometer: Spirit filled thermometer, standard
- r. Vinyl Graphics: None, standard

**ITEM # CM7-32 REFRIGERATED DISPLAY****Quantity: One (1)****Manufacturer: Structural Concepts****Model: B47R**

- a. Model B47R Oasis® Refrigerated Self-Service Case, 47-5/8"W x 34-1/4"D x 82-1/4"H, Warmest average product temperature of 40°F or less, LED top light, (4) metal shelves, Breeze with self-contained refrigeration, condensate pan, magnetic air filter, non-locking casters with levelers, end panels with mirrored stainless interior, black exterior, R290 Hydrocarbon refrigerant, cETLus, ETL-Sanitation
- b. Exterior Color: Powder coated SCC Standard Silversan Black
- c. Interior Color: Powder coated SCC Standard Silversan Black
- d. Lower Front Panel Color: Powder coated SCC Standard Silversan Black
- e. Rear Exterior Color: Powder coated SCC Standard Silversan Black standard

- f. Base support: Casters (non-locking) w/ levelers
- g. End Panel Left: Full with stainless steel mirror interior, standard
- h. End Panel Right: Full with stainless steel mirror interior, standard
- i. Cover/Curtain: Roll-down security cover, locking.
- j. Rear Doors: Rear loading hinged doors, locking
- k. Shelving: Metal shelves (4), lighted (LED 4000K)
- l. Top Light: LED 4000K, standard
- m. Electrical Connection: 6' Straight blade power cord, standard
- n. Clean Sweep: None, standard
- o. Refrigeration: Breeze-E (Type II) self-contained refrigeration, standard
- p. Refrigerant: Hydrocarbon refrigerant (R290)
- q. Thermometer: Spirit filled thermometer, standard
- r. Vinyl Graphics: None, standard

**ITEM # CM7-33                    HEATED MERCHANDISER**  
**Quantity:                        Five (5)**  
**Manufacturer:                  Hatco**  
**Model:                             GR3SDS-39DCT**

- a. Model GR3SDS-39DCT Glo-Ray® Designer Slant Display Warmer, with curved canopy top, (14) rods, countertop, dual shelf, adjustable thermostat, hardcoated heated base, heated glass shelves, tempered glass side panels, LED display lights, built-in front sign holder (sign not included), 2-1/2" legs, cULus, UL EPH Classified, Made in USA, CE
- b. 120/208-240v/60/1-ph, 2130 watts, 12.8 amps, NEMA L14-20P
- c. Model STANDARD Black designer color, standard
- d. Model 4"LEGS 4-inch adjustable legs, set of 4

**ITEM # CM7-34                    REFRIGERATED SELF-SERVE ISLAND**  
**Quantity:                        One (1)**  
**Manufacturer:                  Structural Concepts**  
**Model:                             FSI660R**

- a. Model FSI660R Oasis® Refrigerated Self-Service Island, 60"H, open air screen, (3) non-lit non-adjustable metal shelves, top light, black interior, includes price tag moulding (matches interior color), laminated exterior, levelers, Breeze-E (Type II) with EnergyWise self-contained refrigeration system, cETLus, ETL-Sanitation
- b. Refrigeration: Breeze self-contained refrigeration, standard
- c. Electrical Connection: 6' NEMA 6-30P, 208-240v/60/1-ph straight blade power cord, standard
- d. Base Support: Casters with levelers (self-cont.), standard
- e. Interior Color: Powder coated SCC Standard Silversan Black (FDA compliant), standard
- f. Exterior Color: Laminate standard color 909-58 Black
- g. Model GRAIN DIRECTION Standard laminate grain directions (when applicable):
  - Front Panels (Upper Header and Lower Panels): Horizontal grain direction
  - End Panels: Vertical grain direction
  - Blend & Reveal Cases Only: Horizontal grain direction on front and end panels
- h. Thermometer: Digital fahrenheit thermometer, standard
- i. Shelving: (3) LED Lighted non-adjustable metal shelves

**ITEM # CM7-35                    ICE MAKER**  
**Quantity:                        Two (2)**  
**Manufacturer:                  Ice-O-Matic**  
**Model:                             CIM0836FA**

- a. Model CIM0836FA Elevation Series™ Modular Cube Ice Maker, air-cooled, self-contained condenser, dual exhaust top/side air discharge, 30" W, approximately 896 lb production/24 hours at 70°/50° (711 lb at 90°/70°), full-size cubes, PURE ICE® built-in antimicrobial protection, LED status display, one touch sanitize/descaling controls, dishwasher safe food zone components, cULus, NSF, CE, BPA Free
- b. 208-230v/60/1-ph, 13.4 amps, standard

**ITEM # CM7-35.1      SODA DISPENSER**  
**Quantity:            Two (2)**  
**Manufacturer:        By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM7-35.2      WATER FILTER**  
**Quantity:            Two (2)**  
**Manufacturer:        Ice-O-Matic**  
**Model:                IFQ2**

- a. Model IFQ2 Water Filter Manifold, dual filter designed for ice makers producing between 1050 & 1400 lbs. (476.3 to 635 Kg.) of ice per day, 3.0 gpm maximum flow rate, IsoNet® scale inhibitor, .5 micron particle reduction.

**ITEM # CM7-36        UNDERCOUNTER SODA SYSTEM SYRUP RACK**  
**Quantity:            One (1)**  
**Manufacturer:        By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM7-36.1      CARBONATOR**  
**Quantity:            One (1)**  
**Manufacturer:        By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CM7-37        CONDIMENT CADDY**  
**Quantity:            Two (2)**  
**Manufacturer:        Dispense-Rite**  
**Model:                NLO-STK-1BT**

- a. Model NLO-STK-1BT Lid, Straw & Condiment Organizer, 7-1/8" H x 8" W x 19-1/8" D, narrow, removable section dividers, polystyrene, black

**ITEM # CM7-38        POS, SELF-CHECKOUT**  
**Quantity:            Six (6)**  
**Manufacturer:        BY OPERATIONS**  
**Model:                POS**

- a. Model POS PROVIDED BY OPERATIONS

**ITEM # CM7-39        MOP SINK CABINET**  
**Quantity:            One (1)**  
**Manufacturer:        Advance Tabco**

**Model: 9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF.
- b. Model CAB-R Change door to right-side hinge
- c. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- d. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**CSC – CONCOURSE LEVEL SIDELINE CLUB**

**ITEM # CSC-1                    1 COMPARTMENT SINK PREP TABLE**  
**Quantity:                        One (1)**  
**Manufacturer:                  Atlanta Custom Fabricators**  
**Model:                             1CSPT**

- a. Model 1CSPT Prep table with 1-Compartment Sink, 7'-0" long X 2'-6" wide X 36" high, all 14 gauge type 304 stainless steel construction. Table to be fully welded construction with all welds ground and polished to a uniform finish. Top to be provided with 8" high back splash, 2" return on 45 degree angle and 1" turned down, attach to wall with stainless steel Z-clips, marine edges, stainless steel cross bracing, stainless steel legs and stainless steel adjustable flanged feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Sink to be 20" long X 20" wide X 12" deep, provided with T&S Brass #B-3950 Waste Valve, twist handle assembly for 3-1/2" sink opening, 2" drain outlet with 1-1/2" adapter and stainless steel lever waste bracket. Crease bottom of sink bowl to pitch to the drain. Provide stainless steel skirt to cover sink bowl.
- c. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- d. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-1.1                FAUCET**  
**Quantity:                        One (1)**  
**Manufacturer:                  T&S Brass**  
**Model:                             B-0231-CR**

- a. Model B-0231-CR Faucet, 12" swing nozzle, 8" wall mount base, 1/2" NPT female Inlets, quarter-turn Cerama cartridges, low lead, ADA Compliant

**ITEM # CSC-2                    WALL MOUNTED OVER SHELF**  
**Quantity:                        One (1)**  
**Manufacturer:                  Atlanta Custom Fabricators**  
**Model:                             WMO**

- a. Model WMO Wall mounted over shelf, 7'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2",

supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.

- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-2.1**            **WALL MOUNTED OVER SHELF**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Atlanta Custom Fabricators**  
**Model:**                    **WMO**

- a. Model WMO Wall mounted over shelf, 7'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-3**            **HAND SINK**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Advance Tabco**  
**Model:**                    **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # CSC-4**            **WORK TABLE**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Atlanta Custom Fabricators**  
**Model:**                    **WT**

- a. Model WT Work table, all stainless steel construction, 5'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.
- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-5**            **WALL MOUNTED OVER SHELF**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Atlanta Custom Fabricators**  
**Model:**                    **WMO**

- a. Model WMO Wall mounted over shelf, 5'-0" long X 12" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2",

supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.

- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-5.1**            **WALL MOUNTED OVER SHELF**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Atlanta Custom Fabricators**  
**Model:**                    **WMO**

- a. Model WMO Wall mounted over shelf, 5'-0" long X 14" deep. Shelf to be constructed of 16 gauge type 304 stainless steel with back and ends turned up 2" and front rolled 1-1/2", supported by 14 gauge stainless steel cantilever brackets secured to wall with stainless steel fasteners.
- b. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-6**            **ICE MACHINE**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Hoshizaki**  
**Model:**                    **KM-660MWJ**

- a. Model KM-660MWJ Ice Maker, Cube-Style, 22"W, water-cooled, self-contained condenser, production capacity up to 647 lb/24 hours at 70°/50° (630 lb AHRI certified at 90°/70°), stainless steel finish, crescent cube style, R-404A refrigerant, 115v/60/1-ph, 12.35 amps, NSF, UL

**ITEM # CSC-6.1**        **ICE BIN**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Hoshizaki**  
**Model:**                    **B-500SF**

- a. Model B-500SF Ice Bin, 30"W, top-hinged front-opening door, 500-lb ice storage capacity, for top-mounted ice maker, stainless steel exterior, painted legs included, protected with H-GUARD Plus Antimicrobial Agent, ETL, ETL-Sanitation
- b. Model HS-2033 Top Kit, 8", ABS
- c. Model LP-6 LEG Leg Package, (4) x 6" stainless steel legs
- d. Model HS-5607 Scoop Holder Kit

**ITEM # CSC-6.2**        **WATER FILTER**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Hoshizaki**  
**Model:**                    **H9320-51**

- a. Model H9320-51 Water Filtration System, single configuration.

**ITEM # CSC-7**            **FLOOR TROUGH**  
**Quantity:**                **One (1)**  
**Manufacturer:**        **Atlanta Custom Fabricators**  
**Model:**                    **FT**

- a. Model FT Stainless steel floor trough, 2'-6" long X 1'-0" wide, 2" deep, constructed of 14 gauge type 304 stainless steel with perimeter stainless steel anchor tabs welded approximately 12" O.C., removable washable 1" X 1/4" fiber grate. Grating flat bars to be

parallel to pour pattern to minimize splash. Provide with 4" O.D. tailpiece drain connection and removable stainless steel scrap basket.

- b. Unit to be further constructed in accordance with shop drawings.

APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-8**                      **3 COMPARTMENT SINK**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                         **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
 OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain
- d. Model K-454 Side splash, integral (welded), for NSF sinks & dish tables, height matches backsplash height.  
 RIGHT SIDE

**ITEM # CSC-8.1**                **FAUCET**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **T&S Brass**  
**Model:**                         **5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # CSC-9**                    **WALL SHELF W/ POT RACK**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                         **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # CSC-10**                **BAG-IN-BOX RACK**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # CSC-10.1**              **CARBONATOR**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER  
 CARBONATOR IS LOCATED IN (CSC) CONCOURSE LEVEL - SIDLE LINE CLUB BAR

**ITEM # CSC-10.2**              **CARBONATOR**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER  
CARBONATOR IS LOCATED IN (CB2) CONCOURSE LEVEL - BAR 2

**ITEM # CSC-11**                    **STORAGE SHELVING**  
**Quantity:**                    **Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:**              **Metro**  
**Model:**                        **1830NK3**

- a. Model 1830NK3 Quick Ship - Super Erecta® Shelf, wire, 30"W x 18"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # CSC-12**                    **MOP SINK CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF (right hinged door available on request)
- b. Model CAB-R Change door to right-side hinge
- c. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- d. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**ITEM # CSC-13**                    **SPARE NO.**

**ITEM # CSC-14**                    **SPARE NO.**

**ITEM # CSC-15**                    **REACH-IN REFRIGERATOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAR2P-S**

- a. Model GAR2P-S Specification Line® Refrigerator, Reach-In, two-section, 46.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), (6) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®

- b. Left door hinged on left, right door hinged on right, standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CSC-16**                    **ROLL-IN REFRIGERATOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Delfield**  
**Model:**                        **GARRI1P-S**

- a. Model GARRI1P-S Specification Line® Refrigerator, Roll-In, one-section, 37.0 cubic feet capacity, top-mounted self-contained refrigeration system, (1) full-height hinged solid door (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.35 HP, 115v/60/1-ph, 6.0 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Full height solid door, standard
- c. Door hinged on right standard

**ITEM # CSC-17**                    **UNIVERSAL ROLL-IN RACK**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**                **Cres Cor**  
**Model:**                        **207UA12AC**

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF
- b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans
- c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # CSC-18**                    **HAND SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                        **7-PS-95**

- a. Model 7-PS-95 Hand Sink, pedestal mounted base, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, splash mounted faucet, soap & paper towel dispenser, pedal valves with easy access design, basket drain, wall bracket, NSF, cCSAus
- b. Model 7-PS-17 Welded Side Splash, 7-3/4"H (installed height), both sides, for hand sinks with 14" wide x 10" front-to-back bowl, splash mounted faucets

**ITEM # CSC-19**                    **REACH-IN FREEZER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Delfield**  
**Model:**                        **GAF1P-SH**

- a. Model GAF1P-SH Specification Line® Freezer, Reach-In, one-section, 21.0 cubic feet capacity, top-mounted self-contained refrigeration system, (2) half-height hinged solid doors (locking), (3) adjustable chrome wire shelves, 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, pilaster with shelf clips, stainless steel exterior front, sides & interior, (4) 5" locking casters, GreenGenius™ R290 Hydrocarbon refrigerant, 0.55 HP, 115v/60/1-ph, 7.2 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. ODoor hinged on right standard
- c. Set of (4) 5" locking casters, standard

**ITEM # CSC-20**                      **EXHAUST HOOD W/ FIRE SYSTEM**  
**Quantity:**                        **One (1)**  
**Manufacturer:**                **Accurex**  
**Model:**                            **XBEW-108.00-S**

- a. Model XBEW-108.00-S
- A. Type I, exhaust only wall canopy suitable for all types of cooking applications. The hood(s) shall be U.L. 710 Listed without a fire damper (with optional) for medium, heavy, or extra-heavy duty rated cooking appliances. Make-up air shall be independently provided. The hood(s) exterior shall be constructed of a minimum of 18-gauge 300 series stainless steel. The hood(s) shall be constructed using the standing seam method for optimum strength and with a Performance Enhancing Lip (PEL) to improve capture efficiency by turning air back into the hood. Front panels shall be of single wall construction. An integral 3-inch air space is provided to meet NFPA® 96 clearance requirements against limited combustible walls. Integral 3-inch air space may be omitted for non-combustible construction. All seams, joints and penetrations of the hood enclosure shall be welded and/or liquid tight. Lighter material gauges, alternate material types and finishes are not acceptable. All unexposed interior surfaces shall be constructed of a minimum 18-gauge corrosion resistant stainless steel including, but not limited to ducts, plenum, and brackets.
- B. The hood(s) shall include a filter housing constructed of the same material as the hood. The filters shall be stainless steel baffle type (non-stick coating optional), U.L. 1046 Classified, and in sufficient number and size to ensure optimum performance. The filter housing shall terminate in a pitched, full length grease trough which shall drain into a removable grease container. These filters shall have a grease removal efficiency of 28% at 8 microns (16% from 3-10 microns) and static pressure drop of 0.5-0.6 in WC. Vapor proof, U.L.
- C. LED light fixtures shall be pre-wired to a junction box located at the top of the hood for field connection. The wiring shall conform to the requirements of the NFPA® 70.
- D. The canopy hood(s) shall be built in accordance with the NFPA® 96, IMC, UMC, and bear the NSF Seal of Approval. The hood manufacturer shall provide, on request, the necessary data that confirms compliance with the code authorities listed above.
- E. Continuous Capture - UL listed connection to join multiple sections.
- F. Provide Accurex Controls: XKC-CV-S Controls system shall be a UL listed outlet center which shall standardly consist of a NEMA-1 Stainless Steel Enclosure within a Stainless-Steel Enclosure Panel, Printed Circuit Board (PCB), with Full Color Touchscreen, audible alarm, sensor (s) and motor starters. The constant volume Accurex Controls shall utilize resistive type temperature sensors that are mounted in the capture tank of the hood to monitor exhaust air temperatures, and an optional room temperature sensor, shipped loose, to be installed to detect ambient air temperatures in the kitchen space. Temperature sensors shall be made of stainless steel and shall be installed in a UL approved coupling.
- G. Fire System – Provide factory pre-piped for Ansul R-102 fire protection system located in an integral utility cabinet on the right end of the hood. The system shall provide surface, duct, and plenum protection for items of cooking equipment located beneath the hood in accordance with all applicable codes and provisions of NFPA 17A and 96. All system piping shall be concealed where possible with exposed portions of either chrome fittings or stainless-steel sleeving. The system shall be wired with shunt trip breaker and electric/gas shut-off valve serving items of cooking equipment beneath the hood to provide power and fuel shut-off in the event of system actuation.
- H. Exhaust fan(s) and supply fan(s) to be supplied by Mechanical Contractor
- I. 304 Stainless Steel inside and out. No galvanized metal.
- J. Provide fire cabinet on right end of hood.

K. Provide stainless steel backsplash for entire length of hood with 18" to extend right and 18" to extend left of the hood we applicable.

L. Provide stainless steel hood enclosure panel. Top of hood to have a minimum of 3" above the ceiling.

**ITEM # CSC-21**                    **FRYER**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**            **Henny Penny**  
**Model:**                        **OFE321.0**

- a. Model OFE321.0 OFE-321 Open Fryer, floor model, electric, 1 well, stainless steel construction, rectangular fry pot, includes filter drain pan, stainless steel Max oil filtration system, 2 PHT filter envelopes, 4" swiveling casters (2 locking), basket support included in each vat, BUILT-TO-ORDER CONFIGURATION, ENERGY STAR®
- b. F Full well configuration, standard
- c. 480v/60/3-ph, 14.4 kW, 17.0 amps, 3+G wires
- d. C1 Computron® 1000 control with melt mode, idle mode, two 4-character LED displays per control
- e. Without direct connect shortening disposal system plumbing
- f. Full Size Basket
- g. Model 180156 Crumb Catcher, for single well drain pans
- h. Model 03629 Fryer Pot Cover, 32x full pot

**ITEM # CSC-22**                    **REFRIGERATED EQUIPMENT STAND**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Delfield**  
**Model:**                        **F2952CP**

- a. Model F2952CP Refrigerated Low-Profile Equipment Stand, 52-1/4"W x 31-47/50"D x 24"H, single-section, (2) drawers (pans not included), stainless steel top & drawer fronts, front non-spill edge, ABS interior sides, 4" casters, side-mounted refrigeration system with electric condensate evaporator, R290 Hydrocarbon refrigerant, 1/5 hp, cUL, UL, NSF
- b. 115v/60/1-ph, 2.9 amps, NEMA 5-15P, standard
- c. Full perimeter marine edge, standard
- d. Compressor on right, standard

**ITEM # CSC-23**                    **GRIDDLE, HEAVY DUTY**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Southbend**  
**Model:**                        **HDG-48**

- a. Model HDG-48 Griddle, countertop, gas, 48" W x 24" D cooking surface, 1" thick polished steel plate, thermostatic controls, battery spark ignition, flame failure safety device, stainless steel front, sides & 4" adjustable legs, 120,000 BTU, CSA, NSF
- b. Natural Gas
- c. 4" legs, standard
- d. T&S Brass Model HG-2D-48SK-PS Safe-T-Link Gas Connector Kit, 3/4" connection, 48" hose, stainless steel braiding with extruded coating, (2) SwiveLink fittings, 360° rotatable hex nut, with 90° elbow & installation kit (includes restraining cable & ball valve), Posi-Set, 215,000 BTU/ hr minium flow capacity

**ITEM # CSC-24**                    **UNDERCOUNTER REFRIGERATED WORK TOP**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Delfield**

**Model: 4448NP**

- a. Model 4448NP Refrigerated Worktop/Undercounter, two-section, 48"W, (2) doors
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-contained refrigeration, standard
- d. NN: 32" work height
- e. Door(s) standard

**ITEM # CSC-25 HOT FOOD HOLDING CABINET**

**Quantity: Two (2)**  
**Manufacturer: Alto-Shaam**  
**Model: 750-CTUS**

- a. Model 750-CTUS Halo Heat® Hot Food Storage Unit, 1-compartment, capacity (6) 12" x 20" full-size pans, French doors with (2) positive latch door handles, ON/OFF adjustable thermostat, indicator light, exterior temperature gauge, thermostat for 60° F - 200° F, stainless steel exterior & interior, EcoSmart®, cULus, NSF
- b. 120v/50/60/1-ph, 18.8 amps, 2.25kW, NEMA L5-30P
- c. Model 14227 Casters, 3" (76mm), set of (4).

**ITEM # CSC-26 REFRIGERATED PREP TABLE**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: 4448NP-18M**

- a. Model 4448NP-18M Mega Top Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (2) doors, (2) 1/1 GN shelves, stainless steel top with polyethylene cutting board & (18) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-Contained refrigeration, standard
- d. Door(s) standard
- e. Model 44CLEARLID Clear plexi lid (per opening)
- f. MUST confirm the quantity of lids required per cutout

**ITEM # CSC-27 WORK TABLE**  
**Quantity: One (1)**  
**Manufacturer: Atlanta Custom Fabricators**  
**Model: WT**

- a. Model WT Work table, all stainless steel construction, 6'-0" long X 2'-6" wide X 36" high. Table to be fully welded construction with all welds fully ground and polished to a uniform finish. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges, 8" back splash and left end splash, with 2" return on 45 degree angle and 1" turned down, attach with stainless steel Z clips, stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet. All exposed back and end splashes to be enclosed, fully welded, ground and polished.
- b. Model US Undershelf section constructed of 16 gauge type 304 stainless steel with rear and ends turned-up 2", front edge turned down 1-1/2" with 3/4" return on 45 degree angle, closed ends, reinforced with stainless steel hat channel on underside of shelf, size and shape per plan, notched and fully welded to legs, ground and polished to a uniform finish.

- c. Unit to be further constructed in accordance with shop drawings.  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # CSC-28**                    **PANINI GRILL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Equipex LLC**  
**Model:**                        **DIABLO PREMIUM**

- a. Model DIABLO PREMIUM Roller Grill Panini Grill, cast iron grooved top & grooved bottom griddle plates, (2) 14"W x 9-1/2"D grill areas, (2) self- balancing adjustable top plates with heavy duty handles, front grease drawers & selector switches for panini press or bottom plate only operation, electronic timer, grills with stainless steel construction, 570°F thermostatic controls, 208/240v/60/1-ph, 24.0/27.0 amps, 6.5kW, NEMA 6-50P, cULus, cULus Classified
- b. Grooved top & grooved bottom plates, standard

**ITEM # CSC-29**                    **CONVEYOR TOASTER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **TQ3-400**

- a. Model TQ3-400 Toast-Qwik® Conveyor Toaster, countertop design, horizontal conveyor, touchscreen controls, (12) programmable recipes, all bread types toaster, approximately 6-7 slices/min capacity, USB, power save mode, 2" opening height, includes stainless steel toast tray insert, cULus, UL EPH Classified, CE
- b. 120v/50/60/1-ph, 1780 watts, 14.8 amps, NEMA 5-15P, standard
- c. Model STANDARD Black side panels, standard

**ITEM # CSC-30**                    **COLD SHELF, UNDERMOUNT**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **CSU-48-S**

- a. Model CSU-48-S Cold Shelf, undermount, 48"W x 24"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 5/8 HP, cULus, Made in USA
- b. 120v/60/1-ph, 800 watts, 5/8 HP, NEMA 5-15P (domestic voltage), standard

**ITEM # CSC-31**                    **SLIM DROP-IN HEATED WELL**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **HWBI-S2**

- a. Model HWBI-S2 Drop-In Modular Slim Heated Well, (2) full size pan capacity, insulated, top mounted, remote thermostat with separate power switch, stainless steel & Aluminized construction (standard watt), CE, cULus, UL EPH Classified, Made in USA
- b. 208v/60/1, 2415w, 11.6 amps
- c. Single remote control configuration
- d. 15-5/8" bezel depth, standard

**ITEM # CSC-32**                    **UNDER-COUNTER BUFFET WARMER**  
**Quantity:**                    **Five (5)**  
**Manufacturer:**                **CookTek**  
**Model:**                        **660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # CSC-33**                    **FOOD SHIELD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Spring USA**  
**Model:**                        **VG3-SK**

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.
- b. LED LIGHTING

**ITEM # CSC33.1**                **FOOD SHIELD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Spring USA**  
**Model:**                        **VG3-SK**

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.
- b. LED LIGHTING

**ITEM # CSC-33.2**                **FOOD SHIELD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Spring USA**  
**Model:**                        **VG3-DS**

- a. Model VG3-DS Versa-Gard, double-sided, adjustable (7) position self-service food protector, top panel/ shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.
- b. LED LIGHTING

**ITEM # CSC-33.3**                **FOOD SHIELD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Spring USA**  
**Model:**                        **VG3-DS**

- a. Model VG3-DS Versa-Gard, double-sided, adjustable (7) position self-service food protector, top panel/ shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI
- b. LED LIGHTING

**ITEM # CSC-34**                    **UNDERBAR HANDSINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12HS**

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash

mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.

- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CSC-35**                    **BRIDGE TRASH MODULE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # CSC-36**                    **UNDERBAR DRAINBOARD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12DB**

- a. Model TSF12DB TSF Series Underbar Drainboard, 12"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet (replaces TSF12 TSD12)
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-12 TSF Series 12"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed

**ITEM # CSC-37**                    **UNDERBAR DRAINBOARD**  
**Quantity:**                    **Two (2)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TS90D-FI**

- a. Model TS90D-FI TS Series Underbar Corner Drainboard, 18-9/16"W x 18-9/16"D, drainboard top, glass rack inserts, 90° full inside front corner, clipped rear corner, backsplash, 1-1/2" drain, all stainless-steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.

**ITEM # CSC-38**                    **UNDERBAR BLENDER STATION W/SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CSC-39**                    **BRIDGE TRASH MODULE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                      **TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # CSC-40**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                      **TS36IC10**

- a. Model TS36IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 36"W x 18-9/16"D, approximately 85-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC36 Ice Chest Covers, 2-piece sliding assembly, 36"W, front & back, stainless steel.

**ITEM # CSC-40.1**                **SPEED RAIL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                      **SR-D36A**

- a. Model SR-D36A Speed Rail, double, 36" W, stainless steel construction, factory installed

**ITEM # CSC-40.2**                **SODA GUN STATION**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                      **TSF4SGB**

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™

8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # CSC-41**                    **UNDERBAR DRAINBOARD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12DB**

- a. Model TSF12DB TSF Series Underbar Drainboard, 12"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-12 TSF Series 12"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed

**ITEM # CSC-42**                    **UNDERCOUNTER DISH MACHINE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **MEIKO**  
**Model:**                        **UM**

- a. Model UM M-iClean Series Glasswasher, undercounter, 23-5/8"W x 23-5/8"D x 28-3/4"H, high temperature with built-in booster, fully automatic operation, (37) racks/hour capacity, 0.61 gallons/rack, illuminated door handle, glass touch-screen display, M-iClean active wash water filtration, Blue Touch component color coding for intuitive manual cleaning, Auto-Safe temperature control for guaranteed sanitization, Soft Start fine china & glassware protection, leak detection, pumped drain & rinse, standard liquid detergent & rinse aid pumps, double-wall stainless steel construction, (1) coated wire glass rack included, 3/4 HP wash pump, NSF, cETLus, ENERGY STAR®
- b. 208-230v/60/3-ph, 31.1/33.9 amps, standard
- c. NEMA 15-50P, installed by others, includes plug, receptacle & plate
- d. Drain water tempering kit, reduces drain water temperature to below 140°F, installed by others
- e. Standard adjustable hex feet
- f. Drain board top

**ITEM # CSC-43**                    **BOTTLE COOLER**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **BC36RT-3**

- a. Model BC36RT-3 Bottle Cooler, flat top, 36" W, self-contained refrigeration, (8.6) cu. ft. interior capacity, digital temperature control & display, 38°F factory temperature setting, (1) dent-resist and stainless steel door with lock & die-cast handles, automatic condensate evaporator, stainless steel top & interior, R290 Hydrocarbon refrigerant, 1/6 HP, 120v/60/1-ph, 1.9 amps, NEMA 5-15P, NSF, cULus
- b. Black cabinet finish
- c. (2) bin dividers with supporting brackets
- d. Model 67061 Casters, 2-7/8", set of (4)

**ITEM # CSC-44**                    **UNDERBAR HANDSINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12HS**

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CSC-45**                    **BRIDGE TRASH MODULE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard
- c. Model BTB-PL Leg Panel Kit, left
- d. Model BTB-PL Leg Panel Kit, right

**ITEM # CSC-46**                    **UNDERBAR BLENDER STATION W/SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Perlick Corporation**  
**Model:**                        **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CSC-47**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **One (1)**

**Manufacturer:** Perlick Corporation  
**Model:** TS36IC10

- a. Model TS36IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 36"W x 18-9/16"D, approximately 85-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC36 Ice Chest Covers, 2-piece sliding assembly, 36"W, front & back, stainless steel.

**ITEM # CSC-47.1**      **SPEED RAIL**  
**Quantity:** One (1)  
**Manufacturer:** Perlick Corporation  
**Model:** SR-D36A

- a. Model SR-D36A Speed Rail, double, 36" W, stainless steel construction, factory installed

**ITEM # CSC-47.2**      **SODA GUN STATION**  
**Quantity:** One (1)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF4SGB

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # CSC-48**      **UNDERBAR BLENDER STATION W/SINK**  
**Quantity:** One (1)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF12BS

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # CSC-49**      **BRIDGE TRASH MODULE**  
**Quantity:** One (1)

**Manufacturer:** Perlick Corporation  
**Model:** TSF12BTB

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # CSC-50**                    **UNDERBAR ICE WELL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**               **Perlick Corporation**  
**Model:**                        **TS36IC10**

- a. Model TS36IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 36"W x 18-9/16"D, approximately 85-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC36 Ice Chest Covers, 2-piece sliding assembly, 36"W, front & back, stainless steel.

**ITEM # CSC-50.1**               **SPEED RAIL**  
**Quantity:**                    **One (1)**  
**Manufacturer:**               **Perlick Corporation**  
**Model:**                        **SR-D36A**

- a. Model SR-D36A Speed Rail, double, 36" W, stainless steel construction, factory installed

**ITEM # CSC-50.2**               **SODA GUN STATION**  
**Quantity:**                    **One (1)**  
**Manufacturer:**               **Perlick Corporation**  
**Model:**                        **TSF4SGB**

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # CSC-51**                    **UNDERBAR DRAINBOARD**  
**Quantity:**                    **One (1)**  
**Manufacturer:**               **Perlick Corporation**  
**Model:**                        **TSF18DB**

- a. Model TSF18DB TSF Series Underbar Drainboard, 18"W x 24"D, pitched drainboard top, all stainless steel construction, backsplash, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash

- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-18 TSF Series 18"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed

**ITEM # CSC-52                      UNDERBAR DRAINBOARD**  
**Quantity:                              One (1)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    TS90D-FI**

- a. Model TS90D-FI TS Series Underbar Corner Drainboard, 18-9/16"W x 18-9/16"D, drainboard top, glass rack inserts, 90° full inside front corner, clipped rear corner, backsplash, 1-1/2" drain, all stainless-steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.

**ITEM # CSC-53                      BOTTLE COOLER**  
**Quantity:                              One (1)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    BC36RT-3**

- a. Model BC36RT-3 Bottle Cooler, flat top, 36" W, self-contained refrigeration, (8.6) cu. ft. interior capacity, digital temperature control & display, 38°F factory temperature setting, (1) dent-resist and stainless steel door with lock & die-cast handles, automatic condensate evaporator, stainless steel top & interior, R290 Hydrocarbon refrigerant, 1/6 HP, 120v/60/1-ph, 1.9 amps, NEMA 5-15P, NSF, cULus
- b. Black cabinet finish
- c. (2) bin dividers with supporting brackets
- d. Model 67061 Casters, 2-7/8", set of (4)

**ITEM # CSC-54                      BACK BAR REFRIGERATOR, PASS THRU**  
**Quantity:                              One (1)**  
**Manufacturer:                        Perlick Corporation**  
**Model:                                    SDPS60**

- a. Model SDPS60 Pass-Thru Sliding Door Refrigerated Back Bar Cabinet, two-section, 60"W, self-contained side mount refrigeration, 14.8 cu.ft. internal volume, (4) sliding glass doors with locks, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/5 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 2.5 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top
- e. Condensing unit cover finish, front: Black vinyl coated
- f. Condensing unit cover finish, rear: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Shelving style, first: (3) flat shelves
- i. Shelving style, second: (3) flat shelves
- j. Crisp White LED
- k. Black baseplates (all sides) & 4" legs (set of 4), for 60" back bar cabinets

### **SBB1 – CONCOURSE LEVEL SERVICE BAR / BUFFET 1**

**ITEM # SBB1-1                      UNDERBAR HAND SINK**  
**Quantity:                              One (1)**

**Manufacturer:** Perlick Corporation  
**Model:** TSF12HS

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # SBB1-2**            **UNDERBAR ICE WELL**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Perlick Corporation**  
**Model:**                **TS36IC**

- a. Model TS36IC TS Series Underbar Ice Bin/Cocktail Unit, modular, 36"W x 18-9/16"D, approximately 85-lb. ice capacity, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC36 Ice Chest Covers, 2-piece sliding assembly, 36"W, front & back, stainless steel.

**ITEM # SBB1-2.1**        **SPEED RAIL**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Perlick Corporation**  
**Model:**                **SR-D36A**

- a. Model SR-D36A Speed Rail, double, 36" W, stainless steel construction, factory installed

**ITEM # SBB1-3**            **UNDERBAR BLENDER STATION W/SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Perlick Corporation**  
**Model:**                **TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (2) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs

- d. One (1) Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # SBB1-4**                    **BACK BAR COOLER, 4 DOOR**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Perlick Corporation**  
**Model:**                        **BBS108**

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Left
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # SBB1-5**                    **COLD SHELF, UNDERMOUNT**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**            **Hatco**  
**Model:**                        **CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P, standard

**ITEM # SBB1-6**                    **ELECTRIC GRIDDLE**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Evo America, LLC**  
**Model:**                        **10-0148-EVT**

- a. Model 10-0148-EVT Evo® EVent® 48E Full Metal Surround Cooking Station, electric, 48"W x 24"D rectangular steel cooktop surrounded with black granite, self-contained ventilation, multi-stage filtration system, integrated fire suppression system, 100° F to 550° F (38° C to 288° C) temperature range, touch panel display, includes: cleaning kit, (2) stainless steel spatulas, (1) stainless steel scraper, UL, UL EPH Classified, Made in USA
- b. 208v/60/1-ph, 32.0 amps, 6.7 kW, 8-foot cord, NEMA 6-50P
- c. Model 10-0150-EVT-FMS Customization for 10-0148-EVT: Metal surround, stainless steel enclosure
- d. Model 10-0150-EVT-36 Caster Kit, for 36" working height, standard

**ITEM # SBB1-7**                    **DECORATIVE HEAT LAMP**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**            **Hatco**  
**Model:**                      **DLH-725**

- a. Model DLH-725 Decorative Heat Lamp, High Wattage, (1) bulb type (not included), 8-1/2"H x 9-1/2" diameter shade, 375 watt max, CE, cULus, UL EPH Classified, Made in USA
- b. 120v/60/1-ph, 375 watt, standard
- c. Model WHITE-CTD-120H Lamp Bulb, 375 Watt clear, coated
- d. Model BCOPPER Bright Copper plated finish
- e. Model BCOPPER Bright Copper plated finish
- f. Model RCT Mounting Style - Retractable mount to track adapter (specify cord & track color) - retractable Straight cord mount, 8-1/2" Shade adjusts from 27" to 77" & 10-1/2" Shade adjusts from 29" to 77"
- g. Model R Switch Location - Remote
- h. Model DL-CORD-BK Black Cord, standard
- i. (2) Model DL-TRACK-4B Track Mount Bar, 4', black
- j. Model DL-ADAPT-BK Black Track Adapter

**ITEM # SBB1-8**                    **UNDER-COUNTER BUFFET WARMER**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**            **CookTek**  
**Model:**                      **660801**

- a. Four (4) Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE, Made in China

**ITEM # SBB1-9**                    **REFRIGERATED UNDERCOUNTER WORK TOP**  
**Quantity:**                    **One (1)**  
**Manufacturer:**            **Delfield**  
**Model:**                      **4448NP**

- a. Model 4448NP Refrigerated Worktop/Undercounter, two-section, 48"W, (2) doors
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-contained refrigeration, standard
- d. NN: 32" work height
- e. Door(s) standard

**ITEM # SBB1-10            HOT FOOD HOLDING CABINET**

**Quantity:**            **One (1)**  
**Manufacturer:**    **Alto-Shaam**  
**Model:**              **750-CTUS**

- a. Model 750-CTUS Halo Heat® Hot Food Storage Unit, 1-compartment, capacity (6) 12" x 20" full-size pans, French doors with (2) positive latch door handles, ON/OFF adjustable thermostat, indicator light, exterior temperature gauge, thermostat for 60° F - 200° F, stainless steel exterior & interior, EcoSmart®, cULus, NSF
- b. 120v/50/60/1-ph, 18.8 amps, 2.25kW, NEMA L5-30P
- c. Model 14227 Casters, 3" (76mm), set of (4)

**ITEM # SBB1-11            REFRIGERATED PREP TABLE**

**Quantity:**            **One (1)**  
**Manufacturer:**    **Delfield**  
**Model:**              **4448NP-18M**

- a. Model 4448NP-18M Mega Top Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (2) doors, (2) 1/1 GN shelves, stainless steel top with polyethylene cutting board & (18) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF
- b. 115v/60/1-ph, NEMA 5-15P, standard
- c. Self-Contained refrigeration, standard Door(s) standard

**ITEM # SBB1-12            DROP-IN SINK W/ FAUCET**

**Quantity:**            **One (1)**  
**Manufacturer:**    **Advance Tabco**  
**Model:**              **DI-1-10**

- a. Model DI-1-10 Drop-In Sink, 1-compartment, 10" wide x 14" front-to-back x 10" deep bowl, 20 gauge 304 stainless steel, with deck mounted gooseneck faucet, basket drain, NSF

**ITEM # SBB1-13            FOOD SHIELD**

**Quantity:**            **One (1)**  
**Manufacturer:**    **Spring USA**  
**Model:**              **VG3-SK**

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

**ITEM # SBB1-13.1        FOOD SHIELD**

**Quantity:**            **One (1)**  
**Manufacturer:**    **Spring USA**  
**Model:**              **VG3-SK**

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

**ITEM # SBB1-14**      **FOOD SHIELD**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Spring USA**  
**Model:**                **VG3-SK**

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

**ITEM # SBB1-15**      **MOP SINK CABINET**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF (right hinged door available on request)
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

#### **SBP – CONCOURSE LEVEL BUFFET PANTRY**

**ITEM # SBP-1**            **HAND SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus
- b. Model 7-PS-31 Skirt for 17-1/4" wide hand sink with splash mounted faucet (10" x 14" bowl), stainless steel

**ITEM # SBP-2**            **3 COMPARTMENT SINK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
 OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision
- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # SBP-2.1**        **FAUCET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **T&S Brass**

**Model: 5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # SBP-3 WALL SHELF W/ POT RACK**

**Quantity: One (1)**  
**Manufacturer: Advance Tabco**  
**Model: PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # SBP-4 ROLL-IN REFRIGERATOR**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: GARRI2P-S**

- a. Model GARRI2P-S Specification Line® Refrigerator, Roll-In, two-section, 76.5 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.38 HP, 115v/60/1-ph, 6.5 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Full height solid doors, standard
- c. Door hinged on left standard
- d. Door hinged on right standard

**ITEM # SBP-5 UNIVERSAL ROLL-IN RACK**

**Quantity: Four (4)**  
**Manufacturer: Cres Cor**  
**Model: 207UA12AC**

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF
- b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans
- c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # SBP-6 ROLL-IN HEATED CABINET**

**Quantity: One (1)**  
**Manufacturer: Delfield**  
**Model: GAHRI2-S**

- a. Model GAHRI2-S Specification Line® Heated Cabinet, Roll-In, two-section, 76.5 cubic feet capacity, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, 208-240v/60/1-ph, 10.5 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Full height solid doors, standard
- d. Model AS269-AFJ-0043 Raised Ramp, for roll in/roll thru, standard

**ITEM # SBP-7 REACH-IN ICE FREEZER**

**Quantity:** One (1)  
**Manufacturer:** Beverage Air  
**Model:** MMF49HC-1-B

- a. Model MMF49HC-1-B MarketMax™ Freezer Merchandiser, reach-in, two-section, (2) triple pane hinged glass doors, 46.2 cu. ft. capacity, electronic control, digital display, (10) epoxy coated steel shelves, LED interior lighting, lighted sign panel, self closing door with automatic hold-open feature, bottom-mounted refrigeration, black exterior, R290 Hydrocarbon refrigerant, 3/4 HP, cULus, UL EPH Classified, UL-Sanitation, Made in USA
- b. 115v/60/1-ph, 11.0 amps, cord with NEMA 5-15P
- c. door hinged left, right door hinged right, standard
- d. Model 61C01-017D-01 Casters, 6" HB, MM & Slate Series models (set of 4)

**ITEM # SBP-8** MOBILE SECURITY UNIT  
**Quantity:** One (1)  
**Manufacturer:** Eagle Group  
**Model:** CSC2448

- a. Model CSC2448 Security Unit, mobile, 51-1/4"W x 27-1/4"D x 69"H, open wire construction with 2" x 2" mesh panels, (2) doors with hasps for padlock, chrome-plated finish, (2) swivel & (2) swivel/brake 5" stem casters with poly tread, KD, NSF
- b. Model 2448C-X Shelf, wire, 48"W x 24"D, patented QuadTruss® design, includes (4) pairs of split sleeves per shelf, 800 lbs. capacity, chrome-plated finish, NSF

**ITEM # SBP-9** DISH DOLLY  
**Quantity:** Two (2)  
**Manufacturer:** Metro  
**Model:** PCD11A

- a. Model PCD11A Quick Ship - Poker Chip Dish Dolly, 26-5/8"W x 26-5/8"D x 31-15/16"H, adjustable, dish size 4-1/4" to 11-3/4", removable dividers & towers, two-handed access, recessed handles, 5"Dia. swivel casters with neoprene wheels (2 with brakes), chip-resistant polymer shell with Microban® antimicrobial protection, aesthetic blue, vinyl dust/water splash cover, NSF

**ITEM # SBP-10** BAG-N-BOX RACK  
**Quantity:** One (1)  
**Manufacturer:** By Product Supplier

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # SBP-10.1** CARBONATOR  
**Quantity:** One (1)  
**Manufacturer:** By Product Supplier

- a. PROVIDED BY PRODUCT SUPPLIER  
 LOCATED IN (SLBE) SUITE LEVEL-LOGE BAR EAST

**ITEM # SBP-11** MOP SINK CABINET  
**Quantity:** One (1)  
**Manufacturer:** Advance Tabco  
**Model:** 9-OPC-84

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF
- b. Model CAB-R Change door to right-side hinge
- c. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- d. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**SL01 – SUITE LEVEL SUITE 01**

**ITEM # SL01-1                    UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                   CookTek**  
**Model:                            660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL01-2                    COLD SHELF, UNDERMOUNT**  
**Quantity:                        One (1)**  
**Manufacturer:                   Hatco**  
**Model:                            CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

**SL02 – SUITE LEVEL SUITE 00**

**ITEM # SL02-1                    UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                   CookTek**  
**Model:                            660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL02-2                    COLD SHELF, UNDERMOUNT**  
**Quantity:                        One (1)**  
**Manufacturer:                   Hatco**  
**Model:                            CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA

- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

### **SL03 – SUITE LEVEL SUITE 03**

**ITEM # SL03-1                    UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                   CookTek**  
**Model:                             660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL03-2                    COLD SHELF, UNDERMOUNT**  
**Quantity:                        One (1)**  
**Manufacturer:                   Hatco**  
**Model:                             CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

### **SL04 – SUITE LEVEL LARGE SUITE 04**

**ITEM # SL04-1                    UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                   CookTek**  
**Model:                             660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL04-2                    COLD SHELF, UNDERMOUNT**  
**Quantity:                        One (1)**  
**Manufacturer:                   Hatco**  
**Model:                             CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

### **SL06 – SUITE LEVEL SUITE 06**

**ITEM # SL06-1                    UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                   CookTek**

**Model: 660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL06-2 COLD SHELF, UNDERMOUNT**  
**Quantity: One (1)**  
**Manufacturer: Hatco**  
**Model: CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
 b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

### SL07 – SUITE LEVEL SUITE 07

**ITEM # SL07-1 UNDER-COUNTER BUFFET WARMER**  
**Quantity: Three (3)**  
**Manufacturer: CookTek**  
**Model: 660801**

- a. **ITEM # SL13-2 COLD SHELF, UNDERMOUNT**  
**Quantity: One (1)**  
**Manufacturer: Hatco**  
**Model: CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

#### **SL14 – SUITE LEVEL LARGE SUITE 14**

**ITEM # SL14-1 UNDER-COUNTER BUFFET WARMER**  
**Quantity: Three (3)**  
**Manufacturer: CookTek**  
**Model: 660801**

- a. Three (3) Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL14-2 COLD SHELF, UNDERMOUNT**  
**Quantity: One (1)**  
**Manufacturer: Hatco**  
**Model: CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

#### **SL16 – SUITE LEVEL SUITE 16**

**ITEM # SL16-1 UNDER-COUNTER BUFFET WARMER**  
**Quantity: Three (3)**  
**Manufacturer: CookTek**  
**Model: 660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL16-2**                    **COLD SHELF, UNDERMOUNT**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

### **SL17 – SUITE LEVEL SUITE 17**

**ITEM # SL17-1**                    **UNDER-COUNTER BUFFET WARMER**  
**Quantity:**                    **Three (3)**  
**Manufacturer:**                **CookTek**  
**Model:**                        **660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL17-2**                    **COLD SHELF, UNDERMOUNT**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

### **SL18 – SUITE LEVEL SUITE 18**

**ITEM # SL18-1**                    **UNDER-COUNTER BUFFET WARMER**  
**Quantity:**                    **Three (3)**  
**Manufacturer:**                **CookTek**  
**Model:**                        **660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SL18-2**                    **COLD SHELF, UNDERMOUNT**  
**Quantity:**                    **One (1)**  
**Manufacturer:**                **Hatco**  
**Model:**                        **CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA

- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

**SLB2 – SUITE LEVEL BUFFET 2**

**ITEM # SLB2-1                    COLD SHELF, UNDERMOUNT**  
**Quantity:                        Four (4)**  
**Manufacturer:                    Hatco**  
**Model:                             CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA  
 b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

**ITEM # SLB2-2                    DECORATIVE HEAT LAMP**  
**Quantity:                        Four (4)**  
**Manufacturer:                    Hatco**  
**Model:                             DLH-725**

- a. Model DLH-725 Decorative Heat Lamp, High Wattage, (1) bulb type (not included), 8-1/2"H x 9-1/2" diameter shade, 375 watt max, CE, cULus, UL EPH Classified, Made in USA  
 b. 120v/60/1-ph, 375 watt, standard  
 c. Model WHITE-CTD-120H Lamp Bulb, 375 Watt clear, coated  
 d. Model BCOPPER Bright Copper plated finish  
 e. Model BCOPPER Bright Copper plated finish  
 f. Model RCT Mounting Style - Retractable mount to track adapter (specify cord & track color) - retractable Straight cord mount, 8-1/2" Shade adjusts from 27" to 77" & 10-1/2" Shade adjusts from 29" to 77"  
 g. Model R Switch Location - Remote  
 h. Model DL-CORD-BK Black Cord, standard  
 i. Model DL-TRACK-4B Track Mount Bar, 4', black  
 j. Model DL-ADAPT-BK Black Track Adapter

**ITEM # SLB2-3                    UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Four (4)**  
**Manufacturer:                    CookTek**  
**Model:                             660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SLB2-4                    HOT/COLD/FREEZE WELL, DROP-IN**  
**Quantity:                        One (1)**  
**Manufacturer:                    Low Temp Industries**  
**Model:                             DI-QSP-DW-20-04**

- a. Model DI-QSP-DW-20-04 QuickSwitch™ Hot/Cold/Freeze Food Well, drop-in, 64-3/4"W x 26-3/4"D x 21-16/25"H, 14ga stainless steel top, accommodates (4) 12" x 20" pan size, wired remote, individual wired remote digital controls for hot or cold operation, manifold

drain, stainless steel top & wells, galvanized exterior, cUL, UL, UL EPH Classified  
(ANSI/NSF 4, ANSI/NSF 7)

- b. 120/208v/60/1-ph, 14.4 amps, NEMA 14-20P

**ITEM # SLB2-5                      REFRIGERATED UNDERCOUNTER WORK TOP**  
**Quantity:                              One (1)**  
**Manufacturer:                         Delfield**  
**Model:                                    4448NP**

- a. Model 4448NP Refrigerated Worktop/Undercounter, two-section, 48"W, (2) doors  
 b. 115v/60/1-ph, NEMA 5-15P, standard  
 c. Self-contained refrigeration, standard  
 d. NN: 32" work height  
 e. Door(s) standard

**ITEM # SLB2-6                      PANINI GRILL**  
**Quantity:                              One (1)**  
**Manufacturer:                         Equipex LLC**  
**Model:                                    DIABLO**

- a. Model DIABLO Roller Grill Panini Grill, cast iron grooved top & grooved bottom griddle plates, (2) 14"W x 9-1/2"D grill areas, (2) independent adjustable spring counterbalanced tops, front drip tray & scraper, grills with stainless steel construction, 570°F thermostatic controls, 208/240v/60/1-ph, 24.0/27.0 amps, 6.5kW, NEMA 6-50P, cULus, cULus Classified  
 b. Grooved top & grooved bottom plates, standard

**ITEM # SLB2-7                      HOT FOOD HOLDING CABINET**  
**Quantity:                              One (1)**  
**Manufacturer:                         Alto-Shaam**  
**Model:                                    750-CTUS**

- a. Model 750-CTUS Halo Heat® Hot Food Storage Unit, 1-compartment, capacity (6) 12" x 20" full-size pans, French doors with (2) positive latch door handles, ON/OFF adjustable thermostat, indicator light, exterior temperature gauge, thermostat for 60° F - 200° F, stainless steel exterior & interior, EcoSmart®, cULus, NSF  
 b. 120v/50/60/1-ph, 18.8 amps, 2.25kW, NEMA L5-30P  
 c. Model 14227 Casters, 3" (76mm), set of (4)

**ITEM # SLB2-8                      REFRIGERATED PREP TABLE**  
**Quantity:                              One (1)**  
**Manufacturer:                         Delfield**  
**Model:                                    4448NP-18M**

- a. Model 4448NP-18M Mega Top Sandwich/Salad Top Refrigerator, two-section, 48" W, 16.0 cubic feet, (2) doors, (2) 1/1 GN shelves, stainless steel top with polyethylene cutting board & (18) 1/6 size plastic pans, ABS interior sides, stainless steel front & sides, 5" casters, front-breathing rear-mounted refrigeration system, R290 Hydrocarbon refrigerant, 0.3 hp, cUL, UL, NSF  
 b. 115v/60/1-ph, NEMA 5-15P, standard  
 c. Self-Contained refrigeration, standard  
 d. Door(s) standard

**ITEM # SLB2-9                      DROP-IN SINK W/ FAUCET**

**Quantity:** One (1)  
**Manufacturer:** Advance Tabco  
**Model:** DI-1-10

- a. Model DI-1-10 Drop-In Sink, 1-compartment, 10" wide x 14" front-to-back x 10" deep bowl, 20 gauge 304 stainless steel, with deck mounted gooseneck faucet, basket drain, NSF

**ITEM # SLB2-10**      **FOOD SHIELD**  
**Quantity:** One (1)  
**Manufacturer:** Spring USA  
**Model:** VG3-SK

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

**ITEM # SLB2-11**      **FOOD SHIELD**  
**Quantity:** One (1)  
**Manufacturer:** Spring USA  
**Model:** VG3-SK

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

**ITEM # SLB2-11.1**      **FOOD SHIELD**  
**Quantity:** One (1)  
**Manufacturer:** Spring USA  
**Model:** VG3-SK

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

**ITEM # SLB2-12**      **FOOD SHIELD**  
**Quantity:** One (1)  
**Manufacturer:** Spring USA  
**Model:** VG3-SK

- a. Model VG3-SK Versa-Gard, adjustable, (7) position self-service/ operator service food protector, glass top/shelf & end panels, 1/4" or 3/8" clear tempered glass, surface mount, NSF/ANSI.

#### **SLBA – SUITE LEVEL LOGE BAR A**

**ITEM # SLBA-1**      **UNDERBAR HAND SINK**  
**Quantity:** Three (3)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF12HS

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold

paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.

- b. 6" Backsplash standard
- c. (6) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # SLBA-2                      UNDERBAR STORAGE CABINET**  
**Quantity:                            Three (3)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF.
- b. 6" backsplash
- c. (6) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model DR24SC Field reversable door and lock set for 24"W storage cabinets
- f. Model SC-ES-L End Splash, left, for storage cabinets
- g. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # SLBA-3                      POS**  
**Quantity:                            Three (3)**  
**Manufacturer:                      By Operations**  
**Model:                                POS**

- a. PROVIDED BY OPERATIONS

**ITEM # SLBA-4                      UNDERBAR ICE WELL**  
**Quantity:                            Three (3)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TS30IC10**

- a. Model TS30IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 30"W x 18-9/16"D, approximately 70-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard
- c. Model ICC30 Ice Chest Covers, 2-piece sliding assembly, 30"W, front & back, stainless steel.

**ITEM # SLBA-4.1                  SPEED RAIL**

**Quantity:** Three (3)  
**Manufacturer:** Perlick Corporation  
**Model:** SR-D30A

- a. Model SR-D30A Speed Rail, double, 30" W, stainless steel construction, factory installed

**ITEM # SLBA-5**            **SODA GUN STATION**  
**Quantity:** Three (3)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF4SGB

- a. Model TSF4SGB TSF Series Soda Gun Filler Section, 4"W x 24"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # SLBA-6**            **UNDERBAR BLENDER STATION W/ SINK**  
**Quantity:** Three (3)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF12BS

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (6) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6", for TS or TSF series
- f. Model 7054L End Splash, left, 6", for TS or TSF series

**ITEM # SLBA-7**            **BRIDGE TRASH MODULE**  
**Quantity:** Three (3)  
**Manufacturer:** Perlick Corporation  
**Model:** TSF12BTB

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # SLBA-8**            **BACK BAR COOLER, 4 DOOR**  
**Quantity:** One (1)  
**Manufacturer:** Perlick Corporation  
**Model:** BBS108

- a. Model BBS108 Refrigerated Back Bar Cabinet, four-section, 108"W, self-contained refrigeration, 33.5 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/4 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 4.2 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Left
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Left
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Door type, third: solid, black vinyl/field laminated
- q. Door hinge location, third: Right
- r. Door handle, third: full length stainless steel handle, 24"
- s. Shelving style, third: (3) flat shelves
- t. Door type, fourth: solid, black vinyl/field laminated
- u. Door hinge location, fourth: Right
- v. Door handle, fourth: full length stainless steel handle, 24"
- w. Shelving style, fourth: (3) flat shelves
- x. Crisp White LED
- y. Model 57787 Casters (3-3/4"), set of (6)

**ITEM # SLBA-9**                      **BACK BAR COOLER, 2 DOOR**  
**Quantity:**                        **Four (4)**  
**Manufacturer:**                **Perlick Corporation**  
**Model:**                            **BBS60**

- a. Model BBS60 Refrigerated Back Bar Cabinet, two-section, 60"W, self-contained refrigeration, 16 cu.ft. internal volume, digital thermostat, LED interior lighting, front vented, automatic defrost & condensate evaporator, includes floor drain, stainless steel interior, side mount compressor, 1/5 HP, R290 Hydrocarbon refrigerant, NSF, cULus
- b. 120v/60/1-ph, 2.5 amps, NEMA 5-15P
- c. Standard refrigerator
- d. Stainless steel top - no tapping holes
- e. Condensing unit location: Right
- f. Condensing unit cover finish: Black vinyl coated
- g. End finish: Stainless steel, unfinished, both sides, standard
- h. Door type, first: solid, black vinyl/field laminated
- i. Door hinge location, first: Left
- j. Door handle, first: full length stainless steel handle, 24"
- k. Shelving style, first: (3) flat shelves
- l. Door type, second: solid, black vinyl/field laminated
- m. Door hinge location, second: Right
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Crisp White LED

- q. Model 57786 Casters, 3-3/4", set of (4)

**ITEM # SLBA-10                    UNDERBAR 3 COMPARTMENT SINK**  
**Quantity:                            One (1)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TS60M3-DB**

- a. Model TS60M3-DB TS Series Underbar Multi-tank Sink Unit, three 18 gauge stainless steel compartment, 60"W x 18-9/16"D, backsplash, 10" wide x 14" front-to-back x 9-1/4" deep compartments, 12" pitched drainboard top on left & right, 4" OC (TS) splash or (TSF) deck mount faucet holes, seamless 18 gauge stainless steel front apron, includes 1-1/2" drains & 8-1/2" removable overflow standpipes, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet.
- b. 6" backsplash
- c. Model ZZPERL1040635 TS Series, Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- d. Model 934-10LF Front Loading Faucet, wall/splash mount, lead free, 10" swing spout, faucet valves include built-in check valves to prevent back flow or cross flow, (2) 3/8" O.D. x 3/8" O.D. x 18" braided stainless steel supply lines included
- e. (3) Model 54965-1 Drain Screen, for 1-1/2" drain socket

**ITEM # SLBA-11                    BAG-N-BOX RACK**  
**Quantity:                            One (1)**  
**Manufacturer:                      By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

**ITEM # SLBA-11.1                CARBONATOR**  
**Quantity:                            One (1)**  
**Manufacturer:                      By Product Supplier**

- a. PROVIDED BY PRODUCT SUPPLIER

### **SLBE – SUITE LEVEL LOGE BAR EAST**

**ITEM # SLBE-1                    UNDERBAR HAND SINK**  
**Quantity:                            Two (2)**  
**Manufacturer:                      Perlick Corporation**  
**Model:                                TSF12HS**

- a. Model TSF12HS TSF Series Underbar Hand Sink Unit, 12"W x 24"D, 10" wide x 14" front-to-back x 9-1/4" deep 18 gauge stainless steel sink, backsplash, 4" OC splash mount faucet holes, (16) oz. pump soap dispenser integrated into front apron, C-fold paper towel dispenser integrated into front apron, stainless steel hinged door with magnetic catches, 1-1/2" NPS male drain, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with 1" adjustable thermoplastic feet.
- b. 6" Backsplash standard
- c. (4) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"

- f. Model 7054L End Splash, left, 6"

**ITEM # SLBE-2                    UNDERBAR STORAGE CABINET**  
**Quantity:                        Three (3)**  
**Manufacturer:                  Perlick Corporation**  
**Model:                            TSF24SC**

- a. Model TSF24SC Underbar Storage Cabinet 24"W x 24"D, 4" or 6"H backsplash with 1" return at top, pitched drainboard top with 1-1/2" NPS drain socket with 1/2" OD barb & 1/2" ID anti-microbial tubing, 1-1/2" NPS male drain center back of cabinet bottom, (1) adjustable intermediate shelf, stainless steel construction, Perlick Quick Clamp stainless steel legs & adjustable feet, NSF.
- b. 6" backsplash
- c. (6) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 1032968-24 TSF Series 24"W Perforated Drainboard Insert, 'Stadium' shaped perforations, stainless steel construction, factory installed
- e. Model DR24SC Field reversable door and lock set for 24"W storage cabinets, Factory Installed
- f. Model SC-ES-L End Splash, left, for storage cabinets
- g. Model SC-ES-R End Splash, right, for storage cabinets

**ITEM # SLBE-3                    POS**  
**Quantity:                        Three (3)**  
**Manufacturer:                  BY OPERATIONS**  
**Model:                            POS**

- a. POS PROVIDED BY OPERATIONS

**ITEM # SLBE-4                    SODA GUN STATION**  
**Quantity:                        Three (3)**  
**Manufacturer:                  Perlick Corporation**  
**Model:                            TS4SGB**

- a. Model TS4SGB TS Series Soda Gun Filler Section, 4"W x 18-9/16"D x 22"H, all stainless steel construction, universal design accepts either Wunder-Bar® & Schroeder America™ 8-14 product soda manifolds & drip cups (accepts only NON-FLOW CONTROL manifolds that don't exceed 3" in overall thickness), interior mounted manifold conceals soda lines, tool-less removal of top cover provides easy access, integrated drip cup mounting allows concealed routing of drip tube to waste drain, accessory speed rails can bypass or terminate on Soda Gun Filler, soda manifold, hose gun & drip cup NOT included, NSF

**ITEM # SLBE-5                    UNDERBAR ICE WELL**  
**Quantity:                        One (1)**  
**Manufacturer:                  Perlick Corporation**  
**Model:                            TS24IC10**

- a. Model TS24IC10 TS Series Underbar Ice Bin/Cocktail Unit, modular with cold plate, 24"W x 18-9/16"D, approximately 50-lb. ice capacity, 10-circuit aluminum cold plate concealed under bin liner, 6"H backsplash with 1" return at top, ABS plastic top ledge, 10-3/4" deep stainless steel ice bin, stainless steel front & sides, galvanized steel back & bottom, 1/2" NPS male drain, 1-5/8" tubular stainless steel legs with 1" adjustable thermoplastic feet, NSF
- b. 6" Backsplash standard

- c. Model ICC24 Ice Chest Covers, 2-piece sliding assembly, 24"W, front & back, stainless steel.

**ITEM # SLBE-5.1      SPEED RAIL**  
**Quantity:              One (1)**  
**Manufacturer:        Perlick Corporation**  
**Model:                  SR-D24A**

- a. Model SR-D24A Speed Rail, double, 24" W, stainless steel construction, factory installed

**ITEM # SLBE-6        UNDERBAR BLENDER STATION W/ SINK**  
**Quantity:              Three (3)**  
**Manufacturer:        Perlick Corporation**  
**Model:                  TSF12BS**

- a. Model TSF12BS TSF Series Underbar Blender Station with 18 gauge stainless steel dump sink, 12"W, backsplash, 9-5/8" wide x 10-5/8" front-to-back x 6" deep sink, 4" OC splash mount faucet holes, recessed blender shelf with access hole & installed junction box, stainless steel construction, Perlick Quick Clamp tool less leg attachment, stainless steel legs with adjustable thermoplastic feet (replaces TS12BLW)
- b. 6" Backsplash standard
- c. (6) Model 1039805 Perlick Flex Mount Leg Relocation Kit, Includes: (1) Rails, (1) Bolts, and (1) Tightening Knobs
- d. Model 934GN-LF Front Loading Faucet, wall/splash mount, lead free, gooseneck spout, faucet valves includes: built-in check valves to prevent back flow or across flow, (2) 3/8" O.D. x 3/8" O.D. x 18", braided stainless steel supply lines included
- e. Model 7054R End Splash, right, 6"
- f. Model 7054L End Splash, left, 6"

**ITEM # SLBE-7        BRIDGE TRASH MODULE**  
**Quantity:              Three (3)**  
**Manufacturer:        Perlick Corporation**  
**Model:                  TSF12BTB**

- a. Model TSF12BTB TSF Series Trash Receptacle Top Cover, 12"W x 24"D x 13-9/16"H, stainless steel construction (wastebasket is not included), 6"H backsplash, 8-3/8" x 6-3/8" opening for trash (requires support by adjacent underbar equipment or accessory end panel & leg kit)
- b. 6" Backsplash standard

**ITEM # SLBE-8        UNDERBAR ICE WELL**  
**Quantity:              Two (2)**

- m. Door hinge location, second: Right
- n. Door handle, second: full length stainless steel handle, 24"
- o. Shelving style, second: (3) flat shelves
- p. Crisp White LED
- q. Model 57786 Casters, 3-3/4", set of (4)

### **SLC – SUITE LEVEL LOUNGE C**

**ITEM # SLC-1                        UNDER-COUNTER BUFFET WARMER**  
**Quantity:                              Three (3)**  
**Manufacturer:                        CookTek**  
**Model:                                    660801**

- a. Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SLC-2                        COLD SHELF, UNDERMOUNT**  
**Quantity:                              One (1)**  
**Manufacturer:                        Hatco**  
**Model:                                    CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

**SLD – SUITE LEVEL LOUNGE D**

**ITEM # SLD-1                      UNDER-COUNTER BUFFET WARMER**  
**Quantity:                        Three (3)**  
**Manufacturer:                  CookTek**  
**Model:                             660801**

Three (3) Model 660801 (B651-U2) Incogneeto™ Induction Buffet, under-countertop design, mounts to underside of countertop, includes control panel & (1) Magneeto™ trivet (locator/controller disc), automatic pan detection, lock feature, red LED display, polycarbonate top, aluminum housing, 100-120v/50/60/1-ph, 650 watts, 6.0 amps, 6 ft. cord, NEMA 5-15P, cETLus, NSF, CE.

**ITEM # SLD-2                      COLD SHELF, UNDERMOUNT**  
**Quantity:                        One (1)**  
**Manufacturer:                  Hatco**  
**Model:                             CSU-24-I**

- a. Model CSU-24-I Cold Shelf, undermount, 24"W x 19-1/2"D, electronic temperature control, attached control box, self-contained refrigeration, R-513A refrigerant, aluminum hardcoat, 1/5 HP, cULus, Made in USA
- b. 120v/60/1-ph, 300 watts, 1/5 HP, NEMA 5-15P standard

**SP1 – SUITE LEVEL SERVICE PANTRY ONE**

**ITEM # SP1-1                      REACH-IN ICE FREEZER**  
**Quantity:                        Two (2)**  
**Manufacturer:                  Beverage Air**  
**Model:                             MMF49HC-1-B**

- a. Model MMF49HC-1-B MarketMax™ Freezer Merchandiser, reach-in, two-section, (2) triple pane hinged glass doors, 46.2 cu. ft. capacity, electronic control, digital display, (10) epoxy coated steel shelves, LED interior lighting, lighted sign panel, self closing door with automatic hold-open feature, bottom-mounted refrigeration, black exterior, R290 Hydrocarbon refrigerant, 3/4 HP, cULus, UL EPH Classified, UL-Sanitation, Made in USA
- b. 115v/60/1-ph, 11.0 amps, cord with NEMA 5-15P
- c. Left door hinged left, right door hinged right, standard
- d. Model 61C01-017D-01 Casters, 6" HB, MM & Slate Series models (set of 4)

**ITEM # SP1-2                      ROLL-IN REFRIGERATOR**  
**Quantity:                        Three (3)**  
**Manufacturer:                  Delfield**  
**Model:                             GARRI2P-S**

- a. Model GARRI2P-S Specification Line® Refrigerator, Roll-In, two-section, 76.5 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front,

sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.38 HP, 115v/60/1-ph, 6.5 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®

- b. Full height solid door, standard
- c. Door hinged on left standard
- d. Full height solid door, standard
- e. Door hinged on right standard

**ITEM # SP1-3**                      **UNIVERSAL ROLL-IN RACK**  
**Quantity:**                      **Twelve (12)**  
**Manufacturer:**                **Cres Cor**  
**Model:**                         **207UA12AC**

- a. Model 207UA12AC Rack, Roll-In Refrigerator, open frame design, (12) universal slides for 12" x 20" thru 18" x 26" pans on 4-1/2" centers, adjustable at 1-1/2" intervals, welded extruded aluminum frame, NSF
- b. Model 1032 001 Pan Stop, mounted to rear, prevents accidental push through of pans
- c. Model 1056 002 Corner Bumpers, add 2" to OA dimensions, non-marking, gray

**ITEM # SP1-4**                      **HAND SINK**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **Advance Tabco**  
**Model:**                         **7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # SP1-5**                      **POS**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **BY OPERATIONS**  
**Model:**                         **POS**

- a. PROVIDED BY OPERATIONS

**ITEM # SP1-5.1**                    **POS PRINTER**  
**Quantity:**                      **One (1)**  
**Manufacturer:**                **BY OPERATIONS**  
**Model:**                         **POS**

- a. PROVIDED BY OPERATIONS

**ITEM # SP1-6**                      **ISLAND WORK TABLE**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **Atlanta Custom Fabricators**  
**Model:**                         **IWT**

- a. Model IWT Island work table, all stainless steel construction, 8'-0" long X 3'-0" wide X 36" high. Top to be 14 gauge type 304 stainless steel with 1-3/4" rolled edges. Table to be fully welded construction with all welds ground and polished to a uniform finish. Table to be provided with stainless steel cross bracing, stainless steel legs and stainless steel adjustable bullet feet.
- b. Unit to be further constructed in accordance with shop drawings  
APPROVED SHOP DRAWINGS REQUIRED PRIOR TO CONSTRUCTION.

**ITEM # SP1-7**                    **DISH DOLLY**  
**Quantity:**                    **Four (4)**  
**Manufacturer:**              **Metro**  
**Model:**                        **PCD11A**

- a. Model PCD11A Quick Ship - Poker Chip Dish Dolly, 26-5/8"W x 26-5/8"D x 31-15/16"H, adjustable, dish size 4-1/4" to 11-3/4", removable dividers & towers, two-handed access, recessed handles, 5"Dia. swivel casters with neoprene wheels (2 with brakes), chip-resistant polymer shell with Microban® antimicrobial protection, aesthetic blue, vinyl dust/water splash cover, NSF

**ITEM # SP1-8**                    **ROLL-IN HEATED CABINET**  
**Quantity:**                    **Three (3)**  
**Manufacturer:**              **Delfield**  
**Model:**                        **GAHRI2-S**

- a. Model GAHRI2-S Specification Line® Heated Cabinet, Roll-In, two-section, 76.5 cubic feet capacity, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, 208-240v/60/1-ph, 10.5 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Full height solid doors, standard
- d. Model AS269-AFJ-0043 Raised Ramp, for roll in/roll thru, standard

**ITEM # SP1-9**                    **STORAGE SHELVING**  
**Quantity:**                    **Eight (8) – (3 COMPLETE UNITS 4 SHELVES EACH)**  
**Manufacturer:**              **Metro**  
**Model:**                        **2142NK3**

- a. Model 2142NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (4) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (4) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # SP1-10**                **3 COMPARTMENT SINK**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **K7-CS-29**

- a. Model K7-CS-29 Convenience Store Sink, 3-compartment, with left & right-hand drainboards, 16" front-to-back x 14" W compartment, 12" deep with 8"H backsplash, stainless steel open frame base, side crossrails, adjustable metal bullet feet, 18 gauge 304 stainless steel, 11-5/8" drainboards, overall 21-1/2" F/B x 70" L/R  
 OMIT FAUCET
- b. (2) Model K-472 Faucet hole revision

- c. (3) Model K-4 Support Bracket, for lever waste drain handle, (1) support required for each lever drain

**ITEM # SP1-10.1**      **FAUCET**  
**Quantity:**            **Two (2)**  
**Manufacturer:**      **T&S Brass**  
**Model:**                **5F-8WLX10**

- a. Model 5F-8WLX10 Equip Faucet, 8" centers, wall mount, 10" swivel nozzle, lever handles, 2" flange, ceramic cartridges, low lead, ADA Compliant

**ITEM # SP1-11**      **WALL SHELF W/ POT RACK**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **PS-12-72**

- a. Model PS-12-72 Shelf with Pot Rack, wall-mounted, 72"W x 12"D, 18/430 stainless steel shelf, 2" x 1/4" stainless steel pot rack, includes: (9) plated double pot hooks, NSF

**ITEM # SP1-12**      **MOP SINK CABINET**  
**Quantity:**            **One (1)**  
**Manufacturer:**      **Advance Tabco**  
**Model:**                **9-OPC-84DL**

- a. Model 9-OPC-84DL Cabinet with Mop Sink, 50-3/8"W x 22-3/4"D x 84"H O.A., double hinged doors, left side mop sink 20"W x 16"D front to back x 12" deep (drain included), storage for mop bucket to roll in on right, (2) mop holders, (4) fixed intermediate shelves (3 on right, 1 on left above sink), slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series sink bowl apron, 18/430 series stainless steel cabinet, NSF
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**ITEM # SP1-13**      **SPARE NO.**

**ITEM # SP1-14**      **SPARE NO.**

**ITEM # SP1-15**      **DUNNAGE RACK**  
**Quantity:**            **Five (5)**  
**Manufacturer:**      **Channel Manufacturing**  
**Model:**                **ES2048**

- a. Model ES2048 Dunnage Rack, Tubular Dunnage Rack, Stainless Series, 48"W x 20"D x 12"H, Stainless Steel Construction, (4,000) lb. distributed weight capacity per shelf, Made in USA, NSF, 20lbs. (ITEM WEIGHT ONLY), add /8 after model number for (8") height

**ITEM # SP1-16**      **DRY STORAGE SHELVING**  
**Quantity:**            **Ten (10) – (2 COMPLETE UNIT 5 SHELVES EACH)**  
**Manufacturer:**      **Metro**  
**Model:**                **2160NK3**

- a. Model 2160NK3 Quick Ship - Super Erecta® Shelf, wire, 60"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (8) Model 86PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 86-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # SP1-16.1            DRY STORAGE SHELVING**  
**Quantity:                Ten (10) – (2 COMPLETE UNIT 5 SHELVES EACH)**  
**Manufacturer:           Metro**  
**Model:                    2148NK3**

- a. Model 2148NK3 Quick Ship - Super Erecta® Shelf, wire, 48"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (8) Model 86PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 86-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # SP1-16.2            DRY STORAGE SHELVING**  
**Quantity:                Ten (10) – (2 COMPLETE UNIT 5 SHELVES EACH)**  
**Manufacturer:           Metro**  
**Model:                    2142NK3**

- a. Model 2142NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. (8) Model 86PK3 Quick Ship - Super Erecta® SiteSelect™ Post, 86-1/2"H, adjustable leveling bolt, posts are grooved at 1" increments & numbered at 2" increments, double grooved every 8", Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection

**ITEM # SP1-17              MOBILE SECURITY UNIT**  
**Quantity:                One (1)**  
**Manufacturer:           Eagle Group**  
**Model:                    CSC2448**

- a. Model CSC2448 Security Unit, mobile, 51-1/4"W x 27-1/4"D x 69"H, open wire construction with 2" x 2" mesh panels, (2) doors with hasps for padlock, chrome-plated finish, (2) swivel & (2) swivel/brake 5" stem casters with poly tread, KD, NSF
- b. (2) Model 2448C-X Shelf, wire, 48"W x 24"D, patented QuadTruss® design, includes (4) pairs of split sleeves per shelf, 800 lbs. capacity, chrome-plated finish, NSF

## **SP2 – SUITE LEVEL SERVICE PANTRY TWO**

**ITEM # SP2-1              HAND SINK**  
**Quantity:                Two (2)**  
**Manufacturer:           Advance Tabco**  
**Model:                    7-PS-66**

- a. Model 7-PS-66 Hand Sink, wall mounted, 14" wide x 10" front-to-back x 5" deep bowl, 20 gauge 304 stainless steel, 7-3/4" high side splashes, with heavy duty splash mounted faucet, wall bracket, NSF, cCSAus

**ITEM # SP2-2**                      **ROLL-IN REFRIGERATOR**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **Delfield**  
**Model:**                         **GARRI2P-S**

- a. Model GARRI2P-S Specification Line® Refrigerator, Roll-In, two-section, 76.5 cubic feet capacity, top-mounted self-contained refrigeration system, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, LED interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, GreenGenius™ R290 Hydrocarbon refrigerant, 0.38 HP, 115v/60/1-ph, 6.5 amps, NEMA 5-15P, NSF, cULus, ENERGY STAR®
- b. Full height solid doors, standard
- c. Door hinged on left standard
- d. Door hinged on right standard

**ITEM # SP2-3**                      **ROLL-IN HEATED CABINET**  
**Quantity:**                      **Two (2)**  
**Manufacturer:**                **Delfield**  
**Model:**                         **GAHRI2-S**

- a. Model GAHRI2-S Specification Line® Heated Cabinet, Roll-In, two-section, 76.5 cubic feet capacity, (2) full-height hinged solid doors (locking), 4.3" easyTouch® screen temperature display/control with remote monitoring, incandescent interior lighting, 1" tall stainless steel ramp, stainless steel exterior front, sides & interior, 208-240v/60/1-ph, 10.5 amps, NEMA 6-20P, NSF, cULus, ENERGY STAR®
- b. Left door hinged on left, right door hinged on right, standard
- c. Full height solid doors, standard
- d. Model AS269-AFJ-0043 Raised Ramp, for roll in/roll thru, standard

**ITEM # SP2-15        STORAGE SHELVING**  
**Quantity:            Four (4) – (1 COMPLETE UNIT 4 SHELVES)**  
**Manufacturer:       Metro**  
**Model:                2142NK3**

- a. Model 2142NK3 Quick Ship - Super Erecta® Shelf, wire, 42"W x 21"D, Metroseal™ Green epoxy-coated corrosion-resistant finish with Microban® antimicrobial protection, plastic split sleeves are included in each carton, NSF
- b. Model 74UPK3 Quick Ship - Super Erecta® SiteSelect™ Post, 73-7/8"H, for use with stem casters, Metroseal 3 Green epoxy coated corrosion-resistant finish with Microban® antimicrobial protection
- c. (2) Model 5PC Quick Ship - Super Erecta® Stem Caster, swivel, 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper
- d. (2) Model 5PCB Quick Ship - Super Erecta® Stem Caster, swivel (with foot operated brake), 5" dia., 1-1/4" face, 300 lb. capacity, corrosion resistant, polyurethane flat wheel tread, polymer horn, includes bumper

**ITEM # SP2-16**                    **MOP SINK CABINET**  
**Quantity:**                    **One (1)**  
**Manufacturer:**              **Advance Tabco**  
**Model:**                        **9-OPC-84**

- a. Model 9-OPC-84 Cabinet with Mop Sink, 25-3/16"W x 22-3/4"D x 84"H, mop sink base with drain (bowl 16" x 20" x 12"), left hinged door, (2) mop holders, (1) fixed intermediate shelf, slotted side panels for ventilation, 16/304 series stainless steel sink bowl, 18/304 series stainless steel sink bowl apron, 18/430 series stainless steel cabinet, NSF (right hinged door available on request)
- b. Model K-240 Service Sink Faucet, wall mount, heavy duty, 8" OC, 6-1/2" spout, with hose thread & pail hook, vacuum breaker spout, wall braced, chrome-plated brass
- c. Model K-610CF Perforated bottom strainer plate, stainless steel, removable, sits 1" above bottom of sink, fits Advance Tabco Fabricated 16" x 20" sink bowls only

**END OF SECTION 11 40 00**

**PART 15 - THIS PAGE IS INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 11 47 00 - ICE MACHINES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Ice-making machines and bins.

**1.2 COORDINATION**

- A. Coordinate equipment layout and installation with other work, including layout and installation of lighting fixtures, HVAC equipment, and fire-suppression system components.
- B. Coordinate locations and requirements of utility service connections.
- C. Coordinate sizes, locations, and requirements of the following:
  - 1. Floor areas with positive slopes to drains.
  - 2. Roof curbs, equipment supports, and penetrations.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Include the following:
  - 1. Manufacturer's model number.
  - 2. Accessories and components that will be included for Project.
  - 3. Clearance requirements for access and maintenance.
  - 4. Utility service connections for water, drainage, power, and fuel; include roughing-in dimensions.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings:
  - 1. Indicate locations of equipment and connections to utilities.
  - 2. Key equipment using same designations as indicated on Drawings.
  - 3. Include plans and elevations; clearance requirements for equipment access and maintenance; details of equipment supports; and utility service characteristics.
- B. Sample Warranty: For special warranty.

**1.6 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For equipment to include in emergency, operation, and maintenance manuals.
  - 1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Product Schedule: For each equipment item, include the following:
      - 1) Designation indicated on Drawings.
      - 2) Manufacturer's name and model number.
      - 3) List of factory-authorized service agencies including addresses and telephone numbers.

**1.7 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of construction contiguous with equipment by field measurements before fabrication. Indicate measurements on Coordination Drawings.

**1.8 WARRANTY**

- A. Refrigeration Compressor Warranty: Manufacturer agrees to repair or replace compressors that fail in materials or workmanship within specified warranty period.
  1. Failure includes, but is not limited to, inability to maintain set temperature.
  2. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. NSF Standards: Provide equipment that bears NSF Certification Mark or UL Classification Mark certifying compliance with applicable NSF standards.
- B. UL Certification: Provide electric and fuel-burning equipment and components that are evaluated by UL for fire, electric shock, and casualty hazards according to applicable safety standards, and that are UL certified for compliance and labeled for intended use.
- C. Regulatory Requirements: Install equipment to comply with the following:
  1. ASHRAE 15, "Safety Code for Mechanical Refrigeration."
  2. NFPA 70, "National Electrical Code."

**2.2 ICE-MAKING MACHINES**

- A. Basis-of-Design Products: Subject to compliance with requirements, provide products indicated in paragraphs below or comparable product by one of the following:
  1. Follett Corporation.
  2. Hoshizaki America, Inc.
  3. Ice-O-Matic
  4. Manitowoc Ice.
  5. Scotsman Ice Machines.
- B. Ice Machine:
  1. Basis of Design: Manitowoc; RNF-1100W.
  2. Description: Water-cooled, freestanding units.
    - a. Production: Small, chewable, pellet-type ice.
    - b. Capacity: 1158 lbs. per 24-hour period.
    - c. Dimensions: 30 inches wide by 23.62 inches deep by 27.40 inches high.
    - d. Accessories:
      - 1) Storage Bin: Manitowoc; D-570.
        - a) Storage Capacity: 430 lbs.
        - b) Dimensions: 30 inches wide by 34 inches deep by 44 inches high.
      - 2) Water filter.
    - e. Electrical Service: Equip unit for connection to 208-230/60/1.

**2.3 MISCELLANEOUS MATERIALS**

- A. Installation Accessories, General: NSF certified for end-use application indicated.

**2.4 FINISHES**

- A. Stainless-Steel Finishes:
  - 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
  - 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
    - a. Run grain of directional finishes with long dimension of each piece.
    - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

**PART 3 - EXECUTION****3.1 INSTALLATION**

- A. Install equipment level and plumb, according to manufacturer's written instructions.
  - 1. Connect equipment to utilities.
- B. Complete equipment assembly where field assembly is required.
- C. Install equipment with access and maintenance clearances that comply with manufacturer's written installation instructions and with requirements of authorities having jurisdiction.

**3.2 CLEANING AND PROTECTING**

- A. After completing installation of equipment, repair damaged finishes.
- B. Clean and adjust equipment as required to produce ready-for-use condition.
- C. Protect equipment from damage during remainder of the construction period.

**3.3 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain equipment.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 11 61 00 - THEATER AND STAGE EQUIPMENT****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes the following:
  - 1. Curtain tracks and carriers for vomitories.

**1.2 SUBMITTALS**

- A. Shop Drawings showing layout and types of cubicles, number of carriers, anchorage details, and conditions requiring accessories. Indicate dimensions taken from field measurements.

**1.3 PROJECT CONDITIONS**

- A. Field Measurements: Verify dimensions by field measurements. Verify that tracks and curtains may be installed to comply with the original design and referenced standard.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide cubicles by one of the following:
  - 1. ADC Hospital Equipment.
  - 2. Creative Healthcare Products, Inc. (Clickeze).
  - 3. General Cubicle Co.
  - 4. Imperial Fastener Co.
  - 5. Kirsch Co.
  - 6. Nelson: A.R. Nelson Co., Inc.
  - 7. Pryor Products.
  - 8. Salisbury Industries.

**2.2 CUBICLE TRACK**

- A. Track: Anodized, extruded aluminum.
- B. Track Mounting: Ceiling mounted; mechanically fastened directly to finished ceiling.
  - 1. Exposed Fasteners: Stainless steel.
  - 2. Concealed Fasteners: Stainless steel.
- C. Track Accessories: Provide end caps, connectors, end stops, coupling sleeves, wall brackets, and other accessories as required for secure and operational installation. Provide a quantity of carriers for 6-inch spacing the full length of the curtain plus 1 additional carrier.
  - 1. Carriers: One-piece nylon glide with chrome-plated steel hook.
  - 2. Carriers: One-piece nylon glide with hook.
  - 3. Carriers: Nylon rollers and axle with chrome-plated steel hook.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine ceilings for suitable conditions where cubicle track is to be installed.

- B. Do not proceed until unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install cubicle curtain track level and plumb, according to manufacturer's written instructions and original design.
- B. Install ceiling-mounted tracks at intervals of not less than 24 inches.
- C. Center fastener in track to insure unencumbered carrier operation.

END OF SECTION

**SECTION 11 61 43 - STAGE CURTAINS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Stage curtains, scrims, and drops.
  - 2. Draw-curtain tracks.
  - 3. Draw-curtain machines for motorized operation.
  - 4. Curtain rigging.
- B. Related Requirements:
  - 1. Section 05 50 00 "Metal Fabrications" for steel framing and supports for stage-curtain systems.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product and the following:
  - 1. Draw-Curtain Machines: Include rated capacities, operating characteristics, and electrical characteristics.
  - 2. Tracks: Capability of each track to support the weight and operation of curtains that it supports.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
  - 1. Include plans, elevations, sections, and attachment details of curtains.
  - 2. Include fabric assembly and hanging details.
  - 3. Dimension operating clearances.
  - 4. Include documentation of capacity of each batten, track, attachment, and rigging component to support loads.
  - 5. Points of attachment for proscenium curtain and the corresponding static and dynamic loads imposed on structure.
  - 6. Locations of equipment components, switches, and controls. Differentiate between manufacturer-installed and field-installed wiring.
  - 7. Wiring Diagrams: For power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of stage curtain indicated. Include color charts showing full range of colors, textures, and patterns available, together with 12-inch-square Sample (any color) of each fabric type and seam.
- D. Samples for Verification: Full width by minimum 36-inch-long section of each fabric from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of fabric.
- E. Delegated-Design Submittal: For stage-curtain systems and attachments to structure, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Structural members to which tracks, battens, and other stage-curtain equipment will be attached.
  - 2. Locations of lighting fixtures and cabling, ductwork, piping, and sprinklers.
  - 3. Rigging equipment for stage equipment.
  - 4. Access panels.
- B. Qualification Data: For Installer and professional engineer.
- C. Product Certificates: For the following, from manufacturer:
  - 1. Fabric: Provide name of flame-retardant chemical used, identification of applicator, treatment method, application date, allowable life span for treatment, and details of any restrictions and limitations.
  - 2. Rigging: Compliance of suspended battens and tracks with requirements.
- D. Sample Warranty: For manufacturer's special warranty.

**1.5 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For stage curtains and rigging to include in operation and maintenance manuals.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: Manufacturer of stage curtains.

**1.7 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install stage curtains until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Field Measurements: Verify locations of supporting structural elements and construction contiguous with stage curtains and rigging by field measurements before fabrication and indicate measurements on Shop Drawings.

**1.8 WARRANTY**

- A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of stage-curtain systems that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, faulty operation of rigging.
  - 2. Warranty Period: Two years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 STAGE-CURTAIN SYSTEMS**

- A. Description: Complete stage-curtain systems, including stage curtains, tracks, draw-curtain machines, and rigging; with necessary accessories for support and operation.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Black Sheep Enterprises.
    - b. Georgia Stage, Inc.
    - c. iWeiss Theatrical Solutions.
    - d. Janson Industries.
    - e. LimeLight Productions, Inc.
    - f. LuXout Stage Curtains.
    - g. Mainstage Theatrical Supply, Inc.
    - h. NorthEast Stage.
    - i. Rose Brand.
    - j. Sew What? Inc.
    - k. Show Works.
    - l. S&K Theatrical Draperies, Inc.
    - m. Stagecraft Industries, Inc.
    - n. Stage Decoration & Supplies, Inc.
    - o. Syracuse Scenery & Stage Lighting Co., Inc.
    - p. Texas Scenic Company, Inc.
    - q. Tru-Roll, Inc.; a division of Advanced Entertainment Technology.
- B. Source Limitations: Obtain stage-curtain systems from single manufacturer. Obtain each color, grade, finish, type, and variety of fabric from single source with resources to provide materials of consistent quality in appearance and physical properties.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design stage-curtain systems, including comprehensive engineering analysis and attachments to building structure, using performance requirements.
- B. Structural Performance: Stage-curtain systems and attachments to structure shall withstand the effects of gravity and operational loads and the following loads and stresses:
1. Design Loads: Weight of curtains.
- C. Fire-Test-Response Characteristics: Provide stage curtains meeting the following requirements as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
1. Flame-Propagation Resistance: Passes NFPA 701.
    - a. Permanently attach label to each fabric of curtain assembly indicating whether fabric is inherently and permanently flame resistant or is treated with flame-retardant chemicals and whether it requires retreatment after cleaning or after a designated time period of use.
    - b. Permanently attach 12-inch-square swatch of same fabric and dye lot for each fabric of a curtain assembly to the back of assembly for use as fire-resistance test strip.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

**2.3 CURTAIN FABRICS**

- A. General: Provide fabrics inherently and permanently flame resistant or chemically flame resistant by immersion treatment according to performance requirements indicated. Provide fabrics of each type and color from same dye lot.
- B. Heavyweight Woven Cotton Velour: Napped fabric of 100 percent cotton weighing not less than 25 oz./linear yd., with pile height not less than 79 mils; 54-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; Symphony.
    - b. Frankel Associates/Fabric One; 950.
    - c. JB Martin Company; #2703 Overture.
    - d. KM Fabrics, Inc.; Memorable.
    - e. Valley Forge Fabrics, Inc.; 2525 Velour.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- C. Medium-Weight Woven Cotton Velour: Napped fabric of 100 percent cotton weighing not less than 20 oz./linear yd., with pile height not less than 75 mils; 54-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; Allure.
    - b. Frankel Associates/Fabric One; 650.
    - c. JB Martin Company; #2603 Concertino.
    - d. KM Fabrics, Inc.; Marvel.
    - e. Valley Forge Fabrics, Inc.; 2020 Velour.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- D. Lightweight Woven Cotton Velour: Napped fabric of 100 percent cotton weighing not less than 15 oz./linear yd., with pile height not less than 59 mils; 54-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. JB Martin Company; #2503 Melody.
    - b. KM Fabrics, Inc.; Princess.
    - c. Valley Forge Fabrics, Inc.; 16 oz. Velvet.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- E. Polyester Velour: Napped fabric of 100 percent polyester weighing not less than 22 oz./linear yd., with pile height approximately 75 mils; inherently and permanently flame resistant; 54-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; Angelo.
    - b. JB Martin Company; Dante.
    - c. KM Fabrics, Inc.; Prestige.
    - d. Milliken & Company; Encore.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- F. Muslin: Sheer, plain-woven fabric.
1. Fabric: 100 percent cotton weighing not less than 16 oz./linear yd.; [100-inch] <Insert dimension> minimum width.
  2. Fabric: 100 percent polyester weighing not less than [11.75 oz./linear yd.] <Insert value>; inherently and permanently flame resistant; [106-inch] <Insert dimension> minimum width.
  3. Color: As selected by Architect from manufacturer's full range.

- G. Duvetyn: 100 percent cotton, short-napped fabric weighing not less than 8 oz./linear yd.; twill weave with soft uniform texture; 54-inch minimum width; black.
- H. Duvetyn: 100 percent cotton, short-napped fabric weighing not less than 8 oz./linear yd.; twill weave with soft uniform texture; 54-inch minimum width; black.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; Duvetyne.
    - b. Frankel/Fabric One; Duvetyne.
    - c. Fred Krieger & Co., Inc.; Duvetyne.
    - d. Rose Brand; Duvetyne.
- I. Duvetyn, Heavy Weight: 100 percent cotton, short-napped fabric weighing not less than 16 oz./linear yd.; twill weave with soft uniform texture; 54-inch minimum width; black.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; Supercote Heavyweight.
    - b. Fred Krieger & Co., Inc.; Super Commando.
    - c. Rose Brand; Black Commando.
    - d. Valley Forge Fabrics, Inc.; Commando.
- J. Repp, Atlas Oxford: 100 percent heavyweight cotton woven fabric; herringbone weave; 54-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Fred Krieger & Co., Inc.; Atlas Oxford.
    - b. Rose Brand; Atlas Oxford.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- K. Repp, Nassau Chevron: 100 percent heavyweight cotton woven fabric; chevron weave; 54-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Frankel Associates/Fabric One; Nassau Chevron.
    - b. Fred Krieger & Co., Inc.; Nassau Chevron.
    - c. Rose Brand; Nassau Chevron.
    - d. Valley Forge Fabrics, Inc.; Nassau Chevron.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- L. Synthetic Boucle: 100 percent synthetic blend with opaque vinyl backing; diagonal weave; inherently and permanently flame resistant; 48-inch minimum width.
1. Products: Subject to compliance with requirements, provide the following:
    - a. Fred Krieger & Co., Inc.; Dural.
  2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- M. Polyester: 100 percent polyester yarn woven fabric weighing not less than 13 oz./linear yd.; inherently and permanently or durably flame resistant; 72-inch minimum width.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; PD Cloth.
    - b. Frankel Associates/Fabric One; Cyc-Clone.
    - c. Rose Brand; Poly Cyc.
    - d. Valley Forge Fabrics, Inc.; Wiz Key.

2. Color/Texture/Pattern: As selected by Architect from manufacturer's full range.
- N. Sharkstooth Scrim: Open-weave, seamless, lightweight gauze fabric.
1. Fabric: 100 percent cotton or 95 percent cotton/5 percent polyester weighing not less than 29 oz./linear yd.; 30-foot minimum width.
  2. Fabric: 100 percent cotton weighing not less than 32 oz./linear yd.; three-thread construction; 30-foot minimum width.
  3. Fabric: 100 percent polyester weighing not less than 37 oz./linear yd.; inherently and permanently flame resistant; 35-foot minimum width.
  4. Fabric: 100 percent polyester/modacrylic blend weighing not less than 40 oz./linear yd.; inherently and permanently flame resistant; three-thread construction; suitable for all weather applications; 36-foot minimum width.
  5. Color: As selected by Architect.

## 2.4 LINING

- A. Cotton Lining: Yarn-dyed denim cloth of 100 percent cotton; woven in a warp-faced twill; 54-inch minimum width; black.
- B. Ranger Lining: 100 percent cotton fabric weighing not less than 13 oz./linear yd.; 54-inch minimum width; black.
- C. Polyester Lining: 100 percent polyester fabric; inherently and permanently flame resistant; 54-inch minimum width; black.

## 2.5 CURTAIN-BOTTOM WEIGHTS

- A. Individual Weights: Curtain manufacturer's standard segmented weights to suit each curtain type and location.
- B. Proof Coil Chain: Grade 30, No. 8, zinc plated, 3/16 inch, ASTM A413/A413M.
- C. Weight Tape: Curtain manufacturer's standard, continuous weight tape to suit each curtain type and location.
- D. Pipe or Conduit Weight and Stiffener: Curtain manufacturer's standard or recommended stiffening pipe or conduit that slides into bottom hem, suitable for curtain type and location indicated.

## 2.6 CURTAIN FABRICATION

- A. General: Affix permanent label, stating compliance with requirements of authorities having jurisdiction, in accessible location on fabric not visible to audience. Provide vertical seams unless otherwise indicated. Arrange vertical seams so they do not fall on faces of pleats. Do not use fabric cuts less than one-half width. Orient velour fabric with the fabric nap down.
- B. Vertical and Top Hems: Machine sew hems as follows unless otherwise indicated:
  1. Vertical Hems: Minimum 2 inches wide, and not less than 4 inches wide at borders, valance, teasers, and tormentors, with not less than a 1-inch tuck and with no selvage material visible from front of curtain. Sew open ends of hems closed.
  2. Turn backs: Provide leading-edge turn backs for traveler curtains, formed by folding back not less than 12 inches of face fabric, with not less than a 1-inch tuck, and vertically secured by sewing.
  3. Top Hems: Reinforced by double-stitching 3-1/2-inch-wide, heavy, jute webbing to top edge on back side of curtain with not less than 2 inches of face fabric turned under.

- C. Fullness:
1. Flat: Provide zero percent fullness in curtains.
  2. 50 Percent Fullness: Provide fullness, exclusive of turnbacks and hems, by sewing additional material into 3-inch double-stitched, flat, box pleats spaced at 12 inches o.c. along top hem reinforcement.
  3. 100 Percent Fullness: Provide fullness, exclusive of turnbacks and hems, by sewing additional material into 6-inch double-stitched, flat, box pleats spaced at 12 inches o.c. along top hem reinforcement.
- D. Grommets: Brass, No. 3, or No. 4.
1. Black Curtains: Provide brass or aluminum grommets with black finish.
  2. Flat Curtains: Place 12 inches o.c. and 1 inch from corner of curtain; for ties, snap hooks, or S-hooks.
  3. Flat Curtains: Provide blind grommet top finish to mask battens using hidden pairs of grommets; place 12 inches o.c. and 1 inch from corner of curtain; for ties.
  4. Pleated Curtains: Center grommets on each box pleat and place 1 inch from corner of curtain; for snap hooks or S-hooks.
- E. Bottom Hems: Machine sew hems as follows unless otherwise indicated:
1. For Flat Curtains Without Fullness: 4-inch lined hem with pocket for sliding pipe or conduit weight and stiffener into bottom of curtain, and with a concealing flap of same fabric in front of pocket made 2 inches longer than bottom edge of pocket.
  2. For Curtains With Fullness:
    - a. Curtains That Do Not Hang to Floor: Hems not less than 3 inches deep, with 3/4-inch weight tape, and with open ends of hems sewn closed.
    - b. Floor-Length Curtains: Hems not less than 6 inches deep, with 1-inch weight tape sewn to top seam of the bottom hem, clear of the finished bottom edge, and with open ends of hems sewn closed.
    - c. Floor-Length Curtains: Hems not less than 6 inches deep, with individual weights in individual closed pockets sewn above finished bottom edge of curtain, and with open ends of hems sewn closed.
    - d. Floor-Length Curtains: Hems not less than 6 inches deep; with separate, interior, 100 percent cotton, heavy canvas chain pockets equipped with proof coil chain; with chain pockets sewn so that chain rides 2 inches above finished bottom edge of curtain; and with open ends of hems sewn closed.
  3. Lining: Where indicated, provide lining for curtain in same fullness as face fabric and finished 2 inches shorter than face fabric. Sew or otherwise securely attach lining to top hem of face fabric. Attach lining to face fabric along bottom and side seams with 4-inch-long strips of heavy woven cotton tape. Sew lining to bottom edge of curtain allowing sufficient lining fabric for tucking to prevent shrinkage.

## 2.7 SCRIMS AND DROPS

- A. General: Affix permanent label, stating compliance with requirements of authorities having jurisdiction, in accessible location on fabric not visible to audience. Provide vertical seams unless otherwise indicated. Do not use fabric cuts less than one-half width.
- B. Scrims: Scrim curtain fabric sewn flat. Provide with continuous 6-inch pipe pocket at bottom with 6-inch flap of same fabric in front of pocket. Double-stitch 3-1/2-inch jute webbing at top with not less than No. 2 brass grommets spaced at 12 inches o.c. and 1 inch from corner of curtain. Provide not less than 2-inch double-folded side hem and 4-inch bottom hem.

- C. Drops: Muslin fabric, sewn flat, with either horizontal or vertical seams and with selvage to the rear. Provide 6-inch pipe pocket at bottom with 6-inch flap of same fabric in front of pocket. Double-stitch 3-1/2-inch jute webbing at top with not less than No. 2 brass grommets spaced at 12 inches o.c. and 1 inch from corner of curtain. Provide not less than 2-inch double-folded side hem and 4-inch bottom hem.

## 2.8 **CURTAIN ACCESSORIES**

- A. S-Hooks: Manufacturer's standard heavy-duty plated-wire hooks, not less than 2 inches long.
- B. Tie Lines: No. 4 or No. 4-1/2 cord or braided soft cotton tape, black or white to best match curtain; not less than 5/8 inch wide by 36 inches long, threaded through grommets.
- C. Snap Hooks: Manufacturer's standard heavy-duty hooks, sewn to top edge of curtain.

## 2.9 **ALUMINUM CURTAIN TRACK**

- A. Aluminum Track: Extruded aluminum, ASTM B221; alloy and temper as recommended by manufacturer for strength and corrosion resistance; black paint finish; complete with necessary accessories for support and operation.
  - 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Automatic Devices Company; 500 series, Patriarc.
    - b. H & H Specialties Inc.; 500 series.
    - c. Tru-Roll, Inc., a division of Advanced Entertainment Technology; No. 1200 Medium Duty Straight Track.
  - 2. Curved Track: Fabricate curved portions of track in shop.
  - 3. Cable Guides for Curved Track: Outside idlers, mule pulleys, spindles, and guides; quantity sufficient for configuration of curve(s) and length of track.
  - 4. Aluminum Thickness: As recommended by manufacturer for loads and operation.
- B. Curtain Rails: Single or double curtain capacity as indicated. Provide end stops for track rails.
- C. Curtain Carriers: Standard carriers with a pair of nylon-tired ball-bearing wheels riveted parallel to plated-steel body. Equip carriers with rubber or neoprene bumpers and nylon glide strips to reduce noise, and heavy-duty, plated-steel swivel eye for attaching curtain snap or S-hook. Provide quantity of curtain carriers sufficient for track length, to suit curtain fabrication.
  - 1. Master Curtain Carriers: One master carrier, for each leading curtain edge, with two pairs of nylon-tired ball-bearing wheels riveted parallel to plated-steel body.
- D. Curved-Suspended-Track Stiffener: NPS 1-1/2 steel pipe for supporting both sections of suspended curved tracks; curved to match track.
- E. Clamp and Bracket Hangers: Steel clamps and brackets of sufficient strength required to support loads for attaching track to overhead support.
- F. Track-Lap Clamp: Metal to match track channel for attaching two tracks at center overlap.
- G. Folding Guide: Where indicated, equip carriers with rear-fold or backpack guide and rubber spacers to fold curtain from the offstage end of the track; sized for use with operating line if any.
- H. Manual Walk-Along Operation: Fabricate curtain track without cord, cable, pulleys, or floor pulley.
- I. Manual Cord Operation: Fabricate curtain track with cord, pulleys, and floor pulley.
  - 1. Operating Line: 3/8-inch-diameter, stretch-resistant operating cord consisting of braided synthetic-fiber jacket over solid, synthetic-fiber, linear filaments.

2. End Pulleys: One single dead-end and one double live-end pulley. Provide sheave(s) with shielded ball bearing(s) housed in plated-steel body finished to match track. Provide with bracket for securing off-stage curtain end.
  3. Floor Pulley: Sheave with shielded ball bearing housed in plated-steel body, painted black. Adjustable type, with 3-inch wheel.
- J. Motorized Operation: Fabricate curtain track with cord and pulleys.
1. Operating Line: 1/4-inch-diameter, stretch-resistant operating cable consisting of braided synthetic-fiber jacket over galvanized wire cable.
  2. End Pulleys: One single dead-end and one double live-end pulley. Provide sheave(s) with shielded ball bearing(s), housed in plated-steel body finished to match track. Provide with bracket for securing off-stage curtain end.

## 2.10 STEEL CURTAIN TRACK

- A. Steel Track: Roll-formed, galvanized, commercial-quality, zinc-coated steel sheet, ASTM A653/A653M; G60 coating designation; with continuous bottom slot and with each half of track in one continuous piece; black paint finish; complete with necessary accessories for support and operation.
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Automatic Devices Company; 280 series.
    - b. H & H Specialties Inc.; 200 series.
    - c. Tru-Roll, Inc., a division of Advanced Entertainment Technology; No. 2300 Medium Duty Cyclorama Track.
  2. Curved Track: Factory-fabricated sections.
  3. Cable Guides for Curved Track: Outside idlers, mule pulleys, spindles, and guides; quantity sufficient for configuration of curve(s) and length of track.
  4. Steel Thickness: As recommended by manufacturer for loads and operation.
    - a. Heavy Duty: Minimum 0.079 inch.
    - b. Medium Duty: Minimum 0.064 inch.
- B. Curved-Suspended-Track Stiffener: NPS 1-1/2 steel pipe for supporting both sections of suspended curved tracks; curved to match track.
- C. Clamp and Bracket Hangers: Steel clamps and brackets of sufficient strength required to support loads for attaching track to overhead support.
- D. Track-Lap Clamp: Metal to match track channel for attaching two tracks at center overlap.
- E. Folding Guide: Where indicated, equip carriers with rear-fold or backpack guide and rubber spacers to fold curtain from the offstage end of the track; sized for use with operating line if any.
- F. Heavy-Duty Track System: Equip track with heavy-duty components as recommended by manufacturer for loads and operation. Provide end stops for track.
1. Curtain Carriers: Standard carriers of plated steel with a pair of nylon -tired ball-bearing wheels riveted parallel to body. Equip carriers with rubber or neoprene bumpers to reduce noise, and heavy-duty, plated-steel swivel eye and trim chain for attaching curtain snap or S-hook. Provide quantity of curtain carriers sufficient for track length, to suit curtain fabrication.
    - a. Master Curtain Carriers: One master carrier, for each leading curtain edge, of plated steel with two pairs of nylon -tired ball-bearing wheels and with two line guides per carrier.
  2. Pulleys: One dead-end, single-wheel pulley; one live-end, double-wheel pulley; and one adjustable pulley to maintain proper tension on operating line; each with not less than 5-inch molded-nylon- or glass-filled-nylon-tired ball-bearing sheaves enclosed in steel housings. Provide pulleys with steel housing finished to match track and with bracket for securing off-stage curtain end.

- G. Medium-Duty Track System: Equip track with components as recommended by manufacturer for loads and operation. Provide end stops for track.
  - 1. Curtain Carriers: Standard carriers of plated steel with a pair of nylon wheels riveted parallel to body. Equip carriers with plated-steel swivel eye for attaching curtain snap or S-hook. Provide quantity of curtain carriers sufficient for track length, to suit curtain fabrication.
    - a. Master Curtain Carriers: One master carrier, for each leading curtain edge, of plated steel with two pairs of nylon wheels and with two line clamps per carrier.
  - 2. Pulleys: One dead-end, single-wheel pulley; one live-end, double-wheel pulley; and one adjustable pulley to maintain proper tension on operating line; each containing guarded ball-bearing sheaves enclosed in steel housings. Provide pulleys with steel housing finished to match track and with bracket for securing off-stage curtain end.
- H. Manual Cord Operation: Provide with cord operating line, 3/8-inch-diameter, stretch-resistant operating cord of braided synthetic-fiber jacket over solid, synthetic-fiber, linear filaments.
- I. Motorized Operation: Provide with cable operating line, 1/4-inch- diameter, stretch-resistant operating cable of braided synthetic-fiber jacket over galvanized wire cable.

## 2.11 DRAW-CURTAIN MACHINES

- A. General: Operating machine of size and capacity recommended and provided by track manufacturer for each motorized curtain specified; complete with electric motor and factory-prewired motor controls, starter, gear-reduction unit, brake, and control station.
  - 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Automatic Devices Company; Autodrape Model No. 1454.
    - b. H & H Specialties Inc.; Atlas Silk Model No. 454.
    - c. Tru-Roll, Inc., a division of Advanced Entertainment Technology; Tru-Roll Traction Drive.
- B. Operator Type: Cable drum with grooved drum and cable tension device to automatically take up cable slack and retain cable in grooves.
- C. Operator Type: Traction drive.
- D. Motor Characteristics: Size sufficient to start, accelerate, and operate curtain in either direction from any position at indicated speeds without exceeding nameplate rating or service factor; complying with NEMA MG 1 and the following:
  - 1. Electrical Characteristics:
    - a. Phase: Single phase.
    - b. Volts: 115 V.
    - c. Hertz: 60.
    - d. Duty: Continuous duty at ambient temperature of 105 deg F and at altitude of 3300 feet above sea level.
- E. Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
- F. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.
- G. Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."
  - 1. Switches: Key-operated, keyed alike, with one key per switch plus one extra key.
  - 2. Control-Station Enclosures: Key-accessed, keyed alike, with one key per enclosure plus one extra key.
- H. Limit Switches: Fully closed and fully opened preset stops.

**2.12 CURTAIN RIGGING**

- A. Battens: Fabricated from steel pipe with a minimum number of joints. Connect pipe at joints with a drive-fit pipe sleeve not less than 18 inches long, and secure with four flush rivets, plug welds, threaded couplings, or another equally strong method.
  - 1. Steel Pipe: ASTM A53/A53M, Grade A, standard weight (Schedule 40), black, NPS 1-1/2 nominal diameter unless otherwise indicated.
  - 2. Finish: Shop painted black, with a 1-inch-wide yellow stripe at center of each batten.
- B. Supports, Clamps, and Anchors: ASTM A153/A153M, Class B, galvanized sheet steel in manufacturer's standard thicknesses, galvanized after fabrication.
- C. Trim and Support Cable: 1/4-inch-diameter, 7x19 galvanized-steel cable with a breaking strength of 7000 lb. Provide fittings according to cable manufacturer's written instructions for size, number, and method of installation, including a drop-forged galvanized turnbuckle to allow for leveling.
- D. Trim and Support Chain: ASTM A391/A391M, Grade 80, hardened alloy steel chain rated for overhead lifting.
- E. Inserts, Bolts, Rivets, and Fasteners: Manufacturer's standard corrosion-resistant units.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for supporting members, blocking, installation tolerances, clearances, and other conditions affecting performance of stage-curtain work.
- B. Examine inserts, clips, blocking, or other supports required to be installed by others to support tracks and battens.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION, GENERAL**

- A. Install stage-curtain system according to curtain and track manufacturer's written instructions.

**3.3 BATTEN INSTALLATION**

- A. Install battens by suspending at heights indicated with trim and supports spaced to support load, except do not exceed 10 feet between supports.
  - 1. Cable Trim and Support: Secure cables either directly to structures or to inserts, eye screws, or other devices that are secure and appropriate to substrate and that are not subject to deterioration or failure with age or elevated temperatures. Attach other cable end to pipe clamps with turnbuckles, housed or fixed with nuts after adjustment, to prevent loosening.
  - 2. Chain Trim and Support: Secure chain with load-rated terminations.

**3.4 TRACK INSTALLATION**

- A. Ceiling-Mounted Track: Drill track at intervals not greater than manufacturer's written instructions for spacing, and fasten directly to structure.
- B. Beam-Mounted Track: Install track by suspending from beam clamps securely mounted to I-beam structure at track-support spacing, according to manufacturer's written instructions.

- C. Wall-Mounted Track: Install track by suspending from brackets securely mounted to wall construction at track-support spacing, according to manufacturer's written instructions.
- D. Batten-Hung Track: Install track by suspending from pipe batten with manufacturer's track clamp hangers attached to batten pipe clamps at track-support spacing, according to manufacturer's written instructions.
- E. Track-Support Spacing: According to manufacturer's recommendations for applied loads, but not exceeding the following dimensions between supports:
  - 1. Heavy-Duty Track: 72 inches.
  - 2. Medium-Duty Track: 48 inches.
  - 3. Curved Walk-Along Track: 48 inches, with additional supports at curves and splices.
- F. Install track for center-parting curtains with not less than 24-inch overlap of track sections at center, supported by track lap clamps.

### **3.5 CURTAIN INSTALLATION**

- A. Track Hung: Secure curtains to track carriers with S-hooks.
- B. Batten Hung: Secure curtains to pipe battens with S-hooks.

### **3.6 DRAW-CURTAIN-MACHINE INSTALLATION**

- A. Install each draw-curtain machine by securely mounting to the supporting construction, according to manufacturer's written instructions.
- B. Adjust each installation to function smoothly and lubricate as recommended by manufacturer.

### **3.7 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain stage curtains, draw-curtain machines, and tracks.

### **3.8 CURTAIN SCHEDULE**

- A. Stage Curtain : As indicated on Drawings.

END OF SECTION

**SECTION 11 61 44 - HALF-HOUSE CURTAINS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Black-Out Curtains: Motor-operated Arena Reduction (Half-House) Curtains
  - 2. Rigging and Operating Equipment (except where indicated by others)
  - 3. System Design and Engineering
- B. Related Work: Electrical interface activities shall be coordinated with the Work of Division 26 Sections for motors, controls, conduit, wiring, and connections to permanent power supply.
- C. Related Sections include the following:
  - 1. Division 05 Section "Metal Fabrications" for supplementary metal members supporting curtain systems to structure.
  - 2. Division 11 Sections "Arena Curtains" and "Upper Bowl Masking System" for supply of other curtain systems.

**1.2 SYSTEM DESCRIPTION**

- A. Design of half-house arena reduction system shall conform to the best engineering practices and shall reflect a requirement for minimum ongoing institutional maintenance.
- B. Arena Reduction Curtain: Electric chain motor operated rigging system, truss-supported black-out drapery, trusses, curtain-to-truss attachment, controllers, accessories, and training. Curtain raised and lowered by operating system. Curtain and support truss designed for convenient dismantling and storage when not deployed.
  - 1. Design shall reflect a requirement for minimum ongoing institutional maintenance.
  - 2. Locations, Heights and Configurations: The general scope is indicated on the drawings. Design arena reduction curtain system to provide a continuous barrier as follows:
    - a. Locations: Primary and Secondary locations as indicated. Coordinate system, including curtain planes, curtain panel raising and lowering paths, operation, deployment and components with other building features including the scoreboard and structural, mechanical and electrical work.
    - b. Heights: Curtains shall extend from a line approximately five feet below the rigging steel level to the arena floor. Provide bottom overlap adequate to effectively close curtain to floor areas and other conditions without unreasonable excess material.
    - c. Configurations: Follow the profile of the floor surfaces, including seating tiers, below each hanging location, to provide full bottom closure.
      - 1) Provide pass-through for performance activities at center curtain panel edges.
- C. Fabric to be resistant to the following:
  - 1. Staining.
  - 2. Color fading.

**1.3 SUBMITTALS**

- A. Product Data: For each type of product indicated.

- B. Shop Drawings: Provide fabrication and erection arrangement drawings for upper bowl masking system. Prior to beginning fabrication, submit complete shop drawings of the rigging components including, but not limited to, the following:
1. Mechanical Assembly Drawings: Show detailed sizes, rating, and weights of components, equipment, supports, and linkages. Show sufficient detail to serve as a basic record for maintenance. Provide a reference listing for all materials, components, equipment, and any special equipment furnished.
  2. Mechanical Detail Drawings: Show all details necessary for fabrication for all specially designed components, linkages, and supports.
  3. Mechanical General Layout: Show mechanical equipment locations, connections to building structure, linkages, calculated loads, travels and travel relationships between adjacent installations and between adjacent structure.
  4. Component Equipment Drawings: Provide manufacturer's approved drawings or catalog cuts showing weight, dimensions, and capacities of mechanical components.
  5. Erection Plans and Diagrams: Provide relative locations of various members and overall dimensions with reference to the preliminary drawings including auxiliary steel supplied by others.
  6. Miscellaneous Details and Assembly Drawings: Give lengths, widths, and sizes of members, connection details, locations, type and size of bolts, rivets, welds, and other connections together with material to be used.
  7. Provide complete wiring diagrams for field connections and showing all devices and circuits.
  8. Provide maintenance and replacement parts information.
- C. Approval of Shop Drawings shall not be considered as a guarantee of measurements of building conditions. Where drawings are approved, said approval does not mean that drawings have been checked in detail, and said approval does not in any way relieve the Contractor from his responsibility or necessity of furnishing material or performing work as required by the Contract Specifications.
- D. Failure by the Contractor to submit shop drawings in ample time for review shall not entitle him to an extension of contract time, and no claim for extension by reason of such default will be allowed.
- E. Samples for Verification: For each type of fabric from dye lot to be used for the Work, with specified treatments applied, and showing complete pattern and texture repeat, if any. Mark top and face of fabric. Prepare Samples of size indicated below.
1. Size: Not less than 36 inches (900 mm) square.
- F. Product Certificates: For each type of fabric, signed by product manufacturer.
1. Fabric: Certification of flame resistance.
  2. Rigging: Suspended battens and tracks comply with requirements.
- G. Qualification Data: For Installer and Professional Engineer. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- H. Maintenance Data: For curtains and rigging to include in maintenance manuals.
1. Submit bound manual for rigging system, with operating and maintenance instructions, parts listing, recommended parts inventory listing, purchase source listing, emergency instructions and similar information.
- I. Warranties: Special warranties specified in this Section.

#### 1.4 SUBSTITUTIONS

- A. Bidders wishing to obtain approval of brand items in lieu of those listed herein by name shall submit such request in writing to the Owner not less than ten (10) days prior to the date for receipt of bids. The Owner assumes no responsibility for the delivery or the delivery on time for such requests. No oral approval for substitute brand items shall be sought by bidders.
- B. Each request shall include the brand name of the material or item for which substitution approval is being sought together with a complete description of the proposed brand name substitute including drawings, cuts, specifications, performance and test data, and any other detailed information necessary for a complete evaluation being made. Approval request based on pictorial illustrations or general statements such as "manufacturer's standard", "standard of the industry" "generally used", and the like will not be considered as fulfilling the requirement for complete description and performance and test data as listed above and as such those request will not be considered.
- C. Any approval granted for a substitute brand name item will be by addendum issued by the Owner and sent prior to the bidding date by first class mail to all bidders of record. The Owner assumes no responsibility for the delivery or the delivery on time of such addendum other than mailing in reasonable time during the ten (10) day period as allowed.
- D. If bidders do not elect to obtain prior approval for a substitute brand named item during the pre-bid time so specified above, the Owner has no obligation to review or consider such item subsequent to the contract award.

#### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: A firm or individual experienced in installing arena curtains and rigging similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
- B. Codes: System and installation shall comply with all applicable codes and ordinances.
- C. Single Source: Half-house curtains shall be the work of a single manufacturer as his direct and undivided responsibility through the design, engineering, fabrication, installation, guarantee, and maintenance phase. Such manufacturer shall operate its own machining and fabricating facilities.
  - 1. Curtain fabrics for each of the three curtain systems shall be from the same manufacturer.
- D. Fire-Test-Response Characteristics: Provide arena curtains with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or a testing and inspecting agency acceptable to authorities having jurisdiction.
  - 1. Flame-Resistance Ratings: ASTM E84 and NFPA 701, Small Scale.
  - 2. Permanently attach label to each fabric of curtain assembly indicating whether fabric is inherently and permanently flame resistant or treated with flame-retardant chemicals, and whether it will require retreatment after designated time period or cleaning.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of operable drapery systems that are similar to those indicated for this Project in material, design, and extent.
- F. Workmanship: The fabrication of equipment, rigging, and drapery, shall incorporate only new and unused materials. Equipment and rigging includes, but is not limited to, the following metal components: plate, bar, rod, castings, structural members, stampings, forgings, clamps, bolts, bearings, chain, pipe, sleeves, clips, cable, and all other accessories not mentioned. Drapery includes, but is not limited to, fabric, and accessory items such as chain pocketing and webbing.

- G. Fabrication: Incorporate neat and mechanically acceptable practices such as clean drilled and punched holes without flash, hand smooth finish for sheared, machined and cut edges, and proper fit of component and contiguous parts without irregularity where matching is intended. Moving parts shall have specified tolerances, shaft sizes, bearings, mountings, connections, and accessories coordinated into the work in a manner acceptable to the Owner. No wood construction or equipment shall be incorporated into the work.
- H. Installation: Provide straight, plumb, true, and aligned components throughout. Connections shall be tight fitting with a minimum safety factor of eight and arranged in an orderly manner. Mechanical fabrication shall possess the necessary properties to withstand stresses of tension, compression, flexure, shear and torsion which may apply on one or more of the components and shall be related to safety, ease of operation, quietness of operation, and service life. Service life for mechanical equipment (excluding cable) is to be coincident with the building life and the standards of quality and design covering the equipment fabrication in this category, plus the installation workmanship techniques required are both established on this basis.
1. The decision of the Owner in determining the acceptability of equipment items and installation technique and workmanship shall be final.
- I. Any workmanship or materials found to be defective, improperly placed, not in strict conformity with the specifications, or defaced or injured through action of fire or the elements, through usage by the Contractor or his employees, or from any other cause shall be removed immediately from the premises when directed by the Owner and satisfactory materials or work substituted therefore without delay. This shall include making good the work of other contractors destroyed or damaged by delivery or installation, or by such removal or replacement. The cost of the above replacements shall be borne by the Contractor responsible for the defective work or materials.
- J. In the event that rejected materials cannot be replaced before occupancy and use of the building, the rejected items shall be allowed to remain in use until replaced at no expense to the Owner.
- K. Preinstallation Conference: Conduct conference at Project site to comply with the following requirements:
1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect and Construction Manager of scheduled meeting dates.
  2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
    - a. Contract Documents.
    - b. Options.
    - c. Related Change Orders.
    - d. Purchases.
    - e. Deliveries.
    - f. Submittals.
    - g. Review of mockups.
    - h. Possible conflicts.
    - i. Compatibility problems.
    - j. Time schedules.
    - k. Weather limitations.
    - l. Manufacturer's written recommendations.
    - m. Warranty requirements.
    - n. Compatibility of materials.
    - o. Acceptability of substrates.
    - p. Temporary facilities and controls.
    - q. Space and access limitations.
    - r. Regulations of authorities having jurisdiction.
    - s. Testing and inspecting requirements.
    - t. Required performance results.

- u. Protection of construction and personnel.
- 3. Record significant conference discussions, agreements, and disagreements.
- 4. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

## 1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify half-house-curtain openings and the dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings.

## 1.7 WARRANTY

- A. Special Warranty for Rigging Equipment: Manufacturer's standard form in which manufacturer agrees to repair or replace components of rigging equipment that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to faulty operation of rigging equipment.
- B. Warranty Period: Two years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Athletic & Performance Rigging (Tiffin Scenic Studios, Inc.).
  - 2. Atlanta Rigging Systems, Inc.
  - 3. Chicago Spotlight.
  - 4. Nickerson Arena Curtains

### 2.2 CURTAIN FABRICS

- A. General: Provide fabrics inherently and permanently flame resistant to comply with requirements indicated. Provide fabrics from the same dye lot.
- B. Polyester Fabric: Inherently fire-resistant, heavy PD Cloth, in a dense file weave construction; 72 inches (1800 mm) wide.
  - 1. Basis of Design Product: Dazian IFR Avora® Polyester

### 2.3 CURTAIN FABRICATION

- A. Sewing and Fabrication:
  - 1. Table drapery, as removed from bolts, across an inspection window to detecting defects. Cut defects out and do not incorporate in finished work.
  - 2. Fabric panels shall run full height of various sections without horizontal seams and be box pleated at top in 30 percent fullness exclusive of turnback facings. Pleats shall be on face side of drapery and reinforced across top with 3-1/2 inches BFM jute webbing. Sew webbing drapery top with four runs of stitching with dual runs 1-1/2 inches apart, using industrial style sewing machine and at least H30 heavy industrial thread. Locate grommets so that no horizontal stitching is cut or severed and on each plait approximately one foot center to center.
  - 3. Face fabric bottom edge to be within ¼ inch parallel with drapery top edge for true hanging across full width.

- B. Half-House Curtains: Multiple panels to achieve design intent.
1. With 30 percent fullness
  2. Bottom Hem: 5 inches deep with No. 8 zinc plated jack chain weighting in separate pockets inside hem.
  3. Top and Side Hems: 3-1/2 inches reinforced with jute webbing.
  4. Brass grommets located on top to correspond with positions carrier chains.
  5. Drapery Self-Storage: Provide drapery storage bags to attach to trussing with velcro-style dome straps on one foot centers that enable all drapery to self-store.
  6. Finished drapery panel sizes and quantities shall be determined by manufacturer. Provide storage panels as required to protect each separate panel.

## 2.4 EQUIPMENT

- A. Quantities: Provide equipment in quantities as required to achieve the design requirements but at least in the quantities specified.
1. Chain Motors: C/M Model F Lodestar Half ton chain hoists.
  2. Quantity: As determined by manufacturer for a complete installation.
  3. Travel: 100'-0"
  4. Power: 280 V, 3 phase
  5. Traveling Speed: 16 fpm.
  6. Hook: To allow 360 degree rotation latch hook with upper and lower hooks.
  7. Power cords.
  8. Control cords.
  9. Chains:
    - a. Typical: 1/4 inch "Star Grade" by Lodestar.
    - b. Bridling: Special alloy (Stac) design.
  10. Chain Capture System (Chain catching bags):
    - a. Quantity: As determined by manufacturer for a complete installation.
    - b. Constructed of 1,000 Denier Nylon Codura; abrasion, water, and tear resistant. Steel frame and Masonite bottom combined to accept 270 inch-pounds with a 5:1 safety ratio.
  11. Cables:
    - a. Fly cables: As recommended by manufacturer.
    - b. Quantities: As determined by manufacturer for a complete installation.
      - 1) Wire Rope Bridles: 3/8 inch 7x19 Galvanized aircraft quality cable.
  12. Connections:
    - a. Construct wire rope bridles using Perma lock oval sleeve (flemish eye) to accept 3/8 inch cable as recommended by manufacturer. Terminate bridle ends with heavy pattern 3/8 inch thimbles.
    - b. Span Sets: 3 foot span sets, Tuflex, endless round sling.
      - 1) Quantity: As determined by manufacturer for a complete installation.
    - c. Shackles: 5/8 inch screw pin style, marked with size and working load limit.
      - 1) Quantity: As determined by manufacturer for a complete installation.
    - d. Provide additional bridling points for optional half house proscenium location.
    - e. Trusses: Aluminum; triangle design, 18 inches by 18 inches by 18 inches by 10 feet long; weld end plates for easy assembly. No splicing accepted.
      - 1) Quantity: As determined by manufacturer for a complete installation. Include truss hinges as needed
  13. Controllers: Eight (8) way controller with hand held remote by Motion Laboratories.
    - a. Controller: Provide two (2) minimum
      - 1) Remote Feeder Cable: One hundred (100), minimum
  14. Remote Station: Heavy duty, injection-molded, plastic hand held device.
    - a. Tail: Minimum one hundred (100) feet
    - b. Power Present: 12 V DC nominal maximum
      - 1) Capable of operating four through eight individual hoists separately, all, or any simultaneously.

- 2) Hoist Control Functions: Up, down, stationary, system go, and system kill
15. Motor Control Distro:
- a. Construct of 1/8 inch thick aluminum "U" channel with 1 inch flanges.
  - b. Panels shall bolt together to allow modular assembly.
  - c. Fit standard 19 inch rack rail.
  - d. Contractor Enable function allowing individual local (pickle) control.
  - e. Phase OK light (3 phase systems) to verify all 3 phases present and in correct sequence.
  - f. Phase Reverse function
  - g. Dual (redundant) contactors for Phase Reverse and System Kill.
  - h. Constructed with Twist-Lock, P-14 (canon), Socapex, Sine, or VSC connectors.
  - i. Input connectors by Twist-Lock, Camlok, or equal
  - j. Parallel flanged outlet for daisy-chaining units.
  - k. UL Listed Breakers: Provide at least one breaker per pair of hoists per NEC 96.
  - l. Cannon Tail / Hubbel breakout: 26 pin cannon connector allowing connection to remote station.
  - m. Black anodized finish with computer engraved labels and digitized customer logo.
  - n. Accessories: Provide auxiliary steel and miscellaneous metal framing as required for a complete installation

## 2.5 METAL FINISHES

- A. General: Shop finish the exposed metal components and supports for the half house curtains. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating metal finishes.
- B. Baked-Enamel/Powder-Coated Finish: Immediately after cleaning and pretreating, apply manufacturer's standard baked-on finish. Comply with coating manufacturer's written instructions for applying and baking.
  1. Color and Gloss: Matte black.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates for required substrates and conditions which would impair or be detrimental to the performance of the system. Notify the Contractor in writing of any such condition for correction. Begin work only after corrections have been made.
- B. Examine areas and conditions, with Installer present, for compliance with requirements for supporting members, blocking, installation tolerances, clearances, and other conditions affecting performance of curtain and rigging work. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Examine inserts, clips, blocking, or other supports required to be installed by others to support tracks and battens. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION, GENERAL

- A. Installation system in accordance with manufacturer's written instructions and approved shop drawings.
- B. Secure system to structural steel frame. Provide auxiliary steel as required for proper installation.
- C. Install curtain system according to manufacturer's and fabricator's written instructions.

- D. Adjust movable units for smooth and free operation without binding or rough spots. Replace units that cannot be adjusted or that will not function properly.

### **3.3 DEMONSTRATION**

- A. Instruction: Provide at least one (1) hour instruction of Owner's designated personnel in proper use, operations, safety features and maintenance. Include truss assembly and disassembly, curtain deployment, attachment to trusses and equipment storage. Train Owners' personnel in normal procedures to be followed in checking for sources of operational failures or malfunctions.

END OF SECTION

**SECTION 11 61 53 - ARENA CURTAINS****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes:
  - 1. Manually operated black-out arena curtains and rigging for vomitory entrances and concourse closures.
- B. Related Sections include the following:
  - 1. Division 05 Section "Metal Fabrications" for supplementary metal members supporting curtain systems to structure.
  - 2. Division 11 Sections "Half-House Curtains" and "Upper Bowl Masking System" for supply of other curtain systems.

**1.2 DEFINITIONS**

- A. Batten: Steel pipe supporting curtain or suspended track by means of chains from overhead structural support.
- B. Overlap: Track that extends beyond curtain centerline to ensure closure of biparting curtain.
- C. Rigging: General term for hardware used to move curtains.
- D. Trim: Adjustment of height or level of curtain or equipment.

**1.3 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Provide rigging capable of withstanding the effects of the following design loads and the weight of arena curtains.
  - 1. Design Loads: five (5) times the safety factor plus dead load.
  - 2. Hoisting time for retractable window coverings: 16 feet/minute minimum hoisting rate.
  - 3. Curtain sag: None
  - 4. Deflection: None
- B. Design Criteria
  - 1. Window coverings to provide light blocking at each specified window.
  - 2. Window covering shall be retracted on radio controlled motor operated rollers.

**1.4 SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show fabrication and installation details for arena curtains. Include plans, elevations, sections, details, attachments to other work, and the following:
  - 1. Operating clearances.
  - 2. Requirements for supporting curtains, track, and equipment. Verify capacity of each track and rigging component to support loads.
  - 3. Locations of equipment components, switches, and controls. Differentiate between manufacturer-installed and field-installed wiring.
  - 4. Include structural analysis data for rigging signed and sealed by the qualified professional engineer responsible for their preparation.
  - 5. Include curtain openings at the top of each aisle.

- C. Samples for Initial Selection: For each type of arena curtain indicated; include color charts showing the full range of colors, textures, and patterns available, together with a 24-inch- (600-mm-) square sample (any color) of each type fabric.
- D. Samples for Verification: For each type of fabric from dye lot to be used for the Work, with specified treatments applied, and showing complete pattern and texture repeat, if any. Mark top and face of fabric. Prepare Samples of size indicated below.
  - 1. Size: Not less than 36 inches (900 mm) x full width.
- E. Product Certificates: For each type of product including fabric, signed by product manufacturer.
  - 1. Fabric: Give name of flame-retardant chemical used, identification of applicator, treatment method, application date, allowable life span for treatment, and details of any restrictions and limitations.
  - 2. Rigging: Suspended battens and tracks comply with requirements.
- F. Qualification Data: For Installer. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- G. Maintenance Data: For arena curtains and rigging to include in maintenance manuals.
- H. Warranties: Special warranties specified in this Section.

### **1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: A firm or individual experienced in installing arena curtains and rigging similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
  - 1. Welders, tackers, and welding operators: Qualified in compliance with requirements of AWS D1.1 and D1.3.
- B. Single Source: Arena curtains shall be the work of a single manufacturer as his direct and undivided responsibility through the design, engineering, fabrication, installation, guarantee, and maintenance phase. Such manufacturer shall operate its own machining and fabricating facilities.
  - 1. Curtain fabrics for each of the three curtain systems shall be from the same manufacturer.
- C. Fire-Test-Response Characteristics: Provide arena curtains with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or a testing and inspecting agency acceptable to authorities having jurisdiction.
  - 1. Flame-Resistance Ratings: NFPA 701.
  - 2. Permanently attach label to each fabric of curtain assembly indicating whether fabric is inherently and permanently flame resistant or treated with flame-retardant chemicals, and whether it will require retreatment after designated time period or cleaning.
- D. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination."

### **1.6 PROJECT CONDITIONS**

- A. Field Measurements: Verify arena-curtain openings and the dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings.

### **1.7 WARRANTY**

- A. Special Warranty for Rigging Equipment: Manufacturer's standard form in which manufacturer agrees to repair or replace components of rigging equipment that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to faulty operation of rigging equipment.

- B. Warranty Period: Two years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Nickerson Arena Curtains
  2. Athletic & Performance Rigging (Tiffin Scenic Studios, Inc.).
  3. Chicago Spotlight.
  4. Atlanta Rigging Systems, Inc.

### **2.2 ARENA CURTAIN FABRICS**

- A. General: Provide fabrics inherently and permanently flame resistant to comply with requirements indicated. Provide fabrics from the same dye lot.
- B. Polyester Velour: Napped fabric of 100 percent polyester weighing not less than 15 oz./linear yard (425 g/linear meter); inherently and permanently flame resistant; 54-inch (1372-mm) minimum width.
1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
    - a. Dazian LLC; Milano Velvet.
    - b. Rose Brand; Encore.
  2. Colors: As selected by Architect from manufacturer's full range.
- C. Lining: Woven fabric of 100 percent polyester yarn, inherently and permanently flame resistant; 54-inch (1372-mm) minimum width, of weight recommended by curtain fabricator, but not less than 8 oz./linear yard (250 g/linear meter).
1. Colors: Match face fabric.

### **2.3 CURTAIN FABRICATION**

- A. General: Affix permanent label, stating compliance with requirements of authorities having jurisdiction, in accessible location on curtain not visible to audience. Provide vertical seams, unless otherwise indicated. Arrange vertical seams so they do not fall on faces of pleats. Do not use fabric cuts less than one-half width.
1. Vertical Hems: Provide vertical hems not less than 2 inches (50 mm) wide, with not less than a 1-inch (25-mm) tuck, and machine-sewn with no selvage material visible from front of curtain. Sew open ends of hems closed.
    - a. Overlaps: For center opening curtain, provide not less than 4 inches (100 mm) wide overlap.
    - b. Curtains: Provide 1/2-inch wide reflective tape permanently affixed vertically to the leading edge hems, visible to the audience in a blackout condition at the top of every aisle.
  2. Leading Edge Turnbacks: Provide turnbacks formed by folding not less than 12 inches (300 mm) of face fabric back, with not less than a 1-inch (25-mm) tuck, and secured by sewing turnbacks vertically.
    - a. Vomitory Curtains: Provide 1/2-inch wide reflective tape permanently affixed vertically to the leading edge hems, visible to the audience in a blackout condition.
  3. Top Hems: Reinforce top hems by double-stitching 3-1/2-inch- (89-mm-) wide, heavy jute webbing to top edge with not less than 2 inches (50 mm) of face fabric turned under.

4. Pleats: Provide 50 percent fullness in curtains, exclusive of turnbacks and hems, by sewing additional material into 3-inch (75-mm) double-stitched box pleats spaced at 12 inches (300 mm) o.c. along top hem reinforcement.
5. Grommets: Brass, No. 3, centered on each box pleat and 1 inch (25 mm) from corner of curtain, for snaps or S-hooks.
  - a. For black curtains, provide brass or aluminum grommets with black finish.
6. Bottom Hems:
  - a. For curtains that do not hang to the floor, provide hems not less than 3 inches (75 mm) deep with 3/4-inch (19-mm) weight tape.
7. Velour Curtains: Fabricate with the fabric nap down.
8. Lining: Provide lining for each curtain in same fullness as face fabric, and finished 2 inches (50 mm) shorter than face fabric. Attach lining to face fabric along bottom and side seams with 4-inch- (100-mm-) long strips of heavy woven cotton tape.

## 2.4 RIGGING

- A. Battens: Fabricate battens from steel pipe with a minimum number of joints. As necessary for required lengths, connect pipe with a drive-fit pipe sleeve not less than 18 inches (450 mm) long, and secure with four flush rivets, plug welds, threaded couplings, or another equally secure method.
  1. Steel Pipe: ASTM A 53/ A 53M, Grade A, standard weight (Schedule 40), black, 1-1/2-inch (40-mm) nominal diameter, unless otherwise indicated.
- B. S-Hooks: Track manufacturer's heavy-duty plated-wire hooks.
- C. Snap Hooks: Track manufacturer's heavy-duty hooks.
- D. Supports, Clamps, and Anchors: Sheet steel in manufacturer's standard thicknesses, galvanized after fabrication according to ASTM A 153/A 153M, Class B.
- E. Trim and Support Chain: Grade 80 hardened alloy steel chain rated for overhead lifting, ASTM A 391/A 391M.
- F. Inserts, Bolts, Rivets, and Fasteners: Manufacturer's standard corrosion-resistant units.
- G. Aluminum Curved Track: Fabricate of extruded aluminum, ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for strength and corrosion resistance, mill finish, not less than 0.08-inch (2.03-mm) nominal thickness.
  1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
  2. Products: Subject to compliance with requirements, provide one of the following:
    - a. Automatic Devices Company; Rig-I-Flex 140 (240) series.
    - b. H & H Specialties, Inc.; 300 (300B) series.
    - c. Tiffin Scenic Studio Inc.'s Continental track systems, Continental No. 62 Track.

## 2.5 ALUMINUM-CURTAIN-TRACK FABRICATION

- A. General: Fabricate straight and curved aluminum curtain tracks for walk-along operation, without cord, cable, pulleys, or floor block, designed for rigid attachment to ceiling or hanging clamps.
  1. Shop-fabricate curved portions of track.
- B. Aluminum Track System: Fabricate track of 0.125-inch- (3.1-mm-) thick extruded aluminum consisting of an I-beam with intermediate flange or of parallel aluminum channels with steel tubing strongback. Provide single curtain carriers of two nylon-tired ball-bearing wheels riveted parallel to plated-steel body. Provide one master carrier, for each leading curtain edge, of plated steel with two pairs of nylon-tired ball-bearing wheels riveted parallel to plated-steel body. Equip carriers with rubber or neoprene bumpers and nylon glide strips to reduce noise, and

heavy-duty, plated-steel swivel eye for attaching curtain snap or S-hook. Provide end stops for track.

1. Suspended Track: 1-1/2-inch (40-mm) steel pipe stiffener for supporting both straight and curved sections of suspended curved tracks.
2. Operating Line: Manufacturer's standard 3/8-inch (9-mm) stretch-resistant operating cord consisting of braided synthetic-fiber jacket over solid, synthetic-fiber, linear, center filaments.
3. Track Lap Clamp: Metal to match track channel for attaching double-sectioned track at center overlap.
4. Curtain Carriers: For track spaced at 12 inches (300 mm) o.c.
5. Fold Guide: Equip carriers with rear-fold or backpack guide and rubber spacers to permit curtain folding for storage when curtain is open, sized for use with operating line if any.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for supporting members, blocking, installation tolerances, clearances, and other conditions affecting performance of stage-curtain work. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Examine inserts, clips, blocking, or other supports required to be installed by others to support tracks and battens. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Surface Preparation:
  1. Inspection: Inspect all materials prior to installation. Be responsible for all materials and expenses incurred to replace the Work installed with manufacturing defects or defects caused by installation.

#### **3.3 INSTALLATION, GENERAL**

- A. Install curtain system according to track manufacturer's and curtain fabricator's written instructions.
- B. Motors and controls shall be delivered to the job site complete with all required rigging hardware and accessories. Make all adjustments and modifications necessary or required for approval and leave ready for satisfactory operation.
- C. Safety Warnings: Assembly components shall clearly indicate weight, storage, and erection restrictions, and recognized product safety procedures.

#### **3.4 TRACK INSTALLATION**

- A. Ceiling-Mounted Tracks: Drill track at intervals not greater than manufacturer's written instructions for spacing, and fasten directly to structure.
- B. Beam-Mounted Tracks: Install tracks by suspending from manufacturer's special beam clamps securely mounted to I-beam structure at spacing, according to manufacturer's written instructions.

- C. Wall-Mounted Tracks: Install tracks by suspending from manufacturer's special bracket clamps securely mounted to wall construction at spacing, according to manufacturer's written instructions.
- D. Batten-Hung Tracks: Install track by suspending from pipe batten with manufacturer's track clamp hangers attached to batten pipe clamps at spacing, according to manufacturer's written instructions.
- E. Spacing: Do not exceed the following dimensions between supports:
  - 1. Heavy-Duty Track: 72 inches (1829 mm).
  - 2. Medium-Duty Track: 48 inches (1219 mm).
  - 3. Curved Walk-Along Track: 48 inches (1219 mm). Provide additional supports at curves and splices.
- F. Install track for center-parting curtains with not less than 24-inch (600-mm) overlap of track sections at center, supported by special lap clamps.

### **3.5 ARENA CURTAIN INSTALLATION**

- A. Track Hung: Secure curtains to track carriers with track manufacturer's special heavy-duty S-hooks.

### **3.6 DEMONSTRATION**

- A. Engage a factory-authorized service representative to test system and to train Owner's personnel to rig, adjust, operate, and maintain curtains, tracks, and draw-curtain machines.

END OF SECTION

**SECTION 11 82 26 - FACILITY WASTE COMPACTORS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes facility waste compactors.
- B. Related Requirements:
  - 1. Section 11 30 13 "Residential Appliances" for residential trash compactors.
  - 2. Section 11 40 00 "Foodservice Equipment" for food-waste shredding, pulping, grinding, and compacting machines in foodservice facilities.
  - 3. Section 21 13 13 "Wet-Pipe Sprinkler System" for building fire sprinklers and piping connections to automatic sprinkler in hopper of each chute-fed compactor.

**1.2 DEFINITIONS**

- A. See the "WASTEC 2013 Listing of Rated Stationary Compactors" for detailed definitions of waste-compactor terminology.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Inspect and discuss electrical, plumbing, and sprinkler roughing-in; equipment bases; and other preparatory work specified elsewhere.
  - 2. Review coordination of chute and diverter locations with waste compactors.
  - 3. Review sanitary requirements for water bibs, floor drains, and grease traps if required for Project to reduce decomposition and odors.
  - 4. Review haul routes of waste to the compactor, route of hauler's equipment, and protections along these routes that are specified elsewhere.
  - 5. Review required testing, inspection, and certification procedures.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, furnished specialties and accessories, and finishes.
- B. Shop Drawings: For each waste compactor and for special components not dimensioned or detailed in manufacturer's product data.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Dimension chute and diverter locations that interface with waste compactors.
  - 4. Include location and installation details of automatic sprinkler in hopper of each chute-fed compactor.
  - 5. Indicate equipment access points and required space for equipment service and operation.
  - 6. Include setting drawings, templates, and instructions for installing anchor bolts and other anchorages.
  - 7. Include diagrams for power, signal, and control wiring.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of waste compactor.
- C. Field quality-control reports.

## 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For waste compactors to include in operation and maintenance manuals.
- B. Continuing Maintenance Proposal: From Installer to Owner, in the form of a standard five-year maintenance agreement, starting on date maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

## 1.7 QUALITY ASSURANCE

- A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.
  - 1. Maintenance Proximity: Not more than two hour(s') normal travel time from Installer's place of business to Project site.

## PART 2 - PRODUCTS

### 2.1 FACILITY WASTE COMPACTORS

- A. Waste Compactor: Manufacturer's standard-type stationary compactor, complying with requirements; liquidtight; and with components, options, and accessories needed to provide a complete, functional system.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Compactors, Inc.
  - b. Harmony Enterprises, Inc.
  - c. J. V. Manufacturing, Inc.
  - d. Marathon Equipment Company; a Dover company.
  - e. Precision Machinery Systems, Inc.
  - f. PTR Baler & Compactor Company.
  - g. Rudco Products, Inc.
  - h. Sebright Products Inc.
  - i. SP Industries, Inc.
  - j. Wastequip, Inc.
  - k. Western Chutes; a division of Buchanan Company, Inc.
  - l. Wilkinson Hi-Rise, LLC.
  - 2. Source Limitations: Obtain from single source from single manufacturer.
  - 3. Waste-Compactor Standards: ANSI Z245.21 including appendices and NFPA 82.
  - 4. Waste-Container Standards: ANSI Z245.30 and ANSI Z245.60.
  - 5. WASTEC-Rated Size (Volume): Minimum Refer to Drawings.
  - 6. Clear Top Opening (Length by Width): Refer to Drawings .
  - 7. Cycle Time: Maximum Refer to Drawings.
  - 8. Discharge Opening (Width by Height): Maximum Refer to Drawings .
  - 9. Ground Height: Minimum Refer to Drawings .
  - 10. Ram Face: Minimum Refer to Drawings .
  - 11. Ram Penetration: Minimum Refer to Drawings.
  - 12. Normal/Maximum Resultant Ram Forces: Refer to Drawings.

13. Normal/Maximum System Pressures: Refer to Drawings.
  14. Scale Weight: Maximum Refer to Drawings.
  15. Electrical Characteristics: Refer to Drawings
  16. Controls: Refer to Drawings .
  17. Finish: Refer to Drawings .
    - a. Color: As selected by Architect from manufacturer's full range.
  18. Deodorizing Device:[Manufacturer's standard.
- C. Number of Extra Storage Containers: Two.

## **2.2 FABRICATION**

- A. Fabricate waste compactors with smooth, eased, exposed edges to prevent injury to persons in vicinity of the equipment.
- B. Fabricate containers, hoppers, compaction chambers, unit bodies, and similar components of steel with welded joints. Reinforce with steel members sized and spaced to withstand impacts and pressures of normal operations and to prevent deformation.
- C. Fabricate equipment with replaceable parts at points of normal wear.
- D. Fabricate liquidtight compactor baffles to stop liquid from leaking out.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, clearances, service rough-ins, and other conditions affecting performance of the Work.
- B. Examine walls, floors, and chutes for suitable conditions where each waste compactor will be installed.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION OF FACILITY WASTE COMPACTORS**

- A. Install each waste compactor according to manufacturer's written instructions, ANSI Z245.2, and ANSI Z245.21, including appendices.
- B. Install automatic sprinkler in hopper of each chute-fed compactor according to NFPA 82.
- C. Set waste compactors level, plumb, properly aligned, and securely in place. Anchor as required for secure operation.

### **3.3 FIELD QUALITY CONTROL**

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  1. Perform installation and startup checks according to ANSI Z245.21, Appendix D, "Tests for Evaluation of Equipment and Performance," and manufacturer's written instructions.
  2. Test and adjust controls, alarms, and safeties. Replace damaged and malfunctioning controls and equipment.
  3. Verify unrestricted access to each firefighting access door or hose connection required by ANSI Z245.21 and NFPA 82 for compactor container(s).

4. Verify correct locations, color coding, and legibility of caution, warning, and danger markings.
  5. Certify compliance with test parameters.
- B. A waste compactor will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### **3.4 MAINTENANCE SERVICE**

- A. Maintenance Service: Beginning at Substantial Completion, initial maintenance service shall include 12 months' full maintenance by skilled employees of waste-compactor Installer. Include monthly preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper waste-compactor operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

### **3.5 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain waste compactors according to manufacturer's written instructions and ANSI Z245.2.

END OF SECTION

**SECTION 12 22 00 - CURTAINS AND DRAPES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Drapes.
  - 2. Drapery tracks.
- B. Related Requirements:
  - 1. Section 05 75 00 "Decorative Formed Metal" for drapery pockets.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For the following:
  - 1. Drapery Tracks: Include maximum weights of drapes that can be supported.
    - a. Motorized Tracks: Indicate motor weights, motor-mounting requirements, and electrical requirements.
  - 2. Fabrics.
  - 3. Textile treatments.
- B. Shop Drawings:
  - 1. Drapery Tracks: Show installation and anchorage details and locations of controls.
    - a. Motorized Tracks: Indicate dimensions, weights, and required clearances for track and motor and differentiate between manufacturer-installed and field-installed wiring.
  - 2. Drapes: Show sizes, locations, and details of installation.
- C. Samples: As follows:
  - 1. Drapery Tracks: 18 inches long, with carriers, controls, and accessories.
  - 2. Drapery Fabrics: For each color and pattern indicated, full width by 36 inches long, from dye lot to be used for the Work and with specified textile treatments applied. Show complete pattern repeat if any. Mark top and face of fabric.
  - 3. Textile Trims: For each color and pattern indicated, 18 inches long.
  - 4. Drape Fabrication: For each heading, fabric, color, and pattern indicated, a complete full-size panel to verify details of fabrication and thread colors.
- D. Samples for Initial Selection: For each type of product indicated.
- E. Samples for Verification: As follows:
  - 1. Drapery Tracks: 18 inches long, with carriers, controls, and accessories.
  - 2. Drapery Fabrics: For each color and pattern indicated, full width by 36 inches long, from dye lot to be used for the Work and with specified textile treatments applied. Show complete pattern repeat if any. Mark top and face of fabric.
  - 3. Textile Trims: For each color and pattern indicated, 18 inches long.
  - 4. Drape Fabrication: For each heading, fabric, color, and pattern indicated, a complete full-size panel to verify details of fabrication and thread colors.
- F. Product Schedule: For drapes. Use same designations indicated on Drawings.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: For drapery track installation; reflected ceiling plans drawn to scale and coordinating track installation with openings and ceiling-mounted items, on which the following items are shown:
  - 1. Suspended ceiling components.
  - 2. Structural members to which motors are attached.
  - 3. Size and location of motor access panel.
- B. Product Certificates: For each drapery fabric treated with flame retardant, signed by fabric supplier and indicating treatment durability and cleaning procedures required to maintain treatment effectiveness.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For products installed to include in maintenance manuals.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Drapery Track Carriers: For each size indicated, equal to 5 percent of amount installed, but no fewer than 10 of each size.
  - 2. Drapery Track Controls: For each type indicated, equal to 5 percent of amount installed, but no fewer than 10 of each type.
  - 3. Drapery Fabrics: For each fabric, color, and pattern indicated, from the same product run, full-width lengths equal to 5 percent of amount installed, but no fewer than 10 yards of each fabric, color, and pattern.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: For drapes and drapery tracks, fabricator of drapes.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
  - 1. Build mockup at location and in size shown on Drawings.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.7 FIELD CONDITIONS**

- A. Field Measurements: Verify dimensions by field measurements before drape fabrication, and indicate measurements on Shop Drawings.
- B. Scheduling: Do not deliver or install drapes until after other finish work, including painting, is complete and spaces are otherwise ready for occupancy.

**PART 2 - PRODUCTS****2.1 DRAPERY TRACKS**

- A. Motorized Track:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Lutron Traditional Draper Track System or comparable product by one of the following:
    - a. BTX Window Automation Inc.
    - b. Forest Group USA, Inc.
    - c. Lutron Electronics Co., Inc.

- d. MechoShade Systems, Inc.
- e. Silent Gliss.
- f. SM Automatic, Inc.
2. Operation: Motorized.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. Construction: Extruded aluminum, slotted for mounting at interval of not more than 24 inches o.c.
  - a. Lengths and Configurations: As indicated on Drawings.
  - b. Track Type: Dual tandem.
  - c. Support Capability: Weight of drape indicated mounted on track length indicated.
  - d. Finish: Match adjacent ceiling finish.
5. Mounting Brackets: Suitable for fastening track to surface indicated and designed to support weight of track assembly and drape plus force applied to operate track.
  - a. Mounting Surface: Drapery pocket.
6. Installation Fasteners: Sized to support track assembly and drape, and fabricated from metal compatible with track, brackets, and supporting construction. Provide two fasteners to fasten each bracket to supporting construction.
7. Motor Operation: Low-voltage motor with built-in low-voltage interface for direct access to control systems, with thermal-overload switch; sized for weight of drape and track length indicated; and equipped with stops to prevent overdrawing.
  - a. Control: Wall switch.
  - b. Draw: Two way, center opening.
  - c. Electrical Requirements: As indicated on Drawings.
  - d. Travel Speed: 6 inches per second.
8. Carriers: Coordinate with drapery headings indicated.
  - a. Master Carriers: Overlap.
9. End Stops: Manufacturer's standard.
10. Pulleys: Standard duty.

## 2.2 DRAPES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  1. Barjan Manufacturing Ltd.
  2. Contract Shading Systems.
  3. Creative Draperies Inc.
  4. DFB Sales Inc.
  5. Fabricut.
  6. Fabtex.
  7. Lutron.
  8. Quiltcraft Industries, Inc.
  9. Standard Textile Co., Inc.
  10. Wesco Fabrics, Inc.
- B. Source Limitations: Obtain each color and pattern of drapery fabric and trim from one dye lot.
- C. Fire-Test-Response Characteristics: For fabrics treated with fire retardants, provide products that pass NFPA 701 as determined by testing of fabrics that were treated using treatment-application method intended for use for this Project by a testing and inspecting agency acceptable to authorities having jurisdiction.

- D. Drape:
1. Heading:
    - a. Ripplefold: As indicated on Finish Legend.
    - b. Heading Accessories:
      - 1) Nonwoven buckram.
      - 2) Hooks.
  2. Drapery Fabric:
    - a. Reference Finish Legend & drawings for fabric selections.
  3. Textile Treatments: Stain repellent; and flame retardant, polymer type.
  4. Lining Fabric:
    - a. Lining Type: Blackout.
    - b. Product: Selected by fabricator for use with drapery fabric indicated, to match face fabric selection.

### 2.3 DRAPE FABRICATION

- A. Fabricate drapes in heading styles and fullnesses indicated. Fabricate headings to stand erect. If less than a full width of fabric is required to produce panel of specified fullness, use equal widths of not less than one-half width of fabric located at ends of panel.
1. One-Way-Stacking Drapes: Add 5 inches to overall width for returns.
  2. Center-Opening Drapes: Add 10 inches to overall width for overlap.
- B. Seams: Sew vertical seams with twin-needle sewing machine with selvage trimmed and overlocked. Join widths so that patterns match and vertical seams lay flat and straight without puckering. Horizontal seams are unacceptable.
- C. Side Hems: Double-turned, 1-1/2-inch-wide hems consisting of three layers of fabric, and blindstitched so that stitches are invisible on face of drape.
- D. Bottom Hems: Double-turned, 4-inch-wide hems consisting of three layers of fabric, and weighted and blindstitched so that weights and stitches are invisible on face of drape.
1. Sew in square lead weights at each seam and at panel corners.
- E. Interlinings: Extend from top of drape to within 1/2 inch of lining's bottom hem and to leading edge of side hems to produce full-shadowed appearance.
- F. Linings: Equal to widths of drapery fabric and joined to drapery fabric at top by inside invisible seam, and hand stitched at side hems and shadowed with 1-1/2-inch return of face fabric.
1. Bottom Hem: Blind stitch to drapery fabric.
  2. Refer to Finish Legend and drawings for all fabric sections.
- G. Baton/Pull Rod
1. Provide metal pull rod at each length, typical.

## PART 3 - EXECUTION

### 3.1 DRAPERY TRACK INSTALLATION

- A. Install track systems according to manufacturer's written instructions, level and plumb, and at height and location in relation to adjoining openings as indicated on Drawings.
- B. Isolate metal parts of tracks and brackets from concrete, masonry, and mortar to prevent galvanic action. Use tape or another method recommended in writing by track manufacturer.

**3.2 DRAPE INSTALLATION**

- A. Where drapes abut overhead construction, hang drapes so that clearance between headings and overhead construction is 1/4 inch.
- B. Where drapes extend to floor, install so that bottom hems clear finished floor by not more than 1 inch and not less than 1/2 inch.
- C. Where drapes extend to windowsill, install so that bottom hems hang above sill line and clear sill line by not more than 1/2 inch.

**3.3 ADJUSTING**

- A. After hanging drapes, test and adjust each drapery track to produce unencumbered, smooth operation.
- B. Steam and dress down drapes as required to produce crease- and wrinkle-free installation.
- C. Remove and replace drapes that are stained or soiled.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 12 36 16 - METAL COUNTERTOPS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Stainless-steel countertops.

**1.2 COORDINATION**

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded wall-mounted shelves.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For metal fabrications.
  - 1. Include plans, sections, details, and attachments to other work. Detail fabrication and installation, including field joints.
  - 2. For countertops, show locations and sizes of cutouts and holes for items installed in metal countertops.

**1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver products only after casework and supports on which they will be installed has been completed in installation areas.
- B. Keep finished surfaces of products covered with polyethylene film or other protective covering during handling and installation.

**1.5 FIELD CONDITIONS**

- A. Field Measurements: Where products are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- B. Established Dimensions: Where products are indicated to fit to other construction, establish dimensions for areas where products are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

**PART 2 - PRODUCTS****2.1 STAINLESS-STEEL COUNTERTOPS FABRICATIONS**

- A. Countertops: Fabricate from 0.062-inch-thick, stainless-steel sheet. Provide smooth, clean exposed tops and edges in uniform plane, free of defects. Provide front and end overhang of 1 inch over the base cabinets.
  - 1. Joints: Fabricate countertops without field-made joints.
  - 2. Weld shop-made joints.
  - 3. Sound deaden the undersurface with heavy-build mastic coating.
  - 4. Extend the top down to provide a 1-inch-thick edge with a 1/2-inch return flange.

5. Form the backsplash coved to and integral with top surface, with a 1/2-inch-thick top edge and 1/2-inch return flange.
  - a. Provide endsplash at all locations where countertop is butted up against a side wall. Open countertop ends are to have endsplashes only when detailed on Drawings.
6. Provide raised (marine) edge around perimeter of tops containing sinks; pitch tops containing sinks two ways to provide drainage without channeling or grooving.
7. Where stainless-steel sinks occur in stainless-steel tops, factory weld into one integral unit.

## 2.2 MATERIALS

- A. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304.
- B. Sealant for Countertops: Manufacturer's standard sealant that complies with applicable requirements in Section 07 92 00 "Joint Sealants" and the following:
  1. Mildew-Resistant Joint Sealant: Mildew resistant, single component, nonsag, acid curing, silicone.
  2. Color: As selected by Architect from manufacturer's full range.
  3. Sealant shall have a VOC content of 250 g/L or less.

## 2.3 STAINLESS-STEEL FINISH

- A. Grind and polish surfaces to produce uniform, directional satin finish matching No. 4 finish, with no evidence of welds and free of cross scratches. Run grain with long dimension of each piece. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces clean.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install metal countertops level, plumb, and true; shim as required, using concealed shims.
- B. Field Jointing: Where possible, make field jointing in the same manner as shop jointing; use fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.
- C. Secure countertops to cabinets with Z- or L-type fasteners or equivalent; use two or more fasteners at each front, end, and back.
- D. Abut top and edge surfaces in one true plane, with internal supports placed to prevent deflection.
- E. Seal junctures of countertops, splashes, and walls with sealant for countertops.
- F. Wall-Mounted Shelves: Fasten to supporting construction through upturned back edge at not less than 24 inches o.c.
  1. For framed construction, fasten through wall or partition finishes directly to framing, blocking, or reinforcements.

**3.3 CLEANING AND PROTECTION**

- A. Repair or remove and replace defective work as directed on completion of installation.
- B. Clean finished surfaces. Remove and replace damaged products or touch up and refinish damaged areas to match original factory finish, as approved by Architect.
- C. Protection: Provide 6-mil plastic or other suitable water-resistant covering over countertop surfaces. Tape to underside of countertop at a minimum of 48 inches o.c. Remove protection at Substantial Completion.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 12 48 13 - ENTRANCE FLOOR MATS AND FRAMES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Resilient entrance mats.
  - 2. Recessed frames.

**1.2 COORDINATION**

- A. Coordinate size and location of recesses in concrete to receive floor mats and frames.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for floor mats and frames.
- B. Shop Drawings:
  - 1. Items penetrating floor mats and frames, including door control devices.
  - 2. Divisions between mat sections.
  - 3. Perimeter floor moldings.
  - 4. Custom Graphics: Scale drawing indicating colors.
- C. Samples: For the following products, in manufacturer's standard sizes:
  - 1. Floor Mat: Assembled sections of floor mat.
  - 2. Frame Members: Sample of each type and color.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For floor mats and frames to include in maintenance manuals.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Resilient-Tile Entrance Mats: Full-size tile units equal to 2 percent of amount installed, but no fewer than 10 units.

**PART 2 - PRODUCTS****2.1 ENTRANCE FLOOR MATS AND FRAMES, GENERAL**

- A. Structural Performance: Provide roll-up rail mats and frames capable of withstanding the following loads and stresses within limits and under conditions indicated:
  - 1. Uniform floor load of 300 lbf/sq. ft..
  - 2. Wheel load of 350 lb per wheel.
- B. Accessibility Standard: Comply with applicable provisions in the DOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1.

**2.2 RESILIENT ENTRANCE MATS**

- A. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
1. American Floor Products Company, Inc.
  2. American Mat & Rubber Company.
  3. Arden Architectural Specialties, Inc.
  4. Balco, Inc.
  5. Cactus Mat Mfg. Co.
  6. Consolidated Plastics Company, Inc.
  7. C/S Group.
  8. Durable Corporation.
  9. Flexco.
  10. Mats Inc.
  11. Musson Rubber Company.
  12. Pawling Corporation; Architectural Products Division.
  13. Sbemco International Inc.; Matting by Design.
  14. Tennessee Mat Company, Inc.
  15. Tepromark International, Inc.
  16. U.S. Mat & Rubber Corporation.
- B. Cocoa Mats: Constructed from cocoa fiber yarn permanently bonded to PVC backing for dimensional stability and resistance to shedding; 1-inch overall thickness; 2.0-lb/sq. ft. weight.
1. Color: As selected by Architect from full range of industry colors.
  2. Mat Size: As indicated.
- C. Graphics: Custom inlaid or woven-in graphic design, as indicated.

## 2.3 FRAMES

- A. Recessed Frames: Manufacturer's standard extrusion.
1. Extruded Aluminum: ASTM B 221, Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
    - a. Color: Clear.

## 2.4 CONCRETE FILL AND GROUT MATERIALS

- A. Provide concrete fill and grout equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

## 2.5 FABRICATION

- A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.
- B. Recessed Frames: As indicated, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.
1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.
- C. Coat concealed surfaces of aluminum frames that contact cementitious material with manufacturer's standard protective coating.

**2.6 ALUMINUM FINISHES**

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine substrates and floor conditions for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 CONSTRUCTION WASTE MANAGEMENT**

- A. Construction Waste shall be managed in accordance with provisions of Section 01 74 19 "Construction Waste Management and Disposal". Documentation shall be submitted to satisfy the requirements of that section.

**3.3 INSTALLATION**

- A. Install recessed mat frames and mats to comply with manufacturer's written instructions so that tops of mats will be flush with adjoining finished flooring. Set mats with tops at height recommended by manufacturer for most effective cleaning action; coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.
  - 1. For installation in polished concrete flooring areas, allow for grinding and polishing of concrete without grinding surface of recessed frames. Coordinate with other trades as required.
  - 2. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.
  - 3. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.
  - 4. Delay setting mats until construction traffic has ended.

**3.4 PROTECTION**

- A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 12 63 26 – ARENA SEATS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Types of arena chairs specified in this section include the following:
  - 1. Cushioned arena chairs
  - 2. Integral platform chairs
  - 3. Main concourse club, Event club, and Goalie seating chairs
  - 4. Event suite chairs
  - 5. Suite chairs
  - 6. Video room chairs
- B. Related Requirements: The following Section contains requirements that relate to this Section:
  - 1. Division 12 Section “Multipurpose Seating” for telescoping seating platforms for installation of integrally ganged platform chairs.
  - 2. Division 12 Section “Portable Platforms” for aluminum platforms for installation of arena chairs.
- C. Work Provided by Owner: Folding chairs for wheelchair companion chairs.

**1.2 UNIT PRICES**

- A. Provide Unit Prices for each Chair Type and Size.

**1.3 PERFORMANCE REQUIREMENTS**

- A. General: The completed arena chair installation shall provide the following minimum performance requirements:
  - 1. Mechanical fastening devices: Non-corrosive materials.
  - 2. Seat hinge assemblies: Non-corrosive materials.
  - 3. Fasteners: Threaded except for mounting numberplates. Threaded fastener engagement shall be into threaded metal.
  - 4. Seat hinge assembly shall raise, without assistance, the seat pan to within one inch plus or minus of the end of the armrest.
  - 5. Easy Access Chair: Provide end standard with hinged armrest to allow access to the chair from the side.
    - a. Height of armrest: Match fixed arena chairs.
    - b. Quantity: Equal to one percent of overall seating capacity.
  - 6. Seating envelope: Comply with clear aisle access way width requirements of NFPA 101, Life Safety Code, Chapter entitled, “New Assembly Occupancies.”
  - 7. At expansion joints that fall within a row of arena chairs, accommodate for the movement of the expansion joint without any detrimental effects on the performance of the arena chair.
  - 8. Install as many chairs as possible to fill each row in each seating section, but no less than indicated on the Architectural Drawings. Fill all rows with larger sized chairs so that no gap exceeds 2”.

**1.4 SUBMITTALS**

- A. Required With The Bid
1. Base bids on chair quantities included in the Chair Summary included on the Drawings.
  2. Provide Unit Prices for each chair type and size, complete with all accessories, including removable painted tubular steel beam-mounted chairs.
    - a. Unit Prices will be used to adjust the Contract Sum for adjustments to the quantities indicated in the Chair Summary.
    - b. Future Orders: Provide the order lead time and unit prices (with a yearly escalation factor) for a period of five (5) years, for any component purchased to replace the extra stock after Substantial Completion of the Project.
  3. Pricing for Listed Alternates: Provide separate pricing for each of the listed alternates.
  4. Provide copies of the manufacturer's written warranty.
  5. Provide full sized sample of each arena chair required.
  6. Product Literature for each type of chair proposed, including standard specifications for treatments for cast iron, cast aluminum, steel, and plastic.
  7. Anchor bolt information.
- B. Required After Award Of Contract
1. Product Data: Submit technical data, performance test data certified by an independent testing laboratory and product information describing durability and maintenance requirements as applicable for the following items:
    - a. Anchor bolts
    - b. Chair assembly.
    - c. Plastic materials and additives.
    - d. Padding and upholstery.
    - e. Coating materials, and application procedures.
    - f. Armrests and cup holders
  2. "Shop Drawings: Provide the following drawings
    - a. Complete seating bowl with tread and riser mounting details and aisle locations
      - 1) Show joints between precast treads and risers and attachments.
      - 2) Show locations of wheelchair companion seating.
      - 3) Show easy access chairs.
    - b. End standard design with logo.
    - c. Hinged armrest for Easy-Access chair end standards.
    - d. Low riser height mounting bracket, if required.
    - e. Seat and back design.
    - f. Seat assembly.
    - g. Seat and row identification graphics.
    - h. Seat attachment at unique conditions such as angled corners and where chairs span across a control or expansion joint.
  3. Seating Chart: Submit a seating chart that shows the total quantity of seats, seat widths, aisle widths, and mounting conditions. Each chair shall be represented by a rectangle. Following approval of the seating chart, the Owner will furnish the numbering systems for section, seat, and row identification.
  4. Seating Manifest: Owner will use seating manifest to determine allocation of chairs for marketing and distribution of tickets. Provide Seating Manifest to Owner as follows.
    - a. Prepare seating manifest based on verified field measurements of seating bowl, aisle locations, and aisle widths.
      - 1) Each seat shall be represented by a rectangle and shall include Owner supplied numbering systems.
      - 2) Indicate each easy access chair and companion chairs.
      - 3) Submit within 30 days of completion of seating bowl construction, except where sections of seating bowl are withheld as construction access. In the event of hold out seating bowl, submit manifest within 30 days after completion of all other seating bowl construction.

- 4) Indicate total quantity of seats, seat widths, aisle widths, and mounting conditions.
- 5) View and scale of chart shall be coordinated with the Architect.
5. Samples: Submit custom color samples to match the Architect's color sample for the selection of colors for plastic components and ferrous or non-ferrous metal components.
6. Submit one assembled arena chair in selected color, one chair on a tubular steel assembly, and one Easy Access Chair.
  - a. Approved chair samples may be used as part of the work.

## 1.5 QUALITY ASSURANCE

- A. Life Safety: The seating layout and installation shall comply with the requirements of the NFPA 101 Life Safety Code.
- B. Seat Widths: Increase width of individual seats within a row so that the end standards are in general alignment from one row to another, whether aisles are of constant or configuring widths.
  1. Minimum width of general arena chairs shall be 20 inches. Increase chair width to align end standards.
  2. Minimum width of arena chairs on telescoping platforms shall be 21-1/2 inches. Increase chair width to align end standards.
  3. Minimum width of suite chairs shall be 24 inches. Increase chair width to align end standards.
  4. Minimum width of main concourse club, event club and goalie seating chairs shall be 23 inches. Increase chair width to align end standards.
  5. Quantity of Seats: The manufacturer shall maximize the quantity of the seating based on row lengths, row configuration, and minimum seat widths indicated on the Drawings.
    - a. Changes to the base bid quantity shall be made by Change Order based on the unit prices provided with the Bid.
- C. Forest Certification: Fabricate products with wood components produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- D. "Easy Access Chair" seating, evenly distributed throughout the seating bowl, shall be understood to mean arena chair with an armrest design that complies with applicable requirements of the American with Disabilities Act and the Performance Requirements of this Section. Provide each chair with universal symbol of access.
- E. Testing: Determine resistance of seat to deformation when loaded in accordance with the requirements of ANSI-BIFMA Seat Impact Test, modified to analyze front and back of seat.
- F. Materials (Flammability) shall satisfy applicable test, codes, standards, or requirements as follows:
  1. Polyethylene shall meet the Federal Motor Vehicle Standard No. 302 which specifies a burning rate of less than 4 inches per minute.
  2. Upholstery materials shall meet requirements set forth in the State of California Bureau of Home Furnishings Technical Bulletin No. 117.
  3. Fire-Performance Characteristics of Seat Padding: Provide chairs that comply with test method included in California Technical Bulletin 117.
  4. Cushioning and padding shall be self-extinguishing as defined in the requirements as set forth in the State of California Bureau of Home Furnishings Technical Bulletin No. 117.
  5. Full Scale Fire Performance Characteristics of Finished Chair: If required by State Statute, provide chair that complies with State of California Technical Bulletin No. 133
- G. Pre-Installation Conference: Prior to commencing the chair installation meet at the project site to review the installation.
- H. Single Source Responsibility: Arena chairs shall be provided by a single manufacturer.

**1.6 WARRANTY**

- A. General: The warranty shall be in addition to and not a limitation of other rights the Owner may have against the Contractor, Installer, or Manufacturer, under the Contract Documents.
- B. Warranty: Provide warranty signed by an officer of the chair manufacturer that provides for repair, replacement, or both, of arena chairs and components found to be defective in appearance or unusable due to defects in performance. Warranty shall provide for materials and labor.
  - 1. General Warranty Period: 12 months after the Date of Substantial Completion.
  - 2. Special Warranties: Provide the following special warranties:
    - a. Chair Standards: 10 year period against failure of the base material.
    - b. Hinge mechanism: 5 year period against failure of the hinge to provide for automatic rising.
    - c. Painted components: 10 year period against color change, beyond normal use. Deterioration of metals due to corrosion resulting from physical damage to the paint finish, after acceptance by Owner, is not covered by the warranty.
    - d. Plastic Components: 3 year period against cracking, crazing, color change, or other failure of backs and seats.
    - e. Upholstery: 1 year period against breakdown of fabric and padding, beyond normal use.

**1.7 SCHEDULING**

- A. Coordinate Work of this Section with the construction of the seating bowl precast concrete and installation of handrails and guardrails.
- B. Provide detailed schedule in Critical Path Method (CPM) for fabrication and installation of chairs. Include decision dates for input to manufacturer on logo design, seat and row identification numbers, and completion of supporting construction.

**1.8 DELIVERY STORAGE AND HANDLING**

- A. Deliver chair components in manufacturer's unopened cartons clearly labeled with manufacturer's name and contents of cartons.
- B. Packaging and shipping methods shall prevent painted chair standards from coming in contact with each other as well as other painted metal components by utilizing protective covering over each component. Maintain the protective covering on each metal component until after metal component is installed. Coating failures resulting from improper packaging, shipping, and handling during installation shall be repaired or replaced prior to installing plastic components.
- C. Protect chair units from physical damage and abuse by other trades. Replace damaged units.
- D. Environmental Limitations: Do not install arena chairs until spaces are enclosed and weathertight; wet work in space is complete and dry; finishes, including painting, are complete; and work above ceilings is complete. Do not install chairs until ambient temperature and humidity conditions are continuously maintained at the levels anticipated for final occupancy.
- E. Field Measurements: Verify chair layout by field measurements before chair fabrication and indicate measurements on Seating Manifest. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

**1.9 MAINTENANCE**

- A. Maintenance Manuals: Provide maintenance manuals that describe procedures for the cleaning and service of the arena chairs. Include replacement part numbers and procedures for replacement.

- B. Extra Stock: Provide the following chair components that are manufactured from the same lot as the installed components. Prorate quantities among chair sizes, types and colors furnished.
1. Seats: 1 percent
  2. Backs: 1 percent
  3. Center Standards: 1 percent
  4. End Standards: 1 percent
  5. Cup Holders: 1 percent
  6. Hinge Components: 2 percent
  7. Fasteners and mounting hardware: 10 percent
  8. Easy access armrest: 2 percent
  9. Row Identification Plates: 5 of each
  10. Seat Identification Plates: 5 of each
  11. Fabrics:
    - a. Provide 200 yards each of main/upper concourse chair fabric.
    - b. Provide 40 yards of suite/club chair fabric.

## PART 2 - PRODUCTS

### 2.1 ARENA SEATING

- A. Basis-of-Design Products: The design is based on the products named. Subject to compliance with requirements, provide either the named products or comparable products by one of the other manufacturers specified.
1. General Arena Seating (Fixed Seating).
    - a. Riser Mounted, Upholstered Chairs.
    - b. Seat Width: 21" – 22"
    - c. Irwin Seating: "Millenium" 91.12.18.12 with 40-inch high back.
    - d. No. 18 cast iron end with screen printed logo plate.
    - e. Polymer armrests.
    - f. Color: As selected by Architect.
    - g. Fabric: DesignTex – Play Ball 1402-981 (Freestyle Blue).
  3. Sideline Club and Bunker Club Seating (Fixed Seating).
    - h. Riser Mounted, Upholstered Chairs.
    - i. Seat Width: 23"
    - j. Irwin Seating: "Marquee" 51.12.18.12 with 40-inch high back.
    - k. No. 18 cast iron end with screen printed logo plate.
    - l. Polymer cupholder armrests.
    - m. Color: As selected by Architect.
    - n. Fabric: Paul Brayton Designs – Almost Calf ACF822 Columbine.
  2. Suite Level Seating (Fixed Seating).
    - a. Riser Mounted, Upholstered Chairs.
    - b. Seat Width: 24"
    - c. Irwin Seating: "Marquee" 51.12.18.12 with 40-inch high back.
    - d. No. 18 cast iron end with screen printed logo plate.
    - e. Polymer armrests with drink table.
    - f. Color: As selected by Architect.
    - g. Fabric: Paul Brayton Designs – Almost Calf ACF822 Columbine.
  7. General Arena Seating (Fixed Telescoping Platforms for Retractable Seating).
    - h. Riser Mounted, Integral Telescoping Platform, Upholstered Chairs.
    - i. Seat Width: 21.5"
    - j. Irwin Seating: "Millenium" 91.12.18.12 with 40-inch high back.
    - k. No. 18 cast iron end with screen printed logo plate.
    - l. Polymer armrests.
    - m. Color: As selected by Architect.
    - n. Fabric: DesignTex – Play Ball 1402-981 (Freestyle Blue).

- o. Folding Mechanism: Chairs shall be ganged in no more than groups of five.
- 8. Goalie Seating (Fixed Telescoping Platforms for Retractable Seating).
  - p. Riser Mounted, Upholstered Chairs.
  - q. Seat Width: 23"
  - r. Irwin Seating: "Marquee" 51.12.18.12 with 40-inch high back.
  - s. No. 18 cast iron end with screen printed logo plate.
  - t. Polymer cupholder armrests.
  - u. Color: As selected by Architect.
  - v. Fabric: Paul Brayton Designs – Almost Calf ACF822 HG Columbine.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Hussey Seating
  - 2. Irwin Seating Company
    - a. Basis of Design
  - 3. Camatic Seating

## 2.2 MATERIALS

- A. Anchor Bolts: The Chair Manufacturer shall provide compatible anchorbolts appropriate for mounting riser and tread mounted chairs. The Chair Manufacturer shall provide all necessary materials for a complete seating installation.
- B. Plastic Components: Plastic seat and back components shall be double-wall construction, high density polyethylene plastic formulated with ultra-violet inhibitors to minimize surface deterioration. Surface finish shall be manufacturer's standard textured finish.
- C. Steel Shapes, Plates, and Sheet Metal: ASTM A 36/A36M; coated as specified for chair standards.
- D. Standards: Provide riser mounted standards. Provide manufacturer's "low riser" unit if required to accommodate concrete substrate anchorage. Provide custom riser mount as required for lower bowl ventilation system per the details.
  - 1. Provide manufacturer's standard cast iron, cast aluminum, or tubular steel design.
  - 2. Provide riser mounted end of row standards.
  - 3. If required, provide steel transfer plate to accommodate concrete substrate anchorage.
  - 4. Chair standard design: End of row standards shall be custom for this project. Provide custom logo insert as follows:
    - a. Logo: Artwork for logo is available from the Owner. Provide logo in raised, three dimensional pattern; right and left hand applications.
- E. Hinge Mechanism: Provide automatic lifting of the seat to a full fold position, allowing for manually lifting the seat to a full fold position regardless of arena chair design.
  - 1. Hinge mechanism shall perform to the requirements of ASTM F851, Test Method for Self-Rising Seat Mechanisms plus the performance requirements required by this specification section.
- F. Seat and Row Identification: Aluminum plates with identification graphics in color, font, and design as selected by Architect.
  - 1. Seat Identification: Securely affix to recess in center of seat back.
  - 2. Row Identification: Securely affix to the end standard of each row, including "Easy Access Chair" end.
  - 3. Identification mounting: Recessed and canted mounting above the cast team logo.
- G. Concealed Plywood: HPVA HP-1 hardwood plywood, made with adhesive containing no urea formaldehyde, or DOC PS 1 softwood plywood, as standard with manufacturer.
- H. Plastic Laminate: NEMA LD 3, Grade VGS for vertical surfaces and Grade HGS for horizontal surfaces.
  - 1. Color and Pattern: As indicated on the Finish Legend.

- I. Cup Holders: Cup holders shall be mounted to the back of fixed tread or riser mounted arena chair standards in the lower seating bowl. Manufacturers of cup holders include Caddy Products and Cy Young Industries.
  1. Mount cup holders to the backs of arena chairs.
  2. Provide integral cup holders and armrest caps for arena chairs in front rows of seating levels.
  3. Color of cup holder shall match the color of the standards.
  4. Advertising for cup holders will be provided by the Owner. The cup holder manufacturer shall apply advertising on the cup holder in the factory prior to shipping the cup holders to the chair manufacturer.

### **2.3 GENERAL ARENA CHAIR CONSTRUCTION**

- A. Standards: Riser Mounted, Single pedestal center and end standards with integral arm rests.
  1. Color: Black.
- B. Chair Backs: 40 inch high outer back; injection molded textured high impact polypropylene.
  1. Pad: 2 inch polyurethane pad over contoured wood frame; face upholstered.
  2. Rear of Back: Textured high impact polypropylene.
- C. Chair Seats: Injection molded textured high impact polypropylene seat bottom, with self rising mechanism.
  1. Pad: 3 to 4 inch molded polyurethane ergo system pad, face upholstered.
  2. Seat Bottom: Textured high impact polypropylene.
- D. Concourse Chair Fabrics: Class A fire rated in accordance with ASTM E84 Tunnel Test.
  1. Acceptable Manufacturers: Subject to compliance with the requirements of the specified material, other acceptable manufacturers include the following:
    - a. Absecon
    - b. Bernhardt
    - c. Cartwright
    - d. DesignTex
    - e. Paul Brayton Designs

### **2.4 GOALIE SEATING SIDELINE CLUB AND BUNKER CLUB SEATING CONSTRUCTION**

- A. Standards: Riser Mounted, Single pedestal center and end standards with integral arm rests.
  1. Color: Black.
- B. Chair Backs: 40 inch outer back; injection molded textured high impact polypropylene.
  1. Pad: 2 inch polyurethane pad over contoured wood frame; face upholstered with tufting.
  2. Rear of Back: Textured high impact polypropylene.
- C. Chair Seats: Injection molded textured high impact polypropylene seat bottom, with self rising mechanism.
  1. Pad: 3 to 4 inch molded polyurethane ergo system pad, face upholstered.
  2. Seat Bottom: Textured high impact polypropylene.
- D. Club Chair Fabric: Class A fire rated in accordance with ASTM E84 Tunnel Test.
  1. Acceptable Manufacturers: Subject to compliance with the requirements of the specified material, other acceptable manufacturers include the following:
    - a. Cartwright
    - b. CMI Enterprises
    - c. Naugahyde
    - d. Paul Brayton Designs

### **2.5 SUITE CHAIR CONSTRUCTION**

- A. General: Provide chairs for Typical Suites, Large Suites, Suite Lounges, Loge Boxes.
- B. Standards: Riser Mounted, Single pedestal center and end standards.
  - 1. End Standards: Stained wood panel as selected by Architect.
  - 2. Center Standards: Powder coated.
    - a. Color: Black.
- C. Chair Backs: 40 inch high profile outer back; injection molded textured high impact polypropylene.
  - 1. Pad: 3 inch polyurethane pad over contoured wood frame; face upholstered.
  - 2. Rear of Back: Textured high impact polypropylene.
- D. Chair Seats: Injection molded plastic seat bottom, with self rising mechanism;
  - 1. Pad: 3 to 4 inch molded polyurethane ergo system pad, face upholstered.
  - 2. Seat Bottom: Textured high impact polypropylene.
- E. Arm Rests for Suite Chairs: Where indicated on the Drawings, provide wood armrests.
  - 1. Wood Armrests: Hardwood stained and finished to match suite casework.
- F. Suite Chair Fabric: Class A fire rated in accordance with ASTM E84 Tunnel Test.
  - 1. Acceptable Manufacturers: Subject to compliance with the requirements of the specified material, other acceptable manufacturers include the following:
    - a. Cartwright
    - b. CMI Enterprises
    - c. Naugahyde
    - d. Paul Brayton Designs

## 2.6 INTEGRAL PLATFORM CHAIR CONSTRUCTION

- A. Standards: Riser mounted.
  - 1. Color: Black.
- B. Chair Backs: 40 inch high profile outer back; injection molded textured high impact polypropylene.
  - 1. Pad: 2 inch polyurethane pad over contoured wood frame; face upholstered.
  - 2. Rear of Back: Textured high impact polypropylene.
- C. Chair Seats: Injection molded plastic seat bottom, with self rising mechanism;
  - 1. Pad: 3 to 4 inch molded polyurethane ergo system pad, face upholstered.
  - 2. Seat Bottom: Textured high impact polypropylene.
- D. Arm Rests: Plastic armrests with cup holders.
- E. Chair Fabric: Class A fire rated in accordance with ASTM E84 Tunnel Test.
  - 1. Acceptable Manufacturers: Subject to compliance with the requirements of the specified material, other acceptable manufacturers include the following:
    - a. Cartwright
    - b. CMI Enterprises
    - c. DesignTex
    - d. Naugahyde
    - e. Paul Brayton Designs

## 2.7 FINISHES

- A. Plastic Component Color: Two as selected by Architect
- B. Standards, seat arms and related cast iron, cast aluminum, or ferrous metal components:
  - Factory applied coating as follows:
    - 1. Surface Preparation: Grit blasting and washing process, in addition to special surface preparation treatments that are standard to the manufacturer.

2. Pretreatment: Manufacturer's standard multi-stage bonderization process.
3. Primer: Manufacturer's standard electrodeposition epoxy primer.
4. Finish Coating: Manufacturers standard superpolyester TGIC resin powder coating.
5. Colors of Standards: As selected by Architect.
9. Colors of Logos: Three colors plus base color of standard.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine substrates and conditions with Installer and Chair manufacturer present for compliance with requirements for construction tolerances and resultant impact on anchors, fasteners, and alignment. Do not proceed with installation until unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. General: Install arena chairs in locations indicated and fasten securely to substrates according to manufacturer's recommendations and approved submittals.
  1. Use installation methods and fasteners that produce fixed audience seating assemblies with individual chairs capable of supporting an evenly distributed 600-lb (272-kg) static load without failure or other conditions that might impair the chair's usefulness.
- B. Install seating with chair ends aligned from first to last row and with backs and seats varied in width to optimize sightlines.
- C. Install riser-mounted attachments to maintain uniform chair heights above floor and to ensure level alignment of chair backs.
  1. Anchors: Tread and riser mounted standards shall be attached to the substrates with the appropriate anchors. Ends of anchors shall not protrude from the face of nut any more than 3/8 inch. Trim anchors as necessary and provide a finished end with no burrs or sharp edges.
- D. Install seating so moving components operate smoothly and quietly.
- E. Fasteners: Seats and backs shall be connected to hinge mechanisms and chair standards using screws of sufficient length for attachment, but not protruding from face of nut any more than 1/8 inch. Provide a finished end with no burrs or sharp edges.
- F. Adapter Plates: Design adapter plates to support chairs over expansion joints to allow for no deflection. Anchor adapter plates to risers to span expansion joints with no vertical deflection.

#### **3.3 ADJUSTMENT AND CLEANING**

- A. Adjust self-rising seat mechanisms to align seats in each row when in upright position.
- B. Before final inspection, thoroughly clean arena chairs using the manufacturer's recommended procedure.
- C. Repair minor abrasions and imperfections in finishes with coating that matches factory-applied finish.
- D. Replace padding damaged during installation.

#### **3.4 FIELD QUALITY CONTROL**

- A. Manufacturer or its assigned agent shall provide supervision of the Work and perform field inspection prior to request for final punchlist.
  1. Correct identified defects or irregularities.

END OF SECTION

**SECTION 12 66 00 - TELESCOPING STANDS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Electrically operated telescoping stands.

**1.2 DEFINITIONS**

- A. Forward Folding: Wall- or floor-attached bleachers that open in the forward direction by moving the front row away from the stack to the fully extended position.
- B. Reverse Folding: Floor-attached bleachers that open in the backward direction by moving the last row away from the stack to the fully extended position.
- C. Freestanding: Being free or away from a permanent wall.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for telescoping stands.
  - 2. Include load capacities, assembly characteristics, and furnished accessories.
  - 3. Include electrical characteristics of electrical components, devices, and accessories.
- B. Shop Drawings: For telescoping stands in both stacked and extended positions.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include load capacities.
  - 3. Show seating layout, aisle widths, row-lettering and seat-numbering scheme, and wheelchair accessibility provisions.
  - 4. Show locations and details for installing operator components, switches, and controls.
  - 5. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
  - 6. Include diagrams for power, signal, and control wiring.
- C. Samples for Initial Selection: For each type of exposed product and for each color and texture required.
  - 1. Include Samples of accessories involving color and finish selection.
- D. Samples for Verification: For the following products prepared on Samples of size indicated below:
  - 1. Decking: 6-inch-square Samples of finished material.
  - 2. Metal Components: 6-inch-square Sample of each color and finish indicated.
  - 3. Seating Material: 6-inch-square Sample of each seating material, color, and finish indicated.
  - 4. Seat Unit: Full-size unit of each type.
  - 5. Upholstery Fabric: 12-inch-square Sample of fabric from dye lot to be used for the Work, with specified treatments applied. Show complete pattern repeat. Mark top and face of fabric.

6. Signage: Full-size units for row letters, seat numbers, each type of accessibility sign, and custom graphics.
- E. Delegated-Design Submittal: For telescoping stands indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

### 1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.
- C. Product Certificates: For each type of telescoping stand assembly.
- D. Material Certificates: For each type of flame-retardant treatment of upholstery fabric.
- E. Field quality-control reports.

### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For telescoping stands to include in operation and maintenance manuals.
  1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
    - a. Procedures for conducting periodic inspections.
    - b. Precautions for cleaning materials and methods that could be detrimental to telescoping-stand finishes and performance.
    - c. Methods for maintaining upholstery fabric.

### 1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
  1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- D. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the state where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of pipe and tube railings that are similar to those indicated for this Project in material, design, and extent.
- E. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.
  1. Build mockup of typical telescoping stand as shown on Drawings.
  2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

### 1.8 FIELD CONDITIONS

- A. Finished Spaces: Do not deliver or install telescoping stands until finishes in spaces to receive them are complete, including suspended ceilings, floors, and painting.
- B. Field Measurements: Indicate measurements on Shop Drawings.

**1.9 WARRANTY**

- A. General: Provide Manufacturers standard coverage on all parts and systems – minimum 1 year from Substantial Completion and completed training.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Telescoping stands to withstand the effects of gravity loads, operational loads, and other loads and stresses according to ICC 300.
- B. Fire-Test-Response Characteristics of Upholstered Chairs: Comply with California Technical Bulletin 117 and Bulletin 133.
- C. Accessibility Standard: Comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design, the ABA Standards of the Federal agency having jurisdiction, and ICC A117.1.

**2.2 TELESCOPING STANDS**

- A. System Description: Operable system of multiple-tiered seating on interconnected folding platforms that close for storage, without being dismantled, into a nested stack. Telescoping-stand units permit opening and closing of adjacent, individual and multiple rows, and close with vertical faces of platforms in the same vertical plane.
  - 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 2. Telescoping-Stands Standard: ICC 300.
- B. Wall-Attached Telescoping Stands: Forward-folding system, in which the bleachers open in the forward direction by moving the front row away from the stack to the fully extended position and the rear of bleacher understructure permanently attaches to wall construction.
  - 1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Hussey Seating Company.
    - b. StageRight
    - c. Irwin Telescopic Seating
  - 2. Row Spacing: As indicated on Drawings.
  - 3. Row Rise: As indicated on Drawings.
  - 4. Seat Type: As indicated on Drawings.
  - 5. Elevated Front Row: Height indicated on Drawings.
  - 6. Operation: Electrically operated, with friction-type, integral power unit.
  - 7. Electrical Characteristics for Each Seating Section:
    - a. Horsepower: As indicated on Drawings.
    - b. Single-Phase Voltage: As indicated on Drawings.
    - c. Three-Phase Voltage: As indicated on Drawings.
  - 8. Electrical Controls:
    - a. Control Devices: Wireless control system unless indicated otherwise.
    - b. Limit Switches: Automatically stop power system when telescoping stands reach fully opened or closed positions.
    - c. Motion Monitor: Flashing light with self-contained warning horn, rated at 85 dB at 10 feet, mounted under telescoping seating for audio and visual warning during operation.
    - d. Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.

- C. Recessed Telescoping Stands : Forward-folding system, in which the bleachers open in the forward direction by moving the front row away from the stack to the fully extended position and the rear of bleacher understructure permanently attaches to building construction so that closed stands are recessed in opening.
1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Hussey Seating Company.
    - b. Interkal LLC.
    - c. Irwin Telescopic Seating Company.
    - d. Kodiak Industries Ltd.
  2. Row Spacing: As indicated on Drawings.
  3. Row Rise: As indicated on Drawings.
  4. Seat Type: As indicated on Drawings.
  5. Elevated Front Row: Height indicated on Drawings.
  6. Operation: Electrically operated, with friction-type, integral power unit.
  7. Electrical Characteristics for Each Seating Section:
    - a. Horsepower: As indicated on Drawings.
    - b. Single-Phase Voltage: As indicated on Drawings.
    - c. Three-Phase Voltage: As indicated on Drawings.
  8. Electrical Controls:
    - a. Control Devices: Wireless control system unless indicated otherwise.
    - b. Limit Switches: Automatically stop power system when telescoping stands reach fully opened or closed positions.
    - c. Motion Monitor: Flashing light with self-contained warning horn, rated at 85 dB at 10 feet, mounted under telescoping seating for audio and visual warning during integral power operation.
    - d. Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.
- D. Freestanding, Forward-Folding, Telescoping Stands: Floor-attached system, in which the bleachers open in the forward direction, by moving the front row away from the stack to the fully extended position, and the rear of bleacher understructure permanently attaches to floor construction.
1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Hussey Seating Company.
    - b. Interkal LLC.
    - c. Irwin Telescopic Seating Company.
    - d. Kodiak Industries Ltd.
  2. Row Spacing: As indicated on Drawings.
  3. Row Rise: As indicated on Drawings.
  4. Seat Type: As indicated on Drawings.
  5. Elevated Front Row: Height indicated on Drawings.
  6. Operation: Electrically operated, with friction-type, integral power unit].
  7. Electrical Characteristics for Each Seating Section:
    - a. Horsepower: As indicated on Drawings.
    - b. Single-Phase Voltage: As indicated on Drawings.
    - c. Three-Phase Voltage: As indicated on Drawings.
  8. Electrical Controls:
    - a. Control Devices: Wireless control system unless indicated otherwise.
    - b. Limit Switches: Automatically stop power system when telescoping stands reach fully opened or closed positions.

- c. Motion Monitor: Flashing light with self-contained warning horn, rated at 85 dB at 10 feet, mounted under telescoping seating for audio and visual warning during integral power operation.
  - d. Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.
- E. Freestanding, Reverse-Folding, Telescoping Stands: Floor-attached, reverse-opening system, in which the bleachers open in the backward direction, by moving the last row away from the stack to the fully extended position, and the front of bleacher understructure permanently attaches to floor construction.
  - 1. Basis-of-Design Product: Refer to the Finish Legend on Drawings. Subject to compliance with requirements, provide the product listed in the Finish Legend or comparable products including but are not limited to the following:
    - a. Hussey Seating Company.
    - b. Interkal LLC.
    - c. Irwin Telescopic Seating Company.
    - d. Kodiak Industries Ltd.
  - 2. Row Spacing: As indicated on Drawings.
  - 3. Row Rise: As indicated on Drawings.
  - 4. Seat Type: As indicated on Drawings.
  - 5. Elevated Front Row: Height indicated on Drawings.
  - 6. Aisle Recovery: Equip unit with ability to create a front cross-aisle 42 inches wide when stand is open.
  - 7. Operation: Electrically operated, with friction-type, integral power unit.
  - 8. Electrical Characteristics for Each Seating Section:
    - a. Horsepower: As indicated on Drawings..
    - b. Single-Phase Voltage: As indicated on Drawings.
    - c. Three-Phase Voltage: As indicated on Drawings.
  - 9. Electrical Controls:
    - a. Control Devices: Wireless control system unless indicated otherwise.
    - b. Limit Switches: Automatically stop power system when telescoping stands reach fully opened or closed positions.
    - c. Motion Monitor: Flashing light with self-contained warning horn, rated at 85 dB at 10 feet, mounted under telescoping seating for audio and visual warning during integral power operation.
    - d. Transformer: As required to coordinate current characteristics of motor and control station with building electrical system.

### 2.3 COMPONENTS

- A. Benches: Seats and skirts.
  - 1. Material: As indicated on Drawings.
    - a. Color: As selected by Architect from manufacturer's standard.
  - 2. Bench Height: As indicated on Drawings.
  - 3. Bench Depth: As indicated on Drawings.
  - 4. Backs: Folding backrests permanently attached to bench units.
    - a. Material: As indicated on Drawings.
    - b. Operation: Manual.
- B. Chairs: Rotating from upright, locked position to folded-down position that allows supporting platform to telescope for storage. In upright position, seats fold up to allow passage of persons within row.
  - 1. Operation: Automatic.
  - 2. Chair Width: As indicated on Drawings.
  - 3. Seat Height: Not less than 17 inches or more than 18 inches.
  - 4. Seats: As indicated on Drawings..
    - a. Color: As selected by Architect from manufacturer's full range.

5. Backs: As indicated on Drawings.
  - a. Color: As selected by Architect from manufacturer's full range.
6. Armrests: As indicated on Drawings.
  - a. Color: As selected by Architect from manufacturer's full range.
- C. Wheelchair-Accessible Seating: Locate seating to provide wheelchair-accessible seating at locations indicated on Drawings.
  1. Equip tiers adjacent to wheelchair-accessible seating with front rails as required by ICC 300.
  2. Equip cutouts with full-width front closure panels that match decking construction and finish and that extend from underside of tiers adjacent to cutouts to 1-1/2 inches from finished floor.
- D. Deck: As indicated on Drawings.
  1. Finish: Manufacturer's standard.
    - a. Color: As selected by Architect from manufacturer's standard colors.
- E. Risers: Steel sheet with manufacturer's standard, rust-inhibiting coating or hot-dip galvanized finish.
- F. Safety Rails: Steel, finished with manufacturer's standard powder coat system.
  1. Removable mid-aisle handrails located at centerline of each aisle with seating on both sides.
  2. End rails (guards) that are removable.
  3. Back rails (guards) along rear of units where required by ICC 300.  
Removable front rails (guards) along front of units where required by ICC 300.
  4. Removable rails around accessible seating cutouts and truncations.
  5. Removable, programming-support front rails to allow seating in upper rows while lower rows remain in the stored position.
  6. Color: Match Architect's sample.
- G. Understructure: Structural steel.
  1. Finish: Manufacturer's standard rust-inhibiting finish.
  2. Color: Manufacturer's standard.
- H. Support Column Wheels: Nonmarring, soft, rubber-face wheel assembly under each support column.
  1. Include wheels of size, number, and design required to support stands and operate smoothly without damaging the flooring surface, but no fewer than four per column or less than 4 inches in diameter and 1-1/2 inches wide.
- I. Control Devices:
  1. Wireless: Hand-held, wireless transmission unit that operates wireless receivers in each operating section, with a transmission range to keep handheld control unit within close proximity and with full view of stand and its movement area. Provide one unit for each operating section.
- J. Fasteners: Vibration proof, in manufacturer's standard size and material.

## 2.4 ACCESSORIES

- A. Steps:
  1. Slip-resistant, abrasive tread nosings at aisles.
  2. Intermediate aisle steps, fully enclosed, at each aisle.
  3. Transitional top step, fully enclosed, at each aisle where last row of telescoping stands is adjacent to a cross aisle.
  4. Removable front steps, fully enclosed, at each aisle, that engage with front row to prevent accidental separation or movement and are equipped with a minimum of four skid-resistant feet.

- B. Portable Stairs: Portable access-stair units equipped with handrails, with no fewer than four full-swiveling, nonmarring wheels and a locking mechanism to prevent movement during use.
- C. Ramps: Portable access-ramp units, slope as indicated on Drawings, equipped with handrails, with no fewer than four full-swiveling, nonmarring wheels and a locking mechanism to prevent movement during use.
- D. Closure Panels and Void Fillers:
  1. Aisle closures at foot level that produce flush vertical face at aisles when system is stored.
  2. End panels covering exposed ends of stands in the stored position.
  3. Back panels covering rear of freestanding units. Panels extend full height and width of unit.
  4. Panels at cutouts and truncations for accessible seating.
  5. Rear fillers including supports for closing openings between top row and rear wall of adjoining construction.
  6. Gap fillers for closing openings between stand units or between stand units and adjoining construction.
- E. Spanner Seats: Removable, designed to span area between adjacent stand units, in locations indicated on Drawings.
- F. Signage:
  1. Row letters at each row end.
  2. Seat numbers at 18 inches o.c. on benches and on each chair.
  3. Accessibility signs at each accessible space and accessible aisle seat.
  4. Custom graphics as indicated on Drawings on whole seating array.
- G. Scorer's Table: Removable unit that attaches to mounting sockets installed in telescoping stand unit.

## 2.5 MATERIALS

- A. Lumber: Kiln dried, surfaced four sides; southern pine complying with SPIB's "Standard Grading Rules for Southern Pine Lumber" for B & B finish (B and better) grade-of-finish requirements.
- B. Plywood: PS 1 as standard with manufacturer.
- C. Molded Plastic: High-density polyethylene; blow or injection molded, color-pigmented, textured, impact-resistant, with integral reinforcing ribs for attachment and anchoring points. Provide with UV inhibitors to retard fading.

## 2.6 FABRICATION

- A. Fabricate telescoping stands to operate easily without special tools or separate fasteners unless otherwise indicated.
- B. Round corners and edges of components and exposed fasteners to reduce snagging and pinching hazards.
- C. Form exposed work with flat, flush surfaces, level and true in line.
- D. Supports: Fabricate supports to withstand, without damage to components, the forces imposed by use of stands without failure or other conditions that might impair their usefulness.
  1. Cantilever bench seat supports to produce toe space uninterrupted by vertical bracing.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Install telescoping stands according to ICC 300 and manufacturer's written instructions.

### **3.3 FIELD QUALITY CONTROL**

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Perform the following tests and inspections:
  - 1. ICC 300 Inspection: Inspect installed telescoping stands to verify that construction, installation, and operation are according to ICC 300 requirements.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Telescoping stands will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

### **3.4 ADJUSTING**

- A. Adjust backrests so that they are at proper angles and aligned with each other in uniform rows.
- B. Adjust hardware and moving parts to function smoothly, and lubricate, test, and adjust each telescoping stand unit to operate according to manufacturer's written instructions.
- C. Clean installed telescoping stands on exposed and semi-exposed surfaces. Touch up factory-applied finishes or replace components as required to restore damaged or soiled areas.
- D. Replace upholstery fabric damaged during installation or work of other trades.

### **3.5 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to inspect, adjust, operate, and maintain telescoping stands.

### **3.6 MAINTENANCE AND OPERATION**

- A. The Owner is responsible for maintaining, monitoring the operation of, and performing periodic inspections on telescoping stands to ensure building-occupant safety. The Owner must be aware of and able to fulfill this obligation.

END OF SECTION

**SECTION 12 66 23 - PORTABLE PLATFORMS****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes the following:
  - 1. Portable platforms.
  - 2. Movable pedestal platform chairs
- B. Related Requirements: The following Sections contain requirements that relate to this Section:
  - 1. Division 12 Section "Bench Seating" for aluminum benches to be mounted on portable seating platforms.
  - 2. Division 12 Section "Arena Chairs" for fixed stadium chairs to be mounted on portable seating platforms.

**1.2 DEFINITION**

- A. Portable platforms are demountable systems of multiple-tiered platforms on interconnected, demountable supports that permit dismantlement, into a stacked relationship for purpose of storing and/or moving.
- B. Movable pedestal platform chairs are contoured polyethylene units mounted on steel beams in groups of up to 7 chairs to facilitate removal, storage, and re-installation.

**1.3 SYSTEM PERFORMANCE REQUIREMENT**

- A. Structural Performance: Design, engineer, fabricate, and install platforms to withstand the following structural loads without exceeding the allowable design working stresses of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each respective component of each platform unit.
  - 1. Design Load: NFPA 102, Chapter 5.
  - 2. Live Load: 125 lbs. per square foot.
  - 3. Side sway load: 24 lbs. per linear foot of row.
  - 4. Front to rear load sway load: 10 lbs. per linear foot or row.
- B. Structural Performance of Seating Units: In the mounted position, seating units shall resist damage caused from the following forces:
  - 1. 600 pound load applied vertically to each seat pan.
  - 2. 350 pound load applied horizontally to each seat back.
- C. Structural Performance of Handrails and Railings: Provide handrails and railings capable of withstanding the following structural loads without exceeding allowable design working stresses of materials for handrails, railings, anchors, and connections:
  - 1. Top Rail of Guards: Capable of withstanding the following loads applied as indicated:
    - a. Concentrated load of 200 lbf applied at any point and in any direction.
    - b. Uniform load of 50 lbf/ft. applied horizontally and concurrently with uniform load of 100 lbf/ft. applied vertically downward.
    - c. Concentrated and uniform loads above need not be assumed to act concurrently.
  - 2. Handrails Not Serving As Top Rails: Capable of withstanding the following loads applied as indicated:
    - a. Concentrated load of 300 lbf applied at any point and in any direction.
    - b. Uniform load of 50 lbf/ft. applied in any direction.
    - c. Concentrated and uniform loads above need not be assumed to act concurrently.

3. Infill Area of Guards: Capable of withstanding a horizontal concentrated load of 200 lbf applied to 1 sq. ft. at any point in system, including panels, intermediate rails, balusters, or other elements composing infill area.
  - a. Load above need not be assumed to act concurrently with loads on top rails in determining stress on guard.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

#### 1.4 SUBMITTALS

- A. Shop drawings indicating layout of portable platforms with seating heights and layouts, row spacing and rise, aisle widths and locations, overall dimensions for installed and stored units, connections and relationship to adjoining work, accessories, types of materials, and finishes.
- B. Where installed products are indicated to comply with certain design loadings, include structural computations, material properties, and other information needed for structural analysis that has been signed and sealed by a qualified professional engineer responsible for their preparation.
- C. Maintenance data for inclusion in Operating and Maintenance Manual specified in Division 01 including detailed instructions indicating proper means for installing, dismantling, and maintaining platforms is required.

#### 1.5 QUALITY ASSURANCE

- A. Single Source Responsibility: Provide portable platforms by the same manufacturer as the telescoping platforms, if provided.
- B. NFPA Standard: Comply with requirements of NFPA 102, "Standard for Grandstands, Folding and Telescopic Seating, Tents, and Membrane Structures," and specifically with Chapter 5, "Folding and Telescopic Seating," except where more stringent requirements are indicated or imposed by authorities having jurisdiction.
- C. Installer Qualifications: Engage an experienced Installer to perform unit of work of this section who has specialized in the installation of types of portable platforms similar to that required for this project and who is acceptable to, and certified by, manufacturer of portable platforms.
- D. Engineer Qualifications: Professional engineer licensed to practice in jurisdiction where project is located and experienced in providing engineering services of the kind indicated that have resulted in the successful installation of portable platforms similar in material, design, and extent to those indicated for this Project.
- E. Qualify welding processes and welding operators in accordance with AWS D1.1 "Structural Welding Code - Steel" and D1.3 "Structural Welding Code - Sheet Steel."

#### 1.6 PROJECT CONDITIONS

- A. Field Measurements: Check actual dimensions of construction affecting portable platforms by accurate field measurements before fabrication; show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of Work.

#### 1.7 WARRANTY

- A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

- B. Special Warranty: Manufacturer shall warrant all items against defects in material and workmanship for one year from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  1. Stageright
  2. Sightline Commercial Solutions.
  3. Sico America Inc.

### **2.2 MATERIALS**

- A. Structural Steel Shapes, Plates, and Bars: ASTM A 36, except where higher strength steel is indicated or standard with manufacturer.
- B. Uncoated Steel Sheet: ASTM A 366, commercial quality, cold-rolled sheet, stretcher leveled.
- C. Steel Tubing: ASTM A 501, hot-formed.
- D. Extruded Aluminum: Manufacturer's standard extrusions of sizes and profiles required to achieved tread and riser dimensions indicated, 6063-T52, AA-C22A41 clear anodized finish; 0.094-inch minimum thickness.
- E. Aluminum Tubing: ASTM B 429, 6063-T6, Schedule 40.

### **2.3 MANUFACTURED UNITS**

- A. Portable Platforms: Construct units to stand on the arena floor and support the design loads specified. Seating shall be manually placed on the platforms and ganged together.
- B. Understructure: Fabricate understructure from structural steel or aluminum members of size, spacing, and form required to support design loads.
- C. Deck system: Decking and aisle steps shall be unitized assemblies of snap interlocked, extruded aluminum shapes with one-piece, non-slip ribbed extruded aluminum nosings and one-piece high tensile galvanized steel sheet risers. Pre-finished steel sheet riser with black vinyl finish risers as standard with manufacturer are acceptable. Painted steel risers are unacceptable
  1. Underside of deck shall consist of inverted "T's" approximately 3 inches on center with a material thickness to meet design criteria. Deck ends to be rigidized and protected with heavy aluminum end caps.
  2. Provide fully closed tread and riser construction.
  3. Attachment of Deck System to Understructure: Through-bolted with extrusion clips fore/aft to deck stiffeners, doublers, and frame cantilevers or manufacturer's standard locator pin fastening system. Attachment by the use of self tapping fasteners is unacceptable.
  4. Aisle Steps: Fabricate aisle steps to match deck system in strength and appearance

- D. Deck system:
1. Lower rear riser shall be a continuous formed steel member recessed to provide full heel room and provide a continuous envelope for the deck and longitudinal support of the deck surface.
  2. Front nose beam shall be a continuous structural member to support design loads and provide continuous longitudinal support of the deck surface.
  3. "Panelam" decking shall have a 0.030 inch high density polyethylene overlay, permanently bonded to structural western fir plywood in strict compliance with U.S. Product Standard PS 195. Finished thickness shall be 5/8 inch minimum. Polyethylene or polypropylene finish shall be textured grey. Plywood shall be supported along the front and back edge for maximum rigidity. An "H" type aluminum splice beam shall be provided between all decks.
  4. Decking shall be through bolted to steel supports with locking hardware. Decking attached by the use of self tapping fasteners is unacceptable.
- E. Platform Chairs: Mount up to 7 chairs on steel mounting beams.
1. Seats and backs: One-piece double wall construction of polyethylene.
    - a. Colors: To match Architect's sample.
  2. Supports: Heavy gauge brackets screw attached to seat and back with threaded inserts.
  3. Operation: Chairs shall be rigidly anchored to platform with stainless steel nuts and bolts which prevent rocking or swaying of in-place chairs.
- F. Rails: Provide removable guardrail sections with intermediate members to fulfill design criteria for exposed bank ends and front row of each platform seating unit per NFPA 101.
1. Aluminum: 1-1/4 inch schedule 40 aluminum pipe, unless indicated otherwise.
    - a. Provide 42 inch high rails at ends of rows.
    - b. Provide 34 inch high rails along aisles and stairs.
  2. Aluminum with Polycarbonate Infill panels: 1-1/4 inch schedule 40 aluminum pipe with plastic glazing panels as indicated on the drawings.
    - a. Provide 30 inch high guardrails in front of seating areas.
- G. Accessories: Provide the following accessories of manufacturer's standard design and construction at locations indicated or required.
1. Storage racks or carts: Provide for storage of portable platforms.
  2. Integral Lift Beams: Provide integral steel lifting beams on each platform section. Lift beams shall be designed to facilitate transporting of platforms without damaging the structure, per manufacturer's requirements.
  3. Aisle Lights: Install strip aisle lights full width of aisle at each face of the riser and each aisle step riser unless otherwise indicated and as required to provide minimum one foot candle on the horizontal surface of each aisle tread. Provide junction boxes and interconnecting wiring required to connect to building electrical systems.
  4. Transport Trucks: Heavy duty mobile handling trucks for storage and transportation of all demountable rails associated with each platform seating system. Transport trucks to be approximately 4'-0" wide and 8'-0" long with support brackets as required to store rails double high and from two sides of truck. Fit trucks with a sufficient quantity of 360 deg. swivel 6" diameter x 2" face wheels to insure ease of manual movement and stability of truck. Wheel treads to be molded polyurethane bonded to metal hub. Coordinate number of trucks required with event configurations indicated.
  5. Row Letter/Number Plates: Provide 2" x 2" etched anodized aluminum row letter plates to be affixed to the front riser of each row. Row lettering/numbering shall be silk screened in the size, style and color as approved by the Architect.

6. Fabric End Closure: Provide 16 oz. nylon reinforced coated vinyl fabric end closures at each exposed end of each seating bank. Closures shall be designed to be attached by 3/8 inch diameter brass grommets spaced at 6 inches on center along all perimeter edges. Provide integral polyethylene rubber shock cord with nylon jacket around rubber core and plasticized steel hooks through grommets to stretch fabric over exposed ends of seating banks. Sew panels together to form single piece closure. Provide continuous hem at perimeter as required to prevent pull-out of grommets. Provide portable storage units designed to transport fabric end closures from installed locations to storage and protect fabric end closures from damage while stored.

## 2.4 FINISHES

- A. Aluminum Finishes: Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
- B. Steel Finishes
  1. Surface Preparation: Solvent-clean surfaces in compliance with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel in compliance with SSPC-SP 5 (White Metal Blast Cleaning) or SSPC-SP 8 (Pickling).
  2. Baked Enamel Finish: Immediately after cleaning and pretreatment, apply manufacturer's standard 2-coat baked enamel finish consisting of prime coat and thermosetting topcoat to exposed and concealed metal surfaces including understructure, except where other types of finishes are indicated
  3. Vinyl-Clad Steel Finish: Apply manufacturer's standard flow-coated vinyl plastisol finish over shop-cleaned steel sheet to produce a vinyl coating with a cured thickness of not less than 8 mils and in manufacturer's standard, uniform color.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install portable platforms to comply with manufacturer's instructions and final shop drawings. Provide anchors, fasteners, inserts, and other accessories required for installation of units and attachment of units to adjoining construction.
- B. Firmly secure chairs to platforms using manufacturer's recommended hardware and fasteners.

### 3.2 ADJUSTMENT AND CLEANING

- A. Clean installed platform units on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

### 3.3 PROTECTION

- A. Protect platforms and seating from damage or deterioration until Substantial Completion.

### 3.4 TRAINING OWNER'S PERSONNEL

- A. Demonstrate and explain the operation and maintenance procedures of the portable platforms and accessories to Owner's operation personnel.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 13 17 00 - HYDROTHERAPY EQUIPMENT, POOLS, AND TUBS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Types of equipment specified in this section include the following:
  - 1. Aquatic therapy pool systems.
- B. Scope of Work: Provide hydrotherapy equipment compliant with the Authority Having Jurisdiction (AHJ) regulations for room indicated on the Drawings.
- C. Related Requirements:

**1.2 SUBMITTALS**

- A. Product Data: For each model indicated. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes.
- B. Shop Drawings: For each type of equipment required.
  - 1. Include dimensioned plans, elevations and details, and large-scale sections of typical components. Show anchors, grounds, reinforcement, and layout, and indicate finishes.
  - 2. Include setting drawings, templates, and directions for installing anchor bolts and other anchorages to be installed as a unit of Work in other Sections.
  - 3. Wiring diagrams from manufacturer for electric components.
- C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors and textures available for each component.
- D. Samples for Verification: Of the following products, showing color and texture, or finish selected. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected. Prepare Samples from the same material to be used for the Work.
  - 1. Trim and Accessories: Samples of each finish type and color, on 6-inch- (150-mm-) long sections of extrusions and not less than 4-inch (100-mm) squares of sheet or plate.
- E. Maintenance manuals for each different piece of equipment, including operation and maintenance instructions, parts listing with sources indicated, recommended parts inventory listing, emergency instructions, and similar information. Include all diagnostic and repair information available to manufacturer's and Installer's maintenance personnel. Submit for Owner's information at project closeout as specified in Division 01.

**1.3 QUALITY ASSURANCE**

- A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the equipment manufacturer for installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain hydrotherapy equipment through one source.
- C. Electrical Components: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.
- D. Product Options: Drawings indicate sizes, profiles, and dimensional requirements of hydrotherapy equipment and are based on the specific types and models indicated. Other manufacturers' appliances with equal performance characteristics may be considered. Refer to Division 01 Section "Product Requirements."

## 1.4 WARRANTIES

- A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.
- B. Special Warranties: Written warranties, executed by manufacturer of each piece of equipment specified agreeing to repair or replace equipment or components that fail in materials or workmanship within specified warranty period.
  - 1. Warranty:
    - a. Structural: 5-years from date of Substantial Completion.

## 1.5 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance service by skilled, competent employees of the equipment Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Use parts and supplies as used in the manufacture and installation of original equipment.
  - 1. Perform maintenance, including emergency callback service, during normal working hours.
  - 2. Include 24-hour-per-day, 7-day-per-week emergency callback service.
    - a. Response Time: 2 hours or less.

## PART 2 - PRODUCTS

### 2.1 HYDROTHERAPY EQUIPMENT

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated or comparable product:
  - 1. Aquatic Plunge Pools:
    - a. Basis of Design: Custom Tile Pool
      - 1) Pricing Alternate: Hydroworx Rejuvenate
    - b. Quantity: two (2) each
    - c. Size: 7'-6" x 9'-0"
    - d. Type: combination hot/cold
- B. Aquatic Therapy Pool Systems: Provide a complete operating system for the specified product, including but not limited to the following:
  - 1. Recessed installation as indicated on the drawings
  - 2. Commercial installation
  - 3. Electric water heater
  - 4. Load bearing capacity of 460 lbs./sq. ft
  - 5. Access door to pit area
  - 6. Water test kit
  - 7. Water start-up treatment kit
  - 8. Ozonator
  - 9. Color tile as selected by Architect
  - 10. Equalization Skimmer
  - 11. Magnetic Water Conditioner

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of therapeutic pools.
  - 1. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Examine roughing-in before installation.

### **3.2 INSTALLATION**

- A. Install therapeutic pools level and plumb, according to manufacturer's written instructions and roughing-in drawings.

### **3.3 DEMONSTRATION**

- A. Startup Services: Engage a factory-authorized service representative to provide startup services and to demonstrate and train Owner's maintenance personnel as specified below.
  - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - 2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.
  - 3. Review data in the operation and maintenance manuals. Refer to Division 01 Section "Operation and Maintenance Data."
  - 4. Schedule training with Owner, through Architect, with at least 7 days' advance notice.

### **3.4 PROTECTION**

- A. Secure installed therapeutic pools to ensure that they will not be used before Substantial Completion.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 13 18 11 - ICE RINK GENERAL REQUIREMENTS**

**PART 1 - GENERAL**

**1.1 SECTION INCLUDES**

- A. Quality assurance - prequalification criteria.
- B. General description of ice system requirements including ice rink floor, refrigeration system, and waste heat recovery systems.
- C. Reinspection.
- D. Submittal and project closeout requirements.
- E. Electrical requirements.
- F. General concrete requirements.
- G. Floor drain containment systems.
- H. Start-up and shutdown procedures.
- I. Emergency Preparedness Planning/Process Hazard Assessment Assistance (ammonia systems).

**1.2 QUALITY ASSURANCE**

- A. Contractors wishing to bid/quote on this project must submit, with their bid, the following prequalification criteria.

To demonstrate the qualifications to perform the Work, the Ice Rink Contractor shall submit the information requested below with their Bid. Ice Rink Contractor is defined as the contractor responsible for completing all Division 13 work and all work shown on the "R" drawings. Subcontractors performing the work identified below shall also meet the qualifications. Qualification document submitted by the low bidder will be evaluated after the bid opening to determine if the Ice Rink Contractor meets these qualifications.

1. As evidence and assurance of the contractor's ability to construct the project and support the Owner's system with service the contractor installing and constructing the primary and secondary refrigeration systems must have successfully installed and constructed ammonia refrigeration systems and ice rink floors for **(5)** years of completed projects. Submit information on each project. Submittal shall be on company letterhead, signed by an authorized representative of the company and include project description, portion of project completed by the company, location, construction cost, completion date, owner's name, owner's representative, phone number and completion date of work.
2. As evidence and assurance of the contractor's concrete subcontractor's ability to construct the project the contractor placing and finishing the concrete must have successfully completed the placement and finishing of concrete on **(8)** years of completed projects. Submit information on each project. Submittal shall be on company letterhead, signed by an authorized representative of the company and include project description, portion of project completed by the company, location, construction cost, completion date, owner's name, owner's representative, phone number and completion date of work.

3. As evidence and assurance of the contractor's controls subcontractor's ability to construct the project the control subcontractor must have successfully completed the programming and installation of two (2) ice rink construction projects that are similar to this project that were completed within the past five (5) years. Submit information on each project. Submittal shall be on company letterhead, signed by an authorized representative of the company and include project description, portion of project completed by the company, location, construction cost, completion date, owner's name, owner's representative, phone number and completion date of work.
  4. As evidence and assurance of the contractor's expansion joint subcontractor's ability to construct the project the ice rink floor expansion joint subcontractor must have successfully completed twenty (20) construction projects that use the same type of joint. Submit information on each project. Submittal shall be on company letterhead, signed by an authorized representative of the company and include project description, portion of project completed by the company, location, construction cost, completion date, owner's name, owner's representative, phone number and completion date of work.
  5. Submit the name of at least one (1) person employed by the company that will supervisor the fusion welding process along with their certifications, training and qualifications for performing the fusion welding process for high density polyethylene pipe (HDPE).
- B. Contractors wishing to bid on this project shall perform an on-site investigation prior to submitting a bid for the project. Contractor shall field verify all equipment and materials that will be affected by the work of this project and report any concerns to the Engineer at least ten (10) business days prior to the bid opening date.

### 1.3 GENERAL PROJECT DESCRIPTION

- A. The following is a general description of the project and may not include all materials and labor required or covered elsewhere in the contract documents.
1. Furnish and install a complete ice system including refrigeration system, ice rink floor, and waste heat recovery systems for sub-floor heating and snow melting.
  2. Furnish and install an indirect refrigeration system including equipment, piping, insulation, valves, refrigerant, brine, gas monitoring system, controls, motor control center, electrical, accessories and all other necessary materials and labor required for a complete operating system.
  3. Furnish and install a concrete ice rink floor including floor insulation, vapor barrier, pipe supports, welded steel piping, reinforcement, concrete, expansion joint, accessories and all other necessary materials and labors required for a complete operating system.
  4. Furnish and install waste heat recovery systems for sub-floor heating and snow melting including sand, piping, coil for pit, heat exchanger, pumps, valves, glycol, controls, electrical, accessories and all other necessary materials and labor required for complete operating systems.
  5. Schedule and pay for all testing and start up services required by the contract documents pertaining to the ice system.

### 1.4 REINSPECTION

- A. In addition to the Engineer's standard site visits throughout the project, the Engineer will be on-site at the end of the project to generate a list of uncompleted, or unsatisfactorily completed items, (i.e., punch list) after the project is reported complete by the Contractor and prior to the project's required completion date. If the items are not satisfactorily completed and should additional site visits be required to follow up on uncompleted items, the Engineer shall be

compensated at the typically hourly rate for each person involved in the re-inspection. The Contractor will be back charged the amount of the additional inspections.

### 1.5 RELATED SECTIONS

- A. Division 0, Division 1, General and Supplementary Conditions.
- B. Section 131812 - Ice Rink Refrigeration System.
- C. Section 131813 - Ice Rink Floor System.
- D. Section 131814 - Ice Rink Piping, Valves and Accessories.
- E. Section 131815 - Ice Rink Waste Heat Recovery Systems.
- F. Section 131817 – Ice Rink Central Control System.

## 1.7 CODES AND STANDARDS

- A. All parts of the project shall be performed in accordance with the most recent version of the following codes and standards and all amendments:
  1. State Building Codes.
  2. State Electrical Codes.
  3. State Mechanical Codes.
  4. State Fire Codes.
  5. National Fire Protection Association Codes.
  6. ANSI/ASHRAE 15 -Safety Code for Mechanical Refrigeration.
  7. ASHRAE 34-Number Designations and Safety Classification of Refrigerants .
  8. OSHA.
  9. American Standard Code for Pressure Piping ASA B31.1.
  10. American Standard Code for Refrigeration Piping ASA B31.
  11. American Standard Code for Pressure Vessels.
  12. ANSI/IIAR Standard.

## 1.8 SUBMITTALS

- A. See General Conditions, Division 0 and additional requirements below.
- A. Shopdrawings and Submittals:
  1. The Contractor's approval stamp is required on all submittals and indicates that the Contractor has reviewed all materials and has a completed understanding of the specifications and requirements. Contractor shall clearly mark all deviations from the contract documents on all submittals.
  2. Shop Drawings. All submittals shall conform to the requirements the General Conditions and these specifications.
  3. Submit each item/material/equipment in a separate submittal and clearly labeled as follows using specification section, article and title.
    - a. For example: Rink Piping, Title: Polyethylene Rink Pipe, Submittal No. 131813.2.05.001
- B. Progress Schedule. Submit progress schedule before project begins.
- C. Test Reports. Submit one (1) electronic copy of test reports to the Engineer when specified.
- D. Certifications. Submit one (1) electronic copy of certifications to the Engineer when specified.
- E. Operation and Maintenance Manuals
  1. Submit one (1) electronic copy for initial review. After reviewed by the Engineer and all changes are made, submit one (1) final electronic copy and two (2) final printed copies for the Owners use.
  2. Prepare manuals, instructions and data by personnel experienced in maintenance and operation of described products.
  3. Prepare data in form of an instructional manual.
  4. Binders: Commercial quality, 8 1/2 x 11-inch text pages, three D size, 3 ring binders with durable plastic covers, 2-inch maximum ring size. When multiple binders are used, correlate data into related consistent groupings.
  5. Provide tabbed dividers for each separate product and system, with typed description of product and major component parts of equipment.
  6. Sheets: Printed sheets in Part 1 shall have page protectors for each sheet. Printed sheets at the start and end of each additional section of the manual shall have page protectors.
  7. Drawings: Provide with reinforced edges.

8. Manual covers to have printed title “OPERATION AND MAINTENANCE INSTRUCTIONS”, title of project, and subject matter of manual when multiple manuals are required.
9. Contents of Manuals:
  - a. Table of Contents: Provide for each volume with each product or system identified, typed on white paper.
  - b. **P0001**: Directory, listing names, addresses, and telephone numbers of Engineer, Contractor, subcontractors, and major equipment suppliers for each product or system.
  - c. **P0002** Operation and maintenance instructions arranged by system and subdivided by specification section. For each category, identify names, addresses, and telephone numbers of subcontractors and suppliers. Identify the following:
    - 1) Provide logical sequence of instructions for each procedure, incorporating manufacturer’s instructions.
    - 2) Description of each unit, equipment or system.
    - 3) Significant design criteria, normal operating characteristics and limiting conditions for each equipment and system. Include performance curves, engineering data and tests.
    - 4) Operating Procedures: Include start-up, break-in, routine normal operating instructions, sequences, and shutdown of the system including, but not limited to, system checks, controls, stopping, valve number references, typical fluid levels in all vessels, emergency instructions, etc. Include winter, summer, and any other special operating instructions.
    - 5) Start-up and shut-down procedure description including a step by step written description of how to start up and shutdown the system including, but not limited to, system checks, safety device checks, valves number references, typical levels in vessels, etc.
    - 6) Instructions of care and maintenance instructions for equipment and systems including, but not limited to, manufacturer’s recommendations for cleaning agents and methods, precautions against detrimental cleaning agents and methods, and recommended schedule for cleaning and maintenance.
    - 7) Maintenance Requirements: Include routine maintenance procedures and guide for preventative maintenance and troubleshooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.
    - 8) Detailed description of control system including a step-by-step written description of how to operate the control system. See Section 131817 - Ice Rink Control System for additional requirements.
    - 9) List of equipment.
    - 10) Parts list for each component.
    - 11) Valve list that includes valve number, description, manufacturer, operation (normal closed or open, etc.). Provide schematic drawing of refrigeration system that shows locations of each valve.
    - 12) Servicing and lubrication schedule, list of lubricants required.
    - 13) Troubleshooting information.
  - d. **P0003** Project documents and certificates, including the following:
    - 1) Approved shop drawings and product data.
    - 2) Manufacturer’s printed operation and maintenance instructions.
    - 3) Detailed wiring diagrams of all electrical and control systems and all other electrical and control information.
    - 4) Product Data: Mark each sheet to clearly identify specific products and component parts, and data applicable to installation. Delete inapplicable information.
    - 5) Air and water balance reports.
    - 6) Test records
      - a) Material and fluid tests for concrete, sand, glycol, CaCl<sub>2</sub>, etc.

- b) Pipe pressure tests for refrigeration system piping, rink floor piping, and transmission mains.
- 7) Certifications of inspections by regulatory agencies.
- 8) Warranties. Including project warranty and all equipment and material warranties.
- 9) Maintenance Drawings – Supplement product data to illustrate relations of component parts of equipment and systems, to show control and flow diagrams. Do not use Project Record Documents as maintenance drawings.
- 10) Record Drawings including pipe routing, joint locations on all underground transmission mains, wiring diagrams, equipment layout, valve locations, etc. Reduce to half size and insert into back of manual
- 11) Training and reporting forms.
  - a) Provide daily checklist form for recording operation of refrigeration system.

### 1.9 WARRANTY GUARANTY

- A. In addition to the standard manufacturer's warranty on all equipment and materials, the contractor shall provide a standard one-year materials and labor warranty on all work performed for this project.

### 1.10 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS

- A. Transport, handle, store and protect products in accordance with manufacturer's recommendations. Secure products at all times.
- B. Store products with seals and labels intact and legible.
- C. Store products in a secure environment at all times.
- D. Provide adequate labor to handle products and prevent damage.
- E. All damaged materials and equipment will be rejected.

## PART 2 - PRODUCTS

### 2.1 ELECTRICAL

- A. See requirements in Section 131812 - Ice Rink Refrigeration Systems.

### 2.2 GENERAL CONCRETE REQUIREMENTS

- A. This section refers to all concrete work outside the ice rink floor unless otherwise noted. For concrete ice rink floor see Section 131813 - Ice Rink Floor.
- B. Concrete Mix:
  - 1. Submit mix design fourteen (14) business days prior to placement.
  - 2. Concrete shall be produced by a Ready-Mix Plant approved by the Engineer. Concrete shall meet the requirement of ASTM C94 - Standard Specifications for Ready Mix Concrete.
  - 3. Mix Design Requirements

Minimum 28-day compressive strength	4000 psi
Coarse aggregate size	3/4 inch to #44 (ASTM C33 No. 67)
Maximum water to cement ratio	0.45

Maximum pozzolan content	25% of cement content
Minimum cement plus pozzolan content	564 lbs/cy
Slump	3 inches +/- 1 inch
Entrained air content	6% +/- 1.5%

C. Material Requirements

1. Cement: Shall meet ASTM C150, Type 1
2. Aggregates: Shall meet ASTM C33
3. Water: Shall be clean, potable water.
4. Admixtures:
  - a. Air Entrainment: Shall meet ASTM C260
  - b. Water Reducing Agent: Shall meet ASTM C494, Type A
  - c. Fly Ash: Shall meet ASTM C618 class C or F.

D. Reinforcement and Formwork

1. Formwork shall meet ACI 347 - Recommended Practice for Concrete Formwork.
2. Reinforcement shall be tagged and conform to ASTM A615 Grade 60. Installation shall meet ACI 315.
3. Tire wire: Shall be 16-gauge black annealed wire or heavier.

E. Related General Materials

1. Polyethylene Sheeting: Shall conform to ASTM C171.
2. Finishing Compound: Thoroseal by Thoro System Products or equal.
3. Expansion Joint: Bituminous fiber type meeting ASTM D1751.
4. Joint Sealant: Two part - self leveling, polyurethane sealant. MasterSeal SL2 by BASF or equal.
5. Anchor Adhesive: For anchoring dowels. Hilti HIT Doweling Adhesive C-100 by Hilti Fastening Systems, Powers Pure 110 , or equal.

## 2.3 FLOOR DRAIN CONTAINMENT SYSTEMS

A. Floor Drain Covers

1. Approved manufacturers: CPLabSafety (California Small Business #58199) or equal.
2. Provide one Drain Seal product for each of the floor drains in the ammonia refrigeration room.
3. Size: shall be 6" larger than the outside of the drain grate or as required by the manufacturer.
4. Material: The Drain Seal system shall be water-tight, Ultra-Tech flexible, 2-hour rated, non-absorbing urethane material, shall resist oil and ammonia, and made with reinforced and tear resistant mesh. System shall seal using either side of material the material.
5. Color: orange

## PART 3 - EXECUTION

### 3.1 CONSTRUCTION UTILITIES AND FACILITIES

- A. Unless specified elsewhere, all temporary utilities and facilities required to complete the project shall be the responsibility of the contractor and costs for these utilities and facilities shall be incidental to the project costs.

### 3.2 NOTIFICATIONS OF WORK

- A. The Contractor shall notify the Engineer, a minimum of seven (7) business days, prior to the following phases of the work:
1. Completion of subgrade preparation.

2. Start of sub-floor heating system piping.
  3. Completion of transmission main installation
  4. Start of floor insulation.
  5. Completion of floor insulation.
  6. Start of rink piping and header piping.
  7. Completion of rink piping and header piping.
  8. Final flushing of all piping systems.
  9. Start of concrete placement.
  10. Start of refrigeration piping insulation installation.
  11. Start and completion of all pressure tests.
  12. Start up and Training
- B. See Section 1.04 of this section for requirements regarding re-inspection of uncompleted or unsatisfactorily completed items.

### 3.3 CLEANING PAINTING AND RESTORATION

- A. Contractor shall be responsible for cleaning the immediate construction area including the rink floor, perimeter concrete where work or demolition is conducted and the mechanical rooms where work is being performed.
- B. Patch and paint all holes caused or left by construction and demolition work. Match adjacent textures and colors.
- C. Clean all equipment and piping to original condition after project has been completed.
- D. Touch up all equipment paint, using paint provided by the manufacturer, after the installation is complete.
- E. All piping, valves, and other items related to the ice system resulting from required demolition shall be removed and disposed of off-site by the contractor unless specifically designated to be salvaged.
- F. Clean out snow melt pit.

### 3.4 CONCRETE WORK

- A. Reinforcement shall be installed with a minimum of 2" of cover. Adequately support reinforcement with concrete blocks or wire/plastic chairs. Splices shall be installed with minimum lapping distances shown on the plans and bars wired tightly together.
- B. Concrete Placement: shall conform to ACI 309 - Consolidation, ACI 306 - Cold Weather Placement, ACI 307 - Hot Weather Placement.
- C. All new concrete adjacent to the ice rink floor shall be placed at the same tolerance as specified for the ice rink floor and shall use the same benchmark, unless otherwise noted.
- D. Finishing: Apply float finish and uniform textured surface to all interior slabs. Apply broom finish to exterior slabs. Edge or chamfered the edge of all concrete that is adjacent an expansion or construction joint.
- E. Joints: Install control and construction joints as follows unless otherwise stated elsewhere:
1. Install control joints every 10 feet o.c. in each direction.
  2. Install construction joints with expansion material and caulk at any new cold joints.
- F. Curing: Cover with burlap-polyethylene and damp cure for a minimum of 7 days.
- G. Testing: Contractor shall hire a testing agency to perform the following tests and shall pay for all testing and laboratory costs. Tests shall include air content (ASTM C 231), slump (ASTM C143)

and compressive strength (ASTM C31, C39) for all concrete placed. Three (3) copies of the results shall be submitted to the Engineer.

### 3.5 START-UP AND FOLLOW UP SERVICES

- A. Test all refrigeration systems, including secondary refrigeration systems, according to the specifications and current codes and have been thoroughly cleaned, fill all piping systems with a complete charge of the specified primary and secondary refrigerants. Remove all free air from the systems. The contractor shall be responsible for removing air from the system throughout the warranty period of the project. The contractor shall take every precaution to fill the piping system in such a manner that results in maximum air removal and avoids trapping air in the system (for example, the ice rink floor). If air becomes trapped in the piping system, the contractor shall remove the fluid and refill the system as many times as required until the air is removed. Provide field report for each site visit where air is removed, or systems checked clearly detailing processes and observations.
- B. Provide documentation of all piping pressures tests and vacuum tests on systems. All tests shall be witnessed by Owner or Owner's representatives.
- C. After all piping systems have been tested according to the specifications and current codes and have been thoroughly cleaned, fill all piping systems with a complete charge of the specified primary and secondary refrigerants. Remove all free air from the systems. The contractor shall be responsible for removing air from the system throughout the warranty period of the project. The contractor shall take every precaution to fill the piping system in such a manner that results in maximum air removal and avoids trapping air in the system (for example, the ice rink floor). If air becomes trapped in the piping system, the contractor shall remove the fluid and refill the system as many times as required until the air is removed. Provide field report for each site visit where air is removed, or systems checked clearly detailing processes and observations.
- D. Provide all additional primary and secondary refrigerants necessary to maintain fully charged systems throughout the warranty period of the project. Test all refrigerants at frequency specified in Section 131812 – Ice Rink Refrigeration System and provide final test reports of each refrigerant (including moisture content, inhibitor concentration, solids, refrigerant content, etc.).
- E. Start-Up and Commissioning: Provide a factory trained technician for a minimum of 30 hours to completely check the operation of the refrigeration system and equipment and all associated systems and equipment during start up. Startup shall follow all requirements of ANSI/IIAR-5 Startup of Closed-Circuit Ammonia Refrigeration Systems. Provide documentation and certification from trained technician with completed, detailed, check list for each piece of equipment.
- F. Inspection, Testing, and Maintenance Service: The Contractor shall provide the following follow-up services, at minimum. The cost of these services shall be incidental.
1. 6 Month (Semi-Annual) System ITM: Perform all recommended system tests, inspections and maintenance per *ANSI/IIAR-6 Standard for Testing, Inspection and Maintenance of Closed-Circuit Ammonia Refrigeration System* including but not limited to:
    - a. Testing of Secondary Refrigerants
    - b. Calibration of Ammonia Leak Detectors.
  2. 12 Month (Annual) System ITM: Perform all recommended system tests, inspections and maintenance per *ANSI/IIAR-6 Standard for Testing, Inspection and Maintenance of Closed-Circuit Ammonia Refrigeration System* including but not limited to:
    - a. Testing of Secondary Refrigerants
    - b. Calibration of Ammonia Leak Detectors.
  3. Site visits during the warranty period as required to make adjustments to control settings, equipment functions, and any other parts of the system
- G. Concrete ice rink floors shall cure a minimum of 28 days prior to lowering the temperature of the ice rink floor. After the 28-day cure, lower the temperature of the ice rink floor at a maximum rate of 1-degree F per hour until a slab temperature of 34 degrees F and then 1-degree F every 2 hours until a slab temperature of 16-18 degrees F or as desired by the Owner. Apply water only after the desired operating temperature is reached. Provide documentation that procedure was witnessed by Owner or Owner representative.

- H. Provide the Owner's operating staff with fourteen (14) hours of hands-on instructions on the safe operation of the entire ice system. This shall be provided in a minimum of two (2) separate days. Include detailed instructions on how to build the first ice sheet. Operation and Maintenance Manuals must be completed and approved at by this time so they can be reviewed during the training sessions. Provide a minimum of fourteen (14) days' notice for all training sessions. Training sessions shall be coordinated with Owner's schedule.
- I. Demonstrate that all control and alarm systems are working as required by code and specified in the contract documents. All necessary adjustments, additions, and electrical modifications shall be made to provide these systems. Provide documentation that procedure was witnessed by Owner or Owner representative.
- J. Variable Frequency Drives: Provide start up services by a certified manufacturer's representative to provide an additional 1-year warranty. Provide field report and documentation of all work performed and observations.
- K. Provide on-site monitoring for first four (4) hockey games. The contractor's representative shall be on-site during 10 hours before the start of the game and for the duration of the game to monitor system operations.
- L. Assist the Owner in preparing an Emergency Preparedness Plan, Process Hazard Assessment, or related documents by providing the Owner's planning consultant/engineer with the required information on the ice system as requested and take part in two planning sessions with the Owner via teleconference.
- M. Provide laminated drawings of all the flow diagrams and P&IDs, valve list and reference for the project. Mount drawings to refrigeration room wall. Minimize size of drawings shall be 22" x 34".
- N. System Function Testing: Contractor shall prove system function by refrigerating the ice rink floor and by building a layer of "black ice" (+/-1/4"). The system shall remain operational for a minimum of 48 hours after black ice has been formed. Contractor shall inspect entire ice rink floor with a thermal imaging camera.

### **3.6 SHUTDOWN SERVICES**

- A. Provide the Owner's operating staff with eight (8) hours of hands-on instructions on the shutdown procedures of the system after the first ice season has finished. Provide a minimum of fourteen (14) days' notice for all training sessions. Training sessions shall be coordinated with Owner's schedule.

### **3.7 COORDINATION OF WORK**

- A. The contractor shall be responsible for coordinating all work in Division 13 – Ice Rink. The contractor shall also work closely with the other subcontractors on the project and help coordinate all associated structural, electrical and mechanical systems.

### **3.8 PERMITS**

- A. The contractor shall apply for and obtain all permits required to construct the project at no additional cost to the Owner unless specified otherwise.

END OF SECTION

**SECTION 13 18 12 - ICE RINK REFRIGERATION SYSTEM****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. General system description, design criteria and control criteria.
- B. Motor Control Center
- C. Motor Starters.
- D. Motors.
- E. Other Electrical Components (enclosures, emergency switch, dialer, meter, etc.).
- F. Compressors.
- G. Chiller and Surge Drum.
- H. Rink Pumps.
- I. Condenser System (incl. water pump, sump & chemical treatment system).
- J. Gas Monitoring System.
- K. Primary Refrigerant.
- L. Secondary Refrigerant.
- M. Storage Receiver System.
- N. Thermosyphon Receiver.
- O. Wind Sock

**1.2 RELATED SECTIONS**

- A. Division 0, Division 1, General and Supplementary Conditions.
- B. Section 131811 - Ice Rink General Requirements.
- C. Section 131813 - Ice Rink Floor System.
- D. Section 131814 - Ice Rink Piping, Valves and Accessories.
- E. Section 131815 - Ice Rink Waste Heat Recovery Systems.
- F. Section 131817 – Ice Rink Central Control System.

**1.3 GENERAL REQUIREMENTS**

- A. General Refrigeration System Description:
  - 1. Furnish and install a complete ice rink refrigeration system including but not limited to chiller, compressors, pumps, condenser system, piping, valves, controls, motor control center, and all related electrical components and connections necessary for a completely automatic refrigeration system with alarms, operating at the conditions described in, and meeting the requirements of, the contract documents.
- B. Refrigeration System Design Criteria:
  - 1. Design Parameters: See Ice Equipment Schedule on drawings.
  - 2. All primary refrigeration piping shall be sized by the Contractor unless otherwise specified or indicated on the drawings. The piping shall be sized for the full capacity of the system

except where manufacturer recommends a different size to optimize operation of the system.

3. Furnish and install isolation valves, unions, purge valves, etc. required for isolating and servicing each piece of equipment and system components whether or not they are shown on the drawings.
4. The cost of all piping, electrical, equipment, controls, or other changes required for the proper installation of all equipment shall be included in the Contractors bid. If equipment substitutions require revisions in the design of the systems or facility, the Contractor shall reimburse the Owner for the cost of the redesign services.
5. The Contractor shall provide all electrical work, design, materials and equipment necessary for a complete, operational ice system. All work, materials and equipment shall meet the required electrical codes for the Project's location. A licensed electrician shall perform all electrical work. The main electrical feed for each piece of equipment shall be routed beneath the floor slab, not overhead. Provide all low voltage wiring required for alarms, controls and other related system for a complete operating system.

**1.4 SUBMITTALS**

- A. Shop Drawings. All submittals shall conform to the requirements of the General Conditions and these specifications.

**1.5 WARRANTY GUARANTY**

- A. As required in Section 131811 - Ice Rink General Requirements and as follows:
  1. Manufacturer's standard warranties that exceed the specified warranty.
  2. Evaporative Condenser: 5-year warranty
  3. Motors and Variable Frequency Drives: In addition to the standard 1-year warranty, provide start-up services from a certified manufacturer's representative to provide an additional 1-year warranty.
  4. Test and maintain chemical balance of all refrigerants in all systems including inhibitors in all solutions during warranty period.

**1.6 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS**

- A. As required in Section 131811 - Ice Rink General Requirements.

**PART 2 - PRODUCTS**

**2.1 MOTOR CONTROL CENTER**

- A. Approved Manufacturers: Eaton/Cutler Hammer Westinghouse, Allen Bradley, General Electric, Siemens, Square D, Rockwell Automation or equal.
- B. Panels designed and manufactured by custom panel shops will not be approved.
- C. **P**anel schedule shall be provided to the contractor for review and approval. See equipment chart on drawings for MCC loads.
- D. Provide a Motor Control Center (MCC) to house and including all starters, breakers, controls, running lights, contacts, relays, switches, fuses, safety switches, alarms, overload relays, resets, VFDs and all other electrical devices required for a fully operational ice system. The MCC shall include but not limited to, the following:
  1. Starters for compressors, and pumps.
  2. Variable frequency drives for condenser fan and rink pumps

- D. Solid State Starters (Soft Starts): Required for motors 75-HP and greater. Shall be UL listed and include isolation contacts, current limiting fuses, capacitors for noise protection, microprocessors and all other circuitry required to function properly, overload protection, LED indicators, auxiliary contacts, heat sink, integral cooling fan, phase loss and stall protection, soft stop, adjustable starting and stopping times, and adjustable initial voltage level to adjust torque for motor starts. Shall have standard handle with four positions; ON, OFF, TRIPPED, and RESET. Part winding or wye-delta starters will not be accepted.
- E. All motors for use with Variable Frequency Drives shall be listed suitable for use with VFD equipment to prevent premature bearing failure as specified in the VFD section.
- F. Variable Frequency Drive (VFD):
1. Approved Manufacturers: ABB, Allen Bradley, Bell & Gossett, Cutler Hammer or equal.
  2. Materials and Construction: NEMA 1 Enclosure, pad lockable input disconnect switch, electronic overload protection, input fuses, HOA switch, selectable operating modes, protection circuits, UL/CSA Approved.
  3. Display: Output frequency and voltage, motor current, kwh meter, fault indication with text, % torque, % power (kW), and speed (RPM).
  4. Voltage Tolerance: +/- 10%.
  5. Options: Manual bypass (2 contactors) for condenser fan, auxiliary contact for disconnect.
  6. All motors for use with Variable Frequency Drives shall be listed suitable for use with VFD equipment to prevent premature bearing failure. This includes, but is not limited to, providing NDE and DE bearings and shaft grounding rings or system, etc. Shall be installed prior to start-up.

## 2.4 MOTORS

- A. Motors shall be 460 volts, 3 phase, 60 Hz, squirrel cage induction motors with a service factor of 1.15. Shall have adequate torque to accelerate the load at operating conditions without exceeding the nameplate rating, not including the service factor. Motors shall be designed, constructed and tested in accordance with ANSI/NEMA Publication No.MG-1 and meet NEMA specifications. Shall be premium efficiency design as determined by IEEE Standard 112, Method B. Minimum motor efficiencies shall meet the following.

*Table for Premium Efficiency Motors (ODP type)*

M <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> HP	1200 RPM	1800 RPM	3600 RPM
1	82.5	85.5	77.0
1.5	86.5	86.5	84.0
2	87.5	86.5	85.5
3	88.5	89.5	85.5
5	89.5	89.5	86.5
7.5	90.2	91.0	88.5
10	91.7	91.7	89.5
15	91.7	93.0	90.2
20	92.4	93.0	91.0
25	93.0	93.6	91.7
30	93.6	94.1	91.7
40	94.1	94.1	92.4
50	94.1	94.5	93.0
60	94.5	95.0	93.6
75	94.5	95.0	93.6

100	95.0	95.4	93.6
125	95.0	95.4	94.1
150	95.4	95.8	95.0
200	95.4	95.8	95.0

- B. Motor enclosures shall be open drip proof (ODP). Bearings shall be shielded and regreasable steel ball bearings. Stator windings shall be copper. Insulation shall be Class F non-hygroscopic materials.
- C. Motor shall be factory aligned and if necessary, shall be realigned by the Contractor after installation and prior to start-up.
- D. Motors shall be inverter duty where VFDs are being used.

## 2.5 OTHER ELECTRICAL COMPONENTS

- A. All electrical components if not specified elsewhere shall be UL listed where possible, meet all code requirements and approved for specific application.
- B. Enclosures: Enclosures shall be NEMA 1 rated for indoor applications and NEMA 3R for outdoor applications.
- C. Disconnects: Approved Manufacturers for disconnects: Cutler Hammer, General Electric, Square D, Westinghouse or equal. Enclosure shall be NEMA rated for environment where it will be located. Disconnects for motors with VFD drives shall have auxiliary contacts to shut down VFD per manufactures recommendations.
- D. Fuses: Provide one spare fuse for each type and size used on the project.
- E. Emergency Devices
  - 1. Furnish and install an emergency remote control push/pull button (off-only control) and all associated electrical for a complete system to stop the operation of all electrically energized equipment related to the refrigeration system as required by the current state and local mechanical codes.
  - 2. For interior devices and locations, furnish and install a clear Plexiglass protective, lockable, wall mounted case for devices.
  - 3. For exterior devices and locations, furnish and install NEMA Type 3R, continuous hinge, lockable enclosure (Weigmann RHC121206 or equal). Emergency ventilation remote switch provided by others will also be installed by others in this enclosure. Verify enclosure space needs with ventilation contractor.
  - 4. See Gas Monitoring section for additional requirements.
  - 5. Provide all low voltage wiring and connections required for alarms, controls and all other related devices for complete operating systems.
- F. Power Monitor: Furnish and install a microprocessor-based monitor panel to provide the following readings: voltage, amperage, power, power factor, and energy consumption. The panel shall conform to the following:
  - 1. Approved Manufacturers: Rockwell Automation (Allen Bradley) PowerMonitor 5000 or equal.
  - 2. Current transformers, 5A secondary.
  - 3. Four (4) protection functions shall be provided which shall include the following: overvoltage and undervoltage. Protective functions shall be field settable for alarm and/or trip outputs.
  - 4. One alarm relay shall be programmable for KWH pulse output.
  - 5. A serial port for data transmission to remote location shall be provided.
  - 6. Provide monitoring software for multiple computers as required by Engineer/Owner. Connect unit to Ice Rink Center Control System for data collection and manipulation.

- G. Automatic Alarm Dialer.
1. Furnish and install a complete automatic alarm dialer system, compatible with the Owner's telephone system, that will monitor the following alarm conditions and points. This system is required by IIAR 6.14.7.4 "A monitored location shall be notified upon loss of power to or failure of the emergency mechanical ventilation system".
  2. Before ordering the dialer system, the contractor shall verify with the Owner the type of phone system that is being used (standard dial type telephone system, Voice over Internet Protocol (VoIP) system, etc.). The contractor shall select the correct dialer system for their application. If VoIP is available, that system shall be selected.
  3. Monitor the following alarm conditions and points:
    - a. Power loss to refrigerant leak detection dedicated circuit branch (per IIAR).
    - b. Power loss to emergency mechanical ventilation system's dedicated circuit branch (per IIAR).
    - c. Start/Fail for the emergency ventilation system's fan (per IIAR).
    - d. High brine temperatures from compressor microprocessor.
    - e. Alarm conditions from compressor microprocessor to be named later by Owner.
    - f. Power failure to refrigeration system.
  4. Manufacturer: Sensaphone 800 system, Sensaphone Sentinel Monitoring System with Cellular Modem or equal.
  5. Unit to provide up to 12 different status conditions.
  6. Dial a minimum of eight (8) different phone numbers.
  7. Uninterrupted Power Supply (UPS) for 20 minutes.
  8. Additional requirements for standard telephone system:
    - a. Operate with standard dial telephone line.
    - b. Respond to status interrogation from any touch-tone telephone.
  9. Additional requirements for VoIP system:
    - a. Include 12-month subscription to cellular dialer system for time of startup. Coordinate with City on selection of service provider.
    - b. Shall instantly sends alerts via phone, text or email over cellular connection.
    - c. Shall deliver event reports, and audit logs.
    - d. Shall store all data in the cloud, with unlimited information storage and allows multiple devices to be managed from one account. No software shall be required.
    - e. Shall be accessible by any web-enabled device.

## 2.6 SCREW COMPRESSOR PACKAGE

- A. Approved manufacturers: Mycom Compressor Package, Bitzer ACP or equal.
- B. Design Parameters: See Ice Equipment Schedule on drawings for design conditions. System basis of design is based on Mycom I Series screw compressors package. If alternative compressor manufacture is used, contractor shall submit revised design documents including but not limited to: design data, flow diagram, package layout, etc. Package shall be designed and constructed to meet all applicable codes including but not limited to: ANSI IIAR, ASHRAE 15, ASME B31.3, etc. All compressors, vessels, piping, and accessories shall be mounted to a single industrial strength steel frame and be fully piped, wired and tested prior to delivery.
- C. Compressors: Open drive ammonia screw compressor. Compressors shall have stepped capacity control (50%-75%-100%) via solenoid valves. Bitzer OS 74/85 Series, Mycom i-Series or equal.
- D. Motors: NEMA Premium Efficiency Motors, 1.15SF Motor (s) C-Flange, 3,300 ft elevation, 40C ambient, 460v/3p/60Hz, ODP, suitable for Solid State Soft Starter.
- E. Accessories: Suction check valve, Suction shut-off valve, Suction Strainer, Discharge shut-off valve, Discharge check valve with cold start pressure control.
- F. Oil Cooling / Separation System

1. Provide a complete thermosyphon oil cooling and separation system.
  2. Combination Oil Separator: Horizontal type multi-stage oil separator with sump oil heaters, dual relief valve assembly, sight glasses, and access cover for replacement of internal coalescing elements. The separator shall be designed and constructed in accordance with ASME Section VIII, Div.1 for a minimum design working pressure of 300 PSIG. The separator shall be sized for full capacity of associated compressors.
  3. Oil Cooling Heat Exchanger: Shall be plate and shell or shell and tube type heat exchanger. The heat exchanger shall be sized for full capacity of associated compressors. The oil side of heat exchanger shall include a 3-way thermostatic mixing valve to maintain required oil temperature. See ice equipment schedule on drawings for design conditions.
  4. Oil Filter: Package shall include dual oil filters (20 Micron) or a single oil filter with bypass. Provide one complete set of spare oil filters and O-rings/gaskets for owners use after warranty period.
  5. Oil: Package shall come with complete charge of manufacturer approved oil. Provide (10) gallons of spare oil for owners use after warranty period.
- G. Wiring/Controls: All sensors, transducers, and controls necessary for a fully functioning system shall be wired to a central terminal box. See ice rink control system specification for additional requirements.
- H. Startup: Package shall be started up by a factory trained technician. Start up service shall include (2) eight-hour days of onsite service. The technician shall provide a complete start-up report and pre-start checklist.
- I. Post Start-Up Maintenance/Service: Following initial startup, at minimum the contractor shall perform the following manufacture recommended inspection/maintenance/service items and all other inspection/maintenance/service items recommended by the manufacture to maintain warranty:
1. At 100 hours or per manufacturers recommendations (whatever comes first), replace compressor oil filters.
  2. At 500 hours or per manufacturers recommendations (whatever comes first), clean suction strainer.
  3. At 500 hours or per manufacturers recommendations (whatever comes first), analyze oil. Oil shall be analyzed every 5,000 hours or annually (whatever comes first) thereafter throughout the warranty period.
  4. At 500 hours or per manufacturers recommendations (whatever comes first), replace primary oil filter(s).
- J. Warranty: 24-month factory warranty on compressor package from compressor startup or 30 months from ship date of equipment. Warranty shall include all parts and labor.

**2.7 THERMOSYPHON RECEIVER**

- A. Approved Manufacturers: HT Industrial, Bitzer, H.A. Phillips, Docal, or equal.
- B. Capacity: See Ice Equipment Schedule on drawings.
- C. Construction: Designed for minimum design parameters outlined in table below. Vessel shall be constructed and stamped per ASME Boiler and Pressure Vessel Code, Section VIII, Division 1 98E/99A. Shall be pass through design.
- |       |          |                |   |   |   |
|-------|----------|----------------|---|---|---|
| R     | M        | D              | P | T | R |
| R-717 | 250 PSIG | -20 F to 250 F |   |   |   |
- D. Accessories: Provide a dual relief valve assembly as specified and per code requirements. Provide all valves, piping and other related materials and accessories as necessary for a fully operational system. Name plate shall clearly display code compliance and capacity of vessel.
- E. Vessels shall be mounted on a factory constructed steel legs or frame system.

- J. Finish: Prepare exterior surface of all vessels in accordance with SSPC-SP3 Power Tool Cleaning or SSPC-SP10/NACE 2 Near-White Blast Cleaning. Paint with one coat of primer and one coat of alkyd egg-shell enamel for exterior use.
- K. Drip Pan: Provide a stainless steel drip pan under oil pot with integral drain.

**2.9 RINK PUMPS**

- A. Approved Manufacturers: Pentair Aurora Series 3800 Series, Xylem Inc. Bell and Gossett Series e1510, Armstrong or equal.
- B. Design Parameters: See Ice Equipment Schedule on drawings. Motor size is based on the pump manufacturer listed in the schedule on the drawings. If the motor size increases due to the use of pump another manufacturer, the contractor is responsible for all changes associated with the motor size change at no additional cost to the Owner.
- C. Pump Construction and Materials
  - 1. Centrifugal, end suction design, base mounted, single stage. Shall be serviceable without disconnecting to piping system. Pumps shall be capable of continuous operation without fault. Pump shall be rated at 175 psi.
  - 2. Volute: Heavy-duty cast-iron conforming to ASTM A48, Class 30, integrally cast pedestal support. Provide drain and vent plugs. When calcium chloride (CaCl<sub>2</sub>) is specified as the secondary refrigerant or brine all surfaces in contact with the liquid shall have an epoxy coating.
  - 3. Impellers: Enclosed type, cast bronze conforming to ASTM B584 (for glycol use only), vacuum cast, keyed to shaft with non-corrosive fasteners, statically and dynamically balanced. When calcium chloride (CaCl<sub>2</sub>) is specified as the secondary refrigerant or brine the impeller material shall be cast iron conforming to ASTM A48, Class 30 or stainless-steel conforming to AISI 316.
  - 4. Shafts: Carbon steel conforming to AISI C1045 machined and polished. Replaceable bronze sleeve conforming to ASTM B62. Maximum deflection of 0.002 inches at the seal face under a maximum load condition. Provide ANSI/OSHA-compliant coupling guard with slotted viewing window. When calcium chloride (CaCl<sub>2</sub>) is specified as the secondary refrigerant or brine the sleeve shall be stainless steel conforming to AISI 316 when using calcium chloride.
  - 5. Bearings: Heavy duty, grease lubricated, regreasable, ball bearings with B10 minimum bearing life of 50,000 hours per AFBMA test procedures. Shall be replaceable without disconnecting pump from pipe system.
  - 6. Seal Assembly:

M	C C2 G S	W S
Elastomer	EPR (Ethylene Propylene Rubber)	Buna
Rotating Face	Silicon Carbide	Carbon
Stationary Face	Silicon Carbide	Silicon Carbide
Hardware	Stainless Steel	Stainless Steel
Spring	18-8-Stainless Steel	18-8-Stainless Steel
Other	Internal flushing capabilities	Internal flushing capabilities
Other	Easily Inspected	Easily Inspected
Other	Replaceable	Replaceable

- 7. Wearing Ring:

M	G S	C C2 S
Material	Bronze	Cast Iron
ASTM Specification	B62	A48
Type	Replaceable	Replaceable

- 8. Motor: Shall conform to the requirements of this Section.
- 9. Accessories: See Section on Ice Rink Piping, Valves, and Accessories and other requirements herein.

**2.10 EVAPORTIVE CONDENSER**

- A. Approved Manufacturers: Evapco PHC-E, Baltimore Air Coil CXVB, Marly, or equal.
- B. Provide one (1) condenser system with design parameters listed on the Ice Equipment Schedule on drawings. See warranty in Section 1.5 of this specification.
- C. Material Construction: Induced draft design with vertical discharge condenser with all stainless-steel panel construction.
- D. Fan: Fans shall be heavy-duty, axial type with aluminum alloy blades driven by a one-piece, multi-groove neoprene/ polyester belt designed for a minimum of 150% of the motor nameplate horsepower. Fan(s) and shafts shall be supported by heavy-duty, self aligning, grease-packed ball bearings with moisture-proof seals and integral sealer rings, designed for a minimum L10 life of 80,000 hours. Fan and motor sheaves shall be fabricated from corrosion resistant materials.

Fan motor(s) shall be totally enclosed fan cooled (TEAO) type, premium efficiency/VFD ready with a 1.0 service factor, suitable for 460 V, 3 phase, 60 Hz electrical service and shall be mounted on an easily adjusted, heavy-duty motor base. Fan motors shall comply with NEMA Standard MG 31, Section IV, Part 31. Shall be oversized for dry operation and shall conform to the requirements of this Section. Motor shall be inverter duty type for operation with VFD.

  - 1. Variable Frequency Drive (VFD): Furnish and install VFD as specified in this section, for the fan motor.
- E. Coil: Material shall be 304 stainless steel pipe suitable for specified refrigerant. Shall be rated at 280 PSIG working pressure and tested at 375 PSIG air pressure under water. The coil shall be designed for low-pressure drop with sloping tubes for free drainage of fluid. The refrigerant condensing coil shall be ASME B31.5 compliant.
- F. Water System and Eliminators: Shall include headers, Sch 40 PVC spray branches with distribution nozzles. All components and fasteners shall be made of non-corroding material and designed for easy removal and cleaning. Removable PVC drift eliminators shall have a minimum of three changes in air direction with hooked leaving edge. Drift loss shall be less than 0.001 percent of total water circulated.
- G. Sun Blockers: Provide sun blocker system for coil and fill.
- H. Basin Assembly: The cold water basin shall be constructed of heavy-gauge type 304 stainless steel panels and structural members, with all welded seams. The welded stainless steel basin shall be leak tested at the factory. Basin shall include a depressed section with drain/cleanout connection. The basin area under the fill surface shall be sloped toward the depressed section to facilitate cleaning.
- I. Water Pump: The cold water basin shall include: a drain/clean-out connection; a stainless steel strainer; a corrosion resistant make-up valve; overflow connection; and a water recirculation pump assembly. Cold water basin shall be designed so that the strainer, makeup valve and float, and pump assembly are easily accessible without removing any of the unit panels or other components. Lift-out steel strainer shall be supplied with perforated openings sized smaller than the water distribution nozzle orifices and an integral anti-vortexing hood to prevent air entrainment. Water recirculation pump shall be a close-coupled, bronze fitted centrifugal pump equipped with a mechanical seal, mounted on the basin and piped from the suction strainer to the water distribution system. The pump shall be installed with adequate drains so that it may drain freely when the basin is drained. The pump assembly shall include an integral metering valve and bleed line to control the bleed rate from the pump discharge to the overflow connection. The pump motor shall be totally enclosed fan cooled (TEFC) type suitable for 460 volt, 3 phase, 60Hz electrical service.
- J. Walkways, Ladders and Platforms

1. Furnish and install a complete, elevated, walkway/platform system for easy and safe access of equipment. The system shall include:
  - a. External Louver Face platform: Aluminum, galvanized steel, or stainless steel complete with knee rail and toe board. Comply with 29 CFR 1910.23.
  - b. Internal Walkway: Same material as external platform. Shall span the collection basin from one end of the tower to the other and positioned to form a path between the access doors.
  - c. External Ladders: Provide a ladder for each access panel and platform. Aluminum galvanized or stainless steel, fixed ladders with ladder extensions to access external platforms and top of cooling tower from adjacent grade without the need for portable ladders. Comply with 29 CFR 1910.27. Provide extensions as needed to meet roof or slab elevation. Provide cage around ladder if required by OSHA, and other code requirements.

## 2.11 CHEMICAL TREATMENT SYSTEM

1. Furnish and install a complete chemical water treatment system for the condenser system to control scale, corrosion and biological growth. Provide all piping, valves, controls, wiring, meters, strainers, equipment and chemicals required for a complete operating system. Interlock with water pump as necessary for automatic operation.
  2. Approved water treatment company: Verify with Owner.
  3. All chemical feed piping to the internal sump of the unit that is located outside the building shall be stainless steel.
  4. Provide chemicals for one year for the prevention of scale, corrosion and biological growth. All chemicals must be compatible with the equipment materials used in the system and must meet or exceed all environmental requirements. Annual chemical cost information and name of suppliers must be submitted with the proposed chemical treatment system shop drawings.
  5. Provide quarterly water testing for the duration of the warranty period.
  6. Accessories: Furnish a pH cube kit as manufactured by HACH Cat. No. 12519 Phenol red.
  7. Chemical treatment supplier to provide a passivation plan for the condenser.
- B. Containment Tray: Furnish and install a containment tray for the chemical drums. Approved manufactures: PIG [www.newpig.com](http://www.newpig.com) or equal. System shall be durable plastic, one-piece utility tray with 5" minimum side walls.

## 2.12 REFRIGERANT GAS MONITORING SYSTEM

- A. Approved Manufacturer: Bacharach (Pat McClernon, Control House Ltd. 952-746-3485), Calibration Technologies, Inc., Cool Air Mechanical, or equal
- B. Provide one (1) complete refrigerant gas monitoring system for the specified refrigerant. System shall continuously monitor for refrigerant leaks and meet ASHRAE 15 Standard current edition.
- C. System shall include:
  1. One (1) Main Controller Panel mounted inside ice equipment room.
  2. One (1) Remote Display Panel mounted outside main door to ice equipment room.
  3. Sensors, strobes and audible devices as defined herein.
  4. One (1) Uninterruptable Power Supply (UPS) to provide power for 20 minutes.
- D. Features:
  1. Multi-zone detection with expandable capabilities.
  2. Main Controllers and remote displays shall have a front panel display with backlit graphic LCD, system and alarm status indicators, and keypad.
  3. Displays shall show zone specific refrigerant concentration for all sensors.
  4. Four (4) SPDT relays contacts (minimum).

5. 4-20 mA analog output.
6. Sampling: Automatic and continuous or manual.
7. Automatic reboot and system alarm reset after power failure.
8. Trend / Data Logging: Graphic display of trend data, alarm log and fault log.
9. NEMA 4X, UL-listed, CSA, IEC, IP66 enclosure.
10. Provide a silence and reset switch at the gas monitoring panel inside the refrigeration room as required by code.

E. Sensors and transmitters

1. Approved type of sensors:
  - a. Infrared transmitters and sensors with a sensing range of 25ppm to 10,000ppm.
  - b. Electrochemical transmitters and sensors
  - c. Solid state
2. Accuracy of +/- 5% of value.
3. Zero Drift: Less than 0.1% of full-scale.
4. Response time: less than 20 seconds
5. Linearity: +/- 1% of full-scale
6. Ranges:
  - a. Provide ranges most suitable for the ranges specified in the table below except that one sensor in the ice equipment room must have a high range of 10,000 ppm.
7. Certification: ETL listed to UL standard.
8. Sensors shall be installed in the locations shown on the plans (if indicated) and in accordance with the table below. The exact locations shall be verified during construction.

L □□□□□□	S □□□□□T□□□	Q □□□□□□□
Ice Equipment Room	Infrared/Electrochemical/SS	3

F. Alarm Settings

1. Alarm concentration levels shall be adjustable. Initial settings and sequences shall be in accordance with the table below.

A □ □ □□□□ C □□□□□□□□□□□□	D □□□□□□□□□ □□A □□□□□□
25 ppm	1. Notify Ice Rink Control System <ol style="list-style-type: none"> <li>a. Notification sent to facility personnel</li> </ol> 2. Controller to initiate the following alarm sequences per IIAR: <ol style="list-style-type: none"> <li>a. Strobes and audible alarm in ice equipment room, vestibule and exterior door only activated</li> </ol>
50 ppm	1. Notify Ice Rink Control System <ol style="list-style-type: none"> <li>a. Notification sent to facility personnel</li> </ol> 2. Controller to initiate the following alarm sequences: <ol style="list-style-type: none"> <li>a. <u>A</u> strobes and audible alarms activated. This may be the same as 25 ppm.</li> </ol>
150 ppm	1. Notify Ice Rink Control System <ol style="list-style-type: none"> <li>a. Notification sent to facility personnel.</li> </ol> 2. Controller to initiate the following alarm sequences per IIAR: <ol style="list-style-type: none"> <li>a. All strobes and audible alarms activated.</li> <li>b. Emergency purge ventilation system is activated.</li> <li>c. Send signal to fire alarm system.</li> </ol>

250 ppm	<ol style="list-style-type: none"> <li>1. Notify Ice Rink Control System                         <ol style="list-style-type: none"> <li>a. Notification sent to facility personnel.</li> </ol> </li> <li>2. Controller to initiate the following alarm sequences per IIAR:                         <ol style="list-style-type: none"> <li>a. All strobes and audible alarms activated.</li> <li>b. De-energize pumps, compressors, and normally closed automatic refrigerant valves that are not part of an emergency control system.</li> </ol> </li> </ol>
---------	--

G. Alarm Devices

1. Alarm devices shall be combination strobe lights and audible alarms.
2. Strobe light single color shall be selected by Owner.
3. Furnish and install as required by current state and local mechanical codes.
4. Device locations shall be as shown on the plans and in accordance with the table below. The exact locations shall be verified during construction.

L □□□□□□	A □□□□ D □□□□□	Q □□□□□□
Inside Refrigeration Room	Strobe & Audible	2
Outside Refrigeration Room Doors	Strobe & Audible	3

- H. Provide all necessary auxiliary equipment relays as required to operate strobes / audible devices, start emergency ventilation, shut down refrigeration system, fire alarm system notification, etc.
- I. Leak detector shall turn on exhaust fan even when control panel is powered off or not functioning.
- J. Connection from the emergency ventilation to the auxiliary relay will be by building electrical or mechanical contractor.
- K. Connection from the fire alarm system to the auxiliary relay will be by fire alarm contractor.
- L. Provide connection to ice rink control system for monitoring concentrations and alarms.

**2.13 PRIMARY REFRIGERANT**

- A. Furnish and install a complete operating charge of anhydrous ammonia (R-717) refrigerant to fill entire refrigeration system. The refrigerant charge shall meet the following chemical properties:
  1. Ammonia: 99.999% minimum
  2. Moisture (as H2O): 10 ppm maximum
  3. Oil: 1 ppm maximum

**2.14 SECONDARY REFRIGERANT**

- A. Ethylene Glycol Solution
  1. Furnish and install a complete operating charge of 40% by volume of inhibited ethylene glycol and deionized water. The fluid shall be an industrial heat transfer fluid specifically designed for HVAC systems.
  2. Approved Manufacturers: Dow Chemical Company Dowtherm SR-1, Texaco Texcool E100, Dynalene EG, Interstate Chemical Company Intercool, or equal.
  3. The solution shall have a factory mixed corrosion inhibitor or neutralizing agent, an anti-foaming agent to n
  4. The solution mixture shall meet the following parameters:

P □□□□ □□□□	40 EG
Specific Gravity @ 15F	1.077
Viscosity @15F	9.3017
Freezing Point	-9.8 F
pH	8.0 to 9.2
Density @ 15F	68 lbs./cf
Specific Heat @15F	0.700 BTU/lb. F

Thermal Conductivity @15F	0.21 BTU/hr-SF
---------------------------	----------------

5. The deionized water shall conform to the following properties in maximum allowable concentrations:
 

Calcium Carbonate Hardness	100 ppm
Chlorides	25 ppm
Sulfates	25 ppm
- B. Submit a product data sheet and MSDS sheet for the solution including the inhibitor and/or neutralizing agent.
- C. Provide a weather resistant tag on the fill valve for the system that includes description of fluid, freezing and burst point, total gallons of system, Material Safety Data Sheet reference and date of original charge.
- D. Provide certified test results for all solutions in systems. At minimum samples for the secondary refrigerant solution shall be drawn at the following times:
  1. 3 months after start-up.
  2. 11 months after start-up.

**2.15 SIGNAGE**

- A. Furnish and install legible permanent signs on the outside of all ice rink equipment mechanical room doors as detailed on the drawings and as follows:
  1. All signs informative signs, emergency signs, charts and labels shall be in accordance with NFPA 704, ANSI/IIAR, ANSI Z535.2 and the International Mechanical Code.
  2. For ammonia refrigerant, the NFPA 704 or Fire Diamond numbering shall be 3-3-0-blank (blue-red-yellow-white) or per current code requirements.
  3. Provide all other signs required by code even if not shown on the drawings.
- B. Furnish and install signage, as detailed on the drawings, next to each strobe light and audible alarm.
- C. Furnish and install signage, as detailed on the drawings, next to each refrigeration system emergency stop button and ventilation enable switch.
- D. Furnish and install schematic drawing or panel giving directions for operation of the system per ASHRAE-15 paragraph 11.7.
- E. If Owner requires the format (font, size, colors, etc.) of the signage to match other signage in the facility, provide the format required by the Owner unless it does not meet code requirements.

**2.16 STORAGE RECEIVER**

- A. Approved Manufacturers: HT Industrial, Bitzer, H.A. Phillips, Docal, or equal.
- B. Capacity: See Ice Equipment Schedule on drawings.
- C. Construction: Designed for minimum design parameters outlined in table below. Vessel shall be constructed and stamped per ASME Boiler and Pressure Vessel Code, Section VIII, Division 1 98E/99A.

R-717	M 250 PSIG	T -20 F to 250 F
-------	------------	------------------

- D. Accessories: Provide a dual relief valve assembly as specified and per code requirements. Provide a 2" diameter external steel site glass column with: welded caps; a minimum of three (3) 1-¼"-12 SPUD with 1-1/4" sight glasses; and two ¾" NPS connections to the vessel with shut-off valves. Provide all valves, piping and other related materials and accessories as necessary for a

fully operational system. Name plate shall clearly display code compliance and capacity of vessel.

- E. Vessels shall be mounted on a factory constructed steel legs or frame system.
- F. Finish: Prepare exterior surface in accordance with SSPC-SP3 Power Tool Cleaning or SSPC-SP10/NACE 2 Near-White Blast Cleaning. Paint with one coat of primer and one coat of alkyd egg-shell enamel for exterior use.
- G. Rust inhibitor shall be used when hydro-testing system. Thoroughly dry vessel interior after hydro-testing and prior to filling system with refrigerant.

## 2.17 DIFFUSION TANK

- A. Approved Manufacturers: Midwest Tank Company (Big Lake, MN) or equal.
- B. Design Conditions:
  - 1. See Ice Equipment List on drawings for capacity.
  - 2. Provide 3-year warranty for defects in materials and workmanship and 1 year for fittings and accessories.
- C. Construction:
  - 1. Upright, single wall, flat bottom, closed top.
  - 2. Molded one-piece seamless construction according to ASTM D 1998. Virgin polyethylene resin and shall be Type I (cross-linkable polyethylene) or Type II (linear polyethylene) and shall be FDA or NSF 61 listed.
  - 3. Shall be designed for chemical applications and specifically ammonia refrigerant storage.
  - 4. Submit factory test report for verification of wall thickness, impact tests, hydrostatic tests, verification of materials and visual inspection.
  - 5. Tanks shall be manufactured with a minimum of two lift lugs integrally molded into tank.
  - 6. Tanks shall be marked to identify the product, date (month and year) of manufacture, capacity and serial number.
- D. Fittings and Accessories
  - 1. Provide all necessary fittings and accessories required for the layout and function of the tank.
  - 2. Double bolted 150-pound flange fittings required for fittings 2 inches and larger below liquid level.
  - 3. Drain fitting and PVC ball valve at lowest possible point. Provide siphon tube to improve drainage capability.
  - 4. Vents and vent line for atmosphere pressure and pressure during filling of tank for proper ventilation complying with OSHA and other requirements.
  - 5. Ammonia sparger tube.
  - 6. Provide flange connections and adapters as required for connecting equipment, piping, relief inlets and outlets, etc.
  - 7. 18-inch threaded manway with 15-inch access. No vent.
  - 8. Integrally molded gallonage marks on side of tank.
  - 9. 1" flange connection on top of tank for make-up water connection.

## 2.18 WIND SOCK

- A. Furnish and install a wind sock on the exterior of the building as required by code. Coordinate sock size, mounting details and location with owner.

## PART 3 - EXECUTION

### 3.1 EQUIPMENT INSTALLATION

- A. All equipment shall be installed per manufacturer's requirements.
- B. All equipment shall be installed as individual components and not on a steel frame system unless otherwise shown on the drawings. All equipment shall be accessible for safe operation and maintenance.
- C. All equipment bases shall be bolted down and filled with concrete unless otherwise specified or noted. Adjust level of concrete as required to provide access to anchor bolts for compressors, motors, etc.
- D. All equipment shall be installed and designed such that vibration is minimal and meets acceptable limits. If the amount of vibration is in question, the Contractor shall be responsible for hiring a certified, experienced vibration company to perform the necessary test. A certified test report shall be submitted to the Engineer. If results are not satisfactory, the Contractor shall be responsible for correcting the problem and retesting for vibration as previously specified.
- E. Connect cold water make-up line to remote sump. Provide drain line, valves, etc. as shown on the drawings.
- F. All meters, gauges, and readouts shall be mounted at eye level.
- G. All equipment, vessels, and tanks shall be fully supported with a structural steel framing system anchored to the wall and floor and not to the roof structure unless otherwise approved.
- H. Tanks. If tanks (for example, sump, water, diffusion, expansion, etc.) do not fit through existing or proposed door opening, make all necessary accommodations, including removal and replacement of door(s) and wall(s) for required access.

### **3.2 VARIABLE FREQUENCY DRIVES (VFD)**

- A. Provide start-up services by a certified representative of the manufacturer.

### **3.3 MOTORS**

- A. Provide motor circuits as required by NFPA 70 including a motor grounding conductor.
- B. Testing:
  - 1. Voltage and current measurements shall be performed on all motor driven equipment to confirm that the voltage and current is within the operating range of the motor and the nameplate rating.
  - 2. Perform an insulation resistance test or megger test on each 460-volt motor by applying 500 Vdc phase to ground on each phase for 10 minutes with readings taken at the end of one (1) minute and ten (10) minutes. Minimum acceptable reading is 5 megohms.

### **3.4 ELECTRICAL**

- A. Provide all electrical work necessary for a complete, operational ice system. All work shall meet the required electrical codes for the Project's location. A licensed electrician shall perform all electrical work. The main electrical feed for each piece of equipment shall be routed beneath the floor slab, not overhead.
- B. Locate the Emergency Remote Control button(s), protective case(s), audible alarm(s) and strobe light(s) outside the ice mechanical room at a distance from the entrance door(s) to the ice mechanical room as required by code. Locate other strobe lights and audible alarm assemblies were shown on the drawings and as required by code.

### **3.5 REFRIGERANT GAS MONITORING SYSTEM**

- A. Monitoring and display units shall be mounted at eye level.

- B. Recalibrate unit at both the unit and each sensor after final completion of project. Provide verification that the unit has been calibrated. Provide calibration and test kits from the manufacturer as required to calibrate the unit per manufacturers recommendations and as specified.

### **3.6 PAINTING AND FINISHES**

- A. All structural supports and framing shall be painted with one coat of primer and one coat of alkyd egg-shell enamel.
- B. Touch up paint on all equipment, vessels, supports and exposed pipes after project is complete.
- C. Provide additional touch up paint for equipment and vessels for Owners use.
- D. Touch up damaged galvanized coatings and corrosion protection systems on condenser and remote sump.

### **3.7 CLEANING**

- A. Clean and vacuum all debris from inside the Motor Control Center and all other electrical enclosures. Do not use compressed air to clean out panel.
- B. Thoroughly clean equipment of all temporary protective coatings and foreign material prior to assembly of erection.
- C. After project completion thoroughly clean all equipment and piping systems.

### **3.8 START UP AND SHUTDOWN SERVICES**

- A. See Section 131811 - Ice Rink General Requirements.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 13 18 13 - ICE RINK FLOOR SYSTEM****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Sand.
- B. Insulation, jacketing and vapor barrier.
- C. Pipe and reinforcement support chairs.
- D. Reinforcement.
- E. Pipe and fittings.
- F. Expansion joint.
- G. Concrete.
- H. General materials.
- I. Temperature sensors and monitors for sub-floor and ice rink floor.
- J. Subgrade preparation.

**1.2 RELATED SECTIONS**

- A. Division 0, Division, General and Supplementary Conditions.
- B. Section 131811 - Ice Rink General Requirements.
- C. Section 131815 - Ice Rink Waste Heat Recovery Systems.
- D. Section 131817 – Ice Rink Central Control System.

#### 1.4 SUBMITTALS

- A. Shop Drawings. All submittals shall conform to the requirements of the General Conditions and Section 131811 - Ice Rink General Requirements.
- B. Test Reports. Submit four (4) copies of test reports to the Engineer when specified.
- C. Gradation of clean sand fill.
- D. Concrete mix design. Submit fifteen (15) business days prior to placement.
- E. Two (2) samples of a typical fusion welded pipe to fitting connection. Samples shall come from a demonstration performed in the field prior to placement of polyethylene pipe.
- F. Rink subgrade and top of pipe surveys.

#### 1.5 WARRANTY GUARANTY

- A. As required in Section 131811 - Ice Rink General Requirements

#### 1.6 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS

- A. As required in Section 131811 - Ice Rink General Requirements.

### PART 2 - PRODUCTS

#### 2.1 SAND

- A. Sub-Floor and Trench Back Fill Material: Clean sand consisting of sound, durable particles. Material gradation shall meet 100% passing the #4 sieve and not more than 5% passing the 200 sieve. Material shall be clean, free of all debris, roots, or other foreign material or chemicals.

#### 2.2 INSULATION JACKETING AND VAPOR BARRIER

- A. Approved manufacturers: Styrofoam brand by the Dow Chemical Company, CertainTeed, Owens-Corning, DiversiFoam, or equal.
- B. Floor Insulation: Insulation material shall meet ASTM C 578 Type VI with a minimum compressive strength of 40 psi, maximum water absorption of 0.1% by volume (ASTM C272) and an R-value per inch at 75 F of 5 Fxsfhx/Btu. Provide the sheet dimensions as indicated on the drawings.
- C. Pipe Insulation System:
  - 1. Direct Bury: As specified in Section 131814 – Ice Rink Piping, Valves and Accessories.
- D. Accessories: Provide all adhesives, sealants and other products as required by the manufacturer to provide a completely sealed system. Provide vapor barrier for the piping that is non-flammable and fire resistant for all systems operating below 65 F.
- E. Vapor Barrier (for Rink Floor):
  - 1. Concrete Rink Floor: Shall conform to ASTM D-4397 for Clear Polyethylene Film except the thickness shall be 6-mil. Tensile strength shall be a minimum of 1700 psi (long direction) and Elongation shall be a minimum of 225% (long direction). The materials shall be supplied in 20'-0" x 100'-0" minimum size sheets. Provide tape manufactured for sealing the seams of poly sheeting.

**2.3 PIPE AND REBAR SUPPORT CHAIR**

- A. Approved Manufacturers: Hunter Wire Products or equal.
- B. U-type or M-type configuration designed for both supporting rink piping and reinforcement or equal. Six (6) foot long sections.
- C. Material: Wire shall be a minimum of #7-gauge (0.187") steel. Base plate shall be a minimum of 20-gauge steel for sand floors and 24-gauge steel for concrete floors except that 20-gauge steel shall be used on all rink floors with steel rink piping.
- D. Shims (for adjusting pipe elevation): Shims shall be plastic or steel and shall be a minimum size of 2" wide x 2" long to provide full support beneath the pipe and rebar support chair.

**2.4 REINFORCEMENT**

- A. Reinforcement: Shall be tagged and conform to ASTM A615 Grade 60.
- B. Wire Mesh: 6x6 W4.0/W4.0 (4 gauge) steel mesh conforming to ASTM 1064.
- C. Tie Wire: Shall be 16-gauge yellow-coated annealed wire or heavier.

**2.5 PIPE AND FITTINGS**

- A. Steel Pipe:
  1. Schedule 40 black carbon steel ASTM A53 Grade B Type S (seamless) or Type E (Electric-Resistance-Welded), SRL. Rink piping shall be random 40-foot lengths. Headers shall be shop fabricated. Field verify rink radius prior to fabricating. All steel pipe shall be cleaned and capped prior to shipping to the jobsite.
  2. Joints/Connections: All connections shall be welded in accordance with pipe manufacturer's requirements and as specified below:
    - a. All joints on butt welded connections, 1 ½" diameter pipe and smaller, shall use a backer ring.
    - b. Welded socket joints/connections may be used for the rink piping.
    - c. Threaded joints or connections are not allowed.
  3. Fittings:
    - a. All fittings shall be carbon steel with welded end type and shall meet ANSI 11.9. Fittings shall be manufactured and not shop or field fabricated. All welded fittings shall be of the long radius type.
    - b. Rink piping return bends: Schedule 40 black carbon steel ASTM A53 grade B SRL or Electric-Resistance-Welded ASTM A135 Grade B.
  4. Flanges shall be of the same material as the pipe and shall be rated for a minimum of 150 psi.
  5. Protective coating. All steel pipe headers and mains shall be painted with two coats of primer paint.

## B. Polyethylene Pipe:

1. SDR 17, pressure rating 100 psi (rink transmission pipe only)

Nominal I.D.	1"	6"	8"
Actual O.D.	1.135	6.625"	8.625"
Wall Thickness	0.077"	0.390"	0.507"

Minimum thickness. Wall thickness shall be within 10% of that specified.

2. SDR 11, pressure rating 200 psi (subfloor piping and headers, subfloor transmission mains).

Nominal I.D.	¾"	1"	3"	6"	8"	10"
Actual O.D.	1.050"	1.315"	3.5"	6.625"	8.625"	10.750"
Wall Thickness	0.095"	0.119"	0.318"	0.602"	0.784"	

- Minimum thickness. Wall thickness shall be within 10% of that specified.
3. Shall be high density polyethylene complying with requirements of ASTM D3350 cell classification and have a Plastic Pipe Institute (PPI) designation of PE4710. Minimum density shall be 58 lbs/cf (0.957 gm/cc).
  4. Joints/Connections: Fusion welded. Welding process shall be performed by fully trained personnel in the fusion welding process.
  5. Fittings:
    - a. Approved manufacturers: Charter Plastics, Performance Pipe, Rahn, Georg Fisher, Polycam or equal.
    - b. All fittings shall be socket type and conform to ASTM 2683. Fittings shall be manufactured and not field or shop fabricated. The inside diameter of the fittings shall be equal to the inside diameter of the pipe.
    - c. Use manufacturer recommended coupling when fusion welding pipe of different gauges or wall thickness.
  6. The pipe shall have product traceability by inclusion of product code on the exterior of the pipe and include the manufacturer, the date of manufacture, the lot and supplier of the raw material, the location of the manufacture, and the production shift of which the product was produced.

## 2.6 COMPRESSION SEAL AND EXPANSION JOINT MATERIALS

- A. Compression Seals: Shall be D.S. Brown Delastic or equal.
  1. D.S. Brown Delastic Catalog Numbers shall be as follows:
    - a. For ½" joint (width at time of concrete placement) shall be Catalog No. E-1006.
    - b. For 1" joint (width at time concrete placement) shall be Catalog No. CV-1752.
    - c. Provide dimensions as required for the joint width shown on the drawings.
  2. Material shall be polyethylene, non-absorbent, non-staining.
  3. Compression seal material shall meet the parameters for the specified D.S Brown product.
  4. Color: Black
  5. Expansion Joint Material: Ceramar by W.R. Meadows or extruded polystyrene insulation (thickness of expansion joint by depth of rink floor) in one piece with top scored to depth of expansion joint material or as recommended by the manufacturer.

## 2.7 CONCRETE

- A. This section refers to concrete for the ice rink floor only. For perimeter slab concrete and other miscellaneous concrete requirements see Ice Rink General Requirements Section.
- B. Concrete Mix:
  1. Submit mix design fifteen (15) business days prior to placement.
  2. Concrete shall be produced by a Ready-Mix Plant approved by the Engineer. Concrete shall meet the requirement of ASTM C94 - Standard Specifications for Ready Mix Concrete.
  3. Mix Design Requirements. Prepare design mix for type and strength of concrete in accordance with applicable provisions of ASTM C94, Alternative #3.
 

Minimum 28-day compressive strength	5,000 psi
Coarse aggregate size	3/4 inches to #4 (ASTM C33 No. 67)
Maximum water to cement ratio	0.40
Minimum cement content	600 lbs/cy
Fly ash	15% of cement content max.
High Range Water Reducing Admixture	
Slump (prior to addition of HRWRA)	3 inches maximum
Slump (after addition of HRWRA)	7 inches maximum
Air content	3% maximum

4. Proportion aggregates such that the concrete mix adequately flows into all corners and around reinforcement without segregating, leaving voids or producing honeycombs. There shall be no free water in the mix.
  5. The consistency of the concrete mix shall be uniform and such that the cement and other ingredients are uniformly distributed throughout the mix and such that the mortar clings to the coarse aggregate.
- C. Material Requirements
1. Cement: Shall be Portland Cement that meets ASTM C150, Type I or Type I/II. Only the specified manufacturer submitted with design mix will be allowed.
  2. Fine Aggregates: Shall be clean, natural sand free of loam, clay and other deleterious or foreign materials. Shall meet ASTM C33 and come from a single source.
  3. Coarse Aggregates: Shall be clean, processed aggregates free of loam, clay or other deleterious or foreign materials. Shall be crushed stone or crushed gravel.
  4. Water: Shall be clean, potable water. Maximum concentration of chloride ions of 0.1%.
  5. Admixtures: All admixtures shall conform to ASTM C494. A representative for the HRWRA supplier shall be on-site at the start of the concrete placement until consistency in the mix has been proven by the testing agency. No changes are allowed once the design mix is approved.
    - a. Air Entrainment:
      - 1) Shall meet ASTM C260.
      - 2) Approved manufacturers:  
 Axim Concrete Tech. - Catexol AE 260, VR  
 Euclid Chem. Co. - AEA 92S, AEA 92, Air Mix 250  
 General Resource Tech - Polychem AE, VR  
 GCP – Applied Technologies - Darex II AEA, Daravair 1000, 1400, Airalon 3000  
 Master Builders - MB VR standard, Micro Air, MasterAir AE 90  
 Sika Corporation – Sika AEA-14, Sika Multi AIR 25  
 Premiere – ConAir
    - b. Water Reducing Admixture:
      - 1) Shall meet ASTM C494, Type A and shall not contain more chloride ions than in potable water source with a maximum of 0.1%.
      - 2) Approved manufacturers:  
 Axim Concrete Tech. - Catexol 800N, 1000N, 2000N  
 Euclid Chem. Co. - Eucon MR, WR, WR-91  
 General Resource Tech - Polychem 1000, KB1000, 400NC  
 GCP – Applied Technologies - WRDA 82, MIRA 110  
 Master Builders - Pozzolith 220N, MasterPolyhead 997  
 Sika Corporation - Sikament HP, Plastocrete 169, 161  
 Premiere – OptiFlo MR
    - c. High Range Water Reducing Admixture (HRWRA) Superplasticizer
      - 1) Shall meet ASTM C494, Type F or G and shall not contain more chloride ions than in potable water source with a maximum of 0.1%.
      - 2) Approved manufacturers:  
 Euclid Chem. Co. - Eucon 37  
 GCP – Applied Technologies - ADVA 140M, ADVA CAST 575, 600  
 Sika Corporation – Sikament 686  
 Master Builders – MasterGlenium 7500  
 Premiere – OptiFlo MR

## 2.8 GENERAL MATERIALS

- A. Nylon Ties: Shall be 3/16" wide and UL recognized. For sand rink floor ties shall have a minimum tensile strength of 100 lbs, with metal tabs. For concrete rink floor ties shall have a minimum tensile strength of 50 lbs.

- B. Moisture Curing Covers: Shall be a curing cover such Ultra Cure by McTech Group, Hydrocure by PNA Construction Technologies or equal. Polyethylene sheeting is not approved.

## **2.9 TEMPERATURE SENSOR AND MONITORS**

- A. Provide sensors for sub-floor heating system and the rink floor. See drawings for number and location.
- B. Approved Manufacturers: Omega Engineering, Thermokon, Kele, Honeywell, or equal.
- C. Sensor (thermistor or RTD):
  1. Accuracy: +/- 1% accuracy of measuring range.
  2. Sensor pocket shall be aluminum.
  3. Protection: Shall be protected against humidity, vibration and mechanical overstress.
  4. Construction: Shall be suitable for temperature extremes and immune to the effects of moisture and condensation.
  5. Provide wiring as required by monitor manufacturer.
  6. Other control systems – provide compatible 4-20mA sensor.
- D. Box: Aluminum construction with 3/4" hub size, threaded connections, flat removable iron or steel cover with neoprene gasket.
- E. Conduit: Schedule 80 PVC from box to mechanical room and from box to depth of sensor to prevent heat transfer.
- F. Wire: Provide all wiring sizes for application and per code requirements.

## **2.10 FLOOR INSERTS**

- A. Furnish and install floor inserts as detailed on the drawings and for the quantity shown. Inserts shall be designed for 5,000-pound load in any direction.
- B. Plug Materials: Furnish and install threaded plugs for each insert. The plug material for goal post inserts shall be 303 stainless steel. The material for dasher board and circus inserts shall be 360 brass.
- C. Insert Materials: As shown on the drawings. If not shown, then material shall be 303 stainless steel inserts.
- D. Base Plate Material: 303 Stainless steel or carbon steel.
- E. Wrench: Furnish two plug wrenches. Each wrench shall have a minimum shaft length of 6", a minimum handle length 10" and designed to fit insert plugs. Wrench shall be constructed of coated steel or equal.
- F. Flexible goal post pegs will be provided by the dasher board manufacturer. Verify peg dimensions prior to manufacturing floor inserts.

## **2.11 FLOOR HARDENER**

- A. Approved manufacturer: Prosoco Consolideck LS or approved equal.
- B. Penetrating lithium silicate hardener, densifier and sealer for concrete surfaces.
- C. Form: Clear to cloudy, colorless, orderless liquid.

## **PART 3 - EXECUTION**

### **3.1 INSPECTION**

- A. The Contractor shall notify the Engineer a minimum of seven (7) business days prior to the phases of work described in the Ice Rink General Requirements Section. Piping shall not be covered without notifying the Engineer.

**3.2 EXCAVATION AND BACKFILL**

- A. The Contractor shall be responsible for verifying the location of all existing piping, electrical, and other utilities prior to excavation.
- B. Benchmark: Contractor shall provide an elevation survey of the existing perimeter concrete, every 10 linear feet, to the Engineer. The Engineer will review and determine the best location for a benchmark.
- C. Excavation: All excavation shall be performed in accordance with OSHA regulations, to the depths shown on the drawings, and to the tolerances specified in the table below.

1.

A	T
Pipe trenches and non-rink floor areas	/- 0.03 feet (3/8")
Rink floor subgrade for rink floor with a subfloor heating system	/- 0.05 feet (5/8")
Rink floor subgrade for rink floor without a subfloor heating system	/- 0.015 feet (3/16")

- D. Verification Surveys and Measurements: The ice rink contractor shall provide verification surveys in the following areas. Submit surveys and measurements to Engineer for review prior to installation of new rink floor system.

1. Perimeter concrete.

- a. Survey top of perimeter concrete within 2" of the rink floor edge every 10 feet around the entire perimeter of the rink floor. This information will be used by the Engineer to establish a benchmark to construct the rink floor.
- b. Measure ice rink floor opening to perimeter concrete at the following locations.
  - i. Length. Provide 2 measurements each from radius point to radius point across the rink floor. 2 measurements total.
  - ii. Width. Take 2 measurements each from radius point to radius point across the rink floor and one at center of rink floor (center ice). 3 measurements total.
  - iii. Radius. Provide measurement of each radius. 4 measurements total.

2. Subgrade. Prior to the installation of the piping systems for the subfloor heating system, survey a 10-foot x10 foot grid pattern across the entire ice rink floor subgrade and include the benchmark elevation that was established in item 1 above.

3. Top of sand layer. Prior to installation of the floor insulation, survey 10-foot x 10-foot grid pattern across the entire final and finished ice rink floor sand layer for the subfloor heating system and include the benchmark elevation that was established in item 1 above.

- E. Backfilling: All excavated areas shall be backfilled as soon as possible but not before compaction tests have been taken and approved where required. Backfill materials shall be placed in lifts less than 12 inches thick, uniformly compacted and follow the requirements of the geotechnical report, if report is available. Backfilled areas shall be fine graded to the tolerances specified in the table below. Care shall be taken while backfilling to protect the pipe from damage.

A	T
Pipe trenches and non-rink floor areas	/- 0.03 feet (3/8")
Rink floor subgrade for rink floor with a subfloor heating system	/- 0.05 feet (5/8")
Rink floor subgrade for rink floor without a subfloor heating system	/- 0.015 feet (3/16")
Rink floor subfloor heating system sand layer	/- 0.015 feet (3/16")
Rink floor sand (for sand floors only)	/- 0.015 feet (3/16")

- F. Compaction: Backfill material shall be uniformly compacted to the densities shown in the table below.

A	S	P	D
Pipe trenches within building footprint and other structural areas	98%		
Rink floor subgrade (below subfloor heating system)	98%		
Rink floor subfloor heating system sand layers 6" thick or less	95%		
Rink floor sand (for sand floors only)	95%		

### 3.3 INSTALLATION OF PIPE

- A. No changes to pipe alignment or elevation shall be made without approval from the Engineer.
- B. All pipe shall be cleaned out prior to installation. Inspect pipe for defects and damage.
- C. Buried piping shall be bedded in material recommended by the pipe manufacturer.
- D. Support rink and header piping systems as shown on the drawings. Provide additional supports for the rink piping system, over the header trench, as necessary to prevent deflection of piping systems during construction and during the concrete pour.
- E. Support all piping in such a manner as to prevent all vibration and vertical or horizontal movement.
- F. For polyethylene pipe, butt or socket fusion welds shall be used to connect pipe and fittings. Electro fusion welded couplings should only be used where it is not possible to make a butt and socket weld due to space constraints. In addition, electro fusion welded couplings and fittings shall not be used in the following locations:
1. In or beneath the ice rink floor system. This includes, but is not limited to, the header pipe systems for both the rink floor and subfloor systems and the rink floor and subfloor piping systems.
  2. Under permanent bleacher systems except where transmission mains connect to header pipe outside of the rink floor perimeter.
  3. Above ground piping systems.

### 3.4 INSULATION JACKETING AND VAPOR BARRIER

- A. Install floor insulation with staggered joints as required on the drawings. Ends shall be tightly butted together and secured. All cuts must be performed with a sharp-edged tool.
- B. Install vapor barrier over insulation with a minimum of 18" overlap at all joints. All joints shall be taped.
- C. Install pipe insulation on transmission mains as specified.

### 3.5 PIPE AND REBAR SUPPORT CHAIR

- A. Install as shown on the drawings.
- B. Additional supports shall be placed as close to the ice rink piping return bends as possible.

### 3.6 REINFORCEMENT

- A. Reinforcement shall be installed as shown in the drawings.
- B. Installation shall meet ACI 315. Reinforcement shall be installed with a minimum of 2" of cover unless otherwise noted on the drawings. Adequately support reinforcement with support chair where specified and concrete blocks. Terminate rebar 2" from the rink edge.

- C. Splices shall be installed with minimum lapping distances shown on the plans and bars wired tightly together. If lapping distances are not shown on the plans the following lapping distances shall apply.

R □□□□□□□□ □□□ B □□ S □□□	L □□ S □□□□□ (□□□□□)	90° H □□□□ E □□
#4	25	8
#5	31	10
#6	37	12

- D. Wire mesh shall be placed over rink piping. The loose ends of the wire mesh shall be bent down. The wire mesh sheets shall be overlapped by a minimum of 6" and wired securely to the reinforcement bars at a minimum of 18" on center or as noted on drawings (whichever is the tighter spacing) in both directions and along all edges of mesh. Consider securing to pipe chairs as well to prevent floating of piping system during the concrete pour especially if air is used for testing the piping system. The mesh shall be tightly wired down in all locations. Terminate mesh 2" from the rink edge. Turn all wires down. Contractors shall monitor the location of the wire mesh throughout the concrete placement and finishing processes and provide additional securing as needed.

**3.7 PIPE AND FITTINGS**

- A. All sub-floor heating and rink piping shall be continuous. There shall be no joints, splices or additional fittings other than were indicated on the drawings. Header and transmission main piping shall be supplied in typical lengths.
- B. All piping and fittings shall be connected by fusion welding. Contractor shall perform and demonstrate in the field, by personal that will be working on this project, for the Engineer prior to placement of polyethylene pipe. Submit two (2) samples of a typical fusion welded joint from the demonstration.
- C. All connections to the header pipe shall be at a 90-degree angle to the header pipe. No connections shall be made at an angle.
- D. Contractor shall inspect the interior and exterior of all butt and socket joints wherever possible to assure there are no blockages and that joints are formed to manufacturer's specifications.
- E. Fasten rink piping to chair supports with specified nylon ties as necessary to secure pipe in position. Varying temperatures may require less restrictions to allow pipe to move. End of ties shall be turned downward.
- F. Placement:
  - 1. Rink piping shall be installed within +/- 3/16" of the elevation shown on the drawings. Shims shall be used to adjust pipe elevations if necessary.
  - 2. Verification Surveys and Measurements:
    - a. Surveys. When rink piping installation is complete the Contractor shall provide a survey of the top of the rink pipe. The survey shall be performed by an independent surveying company and signed by a professional engineer or registered land surveyor licensed in the state of the project. The survey equipment used must have recent documented certification of calibration and must be of the highest accuracy to document the very tight tolerances specified for this work. At minimum, the survey locations shall include the following:
      - 1) Top of rink pipe in an 8-foot x 8-foot grid pattern over the entire rink surface.
      - 2) In addition, top of rink pipe at supply and return headers (next to elbow or tee fitting) at an 8-foot spacing.
      - 3) In addition, the top of rink pipe along radii and ends of rink at a 8-foot spacing, 1 foot from edge of perimeter concrete.
      - 4) In addition, the top of rink pipe along the row of support chairs on each side of the header trench at a 8-foot spacing.

- 5) In addition, perimeter concrete at edge of rink floor every 20 linear feet around entire perimeter of concrete.
- 6) In addition, the top of each floor insert (Circus Anchors, Tennis, etc.)

The information shall be recorded and submitted to the engineer clearly showing top of pipe elevation in reference to the top of concrete elevation and the difference between the two elevations. The survey shall be completed in adequate time for the Engineer to verify the information and the Contractor to make adjustments prior to the concrete pour.

3. Goal insert locations. Provide measurements of each goal insert from center ice, from end of rink, and distance between inserts. 5 measurements total
  4. Cleaning and Flushing: Thoroughly flush and clean all piping systems prior to installation and before installation of secondary refrigerants. Remove all water or other fluids used during the cleaning and flushing procedures. The Engineer shall be notified prior to any final cleaning or flushing.
- G. Testing:
1. The entire sub-floor heating system including the headers and transmission mains and the entire rink piping system including the header and transmission mains shall be hydrostatically tested as two separate systems at 100 psi each for the first four (4) hours and reduced to 60 psi for an additional 20 hours with no pressure drop at either setting and in accordance with ASTM F2164-21 Standard Practice for Field Leak Testing of Polyethylene (PE) and Crosslinked Polyethylene (PEX) Pressure Piping Systems Using Hydrostatic Pressure. While each test is being set up the Contractor will likely need to add water for the first 2 to 3 hours as the pipe may stretch slightly. Each test shall not begin until the Contractor is confident all air is removed from the system and the system is completely filled with water. An Owner's representative shall witness and approve the test.
  2. Once the initial testing is approved, the pressure shall be lowered to 50 psi and maintained until 48 hours after the sand and concrete placement is complete.
  3. Gauges used for pressure tests must be designed for pressures greater than the test pressure. For example, a 100-psi gauge cannot be used for a 100-psi test. The scale on the gauge must be the next increment up from 100 psi.
  4. The insulation systems shall not be installed on the piping until the testing has been accepted.
- H. Fill sub-floor piping system with glycol solution specified in Section 131815 - Ice Rink Waste Heat Recovery Systems. Fill rink piping system with secondary refrigerant as specified in Section 131812 - Ice Rink Refrigeration System.

### 3.8 COMPRESSION SEAL AND EXPANSION JOINT MATERIAL

- A. Install extruded polystyrene insulation (thickness of expansion joint by depth of rink floor) in one piece with top scored to depth of expansion joint material or as recommended by the manufacturer.
- B. After concrete has been placed and cured, remove the top piece of insulation.
- C. Clean all dirt, debris and water from space between perimeter concrete and rink floor using a brush, vacuum or compressed air and as recommended by the manufacturer.
- D. Install when concrete substrate is clean, sound, dry and cured for a minimum of 14 days and as recommended by the manufacturer.
- E. Install the compression seal material in longest pieces possible and as recommended by the manufacturer. A series of small sections will not be accepted.
- F. Install adhesive per manufacturer's recommendations. Do not allow to freeze prior to installation. Store all components out of direct sunlight in a clean, dry location between 50 F and 90 F.

- G. Install adhesive per manufacturer's recommendations.
- H. Install compression seal per manufacturer's recommendations.

### 3.9 CONCRETE WORK

#### A. Quality Control:

1. A prepour meeting will be scheduled with the Engineer or Owner's representative to discuss the methods of placement, equipment, and quality control procedures.
2. A benchmark shall be approved by the Engineer prior to starting the pour.
3. The survey of the rink floor piping must be approved by the Engineer prior to concrete placement.
4. Prior to placement, an inspection of the rink floor shall be conducted and all debris, soil, trash, and standing water shall be removed before placement begins.
5. Concrete shall not be placed until authorized by the Engineer or the Owner's representative.
6. At least two (2) standby concrete trucks shall be available in case of equipment failure or loads are rejected.
7. Standby pumping equipment shall be on-site in case primary pumping equipment fails. Hand pushed wheelbarrows will not be accepted.
8. An extra vibrator shall be kept on-site.
9. The concrete placement for the rink floor shall take place as one continuous pour from start to finish. Method of placement, leveling, finishing and curing shall be approved by the Engineer and the Contractor responsible for the ice rink work.
10. Quality control personnel from the ready-mix company, HRWRA admixture supplier and the Contractor shall be present during the pour.
11. All concrete not meeting the approved design mix parameters will be rejected.
12. Testing:
  - a. Contractor shall hire a testing agency to perform the following tests and shall pay for all testing and laboratory costs.
  - b. Temperature: Measure the concrete temperature for each truck.
  - c. Slump: Measure the slump before and after adding the High Range Water Reducing Admixture (HRWRA)/Super Plasticizer for each truck. Tests shall be performed in accordance with ASTM C143.
  - d. Air Content: Tests shall be taken before and after adding the High Range Water Reducing Admixture (HRWRA)/Super Plasticizer during casting of cylinders. Tests shall be performed in accordance with ASTM C231.
  - e. Compressive Strength:
    - 1) Make and cure at least one (1) set of test cylinders, consisting of four (4) individual cylinders, for every 50 cubic yards of concrete placed or fraction thereof. Test specimens and testing shall be performed in accordance with ASTM C31 and ASTM C39.
    - 2) For each set of cylinders, test one specimen at seven (7) days, two specimens at twenty-eight (28) days and one hold. Acceptance shall be based on the average of the two 28-day tests.
  - f. All sampling and tests shall be taken at the point of placement unless otherwise specified.
  - g. An electronic copy of the test results shall be submitted to the Engineer as soon as the tests are completed.

#### B. Placement:

1. All concrete shall be placed and consolidated in accordance with ACI 304 (measuring, mixing, transporting), 305 (hot weather) and 306 (cold weather).
2. The method and manner of placing the concrete shall be such as to minimize the possibility of segregation of the aggregate, the displacement of the reinforcement, pipe or supports and damage to the floor insulation. Place concrete as near to the final position as possible. The

vibrator shall not be used to transport or to flow concrete to the extents that causes segregation.

3. The pumping equipment used for conveyance of concrete the equipment shall be suitable for this type of work and have adequate capacity for the work. The pump shall be operated such that a continuous stream of concrete without air pockets is produced.
4. Proper precautions shall be taken to prevent the polyethylene headers from floating up during the pour.
5. Concrete shall be placed in maximum 12" layers in the header trench. Each layer shall be adequately consolidated before the next layer is placed.
6. Mechanical vibration shall be used to consolidate the concrete. Provide and use two (2) vibrators during the pour. Vibrators shall be capable of operating at frequencies sufficient to achieve thorough and uniform consolidation, but not less than 7000 impulses per minute. Methods such as spading shall be used to consolidate concrete in locations where it's impossible to reach with a vibrator. Vibration shall not be applied directly to the reinforcement or piping. Placement and duration of the vibration shall be such to thoroughly consolidate the concrete without causing segregation or localized areas of grout.
7. Bridge screeds or super screeds shall not be used.
8. Concrete that has been contaminated by foreign materials shall not be deposited or shall be removed from the rink area. Concrete that has been partially hardened shall not be reworked or re-tempered and shall be removed from the rink area.

C. Finishing:

1. Immediately after placement and consolidation, the concrete shall be struck off, screeded, and leveled to the required elevation. Begin floating when the surface is ready and bleed water is no longer visible. Floating may be conducted either by hand or with a machine. Check for levelness, fill or cut as necessary, and refloat surface to a smooth, uniform, granular texture.
2. Chemical finishing aids or fogging system shall be used at the Contractor's discretion to prevent rapid surface moisture loss. Water shall not be added to the concrete at any time.
3. After floating, apply a trowel finish using a power-driven trowel. The Contractor shall determine the time to start troweling. Perform final troweling by a combination of hand and power-driven trowels, leaving the surface free of marks, and uniform in appearance and texture. Provide a smooth surface.
4. The perimeter edge of the rink floor, adjacent to the expansion joint, shall be edged or chamfered to 1/4" radius.
5. Surface Tolerance:
  - a. The top of slab elevation for the rink shall be continuously checked by the Contractor throughout the finishing operation with survey equipment.
  - b. The final concrete surface elevation shall be within +/- 3/16" from a true level plane.

D. Concrete Surface Verification Survey

1. When concrete placement installation for the rink floor is complete the Contractor shall provide a survey of the concrete surface. The survey shall be performed by an independent surveying company and signed by a professional engineer or registered land surveyor licensed in the state of the project. At minimum, the survey locations shall include the following:
  - a. Top of concrete rink floor in a 8-foot x 8-foot grid pattern over the entire rink surface.
  - b. In addition, survey along radii and ends of rink at a 8-foot spacing, 1 foot from edge of perimeter concrete.
2. The information shall be recorded and submitted to the engineer clearly showing the top of concrete elevation in reference to the benchmark used to build the rink floor and the difference between the two elevations. The survey shall be completed the same day as the rink pour and according to ASTM and ACI standards.
3. Concrete Surface Survey (FF/FL): When concrete placement installation for the rink floor is complete the Contractor shall provide a floor profile of the concrete surface using a Floor

Dipstick measurement device or equal that provides instant FF & FL values and floor profiles. The profile/survey shall be performed by an independent testing company and signed by a professional engineer licensed in the state of the project.

The information shall be recorded and submitted to the engineer as a nicely formatted report showing combined section FF and FL numbers and a project summary report for the entire ice rink floor surface in accordance with ASTM E-1155.

- E. Curing: After finishing and as soon as possible provide a wet cure for a minimum of 14 days by covering the entire surface with curing blankets. The curing blankets shall be installed to prevent air pockets and discoloration in the concrete surface. The Contractor is responsible for maintaining the wet condition for the entire 14 days. The curing blankets shall be removed all at one time to avoid potential damage due to differential shrinkage. Approved manufacturers: Ultra Cure by McTech Group, Hydrocure by PNA Construction Technologies or equal. Polyethylene sheeting is not approved.
- F. The concrete floor shall not be refrigerated or open to equipment traffic for 28 days from time of pour. See startup procedures in the Ice Rink General Requirements Section.
- G. Liquid Hardener:
  - 1. A liquid hardener shall be uniformly applied to the surface of the ice rink floor and as recommended by the manufacturer.

### **3.13 TEMPERATURE SENSORS**

- A. Install temperature sensors in accordance with manufacturer's recommendations. Sub-soil temperature sensor shall be installed to 1'-6" depth to bottom of sensor. For each sensor, the top of the box cover shall be even with the top of the ice rink slab for easy access and sensor replacement.

### **3.14 FLOOR INSERTS**

- A. Install inserts at the locations shown on the drawings. Inserts shall be carefully lined and leveled with transit before placing concrete for the rink floor.
- B. Brass plugs should be installed prior to concrete placement. Grease top of plug.

### **3.15 CLEANING**

- A. The ice rink floor shall be completely cleaned of all debris, spills, stains, etc. If requested by the Engineer, the contractor shall wash and mop the entire floor to assure the floor is clean.
- B. Clean all other material, equipment, and debris from other areas of the building on a daily basis and thoroughly clean at the end of the project.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 13 18 14 - ICE RINK PIPING VALVES AND ACCESSORIES****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Pipe and Fittings.
- B. Valves and Accessories.
- C. Pipe Hangers.
- D. Pipe and Equipment Markers.
- E. Expansion Tank.
- F. Pressure Gauges.
- G. Thermometers.
- H. Insulation.
- I. Sealing and Firestopping.

**1.2 RELATED SECTIONS**

- A. Division 0, Division 1, General and Supplementary Conditions.
- B. Section 131811 - Ice Rink General Requirements.
- C. Section 131812 - Ice Rink Refrigeration System.
- D. Section 131813 - Ice Rink Floor System.
- E. Section 131815 - Ice Rink Waste Heat Recovery Systems.
- F. Section 131817 – Ice Rink Central Control System.

**1.3 SUBMITTALS**

- A. Shop Drawings. All submittals shall conform to the requirements of the General Conditions and Section 131811 - Ice Rink General Requirements.

**1.4 WARRANTY GUARANTY**

- A. As required in Section 131811 - Ice Rink General Requirements.

**1.5 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS**

- A. As required in Section 131811 - Ice Rink General Requirements.

**PART 2 - PRODUCTS****2.1 PIPE AND FITTINGS**

- A. Polyethylene.
  - 1. Subfloor pipe and transmission mains. As specified in Section 131813 – Ice Rink Floor System.

- B. Steel.
1. Primary and secondary refrigerant piping.
  2. Material shall be carbon steel and meet the following:
    - a. Pipe smaller than 1 □ inches diameter shall conform to ASTM A106, Grade B, Schedule 80. Schedule 40 steel may be used for R-22 liquid refrigerant lines for piping sizes 6 inches and smaller and R-717 refrigerant liquid lines 2 inches through 6 inches and all suction and discharge line 6 inches.
    - b. 1 3/4 inch to 12 inches diameter shall conform to ASTM A53, Grade B Schedule 40.
    - c. Larger than 12 inches diameter shall conform to ASTM A53, Grade B Schedule 40.
    - d. Type F steel shall not be used for refrigerant lines except when discharging to atmosphere.
  3. Joints shall be welded end type. No threaded joints.
  4. Fittings shall be carbon steel with welded end type and shall meet ANSI B16.9. Fittings shall be manufactured and not shop or field fabricated.
  5. Flanges shall be of the same material as the pipe and shall be rated for a minimum of 150 psi. Shall meet ANSI B16.5
- C. PVC
1. Drain lines where noted.
  2. Shall be Schedule 40, virgin polyvinyl chloride, with maximum operating and required minimum bursting pressures at 73 degrees F for PVC piping and fittings per ASTM D1785 "Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe. Fittings and flanges shall be the same grade and class of pipe. Solvent welded joints using heavy bodied or heavy-duty cement.

## 2.2 VALVES AND ACCESSORIES

- A. Primary Refrigerant Valves and Accessories
1. Approved Manufacturers: Hansen Technologies, Henry, Refrigeration Specialties, Cyrus Shank Company, Parker, Danfoss, or equal.
  2. Minimum working pressure rating: 400 psig.
  3. Body: Heavy duty ductile iron, cast steel.
  4. Internal parts: Stainless steel.
  5. Gaskets and Seats: Neoprene O-rings or flat composite gaskets, Teflon seats.
  6. Packing nut and hand wheel: Zinc chromate plated steel.
  7. Pressure relief valves to meet requirements of Section IV of the ASME Boiler and Pressure Vessel Code. Maximum release pressure should match vessel pressure rating. Provide discharge indicator such as Pop Eye by Hanson Technologies or equal. Secondary side (glycol/brine) should be set at 150 psi unless otherwise stated.
  8. Refrigerant Strainers: Shall include stainless steel screen and body. Shall be easily serviceable in-line.
  9. Filter Dryer: Steel shell with corrosion resistant finish, aluminum cover plate with 1/8" FPT connection for valve, and copper fittings.
  10. All hand expansion valves, solenoid valves, and regulators shall be supplied with seal caps on the adjusting stem.
  11. Check valves: Shall be Hansen HCK4 LR Gravity Drain check valves for low pressure drop applications of 0.25 psid, Danfoss, or equal.
  12. Solenoid Valves: Shall be Hansen Model HS4A, Danfoss or equal. Piston and spring mechanism shall be pressure operated. Valves using plunger-needle type assemblies shall not be used."
  13. Pressure Regulating Valve(s): Shall be Hansen Standard Regulator HA4A, Danfoss, or equal. The pressure regulating valve for the compressor discharge line(s) shall include a high range (up to 185 psi) spring assembly.
  14. 3-Way Oil Temperature Valve: shall be Hansen HOTV/HOTW or equal.

15. Liquid Level Float Switch (High Level):
    - a. Approved Manufacturers: Phillips Refrigeration, Parker, Danfoss, or equal
    - b. Operating temperature: -50F to 150 F.
    - c. Float chamber: zinc plated
    - d. 10-amp Single pole, double throw switch, hermetically sealed, magnetically actuated.
    - e. Standard DIN connector with 15' cable.
    - f. Housing interchangeable with RS LL float switch.
  16. Adjustable Level Controllers and External Level Column Systems: Shall be Hansen Vari-Level or equal. System shall include, but not limited to; adjustable control unit with Teflon encased stainless steel sensing principle and control cable, level column with site glasses (minimum of 4 positioned at 6" on center), probe, valve position indicator, isolation valves. Probes shall be full length of the columns.
  17. Automatic Expansion Valve: Shall be Hansen Motorized Control Valve and Controller Model MCV, equal by Danfoss, or equal. Provide optional power close feature, remote mounted valve position indicator, Teflon seat, non-electric rotor enclosed in stainless steel case."
- B. Secondary Refrigerant Valves and Accessories
1. Approved Manufacturers: Apollo, Aurora, Bell & Gossett, Crane, Flowseal, Milwaukee, Mueller, Nibco, Stockham or equal.
  2. Minimum working pressure rating: 125 psig
  3. Provide valve neck extensions where needed.
  4. Butterfly Valves: Cast iron or ductile iron (ASTM A536) body; Ni-coated duction iron or 316 stainless steel disc; 416 stainless steel stem; EPDM/Buna-N/Teflon/Viton resilient seat; Teflon (PTFE) stem bushing; 316 stainless steel disc screws; EPDM or Buna-N O-Rings.
  5. Check Valves: Non-slam design; cast iron body, bonnet, disc plate, and disc cage meeting ASTM A-126 Class B.
  6. Combination Valves: Operates as a non-slam check valve, shutoff valve and throttling valve. Cast iron body.
  7. Ball Valves: Bronze body, 316 stainless-steel ball, Teflon seats.
  8. Air Release Valves: Cast iron or bronze body. Provide ball valve and drain line to floor. Include 1/2" FPT and 3/4" MPT connections.
  9. 3-Way Mixing Valves: Cast iron body, flanged. Controls to operate valve based on fluid temperature.
  10. Poly to Steel Transition Fittings:
    - a. Approved manufacturers: Krausz USA (Hymax Cplg), Polycam
  11. Suction Diffuser/Strainer:
    - a. Body and Cover: Cast iron, ASTM A48, flanged.
    - b. Vanes & Orifice Cyl: Steel for glycol systems  
Stainless steel for calcium chloride systems.
    - c. Strainer: 5/32" perforated, 304 stainless steel.
    - d. Start-up Screen: 20 mesh, 304 stainless steel.
    - e. O-ring: Buna-N
    - f. Purge/Drain Plug: Wrought steel or Cast Carbon Steel
    - g. Cap Screws: Wrought steel, SAE Grade 5
    - h. Pipe Supports: Steel, adjustable
  12. Flexible Connectors: 150 lb plate or carbon steel - flat face type, flexible stainless-steel hose and braid material.
  13. Flow Switch or Differential Pressure Switch:
    - a. Approved manufacturers: Johnson Controls, Penn by Johnson Controls, United Electric Controls, Hansen, IFM, or equal.
    - b. Must be compatible with the system fluid.
    - c. Enclosure: NEMA Type 4.
    - d. Gold-plated contacts for improved electrical performance.
    - e. Stainless steel paddle or opposing metal bellows (seal bellows) to detect pressure differences between two sources.

- f. Adjustable set points.
- g. Epoxy coated enclosure.
- 14. Resistance Temperature Detectors (RTD) Assemblies:
  - a. Approved manufactures: Omega, JW Instruments (763.784.5708) or equal.
  - b. RTD: Single Element, platinum, 3 wire, Tolerance Class A, 316 stainless steel sheath. Length to be at approximately 10% longer than radius of pipe.
  - c. Temperature Ranges:
    - 1) Return brine/glycol: 0-50F
    - 2) Others: As required.
  - d. Spring loaded.
  - e. NPT stainless steel hex nipple.
  - f. Aluminum screw cover head – NEMA 4X rated.
  - g. Signal: 4 to 20 mA programmable temperature transmitter, upscale burnout, temperature range to match RTD.
- 15. Thermowell: Shall be standard duty threaded (NPT), 304 stainless steel, NPT size as required to accommodate RTD.
  - a. Shall coordinate type of RTD and transmitter with controls, VFD or other device that is being connected to RTD Assembly.
- C. Valve Tags
  - 1. Provide non-ferrous metal or plastic laminated tags on each valve with non-ferrous or corrosion proof fasteners. Numbering system shall be referenced in the Operation and Maintenance Manual.

### 2.3 PIPE HANGERS AND SUPPORTS

- A. Approved Manufacturers: Anvil International, Crane, Red Head, or equal.
- B. Provide a complete pipe support system including hangers, supports, brackets, guides and anchors even if not specifically shown on the drawings. All supports shall conform to the latest requirements of ASME Code for Pressure Piping B31.1 and MSS Standard Practice SP-58, SP-69, SP-89 and SP-90.
- C. Pipe hangers shall be capable of supporting the pipe in all conditions of operation without transferring excessive stress to the pipe.
- D. Supports shall fit adequately over insulation. Provide 12 gage pipe saddles and inserts of high-density block insulation.
- E. Supports shall not be connected to factory provided framework for equipment.
- F. Exterior pipe supports shall be galvanized steel.

### 2.4 PIPE AND EQUIPMENT MARKERS

- A. All pipe and equipment markers shall conform to IIAR Bulletin No. 114 (most recent edition): Guidelines for Identification of Ammonia Refrigeration Piping and System Components.

### 2.5 EXPANSION TANK (FOR RINK FLOOR PIPING)

- A. Approved Manufacturers: Aurora, Xylem Inc. Bell and Gossett, John Wood Company, H.A. Phillips, Armstrong, or equal.
- B. Capacity: Horizontal compression tank. See capacity in Ice Equipment Schedule on drawings.

- C. Materials: Pressure rating of 125 psig in accordance with Section VIII, Division 1, of the ASME Boiler Pressure Vessel Code, and registered with the National Board of Boiler Pressure Vessel Inspectors.
- D. Accessories: Liquid level gauge assembly by Apollo Valve or equal and shall include gauge glass, drain valve, glass protector and shut off valves. Air control fitting equal to Xylem Inc. Bell and Gossett tank fitting and ATFL including brass vent tube plug and stainless-steel ball check.
- E. Tank shall be painted with one coat of primer and one coat of enamel.

## 2.6 PRESSURE GAUGES

- A. Approved Manufacturers: McDaniel, Ashcroft or equal.
- B. Materials and Accessories: Shall have stainless steel case, minimum 4" diameter, bourdon tube type, liquid filled, 1% scale accuracy over entire range of gauge, 1/2" minimum diameter stainless steel sockets. Provide ball valve and snubber for each gauge. Provide 1/2" minimum diameter steel pipe extension to extend ball valve outside of pipe insulation. Steel pipe and ball valve specified elsewhere in the specifications.
- C. Sizes: Scaled from 0 to 50 psi for snowmelt, sub-floor, and water systems. Scaled from 0 to 100 psi for all other systems.

## 2.7 THERMOMETERS

- A. Approved Manufacturers: Weksler, Trerice or equal.
- B. Materials. Round, bimetal thermometer style using bimetallic sensing element, sensing element consisting of two dissimilar metals, stainless steel stem, highly polished type 300 stainless 4" diameter steel case, adjustable angle, silicone dampened coil, dial pointer, stainless steel stems, non-breakable double strength glass window, accuracy to  $\pm 1.0\%$  full scale ASME B40.3 Grade A, external reset.
- C. Materials: Adjustable base, plastic case, non-breakable window, accuracy of one scale division. Temperature wells to have copper bulbs.
- D. Size: scale ranging from -40 F to 110 F.

## 2.8 INSULATION

- A. Pipe and equipment insulation system.
- B. See Insulation Schedule on drawings for required thickness, type and location.
- C. Insulation and Jacket Type:
  - 1. Materials: Shall be composite insulation system including insulation, jacket (as specified for specific application), and all sealants and shall have a flame spread rating of 25 or less and a smoke development rating of 50 or less. Shall be puncture resistant based on ASTM D-781, moisture and mildew resistant and vermin proof. Insulation shall be suitable to receive jackets, adhesives and coatings as indicated.
  - 2. Fittings. All fittings shall be preformed from the factory and match the insulation material, thickness, etc. Field fabricated insulation sections for fittings is not allowed.
  - 3. Type 3 Insulation (exposed, interior of building) - Flexible Elastomeric Thermal Pipe Insulation by Armaflex or equal.
    - a. Jacketing: None.
  - 4. Type 5 Insulation (exposed, interior and exterior of building) – Dow XPS Styrofoam, Certainteed, Owens-Corning, Pittsburgh Corning, Extrol, Fibrex, H.B. Fuller, or equal.
    - a. Insulation shall meet the following properties:

P	V
Density, ASTM D1622, minimum	1.6 lbs/cf
Compressive Strength ASTM D1621, minimum	20 lb/sq. in
K-factor, ASTM C518	0.259 btu-in/hr-cf-F
Water Absorption, % by volume ASTM C272/D2842, max.	0.5/1.0 %
Water Vapor Permeability, ASTM E96, max.	1.5 perm-inch

- b. Jacketing (exposed, interior of building):
  - 1) PVC material with thickness of 20 mils, gloss finish on one side, semi-gloss on other side, FS LP-535D. Ultraviolet inhibited indoor/outdoor grade to be used where exposed to high humidity, ultraviolet radiation or installed outdoors. Jackets shall be rated for 0 F to 150 F with maximum flame spread rating of 25 meeting ASTM E-84 and maximum smoke development rating of 50 meeting ASTM E-84.
  - 2) Type: Composition A, Type II, Grade GU, jacketing shall meet above requirements. Type 3 jacketing shall meet ASTM D-1784, Grade 1, and high impact in addition to the above requirements.
- c. Jacketing (exposed, exterior of building and vertical pipe chase applications):
  - 1) Aluminum material alloy 3003, 1100, or 3105 meeting ASTM B-209 with H-14 temper, 20 mil, smooth finish, white painted aluminum. UV protected. Jacketing shall have no paper to retain moisture.
  - 2) Provide Polysurlyn moisture barrier with a minimum thickness of 2.5 mil. Dupont, Dow Saran or equal.
  - 3) Banding shall be 0.020" thick by 1/2" wide, 300 series, stainless steel.
  - 4) Aluminum jacketing for fittings, tees, elbows, valves, caps, etc. shall be sectional, factory contoured, to fit closely around insulation.

5. Type 5A (direct bury interior and exterior applications) – FoamGlas by Owens Corning or equal.

a. Insulation shall meet the following properties:

P	V
Density, ASTM C303, minimum	7.18 lbs/cf
Compressive Strength C165/C240/C552, minimum	90 lb/sq. in
K-factor, ASTM C518, C177 at 0F	0.250 btu-in/hr-cf-F
Water Absorption, % by volume ASTM C240, max.	0.2% by Vol
Water Vapor Permeability, ASTM E 96 West Cup, max.	0.0 perm-inch

- b. Jacketing:
  - 1) Approved manufacturers: Pittwrap SS by Pittsburgh Corning or equal. Insulrap 50-SJ-NG is not considered an equal.
  - 2) Modified bituminous membrane.
  - 3) Self-healing material
  - 4) Overlap shall be a minimum of 50%.
  - 5) Apply in temperatures above 50F.
  - 6) Properties:

P	V
Thickness (mils), minimum	70
Permeability, ASTM E96 (perm-inches), max.	.002
Tensile Strength, ASTM D882 (at 78F), min.	1150 lbs/in
Puncture Resistant, ASTM E154, min.	199 lbs

6. Type 5B (direct bury interior and exterior applications) Composite Piping System

- a. **HDPE** such as Tricon Piping Systems, Inc., Energy Task Force Pre-Insulated Pipe or equal. Piping material shall meet the pipe specifications for this project. Shall use HDPE jacket as specified below.
- b. Closed cell polyurethane foam insulation. Foamed in place.

c. Insulation shall meet the following properties:

P	V
Density, ASTM D1622, minimum	2.0 lbs/cf
Closed Cell, minimum	90-95%
K-factor, ASTM C177	0.147 btu-in/hr-sf-F

d. Jacketing

- 1) Direct Bury, Interior and Exterior of Building for Composite Piping Systems:
- 2) Approved manufacturers: Tricon Piping Systems, Inc. or equal.
- 3) HDPE materials.
- 4) Must be applied with manufacturers recommended shrink sleeve material connecting pipe section for waterproof application. No substitutions.
- 5) Properties:

P	V
Resin, ASTM D3350	Type III, Grade P34
Tensile Strength, ASTM D638(at 78F), min.	3300 psi
Ultimate Elongation, ASTM D638 min.	850%
Tangent Flexural Modules, ASTM D790, min.	175,000 psi

D. Insulation Inserts and Pipe Shields

1. Approved Manufacturers: B-Line, Pipe Shields, Value Engineered Products or equal.
2. Construct inserts with calcium silicate, minimum 140 psi compressive strength. Piping 12” and larger, supplement with high density 600 psi structural calcium silicate insert. Provide galvanized steel shield. Insert and shield to be a minimum 180 degrees coverage on bottom supported piping and full 360 degrees coverage on clamped piping. On roller mounted piping and piping designed to slide on support, provide additional load distribution steel plate. On low temperature systems, extruded polystyrene may be substituted for calcium silicate provided insert and shield length and gauge are increased to compensate for lower insulation compressive strength.
3. Where contractor proposes shop/site fabricated inserts and shields, submit schedule of materials, thickness, gauges and lengths for each pipe size to demonstrate equivalency to pre-engineered/pre-manufactured product described above.
4. Precompressed 20 lb density molded fiberglass blocks, Hamfab or equal, of the same thickness as adjacent insulation may be substituted for calcium silicate inserts with a 1” x 6” block for piping through 2 ½” and three 1” x 6” blocks for piping through 4”. Submit shield schedule to demonstrate equivalency to pre-engineered/pre-manufactured product described above.
5. Wood blocks will not be accepted.

E. Accessories:

1. Provide all adhesive, sealants, protective finishes, and other products as recommended by the manufacturer to provide a completely sealed system.
2. Provide vapor barrier that is non-flammable, fire resistant and polymeric resin, for all systems operating below 65 F.
3. Insulation bands shall be □ inches wide, constructed of aluminum or stainless steel. Minimum thickness to be 0.015 inches for aluminum and 0.010 inches for stainless steel.
4. Tack fasteners shall be stainless steel ring grooved shank tacks.
5. Staples shall be clinch style.
6. Insulating cement shall meet ANSI/ASTM C195, hydraulic setting mineral wool. Finishing cement shall meet ASTM C449.
7. Bedding compounds to be non-flammable, fire resistant, polymeric resin.

**2.9 SEALANT AND FIRESTOPPING**

- A. Sealant and fire stopping of sleeves and openings between ductwork, piping, etc. and the sleeve, structural or partition opening shall be the responsibility of the contractor.
- B. Fire and/or Smoke Rated Penetrations:
  - 1. Approved Manufacturers: 3M, Hilti, Rectorseal, STI/SpecSeal, Tremco, or equal.
  - 2. All fire stopping systems shall be provided by the same manufacturer.
  - 3. Fire stop systems shall be UL listed or tested by an independent testing laboratory approved by the State.
  - 4. Use a product that has a rating not less than the rating of the wall or floor being penetrated.
  - 5. Contractor shall use firestop putty, caulk sealant, intumescent wrap strips, intumescent firestop collars, firestop blocks, firestop mortar or a combination of these products to provide a UL listed system for each application required for this project. Provide mineral wool backing where specified in manufacturer's application detail.
- C. Non-rated Penetrations:
  - 1. Pipe Penetrations Through Below Grade Walls. In exterior wall openings below grade, use a modular mechanical-type seal consisting of interlocking synthetic rubber links shaped to continuously fill the annular space between the uninsulated pipe and the cored opening or a water-stop type wall sleeve.
  - 2. Pipe Penetrations. At pipe penetrations of non-rated interior partitions, floors and exterior walls above grade, use urethane caulk in annular space between pipe insulation and sleeve.

### **PART 3 - EXECUTION**

#### **3.1 EXCAVATION INSTALLATION OF PIPE AND BACKFILLING**

- A. The Contractor shall be responsible for verifying the location of all existing piping, electrical, and other utilities prior to excavation.
- B. No changes to pipe alignment or elevation shall be made without approval from the Engineer.
- C. All pipes shall be cleaned out prior to installation. Inspect pipe for defects and damage.
- D. Decrease line size to pumps as required with long radius reducing elbows or concentric reducers/increasers in vertical piping. All valves and piping specialties must be full line size.
- E. Excavate pipe trenches in accordance with OSHA regulations. All pipe trenches shall be backfilled as soon as possible. Backfill and compact materials in 12" lifts. Care shall be taken while backfilling to protect the pipe from damage. Backfill material for trenches within the building footprint or other structural areas shall be compacted to at least 100% standard moisture density relationship of soils to prevent settlement of the floor slabs.
- F. Support all piping in such a manner as to prevent all vibration and vertical or horizontal movement. All pipe support systems shall be installed to meet local and state code requirements.
- G. Provide all coring drilling required to install piping system through masonry or concrete walls, screen walls, roof structures and other structures as required to install piping systems. Keep holes to minimal size.
- H. Provide all pipe sleeves required for core drilled penetrations.
- I. Relief lines and devices shall be terminated outside of the building in accordance with all current State and Local codes including minimum distance from ground level, openings and exits unless a containment tank is specified.
- J. All refrigerant piping shall be installed, tested and placed in operation per these specifications and the state and local mechanical codes.

- K. All pipe joints erected on site shall be exposed for visual inspection prior to being covered.

**3.2 TESTING OF PIPING SYSTEMS**

- A. All testing shall be witnessed by the Owner Representative. Provide advanced notification to the Owner and Engineer as specified in Section 131811 - Ice Rink General Requirements.
- B. All piping shall be tested prior to insulating and backfilling. Isolate all equipment and any other devices that may be damaged by the pressure test. Testing procedures shall meet all code requirements.

C. Testing Requirements:

- 1. Polyethylene Pipe: Shall be tested as specified in Section 131813 -Ice Rink Floor System.
- 2. Steel Pipe (secondary refrigerant system): Shall be hydrostatically tested at 75 psig for 24 hours with no pressure drop.
- 3. Steel Refrigerant Pipe (Primary refrigerant system):
  - a. Pressure Test: All refrigeration piping systems shall be pressure tested at the pressures stated in the table below with nitrogen gas for 24 hours with no pressure drop. The pressure shall then be lowered to 200 psig and maintained until system is ready to be charged. The test shall not begin until the Contractor is confident all water and contaminants are removed from the system. The Owner or Owner’s representative shall witness the test.

R	P
Ammonia – High side	250 psi
Ammonia – Low side	250 psi

- b. Vacuum Dehydration: After the piping has been tested, a vacuum pump of adequate size shall be connected to the associated piping and allowed or run continuously until a vacuum reading of at least 1000 microns (29.882 in. vacuum) or lower is obtained. This test must be maintained with the pump valved off for at least ten (10) minutes. Provide an absolute pressure gauge for monitoring and use per the manufacturer’s recommendations. The Engineer shall witness the test.
- 4. Gauges used for pressure tests must be designed for pressures greater than the test pressure. For example, a 100-psi gauge cannot be used for a 100-psi test. The scale on the gauge must be the next increment up from 100 psi.

**3.3 CHARGING OF SYSTEMS**

- A. Primary Refrigerant Systems: After all pressure tests and vacuum dehydration testing has passed, the system shall then be fully charged with the specified refrigerant.
- B. Secondary Refrigerant Systems: After all pressure tests have passed the secondary refrigerant systems shall be fully charged with the specified solutions. Remove all air from the systems.
- C. Waste Heat Recovery Systems: After all pressure tests have passed the waste heat recovery systems shall be fully charged with the specified solutions. Remove all air from the systems.

**3.4 VALVES AND ACCESSORIES**

- A. Install valves at the locations shown on the drawings, described in the specifications as required for system operation and maintenance or as required by the manufacturer.
- B. Install all valves so that they can be easily replaced in the future including installing unions and allowing adequate clearance.
- C. Install isolation valves and unions required for isolation and servicing each piece of equipment and system components whether or not they are shown on the drawings.

- D. Install purges and servicing valves on the systems as needed for operating and servicing the system.
- E. Install all valves with adequate clearance around the valve for maintenance.
- F. Install air release valves at all high points in the system whether or not shown on the drawings.
- G. All pressure relief valves shall be located where ambient temperature is normally above 32 F. Pipe all pressure relief piping to within one foot of ice equipment room floor.
- H. Install valves for system drainage at all exposed low points in the system whether or not shown on the drawings.
- I. Provide all power and electrical systems as necessary for operation.
- J. Expansion tank shall be supported from the ceiling or supported with a floor mounted frame system with adequate supports and gauge glass placed in highly visible arrangement. Location to be approved by the General Contractor.
- K. Construction strainers in suction diffusers shall be removed after system start-up.
- L. Install thermowells for all temperature gauges.
- M. Resistance Temperature Detector (RTD) Assemblies
  1. Piping system shall be drained and fluid stored for installation of threadolets to install wells and RTD probes. No hot taps allowed.
  2. For new projects, installation shall be done prior to installation of insulation systems. For renovation projects, remove pipe insulation as necessary for installation of wells and sensors. Reinsulate piping system with like materials to provide a sealed insulation system.
  3. Wire sensors directly to VFD's or other devices.
  4. Refill piping systems. Provide additional fluid as necessary for full system charge. Remove air from system.

### **3.5 GAUGES AND THERMOMETERS**

- A. All gauges and thermometers shall be installed at eye level wherever possible unless specified otherwise and shall be positioned for ease of reading by operation and maintenance staff. All gauges and thermometers shall be calibrated per the manufacturer's recommendations prior to installation.

### **3.6 HANGERS AND SUPPORTS**

- A. The Contractor is responsible for adequately supporting all piping systems and equipment with hangers, floor supports, framing systems and all other components required to adequately support the piping systems and equipment. If supported from the ceiling, the Contractor shall verify that the building structure can support the total weight of all piping and equipment systems where hangers and supports are installed unless otherwise noted on the drawings. If requested, the contractor shall provide calculations, by a registered engineer, to verify construction of hangers and supports is adequate including the building structure they are attached to.
- B. Support all piping in such a manner as to prevent all vibration and vertical or horizontal movement.
- C. Pipe hangers and supports shall be spaced no more than eight (8) feet on center. Provide additional supports by equipment for assistance with equipment maintenance and replacement. Provide sufficient supports near equipment so that temporary supports are not needed to remove and replace equipment or to service and maintain equipment.
- D. All ground supports shall be located so that equipment, valves, etc. are fully accessible for easy maintenance and supports shall not impede the walkways.

- E. Supports shall not be connected to factory provided framework for equipment.

### 3.7 INSULATION AND JACKETS

- A. Furnish and install insulation and jacketing on equipment and piping as noted on the drawings and all other cold surfaces which are part of the system including, but not limited to, chilled water pump bodies, chilled water filter, chemical bypass feeder, etc.
- B. Systems shall not be insulated until an inspection has been completed by the Engineer and pressure tests have been performed and accepted.
- C. All valves, fittings, and accessories connected to pipe and equipment systems shall be insulated and jacketed. Provide handle extensions as required to allow full insulation of valves.
- D. Provide vapor barrier for all systems operating below 65 F.
- E. Install all insulation and jacketing per manufacturer's recommendations. Use full length materials. Install insulation continuous through pipe hangers and supports with hangers and supports on the exterior of insulation. Where a vapor barrier is not required, hangers or supports may be attached directly to piping with insulation completely covering hanger or support and jacket sealed at support rod penetrations. Where riser clamps are required to be attached directly to piping requiring a vapor barrier, extend insulation and vapor barrier jacketing/coating around riser clamp.
- F. Install all jacketing on exposed exterior piping systems with joints at 3 o'clock and 9 o'clock position and jacketing secured with specified banding and seals. Banding shall be installed at a maximum of 9" on center. End joints shall be secured with bands and seals centered directly over joint. Jacketing shall be installed in a manner to shed water and in accordance with the Midwest insulation Contractors Association (M.I.C.A) National Commercial and Industrial Standards. Jacketing shall be caulked before closing and banding and positioned in an orientation to avoid water infiltration.
- G. All insulation joints shall be staggered and tight. Provide 2" minimum lap on jackets and 2" tape on butt joints, firmly and continuously cemented with lap adhesive or welding solvent as recommended by the manufacturer. Additionally, secure with staples along seams and butt joints. Coat staples with vapor barrier mastic on systems requiring vapor barrier.
- H. Provide inserts and pipe shields at all hanger and support locations. Inserts may be omitted on  $\frac{3}{4}$ " and smaller copper piping provided 12" long 22-gauge pipe shields are used.
- I. Insulate entire piping system for a completely insulated system including all areas that will frost up during operation. This includes filling all gaps, spaces, voids, etc. completely to prevent frost or condensation build up. This also includes providing valve handle extensions and all other material to properly insulate valves and prevent condensation. Insulation shall be tightly butted and free of voids and gaps. Weather seal shall be continuous.
- J. All fasteners and bands shall be neatly aligned, and overall work must be of high-quality appearance and workmanship.
- K. Provide removable insulated covers for fill valves, equipment lifting hooks, access points to strainers, valves, nameplates, and all other areas that require periodic inspection, service or repair.
- L. All site glasses and nameplates shall be insulated to prevent frost build-up.
- M. Provide all adhesive, sealants and other products as required by the manufacturer to provide a completely sealed system. Seal all seams of the jacketing.

### 3.8 SEALING AND FIRESTOPPING

- A. All pipes piercing interior and exterior walls, ceiling, and floor shall be tightly sealed to the walls, ceiling and floors through which they pass as specified herein.
  - 1. Fire and/or Smoke Rated Penetrations. Install approved product in accordance with the manufacturer's instructions where pipes penetrate a fire/smoke rated surface. When pipe is insulated, use a product which maintains the integrity of the insulation and vapor barrier. Where firestop mortar is used to infill large fire-rated floor openings that could be required to support weight, provide permanent structural forming. Firestop mortar alone is not adequate to support any substantial weight.
  - 2. Non-Rated Penetrations. At all interior partitions and exterior walls, pipe penetrations are required to be sealed. Apply sealant to both sides of the penetration in such a manner that the annular space between the pipe sleeve and cored opening and the pipe or insulation is completely blocked.

**3.9 PAINTING AND FINISHES**

- A. All interior steel piping, equipment, fittings, supports, and accessories that are exposed to view shall be painted with one coat of primer and one coat of enamel. Ammonia piping colors per IAR Bulletin No. 114 March 2017. Prepare steel as recommended by the paint manufacturer. Colors shall be as outlined in table below:

A	C
Ammonia high pressure liquid lines	Orange (Pantone 152 C)
Ammonia high pressure vapor lines	Yellow (Pantone 109C)
Ammonia low pressure/high temperature liq. & vapor lines (0F to 47.3F)	Light blue (Pantone 298C)
Ammonia low pressure/low temperature liq.&vapor lines	Dark blue (Pantone 3015C)
Pressure relief vent piping	Grey (Pantone 430C)
Other refrigerant piping and vessels	Color selected by Owner
Condenser water piping (refrigerant piping specified above)	Color selected by Owner
Interior supports and frames in refrigeration room	Color selected by Owner
All other areas not mentioned	Color selected by Owner

- B. All exterior exposed steel piping shall be painted with one coat of primer and two coats of enamel. Prepare steel as recommended by the paint manufacturer. Owner to select color of paint.
- C. Touch up paint on all equipment, vessels, supports and exposed pipes after project is complete.
- D. Touch up damaged galvanized coatings and corrosion protection systems on condenser and remote sump.

END OF SECTION

**SECTION 13 18 15 - ICE RINK WASTE HEAT RECOVERY SYSTEM****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. General system description and design criteria.
- B. Pumps.
- C. Heat Exchanger.
- D. Expansion Tank.
- E. Snowmelt Coil.
- F. Circulation Fluid.
- G. Pipe and Accessories.
- H. Waterproofing for Snow Melt Pit.

**1.2 GENERAL SYSTEM DESCRIPTION AND DESIGN CRITERIA**

- A. Provide all materials, equipment and controls necessary for a fully functional waste heat recovery system that recovers waste heat from the refrigeration system and uses it for heating the sub-floor heating system and for melting snow in the snow melt pit. The system shall be a closed piping system.

**1.3 RELATED SECTIONS**

- A. Section 007200 - General Conditions.
- B. Section 007300 – Supplementary Conditions.
- C. Section 131811 - Ice Rink General.
- D. Section 131812 – Ice Rink Refrigeration System.
- E. Section 131813 - Ice Rink Floor.
- F. Section 131814 - Ice Rink Piping, Valves and Accessories.
- G. Section 131817 – ice Rink Central Control System.

**1.4 SUBMITTALS**

- A. Shop Drawings. All submittals shall conform to the requirements of General Conditions and Section 131811 - Ice Rink General Requirements.

**1.5 WARRANTY GUARANTY**

- A. As required in Section 131811 - Ice Rink General Requirements.

**1.6 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS**

- A. As required in Section 131811 - Ice Rink General Requirements.

- B. Pipe supports shall be 3" high 304L stainless steel square stock, spaced at 3' on center to support the snow melt coil. If the snow melt pit is specified with a membrane liner, pipe supports shall be steel tubing, all edges shall be rounded to prevent puncturing liner and supports shall be tack welded to coil.
- C. Verify size of snow melt pit and location of drain pipe prior to fabricating the coil.

## **2.7 CIRCULATION FLUID**

- A. Furnish and install a complete charge of 35% inhibited ethylene glycol and deionized water as specified in section 131812.

## **2.8 PIPING AND ACCESSORIES**

- A. Provide all piping, thermometers, gauges, valves, insulation, controls, electric as required for a complete system, as shown on the drawings, and as specified in Section 131814 - Ice Rink Piping, Valves and Accessories.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install, test and start up equipment, piping, valves, insulation, etc. as specified in Sections 131813 - Ice Rink Floor, 131812 - Ice Rink Refrigeration System, and 131814 - Ice Rink Piping, Valves and Accessories.
- B. Verify with General Contractor prior to mounting piping, tanks, heat exchangers, to walls or ceiling in ice mechanical room.
- C. Provide all controls and electrical work as required for a complete operating system.

### **3.2 START UP AND SHUTDOWN SERVICES**

- A. See Section 131811 - Ice Rink General Requirements.

END OF SECTION

**SECTION 13 18 16 - ICE RINK DASHER BOARD SYSTEM AND ACCESSORIES**

**NOTE DASHER BOARD SYSTEM TO BE FURNISHED AND INSTALLED BY OWNER.  
CONTRACTOR SHALL COORDINATE INSTALLATION REQUIREMENTS WITH OWNER S DASHER  
BOARD CONTRACTOR.**

**PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Quality assurance - prequalification criteria.
- B. Approved manufacturers.
- C. Dasher board system materials.
- D. Floor anchors.
- E. Advertisement panels.
- F. Accessories (netting, tools, pegs, carts, edger, etc.).
- G. **ALTERNATE BIDS** As specified herein and on the drawings.

**1.2 QUALITY ASSURANCE**

- A. Contractors wishing to bid/quote on this project must submit, with their bid, the following prequalification criteria.
  - 1. Submit a list of five (5) ice rink construction projects the company has completed that are similar to this project and that were completed within the past five (5) years. Submittal shall be on company letterhead, signed by an authorized representative of the company and include project description, portion of project completed by the company, location, construction cost, completion date, owner's name, owner's representative, phone number and completion date of work.
  - 2. Contractors/manufacturers listed as approved manufacturers in section 2.1 are not required to submit the prequalification material described in paragraph A.1 of this section.
  - 3. Contractors/manufacturers seeking approval shall supply a sample panel section representative of all components to be used in the dasher board section if requested by the Owner.
- B. Contractors wishing to bid on this project shall perform an on-site investigation prior to submitting a bid for the project. Contractor shall field verify all measurements that will affect the work of this project and report any concerns to the Engineer at least five (5) business day prior to the bid opening date. The contractor shall also perform a site visit to verify measurements prior to manufacturing the system.

**1.3 RELATED SECTIONS**

- A. Section 007200 - General Conditions.
- B. Section 007300 - Supplementary Conditions.

**1.4 CODES AND STANDARDS**

- A. All parts of the project shall be performed in accordance with the most recent version of the following codes and standards and all amendments:
  - 1. State Building Codes.
  - 2. National Fire Protection Association Codes.
  - 3. OSHA.

### 1.5 SUBMITTALS

- A. Shop Drawings. All submittals shall conform to the requirements of the General Conditions. Shop Drawings shall include product information on all materials, color samples of all standard colors for top sill, facing, kick plate, backer panels, benches, and tables. Shop Drawings shall clearly highlight and note any materials, dimensions, etc. that do not match the contract documents. Samples shall be representative of thickness of material that will be supplied.
- B. Structural Calculations: If requested, the manufacturer shall supply structural engineering calculations for the dasher board system.
- C. Progress Schedule. Submit progress schedule before project begins.
- D. Certifications. Submit four (4) copies of certifications to the Engineer when specified.
- E. Project closeout documents:
  - 1. Provide all documents required by the General Conditions and these specifications.
  - 2. Final Payment Request: The following information shall be submitted with the final payment request from the contractor:
    - a. Insurance certificates for all products and equipment where required.
    - b. Proof that taxes, fees, and similar obligations are paid.
    - c. Contractors Affidavit of Payment of Debts and Claims, AIA Document G706.
    - d. Contractors Affidavit of Release of Liens, AIA Document G706A.
    - e. Consent of Surety to Final Payment, AIA Document G707.
    - f. Final pay request document shall accurately reflect all changes to the contract amount.
    - g. Final liquidated damages settlement statement.
    - h. And all other requirements of the General and Supplemental Conditions.
- F. Payments for all submittals shall be incidental to the cost of the project.

### 1.6 WARRANTY GUARANTY

- A. In addition to the standard manufacturer's warranty on all equipment and materials, the contractor shall provide a standard two-year materials and labor warranty on all work performed for this project.

### 1.7 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS

- A. Transport, handle, store and protect products in accordance with manufacturer's recommendations. Secure products at all times.
- B. Store products with seals and labels intact and legible.
- C. Store products in a secure environment at all times.
- D. Provide adequate labor to handle products and prevent damage.
- E. Protect top sill from becoming scratched or marked up during installation.

### 1.8 ALTERNATE BIDS

- A. Definition: Work that is added or deducted from the Base Bid amount if the Owner decides to accept the corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.
- B. The cost or credit for each alternate is the net addition to, or deduction from, the Contract Sum to incorporate the alternate into the Work. No other adjustments are made to the Contract Sum.
- C. Alternates may be accepted by the Owner in any order and may be used to determine the low bidder.
- D. The bidder shall bid on each alternate specified as part of the specifications. Alternates not specifically requested will not be considered unless prior approval has been granted by the Engineer.
- E. Description of Alternate Bids:
  - 1. Provide flexible frame system integrated into dasher board framework on ends, radius and 24 feet down the sides and ice dam.
  - 2. Provide sufficient quantity of dashers board storage carts to store dashers on each end and radius of the rink.

## PART 2 - PRODUCTS

### 2.1 APPROVED MANUFACTURERS OF DASHER BOARD SYSTEM

- A. Becker Arena Products/Sports Systems/Athletica/Cascadia, or others by prior owner approval.

### 2.2 FRAME

- A. All dasher panels whether straight, curved or gated shall have the same design and similar construction. Panels shall be all welded construction.

- B. Standard Sizes:

P	S	H	L	W
Straight		41"	96"	6"
Curved		41"	88"	6"
Back of Players Boxes		See plan	96"	6"

- C. Materials:
  - 1. Aluminum: Shall be structural alloy 6005A-T6. Architectural alloy is not acceptable. Shall meet ASTM B221 and Federal Specifications QQA200-9.
  - 2. Systems shall be constructed with either aluminum or steel materials, not a combination of the two.
  - 3. Height of systems shall be modified if ice retainers is used.
- D. Components: See drawings.
- E. Connections: Panels shall be fastened together through end plates at a minimum of three (3) locations with 1/2" diameter (minimum) bolts.
- F. Other Supports: Provide additional supports where required and to accommodate systems such as quick release backer panels, gap closures, material, taller panels, etc.
- G. All holes used in the framing system shall be pre-punched with slotted holes to allow for expansion and contraction in the polyethylene materials.
- H. Systems that require external support posts on the back side of the dasher panel section are not acceptable unless specified or noted on the drawings.

- I. Lift Out Panels
  - 1. Modify dasher board framework to provide lift out panels in locations shown on the drawings. All materials and construction to meet the requirement of these specifications.
  - 2. Provide one (1) aluminum stair and railing section for each floor access lift out panel.
  - 3. Verify threshold height with adjacent bleacher or concrete sections.
- J. **ALTERNATE BID 1** Flexible Frame System
  - 1. Approved Manufacturers: Checkflex by Athletica or equal.
  - 2. Frame: As required in this article with the addition of a heavy-duty spring assembly at the base of the dasher board frame.
  - 3. Performance Criteria: 3" impact absorption, 42" above the ice surface.
  - 4. Shielding Clips: Shall be specially designed for extra movement of system.
  - 5. Ice Retainer: A steel ice retainer system is required for this system. See separate article in the Section for the ice retainer.
- K. Conversion Friendly Base
  - 1. Dasher base shall feature a solid aluminum angle with anchor holes in based drilled on site to align with ice damn anchor locations.

**2.3 SHIELDING**

- A. Shielding shall be as specified herein and shown on the drawings.
- B. Acrylic Material: Shall be cell cast acrylic sheeting as manufactured by Rink Shield, CrystaPlex 590 or equal. All sheets shall be clear and colorless. Material shall conform to ASTM D4802-88.
- C. Dimensions:
  - 1. Height of shielding: As shown on the drawings. Specified height of shielding shall be measured from top of top sill to top of shielding.
  - 2. Thickness of shielding in inches: As shown in table below with nominal dimensions shown in ( ):

T ( ) ( )	S ( ) ( ) ( )	E ( ) ( ) ( )	R ( ) ( ) ( ) ( )
Acrylic	0.545-0.620	0.545-0.620	0.545-0.620

- 3. All shielding shall be equal widths wherever possible, so the panels are interchangeable.
- 4. The top two corners of each piece of shielding shall be rounded to 1/2" radius.
- D. Other:
  - 1. Provide one (1) 2.5" diameter speaker hole(s) in shielding in front of scorer's box. All edges of hole shall be routed smooth.
  - 2. Provide transition (angled top edge to match height of adjacent shielding pieces of shielding) where two different height shielding meet as shown on the plans.
  - 3. Provide extra pieces of shielding as stated below. Thickness to match specifications for specified area.

L ( ) ( ) ( ) ( ) ( ) ( )	H ( ) ( ) ( ) ( ) ( ) ( ) ( )	M ( ) ( ) ( ) ( ) ( ) ( ) ( )	N. ( ) ( ) P ( ) ( ) ( ) ( ) ( )
Ends and Radii	99	Acrylic	5
Straight Sections	72	Acrylic	4
30" Access gate	72	Acrylic	1
36" Access Gate	72	Acrylic	1
36' Access gate	99	Acrylic	1
Equipment gate	99	Acrylic	1
<b>TOTAL</b>			<b>13</b>

- 4. Custom Camera Holes and Covers. Provide custom camera holes in shielding at locations noted on the drawings. Holes shall be rectangular and approximately 4" high x 6" long with rounded corners. Holes shall be covered by a 1/2" acrylic shielding cover fastened to the

shielding with heavy duty Velcro fastening system and braided nylon safety string. The bottom of the hole should be located 5" above the caprail per NHL standards.

- E. Curved Acrylic Safety/Termination Sections. Provide four (2) one (1) extra NHL approved curved acrylic safety/termination shielding sections for termination points at each end of player's boxes. Shall be same material and height as adjacent shielding.

## 2.4 SHIELDING SUPPORTS

- A. Acrylic shielding shall be supported by clear, flexible, polycarbonate H sleeves by HDM Divider Sleeves by Athletica.
- B. Gaskets: Continuous polyethylene gasket to hold shielding in place. Thickness of gasket shall vary for varying thickness of shielding to provide snug fit between the shielding and the support.
- C. Hardware: All hardware shall be made of extruded aluminum alloy 6005A or 6351-T-6. All fasteners shall be recessed flush with surface of support. All fasteners and hardware shall be removable for easy replacement of shielding and disassembling for removal and reinstallation.
- D. Height: As indicated on the drawings or 1" max. distance below top of shielding if not indicated on the drawings.
- E. Spacing: Nominally 8'-0" on center on sides of rink. Nominally 4'-0" on ends and raddi.
- F. Other: Eye bolts shall be provided on each support on ends and radius for connection of netting.
- G. Provide 3 extra Polycarbonate H sleeves for each different height of shielding.

## 2.5 SUPPORTLESS SHIELDING SUPPORT CHANNEL

- A. Material:
  - 1. Aluminum: Material shall meet ASTM B221, Federal Specification QQA200-9 and alloy 6005A or alloy 6351-T-6.
  - 2. Polyethylene: Material shall be requirements of Section 2.3.
- B. Construction: Continuous aluminum channel(s) to support glass welded into frame. The bottom 3 -1/2" minimum of tempered glass shall be covered with U-shaped gaskets inserted in channels. A continuous block of polyethylene may be substituted for the aluminum channel.
- C. Gaskets: Continuous polyethylene or equal gasket to hold shield in place. Gaskets shall be mounted to glass with adhesive tape.
- D. Hardware: All hardware shall be made of extruded aluminum alloy 6005A or 6351-T-6. All fasteners shall be recessed flush with surface of support. All fasteners and hardware shall be removable for easy replacement of shielding and disassembling for removal and reinstallation.
- E. Other:
  - 1. Provide system to continuously support netting below top of shielding.
  - 2. The gap between the glass shielding pieces, where there are no gates, shall be 1/4" to 3/8".
  - 3. Furnish and install spring-loaded Lexan clip assemblies at the top of the shielding to connect shielding sections together. Provide poly protection covers for each bolt on back of each assembly. Provide eight (8) extra clips and twenty (20) extra covers for the Owner's use.
  - 4. Furnish and install plastic spacers between the shielding panels for proper spacing.
  - 5. Furnish and install shielding supports as specified in Article 2.8 at doors and 90-degree corners.

**2.6 FLEXIBLE GLASS SYSTEM**

1. Approved Manufacturers: GlassFlex as manufactured by Athletica or equal.
2. Description: 3 ½" extruded U channel shall be mechanically fastened to the dasher framing. Systems which are not mechanically fastened, spring loaded and adjustable are not acceptable. System shall have a minimum movement of ½" measured at top sill area. System shall be constructed completely of welded structural aluminum. Systems with angles or flat bar will not be accepted.
3. Provide gaskets to cover the gap between the shielding and the caprail during movement. The gaskets shall be the same color as the caprail material.
4. Manufacturer must have at least 3 installations completed in the past 5 years.

**2.7 POLYETHYLENE**

- A. Material: High impact, high density, stress relieved, virgin polyethylene. Reprocessed polyethylene is not acceptable.
- B. Dimensions: See drawings.
- C. Colors:
  1. As stated in material schedules on drawings. "Owner" means color shall be selected by Owner from the standard colors of white, black, royal blue, red, gold, yellow. It does not include the premium colors of light blue, green, navy blue, and some shades of grey or custom colors.
  2. All like colors shall match.
  3. White: Shall be Bright white in color. Natural white is not acceptable.
- D. Fasteners: See Article 2.07 in this section.

**2.8 FLEXIBLE CAPRAIL**

- A. Approved Manufacturers: Soft Cap by Athletica or equal.
- B. Description: Replace specified material with 1" thick flexible-plastic elastomer material, shall be installed on the ice side and the standard specified top sill material. ¾" thick shall be installed on the bleacher side of the system and routed to ¼" radius. Provide H clamps of same color.
- C. Color: Selected by Owner from standard red or blue colors
- D. Extra Pieces: Provide the following additional material
  1. 5 extra pieces of Softcap for in front of benches.
  2. 5 extra pieces of H clamps.

**2.9 KICK PLATE**

- A. Shall be inlaid or flush mounted with facing of dasher board system and shall interlock with ice dam. Provide additional stringer to dasher board framing system.

**2.10 FACING PANELS**

1. Shall be one piece, cut to match dimension of frame.
- B. Line Markings:
  - a. Shall be installed at locations shown on the drawings and shall be installed flush with dasher board facing.

- A. Dimensions: As shown on the drawings.
- B. Framing Systems: Shall be constructed of same material as the dasher frame, conforming to material requirements of Article 2.02, and as shown on the drawings.
  - 1. Components: See drawings.
  - 2. Benches shall be constructed so that they can be easily removed including tube supports built into flooring to support the bench supports.
- C. Flooring. Shall be constructed with 3/4" fire treated plywood screwed to framing. Provide coaches walk as shown in the drawings for the full length of the player's benches. All exposed surfaces shall be covered with 1/2" black resilient flooring material as manufactured by Humane or equal.
- D. Scorers Box Table(s) and Benches:
  - 1. Provide table(s) and benches with dimensions shown on the drawings.
  - 2. Framing material as specified in this article.
- E. Fasteners: Fasteners that come in contact with pressure treated or fire-retardant treated wood shall be hot-dipped galvanized steel with a minimum rating of G-185 (1.85 oz. of zinc/sq.ft. of metal) meeting ASTM A153, stainless steel, or silicon bronze as required by the International Building Code Section 2303.1.8.5. Plain finish elsewhere. Electroplated galvanized fasteners shall not be used for exterior applications. Fasteners for benches shall be 3/8" carriage bolts.
- F. Backing: Specified in Article 2.07 of these specifications.
- G. Other: Incorporate a water bottle shelf in player's boxes as shown on the drawings. Shelf shall run full length of player's box. Material thickness as shown on the drawings. Color of shelf material shall be white to match color of backer.

**2.16 PLAYERS AND ACCESS GATES**

- A. Provide access and players gates with openings as shown on the drawings.
- B. Gates shall be integrated into the standard 8' long panel sections and shall be Left or right swing as directed by the Owner.
- C. Gate panel framing shall be similar construction as dasher framing.
- D. Gate Latches: Shall be solid, steel welded construction, with a single 3/8" thick x 2" wide steel flat bar, easily opens with glove hand. Fastened to framing with 3/8" x 1 1/4" hex head bold and 3/8" nylon locking nut. Shall latch by gravity and latch on their own when gate is closed.
- E. Gate Hinges: Shall be two lift off type hinges welded. All hinge assemblies shall have grease fittings for easy lubrication or use nylon bushings. Piano type hinges, 10 GA, non greasable, bolted to frame, are acceptable where shielding is not used. Hinges shall be adjustable.
- F. Doorstop: All gates shall have a steel door stop welded to the frame with minimum dimensions of 3/8" x 3 1/2" x 4 1/2" long".
- G. Ice Side Release Devices: All players and access gates with shielding shall have push button releases located on in the top sill, on the ice side, so that the gate can be opened from the ice side.
- H. Finger hold: Route a 3/8" deep x 3/4" wide area in top sill at all access gates with glass shielding to be used as a finger hold to close doors from the ice side of the board system.
- I. Gate shall be constructed so top of threshold is located as follows:

<b>T</b> □ □ □ □ <b>G</b> □ □ □ □	<b>D</b> □ □ □ □ □ □ <b>A</b> □ □ □ □ <b>F</b> □ □ □ □ □ □ <b>F</b> □ □ □ □ (□)
Players	9
Access	3
Equipment	2

- J. Casters: For gates over 42" wide, provide 5" diameter, spring loaded, adjustable, zinc plated framing, polyurethane tires. Provide casters on each leaf.

### 2.17 EQUIPMENT GATES (STANDARD)

- A. Shall be double leaf gates with opening sizes as shown on the drawings.
- B. Materials: Framing materials to meet requirements of Article 2.02 of this specification and be of similar construction.
- C. Latch: Shall be the sliding steel tube with minimum dimensions of 2 ¼" x 2 ¼" x 12 gauge or 2" diameter solid steel rod with large handle (push down). Zinc plated all components. Provide two (2) latches per gate.
- D. Lock: Each leaf of gate shall lock into concrete perimeter slab with ¾" diameter x 12" long solid steel, zinc plated cane bolts.
- E. Hinges: Zinc plated, heavy duty, manufactured using 3/8" thick steel components and ¾" minimum diameter hinge pins, adjustable, lift off type welded to frame. Shall have grease fittings for easy lubrication. Two hinges per door.
- F. Casters: 5" diameter, spring loaded, adjustable, zinc plated framing, polyurethane tires. Provide casters on each leaf.
- G. Fasteners: Shall be zinc plated and color to match where necessary.

### 2.18 GAP CLOSURES

- A. Furnish and install material to fill the gap between the back of the dasher board panel and the bleachers, stairs, ramps, and all other raised structures.
- B. Material:
  - 1. Polyethylene: ½" thick x width shown on drawings. Length of each piece shall be minimum of 8 feet or longest possible for area of application. Material shall be high impact, high density, stress relieved, virgin polyethylene. Reprocessed polyethylene is not acceptable. Router top edge on opposite side of the bleachers to provide a radius. Furnish and install all additional framing and supports required for fastening to dasher framing and for solid support over gap length. Framing and support material shall match dasher panel framing material. Color selected by Owner from standard colors of white, gold, dark blue, light blue, red, green and yellow. The color of all material shall match.
- C. Fasteners: See Article 2.07 in this section.
- D. Construction: Gap closure system shall be mounted to the dasher board system only and not to the adjacent structure.

### 2.19 FLOOR ANCHORS AND INSERTS

- A. Anchors components include bolts, inserts, washers, threaded rod, and hold down plate as shown on the drawings and as follows:
  - 1. Where dasher board system is located on the perimeter concrete: New holes shall be drilled for each anchor. Anchors shall be 5/8" x 3" zinc plated inserts by Hilti-HFA 200, Hilti HY 150, or equal. Expansion anchors are not acceptable.
  - 2. Where the dasher board system is located on the ice rink slab: Anchor assembly shall be as detailed on the drawings or equal and shall be cast in place into the concrete ice rink floor. If material type is not shown on the drawings, then insert material shall be:
    - a. For permanent panels: All materials shall be zinc plated.

- b. For removable panels: Anchor inserts, and washers shall be 303 stainless steel, base plate may be 303 Stainless steel or carbon steel and bolts shall be zinc plated material.
    3. Where an ice retainer is used, provide 5" anchors of material stated herein.
  - B. Bolts shall be 5/8" diameter. Material shall be as stated herein.
  - C. Hold down plate shall be sized as shown on the drawings.
  - D. Anchoring Adhesive (for drilled in anchors)
    1. Approved Manufacturers: Hilti HIT Doweling Adhesive HIT HY-150 MAX, Red Head A7 Adhesive, Simpson Strong-Tie AT-High Strength or equal.
    2. Properties:
      - a. ASTM C881 Type IV, Grade 3, Class A, B, C.
      - b. Bond Strength: ASTM C 882: 2900 psi min. at 2 days.
      - c. Compressive Strength: ASTM D 695: 9200 psi min. at 7 days.
      - d. Water Absorption: ASTM D 570: 0.23% (24 hours).
  - E. Plug Materials: Furnish and install threaded plugs for each insert. Stainless steel for the circus inserts and brass for the dasher board inserts.

## 2.20 ADA PLATFORMS AND RAMPS

- A. All ramps and platforms shall be constructed with the same materials as Player's, Penalty and Scorer's boxes. All ramps shall be covered with rubber flooring as specified for the Player's Penalty and Scorer's boxes.
- B. All ramps and platforms shall be easily removable and storable.
- C. Coordinate railing requirements with architectural details.

## 2.21 ICE DAM

- A. Materials:
  1. Steel as specified in Article 2.02. Primed and painted with rust inhibitor paint per paint manufacturer's requirements, galvanized or powder coated.
  2. Polyethylene as specified in Article 2.07.
  3. Insulation shall be extruded polystyrene, 25 psi.
- B. Construction:
  1. Dimensions as detailed on the drawings. Section lengths shall be 96".
  2. Anchoring System:
    - a. Anchor plates: Ice retainer section shall have two (2) 1/2" x 4" anchor plates welded to the underside of the channel. Ice retainer shall be secured to concrete floor using 5/8" x 1 1/2" hex head cap screws. Anchors shall be located at approximately 4 feet on center.
    - b. Inserts: Each ice retainer section shall have four (4) 5/8" threaded inserts welded to the underside of the channel. Two will be used for anchoring dasher board system and two for spares.
  3. Fasteners: Polyethylene kickplate shall be fastened with 1/4" diameter nylon nails 9" on center.
  4. Insulation: Insulation shall be cut to fit snugly in the steel channel and bonded in place with construction adhesive. All voids around anchor locations shall be filled with expanding urethane foam.
  5. Coating: Steel channel shall be coated with two coats of rust inhibiting paint prior to installation.

**2.22 PROTECTIVE SPECTATOR NETTING SYSTEM**

- A. Size and Location: Netting shall be installed where shown on the drawings. The netting shall extend from 6" below the top of the shielding supports to the height specified on the drawings. The net shall be custom made to fit the exact length and height required.
- B. Material:
1. Kevlar, No. 12 twisted (1.2 mm twine) x 3" stretched mesh, 292 lb minimum tensile strength, knotted net, fire retardant, urethane coated, black in color. Netting border (all sides) shall be No. 72 twisted (4 mm) polyester, 590 minimum tensile strength, color to match netting. Net supports shall be installed at a maximum of 18" on center. Hanging twine shall be same size as netting.
- C. Support System:
1. The top of the netting shall be supported with a continuous rigid conduit or rigid bar system (10-foot minimum length sections) formed to the radius dimensions of the rink. Rigid supports shall be installed at the bottom of the netting at all equipment and access gates. Conduit supports shall be galvanized steel.
  2. Support Cables: 3/16" galvanized steel cable to roof structure.
  3. Fasteners: Netting shall be attached to top of shielding with cable system and metal clips or nylon tie straps. Every 4' o.c., centered on each sheet of shielding, cable shall be attached to shielding with suction cups if supportless shielding, fasteners shall be attached to poly clips at top of shielding. Nylon ties shall be 1/8" wide, UL recognized and a minimum tensile strength of 100 lbs.
  4. Provide all other cables, clamps, turnbuckles, eyebolts, suction cups, plastic ties, etc. as required for a complete, clean and neat installation.
- D. Motorized Retractable Netting System:
1. Furnish and install an electric winch connected to single control point described in the manual netting system above with a 1/4" diameter aircraft cable. Winch shall raise and lower netting in no more than 8 minutes.
  2. Each winch should be located in an approved location by the Engineer.
  3. System shall raise and lower each netting support bar for the full height of the net and be cable of dropping to the floor and be removed as required.
  4. Furnish and install all cable hoist system, pulleys, hardware, and other material specified in manual system and all other materials required for a complete operating system.
  5. Furnish and install all electrical wiring, conduit, power supply cords, controllers, and controls required for the system. Provide mobile storage case with caster wheels for controller. All wiring shall be installed in conduit.
  6. Netting: As specified in this Section.
  7. Manufacturer to verify all existing or potential obstructions to the hoist system prior to designing the system. Notify Engineer of all concerns.

**2.23 ACCESSORIES**

- A. Glass Handler Suction Cups.
1. Furnish one (1) pair of suction cup devices for glass handling to aid in removal of tempered glass or acrylic shielding, 8" diameter with Lexan handle, 125-pound capacity as manufactured by Wood's Power Grip or equal.
- B. Glass and Acrylic Cleaning Kits as manufactured by Novus ([www.novuspolish.com](http://www.novuspolish.com), 800.548.6872) or equal:
1. Furnish one (1) cleaning starter kit that includes the following:
    - a. One (1) 8 oz. bottle of Polish 1 - Clean and Shine.
    - b. One (1) 8 oz. bottle of Polish 2 - Fine Scratch Remover.
    - c. One (1) 8 oz. bottle of Polish 3 - Heavy Scratch Remover.

- d. Two (2) NOVUS Polish Mates
  2. Furnish one (1) package of ten (10) polish mates:
    - a. Size: 13" W x 13" L each.
    - b. Re-usable and washable.
    - c. Microfilament, highly absorbent, extra durable.
    - d. soft and abrasion resistant.
  3. Furnish one (1) buffing kit that includes the following:
    - a. One (1) wool applicator pad.
    - b. One (1) wool buffing pad.
    - c. One (1) back plate adapter.
    - d. One (1) ¼" spindle adapter.
    - e. One (1) Instruction sheet.
- C. Glass Storage Carts
1. Provide sufficient quantity of glass shielding storage cart(s) and for one (1) cart for the curved acrylic pieces and two (2) for the HDM posts for entire dasherboard system.
  2. Size: Large cart (52-inch-wide x 94 inches high x 102-inch-long)
  3. Construction: 4,800 lb minimum, steel "A"-frame, heavy duty construction, two rigid and two swivel wheels, and towing tongue and pull handle on each end of cart. Assemble cart(s) for Owner.
  4. Accessories: Provide two (2) ratchet strap assemblies with each cart.
- D. Ice Cover Storage Carts
1. Provide sufficient quantity of cart(s), 66" wide x 65" high x 96" long for entire ice floor cover system.
  2. Construction: 4,000 lb minimum, steel frame, heavy duty construction, end rails, plywood deck, two rigid and two swivel wheels. Shall have 6" diameter wheels rated for 2,000 lb load each. Carts shall be stackable. Assemble cart(s) for Owner.
  3. Finish: One coat of primer and two coats of finish paint.
  4. Accessories: Provide two (2) ratchet strap assemblies with each cart.
- E. Board Storage Carts – **ALTERNATE BID 2**
1. Provide sufficient quantity of board storage cart(s), 60" wide x 60" high x 94" long to store dashers on each end and radius of rink.
  2. Construction: 4,000 lb minimum, steel frame, heavy duty construction, end rails, plywood deck, two rigid and two swivel wheels. Shall have 5" diameter wheels rated for 2,000 lb load each. Carts shall be stackable. Assemble cart(s) for Owner.
  3. Finish: One coat of primer and two coats of finish paint.
  4. Accessories: Provide two (2) ratchet strap assemblies with each cart.
- F. Poly Ramps
1. 24" x 6' long x 2" thick poly ramp four (4) locations. Ramps shall be anchored to concrete in such a manner that they are easily removable. Ramps shall match radius where located in corners.
- G. Shielding Pads.
1. Furnish and install shielding pads at all exposed ends of shielding or supports, corners, and termination of shielding.
  2. Pads shall full length of shielding or supports and shall be constructed with heavy duty 18 oz. reinforced fabric sleeve with impact-absorbing foam core sealed inside. Pads shall be secured in place with 2" wide Velcro fastening system.
  3. Color and Lettering: Color and Lettering: Owner to select custom color and lettering.

## 2.24 ICE COVER

- A. Approved Manufacturers: ArenaDeck XT or equal.

- B. Panel Size: 96" x 48" x 1" thick, 55 lbs each.
- C. Construction: Synthetic material with waffle pattern underside providing an insulated (R-2.84) air pocket. Solid panels shall be used near equipment gates. Allowable compressive strength of 500 psi. Material shall not absorb moisture, warp, swell or stick to the ice.
- D. Coating: FASCOAT coating.
- E. Color: Black
- F. Warranty: 5 Years

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Prior to delivering materials to the site and beginning installation, verify that the rink floor has been released for lift access and that the expansion joint has been installed and inspected.
- B. The manufacturer shall provide all materials and labor for a complete dasher board system and installation. The dasher board system shall be shop fabricated as much as possible prior to delivering to job site.
- C. Installation shall be completed under the direct supervision of an experienced representative from the manufacturer.
- D. Installation shall be performed per the manufacturers recommended requirements and instructions. System shall be securely anchored in place. Provide all trim, shims and other accessories required for a complete, level and plumb, installation.
- E. Any material that is scratched, marked up, chipped, dented or damaged in any way shall be replaced.
- F. All parts of the system shall be thoroughly tested and adjusted, as necessary. Walk through the system with the Owner and make all adjustments necessary for the Owner's satisfaction.
- G. Nylon ties used to attach netting at top of shielding and elsewhere shall be cut off or trimmed in such a manner, and with the appropriate tools, to eliminate all sharp edges.
- H. All supportless shielding systems shall be installed with a maximum 3/8" wide space between any two pieces of shielding.

#### **3.2 ANCHORS AND INSERTS**

- A. The dasher board manufacturer shall be on-site prior to and during the concrete rink floor pour to install, protect and adjust the anchors and inserts when the dasher board system is being installed on the rink floor.
- B. Field verify the location of goal inserts in the concrete floor (if applicable) to assure alignment with the goal line markings on the dasher board system.

#### **3.3 RESILIENT FLOORING IN BOXES**

- A. Cut rubber flooring to fit neatly and tightly around fixed objects and perimeter. Provide flush surfaces at sills and gates. Flooring to be loose laid over plywood substrate on the main box level. Flooring to be securely fastened on coaches raised platform and other raised floor levels within the box areas. All other exposed aluminum or steel to be covered by rubber flooring (horizontal surfaces) or poly (vertical surfaces).

**3.4 CLEANING**

- A. Clean all surfaces thoroughly prior to leaving the job site. The systems shall not be cleaned until all punch list items have been addressed.

**3.5 START-UP SERVICES**

- A. After all the systems have been tested and thoroughly cleaned provide the Owner's operating staff with a minimum of 4 hours of hands-on instructions on the operation and maintenance of the system.

**3.6 COORDINATION OF WORK**

- A. The contractor shall be responsible for coordinating all work specified herein and shall work closely with other subcontractors on the project.

**3.7 PERMITS**

- A. The contractor shall apply for and obtain all permits required to construct the project at no additional cost to the Owner unless specified otherwise.

**APPENDIX**

GEOTECHNICAL REPORT DATED AUGUST 16, 2024 (from Geotechnical Engineering Testing, Inc.)  
AVAILABLE UPON REQUEST

END OF SECTION

**SECTION 13 18 17 - ICE RINK CENTRAL CONTROL SYSTEM****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This section includes labor, materials, equipment, skills and related services necessary to furnish and install an ice rink control system (IRCS) for the ice rink refrigeration system.
- B. General Requirements
- C. General System Description and Design Criteria
- D. References
- E. Submittals
- F. Warranty
- G. Products, Delivery, Storage and Handling Requirements
- H. Products
- I. Execution / Performance

**1.2 RELATED SECTIONS**

- A. Division 0, Division 1, General and Supplemental Conditions
- B. Section 131811 – Ice Rink General Requirements
- C. Section 131812 – Ice Rink Refrigeration System
- D. Section 131815 – Ice Rink Waste Heat Recovery Systems
- E. Drawing Sheets show locations and quantities of equipment for the refrigeration system.

**1.3 GENERAL REQUIREMENTS**

- A. All work of this Division shall be coordinated and provided by the single Ice Rink Control System (IRCS) Contractor.
- B. The work of this Division shall be scheduled, coordinated and interfaced with the associated work of other trades. Reference the other Division 13 Sections for details.
- C. The work of this Division shall be as required by the Specifications, Point Schedules and Drawings.
- D. If the IRCS Contractor believes there are conflicts or missing information in the project documents, the Contractor shall promptly request clarification and instruction from the Engineer.
- E. Provide connection points to collect and manipulate data from power monitoring device specified in Section 13 18 12 Ice Rink Refrigeration System.
- F. The IRCS Contractor is responsible for the design of the control system.
- G. The refrigeration system shall have sufficient manual controls to allow the system to operate without the computer control system if the computer control system fails.

**1.4 GENERAL SYSTEM DESCRIPTION AND DESIGN CRITERIA**

- A. The Ice Rink Control System (IRCS) shall be a complete system to operate the ice rink refrigeration system and all its functions and monitoring requirements and include the following:

1. An 18" (minimum size) touch screen microprocessor control system to control and manage the refrigeration system and all its components, functions and alarms.
  2. The capability of remote access through an Owner provided data/phone circuit. Contractor to supply phone line to unit. Owner will supply any data lines required for connection with building management, energy management or IT systems.
  3. Provide all control and monitoring points and alarms to the Building Management System (BMS) or Energy Management System (EMS) as specified elsewhere.
- B. The work of the single IRCS Contractor shall be as defined individually and collectively in all Sections of Division 13 of these specifications together with the Drawings.
- C. The IRCS work shall consist of the provision of all labor, materials, tools, equipment, software, software licenses, software configurations and database entries, interfaces, wiring, tubing, installation, labeling, engineering, calibration, documentation, samples, submittals, testing, commissioning, training services, permits and licenses, transportation, shipping, handling, administration, supervision, management, insurance, temporary protection, cleaning, cutting and patching, warranties, services, and items, even though these may not be specifically mentioned in these Division documents which are required for the complete, fully functional and commissioned IRCS.
- D. Provide a complete, neat and workmanlike installation. Use only manufacturer employees who are skilled, experienced, trained, and familiar with the specific equipment, software, standards and configurations to be provided for this Project.
- E. The IRCS shall be integrated with the refrigeration system's specified motor control center (MCC) and shall be located in a wall mounted, NEMA rated, steel enclosure.

## 1.5 REFERENCES

- A. In addition to the references listed in Section 131811 - Ice Rink General, all work shall conform to the following Codes and Standards, as applicable:
1. National Fire Protection Association (NFPA) Standards.
  2. National Electric Code (NEC) and applicable local Electric Code
  3. Underwriters Laboratories (UL) listing and labels.
  4. UL 864 UUKL Smoke Control
  5. UL 268 Smoke Detectors.
  6. UL 916 Energy Management
  7. NFPA 70 - National Electrical Code.
  8. NFPA 90A - Standard For The Installation Of Air Conditioning And Ventilating Systems.
  9. NFPA 92A and 92B Smoke Purge/Control Equipment. Factory Mutual (FM).
  10. American National Standards Institute (ANSI).
  11. National Electric Manufacturer's Association (NEMA).
  12. American Society of Mechanical Engineers (ASME).
  13. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) user note: add ASHRAE 62 IAQ as applicable .
  14. Air Movement and Control Association (AMCA).
  15. Institute of Electrical and Electronic Engineers (IEEE).
  16. American Standard Code for Information Interchange (ASCII).
  17. Electronics Industries Association (EIA).
  18. Occupational Safety and Health Administration (OSHA).
  19. American Society for Testing and Materials (ASTM).
  20. Federal Communications Commission (FCC) including Part 15, Radio Frequency Devices.
  21. Americans Disability Act (ADA)
  22. ANSI/EIA 909.1-A-1999 (LonWorks)
  23. ANSI/ASHRAE Standard 195-2004 (BACnet)
- B. In the case of conflicts or discrepancies, the more stringent regulation shall apply.

- C. All work shall meet the approval of the authorities having jurisdiction at the project site.
- D. Definitions:
  - 1. EMS – Energy Management System
  - 2. BMS – Building Management System
  - 3. DDC – Direct Digital Control
  - 4. IRCS – Ice Rink Control System

## 1.6 SUBMITTALS

- A. Shop Drawings. All submittals shall conform to the requirements of General Conditions and Section 131811 - Ice Rink General Requirements.
- B. The IRCS contractor shall submit a list of all shop drawings with submittals dates within 45 days of contract award from City to Ice Rink Contractor.
- C. Submittals shall be in defined packages. Each package shall be complete and shall only reference itself and previously submitted packages. The packages shall be as approved by the Engineer for Contract compliance.
- D. Equipment and systems requiring approval of local authorities must comply with such regulations and be approved. Filing shall be at the expense of the IRCS Contractor where filing is necessary. Provide a copy of all related correspondence and permits to the Owner.
- E. Prepare an index of all submittals and shop drawings for the installation. Index shall include a shop drawing identification number, Contract Documents reference and item description.
- F. The IRCS Contractor shall correct any errors or omissions noted in the first review.
- G. At a minimum, submit the following:
  - 1. IRCS network architecture diagrams including all nodes and interconnections. Include future/existing BMS/EMS connection.
  - 2. Systems schematics, sequences and flow diagrams.
  - 3. Points schedule for each point in the IRCS, including Point Type, Object Name, Expanded ID, Display Units, Controller type, and Address.
  - 4. Samples of screen menus.
  - 5. Details of all IRCS interfaces and connections.
  - 6. Product data sheets or marked catalog pages including part number, photo and description for all products including software.

## 1.7 RECORD DOCUMENTATION

- A. Provide the following information in addition to the requirements of Section 131811 - Ice Rink General Requirements.
  - 1. Operation and Maintenance Manuals
    - a. One (1) hard copy and three (3) electronic copies on compact disc (CD) format of the entire Operation and Maintenance Manuals shall be provided to the Engineer upon completion of the Project. Include the following for the IRCS:
      - 1) Table of contents.
      - 2) As-built system record drawings. Computer Aided Drawings (CAD) record drawings shall represent the as-built condition of the system and incorporate all information supplied with the approved submittal.
      - 3) Manufacturer's product data sheets or catalog pages for all products including software.
      - 4) System and Software Operator's manuals.
      - 5) Archive copy of all site-specific databases and sequences.
      - 6) IRCS and BMS network diagrams.
      - 7) Interfaces to all third-party products and work by other trades.

- 8) Operating license for all software.
- b. The Operation and Maintenance Manual CD shall be self-contained, and include all necessary software required to access the product data sheets. A logically organized table of contents shall provide dynamic links to view and print all product data sheets. Viewer software shall provide the ability to display, zoom, and search all documents.

### **1.8 WARRANTY GUARANTY**

- A. As required in Section 131811 - Ice Rink General Requirements.
- B. Provide as-built drawings to include a board and points list for the system.
- C. The Ice Rink Control Contractor must furnish 8 hours of checkout and walk through time at refrigeration start up with the Owners personnel.
- D. Contractor shall ensure all warranties and extended warranties are properly filed for all systems and equipment. A copy of all warranties shall be inserted in the Operation and Maintenance Manuals.

### **1.9 PRODUCT DELIVERY STORAGE AND HANDLING REQUIREMENTS**

- A. As required in Section 131811 - Ice Rink General Requirements.

### **1.10 QUALIFICATIONS**

- A. As evidence and assurance of the contractor's controls subcontractor's ability to construct the project, the control subcontractor must have successfully completed the design, programming and installation of five (5) ice rink control systems similar to this project within the past five (5) years.

## **PART 2 - PRODUCTS**

### **2.1 APPROVED MANUFACTURERS**

- A. Control systems by Alerton by NAC (651.490.9869, [www.nac-hvac.com](http://www.nac-hvac.com)), Tridium-Vykon by Total Mechanical Services, Inc. (651.768.9367, [www.totalmech.com](http://www.totalmech.com)) Cimco SmartHub and Distech, WAGO, or equal manufacturer.

### **2.2 GENERAL**

- A. Furnish and install a complete ice rink control system (IRCS) including all controllers, alarm devices, enclosures, transformers, sensors, transducers, boards required for a complete monitoring system.
- B. Provide an uninterruptible power supply (UPS) that provides 20-minute run time during a power failure. The purpose of this system is to allow the system to run long enough to send out alarms.

### **2.3 CONTROLLERS**

- A. Alerton Visual Logic Controller (VLC) or equal. Furnish and install all cards and boards required.
- B. Provide remote monitoring capabilities.
- C. All panels and devices must utilize BACnet ANSI/ASHRAE Standards 135-2004, as required to interact with the existing/future BMS/EMS, on a single building level network.
- D. Provide web accessible graphic monitoring and control system. All system access shall be compatible with standard, current web browsers.

**2.4 GRAPHICAL USER INTERFACE (GUI)**

- A. The Graphical User Interface shall allow the operator to view, configure, and edit values from multiple controllers. The GUI shall be completely programmable and shall be wall mounted.
- B. Operator interface shall be via a wall mounted touch screen display with ASHRAE standard user definable graphical icons associated with any displayed variable.
- C. Variables such as alarms, trends, set points, analog and digital values may be displayed and/or edited using the GUI.
- D. The GUI shall be menu based displaying a minimum of 16 menus. Menus shall be arranged logically.
- E. The graphics shall provide a visual representation of the ice rink, refrigeration system and equipment with associated hardware point's locations displayed symbolically and monitoring inputs shown.

**2.5 OTHER SYSTEMS**

- A. ICRS shall communicate with the refrigerant gas monitoring system, power monitoring device, ventilation system, building management system and fire alarm system. See Section 131813 – Ice Rink Refrigeration System.

**2.6 ENCLOSURES**

- A. Furnish and install all required enclosures. Furnish and install weatherproof enclosures for exterior equipment such as the condenser. Seal all unused knockout holes with silicon sealant. Label enclosure.

**2.7 SENSORS AND TRANSDUCERS**

- A. Approved Manufacturers: Rochester Gauges, Inc., Computer Process Controls, Inc., Ashcroft Inc., Kele Inc., Omega, JW Instruments, ACI, SETRA, or equal.
- B. Furnish and install all sensors, transducers and all other devices required to control and monitor systems.
- C. Scale on sensors shall be as specified in the contract drawings for monitoring devices. If not specified, shall be typical of similar systems.
- D. Temperature Sensor Accuracy. The following point types (and the accuracy of each) are required, and their associated accuracy values include errors associated with the sensor, lead wire, and A to D conversion:

P POINT	A ACCURACY
Glycol/Brine (warm or cold)	.5°F
Ice/Subfloor Temperature	.5°F
All Others	.5°F

- E. Resistance Temperature Detectors (RTD) Assemblies:
  - 1. RTD: Single Element, platinum, 3 wire, Tolerance Class A, 316 stainless steel sheath. Length to be at approximately 10% longer than radius of pipe.
  - 2. Temperature Ranges:
    - a. Return brine/glycol: 0-50F.
    - b. Others: As required.
  - 3. Spring loaded.
  - 4. NPT stainless steel hex nipple.

5. Aluminum screw cover head – NEMA 4X rated.
- F. Thermowell:
  1. Shall be standard duty threaded (NPT), 304 stainless steel, NPT size as required to accommodate RTD or other devices.
  2. When thermo wells are required, the sensor and well shall be supplied as a complete assembly, including wellhead and Greenfield fitting.
  3. Thermo wells shall be pressure rated and constructed in accordance with the system working pressure.

## 2.8 INFRARED SENSORS

- A. Approved manufacturers: Raytek M13 sensors and boxes or approved equal.
- B. Furnish and install one complete infrared temperature sensor system with (2) sensors and shall include all equipment, wiring, configuration, programming, setup, hangers, supports and all related work.
- C. Terminate wiring in ice system control panel. Program and configure controller to control start/stop function on packaged refrigeration systems based on user adjustable set-point and IR sensor input as an option to controlling packaged refrigeration systems on return glycol.
- D. Provide visibility of IR Sensors Ice Temperature on control system.
- E. Install above the ice rink floor where shown on the drawings. Field verify sensor wire and conduit routing.

## 2.9 LOW VOLTAGE CABLE

- A. Cable: Shall be level-4, twisted pair, stranded and shielded.
- B. Wire: Shall be 22 AWG, 0.65 mm diameter.
- C. Loop Resistance: 106 ohms/km
- D. Capacitance: 49 nf/km

## 2.10 CABLE FOR SENSORS TRANSDUCERS AND CONTROL RELAY

- A. Temperature Sensors and 2 Wire Inputs Sensors: (Dry contact, 4-20 ma, and low voltage): 2-wire input sensor cable shall be 2 conductor, stranded, shielded, twisted, PVC jacketed 22 AWG, (Belden #8761 or equiv.). Cable runs over 800 feet shall be a minimum of 18 AWG.
- B. Control Relays (low voltage or dry contact only): Cable shall be 2 conductors, stranded, twisted, PVC jacketed 18 AWG cable, (Belden #8461 or equiv.).
- C. Pressure Transducers: Cable shall be 3 conductors, stranded, shielded, twisted, PVC jacketed 22 AWG, (Belden #8771 or equiv.). Cable runs over 800 feet shall be a minimum of 18 AWG.

## 2.11 CONDUIT

- A. Cable: General: Conduit for all high voltage, low voltage, and communication connections must be run and connected in accordance to meet current electrical code standards.
- B. High Voltage Connections:
