- C. Certification: Contractor shall submit to the Engineer a certification letter stating that the Owner's designated representative has been trained as specified herein. Letter shall include date, time, attendees and subject of training. The certification letter shall be signed by the Contractor and the Owner's representative indicating agreement that the training has been provided.
- D. Schedule: Schedule training with Owner with at least 7 days' advance notice.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 23 84 19 - HYDROTHERAPY AIR HANDLING UNITS****PART 1 - GENERAL REQUIREMENTS****1.1 SUMMARY**

- A. Section includes swimming pool heating and cooling units.

**1.2 SUBMITTALS**

- A. Product Data: Submit manufacturer's technical product data, including rated capacities of selected model clearly indicated, dimensions, required clearances, weights, furnished specialties and accessories; and installation and start-up instructions. Provide short circuit current rating of units with factory mounted starter or variable frequency drive.
- B. Shop Drawings:
  - 1. Submit manufacturer's assembly-type shop drawings indicating dimensions, required clearances, and methods of assembly of components
- C. Wiring Diagrams: Submit wiring diagrams detailing the manufacturer's electrical requirements for power supply wiring for swimming pool air handling units. Submit manufacturer's ladder-type wiring diagrams for interlock and control wiring. Clearly differentiate between portions of wiring that are factory-installed and portions to be field-installed.
- D. Operation and Maintenance Data: Submit maintenance data and parts list for each unit, including "trouble-shooting" maintenance guide, servicing guide and preventative maintenance schedule and procedures. Include this data in maintenance manual; in accordance with requirements of Division 1.

**1.3 QUALITY ASSURANCE**

- A. Codes and Standards:
  - 1. Energy Efficiency Ratio (EER) of rooftop units shall be equal to or greater than prescribed by ASHRAE 90.1-2004 "Energy Standard For Buildings Except Low-Rise Residential Buildings".

**1.4 SPARE PARTS**

- A. Extra Materials: Furnish to Owner, with receipt, the following spare parts for each roof mounted heating and cooling unit:
  - 1. One set of matched fan belts for each belt-driven fan.
  - 2. One set of spare filters of each type required for each unit. Obtain receipt from Owner that spare filters have been provided. In addition to the spare set of filters, install new filters at completion of installation work, and prior to testing, adjusting, and balancing work.
  - 3. the day of substantial completion, the Contractor shall clean the unit and provide a new set of filters at each location in the unit.

**1.5 SPECIAL WARRANTY**

- 1. Warranty Period: 5 years from date of substantial completion.

**PART 2 - PRODUCTS AND MATERIALS****2.1 MANUFACTURERS**

- A. Subject to compliance with requirements, provide units of one of the following:
1. Dectron.
  2. Desert Aire.
  3. Poolpak.
  4. Seresco.

**2.2 GENERAL**

- A. Furnish and install enclosed hydrotherapy environmental control energy recovery system. The system shall be specifically designed for control of the hydrotherapy environment. Field assembled or modified commercial grade equipment is not acceptable. Capacities and specifications shall comply with the mechanical schedule. Units shall be completely factory assembled and tested. Outside air, fans, motors, and all operating and safety controls specified shall be furnished, factory installed and factory tested.
- B. Units shall be built to comply with UL Standard 465 and be ETL certified and bear the ETL label. The unit's cooling, heating, dehumidifying, ventilating, and exhausting capacity and performance shall meet or exceed that shown on the schedule. System shall include supply air fans, complete logic control system & power for single point connection. Electrical ladder wiring diagrams shall be laminated and attached to the control panel access doors. Installation and maintenance manuals shall be supplied with each unit.

**2.3 PRINCIPLE OF OPERATION**

- A. The unit shall control space temperature and relative humidity, and shall provide controlled ventilation. Warm moist air from the pool is drawn over an evaporator coil by the supply fan and the latent and sensible heat is removed from the air. The resulting dryer cooler air is mixed with a fixed amount of outside air to ensure proper indoor air quality. The mixed air is drawn by the supply fan over a re-heating coil and an if specified, an auxiliary heating device.
- B. The cooling system is activated if either the space temperature deviates from, or the relative humidity rises above its set point.
- C. The unit shall monitor space and relative humidity.

**2.4 CABINET CONSTRUCTION**

- A. Cabinets shall be constructed in a water and air tight manner. The manufacturer's standard cabinet construction shall result in an ASHRAE/ANSI Standard 111-88 Leakage Class of less than nine (9) as measured in accordance with AMCA Standard 210-85. Unit serial numbers shall be permanently welded into the base frame.
- B. .
- C. Floor Sheets:
1. All floor sheets shall be fabricated of 18 gauge minimum bright galvanized sheet steel which has been continuously hot dip coated with a durable protective coating of zinc. All thickness shall conform to ASTM A-653 for lock-former quality. Zinc coating weight shall be G-90 (1.25 oz/square foot) as per ASTM A-653. Finish shall be bright spangle. All joints shall be sealed with an industrial adhesive sealant for water and air tightness. This sealant shall conform to ASTM C-834-76 and Federal Specification TTS-230C, Class B.

Floors shall be double wall and insulated with minimum of 4 in. of fiberglass insulation having a insulating value of no less than R-11.

D. Casing Panels

1. All panels shall be fabricated of 18 gauge sheet steel with 20 gauge solid sheet steel liners. All sheet steel shall be continuously hot dip coated with a durable protective coating of zinc. The steel shall conform to ASTM A-653 for lock-former quality. Zinc coating weight shall be G-90 (1.25 oz/square foot) as per ASTM A-653. Prior to fabrication, both the outer sheet steel shell inner liner will be submerged in a heated phosphoric acid bath to remove all oil and mill scale. A coating of zinc rich epoxy primer shall be applied on both top and reverse sides of each sheet baked on at 400°F. All panel corners will be caulked with sealant. After insulation, liners shall be permanently welded to the outer shell. Panels shall be flange type with a minimum 1 in. flange caulked and sealed to the structural member to form the air seal with the panel. Fasteners used to attach the panel will pass through this flange and into one side of the tube but not penetrating into the air tunnel. Panels shall not exceed 48 in. without a structural steel support member in at least one axis. Panel joints shall be recessed and shall have a mastic coating, insulated and covered with a removable trim strip. All panel joints shall be sealed with an industrial neoprene gasket for water and air tightness.

- E. Durable access doors shall be provided into all sections of the air handling equipment for easy access of all components. The doors shall be of the same gauge as the unit cabinet. Access doors shall be double wall and completely insulated between the interior and exterior sheet metal of the door. Insulation shall be the same as that of the unit cabinet. Single wall construction is not acceptable. Each door shall have three (3) - 6 inch stainless steel piano hinges. Access panels without hinges is not acceptable. Ventlok high compression latches shall be used on access doors. Latches shall be provided with lock and require a key for entry. All access doors shall be gasketed around the complete perimeter. The gasket shall be a neoprene/EPDM rubber bulb type. All bulb door gasket shall have internal aluminum clips. The bulb gasket shall be rated by the manufacturer for a constant exposure temperature range of -20°F to 160°F. Gasket shall exhibit excellent compression characteristics. Doors shall swing open against the section pressure. Optional Viewing Windows Door viewing windows shall be double pane wire reinforced type. All windows shall be fabricated with an integral desiccant between the hermetically sealed panes.

- F. The finish coat on the exterior of the unit shall be a high gloss alkyd enamel specially formulated for its weathering characteristic. Epoxy coatings will not be acceptable for outdoor applications due to the UV chalking that occurs during the life of the unit. The total coating thickness shall not be less than 1.5 mils. The color shall be machine gray. The color shall be selected by the architect. Pencil hardness shall be B or greater. Direct impact resistance shall be 30 or greater as per ASTM d-2794. Adhesion on the actual metal substrate shall comply with ASTM D-3359-B with no lifting. In an unscribed condition the coating shall exhibit no visible effects after 100 hours exposure to 100% relative humidity at 100F per ASTM D-2247. Less than 1mm undercutting and no blistering shall be exhibited on coatings applied to untreated cold rolled steel panels in a scribed condition after 100 hr exposure in 5% salt spray testing at 95F and 95% relative humidity as per ASTM B-117. Sixty degree gloss retention after six(6) months South Florida weathering shall not decrease by more than 5%.

## 2.5 CONDITIONING COILS

- A. All coils shall meet or exceed all capacities specified on the mechanical schedule for the project. All water coil performances shall be certified by the manufacturer to be in accordance with A.R.I. Standard 410. Cooling coils shall be mounted in the unit for horizontal air flow. Coil air face velocities shall not exceed the specified velocities of the mechanical schedule. All coils shall be mounted on steel glide channels and fastened to the air seal wall. Coils shall be mounted to air seal wall structure with high strength 0.25 inch bolts, lock washers and nuts. Air seal joints shall be completely caulked with a silicone adhesive sealant.

- B. COILS SECTION
- C. Testing Requirements: The following factory tests are required:
1. Coil Performance Tests: Cooling and heating coils, except sprayed surface coils, shall be factory tested for rating in accordance with AHRI 410 - Standard for Forced-Circulation Air-Cooling and Air-Heating Coils.
- D. Coil Pressure Ratings:
1. Water Coils: Design for 200 psi working pressure at 325 F, and pressure test at 300 psi under water.
- E. Coil Sections: Common or individually insulated, galvanized steel casings for heating and cooling coils. Coil section shall be designed and constructed to facilitate removal of coil for maintenance and replacement and to assure full air flow through coils.
1. Multizone units shall have air deflectors and air baffles for balanced air flow across both heating and cooling coils.
  2. Medium and high-pressure units shall have double gaskets between sections and coil connection penetrations through casing sealed to minimize leakage.
- F. Casing: Provide access to both sides of coils. Enclose coils with headers and return bends exposed outside casing. Slide coils into casing through removable end panel with blank off sheets and sealing collars at connection penetrations.
- G. Drain Pans: 24 inch downstream of coil and down spouts for cooling coil banks more than one coil high.
- H. Eliminators: Three break of galvanized steel, mounted over drain pan.
- I. Air Coils:
1. Certify capacities, pressure drops, and selection procedures in accordance with AHRI 410.
- J. Fabrication:
1. Tubes: 5/8 inch OD seamless copper expanded into fins, brazed joints.
  2. Fins: Aluminum or copper, constructed from flat plate with belled collars for tubes. Fins shall be bonded to tubes by mechanically expanding copper tubes.
    - a. Thickness: Minimum 0.006 inches.
    - b. Spacing: Maximum 12 fins per inch.
  3. Casing: Die formed channel frame of galvanized steel.
  4. Water Coil Turbulators: Bronze, spring-type.
- K. Water Heating Coils:
1. Headers: Cast iron, seamless copper tube, or prime coated steel pipe with brazed joints.
  2. Configuration: Drainable, with threaded plugs for drain and vent; serpentine type.
- L. Water Cooling Coils:
1. Headers: Cast iron, seamless copper tube, or prime coated steel pipe with brazed joints.
  2. Configuration: Drainable, with threaded plugs for drain and vent; threaded plugs in return bends and in headers opposite each tube.
- M. HOT WATER HEATING COIL
1. Hot water coils shall be tested to 350 psig compressed air under clear water. Coils shall be designed to operate at 200 psig internal pressure and up to 300°F. Internal tubes shall be round seamless 1/2 in., 0.016 in. wall copper tubes which have been deoxidized by the addition of phosphorous. Coil casings shall be constructed of a minimum of 16 gauge continuous galvanized steel  SS or Copper optional  Coil casing reinforcements shall be required for fin lengths over 42 in. Coil fins shall be plate type, die-formed ripple edge corrugated 0.006 in. aluminum with guide channels to create turbulent wiping behind the tubes with collars drawn and belled. Internal copper tubes shall be staggered in direction of air flow. The copper circuiting tubes shall be mechanically expanded to the phenolic coated aluminum or copper fins. Uncoated copper fins will not be accepted. The fin spacing shall be a maximum of 10 fins per inch.

2. All hot water coils shall be drainable with a 0.25 in. FPT plugged drain or vent tap on the supply and return headers. Seamless copper tubes shall be brazed to the copper supply and return headers.
3. Hot water coil control valve will be furnished and installed by the unit manufacturer.

## 2.6 AIR FILTERS

- A. Filter holding frames shall be of heavy duty construction designed for industrial applications. Holding frames applied in low efficiency filter applications will be upstream accessible. Holding frames shall be constructed from no less than 18 gauge galvanized steel. They shall be equipped with polyurethane foam gaskets, fasteners and filter centering dimples. The in-line depth shall not be less than 2.75 in. in order to effect adequate bearing surface for built-up filter banks. Filter fasteners shall be capable of being installed without the requirement of tools, nuts or bolts. The holding frame shall be designed to accommodate standard size filters with the application of the appropriate type fastener. Holding frame assemblies shall be sized for a maximum of 500 fpm or shall meet or exceed area specified by the mechanical schedule.
- B. Provide filters with MERV ratings as listed in the equipment schedule.

## 2.7 CONTROL DAMPERS

- A. General: Dampers and their operators shall comply with performance requirements specified in Division 23 Section "Instrumentation and Control Devices for HVAC."
- B. Construction:
  1. Aluminum dampers shall be heavy duty construction designed for industrial applications.
  2. The frame shall be fabricated from 16 gauge galvanized steel formed C channel. Side framing shall have extruded bearing holes which decrease wear and allow smooth rotation of the blade shaft bearing.
  3. Damper linkage shall be concealed in the frame out of the air stream for reduced air turbulence. Low operating torque linkage rides on self lubricated delrin type bearings contained within the quadrant clamp. Rigid low maintenance design is capable of handling higher torque requirements.
  4. Drive shafts shall be square to ensure proper alignment and positive locking connection between the blade, axle and linkage. Round drive shafts are unacceptable.
- C. Blades:
  1. Blades shall be parallel blade type when used to mix airstreams and opposed blade type for all other applications.
  2. Blades must be suspended so that blades are centered and bottom edge blade seals are not unduly compressed. Blade end seals shall be spring type tempered stainless steel.
  3. Blades shall be fabricated from no less than 6063-T6 heavy gauge extruded aluminum.
  4. Blades shall be airfoil in shape and utilize the triple-V-groove design and be furnished with a low-leak blade edge seal of material suitable for the environment and application.

## 2.8 FAN MOTORS

- A. Motors shall be NEMA design B with Class F insulation. Motors shall have electrical characteristics and horsepower as specified on the mechanical schedule. All motors shall have a minimum service factor of 1.15. Motors shall have ball bearings. Motors shall be TEFC and high efficiency, and be designed for 1750 RPM. Brake horsepower requirement of the fans shall not exceed 90% of the motor horsepower. The motor shall be located within the unit and mounted on an adjustable heavy steel base. The motor base shall be fastened securely to the structural steel framing of the fan assembly. This entire assembly shall have vibration isolators. Refer to Section "Common Motor Requirements for HVAC Equipment" for additional requirements.

**2.9 CONTROL PANEL**

- A. Each unit shall be equipped with a control panel built as an integral part of the unit. Each unit shall be wired and tested at the factory before shipment. Wiring shall comply with requirements of the latest NEC issue. Where applicable, UL listed components shall be used. Components shall be labeled and wires numbered per the wiring diagram. The unit shall bear the ETL certification label. The control panel shall contain a three pole main power terminal, starters, contactors, three phase overload protection, fuse blocks with fuses, numbered terminal strip, a line voltage to 115 volt control transformer with primary and secondary and control circuit switch.
- B. The controller shall be micro computer based DDC system. The following functions/setpoints will be programmable at the panel:
  - 1. Indoor Air Temperature
  - 2. Indoor Air Relative Humidity
  - 3. Occupied/Unoccupied Schedule
- C. An LED zone terminal will be provided for remote monitoring of the dehumidifier. Remote terminal shall be capable of monitoring of all setpoints listed below:
  - 1. Power On
  - 2. Indoor Air Temperature
  - 3. Indoor Air Relative Humidity
  - 4. Air Heating Mode
  - 5. Air Dehumidification Mode

**2.10 CONTROL SENSORS**

- A. The unit shall be factory supplied with the following factory mounted and wired control sensors:
  - 1. Indoor Air Temperature
  - 2. Indoor Relative Humidity

**2.11 UNIT MOUNTED DISCONNECT SWITCH**

- A. Each unit shall be equipped with a mounted and wired non-fused disconnect switch to meet the NEC requirement for DISCONNECTING MEANS WITHIN THE SIGHT OF THE UNIT.

**2.12 ELECTRIC ELECTRONIC ACTUATORS**

- A. The actuators for modulating service are direct-coupled electronic type. The actuators for the outside air and exhaust air are automatic return type. The input signal is 0-10 vDC and power requirements are 24 vDC.

**2.13 OPERATING AND SAFETY CONTROLS**

- A. Each unit shall be provided with a complete operating and safety logic control system. The control system shall shut down the unit in case of high refrigerant pressure, low refrigerant pressure and /or oil failure conditions. The water pump supplying each system will be interlocked (by others) with the pool water pump to provide safe operation. Operating and safety control system shall include all relays, contactors, sensors and switches necessary to operate complete unit.

**2.14 FACTORY TESTING AND QUALITY ASSURANCE**

- A. The fans shall be factory run tested to insure structural integrity and proper RPM. All electrical circuits shall be tested to ensure correct operation before shipment of unit. Units shall pass quality control and be thoroughly cleaned prior to shipment.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions under which units are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to Installer.

**3.2 INSTALLATION OF SWIMMING POOL AIR HANDLING UNITS**

- A. General: Comply with the manufacturer's printed instructions except where more stringent requirements are shown or specified, and except where manufacturer's technical representative directs otherwise. Install unit where shown on drawings. Provide adequate clearance around unit for air flow and service.
- B. Suspended Units: Suspend units from structural steel support frame using threaded steel rods and vibration isolation springs.
- C. Electrical Wiring: Install electrical devices furnished by manufacturer but not specified to be factory-mounted. Furnish copy of manufacturer's wiring diagram submittal to electrical installer.
  - 1. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of Division-26 sections. Do not proceed with equipment start-up until wiring installation is acceptable to equipment Installer.
- D. Ductwork: Refer to Division-23 Section "Metal Ducts". Connect supply and return ducts to unit with flexible duct connections. Provide transitions to exactly match unit duct connection size.
- E. Piping: Piping installation requirements are specified in other Division 22 Sections. The Drawings indicate the general arrangement of piping, valves, fittings, and specialties. The following are specific connection requirements:
  - 1. Arrange piping installations adjacent to units to allow unit servicing and maintenance.
  - 2. Connection piping to air-handling units with flexible connectors.
  - 3. Connect water supply piping to the air leaving side of water coils.
  - 4. Route unit condensate drain to location shown on the drawings or, if not shown, to nearest indirect waste connection. Provide trap at connection to drain pan with depth as noted on the drawings and install cleanouts at changes in direction. Size condensate drain piping in accordance with local code and as shown on the drawings.

**3.3 ADJUSTING CLEANING AND PROTECTING**

- A. Adjust fan for required airflow in accordance with Division 23 Section "Testing, Adjusting and Balancing for HVAC." Tighten belts as required for proper operation.
- B. Adjust damper linkages for proper damper operation.
- C. Clean the entire unit including cabinet interiors just prior to substantial completion to remove foreign material and construction dirt and dust. Vacuum clean fan wheel, fan cabinet, intake plenum cabinet, heat exchange surfaces, cooling/heating coil sections, filter sections, access sections, etc.

**3.4 STARTUP**

- A. Final Checks Before Start-Up: Perform the following operations and checks before start-up:
  - 1. Remove shipping, blocking, and bracing.
  - 2. Verify unit is secure on mountings and supporting devices and that connections for piping, ductwork, and electrical are complete. Verify proper thermal overload protection is installed in motors, starters, and disconnects.
  - 3. Perform cleaning and adjusting specified in this Section.

4. Disconnect fan drive from motor and verify proper motor rotation direction and verify fan wheel free rotation and smooth bearings operations. Reconnect fan drive system, align belts, and install belt guards.
  5. Lubricate bearings, pulleys, belts, and other moving parts with factory-recommended lubricants.
  6. Set outside-air and return-air mixing dampers to minimum outside-air setting.
  7. Comb coil fins for parallel orientation.
  8. Install clean filters. Do not operate air handling unit without pre-filters installed.
  9. Verify manual and automatic volume control, and fire and smoke dampers in connected ductwork systems are in the full-open position.
  10. Disable automatic temperature control operators.
- B. Start-Up Services: Complete start-up service shall be provided by the equipment manufacturer's authorized representative and shall include complete sequencing of all controls and unit operation. Do not operate units without filters installed. Test controls and demonstrate compliance with requirements. Replace damaged or malfunctioning controls and equipment.
1. Energize motor, verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated RPM.
    - a. Replace fan and motor pulleys as required to achieve design conditions.
    - b. Measure and record motor electrical values for voltage and amperage.
    - c. Shut unit down and reconnect automatic temperature control operators.
    - d. Refer to Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for procedures for system testing, adjusting, and balancing.

### 3.5 TRAINING

- A. General: At a time mutually agreed upon between the Owner and Contractor, provide the services of a factory trained and authorized representative to train Owner's designated personnel for a minimum of four hours on the operation and maintenance of the equipment provided under this section.
- B. Content: Training shall include but not be limited to:
1. Overview of the system and/or equipment as it relates to the facility as a whole.
  2. Operation and maintenance procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance and appropriate operator intervention.
  3. Review data included in the operation and maintenance manuals. Refer to Division 1 Section "Operating and Maintenance Data."
- C. Certification: Contractor shall submit to the Engineer a certification letter stating that the Owner's designated representative has been trained as specified herein. Letter shall include date, time, attendees and subject of training. The certification letter shall be signed by the Contractor and the Owner's representative indicating agreement that the training has been provided.
- D. Schedule: Schedule training with Owner with at least 7 days' advance notice.

END OF DIVISION 26 TABLE OF CONTENTS

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 00 10 - GENERAL ELECTRICAL REQUIREMENTS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section and to all following sections within Division 26.

**1.2 SECTION INCLUDES**

- A. This Division requires providing complete functioning systems, and each element thereof, as specified, indicated, or reasonably inferred, on the Drawings and in these Specifications, including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the Work include, but are not limited to, materials, labor, supervision, supplies, tools, equipment, transportation and utilities.
- B. Division 26 of these Specifications, and Drawings numbered with prefixes E, generally describe these systems, but the scope of the electrical work includes all such work indicated in all of the Contract Documents, including, but not limited to: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Mechanical, Plumbing and Electrical Drawings and Specifications; and Addenda.
- C. Drawings are graphic representations of the Work upon which the Contract is based. The Contractor will show the materials and their relationship to one another, including sizes, shapes, locations, and connections. The Contractor also convey the scope of work, indicating the intended general arrangement of the equipment, fixtures, outlets and circuits without showing all of the exact details as to elevations, offsets, control lines, and other installation requirements. Use the Drawings as a guide when laying out the Work and to verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers' requirements, will ensure a complete, coordinated, satisfactory and properly operating system.
- D. Specifications define the qualitative requirements for products, materials, and workmanship upon which the Contract is based.

**1.3 DEFINITIONS**

- A. Whenever used in these Specifications or Drawings, the following terms shall have the indicated meanings:
  - 1. Furnish: "To supply and deliver to the project site, ready for unloading, unpacking, assembling, installing, and similar operations."
  - 2. Install: "To perform all operations at the project site, including, but not limited to, and as required: unloading, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, testing, commissioning, starting up and similar operations, complete, and ready for the intended use."
  - 3. Provide: "To furnish and install complete, and ready for the intended use."
  - 4. Furnished by Owner (or Owner-Furnished) or Furnished by Others: "An item furnished by the Owner or under other Divisions or Contracts, and installed under the requirements of this Division, complete, and ready for the intended use, including all items and services incidental to the Work necessary for proper installation and operation. Include the installation under the warranty required by this Division."
  - 5. Engineer: Where referenced in this Division, "Engineer" is the Engineer of Record and the Design Professional for the Work under this Division.

- a. A Consultant to, and an authorized representative of, the Architect, as defined in the General and/or Supplementary Conditions. When used in this Division, it means increased involvement by, and obligations to, the Engineer, in addition to involvement by, and obligations to, the "Architect".
  6. Contract Administrator: Where referenced in this Division, "Contract Administrator" is the primary liaison between the Owner and the Contractor. Specifically, for this project this is the "Architect".
  7. AHJ: The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.
  8. NRTL: Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other NRTLs that are acceptable to the AHJ, and standards that meet the specified criteria.
  9. Substitution: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor. Substitutions include Value Engineering proposals.
    - a. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
    - b. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.
  10. Value Engineering: A systematic method to improve the "value" of goods and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value can therefore be increased by either improving the function or reducing the cost. The goal of VE is to achieve the desired function at the lowest overall cost consistent with required performance.
  11. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified
- B. When 'furnish', 'install', 'perform', or 'provide' is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, "provide" is implied.
- C. The terms "approved equal", "equivalent", or "equal" are used synonymously and shall mean "accepted by or acceptable to the Engineer as equivalent to the item or manufacturer specified". The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.
- D. Manufacturers: The listing of specific manufacturers does not imply acceptance of their products that do not meet the specified ratings, features and functions. Manufacturers listed are not relieved from meeting these specifications in their entirety.
  1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.
  3. Where a list is provided, manufacturers are listed alphabetically and not in accordance with any ranking or preference, unless otherwise noted.
- E. The following definitions apply to excavation operations:
  1. Additional Excavation: Where excavation has reached indicated sub-grade elevations, if unsuitable bearing materials are encountered, continue excavation until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.

2. Sub-base: as used in this section refers to the compacted soil layer used in pavement systems between the sub-grade and the pavement base course material.
3. Sub-grade: as used in this section refers to the compacted soil immediately below the slab or pavement system.
4. Unauthorized excavation consists of removal of materials beyond indicated sub-grade elevations or dimensions without specific direction from the Contract Administrator.

#### 1.4 REFERENCE STANDARDS

- A. Execute all work in accordance with, and comply at a minimum with, National Fire Protection Association (NFPA) codes, state and local building codes, and all other applicable codes and ordinances in force, governing the particular class of work involved, for performance, workmanship, equipment, and materials. Additionally, comply with rules and regulations of public utilities and municipal departments affected by connection of services. Where conflicts between various codes, ordinances, rules, and regulations exist, comply with the most stringent. Wherever requirements of these Specifications, Drawings, or both, exceed those of the above items, the requirements of these Specifications, Drawings, or both, shall govern. Code compliance, at a minimum, is mandatory. Construe nothing in these Construction Documents as permitting work not in compliance, at a minimum, with these codes. Bring all conflicts observed between codes, ordinances, rules, regulations and these documents to the Contract Administrator's and Engineer's attention in sufficient time, prior to the opening of bids, to prepare the Supplementary Drawings and Specifications Addenda required to resolve the conflict.
- B. If the conflict is not reported timely, prior to the opening of bids, resolve the conflict and provide the installation in accordance with the governing codes and to the satisfaction of the Contract Administrator and Engineer, without additional compensation. Contractor will be held responsible for any violation of the law.
- C. Obtain timely inspections by the constituted authorities having jurisdiction; and, upon final completion of the Work, obtain and deliver to the Owner executed final certificates of acceptance from these authorities having jurisdiction.
- D. All material, manufacturing methods, handling, dimensions, methods of installation, and test procedures shall conform to industry standards, acts, and codes, including, but not limited to the following, except where these Drawings and Specifications exceed them:
 

IBC	International Building Code
ADA	Americans with Disabilities Act
AEIC	Association of Edison Illuminating Companies
ANSI	American National Standards Institute
ASTM	American Society of Testing Materials
AWS	American Welding Society
AWWA	American Water Works Association
ICEA	Insulated Conductors Engineers Association
IEEE	Institute of Electrical and Electronics Engineers
IES	Illuminating Engineering Society
NBFU	National Board of Fire Underwriters
NEC	National Electrical Code, NFPA 70
NECA	National Electrical Contractors Association
NEMA	National Electrical Manufacturers' Association
NETA	InterNational Electrical Testing Association
NFPA	National Fire Protection Association
OSHA	Occupational Safety and Health Act
UL	Underwriter's Laboratories
- E. Comply with rules and regulations of public utilities and municipal departments affected by connections of services.

- F. Perform all electrical work in compliance with applicable safety regulations, including OSHA regulations. All safety lights, guards, and warning signs required for the performance of the electrical work shall be provided by the Contractor.
- G. Obtain and pay for all permits, licenses and fees that are required by the governing authorities for the performance of the electrical work.

### **1.5 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate with other divisions for electrical work included in them but not listed in Division 26 or indicated on electrical Drawings.
- B. Visit the site and ascertain the conditions to be encountered in installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make due provisions for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, and incorrect or faulty installation of any of the Work under this Division or for additional compensation for any work covered by this Division.
- C. Refer to Drawings and divisions of the other trades and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. Make all offsets required to clear equipment, beams and other structural members, and to facilitate concealing conduit in the manner anticipated in the design.
- D. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
- E. Provide materials with trim that will fit properly the types of ceiling, wall, or floor finishes installed.
- F. Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.
- G. Maintain an electrical foreman on the jobsite at all times to coordinate this work with other trades so that various components of the electrical systems is installed at the proper time, fits the available space, and allows proper service access to all equipment. Carry on the Work in such a manner that the Work of the other trades will not be handicapped, hindered, or delayed at any time.
- H. Work of this Division shall progress according to the "Construction Schedule" as described in Division 01 and as approved by the Contract Administrator. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule so as to ensure successful achievement of all schedule dates.

### **1.6 MEASUREMENTS AND LAYOUTS**

- A. The Drawings are schematic in nature but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the Work. Figured dimensions take precedence to scaled dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. Correct, at no additional costs to the Owner, errors that could have been avoided by proper checking and inspection.

### **1.7 COORDINATION DRAWINGS**

- A. Coordination Drawings, General: Prepare coordination drawings according to the requirements of individual Sections. Additionally, prepare coordination drawings as required scope of installation is not completely shown on Shop Drawings, where limited space availability

necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one trade.

1. Information shall be project specific and drawn accurately to a scale large enough to resolve conflicts. Do not base coordination drawings on standard dimensional data.
  2. Prepare floorplans, sections, elevations, and details as needed to adequately describe relationship of various systems and components.
  3. Clearly indicate functional and spatial relationships of components of all systems specified in the Contract Documents, including but not limited to: architectural, structural, civil, mechanical, electrical, fire protection, and specialty systems.
  4. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
  5. Show location and size of access doors required for access to concealed equipment, fittings, controls, terminations, and cabling.
  6. Indicate required installation sequence to minimize conflicts between entities.
  7. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Contract Administrator indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
  8. The details of the coordination are the responsibility of the Contractor and, where indicated on the Drawings, minor adjustments in raceway routing, device placement, device type, or equipment arrangement are not to be considered changes to the Contract.
- B. Equipment Room Coordination Drawings: In accordance with the submittal procedures outlined within these Specifications, provide dimensioned layouts of electrical equipment locations within electrical rooms/closets, mechanical rooms, generator rooms, and fire pump rooms with equipment drawn to scale and identified therein.
1. Clearly identify all required working clearances and access provisions required for installation and maintenance.
  2. Equipment layouts should be arranged accounting for considerations for required door openings and the clearances required by the equipment manufacturer.
  3. Indicate path to allow for the future removal of each large piece of equipment (up to and including generators and unit sub-station transformers) without removal of non-related equipment or architectural elements.
  4. Include work provided by others routed through the equipment rooms.
- C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
  2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.
    - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Contract Administrator.
  3. Where the Engineer's digital data files are provided to the Contractor for use in preparing coordination digital data files, the Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to the Drawings or Specifications.
  4. Submit coordination drawings in accordance with the submittal procedures outlined within these Specifications.

## 1.8 SUBMITTALS

- A. Refer to Division 01 and General Conditions for submittal requirements in addition to requirements specified herein.

- B. Refer to Division 01 for acceptance of electronic submittals. If not specified by Division 01, provide electronic submittals. If Division 01 requires paper submittals, provide the quantity of submittals required, but no fewer than seven (7) sets.
- C. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Architect and Engineer that the submittals have been posted. If electronic submittal procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives. Contractor shall allow for the Engineer Review Time as specified. Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.
- D. Engineer Review Time: Transmit submittals as early as required to support the project schedule. Allow two weeks for Engineer review time plus to/from mailing time via the Architect, plus a duplication of this time for resubmittal if required. Transmit submittals as soon as possible after Notice to Proceed and before Mechanical construction starts.
- E. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Engineer. They shall not be copies of the work product of the Engineer. If the Contractor desires to use elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.
- F. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division as noted in each individual Section. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.
- G. Separate submittals according to individual specification sections. Only resubmit those sections requested for resubmittal.
- H. Provide submittals in sufficient detail so as to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.
- I. Refer to individual Sections for additional submittal requirements.
- J. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.
- K. Submittals shall contain the following information:
  - 1. The project name.
  - 2. The applicable specification section and paragraph.
  - 3. Equipment identification acronym as used on the drawings.
  - 4. The submittal date.
  - 5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.
  - 6. Submittals not so identified will be returned to the Contractor without action.
- L. The checking and subsequent acceptance by the Engineer and/or Contract Administrator of submittals shall not relieve responsibility from the Contractor for (1) deviations from Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent work. Contractor shall request and secure written acceptance from the Engineer and Architect prior to implementing any deviation.

- M. BIM Incorporation: Develop and incorporate Shop Drawing files into BIM established for Project.

### 1.9 SUBSTITUTIONS

- A. Refer to Division 01 and General Conditions for substitutions in addition to requirements specified herein.
- B. Materials, products, equipment, and systems described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.
- C. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications.
- D. Request for Substitution:
  - 1. Complete and send the Substitution Request Form attached at the end of this section for each material, product, equipment, or system that is proposed to be substituted.
  - 2. The burden of proof of the merit of the proposed substitution is upon the proposer.
  - 3. Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Contract Administrator, and Owner the following:
    - a. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
    - b. Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.
    - c. Proposed substitution has received necessary approvals of the Authorities Having Jurisdiction.
    - d. Same warranty will be furnished for proposed substitution as for specified Work.
    - e. If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.
    - f. Coordination, installation and changes in the Work as necessary for accepted substitution will be complete in all respects.
- E. Substitution Consideration:
  - 1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.
  - 2. Prior to receipt of Bids: No substitutions will be considered prior to receipt of bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of bids.
    - a. If the proposed substitution is approved prior to receipt of bids, such approval will be stated in an addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.
  - 3. After receipt of Bids: No substitutions will be considered after receipt of Bids and before award of the Contract.
  - 4. After award of Contract: No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

### 1.10 ELECTRONIC DRAWING FILES

- A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of 200 for a drawing set up to 12 sheets and 15 per sheet for each additional sheet.
- B. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form.

- C. Contact the Contract Administrator for written authorization.
- D. The following must be received before electronic drawing files will be sent:
  - 1. Contract Administrator's written authorization
  - 2. Engineer's release agreement form
  - 3. Payment

### 1.11 QUALITY ASSURANCE

- A. Execute all work under this Division in a thorough and professional manner by competent and experienced workmen duly trained to perform the work specified.
- B. Install all work in strict conformance with all manufacturers' requirements and recommendations, unless these Documents exceed those requirements. Install all equipment and materials in a neat and professional manner, aligned, leveled, and adjusted for satisfactory operation, in accordance with NECA guidelines.
- C. Unless indicated otherwise on the Drawings, provide all material and equipment new, of the best quality and design, free from defects and imperfections and with markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Provide all material and equipment of the same type from the same manufacturer whenever practicable.
- D. Unless specified otherwise, manufactured items of the same types specified within this Division shall have been installed and used, without modification, renovation, or repair for not less than one year prior to date of bidding for this Project.

### 1.12 OPERATION AND MAINTENANCE MANUALS

- A. Refer to Division 01 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.
- B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.
- C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.
- D. Prior to Substantial Completion of the project, furnish the Operation and Maintenance Manuals to the Contract Administrator, for Engineer's review, and for the Owner's use.
  - 1. Refer to Division 01 for acceptance of electronic manuals for this project. If not specified in Division 1, provide manuals in the form of a multiple file composite electronic PDF file for each manual type required. Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size. Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.
    - a. Contractor shall notify the Contract Administrator and Engineer that the manuals have been posted. If electronic manual procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Contract Administrator's and Engineer's designated representatives.
  - 2. If Division 01 requires paper manuals, provide four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers and plastic insert folders for Record Drawings.

- E. Each manual shall contain equipment data, approved submittals, shop drawings, diagrams, capacities, spare part numbers, manufacturer service and maintenance data, warranties and guarantees. Include local contacts, complete with address and telephone number, for equipment, apparatus, and system components furnished and installed under this Division of the specifications.

#### **1.13 SPARE PARTS**

- A. Provide to the Owner the spare parts specified in the individual sections of this Division

#### **1.14 RECORD DRAWINGS**

- A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.
- B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During the course of construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension from column lines.
- C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Contract Administrator.

#### **1.15 DELIVERY STORAGE AND HANDLING**

- A. Refer to Division 01 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.
- B. Deliver equipment and material to the job site in their original containers with labels intact, fully identified with manufacturer's name, make, model, model number, type, size, capacity and Underwriter's Laboratories, Inc. labels and other pertinent information necessary to identify the item.
- C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and at all times, take every precaution to properly protect equipment and material from damage, including the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which becomes rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Contract Administrator.
- D. Be responsible for the safe storage of tools, material and equipment.

#### **1.16 WARRANTIES**

- A. Refer to Division 01 and General Conditions for Warranties in addition to requirements specified herein.
- B. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.
- C. Warrant each system and each element thereof against all defects due to faulty workmanship, design or material for a period of 12 months from date of Substantial Completion, unless specific items are noted to carry a longer warranty in these Construction Documents or manufacturer's

standard warranty exceeds 12 months. Remedy all defects, occurring within the warranty period(s), as stated in the General Conditions and Division 01.

- D. Also warrant the following additional items:
  - 1. All raceways are free from obstructions, holes, crushing, or breaks of any nature.
  - 2. All raceway seals are effective.
  - 3. The entire electrical system is free from all short circuits and unwanted open circuits and grounds.
- E. The above warranties shall include labor and material. Make repairs or replacements without any additional costs to the Owner.
- F. Perform the remedial work promptly, upon written notice from the Contract Administrator or Owner.
- G. At the time of Substantial Completion, deliver to the Owner all warranties, in writing and properly executed, including term limits for warranties extending beyond the one year period, each warranty instrument being addressed to the Owner and stating the commencement date and term.

#### **1.17 TEMPORARY FACILITIES**

- A. Refer to Division 01 and General Conditions for Temporary Facilities requirements in addition to requirements specified herein.
- B. Temporary Utilities: The types of services required include, but are not limited to, electricity, telephone, and internet. When connecting to existing franchised utilities for required services, comply with service companies' recommendations on materials and methods, or engage service companies to install services. Locate and relocate services (as necessary) to minimize interference with construction operations.
- C. Construction Facilities: Provide facilities reasonably required to perform construction operations properly and adequately.
  - 1. Enclosures: When temporary enclosures are required to ensure adequate workmanship, weather protection and ambient conditions required for the work, provide fire-retardant treated lumber and plywood; provide tarpaulins with UL label and flame spread of 15 or less; provide translucent type (nylon reinforced polyethylene) where daylighting of enclosed space would be beneficial for workmanship, and reduce use of temporary lighting.
  - 2. Heating: Provide heat, as necessary, to protect work, materials and equipment from damage due to dampness and cold. In areas where building is occupied, maintain a temperature not less than 65 degrees F. Use steam, hot water, or gas from piped distribution system where available. Where steam, hot water or piped gas are not available, heat with self-contained LP gas or fuel oil heaters, bearing UL, FM or other approval labels appropriate for application. Use electric-resistance space heaters only where no other, more energy-efficient, type of heater is available and allowable.
    - a. Vent and exhaust fuel-burning heaters per SMACNA Guidelines for Source Control and equip units with individual-space thermostatic controls.
    - b. If permanent HVAC systems are used during construction, provide HVAC Protection and replace all filtration prior to occupancy in accordance with SMACNA Guidelines.

#### **1.18 FIELD CONDITIONS**

- A. Conditions Affecting Excavations: The following project conditions apply:
  - 1. Maintain and protect existing building services that transit the area affected by selective demolition.
  - 2. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by excavation operations.

- B. Site Information: Subsurface conditions were investigated during the design of the Project. Reports of these investigations are available for information only; data in the reports are not intended as representations or warranties of accuracy or continuity of conditions. The Owner will not be responsible for interpretations or conclusions drawn from this information.
- C. Use of explosives is not permitted.
- D. Environmental Conditions: Apply joint sealers under temperature and humidity conditions within the limits specified by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

## **PART 2 - PRODUCTS AND MATERIALS**

### **2.1 SOIL MATERIALS**

- A. Sub base Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, crushed slag, or natural or crushed sand.
- B. Drainage Fill: Washed, evenly graded mixture of crushed stone, or crushed or uncrushed gravel, with 100 percent passing a 1-1/2-inch sieve, and not more than 5 percent passing a No. 4 sieve.
- C. Backfill and Fill Materials: Materials complying with ASTM D2487 soil classification groups GW, GP, GM, SM, SW, and SP; free of clay, rock, or gravel larger than two inches in any dimension; debris; waste; frozen materials; and vegetable and other deleterious matter.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.

### **3.2 EXISTING CONDITIONS**

- A. Existing conditions indicated on the Drawings are taken from the best information available from the Owner, existing record drawings, and from limited, in-situ, visual site observations; and, they are not to be construed as "AS BUILT" conditions. The information is shown to help establish the extent of the new work.
- B. Verify all actual existing conditions at the project site and perform the Work as required to meet the existing conditions and the intent of the Work indicated.
- C. Notify Contract Administrator immediately of any dangerous conditions that exist on the job site, as they are discovered, before demolition, during selective demolition or before remodel work begins.

### **3.3 PERMITS**

- A. Secure and pay for all permits required in connection with the installation of the Electrical Work. Arrange with the various utility companies for the installation and connection of all required utilities for this facility and pay all charges associated therewith including connection charges and inspection fees, except where these services or fees are designated to be provided by others.

### **3.4 TEMPORARY ELECTRICAL SERVICE AND WIRING**

- A. Provide 208Y/120 volt, three-phase, four-wire, temporary electrical service and temporary lighting system to facilitate construction.

- B. In existing facilities, with Owner's approval, Contractor may utilize the existing electrical system as the source of temporary power. Coordinate the point of connection and method of connection to the existing system with the Owner's Representative.
- C. Pay all charges made by the Electric Utility, with respect to installation and energy charges for temporary services.
- D. Work for the temporary power shall consist of all labor and materials, including, but not limited to conduit, wiring, panelboards, fuse blocks, fused disconnecting switches, fuses, pigtails, receptacles, wood panel switch supports, and other miscellaneous materials required to complete the power system.
- E. Install all temporary wiring in accordance with applicable codes, and maintain in an OSHA-approved manner.
- F. Provide an adequate number of GFCI type power distribution centers, rated 208Y/120V, four-wire, and not less than 60A, with sufficient fuse blocks or breakers for lighting and hand tool circuits, 60A four-wire feeders, all mounted within pre-fabricated enclosures UL listed for this application or on suitable wood panels bolted to columns or upright wood supports as required.
- G. Install circuits to points on each level of each building so that service outlets can be reached by a 50-foot extension cord for 120V power and a 100-foot extension cord for 208V power (or as required by OSHA or local authorities).
- H. Provide one lighting outlet per 30 linear feet of corridor and at least one light in each room and for every 800 square feet of floor area. Temporary lighting shall comply with OSHA requirements.
- I. If additional service is required for cranes, electrical welders or for electric motors over 1/2 HP per unit, such additional service shall become the responsibility of the trade involved.
- J. When the permanent wiring for lighting and power is installed, with approval of the Contract Administrator and Owner, the permanent system may be used, provided the Contractor assumes full responsibility for all electrical material, equipment, and devices contained in the systems and provided that roof drainage system and roofing are complete.
- K. When directed by the Contract Administrator, remove all temporary services, lighting, wiring and devices from the property.

### **3.5 ACCESS TO EQUIPMENT**

- A. Locate all pull boxes, junction boxes and controls to provide easy access for operation, service inspection and maintenance. Provide an access door where equipment or devices are located above inaccessible ceilings. Refer to Division 26 Section "Common Work Results for Electrical".
- B. Maintain all code required clearances and clearances required by manufacturers.

### **3.6 PENETRATIONS**

- A. Unless otherwise noted as being provided under other divisions, provide sleeves, box frames, or both, for openings in floors, walls, partitions and ceilings for all electrical work that passes through construction. Refer to Division 26 Section "Common Work Results for Electrical".
- B. Provide sleeves, box frames, or both, for all conduit, cable, and busways that pass through masonry, concrete or block walls.
- C. The cutting of new and/or existing construction will not be permitted except by written approval of the Contract Administrator.

**3.7 EXCAVATION AND BACKFILLING**

- A. Refer to Division 01, Division 02 and General Conditions for Excavation and Backfilling in addition to the requirements specified herein.
- B. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the work under this division. Excavation shall be in conformance with applicable Divisions and sections of the Specifications.
- C. Restore roads, alleys, streets and sidewalks damaged during this work to the satisfaction of Authorities Having Jurisdiction.
- D. Do not excavate trenches close to walks or columns without prior consultation with the Contract Administrator.
- E. Erect barricades around excavations, for safety, and place an adequate number of amber lights on or near the work and keep those burning from dusk to dawn. Be responsible for all damage that any parties may sustain in consequence of neglecting the necessary precautions in prosecuting the work.
- F. Slope sides of excavations to comply with local, state, and federal codes and ordinances. Shore and brace as required for stability of excavation.
- G. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state, and federal codes and authorities. Maintain shoring and bracing in excavations regardless of time period excavations will be open.
  - 1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inches below finished grade elevation.
- H. Install sediment and erosion control measures in accordance with local codes and ordinances.
- I. Dewatering: Prevent surface water and subsurface or ground water from flowing into excavations and from flooding project site and surrounding area.
  - 1. Do not allow water to accumulate in excavations. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations.
  - 2. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey surface water to collecting or run-off areas. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.
- J. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.
  - 1. Locate and retain soil materials away from edge of excavations. Do not store within drip-line of trees indicated to remain.
  - 2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.
- K. Excavation for Underground Tanks and Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 foot; plus a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
  - 1. Excavate, by hand, areas within drip-line of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of one inch in diameter and larger with emulsified asphalt tree paint.
  - 2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.
- L. Trenching: Excavate trenches for electrical installations as follows:
  - 1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of six to nine inches clearance on both sides of raceway and cables.

2. Excavate trenches to depth indicated or required for raceway and cables to establish slope, away from buildings and indicated elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.
  3. Limit the length of open trench to that in which raceway and cables can be installed, tested, and the trench backfilled within the same day.
  4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of raceway and cables. Provide a minimum of six inches of stone or gravel cushion between rock bearing surface and raceway and cables.
  5. Excavate trenches for raceway, cables, and equipment with bottoms of trench to accurate elevations for support of raceway and cables on undisturbed soil.
- M. Cold Weather Protection: Protect excavation bottoms against freezing when atmospheric temperature is less than 35 degrees F.
- N. Backfilling and Filling: Place soil materials in layers to required subgrade elevations for each area classification listed below, using materials specified in Part 2 of this Section.
1. Under walks and pavements, use a combination of subbase materials and excavated or borrowed materials.
  2. Under building slabs, use drainage fill materials.
  3. Under raceway and cables, use subbase materials where required over rock bearing surface and for correction of unauthorized excavation.
  4. For raceway and cables less than 30 inches below surface of roadways, provide 4-inch-thick concrete base slab support. After installation and testing of raceway and cables, provide a 4-inch thick concrete encasement (sides and top) prior to backfilling and placement of roadway subbase.
  5. Other areas use excavated or borrowed materials.
- O. Backfill excavations as promptly as work permits, but not until completion of the following:
1. Inspection, testing, approval, and locations of underground utilities have been recorded.
  2. Removal of concrete formwork.
  3. Removal of shoring and bracing, and backfilling of voids.
  4. Removal of trash and debris.
- P. Placement and Compaction: Place backfill and fill materials in layers of not more than 8 inches in loose depth for material compacted by heavy equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
1. For vertical and diagonal raceway installations, thoroughly support raceways from permanent structures or undisturbed earth at no less than 10-foot intervals, while placing backfill materials, so that raceways are not deflected, crushed, broken, or otherwise damaged by the backfill placement.
- Q. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.
- R. Place backfill and fill materials evenly adjacent to structures, piping, and equipment to required elevations. Prevent displacement of raceways and equipment by carrying material uniformly around them to approximately same elevation in each lift.
- S. Compaction: Control soil compaction during construction, providing minimum percentage of density specified for each area classification indicated below:
1. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum density for soils which exhibit a well-defined moisture-density relationship (cohesive soils), determined in accordance with ASTM D 1557 and not less than the following percentages of relative density, determined in accordance with ASTM D 2049, for soils which will not exhibit a well-defined moisture-density relationship (cohesionless soils).

- a. Areas Under Structures, Building Slabs and Steps, Pavements: Compact top 12 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
  - b. Areas Under Walkways: Compact top 6 inches of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
  - c. Other Areas: Compact top 6 inches of subgrade and each layer of backfill or fill material to 85 percent maximum density for cohesive soils, and 90 percent relative density for cohesionless soils.
2. Moisture Control: Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water. Apply water in minimum quantity necessary to achieve required moisture content and to prevent water appearing on surface during, or subsequent to, compaction operations.
- T. Subsidence: Where subsidence occurs at mechanical installation excavations during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

### 3.8 CUTTING AND PATCHING

- A. Cut walls, floors, ceilings, and other portions of the facility as required to install work under this Division.
- B. Obtain permission from the Architect prior to cutting. Do not cut or disturb structural members without prior approval from the Architect and Structural Engineer.
- C. For post-tension slabs, x-ray slab and closely coordinate all core drill locations with Architect and Structural Engineer prior to performing any work. Obtain approval from Architect and Structural Engineer for all core drills and penetrations at least four days prior to performing work.
- D. Penetrations shall be made as small as possible while maintaining required clearances between the building element penetrated and the system component.
- E. Patch around openings to match adjacent construction, including fire ratings, if applicable.
- F. Repair and refinish areas disturbed by work to the condition of adjoining surfaces in a manner satisfactory to the Architect.

### 3.9 PAINTING

- A. Refer to Division 09 Section "Painting" for painting requirements.
- B. Paint exposed ferrous surfaces, including, but not limited to, hangers, equipment stands and supports using materials and methods as specified under individual sections and Division 09 of the Specifications; colors shall be as selected by the Contract Administrator.
- C. Re-finish all field-threaded ends of galvanized conduits and field-cut ends of galvanized supports with a cold-galvanizing compound approved for use on conductive surfaces. Follow closely manufacturer's instructions for pre-cleaning surfaces and application.
- D. Factory finishes and shop priming and special finishes are specified in the individual equipment Specification sections.
- E. Where factory finishes are provided and no additional field painting is specified, touch up or refinish, as required by, and to the acceptance of, the Contract Administrator, marred or damaged surfaces so as to leave a smooth, uniform finish. If, in the opinion of the Contract Administrator, the finish is too badly damaged to be properly re-finished, replace the damaged equipment or materials at no additional costs to the Owner.

**3.10 CLEANING**

- A. Remove dirt and refuse, resulting from the performance of the Work, from the premises as required to prevent accumulation. Cooperate in maintaining reasonably clean premises at all times.
- B. Immediately prior to the final inspection, the Electrical Contractor shall clean material and equipment installed under the Electrical Contract. Dirt, dust, plaster, stains, and foreign matter shall be removed from surfaces including components internal to equipment.
- C. Damaged finishes shall be touched-up and restored to their original condition

**3.11 ADJUSTING ALIGNING AND TESTING**

- A. Adjust, align and test all electrical equipment furnished and/or installed under this Division.
- B. Check motors for alignment with drive and proper rotation, and adjust as required.
- C. Check and test protective devices for specified and required application, and adjust as required.
- D. Check, test and adjust adjustable parts of all light fixtures and electrical equipment as required to produce the intended performance.
- E. Verify that completed wiring system is free from short circuits, unintentional grounds, low insulation impedances, and unintentional open circuits.
- F. After completion, perform tests for continuity, unwanted grounds, and insulation resistance in accordance with the requirements of NFPA 70 and NETA.
- G. Be responsible for the operation, service and maintenance of all new electrical equipment during construction and prior to acceptance by the Owner of the complete project under this Contract. Maintain all electrical equipment in the best operating condition including proper lubrication.
- H. Notify the Contract Administrator immediately of all operational failures caused by defective material, labor or both.
- I. Maintain service and equipment for all testing of electrical equipment and systems until all work is approved and accepted by the Owner.
- J. Keep a calibrated voltmeter and ammeter (true RMS type) available at all times. Provide service for test readings when and as required.
- K. Refer to individual sections for additional and specific requirements.

**3.12 START-UP OF SYSTEMS**

- A. Prior to start-up of electrical systems, check all components and devices, lubricate items appropriately, and tighten all screwed and bolted connections to manufacturers' recommended torque values using appropriate torque tools.
- B. Each power, lighting and control circuit shall be energized, tested and proved free of breaks, short-circuits and unwanted grounds.
- C. Adjust taps on each transformer for rated secondary voltages.
- D. Balance all single phase loads at each panelboard, redistributing branch circuit connections until balance is achieved to plus or minus 10 percent.
- E. Replace all burned-out lamps. Replace the lamps of all light fixtures that use incandescent, halogen or quartz lamp sources that are installed as part of the finished building, but are used by the Contractor during construction, with new lamps of appropriate type and wattage prior to turning the facility over to the Owner.

- F. After all systems have been inspected and adjusted, confirm all operating features required by the Drawings and Specifications and make final adjustments as necessary.
- G. Demonstrate that all equipment and systems perform properly as designed per Drawings and Specifications.
- H. At the time of final review and tests of the power and lighting systems, all equipment and system components shall be in place and all connections at panelboards, switches, circuit breakers, and the like, shall be complete. All fuses shall be in place, and all circuits shall be continuous from point of service connections to all switches, receptacles, outlets, and the like.

### 3.13 TEST REPORTS

- A. Perform tests as required by these Specifications and submit the results to the Contract Administrator, for Engineer's review. Record the results, date and time of each test and the conditions under which the test was conducted. Include a copy of the finalized test results, with corrections made, in the operations and maintenance manuals. The tests shall establish the adequacy, quality, safety, and reliability for each electrical system installed. Notify the Contract Administrator and Engineer two working days prior to each test.
- B. For specific testing requirements of special systems, refer to the Specification section that describes that system. The Contractor shall provide the following to facilitate the testing of the electrical systems:
  - 1. Perform tests as described in the individual sections;
- C. Upon completing each test, record the results, date and time of each test and the conditions under which the test was conducted. Submit to the Contract Administrator, for Engineer's review, in duplicate, the test results for the following electrical items:
  - 1. Building service entrance voltage and amperes at each phase.
  - 2. Electrical service grounding conditions and grounding resistance.
  - 3. Proper phasing throughout the entire system.
  - 4. Voltages (phase-to-phase and phase-to-neutral) and amperes at each phase for each panelboard, switchboard, and the like.
  - 5. Phase voltages and amperes at each three-phase motor.
  - 6. Test all wiring devices for electrical continuity and proper polarity of connections.
- D. Promptly correct all failures or deficiencies revealed by these tests in accordance with the manufacturer's recommendations and as determined by the Engineer.

### 3.14 SUBSTANTIAL COMPLETION REVIEW

- A. Prior to requesting a site observation for "CERTIFICATION OF SUBSTANTIAL COMPLETION", complete the following items:
  - 1. Submit complete Operation and Maintenance Data.
  - 2. Submit complete Record Drawings.
  - 3. Perform all required training of Owner's personnel.
  - 4. Turn over video recordings of training sessions to the Owner.
  - 5. Turn over all spares and extra materials to the Owner, along with a complete inventory of spares and extra materials being turned over.
  - 6. Perform start-up tests of all systems.
  - 7. Remove all temporary facilities from the site.
  - 8. Comply with all requirements for Substantial Completion in the Division 01 and General Conditions.
- B. Request in writing a review for Substantial Completion. Give the Contract Administrator at least seven (7) days notice prior to the review.
- C. State in the written request that the Contractor has complied with the requirements for Substantial Completion.

- D. Upon receipt of a request for review, the Contract Administrator will either proceed with the review or advise the Contractor of unfilled requirements.
- E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above-mentioned items the Contractor shall reimburse the Contract Administrator and Engineer for time and expenses incurred for the visit.
- F. Upon completion of the review, the Contract Administrator will prepare a "final list" of outstanding items to be completed or corrected for final acceptance.
- G. Omissions on the "final list" shall not relieve the Contractor from the requirements of the Contract Documents.
- H. Prior to requesting a final review, submit a copy of the final list of items to be completed or corrected. State in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

END OF SECTION

**SUBSTITUTION REQUEST FORM**

To Project Engineer: \_\_\_\_\_ Request # (GC Determined): \_\_\_\_\_

Project Name: \_\_\_\_\_

Project No/Phase: \_\_\_\_\_ Date: \_\_\_\_\_

Specification Title: \_\_\_\_\_

Section Number: \_\_\_\_\_ Page: \_\_\_\_\_ Article/Paragraph: \_\_\_\_\_

Proposed Substitution: \_\_\_\_\_

Manufacturer: \_\_\_\_\_ Model No.: \_\_\_\_\_

Address: \_\_\_\_\_ Phone: \_\_\_\_\_

History:  New product  1-4 years old  5-10 years old  More than 10 years old

Differences between proposed substitution and specified Work: \_\_\_\_\_

Point-by-point comparative data attached – REQUIRED BY ENGINEER  
Comparative data may include but not be limited to performance, certifications, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements. Include all information necessary for an evaluation.

Supporting Data Attached:  Drawings  Product Data  Samples  
 Tests  Reports  Other: \_\_\_\_\_

Reason for not providing specified item: \_\_\_\_\_

Similar Installation:  
Project: \_\_\_\_\_ Architect: \_\_\_\_\_

Address: \_\_\_\_\_ Owner: \_\_\_\_\_

\_\_\_\_\_ Date Installed: \_\_\_\_\_

Proposed substitution affects other parts of Work:  No  Yes; explain: \_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_

**Substitution Certification Statement:**

Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner that the:

- ▲ A. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
- B. Proposed substitution is consistent with the Contract Documents and will produce indicated results.
- C. Proposed substitution does not affect dimensions and functional clearances.
- D. Proposed substitution has received necessary approvals of authorities having jurisdiction.
- E. Same warranty will be furnished for proposed substitution as for specified Work.
- F. Same maintenance service and source of replacement parts, as applicable, is available.
- G. Proposed substitution will not adversely affect other trades or delay construction schedule.
- H. Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

Submitting Contractor	Date	Company
-----------------------	------	---------

**Manufacturer's Certification of Equal Quality:**

I \_\_\_\_\_ represent the manufacturer of the Proposed Substitution item and hereby certify and warrant to Architect, Engineer, and Owner that the function and quality of the Proposed Substitution meets or exceeds the Specified Item.

Manufacturer's Representative	Date	Company

**Engineer Review and Recommendation Section**

Recommend Acceptance       Yes       No  
 Additional Comments:       Attached       None

**Acceptance Section:**

Contractor Acceptance Signature	Date	Company
Owner Acceptance Signature	Date	Company
Architect Acceptance Signature	Date	Company
Engineer Acceptance Signature	Date	Company

**SECTION 26 05 00 - COMMON WORK RESULTS FOR ELECTRICAL****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes limited scope general construction materials and methods, electrical equipment coordination, and common electrical installation requirements as follows:
1. Access doors in walls, ceilings, and floors for access to electrical materials and equipment.
  2. Sleeves and seals for electrical penetrations.
  3. Joint sealers for sealing around electrical materials and equipment, and for sealing penetrations in fire and smoke barriers, floors, and foundation walls.
  4. Sealing penetrations through noise critical spaces.
  5. Fire protective wrap for use as a listed fire rated electrical circuit protective system.

**1.2 DEFINITIONS**

- A. The following abbreviations apply to this and other Sections of these Specifications:
1. AHJ: Authority(ies) having Jurisdiction
  2. ATS: Acceptance Testing Specifications
  3. EPDM: Ethylene-propylene-diene monomer rubber
  4. MC: Metal Clad
  5. N/A: Not Available or Not Applicable
  6. NBR: Acrylonitrile-butadiene rubber
  7. NRTL: Nationally Recognized Testing Laboratory
  8. PCF: Pounds per Cubic Foot
- B. The following definitions apply to this and other Sections of these Specifications:
1. Homerun: That portion of an electrical circuit originating at a junction box, termination box, receptacle or switch with termination at an electrical panelboard. Note: Where MC Cable is utilized for receptacle and/or lighting branch circuiting loads, the originating point of the homerun shall be at the first load in the circuit or at a junction box in an accessible ceiling space immediately above the first load.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate arrangement, mounting, and support of electrical equipment:
1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
  2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
  3. To allow right of way for piping, ducts, and other systems installed at required slopes and/or elevations.
  4. So connecting raceways, cables, and wireways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed.
- D. Coordinate electrical testing of electrical, mechanical, and architectural items, so equipment and systems that are functionally interdependent are tested to demonstrate successful interoperability.

## 1.4 SUBMITTALS

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements":
1. Product data for the following products:
    - a. Sleeve seals.
    - b. Through and membrane penetration firestopping systems.
    - c. Joint sealers
    - d. Acoustical sealers
    - e. Endothermic rap
  2. Shop drawings for:
    - a. Detailed fabrication drawings of access panels and doors.
  3. Through and Membrane Penetration Firestopping Systems Product Schedule: Provide UL listing, location, wall or floor rating and installation drawing for each penetration fire stop system.
    - a. Where Project conditions require modification to qualified testing and inspecting agency's illustrations for a particular firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.
    - b. Qualifications data for testing agency.
  4. Endothermic Wrap drawings and system details: Provide UL listing, assembly rating and installation drawing for each case specific installation. Include installation instructions indicating layers of wrap required and securing method.
    - a. Where Project conditions require modifications to qualified testing and inspecting agency's installation requirements for a particular listed fire rated electrical circuit protective system, submit illustration with modifications marked and approved by Endothermic Wrap manufacturer's fire protection engineer as an engineering judgement or equivalent fire-resistive-rated assembly.
  5. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26
    - a. Accurately record actual locations of firestopped penetrations and access panel/door locations. Indicate dimensions from fixed structural elements.

## 1.5 NOISE CRITICAL SPACES

- A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). The table below designates the noise-critical spaces that will require application of sound attenuating measures and acoustical sealants.
1. Offices
  2. Conference Rooms
  3. Teleconference Rooms
  4. Meeting/Banquet Rooms
  5. Sound/Lighting Control Rooms
  6. TV Production Studio
  7. Stage
  8. A/V Spaces
  - 9.

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 ACCESS TO EQUIPMENT

- A. Manufacturers:

1. Bar-Co., Inc.
  2. Elmdor Stoneman.
  3. JL Industries
  4. Jay R. Smith Mfg. Co.
  5. Karp Associates, Inc.
  6. Milcor
  7. Nystrom Building Products
  8. Wade
  9. Zurn
- B. Access Doors:
1. Provide access doors for all concealed equipment, except where above lay-in ceilings. Refer to Section "Identification for Electrical Systems" for labeling of access doors.
  2. Access doors shall be adequately sized for the devices served with a minimum size of 18 inches x 18 inches, furnished by the respective Contractor or Subcontractor and installed by the General Contractor.
  3. Access doors must be of the proper construction for type of construction where installed.
  4. The exact location of all access doors shall be verified with the Contract Administrator prior to installation.
  5. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
  6. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.
    - a. For installation in masonry, concrete, ceramic tile, or wood paneling: 1-inch-wide exposed perimeter flange and adjustable metal masonry anchors.
    - b. For installation in gypsum wallboard or plaster: perforated flanges with wallboard bead.
    - c. For installation in full-bed plaster applications: galvanized, expanded metal lath and exposed casing bead, welded to perimeter of frame.
  7. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
  8. Locking Devices:
    - a. Flush, screwdriver-operated cam locks.
    - b. Where indicated on the drawings or where access panels are installed in locations accessible to the public, provide 5-pin or 5-disc type cylinder locks, all access panels keyed alike.

## 2.2 SLEEVES

- A. Steel sleeves for raceways and cables:
1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends and drip rings.
- B. Cast iron wall pipe sleeves for raceways and cables:
1. Manufacturers
    - a. Josam Mfg. Co.
    - b. Smith (Jay R) Mfg. Co.
    - c. Tyler Pipe/Wade Div.; Subs of Tyler Corp.
    - d. Watts Industries, Inc.
    - e. Zurn Industries, Inc.; Hydromechanics Div.
  2. Cast-iron sleeve with integral clamping flange with clamping ring, and nuts for membrane flashing.
    - a. Underdeck Clamp: Clamping ring with setscrews.
  3. Sleeves for rectangular openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.

4. Coordinate sleeve selection and application with selection and application of firestopping to be used.

## 2.3 SEALANTS

### A. SLEEVE SEALS

1. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
2. Manufacturers:
  - a. Advance Products & Systems, Inc.
  - b. Calpico, Inc.
  - c. Metraflex Co.
  - d. O-Z/Gedney
  - e. Pipeline Seal and Insulator, Inc.
3. Sealing Elements: Interlocking or solid sealing links shaped or pre-drilled to fit surface of cable or raceway. Include type and number required for material and size of raceway or cable.
  - a. EPDM
  - b. NBR
  - c. Neoprene
4. Pressure Plates: Include two for each sealing element. For multi-phase circuits, use slotted pressure plates if metal.
  - a. Plastic
  - b. Carbon steel
  - c. Stainless steel
  - d. PVC-coated steel
5. Connecting Bolts and Nuts: Provide bolts of length required to secure pressure plates to sealing elements. Include one for each sealing element.
  - a. Carbon steel with corrosion-resistant coating
  - b. Stainless steel

### B. JOINT SEALERS

1. General: Joint sealers, joint fillers, and other related materials compatible with each other and with joint substrates under conditions of service and application.
2. Colors: As selected by the Contract Administrator from manufacturer's standard colors.
3. Elastomeric Joint Sealers: Provide the following types:
  - a. Silicone Joint Sealants, One-part nonacid-curing, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for masonry, glass, aluminum, and other substrates recommended by the sealant manufacturer. Provide one of the following:
    - 1) Dow Corning, Dowsil 790
    - 2) Dow Corning, Dowsil 795
    - 3) GE, Silglaze II SCS 2350
    - 4) GE, Silpruf SCS 2000
    - 5) Owens Corning, Energy Complete
    - 6) Pecora, 864 NST
    - 7) Tremco, Spectrem 1
    - 8) Tremco, Spectrem 2
  - b. Mildew Resistant Sealants, one-part mildew-resistant, silicone sealant complying with ASTM C 920, Type S, Grade NS, Class 25, for uses in non-traffic areas for glass, aluminum, metal or porcelain plumbing fixtures and nonporous joint substrates; formulated with fungicide; intended for sealing interior joints with nonporous substrates; and subject to in-service exposure to conditions of high humidity and temperature extremes. Provide one of the following:
    - 1) Dow Corning, Dowsil 786
    - 2) GE, Momentum SCS 1700

- 3) Pecora, 898 Silicone NST
- c. Hybrid Joint Sealants: One-part, nonsag, paintable complying with ASTM C 920, Type S, Grade NS, Class 50 recommended for exposed applications on interior and exterior locations involving joint movement of not more than plus or minus 50 percent. Subject to compliance with requirements, provide one of the following:
  - 1) BASF, MasterSeal NP 100
  - 2) Pecora, DyanTrol I-XL
  - 3) Tremco, Dymonic FC

#### C. FIRESTOPPING

1. Sealants and accessories shall have fire-resistance ratings indicated, as established by testing identical assemblies in accordance with UL 2079 or ASTM E 814, by Underwriters' Laboratories, Inc., or other NRTL acceptable to AHJ. Subject to compliance with requirements, provide one of the following:
  - a. Manufacturers:
    - 1) 3M Corp., Fire Barrier Sealant
    - 2) Hilti, Inc.
    - 3) Tremco, Tremstop Fyre-Sil
    - 4) Pecora, AC-20 FTR
    - 5) RectorSeal
    - 6) Specified Technologies Inc. Firestop
    - 7) USG, SHEETROCK Firecode Compound
    - 8) Owens Corning Firestopping Insulation

#### D. ACOUSTICAL SEALANTS

1. General: Penetrations by conduit through surfaces that are around and between noise critical spaces shall be sleeved, packed and sealed airtight with foam rod, non-hardening sealant and/or packing material as described herein.
2. Foam Backer Rod: Closed cell polyethylene suitable for use as a backing for non-hardening sealant.
3. Non-Hardening Sealant: Sealant for penetrations shall be non-hardening, permanently flexible, approved firestop putty may be used in lieu of the sealant on foam rod in noise critical walls that are also fire rated.
4. Packing Material: Mineral fiber; non-combustible; resistant to water, mildew and vermin. Expanding resilient foams manufactured for this purpose are an acceptable alternative only if the material density is at least 15 PCF (40 kg/m<sup>3</sup>).
5. Acoustical Joint Sealant: Manufacturer's standard non-sag, paintable, non-staining latex sealant complying with ASTM C 834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90. Meeting ASTM E 84 for a smoke flame spread index of less than 25 / 50. Subject to compliance with requirements, provide one of the following:
  - 1) Pecora, AC-20 FTR
  - 2) Pecora, AIS-919
  - 3) USG, SHEETROCK Acoustical Sealant.

### 2.4 FIRE RATED PROTECTIVE WRAPS

#### A. Endothermic Wrap

1. General: Protective wrap, designed to provide fire protection of critical feeders and circuits in accordance with ASTM E1725. Subject to compliance with requirements, provide one of the following:
  - 1) 3M Corp., Interam Endothermic Mat
  - 2) Specified Technologies Inc., E-Wrap

**PART 3 - EXECUTION****3.1 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping".
- C. Coordinate seals with wall, ceiling, roof or floor materials and rating of the surface (sound, fire, waterproofing, etc.)
- D. Comply with NECA 1.
- E. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items, unless indicated otherwise.
- F. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- G. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- H. Right of Way: Yield to raceways and piping systems installed at a required slope.

**3.2 ACCESS DOORS**

- A. Verify the exact location, sizes, and types of all access doors with the Contract Administrator prior to purchase.
- B. Provide access doors for all concealed electrical equipment, except where above lay-in ceilings.
- C. Coordinate with architectural finishes to set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.
- D. Adjust hardware and panels after installation for proper operation.
- E. Label all access doors with a nameplate as described in Division 26 Section "Identification for Electrical Systems".

**3.3 SLEEVES AND SLEEVE SEALS**

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Provide sleeves for required openings in all concrete and masonry construction and fire, smoke, or both, partitions, for all electrical work that passes through such construction. Coordinate with all other trades and divisions to dimension and lay out all such openings.
- C. Only those openings specifically indicated on the Architectural or Structural Drawings will be provided under other divisions.
- D. New Construction:
  - 1. Coordinate with Divisions 03 and 04 for installation of sleeves and sleeve seals integrally in cast-in-place, precast, and masonry walls and horizontal slabs where indicated on the Drawings or as required to support raceway penetrations.
- E. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls. Do not cut or core drill new construction without written approval from the Contract Administrator and Structural Engineer.

- F. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- G. Rectangular Sleeve Minimum Metal Thickness:
  - 1. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 0.052 inch.
  - 2. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 0.138 inch.
- H. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- I. Install pipe and rectangular sleeves in above-grade walls and slabs, where penetrations are not subject to hydrostatic water pressures. Ensure that drip ring is fully encased and sealed within the wall or slab.
- J. Sleeve Length:
  - 1. Sleeves through walls: Cut sleeves to length for mounting flush with both surfaces of walls.
  - 2. Sleeves through floors: Extend sleeves 2 inches above finished floor level.
- K. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed.
- L. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.
- M. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint
- N. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials.
- O. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- P. Aboveground, Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (or larger, if required by the seal manufacturer) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- Q. Above Grade Concrete or Masonry Penetrations
  - 1. Provide sleeves for cables or raceways passing through above grade concrete or masonry walls, concrete floor or roof slabs. Sleeves are not required for core drilled holes in existing masonry walls, concrete floors or roofs. Provide sleeves as follows:
    - a. Install schedule 40 galvanized steel pipe for sleeves smaller than 6 inches in diameter.
    - b. Install galvanized sheet metal for sleeves 6 inches in diameter and larger, thickness shall be 0.138 inches.
    - c. Install galvanized sheet metal for rectangular sleeves
    - d. Schedule 40 PVC pipe sleeves are acceptable for use in areas without return air plenums.
  - 2. Seal elevated floor, exterior wall and roof penetrations watertight and weather tight with non-shrink, non-hardening commercial sealant. Pack with mineral wool and seal both ends with minimum of 1/2" of sealant.
- R. Underground, Exterior-Wall Penetrations: Install cast-iron wall pipes for sleeves. Size sleeves to allow for 1-inch (or larger, if required by the mechanical sleeve manufacturer) annular clear space between sleeve and cable or raceway. Provide mechanical sleeve seal.
  - 1. Use type and number of sealing elements recommended by manufacturer for pipe material and size. Position pipe in center of sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

2. Inspect installed sleeve and sleeve-seal installation for damage and faulty work. Verify watertight integrity of sleeves and seals installed below grade to seal against hydrostatic pressure.
- S. Concrete Slab on Grade Penetrations:
1. Provide ½" thick cellular foam insulation around perimeter of raceway passing through concrete foundation. Installation shall extend to 2" above and below the concrete slab.
- T. Elevated Floor Penetrations of waterproof membrane:
1. Provide cast-iron wall pipes for sleeves. Size wall pipe for minimum ½" annular space between wall pipe and cable or raceway.
  2. Pack with mineral wool and seal both ends with minimum of ½" of waterproof sealant.
  3. Secure waterproof membrane flashing between clamping flange and clamping ring.
  4. Extend bottom of wall pipe below floor slab as required and secure underdeck clamp to hold wall pipe rigidly in place.
- U. Interior Foundation Penetration: Provide sleeves for horizontal raceway passing through or under foundation. Sleeves shall be cast iron soil pipe two normal pipe sizes larger than the pipe served.
- V. Interior Penetrations of Non-Fire-Rated Walls: Seal annular space between sleeve and cable or raceway, using joint sealant appropriate for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of ½" of sealant.
- W. Exterior Wall Penetrations: Seal annular space between sleeve and raceway or duct, using joint sealant for size, depth, and location of joint. Pack with mineral wool and seal both ends with minimum of ½" of waterproof sealant.
- X. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- Y. Sleeve-Seal Installation
1. Install sleeve seals for all underground raceway penetrations through walls at elevations below finished grade. Additionally, install seals inside raceways, after conductors or cables have been installed, in all raceway penetrations through walls at elevations below finished grade.
  2. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- Z. Inspect installed sleeve and sleeve-seal installations for damage and faulty work. Verify watertight integrity of sleeves and seals installed below grade and above grade where installed to seal against hydrostatic pressure.
- AA. Sleeves shall be protected throughout the course of construction, and when damaged shall be replace and/or repaired to a satisfactory condition.

### 3.4 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire/smoke-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

### 3.5 JOINT SEALERS

- A. Preparation for Joint Sealers
1. Clean surfaces of penetrations, sleeves, or both, immediately before applying joint sealers, to comply with recommendations of joint sealer manufacturer.

2. Apply joint sealer primer to substrates as recommended by joint sealer manufacturer. Protect adjacent areas from spillage and migration of primers, using masking tape. Remove tape immediately after tooling without disturbing joint seal.
- B. Application of Joint Sealers
1. General: Comply with joint sealer manufacturers' printed application instructions applicable to products and applications indicated, except where more stringent requirements apply.
    - a. Comply with recommendations of ASTM C 962 for use of elastomeric joint sealants.
    - b. Comply with recommendations of ASTM C 790 for use of acrylic-emulsion joint sealants.
  2. Tooling: Immediately after sealant application and prior to time shining or curing begins, tool sealants to form smooth, uniform beads; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

### 3.6 ACOUSTICAL PENETRATIONS

- A. Do not allow direct contact of raceways with shaft walls, floor slabs and/or partitions. Sleeve, pack and seal airtight with foam rod, non-hardening sealant and/or packing material, as described herein, for all penetrations by raceway, through surfaces that encompass or are between noise critical spaces. Seal and pack with caulking for the full depth of the penetration all openings around raceways in the structure surrounding the electrical equipment and surrounding noise-critical spaces. This includes all slab penetrations and penetrations of noise critical walls.
- B. Where a raceway passes through a wall, ceiling or floor slab of a noise critical space, cast or grout a metal sleeve into the structure. The internal diameter or dimensions of the sleeve shall be 2 inches larger than the external diameter or dimensions of the raceway passing through it. After all of the raceways are installed in that area, check the clearances and correct, if necessary, to within 1/2-inch. Pack the voids full depth with packing material sealed at both ends, 1-inch deep, with non-hardening sealant backed by foam rod.

### 3.7 FIRE RATED PROTECTIVE WRAP

- A. Where indicated on the Drawings or required by code, provide fire rated protective wrap around raceways and equipment.
- B. Install and secure fire protective wrap per manufacturer's written installation documents. Wrap shall be layered as required by the manufacturer to provide 1-, 2-, or 3-hour fire rating required by code for the application.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 05 02 - EQUIPMENT WIRING SYSTEMS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes limited scope for electrical connections to equipment specified under other sections or divisions, or furnished under separate contracts or by the Owner.

**1.2 ADMINISTRATIVE REQUIREMENTS**

- A. Unless otherwise noted, perform all electrical work required for the proper installation and operation of equipment, furnishings, devices and systems specified in other divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this contract.
- A. Coordinate with work described in Division 11 Sections for equipment requiring electrical connection.
- B. Coordinate with work described in Division 23 Section "Common Work Results for HVAC".
- C. Obtain and review shop drawings, product data, and manufacturer's instructions for equipment furnished under other sections.
- D. Determine connection locations and rough-in requirements based on shop drawings.
- E. Sequence rough-in of electrical connections to coordinate with installation schedule for equipment.
- F. Sequence electrical connections to coordinate with start-up schedule for equipment.

**1.3 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product data for the following products for:
  - 1. Special connectors
  - 2. Special conductors or cable assemblies.
- C. Shop drawings for:
  - 3. Detailing electrical characteristics, wiring diagrams, fabrication and installation for wiring systems.

**1.4 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories:
  - 4. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to Authorities Having Jurisdiction.
  - 5. Marked for intended use.
- B. Comply with NFPA 70.

**PART 2 - PRODUCTS AND MATERIALS****2.1 CORDS AND CAPS**

- A. Attachment Plugs: Conform to NEMA WD 1.
- B. Configuration: NEMA WD 6, matching receptacle configuration at outlet provided for equipment, or as required by the equipment manufacturer.
- C. Cord: See Paragraph "Flexible Cords" in Division 26 Section "Low-voltage Electrical Power Conductors and Cables".
- D. Provide cord size suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Verify conditions of equipment and installation prior to beginning work.
- B. Verify that equipment is ready for connecting, wiring, and energizing.

**1.2 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.
- C. Provide fire-resistive protective assembly or an electrical circuit protective system for feeders and control circuit conductors and cables having a fire-resistance rating of not less than 2 hours where required by NFPA or local building codes. Types of systems requiring a fire-resistive protective assembly include, but are not limited to:
  - 1. Feeders for Emergency Power systems
  - 2. Smokeproof Enclosure Pressurization systems
  - 3. Smoke Removal systems
  - 4. Fire service and Occupant Evacuation Elevator systems

**3.2 ELECTRICAL DEVICES**

- A. Install disconnect switches, controllers, control stations, and control devices (other than temperature control devices) as indicated, specified in other divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.

**3.3 ELECTRICAL CONNECTIONS**

- A. Make electrical connections in accordance with equipment manufacturers' instructions.
- B. Make conduit connections to equipment using flexible conduit. Use liquid tight flexible conduit with watertight connectors in damp or wet locations.
- C. Make wiring connections using conductors and cable with insulation suitable for temperatures encountered in heat producing equipment.
- D. Provide receptacle outlet where connection with attachment plug is indicated. Provide cord and cap where field-supplied attachment plug is indicated on the Drawings.
- E. Provide suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.
- F. Provide interconnecting conduit and wiring between devices and equipment where indicated on the Drawings.

**3.4 EQUIPMENT**

- A. When equipment is delivered in separate parts and field assembled, internal wiring, indicated on Shop Drawings as field wiring, will be provided by the equipment supplier, unless otherwise noted.
- B. Provide power connection to all equipment as required and as indicated in the equipment supplier's installation drawings.
- C. Provide all control and interlock wiring for all equipment that is not included within the responsibility of Division 22 or 23.
- D. Motorized Damper: Provide lockable toggle, pilot lighted disconnect switch in an accessible location at each motor actuator, or group of motor actuators.

**3.5 FOOD SERVICE (SERVERY) EQUIPMENT**

- A. Provide power connection to all equipment as indicated or as otherwise required to accommodate the equipment indicated in the food service equipment drawings and specifications.
- B. Coordinate and provide the appropriate receptacle for equipment being installed as required for proper operation. Coordinate the required quantity of conductors prior to pulling wire to outlet box.
- C. Provide a local recessed non-fused equipment disconnect for kitchen equipment as required by the applicable codes and jurisdictions. Coordinate exact location prior to rough-in and maintain all code required clearances.
- D. Provide control wiring and conduit for all equipment that is not indicated as being within the responsibility of the equipment manufacturer or installer.
- E. When equipment is delivered in separate parts and field assembled, internal wiring, indicated on Shop Drawings as field wiring, shall be provided by the equipment installer, unless otherwise noted.
- F. Coolers and Freezers: Cut conduit openings in freezer and cooler walls, floor, and ceilings, in accordance with manufacturers' instructions, when openings are not provided by the manufacturers. Seal around conduit penetrations air tight with an approved pliable material suitable for low temperatures. Effectively seal interiors of conduits, by installing a conduit fitting at the boundary of the two spaces, and filling it with an approved pliable material, after conductors or cables have been installed and tested.
- G. Provide all grounding systems as required by the equipment supplier.

**3.6 DOOR OPERATORS AND HARDWARE**

- A. Provide electrical connections to automatic entry doors, automatic corridor doors, electrically held door latches, remote release doors, and all other required electrical connections for door systems included in other sections of these specifications.
- B. Provide power connection to all equipment as required and as indicated in the equipment supplier's installation drawings.
- C. Provide all control wiring and conduit for all equipment that is not included within the responsibility of the door hardware installer. Provide connection from junction boxes to the door operators or hardware and from door operators to actuation devices as required. Install key operated switches, push pad switches, and other electrically controlled door operation devices furnished by other divisions within this contract.
- D. Provide fire alarm devices and wiring as required for proper operation of door systems in accordance with the NFPA codes.

**3.7 SIGNAGE AND WAYFINDING**

- A. Provide junction boxes, disconnect switches and grounding per manufacturer's installation drawings.
- B. Coordinate rough-in requirements with signage installation instructions.
- C. Coordinate box locations and conduit routing with parapets and roof elevations.
- D. Provide labelling on all junction boxes and disconnects in accordance with Division 26 section "Identification for Electrical Systems"

END OF SECTION

**SECTION 26 05 04 - PROVISIONS FOR ELECTRIC UTILITY SERVICE****PART 1 - GENERAL****1.1 SUMMARY**

- A. Provisions for Underground Secondary Electrical Service.

**1.2 GENERAL REQUIREMENTS**

- A. Utility service voltage:
  - 1. 480Y/277 volts, three-phase, four-wire, 60Hz.
- B. Utility service ampacity: As indicated on the Drawings.
- C. The extent of Work for the secondary electrical service includes providing the following:
  - 1. Raceways
  - 2. Provisions for Metering
  - 3. Grounding and Bonding
  - 4. Concrete pad for service transformer
  - 5. Primary raceways

**1.3 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product Data: For the following products:
  - a. Meter bases
  - b. Current transformer cabinets
- C. Shop Drawings: For the following:
  - a. Utility Company prepared installation drawings
  - b. Cast-in-place concrete pads
- D. Field quality-control test reports:
  - 1. Test procedures used.
  - 2. Test results that comply with requirements.
  - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
  - 4. Utility voltage adjustment request.
- E. Where equipment or materials are specified to comply with utility standards and are listed above as required submittals, obtain approval from the serving utility before submitting to the Contract Administrator.
- F. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Accurately record actual routing of interior conduits two-inch and larger trade size and all exterior buried raceway, including coordination with other surrounding utilities and underground structures. Provide scaled plans and sections that indicate dimensions from finished grade or other fixed structural elements.

**1.4 QUALITY ASSURANCE**

- A. Perform all work in accordance with Utility Company installation drawings and service standards.
- B. Maintain one copy of Utility Company installation drawings and service standards at the site.

- C. Prior to commencing work in this Section, meet with the Utility Company representative to review service entrance requirements and details.
- D. Verify that field measurements are as indicated on Utility Company drawings.
- E. Electrical Components, Devices, and Accessories:
  - 1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that are acceptable to authorities having jurisdiction.
  - 2. Marked for intended use.
- F. Comply with NFPA 70.

## **PART 2 - PRODUCTS AND MATERIALS**

(Not Used)

## **PART 3 - EXECUTION**

### **3.1 SECONDARY SERVICE ENTRANCE UNDERGROUND**

- A. Provide an underground secondary service lateral from the pad mounted transformer in accordance with NFPA 70 Article 230 and the Utility Company standards. Reference the Drawings for service lateral conductor and raceway quantities, sizes, and types.
- B. The Utility Company will provide the service transformer.
- C. Provide a concrete pad, complying with the Utility Company standards, for transformer mounting, and set coated GRS conduit elbows and riser(s), with grounding bushing(s), to receive primary and secondary raceways. Where direct burial primary is used, set coated GRS conduit elbow(s) and riser(s), with grounding bushing(s), to receive primary cables.
- D. Make connections to the secondary terminals of the transformer as required and in conformance with Utility Company requirements. Utility Company will provide primary conductors and terminal connections unless otherwise directed by the Utility Company.
- E. Provide underground raceways for primary cables from the transformer pad to the utility medium voltage switchgear, and provide pull cord, per Utility Company standards, for the Utility Company's use in pulling primary conductors. Install raceways a minimum of 24 inches below finished grade line unless otherwise indicated on the Drawings or directed by the Utility Company. Provide excavation and backfill as required to accomplish the installation.

### **3.2 SECONDARY SERVICE ENTRANCE OVERHEAD**

- A. Provide overhead secondary service drop from the pole-mounted transformer in accordance with NFPA 70 Article 230 and the Utility Company standards. Reference the Drawings for service drop conductor quantities, sizes, and type.
- B. The Utility Company will provide the service transformer.
- C. Coordinate connection with Utility Company and make connections to service drop from transformers in accordance with Utility Company standards.

### **3.3 METERING**

- A. Provide a 1-1/4-inch empty GRS conduit, with pull cord, from the secondary compartment of the pad-mounted service transformer to the meter location shown on the Drawings, or as directed by Utility Company.
- B. Install the meter base furnished by the Utility Company.
- C. The Utility Company will provide the meter and meter wiring.

**3.4 UTILITY SERVICE CHARGES**

- A. It shall be the responsibility of the Division 26 contractor to apply for the electrical service, including the preparation and completion of all forms. Submit the completed application along with all other required documentation for the new or modified service.
- B. Pay all Utility Company charges for providing electric service, including all charges for bringing primary service conductors to the site.

**3.5 FIELD QUALITY CONTROL**

- A. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
  - 1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the outgoing section of each secondary unit substation. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
  - 2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
    - a. Rebalance loads.
    - b. Prepare written request for voltage adjustment by electric utility.
  - 3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained. Submit results in writing.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 05 19 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Conductors, cables, and cords rated 600V and less.
- B. Connectors and terminations rated 600V and less.

**1.2 DEFINITIONS**

- A. The following abbreviations apply to this and other Sections of these specifications:
  - 1. MC: Metal Clad
  - 2. NBR: Acrylonitrile-butadiene rubber
  - 3. NETA ATS: Acceptance Testing Specification.
- B. The following definitions apply to this and other Sections of these Specifications:
  - 1. HOMERUN: That portion of an electrical circuit beginning at a junction box, termination box, receptacle or switch with termination at an electrical panelboard.
    - a. Note: Where MC Cable is allowed to be utilized for receptacle and/or lighting branch circuiting loads, the originating point of the homerun shall be at the first load in the circuit or at a junction box in an accessible ceiling space immediately above the first (most upstream) load.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordination:
  - 1. Coordinate sizes of raceways, boxes, and equipment enclosures installed under other sections with the actual conductors to be installed, including adjustments for conductor sizes increased for voltage drop and temperature deration.
  - 2. Coordinate routing of power, low-voltage, and control conduits requiring fire-resistive protective assembly or electrical circuit protective system. Fire-resistive protective assembly or electrical circuit protective system for power, low-voltage, and control circuit conductors and cables shall have a fire-resistance rating of not less than 2 hours and shall be provided where required by NFPA or local building codes. Types of systems requiring a fire-resistive protective assembly include, but are not limited to:
    - a. Feeders for Emergency Power systems where in areas not protected by an automatic fire suppression system.
    - b. Smokeproof Enclosure Pressurization systems
    - c. Smoke Control systems
    - d. Smoke Removal systems
    - e. Fire service and Occupant Evacuation Elevator systems
  - 3. Coordinate with electrical equipment installed under other sections to provide terminations suitable for use with the conductors to be installed.
  - 4. Coordinate electrical testing of electrical, mechanical, and architectural items, so equipment and systems that are functionally interdependent are tested to demonstrate successful interoperability.
- B. Notify Contract Administrator of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Product data for the following products:
    - a. Conductors, cables, and cords rated 600V and less.
    - b. Metal Clad (MC) cable and fittings.
  - 2. Shop drawings for:
    - a. Fire-Resistive cables, including UL 2196 certification.
- B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conductors and cables, including detailed information on materials, construction, ratings, listings, and available sizes, configurations, and stranding.
- C. Sustainable Design Documentation: Submit manufacturer's product data on conductor and cable showing compliance with specified lead content requirements.
- D. Design Data: Indicate voltage drop and ampacity calculations for aluminum conductors substituted for copper conductors. Include proposed modifications to raceways, boxes, wiring gutters, enclosures, etc. to accommodate substituted conductors.
- E. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
- F. Qualification Data: For testing agency.
- G. Field quality-control test reports in accordance with NETA ATS:
  - 1. Submit all system and component test results.
- H. Project Record Documents: Record actual installed circuiting arrangements. Record actual routing for underground circuits.
- I. Operation and Maintenance Data: For cable and all accessories to include in operation and maintenance manuals.
- J. Follow-up service reports.

**1.5 QUALITY ASSURANCE**

- A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.
- B. Provide products listed and classified by Underwriters Laboratories, Inc (UL) as suitable for the purpose specified and indicated.
- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- D. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with NFPA 70.

**1.6 PROJECT CONDITIONS**

- A. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than 14 degrees F, unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify Contract Administrator and obtain direction before proceeding with work.

- B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by Owner, or others, unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
  - 1. Notify Contract Administrator and the Owner no fewer than 7 days in advance of proposed interruption of electrical service.
  - 2. Do not proceed with interruption of electrical service without Contract Administrator and the Owner's written permission.
  - 3. Owner reserves the right to require Contractor to cease work in any area Owner requires access to on an emergency basis.
- C. Make every effort to schedule outages during non-business or off-peak business hours to minimize disruptions to business operations.

## 1.7 DELIVERY STORAGE AND HANDLING

- A. Receive, inspect, handle, and store conductors and cables in accordance with manufacturer's instructions.

## 1.8 SEISMIC REQUIREMENTS

- A. Seismic bracing, restraints, and controls for all electrical systems specified herein shall be designed and installed as required by Division 26 Section "Seismic Controls for Electrical Systems" and Division 20 Section "Seismic Controls for MEP/F/T Systems".

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 CONDUCTORS AND CABLES - GENERAL

- A. Conductor Material: Annealed (soft) copper complying with ICEA S-95-658/NEMA WC70 and UL Standards 44 or 83, as applicable.
  - 1. Solid conductors for No. 10 AWG and smaller; concentric, compressed stranded for No. 8 AWG and larger
  - 2. Stranded conductors
  - 3. Stranded for all flexible cords, cables, and control wiring.
  - 4. As noted otherwise below.
- B. Conductor Material: Compact stranded, aluminum alloy (AA-8000 Series), complying with ICEA S-95-658/NEMA WC70; No. 1 AWG or larger only
- C. Conductor Insulation: Type THHN/THWN-2, THW, or XHHW-2 complying with ICEA S-95-658/NEMA WC70 or as noted otherwise below.
- D. Sizes of conductors and cables indicated or specified are American Wire Gage (Brown and Sharpe).
- E. Conductors shall not be smaller than No. 12 AWG, with the exception of wiring for signal and pilot control circuits; and pre-manufactured whips for light fixtures which may be No. 14 AWG.
- F. Conductors installed for site electrical work shall be no smaller than No. 10 AWG CU. All site electrical branch circuit wiring shall be sized such that the maximum branch circuit voltage drop is less than 3 percent.
- G. Unless indicated otherwise, special purpose conductors and cables, such as low voltage control and shielded instrument wiring, shall be as recommended by the system equipment manufacturer.
- H. Refer to Part 3 "Conductor and Insulation Applications" Article for insulation type, cable construction, and ratings.

**2.2 SINGLE CONDUCTORS**

- A. Manufacturers:
1. Alan Wire
  2. Cerrowire
  3. Colonial Wire & Cable Co., Inc.
  4. Encore Wire Corporation
  5. General Cable (Prysmian Group)
  6. Northern Cables Inc.
  7. Okonite Company
  8. Southwire Company
- B. 600V, insulated conductors as noted above shall be color-coded as follows, unless noted otherwise:

PHASE	208Y/120V	480Y/277V
A	Black	Brown
B	Red	Orange
C	Blue	Yellow
Neutral	White	Gray
Equipment Ground	Green	Green
Isolated Ground	Green/Yellow Stripe	Green/Yellow Stripe

Except as provided in NFPA 70.

**2.3 TWO-HOUR FIRE RESISTIVE CABLES (INDIVIDUAL CONDUCTORS).**

- A. Manufacturers:
1. Radix Wire & Cable (DuraLife)
- B. Certified to UL2196 for Two-Hour Fire Resistive Cable.
- C. Cable shall be NFPA 70 compliant for use in a listed fire-resistive cable assembly and must be installed in a system meeting Electrical Circuit Integrity System (FHIT) No. 28C or 28E of the UL Fire Resistance Directory.
- D. Two-hour Certified for both vertical and horizontal installations.
- E. Conductors: Stranded soft-drawn copper, Thermal/fire barrier tape, silicone inner layer, LSZH XLPO outer layer, Rated 90 degree C.

**2.4 METAL CLAD CABLE TYPE MC**

- A. General:
1. Shall not be used for life safety or critical systems.
- B. MC Cable (with insulated green grounding conductor, no bonding conductor):
1. Manufacturers:
    - a. Atkore/AFC Cable Systems
    - b. Cerrowire
    - c. Encore Wire Corporation (MC)
    - d. Kaf-Tech
    - e. Northern Cables, Inc.
    - f. Southwire Company (Amorlite)
  2. 600V, Unjacketed and/or PVC-jacketed UL Standard 83, UL Standard 1569 for Type MC, UL Standard 1685, Federal Specification A-A59544, IEEE 1202 Vertical Cable Tray Flame Test and NFPA 70. Type MC Cable shall be listed for use in UL 1, 2, and 3 Hour Through-Penetration Firestop Systems.

3. Armor Assembly: Aluminum interlocked armor (aluminum color).
  4. Phase Conductors: Solid soft-drawn copper, THHN-insulated single conductors, color code: ICEA Method 1.
  5. Grounding Conductor: Solid soft-drawn copper, THHN/THWN-2 green insulated grounding conductor sized per NFPA 70.
  6. Marking: Cable markings shall comply with the requirements of NFPA 70.
- C. MC Cable (with 0-10V dimming control wiring):
1. Manufacturers:
    - a. Atkore/AFC Cable Systems
    - b. Cerrowire
    - c. Encore Wire Corporation (MC- LED)
    - d. Southwire Company (MC – PCS Duo)
  2. 600V, Unjacketed and/or PVC-jacketed UL Standard 83, UL Standard 1569 for Type MC, UL Standard 1685, Federal Specification A-A59544, IEEE 1202 Vertical Cable Tray Flame Test and NFPA 70. Type MC Cable shall be listed for use in UL 1, 2, and 3 Hour Through-Penetration Firestop Systems.
  3. Armor Assembly: Aluminum interlocked armor (aluminum color).
  4. Phase Conductors: Solid soft-drawn copper, THHN-insulated single conductors, color code: ICEA Method 1.
  5. Grounding Conductor: Solid soft-drawn copper, THHN/THWN-2 green insulated grounding conductor sized per NFPA 70.
  6. Control Conductors: Color-coded Class 2/Class 3 twisted jacketed pairs
  7. Marking: Cable markings shall comply with the requirements of NFPA 70.
- D. MC Cable (Two-Hour Fire Resistive Cables)
1. Manufacturers:
    - a. Prysmian Group (Lifeline MC)
    - b. VITALink (VITALink MC)
  2. Cable shall be NFPA 70 and NFPA 101 compliant for use as a listed fire-resistive cable assembly and shall meet Electrical Circuit Integrity System (FHIT) No. 50 of the UL Fire Resistance Directory.
  3. 600V, Unjacketed UL Standard 83, UL Standard 1569 for Type MC, UL Standard 1685, Federal Specification A-A59544, IEEE 1202 Vertical Cable Tray Flame Test and the NEC, classified to UL 2196 Standard for Test for Fire Resistive Cables for two-hour installations. Type MC Cable shall be listed for use in UL 1, 2, and 3 Hour Through-Penetration Firestop Systems.
  4. Armor Assembly: Continuously welded corrugated copper armor meeting equipment grounding conductor requirements of NEC.
  5. Phase Conductors: Solid or stranded soft-drawn copper, THHN-insulated single conductors, color code: ICEA Method 1, Rated 90 degree C.
  6. Marking: Cable markings shall comply with the requirements of NEC Art 310.
  7. Cable insulation and inner binder jacket: Ceramifiable Silicone Zero Halogen (LSZH).
- E. MC Cable Fittings:
1. Manufacturers:
    - a. ABB/T&B
    - b. Arlington
    - c. Eaton/Crouse-Hinds
    - d. Emerson/O-Z Gedney
  2. Fittings used for connecting Type MC cable to boxes, cabinets, or other equipment shall be UL listed and identified for such use with an MCI-A marking on the fitting carton or package.
  3. Fittings shall be insulated type not requiring the use of anti-short bushings.
  4. Romex style, clamp type fittings are not acceptable.

**2.5 VARIABLE-FREQUENCY DRIVE CABLE**

- A. Manufacturers:
  - 1. Belden
  - 2. Service Wire Co.; ServiceDrive
- B. Flexible motor supply cable listed and labeled as complying with UL 2277 in accordance with NFPA 79; specifically designed for use with variable frequency drives and associated nonlinear power distortions.
  - 1. Insulation shall be thermoset types. Thermoplastic insulation types are not permitted.
  - 2. Grounding: Full-size integral equipment grounding conductor or symmetrical arrangement of multiple conductors of equivalent size.
  - 3. Provide 100% coverage copper tape shielding.
  - 4. Jacket: PVC or Chlorinated Polyethylene (CPE).

**2.6 FLEXIBLE CORDS**

- A. Manufacturers:
  - 1. Cerrowire
  - 2. Southwire
- B. 600V, multi-conductor (2, 3, or 4 as indicated on the Drawings), oil-resistant black jacket, extra-hard-usage; Type SEO, SO, or STO for indoor dry and damp locations; SEOW, SOW, or STOW for damp, wet, and outdoor locations; or as required by the manufacturer of the equipment to which the cords are connected.
- C. 300V, multi-conductor (2, 3, or 4 as indicated on the Drawings), oil-resistant black jacket, hard-usage; Type SJEO, SJO, or SJTO for indoor dry locations; SJEOW, SJOW, or SJTOW for damp, wet, and outdoor locations; or as required by the manufacturer of the equipment to which the cords are connected.

**2.7 CONTROL WIRING**

- A. Refer to Division 23 Section "Direct-Digital Control for HVAC"
- B. Unless otherwise noted, all control wiring will be the responsibility of the Section or Division in which the control system is specified.

**2.8 CONNECTORS**

- A. Manufacturers:
  - 1. AMP; Tyco
  - 2. FCI-Burndy
  - 3. Gould
  - 4. Ideal Industries, Inc.
  - 5. IlSCO
  - 6. NSI Industries, Inc.
  - 7. O-Z/Gedney
  - 8. Panduit
  - 9. Thomas and Betts
  - 10. 3-M Electrical Products Division
- B. Compression connectors for conductors No. 8 AWG and larger: Long-barreled, UL 486-listed, circumferential compression type (Burndy "Hylug", or equal), insulated with clamp-on, cold-shrink, or molded covers, or wrapped with multiple over-lapping layers of 3-M Scotch electrical tape.
  - 1. Termination fittings for copper conductors: Bare copper, 1 or 2-hole pad and inspection port.

2. Termination fittings for aluminum conductors: Tinned aluminum, 1 or 2-hole pad.
- C. Mechanical connections for conductors No. 8 AWG and larger: UL-listed, dual-rated, mechanical type, insulated with clamp-on, cold-shrink, or molded covers, or wrapped with multiple overlapping layers of 3-M Scotch electrical tape.
  1. Termination fittings: Bare copper, 1 or 2-hole pad and inspection port.
- D. Connectors for solid conductors No. 10 AWG and smaller: Insulated winged wire nuts. Color-coded for size, except use green only for grounding connections.
- E. Connectors for stranded conductors No. 10 AWG and smaller: Tinned copper, insulated-sleeve, compression type, UL-listed, with wire insulation grip. Terminations: ring-tongue type.
- F. Connectors and terminations for aluminum conductors and cables No. 1 and larger: UL 486B listed and marked AL7CU for 75 deg C rated conductors and AL9CU for 90 deg C rated conductors.
- G. Do not use insulation-piercing or insulation-displacement connectors designed for use with conductors without stripping insulation.
- H. Do not use push-in wire connectors as a substitute for twist-on insulated spring connectors.

### **PART 3 - EXECUTION**

#### **3.1 PREPERATION**

- A. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping".
- B. Coordinate seals with wall, ceiling, roof or floor materials and rating of the surface (sound, fire, waterproofing, etc.)
- C. Electrical conductor and cable work is schematically represented on the Drawings. Unless otherwise indicated, conductor sizes shown on the Drawings are based on not more than three single current-carrying conductors in a raceway in free air. Current ratings are based on copper at 75 degrees C temperature rating for all power circuits. Modify raceway and conductor sizing as may be necessitated by any deviation from these conditions. Do not decrease the indicated conductor size due to the use of conductors having a temperature rating of 90 degrees C.
- D. Conductor sizes shown are minimum based on code requirements, voltage drop, and/or other considerations. Where approved by the Engineer and at no extra cost to the Owner, larger conductor sizes may be installed at Contractor's option in order to utilize stock sizes, provided raceway sizes are increased where necessary to conform with NFPA 70 (determine the effect of the use of larger conductors on the short circuit current ratings of the electrical equipment, and provide increased short circuit current rated equipment as required).
- E. Where anticipated conductor installed lengths exceed the lengths indicated on the Drawings, notify Contract Administrator. Provide tabulated list of exceeded lengths for review. Increase conductor size, circuit ground size, and conduit size accordingly to meet maximum voltage drop indicated within the calculations.

#### **3.2 INSTALLATION**

- A. General
  1. Unless otherwise indicated on the Drawings or in other Sections, install all conductors in raceway. Install continuous conductors between outlets, devices and boxes without splices or taps. Do not pull connections into raceways. Leave at least 12 inches of conductor at outlets for fixture or device connections.
  2. Install in accordance with manufacturer's instructions.

3. Use manufacturer-approved pulling compound or lubricant where necessary; compound used shall not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
4. Use pulling means, including fish tape, cable, rope, and basket weave conductor/cable grips that will not damage conductors/cables or raceway.
5. Where parallel conductors are shown, install each set of conductors in separate raceways of essentially the same length.
6. Seal around cables penetrating fire-rated elements according to Division 07 Section "Penetration Firestopping".
7. Wiring at Outlets: Install conductors at each outlet with at least 12 inches of slack.
8. Common or Shared Neutrals are not allowed unless shown on the plans or specifically noted to be allowed.
9. Multi-wire branch circuits are not allowed unless noted otherwise on the drawings.
10. Where multi-wire branch circuits are utilized (i.e., shared neutral), shall be provided with a means that will simultaneously disconnect all ungrounded conductors at the point the branch circuit originates. Multi-pole breakers or 3 single pole breakers with a handle tie are two examples.
11. Neatly train and bundle conductors inside boxes, wireways, panelboards and other equipment enclosures.
12. Group or otherwise identify neutral/grounded conductors with associated ungrounded conductors inside enclosures in accordance with NFPA 70.
13. When multiple home runs are combined into a single raceway such that the number of conductors exceeds four (conductor count is made up of any combination of phase and neutral conductors), the following restrictions apply, which are in addition to those in NFPA 70:
  - a. Emergency Power Circuits – includes all circuits covered under Articles 700, 701 and 702.
    - 1) Maximum of eight conductors in a single raceway. Minimum raceway size:  $\square$ -inch. Do not install any other type of circuit in this raceway.
    - 2) Only 15A and 20A branch circuit homeruns may be combined into one raceway.
  - b. Normal or Non-Essential circuits.
    - 1) Maximum of 16 conductors in a single raceway. For up to eight conductors in a raceway, minimum raceway size: 3/4 inch. For greater than eight conductors, minimum raceway size: 1 inch. Do not install any other type of circuit in this raceway.
    - 2) The minimum wire size for all conductors in this raceway: No. 10 AWG.
    - 3) Only 15A and 20A branch circuit homeruns may be combined into one raceway.
  - c. GFCI-protected circuits.
    - 1) Do not use multi-conductor circuits, with a shared neutral, for any GFCI circuit breaker or receptacle circuit.
14. For branch circuits fed from GFCI circuit breakers, limit the one-way conductor length to 250 feet between the panelboard and the most remote receptacle or load on the GFCI circuit per basis of design manufacturer, Schneider Electric. Contractor shall confirm that final manufacturer awarded project can meet requirement and notify engineer of any discrepancies.
15. Where the number of conductors for branch circuits is not shown on the Drawings, determine the number of conductors in accordance with NFPA 70. Provide adequate conductors so as to allow performance of all functions of the device.
16. Branch circuit conductors shall be copper.
17. All essential power systems circuits shall be copper.
18. Provide all conductors with 600V insulation of the following types, unless otherwise noted on the Drawings or in these Specifications:
  - a. Wet or dry locations, in raceways:
    - 1) Service entrance: Type THWN, THHN/THWN-2, or XHHW-2.

- 2) Feeders and branch circuits: Type THWN, THHN/THWN-2, or XHHW-2.
  - 3) Conductors No. 6 AWG and smaller: Types THWN or THHN/THWN-2.
  - 4) Conductors used between a variable frequency drive (VFD) and associated motor: Type XHHW-2.
- b. Conductors within three feet of high temperature equipment such as heaters: Type THHN, XHHW, or higher temperature insulation as required for the use.
- B. Aluminum Conductor Option:
1. Terminations: Tinned, mechanical or compression type only; UL-listed for copper and aluminum conductors at 75 degrees C minimum.
  2. Increase the raceway size as required, at no additional cost to the Owner, to accommodate the increased size of the aluminum conductors.
  3. Aluminum conductor size shall meet or exceed the ampere rating of the scheduled copper conductors at 75 degrees C.
  4. Aluminum option applies only for the following feeders or services with minimum size as indicated in "Conductors and Cables" materials section above. All feeders and services smaller than the minimum size or those not listed below shall be copper:
    - a. Service and feeder conductors may be aluminum unless prohibited below.
      - 1) Exceptions:
        - a) Feeders connecting directly to motors including, but not limited to, chillers and fire pumps shall be copper to minimize loosening of connectors due to cyclical thermal expansion.
    - b. Service entrance conductors
    - c. Feeders to switchboards
    - d. Feeders to panelboards
      - 1) Exception: Apartment unit load center feeder conductors shall be copper; aluminum is not acceptable.
    - e. Feeders to motor control centers
    - f. Feeders to transformers
  5. Where aluminum conductors terminate existing panelboards, switchboards or switchgear that utilize compression connections use hydraulic-compression type connectors with a zinc base, anti-oxidizing compound. Use compression tools of the type that will not release unless the correct pressure has been applied.
  6. Measure the temperature of all aluminum conductors at all splices and terminations. Make each test under typical building load conditions after the building is occupied and in operation for a minimum of two weeks. Replace all joints or splices indicating excessive heating.
  7. Take measurements with a non-contact type infrared thermometer, with target size not exceeding one inch at five feet and an accuracy of two percent or better. Submit the meter specifications and calibration date with the test results.
- C. Two-Hour Fire Resistive Cables (Individual Conductors).
1. Cable shall be installed in a system meeting Electrical Circuit Integrity System (FHIT) No. 28C or 28E of the UL Fire Resistance Directory.
  2. Two-Hour Fire-Resistive cable may only be used:
    - a. For feeders and branch circuits where indicated on the Drawings or where a listed fire-resistive cable system is required by NFPA 70, the IBC, or other applicable codes.
  3. Two-Hour Fire-Resistive cable shall not be used for any use not listed in the paragraph above. Examples of those uses include, but are not limited to:
    - a. In locations not permitted by the NEC.
    - b. When specifically not allowed by the local AHJ and/or Owner.
- D. Metal Clad Type MC Cable:
1. Securing and Supporting:
    - a. Support per NFPA 70 for MC cable
    - b. Secure cable within 12 inches of every box or fitting.

- c. Secure/supporting intervals shall not exceed six (6) feet for MC cable.
  - d. Utilize steel cable hangers, Arlington SMC series or equivalent, for MC cable support wherever possible so as to provide for cable routing in a neat and workmanship like manner.
2. Type MC cable may only be used:
- a. In lieu of flexible conduit and wiring from light fixtures in accessible ceilings to junction boxes (attached to building structure) above the ceiling. Provide cable whips of sufficient lengths to allow for relocating each light fixture within a 5-foot radius of its installed location, but not exceeding 6 feet in unsupported lengths.
  - b. For vertical drops and horizontal wiring in stud walls.
3. MC cable shall not be used for any use not listed in the paragraph above. Examples of those uses include, but are not limited to:
- a. Unjacketed MC:
    - 1) In locations not permitted by NFPA 70.
    - 2) When specifically not allowed by the local AHJ and/or Owner.
    - 3) Homeruns to panelboards.
    - 4) Where exposed to view.
    - 5) Where subject to physical damage.
    - 6) Corrosive or Hazardous locations.
    - 7) Wet locations.
    - 8) Branch circuits serving HVAC, elevator/escalator, medical and kitchen equipment loads.
    - 9) Within mechanical, electrical or telecommunication equipment rooms.
    - 10) Emergency circuits covered by NFPA 70, unless specifically noted for use as a fire-resistive cable system.
  - b. PVC Jacketed MC:
    - 1) In locations not permitted by NFPA 70.
    - 2) When specifically not allowed by the local AHJ and/or Owner.
    - 3) Homeruns to panelboards.
    - 4) Where exposed to view.
    - 5) Where subject to physical damage.
    - 6) Branch circuits serving HVAC, elevator/escalator, medical and kitchen equipment loads.
    - 7) Within mechanical, electrical or telecommunication equipment rooms.
    - 8) Emergency circuits covered by NFPA 70.
- E. Metal Clad Type MC Cable (Fire-Resistive):
- 1. Securing and Supporting:
    - a. Install, support, and terminate Fire-Resistive MC cable per manufacturer's installation instructions and per applicable codes and standards.
    - b. Support MC cable per NFPA 70 and requirements of UL Electrical Circuit Integrity System FHIT 50.
    - c. Secure cable within 12 inches of every box or fitting.
    - d. Secure/supporting intervals shall not exceed six (6) feet for MC cable in non-fire rated installations or (4) feet in fire rated installations per UL FHIT 50.
    - e. Utilize steel cable hangers, Arlington SMC series or equivalent, for MC cable support wherever possible in non-fire rated installations.
    - f. Utilize steel slotted support systems with two-piece clamps in fire rated installations per UL FHIT 50 installations.
    - g. Where multiple multi-conductor cables are installed maintain adequate spacing between cables to avoid reduction in allowable ampacities as per NFPA 70 requirements.
    - h. Provide non-metallic barrier between MC cable armor and metallic supports to prevent contact between dissimilar metals.
    - i. Route cabling in a neat and workmanship like manner.
  - 2. Type MC Fire-Resistive cable may only be used:

- a. For feeders and branch circuits where indicated on the Drawings or where a listed fire-resistive cable system is required by NFPA 70, NFPA 101, the IBC, or other applicable codes.
  3. Type MC Fire-Resistive cable shall not be used for any use not listed in the paragraph above. Examples of those uses include, but are not limited to:
    - a. In locations not permitted by the NEC.
    - b. When specifically not allowed by the local AHJ and/or Owner.
    - c. Where subject to physical damage.
    - d. Corrosive or Hazardous locations.
- F. Variable-Frequency Drive Cable:
  1. Use for conductors run between variable-frequency drive (VFD) and motor when distance exceeds 200 feet.
  2. Terminate shielding at both variable-frequency motor controller and associated motor using glands or termination kits recommended by manufacturer.
- G. Flexible Cords
  1. Refer to Division 26 Section, "Equipment Wiring Systems", for electrical connections to equipment.
- H. Control Wiring
  1. Unless otherwise indicated on the Drawings or in other sections, install all control wiring in raceway, regardless of voltage. A qualified Electrician shall install all control wire operating at 120V nominal and above. Control wiring operating at less than 120V (e.g., 12V and 24V) may be installed under the Division furnishing it.
  2. Open wiring in air-handling plenums: UL listed and classified for use in air plenums without raceway. Where indicated on the Drawings or otherwise specified, and permitted by local codes, only cable for communication or fire alarm systems and low voltage control wiring may be installed without raceways.
    - a. Low voltage wiring not routed in a race way shall be supported by cable tray or j-hooks secured independently of ceiling supports. Cabling shall not be supported directly by the ceiling system.
- I. Connections:
  1. Apply a zinc based, anti-oxidizing compound to connections.
  2. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
  3. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
  4. Use oxide inhibitor in each splice and tap conductor for aluminum conductors.
  5. Use only resin pressure splices and splicing kits that totally encapsulate the splice for splices in underground junction boxes. Arrange the splicing kit to minimize the effects of moisture.
  6. Use connectors as indicated in equipment schedules. Where not indicated use connections as noted below.
    - a. Compression – Conductors No. 8 AWG and larger to panelboards, switchboards and apparatus
    - b. Compression – splices, terminals
    - c. Mechanical – where temporary removal is required
  7. Do not use terminals on wiring devices to feed through to the next device.

### 3.3 IDENTIFICATION

- A. General: Provide all identification per Division 26 "Identification for Electrical Systems".
- B. Single Conductors: Identify and color-code conductors to indicate voltage and phase according to Part 2 of this Section. Identification method shall be either:

1. Factory provided colored insulation
  2. Color-Coding Conductor Tape.
  3. On feeders with isolated ground, use colored tape, alternating bands of green and yellow tape to provide a minimum of three bands of green and two bands of yellow.
- C. Power-Circuit Conductor Identification: For primary and secondary conductors 1/0 AWG and larger in vaults, pull and junction boxes, manholes, and handholes identify voltage, source and circuit number of each set of conductors. For single conductor cables, identify phase in addition to the above.
- D. Branch-Circuit Conductor Identification: Where there are conductors for more than three branch circuits in the same junction or pull box identify each ungrounded conductor according to voltage, source and circuit number.
- E. Conductors to Be Extended in the Future: Attach identification device to conductors and list source and circuit number.
- F. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.
1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
  2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
  3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.
- G. Conductors for controls (lighting, controls): Label each conductor with Markers for Conductor and Control Cables. – identify conductors using method as noted in Division 26 Section "Identification for Electrical Systems". Note conductor identification on record Drawings.
- H. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.
- I. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
- J. Low voltage cable sheath labels and related manufacturer information shall remain apparent in all exposed applications.
1. Protect exposed cabling labels from painting and overspray (this includes protection of cables in cable tray)

### 3.4 FIELD QUALITY CONTROL

- A. Do not perform insulation resistance tests of the distribution wiring to equipment with the surge protective devices installed. Disconnect surge protective device before conducting insulation resistance tests and reconnect immediately after the testing is over.
- B. Testing: Perform the following field quality-control testing:
1. After installing conductors and cables and before electrical circuitry has been energized, test for compliance with requirements. Test all wiring prior to energizing to ensure that it is free from unintentional grounds and shorts, is properly phased, and that all connectors are tight.
  2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.3. Certify compliance with test parameters.
- C. Test Reports: Prepare a written report to record the following:
1. Test procedures used.
  2. Test results that comply with requirements.
  3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes grounding of electrical systems and equipment. Grounding requirements specified in this Section may be supplemented by special requirements of systems described in other Sections.
- B. This Section includes:
  - 1. Grounding Electrodes
  - 2. Ground Bars
  - 3. Grounding Conductors
  - 4. Connector Products
  - 5. Miscellaneous Grounding Materials and Products

**1.2 DEFINITIONS**

- A. The following apply to this and other Sections of these Specifications:
  - 1. Ground ring: Bare underground grounding conductor encircling the building or structure.
  - 2. NETA ATS: Acceptance Testing Specification.
  - 3. PSF: Pounds per Square Foot
  - 4. EMT: Electrical metallic tubing.
  - 5. ENT: Electrical nonmetallic tubing.
  - 6. FMC: Flexible metal conduit.
  - 7. GRS: Galvanized Rigid Steel Conduit
  - 8. IMC: Intermediate metal conduit.
  - 9. LFMC: Liquidtight flexible metal conduit.
  - 10. LFNC: Liquidtight flexible nonmetallic conduit.
  - 11. RAC: Rigid Aluminum Conduit
  - 12. RMC: Rigid Metal Conduit
  - 13. RNC: Rigid nonmetallic conduit.

**1.3 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Product data for the following products:
    - a. Electrodes, mechanical and compression connectors, and exothermic connectors .
- B. Qualification Data: For Contractor.
- C. Quality-Control Test Reports:
  - 1. Test procedures used.
  - 2. Test results that comply with requirements.
  - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- D. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Accurately record actual locations of all buried electrodes, bonding conductors and ground rings. Indicate dimensions from fixed structural elements.

## 1.4 QUALITY ASSURANCE

- A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.
- B. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."
- C. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
  - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- D. Electrical Components, Devices, and Accessories:
  - 1. Listed and labeled as defined in NFPA 70, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
  - 2. Marked for intended use.
  - 3. Comply with UL 467.
- E. Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system.
- F. Comply with NFPA 70.

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 GROUNDING CONDUCTORS CONNECTORS AND ELECTRODES

- A. Manufacturers:
  - 1. ABB, Inc.
  - 2. Advanced Lightning Technology (ALT)
  - 3. AFL Global
  - 4. Boggs, Inc.
  - 5. Burndy; Hubbell.
  - 6. Cooper Power; Eaton.
  - 7. Copperweld Corp.
  - 8. ECN/Korns; Division of Robroy Industries.
  - 9. Erico; nVent.
  - 10. Galvan Industries, Inc.
  - 11. Greaves Corp.
  - 12. Harger.
  - 13. Hastings Fiber Glass Products, Inc.
  - 14. Heary Brothers Lightning Protection Co.
  - 15. Ideal Industries, Inc.
  - 16. ILSCO.
  - 17. Lightning Master Corp.
  - 18. Lyncole XIT Grounding; Division of VFC.
  - 19. O-Z/Gedney Co.; Emerson.
  - 20. Panduit, Inc
  - 21. RACO; Hubbell, Inc.
  - 22. Robbins Lightning, Inc.
  - 23. Superior Grounding Systems, Inc.

### 2.2 GROUNDING ELECTRODES

- A. Ground Rods: UL-listed:

1. Copper-clad steel; bonded copper electrolytically-applied to minimum thickness of 10 mils.
  2. Hot-dip galvanized steel; minimum zinc thickness specified per ASTM A-123.
  3. Stainless steel; Type 304.
  4. Size: 5/8 inch by 8 feet.
- B. Chemical Electrodes: Copper tube, straight or L-shaped, filled with nonhazardous chemical salts, terminated with a bare conductor sized, at a minimum, for the size of the connecting grounding electrode conductor.
- C. Ground Plates: UL-listed, rectangular, bare solid copper plate; minimum 0.032-inch thick.
- D. Ground Ring:
1. Bare copper grounding conductor, size as noted on Drawings but not less than #2/0 AWG.

### 2.3 GROUND BARS

- A. General
1. Ground bars described in this section are intended to be wall mounted bars used for grounding and bonding. Equipment ground buses for switchboards, panelboards and miscellaneous equipment are described in the individual equipment sections.
  2. Supports: Minimum of two each 1-1/2-inch insulators and 1-inch stainless steel offset mounting brackets.
- B. Electrical Room Ground Bars
2. Rectangular Ground Bars: bare,  $\frac{1}{4}$  inch thick, electrolytic, tough pitch copper bar, 4 inches wide. Length as indicated on the Drawings but not less 24 inches long. Hole spacing as required for conductor lugs.

### 2.4 GROUNDING CONDUCTORS

- A. For insulated conductors, comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".
- B. Material:
3. Aluminum.
  4. Copper-clad aluminum.
  5. Copper.
- C. Equipment Grounding Conductors: Insulated and identified as indicated in Part 3 of this section.
- D. Isolated Ground Conductors: Insulated and identified as indicated in Part 3 of this section.
- E. Grounding Electrode Conductors: Bare, stranded, unless otherwise indicated.
- F. Underground Conductors:
6. Tinned-copper conductor.
  7. No. 2/0 AWG minimum
  8. Stranded, unless otherwise indicated.
- G. Bare Copper Conductors:
1. Solid Conductors: Comply with Conductors: ASTM B 8.
  2. Tinned Conductors: Comply with ASTM B 33.
- H. Copper Bonding Conductors:
1. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG copper conductor, 1/4 inch in diameter.
  2. Bonding Conductor: No. 4 or No. 6 AWG, stranded copper conductor.
  3. Bonding Jumper: Bare copper tape, braided bare copper conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
  4. Tinned Bonding Jumper: Tinned-copper tape, braided copper conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

- I. Aluminum Bonding Conductors:
  - 1. Bonding Cable: 10 strands of No. 14 AWG aluminum conductor, 1/4 inch in diameter.
  - 2. Bonding Conductor: No. 4 or No. 6 AWG, stranded aluminum conductor.
  - 3. Bonding Jumper: Aluminum tape, braided bare aluminum conductors, terminated with aluminum ferrules; 1-5/8 inches wide and 1/16 inch thick.
- J. Ground Ring:
  - 9. Bare copper grounding conductor, size as noted on Drawings but not less than #2/0 AWG.
- K. Ground Conductor and Conductor Protector for Wood Poles: As follows:
  - 1. No. 4 AWG minimum, soft-drawn copper conductor.
  - 2. Conductor Protector: Half-round PVC or wood molding. If wood molding is utilized, use pressure-treated fir, or cypress or cedar.

## 2.5 CONNECTOR PRODUCTS

- A. Comply with IEEE 837 and UL 467; listed for use for specific types, sizes, and combinations of conductors and connected items.
- B. Bolted Connectors: Bolted-pressure-type connectors.
- C. Compression Connectors: Burndy Hyground, or equal, permanent, pure, wrought copper, meeting ASTM 8 1 87, essentially the same as the conductors being connected; clearly and permanently marked with the information listed below:
  - 10. Company symbol and/or logo.
  - 11. Catalog number.
  - 12. Conductors accommodated.
  - 13. Installation die index number or die catalog number is required.
  - 14. Underwriters Laboratories "Listing Mark:".
  - 15. The words "Suitable for Direct Burial" or, where space is limited, "Direct Burial" or "Burial" per UL Standard ANSI/UL467.
- D. Cast connectors: copper base alloy according to ASTM B 30.
- E. Welded Connectors: Exothermic-welded type, in kit form, and selected per manufacturer's written instructions.

## 2.6 MISCELLANEOUS

- A. Test Wells:
  - 1. Traffic Areas: Polymer concrete reinforced with heavy weave fiberglass; H-20 load rating; minimum 24 inches deep.
  - 2. Non-traffic Areas: High density polyethylene; 350 PSF minimum load rating; minimum 10.25 inches deep.
  - 3. Cover: Factory-identified by permanent means with word "GROUND".
- B. Ground Enhancing Backfill: Provide low-resistivity, ground-enhancing backfill material recommended by the electrode manufacturer.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Examine areas and conditions under which electrical grounding connections are to be made and notify the Contract Administrator and the Engineer in writing of conditions detrimental to proper completion of the work. Do not proceed with Work until unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

#### A. General:

16. Provide all materials, labor and equipment for an electrical grounding system in accordance with applicable portions of NFPA 70 and NECA. Coordinate electrical work as necessary to interface installation of electrical grounding systems with other work.
17. Accomplish grounding and bonding of electrical installations and specific requirements for systems, circuits and equipment required to be grounded for both temporary and permanent construction.
18. Where the size of the grounding conductors are not shown, size in accordance with NFPA 70 Route along shortest and straightest paths possible, unless otherwise indicated. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

#### B. Application:

19. Use only copper conductors for both insulated and bare grounding conductors in direct contact with earth, concrete, masonry, crushed stone, and similar materials.
20. Underground Grounding Conductors: Unless noted otherwise, bury at least 24 inches below grade, or 6 inches below the official frost line, whichever is greater, or when crossing a duct bank, bury 12 inches above duct bank.

#### B. Grounding Electrode System: Provide connection to required and supplemental grounding electrodes indicated to form grounding electrode system.

1. Provide continuous grounding electrode conductors without splice or joint.
2. Install grounding electrode conductors in raceway where exposed to physical damage. Bond grounding electrode conductor to metallic raceways at each end with bonding jumper.
3. Ground Rod Electrodes:
  - a. Install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes.
  - b. Unless otherwise indicated, install ground rod electrodes vertically.
    - 1) Outdoor Installations: Unless otherwise indicated, install with top of rod 6 inches below finished grade.
    - 2) Indoor Installations: Unless otherwise indicated, install with 4 inches of top of rod exposed.
  - c. Where encountered rock prohibits vertical installation, install at 45 degree angle or bury horizontally in trench at least 30 inches (750 mm) deep in accordance with NFPA 70. If depth is unachievable, notify Contract Administrator and Engineer.
  - d. Interconnect ground rods with grounding electrode conductors. Use exothermic welds, except at test wells and as otherwise indicated. Make connections without exposing steel or damaging copper coating.
  - e. Verify that final backfill and compaction has been completed before driving rod electrodes.
  - f. Install one test well for each service at the ground rod electrically closest to the service entrance. Set top of well flush with finished grade, pavement, or floor.
4. Ground Plate Electrodes: Unless otherwise indicated, install ground plate electrodes at a depth of not less than 30 inches. Use exothermic weld to secure grounding electrode conductor.
5. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70, using a minimum of 20 feet of bare, tinned copper conductor not smaller than No. 4 AWG. If concrete foundation is less than 20 feet long, coil excess conductor within the base of the foundation. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor above footer and foundation and connect to building structural steel or other grounding electrode external to concrete.
6. Metal Water Service Pipe: Provide insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes by grounding clamp connectors. Where a dielectric main water fitting is installed, connect

- grounding conductor to street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
7. Ground Ring Electrode (Counterpoise):
    - a. Provide a ground ring encircling the building or structure, in direct contact with earth., installed at a depth of not less than 18 inches or 6 inches below the official frost line, whichever is greater.
    - b. Locate ground ring conductor at least 24 inches outside building perimeter foundation, unless noted otherwise on the Drawings.
    - c. Provide ground enhancement material around conductor where indicated.
  8. Metal In-Ground Support Structures: Provide connection to metal in-ground support structure that is in direct contact with earth in accordance with NFPA 70.
  9. Metal Poles Supporting Outdoor Luminaires: Provide a grounding electrode in addition to installing a separate equipment grounding conductor with supply branch-circuit conductors.
- C. Equipment Grounding Conductors:
1. Comply with NFPA 70, for types, sizes, and quantities of equipment grounding conductors, unless specific types, larger sizes, or more conductors than required by NFPA 70 are indicated.
  2. Install equipment grounding conductors in all feeders and branch circuits.
  3. Install equipment grounding conductor with circuit conductors for the following items, in addition to those required by NFPA 70:
    - a. Feeders and branch circuits.
    - b. Lighting circuits.
    - c. Receptacle circuits.
    - d. Single-phase motor and appliance branch circuits.
    - e. Three-phase motor and appliance branch circuits.
    - f. Flexible raceway runs.
    - g. Armored and metal-clad cable runs.
    - h. Feeders and branch circuits installed in non-metallic raceways.
  4. In branch circuit and feeder raceways, use insulated equipment grounding conductors.
  5. Air-Duct Equipment Circuits: Install an equipment grounding conductor to duct-mounted electrical devices operating at 120V and more, including air cleaners and heaters. Bond conductor to each unit and to air duct.
  6. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate equipment grounding conductor to each electric water heater, heat-tracing, and antifrost heating cable. Bond conductor to heater units, piping, connected equipment, and components. On water heaters, bond metal hot and cold water pipes together, across the heater tank.
  7. Busway Supply Circuits: Install an insulated equipment grounding conductor from the grounding bus in the switchgear, switchboard, or distribution panelboard to the equipment grounding bar terminal on the busway, if a direct bus-to-bus connection is not factory provided.
  8. Metallic Cable Tray Systems: Install equipment grounding conductor in each cable tray. Do not use metal cable tray system as sole equipment grounding conductor.
    - a. Equipment Grounding Conductor for Steel Cable Tray: Use bare or insulated copper conductor.
    - b. Equipment Grounding Conductor for Aluminum Cable Tray: Use insulated copper conductor only; do not use bare copper conductor.
    - c. Minimum Equipment Grounding Conductor Size: 6 AWG copper.
  9. Nonmetallic Raceways: Install an equipment grounding conductor in nonmetallic raceways unless they are designated for telephone or data cables.
- D. Ground Bars:
1. Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated on the Drawings.
    - a. Use insulated spacers and mounting brackets, and support from wall 2 feet above finished floor, unless otherwise indicated.

- C. Signal and Communication Systems: For telephone, alarm, voice and data, and other communication systems, provide No. 6 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
  - 2. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a ground bar.
  - 3. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.
- D. Separately Derived Systems: Bond the derived neutral (grounded) conductor of all separately derived system (e.g., transformers, generators, UPS) to the nearest available grounding electrode, or back to the service grounding electrode if no approved electrodes are readily available. Size the grounding electrode conductor and bonding jumpers as indicated on the Drawings or as required by NFPA 70, whichever is larger.
- E. Bonding: Provide bonding for equipment grounding conductors, equipment ground busses, metallic equipment enclosures, metallic raceways and boxes, device grounding terminals, and other normally non-current-carrying conductive materials enclosing electrical conductors/equipment or likely to become energized as indicated and in accordance with NFPA 70:
  - 1. Bonding Straps and Jumpers: Install so vibration by equipment mounted on vibration isolation hangers and supports is not transmitted to rigidly mounted equipment. Use exothermic-welded connectors for outdoor locations, unless a disconnect-type connection is required; then, use a bolted clamp. Bond straps directly to the basic structure taking care not to penetrate any adjacent parts. Install straps only in locations accessible for maintenance.
  - 2. Bond each aboveground portion of gas piping system upstream from equipment shutoff valve.
  - 3. Bond interior metal piping systems and metal air ducts to equipment grounding conductors of associated pumps, fans, blowers, electric heaters, and air cleaners. Use braided-type bonding straps.
  - 4. Bond metallic elements likely to become energized or where indicated on the Drawings, including but not limited to fences around electrical equipment and metal drain bodies near pools or electrical equipment.
  - 5. Bond raised flooring systems and static control flooring.
  - 6. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with grounding clamp connectors.
  - 7. Common Ground Bonding with Lightning Protection System: Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in PVC conduit.
  - 8. Pole Mounted Luminaires: Bond metal enclosures and components of pole mounted luminaires to the grounding system per the Manufacturer's requirements.
  - 9. Bond the components within the following systems to the building grounding system:
    - a. Metallic Cable Tray Systems.
    - b. Photovoltaic Systems.

### 3.3 CONNECTIONS

- F. General: Make connections so galvanic action or electrolysis possibility is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible. Provide electrical bonding plates, connectors, terminals, lugs and clamps as recommended by the manufacturers for indicated applications. Provide electrical insulating tape, heat-shrinkable insulating tubing, welding materials, and bonding straps as recommended by the manufacturers for types of service indicated.
  - 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer to order of galvanic series.
  - 2. Make connections with clean, bare metal at points of contact.

3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
  4. Make aluminum-to-galvanized steel connections with tin-plated copper jumpers and mechanical clamps.
  5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
- G. Exothermic-Welded Connections: Comply with manufacturer's written instructions. Replace welds that are puffed up or that show convex surfaces indicating improper cleaning. Use exothermic welded connections for the following:
1. Connecting conductors together.
  2. Connecting conductors to ground rods, except at test wells.
  3. Connecting conductors to building steel.
  4. Connecting conductors to plates.
- H. Compression-Type Connections: Use hydraulic compression tools to provide correct circumferential pressure for compression connectors. Use tools and dies recommended by connector manufacturer. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on grounding conductor.
1. Compression Fittings: Permanent compression-type fittings may be used for the following rather than exothermic connections:
    - a. Connecting conductors together.
    - b. Connecting conductors to building steel.
    - c. Connecting conductors to ground rods, except at test wells.
- I. Mechanical Pressure-Type Connections: Tighten screws and bolts for grounding and bonding connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
1. Mechanical Pressure Fittings: Use bolted mechanical (removable) pressure-type clamps for the following:
    - a. Connecting conductors to ground rods at test wells.
    - b. Connecting conductors to pipes.
- J. Equipment Grounding Conductor Terminations: For No. 8 AWG and larger, use pressure-type grounding lugs. No. 10 AWG and smaller grounding conductors may be terminated with winged pressure-type connectors.
- K. Noncontact Metal Raceway Terminations: If metallic raceways terminate at metal housings without mechanical and electrical connection to housing, terminate each conduit with a grounding bushing. Connect grounding bushings with a bare grounding conductor to grounding bus or terminal in housing. Bond electrically noncontinuous conduits at entrances and exits with grounding bushings and bare grounding conductors, unless otherwise indicated.
- L. Connections at Test Wells: Use compression-type connectors on conductors and make bolted-and clamped-type connections between conductors and ground rods.
- M. Moisture Protection: If insulated grounding conductors are connected to ground rods or grounding buses, insulate entire area of connection and seal against moisture penetration of insulation and cable.

### 3.4 GROUND RING

- N. Ground the steel framework of the building with a buried electrode at the base of every corner column and at intermediate exterior columns at distances not more than 60 feet apart. Provide a grounding conductor (counterpoise), electrically connected to each ground rod and to each steel column, extending around the perimeter of the building. Protect taps for steel framing connections from physical damage at foundations and transitions to steel columns.

### 3.5 UNDERGROUND DISTRIBUTION SYSTEM GROUNDING

- O. Manholes and Handholes: Install a driven ground rod close to wall and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide a No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink grout.
- P. Connections to Manhole Components: Connect exposed-metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 6 AWG minimum, stranded, hard-drawn copper conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.
- Q. Pad-Mounted Transformers and Switches: Install two ground rods and counterpoise encircling the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Use tinned-copper conductor not less than No. 2 AWG for counterpoise and for taps to equipment ground pad. Bury counterpoise not less than 18 inches below grade, or 6 inches below the official frost line, whichever is greater, and 6 inches from the foundation.

### 3.6 IDENTIFICATION

- A. Provide identification as specified in Division 26 "Low-Voltage Electrical Power Conductors and Cables" and "Identification for Electrical Systems".

### 3.7 FIELD QUALITY CONTROL

- A. Testing: Perform the following field quality-control testing:
  - 1. After installing grounding system but before permanent electrical circuitry has been energized, test for compliance with requirements.
  - 2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, and at ground test wells. Measure ground resistance not less than two full days after the last trace of precipitation, and without the soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance. Perform tests by the fall-of-potential method according to IEEE 81.
  - 3. Provide drawings locating each ground rod and ground rod assembly and other grounding electrodes, identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.
  - 4. Inspect and test in accordance with NETA ATS, except Section 4.
  - 5. Perform inspections and tests listed in NETA ATS, Section 7.13.
  - 6. Perform ground electrode resistance tests under normally dry conditions. Precipitation within the previous 48 hours does not constitute normally dry conditions.
  - 7. Perform point-to-point megohmmeter tests to determine the resistance between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.
  - 8. Test Values:
    - a. The resistance between the main grounding electrode and earth ground shall be no greater than 5 ohms.

- b. Equipment Rated 500 kVA and Less: 10 ohms.
  - c. Equipment Rated 500 to 1000 kVA: 5 ohms.
  - d. Equipment Rated More Than 1000 kVA: 3 ohms.
  - e. Substations and Pad-Mounted Switching Equipment: 5 ohms.
  - f. Manhole Grounds: 10 ohms.
9. Minimum system neutral-to-ground insulation resistance: one megohm.
  10. Investigate point-to-point resistance values that exceed 0.5 ohms.
    - a. Check for loose connections.
    - b. Check for absent or broken connections.
    - c. Check for poor quality welds.
    - d. Consider other reasons.
  11. Investigate and correct deficiencies where measured ground resistances do not comply with specified requirements
  12. Excessive Grounding Electrode Resistance: If measured resistance to earth ground value exceeds specified values, add grounding electrodes and additional conductors as required to obtain the specified value.
  13. Submit detailed reports indicating inspection and testing results and corrective actions taken.

### 3.8 GRADING AND PLANTING

- A. Restore surface features, including vegetation, at areas disturbed by Work of this Section. Reestablish original grades, unless otherwise indicated. If sod has been removed, replace it as soon as possible after backfilling is completed. Restore areas disturbed by trenching, storing of dirt, cable laying, and other activities to their original condition. Include application of topsoil, fertilizer, lime, seed, sod, sprig, and mulch. Comply with Division 31 and 32. Maintain restored surfaces. Restore disturbed paving as indicated.

END OF SECTION

**SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes the following:
  - 1. Hangers and supports for electrical equipment and systems.
  - 2. Construction requirements for concrete bases.

**1.2 DEFINITIONS**

- A. EMT: Electrical metallic tubing.
- B. IMC: Intermediate metal conduit.
- C. RMC: Rigid metal conduit.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordination:
  - 1. Coordinate sizes and arrangement of supports and bases with the actual equipment and components to be installed.
  - 2. Coordinate the work with other trades to provide additional framing and materials required for installation.
  - 3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
  - 4. Coordinate the arrangement of supports with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
  - 5. Notify Contract Administrator of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
  - 6. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
  - 7. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."
- B. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  - 1. Structural members in path of conduit groups with supports.
  - 2. HVAC items, plumbing items and architectural features in the paths of conduit groups with common supports.
- C. Sequencing:
  - 1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 03 30 00.

**1.4 PERFORMANCE REQUIREMENTS**

- A. Delegated Design: Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
  - 1. Submit fabrication drawings and product literature.
- B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

- C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

### 1.5 SUBMITTALS

- A. Product Data: For the following:
  - 1. Steel slotted support systems.
  - 2. Rooftop support systems.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer. Show fabrication and installation details and include calculations for the following:
  - 1. Trapeze hangers. Include Product Data for components.
  - 2. Steel slotted channel systems. Include Product Data for components.
  - 3. Equipment supports.
- C. Welding certificates.

### 1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Comply with NFPA 70 and applicable building code.
- C. Installer Qualifications for Powder-Actuated Fasteners: Certified by fastener system manufacturer with current operator's license.

## PART 2 - PRODUCTS

### 2.1 SUPPORT ANCHORAGE AND ATTACHMENT COMPONENTS

- A. General:
  - 1. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.
- B. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly. Use corrosion resistant materials suitable for the environment where installed.
  - 1. Manufacturers:
    - a. Allied Tube & Conduit; Atkore International.
    - b. Eaton
    - c. Erico; nVent.
    - d. GS Metals Corp.
    - e. Thomas & Betts Corporation.
    - f. Unistrut; Atkore International.
    - g. Wesanco, Inc.
  - 2. Metallic Coatings:
    - a. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.
    - b. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
  - 3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
  - 4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
  - 5. Channel Dimensions: Selected for applicable load criteria.
- C. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

- D. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
1. Conduit Straps: One-hole or two-hole type.
  2. Conduit Clamps: Bolted type unless otherwise indicated.
- E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:
1. Powder or Battery-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
    - a. Manufacturers:
      - 1) Hilti Inc.
      - 2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      - 3) MKT Fastening, LLC.
      - 4) Powers Fasteners, Inc;
      - 5) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
    2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated or stainless steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
      - a. Manufacturers:
        - 1) Cooper B-Line, Inc.; a division of Cooper Industries.
        - 2) Empire Tool and Manufacturing Co., Inc.
        - 3) Hilti Inc.
        - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
        - 5) MKT Fastening, LLC.
      3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
      4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
      5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
      6. Toggle Bolts: All-steel springhead type.
      7. Hanger Rods: Threaded zinc-plated steel unless otherwise indicated.

H. Wire Rope Hanging Systems:

    1. Manufacturers:
      - a. Gripple.
    2. General: Wire rope hanger system shall have a minimum 5 to 1 safety factor based upon the applied working load being supported.
    3. Source Limitations: Furnish associated fittings, accessories, and hardware produced by a single manufacturer.
    4. Wire Rope: Zinc coated, stainless steel or galvanized steel, with wire thread type as required to support the applied working load being supported. Provide same size wire for all applications based on worst case loading.
    5. Accessories: Hanger attachments and structural attachments shall be compatible with wire rope hanger system and shall be by the same manufacturer as the wire rope hanger system.

**2.2 FABRICATED METAL CONDUIT OR EQUIPMENT SUPPORT ASSEMBLIES**

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.
- C. Rooftop support assemblies: Steel pedestals with thermoplastic or rubber bases that rest on top of roofing membrane.
  - 1. Conduit supports: Unless noted otherwise, surface mounted fittings not requiring any attachment to the roof structure and not penetrating the roofing assembly with support fixtures.
  - 2. Equipment supports: Attachment fittings for connection to roof structure.
- D. Base Sizes: As required to prevent overturning and to distribute load sufficiently to prevent indentation of roofing assembly.
- E. Mounting Height: Provide minimum clearance of 6 inches under supported components to top of roofing.

**PART 3 - EXECUTION****3.1 APPLICATION**

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.
- B. Unless specifically indicated or approved by the Contract Administrator and Structural Engineer, do not support from roof deck.
- C. Where support wires are permitted, identify independent electrical component support wires above accessible ceilings with color distinguishable from ceiling support wires in accordance with NFPA 70.
- D. Steel Components: Use corrosion resistant materials suitable for the environment where installed.
  - 1. Indoor Dry Locations: Use zinc-plated steel or approved equivalent unless otherwise indicated.
  - 2. Outdoor and Damp or Wet Indoor Locations: Use galvanized steel, stainless steel, or approved equivalent unless otherwise indicated.
- E. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway:
  - 1. Minimum rod size shall be 1/4 inch (6 mm) in diameter, unless otherwise indicated.
    - a. Equipment Supports: 1/2 inch diameter minimum.
    - b. Busway Supports: 1/2 inch diameter minimum.
    - c. Single Conduit larger than 1 inch (27 mm) trade size: 3/8 inch diameter minimum.
    - d. Trapeze Support for Multiple Conduits: 3/8 inch diameter minimum.
  - 2. Space supports for EMT, IMC, and RMC as required by NFPA 70.
- F. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
  - 1. Secure raceways and cables to these supports with:
    - a. two-bolt conduit clamps
- G. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

- H. The use of wire rope hanging systems is an acceptable alternate hanging method when installed in strict accordance with manufacturer's instructions. Supported load shall not exceed manufacturer's recommended load rating.

### 3.2 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
- B. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of electrical work.
- C. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.
- D. Install in accordance with manufacturer's instructions.
- E. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.
- F. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).
  - 1. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported with a minimum safety factor of 1.5. Include consideration for vibration, equipment operation, and shock loads where applicable.
- G. Do not use wire, chain, perforated pipe strap, or wood for permanent supports unless specifically indicated or permitted.
- H. Do not use products for applications other than as permitted by NFPA 70 and product listing.
- I. Remove temporary supports when no longer required.
- J. Preset Concrete Inserts: Use manufacturer provided closure strips to inhibit concrete seepage during concrete pour.
- K. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
  - 1. To Wood: Fasten with lag screws or through bolts.
  - 2. To New Concrete: Bolt to concrete inserts.
  - 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
  - 4. To Existing Concrete: Expansion anchor fasteners.
    - a. Instead of expansion anchors, powder or battery-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
  - 5. To Steel:
    - a. Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts
    - b. Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69
    - c. Spring-tension clamps.
  - 6. To Light Steel: Sheet metal screws.
  - 7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

- L. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

### 3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.
- D. Minimize overhanging materials and protrusions, and provide protective caps and fittings on exposed material ends where:
  - 1. Accessible to untrained personnel.
  - 2. Located within confined spaces.
- E. Rooftop support assemblies:
  - 1. Conduit supports: Unless noted otherwise, coordinate installation of support system after roofing materials are complete. Provide adhesive materials to secure conduit supports where required. Where attachment to roof structure is required or otherwise specified, coordinate installation of supports with roofing material installation.
  - 2. Equipment supports: Coordinate installation of supports with roofing material installation.

### 3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated but not less than 4 inches (100 mm) larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 "Concrete".
- C. Anchor equipment to concrete base.
  - 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

### 3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Comply with requirements in Division 09 "Finishes" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.
- D. Inspect support and attachment components for damage and defects. Correct deficiencies and replace damaged or defective support and attachment components.

END OF SECTION

**SECTION 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL REQUIREMENTS****1.1 SECTION INCLUDES**

- A. This Section includes:
1. Raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

**1.2 DEFINITIONS**

- A. Terminology used in this specification is as defined below:
1. EMT: Electrical Metallic Tubing
  2. FMC: Flexible Metal Conduit
  3. GRS: Galvanized Rigid Steel Conduit
  4. IMC: Intermediate Metal Conduit
  5. LFMC: Liquidtight Flexible Metal Conduit
  6. LFNC: Liquidtight Flexible Nonmetallic Conduit
  7. RAC: Rigid Aluminum Conduit
  8. RMC: Rigid Metal Conduit
  9. RNC: Rigid Nonmetallic Conduit
  10. RTRC: Reinforced Thermosetting Resin Conduit

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordination:
1. Coordinate the work with other trades to avoid placement of raceway, boxes, or other potential obstructions within the dedicated equipment spaces and working clearances for equipment installed by other trades in accordance with the codes and manufacturer requirements.
  2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
  3. Coordinate minimum sizes of boxes with the actual installed arrangement of conductors, clamps, support fittings, and devices, calculated according to NFPA 70.
  4. Coordinate minimum sizes of pull boxes with the actual installed arrangement of connected conduits, calculated according to NFPA 70.
  5. Coordinate the placement of boxes with millwork, furniture, devices, equipment, etc. installed under other sections or by others.
  6. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted boxes where indicated. Coordinate the work with other trades to preserve insulation integrity.
  7. Coordinate routing of power, low-voltage, and control conduits requiring fire-resistive protective assembly or electrical circuit protective system. Fire-resistive protective assembly or electrical circuit protective system for power, low-voltage, and control circuit conductors and cables shall have a fire-resistance rating of not less than 2 hours and shall be provided where required by NFPA or local building codes. Types of systems requiring a fire-resistive protective assembly include, but are not limited to:
    - a. Feeders for Emergency Power systems where in areas not protected by an automatic fire suppression system.
    - b. Smokeproof Enclosure Pressurization systems
    - c. Smoke Control systems
    - d. Smoke Removal systems
    - e. Fire service and Occupant Evacuation Elevator systems

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product data for the following products:
  - 1. Floor boxes
  - 2. Poke-Through Outlets
- C. Shop drawings for:
  - 1. Detailing fabrication and installation for custom enclosures.
- D. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  - 1. Structural members in path of conduit groups with supports.
  - 2. HVAC items, plumbing items and architectural features in the paths of conduit groups with common supports.
- E. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Accurately record actual routing of all exterior buried raceway and all interior raceways three inches and larger. Indicate dimensions from fixed structural elements.

**1.5 QUALITY ASSURANCE**

- A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.
- B. Electrical Components, Devices, and Accessories:
  - 1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to AHJ.
  - 2. Marked for intended use.
- C. Comply with NFPA 70.

**PART 2 - PRODUCTS AND MATERIALS****2.1 CONDUITS SURFACE MOUNTED RACEWAYS AND ACCESSORIES**

- A. Metal Conduit and Tubing
  - 1. Manufacturers:
    - a. ABB, Inc.
    - b. Atkore
    - c. American Conduit
    - d. Anamet Electrical, Inc.
    - e. Electri-Flex Co.
    - f. Hubbell (Fittings).
    - g. Nucor Tubular Products.
    - h. O-Z/Gedney Co.; Emerson.
    - i. Southwire Company, LLC
    - j. Western Tube and Conduit Corporation.
    - k. Wheatland Tube Co.
  - 2. RMC:
    - a. GRS: Hot-dip galvanized: ANSI C80.1, UL 6.
      - 1) Plastic-Coated GRS and Fittings: NEMA RN 1, UL-listed. Coating thickness of 0.04 inches (1mm), minimum.
    - b. RAC: ANSI C80.5, UL6A.
  - 3. IMC: ANSI C80.6, UL 1242.

- a. Plastic-Coated IMC and Fittings: NEMA RN 1, UL-listed.
  4. EMT and Fittings: ANSI C80.3, UL 797. Only steel products allowed. Reduced wall EMT is not allowed.
    - a. Fittings: Set-screw or Compression type.
  5. FMC: Aluminum or Zinc-coated steel: UL 1. Reduced wall FMC is not allowed.
  6. LFMC: Flexible steel raceway with PVC jacket: UL 360.
    - a. Fittings: NEMA FB 1; compatible with raceway and tubing materials.
- B. Nonmetallic Raceway
  1. Manufacturers:
    - a. ABB, Inc.
    - b. American Pipe and Plastics, Inc.
    - c. Anamet Electrical, Inc.
    - d. Atkore
    - e. Cantex Inc.
    - f. Carlon
    - g. Champion Fiberglass, Inc.
    - h. Electri-Flex Co.
    - i. Hubbell Inc. (Fittings)
    - j. IPEX USA, LLC.
    - k. Prime Conduit.
    - l. Southwire Corporation.
    - m. Superflex Ltd.
    - n. United Fiberglass of America, Inc.
  2. RNC: Schedule 40 and 80 PVC: NEMA TC 2, UL 651.
    - a. Fittings: match to raceway and tubing type and material: NEMA TC 3, NEMA TC 6, UL 651, as applicable.
  3. LFNC: UL 1660.
    - a. Fittings: match to tubing type and material: NEMA TC 3, NEMA TC 6, UL 651, as applicable.
  4. RTRC (Fiberglass): UL 2420 UG, UL 2515 AG, NEMA TC 14; SW (Standard Wall), HW (Heavy Wall) or XW (Extra Heavy Wall)
  5. Phenolic Conduit (RTRC) for use in UL 2196 2-Hour Fire Resistive systems: UL 2515 AG, NEMA TC 14
    - a. Must be used as part of a UL-certified FHIT 2-hour listed fire resistive system.
- C. Metal Wireways
  1. Manufacturers:
    - a. BEL Products, Inc.
    - b. Cooper B-Line; Eaton.
    - c. EPI-Electrical Enclosures
    - d. Hoffman.
    - e. Square D.
  2. Material and Construction: 14 gauge (minimum) sheet steel, sized and shaped as indicated, NEMA 1, 3R, 12, or 4X.
  3. Fittings and Accessories: Include couplings, offsets, elbows, expansion/deflection joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70. Where indicated, provide a barrier to divide wireway into compartments.
  4. Wireway Covers:
    - a. Hinged type
    - b. Screw-cover type
    - c. Flanged-and-gasketed type
  5. Finish: Manufacturer's standard phosphate pre-treatment and baked enamel finish.
- D. Surface Metal Raceways

1. Manufacturers:
  - a. ABB, Inc.
  - b. Hubbell, Inc.
  - c. Legrand.
  - d. Mono-Systems; Niedax Group
  - e. Panduit Inc.
2. Surface Metal Raceways: Galvanized steel with snap-on covers. Finish with manufacturer's standard prime coating.
3. Types, sizes, and channels as indicated and required for each application, with fittings that match and mate with raceways.

## 2.2 BOXES ENCLOSURES AND CABINETS

### A. General

1. Manufacturers:
  - a. ABB, Inc.
  - b. American Midwest Power
  - c. Appleton/O-Z Gedney Co.; Emerson.
  - d. BEL Products, Inc.
  - e. Cooper Crouse-Hinds; Eaton.
  - f. Erickson Electrical Equipment Co.
  - g. FSR, Inc.
  - h. Hoffman.
  - i. Hubbell, Inc.
  - j. Legrand.
  - k. Molex; Koch Industries.
  - l. Robroy Industries, Inc.; Enclosure Division.
  - m. Spring City Electrical Manufacturing Co.
2. Provide products listed, classified, and labeled as suitable for the purpose intended. Do not use boxes and associated accessories for applications other than as permitted by NFPA 70 and product listing.
3. Provide all boxes, fittings, supports, and accessories required for a complete raceway system and to accommodate devices and equipment to be installed.
4. Where box size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.
5. Provide grounding terminals within boxes where equipment grounding conductors terminate.

### B. Outlet and Device Boxes Up to 100 cubic inches, Including Those Used as Junction and Pull Boxes:

1. Sheet-Steel Boxes: Comply with NEMA OS 1, and list and label as complying with UL 514A.
2. Cast Metal Boxes: Comply with NEMA FB 1, Type FD, with gasketed cover. Furnish with threaded hubs.
  - a. List and label as complying with UL 514A for non-hazardous locations;.
  - b. List and label as complying with UL 886 for hazardous locations, where required.
3. Nonmetallic Boxes: Comply with NEMA OS 2, and list and label as complying with UL 514C.
4. Boxes for Supporting Luminaires and Ceiling Fans: Listed as suitable for the type and weight of load to be supported; furnished with fixture stud to accommodate mounting of luminaire where required.
5. Boxes for Ganged Devices: Use multi-gang boxes of single-piece construction. Do not use field-connected gangable boxes.
6. Minimum Box Size, Unless Otherwise Indicated:
  - a. Wiring Devices (Other Than Communications Systems Outlets): 4 inch square by 1-1/2 inch deep (100 by 38 mm) trade size.

- b. Communications Systems Outlets: Comply with Section 27 10 05.
  - c. Communications Systems Outlets: 4 inch square by 2-1/8 inch (100 by 54 mm) trade size.
  - d. Ceiling Outlets: 4 inch octagonal or square by 1-1/2 inch deep (100 by 38 mm) trade size.
7. Do not use "through-wall" boxes designed for access from both sides of wall.
8. Wall Plates: Comply with Division 26 Section "Wiring Devices".
- C. Boxes for telephone, data, telecommunications and audio-video outlets, refer to:
- 1. Division 27 Section "Common Work Results for Communications"
- D. Junction and Pull Boxes Larger Than 100 cubic inches:
- 1. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1, and list and label as complying with UL 514A.
  - 2. Cast-Metal Pull and Junction Boxes: NEMA FB 1, cast iron or aluminum with gasketed cover.
  - 3. Provide screw-cover or hinged-cover enclosures unless otherwise indicated.
  - 4. Boxes 6 square feet and Larger: Provide sectionalized screw-cover or hinged-cover enclosures.
- E. Floor Boxes
- 1. General:
    - a. Floor Box Schedule on drawings: Refer to Drawings for specific floor box requirements.
    - b. Provide a complete Floor Box Assembly.
    - c. UL514A listed for scrub water exclusion for all floor types.
    - d. Floor boxes for on or below grade installation shall be watertight, fully adjustable cast iron or epoxy coated steel.
    - e. Floor boxes for above grade shall be concrete-tight, fully adjustable, stamped galvanized steel box.
    - f. Provide shallow boxes where necessitated by slab depth. Conduits shown on plans are minimum size, select appropriate floor box based on slab type, thickness, and minimum conduit size.
    - g. Non-metallic PVC construction, watertight floor boxes may be used where specifically listed in schedule or specified on drawings.
    - h. Receptacles:
      - 1) Provide receptacles complying with requirement of Division 26 "Wiring Devices"
      - 2) Duplex: Include a minimum of one convenience receptacle, or quantity as indicated on schedule, with features as noted on schedule.
      - 3) GFCI: Include quantity of GFCI Receptacles as indicated on schedule, with features as noted on schedule.
      - 4) Special: Include quantity of Special/Miscellaneous Devices as indicated on schedule, with features as noted on schedule.
    - i. Communications:
      - 1) Provide dedicated mounting space (gang) for each communication device type indicated on schedule. Include provisions for mounting devices in accordance with the requirements of the communication systems provider.
      - 2) The following items are not provided per this specification section:
        - a) Telecommunications outlet termination plate and termination connectors shall be provided per Division 27 Section "Communications Horizontal Cabling". Coordinate all other Assembly components to ensure compatibility.
        - b) Audio Video custom termination plates and connectors shall be provided per Division 27 Section "Audio Video Systems" and/or "Audio Video Systems Equipment". Coordinate all other assembly components to ensure compatibility.

## F. Poke-Through Outlets

1. General:
  - a. Poke-Through Schedule on drawings: Refer to Drawings for specific floor box requirements.
  - b. Provide a complete Poke through assembly.
  - c. UL listed for scrub water exclusion for all floor types.
  - d. UL listed and UL Fire Classified, with one- to four-hour fire rating, as required by floor rating and type.
  - e. Provide with cover plate, with individual device covers, and floor flange for specific floor material for all types. Provide color as directed by the Contract Administrator.
2. Receptacles:
  - a. Provide receptacles complying with requirement of Division 26 section "Wiring Devices"
  - b. Duplex: Include a minimum of one Convenience Receptacle, or quantity as indicated on schedule, with features as noted on schedule.
  - c. GFCI: Include quantity of GFCI Receptacles as indicated on schedule, with features as noted on schedule.
  - d. Isolated Ground: Include quantity of Isolated Ground Receptacle as indicated on schedule, with features as noted on schedule.
  - e. Special: Include quantity of Special/Miscellaneous Devices as indicated on schedule, with features as noted on schedule.
3. Communications:
  - a. Provide dedicated mounting space (gang) for each communication device type indicated on schedule. Include provisions for mounting devices in accordance with the requirements of the communication systems provider. Communication devices to be defined and provided under specification of other divisions.

## G. Cabinets and Enclosures:

1. General:
  - a. Compliance: NEMA 250, and list and label as complying with UL 50 and UL50E or 508A, as applicable.
  - b. Cabinets and Hinged-Cover Enclosures, Other Than Junction and Pull Boxes: Shall be keyed. Provide 2 keys for each enclosure.
    - 1) All locks shall be keyed alike.
  - c. NEMA 250 Environment ratings:
    - 1) NEMA Type 1: Code-gauge phosphatized steel with continuously welded seams; non-gasketed removable hinged front cover, with flush latch and concealed hinge; collar studs.
    - 2) NEMA Type 3R: Code-gauge galvanized steel with drip shield top, seam-free front, side, and back; non-gasketed continuous-hinged door, with stainless steel pin; captive, plated steel cover screws; hasp and staple for padlocking; collar studs.
  - d. Removable painted steel interior panel mounted on standoffs; metal barriers to separate wiring of different systems and voltages.
  - e. Provide enclosures wider than 36 inches with double doors; removable center posts; internal bracing, supports, or both, as required to maintain their structural integrity; and, accessory feet where required for freestanding equipment.
  - f. Provide clamps, grids, slotted wireways, or similar devices to which or by which wiring may be secured. Provide DIN-rail mounted terminal strips for terminating all incoming and outgoing control wiring, and power terminal blocks for incoming/outgoing power wiring. Provide wire management troughs where practicable.
  - g. Provide metal barriers to separate compartments containing control wiring operating at less than 50 volts from power and higher-voltage control wiring.

**2.3 FACTORY FINISHES**

- A. Interior Finish: All interior components shall be factory finished; manufacturer's standard grey unless otherwise noted.
- B. Exterior Finish: For metal wireway and surface raceway, enclosure, or cabinet components, provide manufacturer's standard prime-coat finish ready for field painting.
- C. Exterior Finish: For metal wireway and surface raceway, enclosure, or cabinet components, provide manufacturer's standard paint applied to factory-assembled metal wireway and surface raceways, enclosures, and cabinets before shipping.

**PART 3 - EXECUTION****3.1 INSTALLATION**

- A. General
  - 1. Install in accordance with manufacturer's instructions.

**3.2 RACEWAYS**

- A. General
  - 1. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on drawings or in this article are stricter.
  - 2. Provide sizes and types of raceways as indicated on the Drawings. Sizes are based on THWN insulated copper conductors, except where noted otherwise. Where sizes are not shown on the Drawings or in the Specifications, size raceways in accordance with NFPA 70 requirements for the number, size and type of conductors installed. Minimum raceway size: 1/2 inch (concealed and exposed); 1 inch (underground and under slab).
    - a. 1/2-inch conduit shall contain maximum (5) #12AWG conductors or (3) #10AWG conductors.
    - b. 3/8-inch flexible conduit may be used for light fixture whips.
  - 3. Provide all raceways, fittings, supports, and miscellaneous hardware required for a complete electrical system as described by the Drawings and Specifications.
  - 4. Install a green-insulated, equipment-grounding conductor, which is bonded to the electrical system ground, in all raceways, with the exception of Service Entrance raceways.
  - 5. Install grounding bushings or other code compliant connections on all conduit terminations and bond to the enclosure, which connects to the equipment grounding conductor and electrical system ground.
  - 6. Install raceways concealed in walls or above suspended ceilings in finished areas. When approved by the Contract Administrator, raceways may be installed concealed in elevated floor slabs. Do not install raceways horizontally within slabs on grade.
  - 7. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portions of bends are not visible above the finished slab.
  - 8. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
  - 9. Make bends and offsets so inside diameters are not reduced. Keep legs of bends in the same plane and keep straight legs of offsets parallel, unless otherwise indicated.
  - 10. Install raceways:
    - a. To meet the requirements of the structure and the requirements of all other Work on the Project.
    - b. To clear all openings, depressions, ducts, pipes, reinforcing steel, and so on.
    - c. Within or passing through the concrete structure in such a manner so as not to adversely affect the integrity of the structure. Become familiar with the Architectural and the Structural Drawings and their requirements affecting the raceway installation. If necessary, consult with the Contract Administrator.

- d. Parallel or perpendicular to building lines or column lines.
  - e. Tight to structure.
  - f. When concealed, with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.
11. Raceways Embedded in Slabs:
- a. Raceways may only be embedded in concrete slabs with written permission from, and only where directed, by the Structural Engineer.
  - b. Install in middle 1/3 of slab thickness, where practical. At a minimum, concrete shall provide at least 2 inches of concrete cover for raceways.
  - c. Secure raceways to reinforcing rods to prevent sagging or shifting during concrete placement.
  - d. Space raceways laterally to prevent voids in concrete.
  - e. Run conduit larger than 1-inch trade size parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.
  - f. Change from RNC to coated GRS or IMC before rising above the floor.
12. Where masonry, brick, CMU or concrete walls are left unfinished, coordinate raceway installations with other trades so that the raceways and boxes are concealed and the wall will have a neat and smooth appearance.
13. Where masonry, brick, CMU or concrete walls in public spaces are left unfinished, coordinate raceway installations with other trades so that the raceways and boxes are concealed and the wall will have a neat and smooth appearance.
14. Support raceways from structural elements of the building as required by NFPA 70, Division 26 Section "Hangers and Supports for Electrical Systems". Do not support raceways by hangers used for any other systems foreign to the electrical systems; and, do not attach to other foreign systems. Do not lay raceways on top of the ceiling system.
- a. Raceways on roof shall be supported from structure not from the roof deck.
15. Provide support spacing in accordance with NFPA 70 requirements, and at a minimum in accordance with NEMA standards. Support by the following methods:
- a. Attach single raceway directly to structural steel with beam clamps.
  - b. Attach single raceway directly to concrete with one-hole clamps or clips and anchors. Outdoors and wherever subject to dampness or moisture, offset raceways from the surface by using galvanized clamps and clamp backs, to mitigate moisture entrapment between raceways and surfaces.
  - c. Attach groups of raceways to structural steel with slotted support system attached with beam clamps. Attach raceway to slotted channel with approved raceway clamps.
  - d. Attach groups of raceways to concrete with cast-in-place steel slotted channel fabricated specifically for concrete embedment. Attach raceway to steel slotted channel with approved raceway clamps.
  - e. Hang plumb horizontally suspended single raceway using a threaded rod. Attach threaded rods to concrete with anchors and to structural steel with beam clamps. Attach raceway to threaded rod with approved raceway clamps.
  - f. Hang horizontally suspended groups of raceways using steel slotted support system suspended from threaded rods. Attach threaded rods to concrete with anchors and to structural steel with beam clamps. Attach raceway to steel slotted channel with approved raceway clamps.
  - g. Support conductors in vertical raceway in accordance with NFPA 70 requirements.
  - h. Cross-brace suspended raceway to prevent lateral movement during seismic activity.
  - i. Use pre-fabricated non-metallic spacers for parallel runs of underground or under-slab conduits, either direct buried or encased in concrete.
16. Install electrically and physically continuous raceways between connections to outlets, boxes, panelboards, cabinets, and other electrical equipment with a minimum possible

- number of bends and not more than the equivalent of four 90-degree bends between boxes. Make bends smooth and even, without flattening raceway or flaking the finish.
17. Protect all electrical Work against damage during construction. Repair all Work damaged or moved out of line after rough-in, to meet the Contract Administrator's approval, without additional cost to the Owner. Cover or temporarily plug openings in boxes or raceways to keep raceways clean during construction. Clean all raceways prior to pulling conductors or cables.
  18. Align and install raceway terminations true and plumb.
  19. Complete raceway installation before starting conductor installation.
  20. Install a pull cord in each empty raceway that is left empty for installation of wires or cables by other trades or under separate contracts. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull cord.
  21. Install approved expansion/deflection fittings where raceways pass through or over building expansion joints; or where structures providing a means of support are subject to relative movement greater than acceptable by the raceway manufacturer.
  22. Route raceway through roof openings for piping and ductwork or through roof seals approved by the Contract Administrator, the roofing contractor, or both. Obtain approval for all roof penetrations and seal types from the Contract Administrator, Owner, roofing contractor, or all three as required to maintain new or existing roofing warranties.
  23. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:
    - a. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces or from building exterior to building interior.
    - b. Where otherwise required by NFPA 70.
  24. Stub-up Connections: Extend conduits through concrete floor for connection to freestanding equipment. Install with an adjustable top or coupling threaded inside for plugs set flush with finished floor. Extend conductors to equipment as required by other requirements of the construction documents.; FMC may be used 6 inches above the floor. Install screwdriver-operated, threaded plugs flush with floor for future equipment connections.
  25. Maintain 2" minimum spacing from bottom of roof deck to prevent raceway penetrations from above.
  26. Do not route conduits across skylights, access panels, hatched tiles, HVAC diffusers, or equipment working space.
  27. Route conduits serving rooftop equipment concealed inside the equipment curb and minimize roof penetrations and exterior conduit runs where practicable.
  28. Install all underground conduits/raceways a minimum of 24" below the bottom of slab/paving/grade, unless noted otherwise, where practicable.
  29. Provide boxes and raceways for the fire protection system low voltage wiring as required. This includes low voltage wiring exposed less than 96" AFF.
    - a. At a minimum, provide 3/4" conduit.
    - b. Coordinate requirements and locations with system installer and fire alarm specifications.

B. RMC

1. Use GRS or IMC in the following areas:
  - a. Where indicated.
  - b. For Emergency Feeders.
  - c. Exterior applications where above grade and exposed.
  - d. Below grade when concrete-encased, plastic-coated, or provided with a corrosion resistant approved mastic coating.

- e. All raceways penetrating slabs on grade (use plastic-coated raceway or provide with a corrosion resistant approved mastic coating). This shall include the 90-degree elbow below grade and the entire vertical transition to above grade.
  - f. Conductors over 600 volts.
  - g. Concealed within masonry walls.
  - h. Damp or wet locations.
  - i. Elevator pits.
  - j. Crawl spaces
  - k. Interior spaces where exposed to damage. Includes but is not limited to the following areas.
    - 1) Loading dock
    - 2) Corridors used for traffic of mechanized carts, forklifts and pallet handling units.
- 2. Use RAC in the following areas:
    - a. Indoors above grade.
    - b. Interior wet or damp locations.
    - c. For circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.
  - 3. Do not use RAC:
    - a. Below grade.
    - b. Imbedded in concrete or other areas corrosive to RAC.
- C. EMT
- 1. Use EMT in the following areas:
    - a. Where indicated.
    - b. Interior concealed locations for:
      - 1) Branch circuits.
      - 2) Feeders.
      - 3) Emergency branch circuits.
      - 4) Low-voltage control, security, and fire alarm circuits
    - c. Exposed where not subject to physical damage
      - 1) Mechanical rooms
  - 2. Do not use EMT:
    - a. Below grade.
    - b. In exterior applications when exposed.
- D. FMC and LFMC
- 1. Use FMC or LFMC:
    - a. For the final 24 inches of raceway to all motors, transformers, and other equipment subject to vibration or movement.
    - b. From outlet boxes (attached to building structure) to recessed light fixtures. Install sufficient length to allow for relocating each light fixture within a 5-foot radius of its installed location.
    - c. Use FMC only in dry locations
    - d. Use LFMC in damp, wet, corrosive, outdoor locations, and food service and kitchen areas.
  - 2. Do not use FMC or LFMC:
    - a. For branch circuits, homeruns or feeders.
    - b. In lengths exceeding 6 feet.
- E. RNC
- 1. Solvent-weld RNC fittings and raceway couplings per the manufacturer's instructions and make all connections watertight. Use solvent of the same manufacturer as the raceway.
  - 2. Where installed exposed outdoors or other areas subject to temperature variations, install expansion fittings per NFPA 70, to accommodate thermal expansion in straight runs.
  - 3. RNC is only allowed to be used in the following locations:
    - a. Where specifically indicated.

- 1) If an adopted code prevents use of RNC in a location where the contract documents specifically allow its use, contractor shall utilize other types of conduit allowed by the specification.
  - 2) Allowed does not mean required.
  - b. Underground, single and grouped, in lieu of GRS or IMC, when indicated.
    - 1) Direct buried
    - 2) Concrete-encased (use approved rigid PVC interlocking spacers, selected to provide minimum duct spacing and cover depths indicated while supporting ducts during concreting and backfilling; produced by the same manufacturer as the ducts).
  4. Phenolic Conduit (RTRC) listed for use in UL 2196 2-Hour Fire Resistive systems may be used as part of a FHIT 2-hour listed fire resistive system where a 2-hour listing is required.
- F. Telephone and Signal/Data System Raceways, 2-Inch Trade Size and Smaller: In addition to above requirements, install raceways in maximum lengths of 150 feet and with a maximum of two 90-degree bends or equivalent. Separate lengths with pull or junction boxes where necessary to comply with these requirements.

### 3.3 RACEWAY FITTINGS

- A. Compatible with raceways and suitable for use and location.
- B. RMC and IMC: Use threaded rigid steel conduit fittings, unless otherwise indicated.
- C. PVC Externally Coated, Rigid Steel Conduits: Use only fittings and installation tools approved by the manufacturer for use with that material. Patch all nicks and scrapes in PVC coating after installing conduits. Replace all fittings and conduits that have any portion of the coating scraped off to bare metal, at no additional cost to the Owner.
- D. Join raceways with fittings designed and approved for that purpose and make joints tight.
- E. Use insulating bushings to protect conductors at raceway terminations:
  1. Where raceways are terminated with locknuts and bushings, align raceways to enter squarely and install locknuts with dished part against box. Use two locknuts, one inside and one outside box.
  2. Where raceways are terminated with threaded hubs, screw raceways or fittings tightly into hub so end bears against wire protection shoulder. Where chase nipples are used, align raceways so coupling is square to box; tighten chase nipple so no threads are exposed.

### 3.4 WIREWAYS

- A. Use flat head screws, clips and straps to fasten wireways to surfaces. Mount plumb and level.
- B. Use suitable insulating bushings and inserts at connections to outlets and corner fittings.
- C. Close ends of wireway and unused raceway openings.

### 3.5 BOXES

- A. General
  1. Verify locations of device boxes prior to rough in.
  2. Set boxes at elevations to accommodate mounting heights as specified or indicated on the Drawings.
  3. Electrical boxes are shown on Drawings in approximate locations unless dimensioned. Adjust box locations to accommodate intended purpose.
  4. Install boxes to preserve fire ratings of walls, floors, and ceilings.
  5. Install flush wall-mounted boxes without damaging wall insulation or reducing its effectiveness.
  6. Support boxes independently of raceway.

7. Clean the interior of boxes to remove dust, debris, and other material. Clean exposed surfaces and restore finish.
  8. Adjust flush-mounted boxes to make front edges flush with finished wall material.
  9. Provide boxes of the depth required for the service, device and the application, and with raised covers set flush with the finished wall surface for boxes concealed in plaster finishes. Select covers with the proper openings for the devices being installed in the boxes. Install boxes flush unless otherwise indicated.
  10. Install outlet boxes in firewalls complying with UL requirements, with box surface area not exceeding 16 square inches; and, when installed on opposite sides of the wall, separate by a distance of at least 24 inches.
- B. NEMA Enclosure ratings, Suitable for the environment in which it is installed. At a minimum, provide the following ratings:
1. NEMA 250, type 3R
    - a. Provide at exterior locations
  2. NEMA 250, type 1
    - a. Provide at interior and dry locations
  3. NEMA 250 type 4 stainless steel
    - a. Provide at interior damp or wet locations
    - b. Provide at interior locations where associated device is labeled as Weather Proof and/or Weather Resistant, unless requirement below already requires box to be rated otherwise.
  4. NEMA 250 type 4X
    - a. Provide at interior locations subject to corrosion
- C. Outlet Boxes
1. Locations of outlets on Drawings are approximate; and, except where dimensions are shown, determine exact dimensions for locations of outlets from plans, details, sections, or elevations on Drawings, or as directed by Contract Administrator. Locate outlets generally from column centers and finish wall lines or to centers or joints of wall or ceiling panels.
  2. Locate outlet boxes so they are not placed back-to-back in the same wall, and in metal stud walls, so they are separated by at least one stud space, to limit sound transmission from room to room. Install outlet boxes in accessible locations and do not install outlets above ducts or behind furring.
  3. Install all electrical devices, such as plug receptacles, lamp receptacles, light switches, and light fixtures in or on outlet boxes Use sheet-steel boxes for dry locations unless otherwise indicated or required.
  4. Use cast iron boxes or cast aluminum boxes for damp or wet locations unless otherwise indicated or required; furnish with compatible weatherproof gasketed covers.
  5. Use cast iron boxes or cast aluminum boxes where exposed galvanized steel rigid metal conduit or exposed intermediate metal conduit (IMC) is used.
  6. Use cast aluminum boxes where aluminum rigid metal conduit is used.
  7. Use nonmetallic boxes where exposed rigid PVC conduit is used.
  8. Use suitable concrete type boxes where flush-mounted in concrete.
  9. Use suitable masonry type boxes where flush-mounted in masonry walls.
  10. Use raised covers suitable for the type of wall construction and device configuration where required.
  11. Use shallow boxes where required by the type of wall construction.
  12. Install extension and plaster rings as required by NFPA 70.
  13. Carefully set outlet boxes concealed in non-plastered block walls so as to line up with wall joints. Coordinate the box and raceway installation with the wall construction as required for a flush and neat appearing installation. Outlet box extensions may be used where necessary.
  14. Do not exceed allowable fill per NFPA 70.
  15. Where multiple devices are shown grouped together, gang mount with a common cover plate.

- D. Junction and Pull Boxes
  - 1. Install junction and pull boxes above accessible ceilings and in unfinished areas.
  - 2. Provide boxes set flush in painted walls or ceilings with primer coated cover.
  - 3. Where junction and pull boxes are installed above an inaccessible ceiling, locate so as to be easily accessible from a ceiling access panel.
  - 4. Boxes for exterior use shall be:
    - a. PVC with a UV-stabilized PVC cover sealed and gasketed watertight.
    - b. Cast aluminum with a cast aluminum cover sealed and gasketed watertight.
    - c. Cast iron with cast iron cover sealed and gasketed watertight in vehicular traffic areas. Provide box and cover UL listed for use in vehicular traffic areas.
    - d. Install buried boxes so that box covers are flush with grade, unless indicated otherwise.
- E. Floor Boxes
  - 1. Use cast or non-metallic floor boxes for installations in slab on grade. Unless otherwise indicated, formed steel boxes are acceptable for slabs above grade.
  - 2. Set metal floor boxes level and flush with finished floor surface.
  - 3. Set non-metallic floor boxes level. Trim after installation to fit flush with finished floor surface.

### 3.6 CABINETS AND ENCLOSURES

- A. Unless otherwise indicated on the Drawings, provide
  - 1. NEMA 1 construction for indoor, dry locations
  - 2. NEMA 12 for indoor, damp and dusty locations
  - 3. NEMA 3R for outdoor locations
  - 4. NEMA 4X for indoor wet and corrosive locations
- B. Install flush mounted in the wall in finished spaces, with the top 78 inches above finished floor. The front shall be approximately 3/4-inch larger than the box all around.
- C. Install surface mounted in unfinished spaces, with the top 78 inches above finished floor. The front shall be the same height and width as the box.
- D. Electrically ground all metallic cabinets and enclosures. Where wiring to cabinet or enclosure includes a grounding conductor, provide a grounding lug in the interior of the cabinet or enclosure. Cabinets and enclosures specified in this Section are intended to house miscellaneous electrical components assembled in a custom arrangement, such as contactors and relays.
- E. All components that are specified or indicated for assembly in cabinets and enclosures shall each be individually UL listed and labeled. Arrange wiring so that it can be readily identified. Support wiring no less than every 3 inches. Install gauges, meters, pilot lights and controls on the face of the door.
- F. Do not provide cabinets and enclosures smaller than the sizes indicated. Where sizes and types are not indicated, provide cabinets and enclosures of the size, type and classes appropriate for the use and location per the guidelines of the NEC. Provide all items complete with covers and accessories required for the intended use.

### 3.7 IDENTIFICATION

- A. Refer to Division 26 Section "Identification for Electrical Systems" for identification materials.
- B. Raceway Identification:
  - 1. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size. Use the following means of identification:
    - a. Spray paint at boxes.
    - b. Self-Adhesive Vinyl Labels
    - c. Snap-Around Labels

- d. Snap-Around, Color-Coding Bands
- e. Self-Adhesive Vinyl Tape
2. Color for Printed Legend:
  - a. Power Circuits: Black letters on an orange field.
  - b. Legend: Indicate system or service and voltage, if applicable
- C. Raceways and Duct Banks More Than 600 V Concealed within Buildings: 4-inch- (100-mm-) wide black stripes on 10-inch (250-mm) centers over orange background that extends full length of raceway or duct and is 12 inches (300 mm) wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch- (75-mm-) high black letters on 20-inch (500-mm) centers. Stop stripes at legends. Apply to the following finished surfaces:
  1. Floor surface directly above conduits running beneath and within 12 inches (300 mm) of a floor that is in contact with earth or is framed above unexcavated space.
  2. Wall surfaces directly external to raceways concealed within wall.
  3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.
- D. Accessible Raceways and Metal-Clad Cables More Than 600 V: Identify with "DANGER-HIGH VOLTAGE" in black letters at least 2 inches (50 mm) high. Repeat legend at 10-foot (3-m) maximum intervals.
- E. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A: Identification device shall be:
  1. Self-adhesive vinyl label
  2. Snap around label
  3. Self-adhesive vinyl tape applied in bands.
- F. Accessible Raceways of Auxiliary Systems: Identify the following systems using the same identification device as other accessible raceways 600V or less, and with the indicated color scheme for each system:
  1. Fire Alarm System: Red.
  2. Fire-Suppression Supervisory and Control System: Red and yellow.
  3. Combined Fire Alarm and Security System: Red and blue.
  4. Security System: Blue and yellow.
  5. Mechanical and Electrical Supervisory System: Green and blue.
  6. Telecommunication System: Green and yellow.
  7. Control Wiring: Green and red.
- G. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.
- H. Junction Boxes and Pull Boxes:
  1. Junction box and pull box covers shall be spray painted to identify the voltage and system. Circuit numbers and the panel they originate from shall be listed on the cover using permanent, waterproof, black ink marker.
  2. The junction box where a homerun ends and the circuit is distributed shall be marked. Junction boxes shall be marked approximately every 100 feet along homerun path to panel.

END OF SECTION

**SECTION 26 05 43 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL REQUIREMENTS****1.1 SECTION INCLUDES**

- A. Raceways, fittings, boxes for underground electrical site distribution
- B. Hand holes and pull boxes
- C. Manholes
- D. Components for direct buried electrical distribution
- E. Components for concrete-encased electrical distribution

**1.2 DEFINITIONS**

- A. Terminology used in this specification is as defined below:
  - 1. GRS: Galvanized Rigid Steel Conduit
  - 2. RMC: Rigid Metal Conduit
  - 3. RNC: Rigid Nonmetallic Conduit
  - 4. RTRC: Reinforced Thermosetting Resin Conduit

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordination:
  - 1. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.
  - 2. Coordinate elevations of ducts and duct-bank entrances into manhole, handholes, and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by the Contract Administrator.

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Product data for the following products:
    - a. Raceways, Raceway fittings, separators, duct-bank materials, manholes, handholes, boxes, solvent cement, warning tape and warning planks.
  - 2. Shop drawings for:
    - a. Detailing fabrication and installation for custom manholes or handholes including duct entry provisions, reinforcing details, frame and cover design, manhole frame support rings, ladder details, grounding details, sump details, joint details, and cable racks, pulling irons, lifting irons.
- B. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Accurately record actual routing of all exterior buried raceway including coordination with other surrounding utilities and underground structures. Provide scaled plans and sections that Indicate dimensions from finished grade or other fixed structural elements.

**1.5 QUALITY ASSURANCE**

- A. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 3 years.
- B. Electrical Components, Devices, and Accessories:
  - 1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to AHJ.
  - 2. Marked for intended use.
- C. Comply with NFPA 70 and ANSI C2.
- D. Test and inspect pre-cast concrete utility structures according to ASTM C 1037.
- E. Non-concrete Handhold and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
  - 1. Tests of materials shall be performed by a independent testing agency.
  - 2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
  - 3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

**1.6 DELIVERY STORAGE AND HANDLING**

- A. Deliver ducts to project site with ends capped and store nonmetallic ducts with supports to prevent bending, warping, and deformation.
- B. Store pre-cast and other factory –fabricated underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings, if present, are visible.
- C. Lift and support pre-cast concrete units only at designated lifting or supporting points.

**PART 2 - PRODUCTS AND MATERIALS****2.1 RACEWAYS AND FITTINGS**

- A. Metal Conduit
  - 1. Manufacturers:
    - a. ABB, Inc.
    - b. Atkore
    - c. Nucor Tubular Products.
    - d. O-Z/Gedney Co.; Emerson.
    - e. Western Tube and Conduit Corporation.
    - f. Wheatland Tube Co.
  - 2. RMC:
    - a. GRS: Hot-dip galvanized: ANSI C80.1, UL 6
  - 3. Plastic-Coated GRS and Fittings: NEMA RN 1, UL-listed. Coating thickness of 0.40 inches (1 mm), minimum.
  - 4. Fittings: NEMA FB 1; compatible with raceway and tubing materials.
- B. Nonmetallic Raceway
  - 1. Manufacturers:
    - a. ABB, Inc.
    - b. American Pipe and Plastics, Inc.
    - c. Anamet Electrical, Inc.;
    - d. Atkore

- e. Cantex Inc.
  - f. Carlon
  - g. Champion Fiberglass, Inc.
  - h. IPEX USA, LLC.
  - i. Prime Conduit.
  - j. Southwire Corporation.
  - k. Superflex Ltd.
  - l. United Fiberglass of America, Inc.
  - 2. RNC: Schedule 40 and 80 PVC: NEMA TC 2, UL 651.
    - a. a. Fittings: match to raceway type and material: NEMA TC 3, NEMA TC 6, UL 651, as applicable.
  - 3. RTRC: UL 2420 UG NEMA TC 14 SW (Standard Wall), HW (Heavy Wall) or XW (Extra Heavy Wall)
- C. DUCT ACCESSORIES
- 1. Duct Separators shall be factory-fabricated rigid interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
  - 2. Underground-line warning tape specified in Division 26 Section "Identification for Electrical Systems."
  - 3. Concrete warning planks shall be nominal 12 by 24 by 3 inches in size, manufactured from 6000-psi concrete.
    - a. Color: Red dye added to concrete during batching.
    - b. Labeling: Mark each plank with "ELECTRICAL" in 2-inch high, 3/8-inch deep letters.

## 2.2 PRE-CAST CONCRETE HANDHOLES AND BOXES

- A. General
- 1. Manufacturers:
    - a. Carder Concrete Products.
    - b. Christy Concrete Products
    - c. Elmhurst-Chicago Stone Co.
    - d. Oldcastle Pre-cast Group
    - e. Riverton Concrete Products; a division of Cretex Companies, Inc.
    - f. Utility Concrete Products, LLC
    - g. Utility Vault Co.
    - h. Wausau Title, Inc.
- B. Comply with ASTM C858 for design and manufacturing process.
- C. Pre-cast concrete handholes and boxes shall be factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of the handhole or box.
- 1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
  - 2. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
  - 3. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.
    - a. Cover Hinges: Concealed, with hold-open ratchet assembly.
    - b. Cover Handle: Recessed.
  - 4. Frame and Cover: Weatherproof aluminum frame, with hinged aluminum access door assembly with tamper-resistant, captive, cover-securing bolts.
    - a. Cover Hinges: Concealed, with hold-open ratchet assembly.

- b. Cover Handle: Recessed.
5. The cover finish shall be a nonskid finish with a minimum coefficient of friction of 0.50.
6. The cover shall have the following legend lettering molded into the cover:
  - a. "ELECTRICAL"
7. Units shall be designed for flush burial and have integral closed bottom, unless otherwise indicated.
8. Extensions and slabs shall be designed to mate with bottom of enclosure and shall be same material as enclosure.
  - a. Extension shall provide increased depth of 12 inches.
  - b. Slab shall be same dimensions as bottom of enclosure, and arranged to provide closure.
9. Windows shall be included as pre-cast openings in walls arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
  - a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
  - b. Window openings shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie into concrete envelopes of duct banks.
  - c. Window openings shall be framed with at least two additional No.4 steel reinforcing bars in concrete around each opening.
10. Duct entrances into handhole walls shall have cast end-bell or duct-terminating fittings in the wall for each entering duct.
  - a. Type and size shall match fittings to duct or conduit to be terminated.
  - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
11. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

### **2.3 HANDHOLES AND BOXES OTHER THAN PRE-CAST CONCRETE**

#### **A. General**

1. Description: Comply with SCTE 77.
2. Color of Frame and Cover: Gray where installed in concrete or other paved area; Green where installed in grass area.
3. Configuration: Units shall be designed for flush burial and have integral closed bottom, unless otherwise indicated.
4. Load Ratings:
  - a. Boxes and covers installed in sidewalks and other areas not subject to normal vehicular traffic shall be rated for a design load of 8,000 lbs. minimum.
  - b. Boxes and covers installed in driveways, parking lots, and other off-roadway applications shall be rated for a design load of 15,000 lbs. minimum.
  - c. Boxes and covers installed in roadways and other high vehicular traffic areas shall be rated for a design load of 28,800 lbs.
5. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
6. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
7. Cover Legend: Molded lettering, applicable logo from the following:
  - a. "ELECTRIC"
8. Duct Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
9. Handholes 12 inches wide by 24 inches long and larger shall have factory-installed inserts for cable racks and pull-in irons.

- B. Polymer-Concrete Handholes and Boxes with Polymer-Concrete Cover: Molded of sand and aggregate, bound together with polymer resin, and reinforced with steel or fiberglass or a combination of the two.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Armorcast Products Company.
    - b. Carson Industries LLC.
    - c. CDR Systems Corporation.
    - d. NewBasis.
    - e. Strongwell
- C. Fiberglass Handholes and Boxes with Polymer-Concrete frame and cover: Sheet-molded, fiberglass-reinforced, polyester resin enclosure joined to polymer concrete top ring or frame.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Armorcast Products Company.
    - b. Carson Industries LLC.
    - c. Christy Concrete Products.
    - d. Synchron Tech Moulded Products, Inc.; a division of Oldcastle Precast.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.

#### **3.2 UNDERGROUND ENCLOSURE INSTALLATION**

- A. Handholes and Boxes for 600 volts and Less, Including Telephone, Communications, and Data Wiring:
  - 1. Units in roadways and Other Deliberate Traffic Paths: Pre-cast concrete. AASHTO HB 17, H-20 structural load rating.
  - 2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Non-deliberate Loading by Heavy Vehicles: Pre-cast Concrete, AASHTO HB 17, H-20 structural load rating.
  - 3. Units in Sidewalk and Similar Applications with a Safety Factor for Non-deliberate loading by Vehicles: Polymer Concrete Units, SCTE 77, Tier 8 structural load rating.

#### **3.3 UNDERGROUND DUCT APPLICATION**

- A. Ducts for Electrical Cables over 600 V: RNC, NEMA Type EPC-40 or RTRC SW or HW PVC, in concrete-encased duct bank, unless otherwise indicated.
- B. Ducts for Electrical Feeders 600volts and Less: RNC, NEMA Type EPC-40 or RTRC SW or HW PVC, in concrete-encased duct bank, unless otherwise indicated.
- C. Ducts for Electrical Feeders 600 volts and Less: RNC, NEMA Type EPC-80 or RTRC HW or XW PVC, in direct- buried duct bank, unless otherwise indicated.
- D. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-80 or RTRC HW or XW PVC, indirect-buried duct bank, unless otherwise indicated.
- E. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-40 PVC or RTRC, in concrete-encased or direct-buried duct bank, unless otherwise indicated.

- F. Underground Ducts Crossing Paved Paths, Walks and Roadways: RNC, NEMA Type EPC-40 PVC or RTRC, encased in reinforced concrete.

### 3.4 EARTHWORK

- A. Excavation and Backfilling: Comply with Division 31 Section "Earth Moving" but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling and compaction is complete.
- C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Division 32 Sections "Turf and Grasses and "Plants"
- D. Cut and patch existing pavement in the path of underground ducts and utility structures according to Division 01 Section "Cutting and Patching."

### 3.5 DUCT INSTALLATION

- A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.
- B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48-inches, both horizontally and vertically, at other locations, unless otherwise indicated.
- C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in the same plane.
- D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10-inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.
  - 1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell with out reducing duct line slope and without forming a trap in the line.
  - 2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.
  - 3. Grout end bells into structure walls from both sides to provide watertight entrances.
- E. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 feet outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Division 26 Section "Common Work Results for Electrical."
- F. Sealing: Provide temporary closure at termination of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.
- G. Pulling Cord: Install 100-lbf test nylon cord in ducts, including spares.
- H. Concrete-Encased Ducts: Support ducts on duct separators.
  - 1. Separator installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 4 spacers per 20 feet of duct. Secure separators to earth and ducts to prevent floating during concreting. Stagger separators approximately 6-inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or

- reinforcing steel that may form conductive or magnetic loops around the ducts or duct group.
2. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
    - a. Start at one end finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to the manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
    - b. If more than one pour is necessary, terminate each pour in a vertical plane and install □-inch reinforcing rod dowels 18-inches into concrete on both sides of joint near corners of envelope.
  3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct bank application.
  4. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
  5. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured with out soil inclusions; otherwise, use forms.
  6. Minimum Space between Ducts: 3-inches between ducts and exterior envelope wall, 2-inches between ducts for like services, and 4-inches between power and signal ducts.
  7. Depth: Install top of duct bank at least 24-inches below finished grade in areas not subject to deliberate traffic, and at least 30-inches below finished grade in deliberate traffic paths of vehicles, unless otherwise indicated.
  8. Stub-Ups: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
    - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3-inches of concrete.
    - b. Stub-ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60-inches from edge of base. Install insulated grounding bushings on terminations at equipment.
  9. Warning Tape: Bury warning tape approximately 12 inches above all concrete-encased ducts and duct banks. Align tape parallel to and within 3-inches of the centerline of duct bank. Provide an additional warning tape for each 12-inch increment of duct-bank width over a nominal 18-inches. Space additional tapes 12-inches apart, horizontally.
- I. Direct-Buried Duct Banks:
1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
  2. Space separators close enough to prevent sagging and deforming of ducts, with not less than 4 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6-inches between tiers.
  3. Excavate trench bottom to provide firm and uniform support for duct bank. Prepare trench bottoms as specified in Division 31 Section "Earth Moving" for pipes less than 6-inches in nominal diameter.
  4. Install backfill as specified in Division 31 Section "Earth Moving."
  5. After installing first tier of ducts, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand-place backfill to 4-inches over ducts and hand tamp. Firmly

tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end run and complete backfilling with normal compaction as specified in Division 31 Section "Earth Moving."

6. Install ducts with a minimum of 3-inches between ducts for like services and 6-inches between power and signal ducts.
7. Depth: Install top of duct bank at least 36-inches below finished grade, unless otherwise indicated.
8. Set elevation of bottom of duct bank below the frost line.
9. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
  - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3-inches of concrete.
  - b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60-inches from edge of base. Install insulated grounding bushings on terminations at equipment.
10. Warning Planks: Bury warning planks approximately 12 inches above all direct-buried ducts in a duct bank placing them 24-inches on centers. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch increment of duct-bank width over a nominal 18-inches. Space additional planks 12-inches apart, horizontally.

### **3.6 INSTALLATION OF CONCRETE MANHOLES HANDHOLES AND BOXES**

- A. Precast Concrete Handhole and Manhole Installation:
  1. Comply with ASTM C891, unless otherwise indicated.
  2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
  3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- B. Elevations:
  1. Manhole Roof: Install with rooftop at least 15-inches below finished grade.
  2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1-inch above finished grade.
  3. Install handholes with bottom below the frost line.
  4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1-inch above grade.
  5. Where indicated, cast handhole cover frame integrally with handhole structure.
- C. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
- D. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Waterproofing materials and installation are specified in Division 07 Section "Elastomeric Sheet Waterproofing." After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
- E. Hardware: Install removable hardware, including pulling eye, cable stanchions, cable arms, and insulators, as required for installation and support of cable and conductors and as indicated.
- F. Fixed Manhole Ladders: Arrange to provide for safe entry with maximum clearance from cables and other items in manholes.

- G. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8-inches for manholes and 2-inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.
- H. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover.

### **3.7 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRE-CAST CONCRETE**

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.
- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch (25 mm) above finished grade.
- D. Install handholes and boxes with bottom below the frost line.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.
- F. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box frame. Bottom of ring shall rest on compacted earth.
  - 1. Concrete: 3000psi, 28-day strength, complying with Division 03 Section "Cast-in-Place Concrete," with a troweled finish.
  - 2. Dimensions: 10-inch wide by 12-inches deep

### **3.8 GROUNDING**

- A. Ground underground ducts and utility structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."

### **3.9 INSTALLATION ACCEPTANCE**

- A. Prior to final acceptance of the duct bank and associated structures, pull an aluminum or wood test mandrel through the duct to prove joint integrity and to verify ducts have not been deformed. Provide mandrel equal to 80 percent fill of the duct. Test duct bank, manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Division 26 Section "Grounding and Bonding for Electrical Systems." Correct any deficiencies and retest as specified above. Clean internal surfaces of manholes (including sumps) and handholes and remove foreign materials.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 05 53 - IDENTIFICATION FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes the following:
  - 1. Nameplates.
  - 2. Labels for raceways and metal-clad cable.
  - 3. Labels for junction boxes and pull boxes.
  - 4. Labels for wiring devices and lighting control devices.
  - 5. Markers for conductors, and control cables.
  - 6. Tags.
  - 7. Underground-line warning tape.
  - 8. Warning labels and signs.
  - 9. Arc Flash Warning Labels.
  - 10. Instruction signs.
  - 11. Miscellaneous identification products.
  - 12. Painted Identification.

**1.2 ADMINISTRATIVE REQUIREMENTS**

- A. Where a facility identification standard already exists, that standard shall be continued. Where an identification standard does not exist, color-coding and identification shall be as described herein.
- B. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.
- C. Verify final designations for equipment, systems, and components to be identified prior to fabrication of identification products.
- D. Coordinate installation of identifying devices with location of access panels and doors.
- E. Install identifying devices before installing acoustical ceilings and similar concealment.

**1.3 QUALITY ASSURANCE**

- A. Electrical Equipment, Components, Devices, and Accessories:
  - 1. Listed and labeled as defined in NFPA 70, by an NRTL as defined by OSHA in 29 CFR 1910.7 and that are acceptable to authorities having jurisdiction.
  - 2. Marked for intended use.
- B. Comply with ANSI A13.1 and ANSI C2.
- C. Comply with requirements of NFPA 70.
- D. Comply with 29 CFR 1910.145.

**PART 2 - PRODUCTS AND MATERIALS****2.1 GENERAL**

- A. Location, text, and method of identification to be used is noted in individual sections. Refer to other sections for additional identification requirements.

**2.2 NAMEPLATES**

- A. Comply with UL RP 9691, Recommended Practice for Nameplates for Use in Electrical Installations.
- B. Engraved, Laminated Acrylic or Melamine Label: Non-conductive phenolic with beveled edges.
1. Adhesive backed.
  2. Minimum 1/16 inch (1.6 mm) thick for nameplates with both dimension 4 inches (102 mm) or less and 1/8 inch (3.2 mm) thick for larger sizes.
- C. Stainless Steel Nameplates: Minimum thickness of 1/32 inch; engraved or laser-etched text.
- D. Aluminum Nameplates: Anodized; minimum thickness of 1/32 inch; engraved or laser-etched text.
- E. Text: Minimum text height shall be 1/8 inch (3.2 mm) unless otherwise required by local jurisdiction or owner standards. For elevated components, increase sizes of labels and letters to those appropriate for viewing from the floor.
- F. Colors:
1. Normal systems - white letters on a black background.
  2. Emergency systems - white letters on a red background.
- G. Label Requirements:
1. Service Equipment Label  
 LINE 1: NOMINAL VOLTAGE AND FREQUENCY IN HERTZ  
 LINE 2: SERVICE EQUIPMENT BUS RATING IN AMPS  
 LINE 3: SCCR OF SERVICE EQUIPMENT IN AMPS  
 LINE 4: MAXIMUM AVAILABLE FAULT CURRENT IN AMPS  
 LINE 5: DATE CALCULATED

EXAMPLE:

208Y/120V, 60HZ 800A SCCR 65,000A MAX AVAILABLE FAULT CURRENT 58,815A CALCULATED: 01/01/2018
--

2. Panelboard/Switchboard Label:  
 LINE 1: PANELBOARD/SWITCHBOARD DESIGNATION  
 LINE 2: VOLTAGE, PHASE, WIRES, AMPS  
 LINE 3: FED FROM " "

EXAMPLES:

H1A 480Y/277V, 3PH, 4W, 200A FED FROM MDB
L1A 208Y/120V, 3PH, 4W, 225A FED FROM H1A VIA XFMR T1

3. Transformer Label:  
 LINE 1: TRANSFORMER DESIGNATION  
 LINE 2: FED FROM " "  
 LINE 3: SUPPLIES " "

EXAMPLE:

T1 FED FROM H1A SUPPLIES L1A
------------------------------------

4. Disconnect Switch Label:  
 LINE 1: DESIGNATION OF EQUIPMENT SERVED BY DISCONNECT  
 LINE 2: VOLTAGE, PHASE, WIRES, AMPS  
 LINE 3: FED FROM “ “

EXAMPLES:

WATER HEATER WH1 480V, 3PH, 3W, 100A FED FROM MDB
---

### 2.3 LABELS FOR RACEWAYS AND METAL-CLAD CABLE

- A. Factory Painted Raceways:
1. Metal Raceways: Continuous, rust-inhibiting paint factory applied.
  2. Non-Metallic Raceways: Factory dyed or colored PVC sleeve.
- B. Factory Painted Metal-Clad Cable: 2-inch wide, factory painted bands at a maximum of 6-foot on center spacing.
- C. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.
- D. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- E. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches (50 mm) long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- F. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches (50 mm) wide; compounded for outdoor use.

### 2.4 LABELS FOR JUNCTION BOXES AND PULL BOXES

- A. Junction box and pull box covers shall be spray painted to identify the voltage and system. Circuit numbers and the panel they originate from shall be listed on the cover using permanent, waterproof, black ink marker.

### 2.5 LABELS FOR WIRING DEVICES AND LIGHTING CONTROL DEVICES

- A. Self-laminating Computer Printable Labels: Clear over-laminate to protect legend for permanent, clean identification. Self-laminating Polyester material with white print-on area.
- B. Engraved, Laminated Acrylic or Melamine Label: adhesive backed. Minimum letter height shall be 3/16 inch (4.76 mm).
1. Normal systems - white letters on a black background.
  2. Emergency systems - white letters on a red background
- C. Engraved cover plates: Provide with white letters. White or ivory cover plates shall have black letters.

### 2.6 MARKERS FOR CONDUCTOR AND CONTROL CABLES

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils (0.08 mm) thick by 1 to 2 inches (25 to 50 mm) wide.

- B. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
- C. Self-laminating Computer Printable Labels: Clear over-laminate to protect legend for permanent, clean identification. Self-laminating Polyester material with white print-on area.
- D. Aluminum Wraparound Marker Labels: Cut from 0.014-inch- (0.35-mm-) thick aluminum sheet, with stamped, embossed, or scribed legend, and fitted with tabs and matching slots for permanently securing around wire or cable jacket or around groups of conductors.
- E. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch (50 by 50 by 1.3 mm), with stamped legend, punched for use with self-locking nylon tie fastener.

## 2.7 TAGS

- A. Write-On Tags: Polyester tag, 0.010 inch (0.25 mm) thick, with corrosion-resistant grommet and polyester or nylon tie for attachment to conductor or cable.
  - 1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

## 2.8 UNDERGROUND-LINE WARNING TAPE

- A. Materials: Use foil-backed detectable type polyethylene tape suitable for direct burial, unless otherwise indicated.
- B. Foil-backed Detectable Type Tape: 6 inches (152 mm) wide, with minimum thickness of 5 mil, unless otherwise required for proper detection.
- C. Legend: Type of service, continuously repeated over full length of tape.
- D. Color: Tape for Buried Power Lines: Black text on red background.

## 2.9 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145. Attachment method shall be acceptable to the manufacturers of the equipment to which the nameplates are being applied and shall not compromise any NRTL listing or labeling criteria.
- B. Self-Adhesive Warning Labels: Factory pre-printed or machine-printed multicolor self-adhesive polyester or self-adhesive vinyl labels; UV, chemical, water, heat, and abrasion resistant; produced using materials recognized to UL 969, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.
  - 1. Use thermal transfer process printing machines and accessories recommended by label manufacturer.
  - 2. Do not use labels designed to be completed using handwritten text.
- C. Baked-Enamel Warning Signs: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application.
  - 1. 1/4-inch (6.4-mm) grommets in corners for mounting. Nominal size, 7 by 10 inches (180 by 250 mm).
- D. Metal-Backed, Butyrate Warning Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch (1-mm) galvanized-steel backing; and with colors, legend, and size required for application.
  - 1. 1/4-inch (6.4-mm) grommets in corners for mounting. Nominal size, 10 by 14 inches (250 by 360 mm).
- E. Warning label and sign shall include, but are not limited to, the following legends:
  - 1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."

2. Workspace Clearance Warning (208 Volts): "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES (915 MM)."
3. Workspace Clearance Warning (480 Volts): "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 48 INCHES (915 MM)."

## 2.10 ARC FLASH WARNING LABELS

- A. General: All labels will be based on recommended overcurrent device settings and will be printed after the results of the analysis have been presented and after any system changes, upgrades, or modifications have been incorporated in the system. Refer to Division 26 section "Power System Studies" for additional requirements.
- B. Materials: Use machine-printed, high adhesion, polyester label; UV, chemical, water, heat, and abrasion resistant, for each work location analyzed.
- C. Machine-Printed Labels: Use thermal transfer process printing machines and accessories recommended by label manufacturer. Labels shall be machine printed, with no field markings. Provide warning labels complying with ANSI Z535.4 to identify arc flash hazards for each work location analyzed by the arc flash and shock risk assessment.
- D. Minimum Size: 3.5 inch by 5 inch (89 mm by 127 mm), unless otherwise noted by Owner.
- E. Legend: Provide custom legend in accordance with NFPA 70E based on equipment-specific data as determined by arc flash and shock risk assessment. The label shall include the following information, at a minimum:
  1. Location designation
  2. Nominal voltage
  3. Available fault current
  4. Limited approach boundary
  5. Arc flash boundary
  6. Restricted approach boundary
  7. Hazard risk category
  8. Incident energy
  9. Working distance
  10. Site-specific PPE (personnel protective equipment) requirements.
  11. Date calculations were performed.
  12. Engineering report number, revision number and issue date.

## 2.11 INSTRUCTION SIGNS

- A. Engraved, Laminated Acrylic or Melamine plastic: Non-conductive phenolic. Unless indicated otherwise, provide with minimum 3/8-inch- (10-mm-) high letters. For elevated components, increase sizes of labels and letters to those appropriate for viewing from the floor.
  1. Minimum 1/16 inch (1.6 mm) thick for nameplates with either dimension greater than 4 inches (102 mm) and 1/8 inch (3.2 mm) thick for larger sizes.
  2. Punched or drilled for mechanical fasteners.
  3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.
  4. Normal systems: Engraved legend with white letters on black face.
  5. Essential Systems: Engraved legend with white letters on red face.
- B. Stainless Steel Nameplates: Minimum thickness of 1/32 inch ; engraved or laser-etched text.
- C. Aluminum Nameplates: Anodized; minimum thickness of 1/32 inch; engraved or laser-etched text
- D. Colors:
  1. General Information and Operating Instructions – Black letters on white background.
  2. Normal systems - white letters on a black background.

3. Emergency systems - white letters on a red background.

## 2.12 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.
  1. Minimum Width: 3/16 inch (5 mm).
  2. Tensile Strength: 50 lb (22.6 kg), minimum.
  3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
  4. Color: Black, except where used for color-coding.
- B. Fasteners for Nameplates, Labels and Signs
  1. Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat lock washers unless otherwise noted.

## 2.13 PAINTED IDENTIFICATION

- A. Paint materials and application requirements are specified in Division 09 painting Sections.
  1. Exterior Concrete, Stucco, and Masonry (Other Than Concrete Unit Masonry):
    - a. Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Exterior concrete and masonry primer.
      - 2) Finish Coats: Exterior semi-gloss acrylic enamel.
  2. Exterior Concrete Unit Masonry:
    - a. Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a block filler.
      - 1) Block Filler: Concrete unit masonry block filler.
      - 2) Finish Coats: Exterior semi-gloss acrylic enamel.
  3. Exterior Ferrous Metal:
    - a. Semi-gloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Exterior ferrous-metal primer.
      - 2) Finish Coats: Exterior semi-gloss alkyd enamel.
  4. Exterior Zinc-Coated Metal (Except Raceways):
    - a. Semi-gloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Exterior zinc-coated metal primer.
      - 2) Finish Coats: Exterior semi-gloss alkyd enamel.
  5. Interior Concrete and Masonry (Other Than Concrete Unit Masonry):
    - a. Semi-gloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Interior concrete and masonry primer.
      - 2) Finish Coats: Interior semi-gloss alkyd enamel.
  6. Interior Concrete Unit Masonry:
    - a. Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a block filler.
      - 1) Block Filler: Concrete unit masonry block filler.
      - 2) Finish Coats: Interior semi-gloss acrylic enamel.
  7. Interior Gypsum Board:
    - a. Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Interior gypsum board primer.
      - 2) Finish Coats: Interior semi-gloss acrylic enamel.
  8. Interior Ferrous Metal:
    - a. Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Interior ferrous-metal primer.
      - 2) Finish Coats: Interior semi-gloss acrylic enamel.
  9. Interior Zinc-Coated Metal (Except Raceways):
    - a. Semi-gloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.
      - 1) Primer: Interior zinc-coated metal primer.
      - 2) Finish Coats: Interior semi-gloss acrylic enamel.

**PART 3 - EXECUTION****3.1 PREPARATION**

- A. Verify identity of each item before installing identification products.
- B. Do not install adhesive products when ambient temperature is lower than recommended by manufacturer.
- C. Provide identification product listed for the location in which it is to be installed.
- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.
- E. Painted Identification: Prepare surface and apply paint according to Division 09 painting sections.

**3.2 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. For surfaces that require finish work, apply identification devices after completing finish work. Do not install identification products until final surface finishes and painting are complete.
- C. Install self-adhesive labels and markers to achieve maximum adhesion, with no bubbles or wrinkles and edges properly sealed. Replace labels and markers that exhibit bubbles, wrinkles, curling or other signs of improper adhesion.
- D. Location: Install identification products to be plainly visible for examination, adjustment, servicing, and maintenance without interference with operation and maintenance of equipment. Unless otherwise indicated, locate products as follows:
  - 1. Surface-Mounted Equipment: Enclosure front.
  - 2. Flush-Mounted Equipment: Inside of equipment door.
  - 3. Free-Standing Equipment: Enclosure front; also enclosure rear for equipment with rear access.
  - 4. Elevated Equipment: Legible from the floor or working platform.
  - 5. Branch Devices: Adjacent to device.
  - 6. Interior Components: Legible from the point of access.
  - 7. Conduits: Legible from the floor.
  - 8. Boxes: Outside face of cover.
  - 9. Conductors and Cables: Legible from the point of access.
  - 10. Devices: Outside face of cover.
- E. Attach non-adhesive signs and plastic labels with screws and auxiliary hardware appropriate to the location and substrate.
  - 1. Mounting Holes for Mechanical Fasteners: Two, centered on sides for sizes up to 1 inch high; Four, located at corners for larger sizes.
- F. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.
- G. Equipment Nameplates and Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual.
  - 1. Indoor Clean, Dry Locations: Use plastic nameplates, unless noted otherwise.
  - 2. Outdoor Locations: Use stainless steel nameplates suitable for exterior use.

- H. Install identification products centered, level, and parallel with lines of item being identified.
- I. Mark all handwritten text, where permitted, to be neat and legible.
- J. For refrigeration systems: Neatly bundle circuits and clearly tag and label each circuit with panelboard, branch circuit designation and refrigeration system number at each termination.

END OF SECTION

**SECTION 26 05 73 - POWER SYSTEM STUDIES****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes computer-based studies for the following:
  - 1. Short-circuit analysis.
  - 2. Protective device coordination study.
  - 3. Arc flash and shock risk assessment, including arc flash hazard labels.
  - 4. Harmonic study.
- B. Criteria for selection and adjustment of equipment and associated protective devices not specified in this section, as determined by the studies performed.

**1.2 ADMINISTRATIVE REQUIREMENTS**

- A. The AIC ratings indicated on the Drawings are preliminary and will be finalized based on the results of the short-circuit study. Device ratings for furnished equipment shall be as required by the results of the short-circuit study at no additional cost.
- B. Coordination:
  - 1. Existing Installations: Coordinate with equipment manufacturer(s) to obtain data necessary for completion of studies.
  - 2. Coordinate the work to provide equipment and associated protective devices complying with criteria for selection and adjustment, as determined by studies to be performed.
  - 3. Notify Contract Administrator of any conflicts with or deviations from the contract documents. Obtain direction before proceeding with work.
- C. Pre-Study Meeting: Conduct meeting with Owner to discuss system operating modes and conditions to be considered in studies.
- D. Sequencing:
  - 1. Initial Study:
    - a. Study must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. Do not order equipment until matching study reports and product submittals have both been evaluated by the Contract Administrator.
    - b. If study has not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the Contractor at no additional cost to the project.
  - 2. Final Study:
    - a. Study must be completed and submitted for review prior to substantial completion. Do not print arc flash labels until final study has been evaluated by the Contract Administrator.
    - b. Verify naming convention for equipment identification prior to creation of final drawings, reports, and arc flash hazard warning labels.
- E. Scheduling:
  - 1. Arrange access to existing facility for data collection with Owner.
  - 2. Where work of this section involves interruption of existing electrical service, arrange service interruption with Owner. Refer to Division 26 section "General Electrical Requirements" for additional requirements.

**1.3 SUBMITTALS**

- A. Product Data: In addition to submittal requirements specified in other sections, include manufacturer's standard catalog pages and data sheets for equipment and protective devices indicating information relevant to studies.
  - 1. Product data for computer software program to be used for studies.
  - 2. Include characteristic time-current trip curves for protective devices.
  - 3. Include impedance data for busway.
  - 4. Include impedance data for engine generators.
  - 5. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
  - 6. Include documentation of listed series ratings upon request.
  - 7. Identify modifications made in accordance with studies to meet the results of the study.
- B. Product Certificates: For coordination-study and short-circuit-study computer software programs, certifying compliance with IEEE 399.
- C. Qualification Data:
  - 1. Study Preparer Specialist qualifications.
  - 2. Field Testing Agency qualifications.
- D. Arc Flash Hazard Warning Label Samples: One of each type and legend specified.
- E. Other Action Submittals:
  - 1. Initial Study report, stamped or sealed and signed by study preparer, including:
    - a. Cover page including date of study, study methodology, assumptions made and software products used.
    - b. Study input data, including completed computer program input data sheets.
    - c. Short-circuit study report.
    - d. Equipment evaluation report.
    - e. Coordination-study report.
    - f. Settings report.
    - g. Harmonic analysis report.
  - 2. Final Study report, stamped or sealed and signed by study preparer, including:
    - a. Cover page including date of study, study methodology, assumptions made, software products used, and summary of changes between initial and final studies.
    - b. Study input data, including completed computer program input data sheets.
    - c. Short circuit study report.
    - d. Equipment evaluation report.
    - e. Coordination-study report.
    - f. Settings report.
    - g. Harmonic analysis report.
    - h. Arc-Flash Hazard Analysis, including labels.
  - 3. Certification that field adjustable protective devices have been set in accordance with requirements of studies.
- F. Record Drawings: Submit Record Drawings as required by Division 01 and Division 26 Section "General Electrical Requirements":
  - 1. Accurately record on the One-Line Diagram actual ratings and settings for all overcurrent devices, both adjustable and non-adjustable, including all changes made during construction, due to the study, or both.
  - 2. Include computer software files used to prepare studies with file name(s) cross-referenced to specific pieces of equipment and systems.
  - 3. Include copies of previous studies and existing drawings that were obtained during the data collection phase of the study.

## 1.4 QUALITY ASSURANCE

- A. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.
- B. Study Preparer Qualifications: An organization experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
  - 1. Professional engineer, licensed in the state in which the Project is located, shall be responsible for the study and with a minimum five years experience in the preparation of studies of similar type and complexity using the specified computer software. All elements of the study shall be performed under the direct supervision and control of engineer.
- C. Comply with IEEE 399 for general study procedures.
- D. Comply with IEEE 141, 242 and 551 for short-circuit currents and coordination time intervals.
- E. Comply with IEEE 1584 and NFPA 70E for arc-flash hazard calculations.
- F. Field Testing Agency Qualifications: Independent testing organization specializing in testing, analysis, and maintenance of electrical systems with minimum five years experience; NETA Accredited Company.
  - 1. Field Supervisor: Certified electrical testing technician; NETA ETT Level III.

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Computer Software Developers: Subject to compliance with requirements, use the latest commercially available computer software programs utilizing the specified methodologies developed by one of the following:
  - 1. CYME International, Inc.
  - 2. EDSA Micro Corporation.
  - 3. Electrical Systems Analysis, Inc.
  - 4. SKM Systems Analysis, Inc.
  - 5. Operation Technology, Inc.

### 2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399.
- B. Analytical features of short-circuit-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399, Table 7-4.
- C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices.
  - 1. Zero-Sequence current.
  - 2. Arcing faults.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

- B. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices not submitted for approval with coordination study may not be used in study.
- C. Short-circuit study and coordination study to be performed prior to the final submittals for any piece of electrical equipment which has an AIC rating or an over-current protective device so that correct equipment gets ordered for the project conditions.
- D. Arc Flash Study must be performed after conductors and equipment have been installed and after the project's utility company confirms the available fault current. A final short-circuit and coordination study with all device settings shall be submitted with the Arc Flash Study. The goal of the revised settings is to minimize the arc flash hazard while maintaining reasonable coordination and selectivity. For the components of emergency and legally required standby system components, full selectivity must be maintained.

### 3.2 SYSTEM COMPONENTS TO BE INCLUDED IN STUDIES

- A. Study shall begin with the utility and each alternate power source overcurrent device(s) serving the Project and end at the last branch circuit overcurrent protective device. This includes studies of the complete paths and operating modes on both sides of any transfer switch, contactor or circuit breaker.
- B. Operating modes shall include, where applicable:
  - 1. Utility as a source.
  - 2. Generator as a source.
  - 3. Utility and generator in parallel.
  - 4. Bus tie breaker open/close positions.
  - 5. Maintenance settings.
- C. Components include, but are not limited to:
  - 1. Switchgear
  - 2. Switchboards
  - 3. Distribution Panelboards
  - 4. Panelboards
  - 5. Motor Control Centers
  - 6. Chiller Controllers
  - 7. Air Handling Equipment
  - 8. Roof Top HVAC equipment
  - 9. Elevator controllers

### 3.3 POWER SYSTEM DATA FOR STUDIES

- A. Compile information on project-specific characteristics of actual installed equipment, protective devices, feeders, etc. as necessary to develop single-line diagram of electrical distribution system and associated input data for use in system modeling. Gather and tabulate the following input data to support studies:
  - 1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
  - 2. Impedance of utility service entrance.
  - 3. Electrical distribution system diagram showing the following:
    - a. Indicate load current that is the basis for sizing continuous ratings of circuits for cables and equipment.
    - b. Protective Devices: Include circuit-breaker and fuse-current ratings and types;
    - c. Protective Relays: Include manufacturer/model, type, settings, current/potential transformer ratio, and associated protective device.

- d. Transformers: Include primary and secondary voltage ratings, kVA rating, winding configuration, percent impedance, and X/R ratio. kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
  - e. Generators: Include manufacturer/model, kilovolt amperes, size, voltage, and source impedance.
  - f. Cables: Indicate conduit material, sizes of conductors, conductor insulation, and length.
  - g. Busways: Include bus material, ampacity and impedance.
  - h. Motors: Include manufacturer/model, type (e.g. induction, synchronous), horsepower rating, voltage rating, full load amps, and locked rotor current or NEMA MG 1 code letter designation.
  - i. Variable frequency drive rating, manufacturer, and model series.
4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram:
- a. Special load considerations, including starting inrush currents and frequent starting and stopping.
  - b. Magnetic inrush current overload capabilities of transformers.
  - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
  - d. Ratings, types, and settings of utility company's overcurrent protective devices.
  - e. Special overcurrent protective device settings or types stipulated by utility company.
  - f. Protective Devices:
    - 1) Circuit Breakers: Include manufacturer/model, type (e.g. thermal magnetic, electronic trip), frame size, trip rating, voltage rating, interrupting rating, available field-adjustable trip response settings, and features (e.g. zone selective interlocking).
    - 2) Fuses: Include manufacturer/model, type/class (e.g. Class J), size/rating, and speed (e.g. time delay, fast acting).
  - g. Time-current-characteristic curves of devices indicated to be coordinated.
  - h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
  - i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
  - j. Panelboards, switchboards, motor-control center ampacity, and interrupting ratings in amperes rms symmetrical.
5. Existing Installations:
- a. Provide the services of field testing agency or equipment manufacturer's representative to perform field data collection.
  - b. Collect data on existing electrical distribution system necessary for completion of studies, including field verification of available existing data (e.g. construction documents, previous studies). Include actual settings for field-adjustable devices.

### 3.4 SHORT-CIRCUIT STUDY

- A. Source Impedance: Utility company's fault current contribution as provided by utility.
- B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project and use approved computer software program to calculate values. Include studies of system-switching configurations and alternate operation modes that could result in maximum fault conditions.
- C. Calculate momentary and interrupting duties on the basis of maximum available fault current.
- D. Comply with IEEE 241 and IEEE 242 recommendations for fault currents and time intervals.

- E. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with the following:
  - 1. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.50.
  - 2. Low-Voltage Fuses: IEEE C37.46.
  - 3. Circuit Breakers: IEEE C37.13.
- F. Study Report:
  - 1. Enter calculated X/R ratios and interrupting (5-cycle) fault currents on electrical distribution system diagram of the report.
  - 2. Show interrupting (5-cycle) and time-delayed currents (6 cycles and above) on medium-voltage breakers as needed to set relays and assess the sensitivity of overcurrent relays.
  - 3. List other output values from computer analysis, including momentary (1/2-cycle), interrupting (5-cycle), and 30-cycle fault current values for 3-phase, 2-phase, and phase-to-ground faults.
- G. Equipment Evaluation Report: Prepare a report on the adequacy of overcurrent protective devices and conductors by comparing short-circuit current ratings of these devices with calculated short-circuit current momentary and interrupting duties. Identify locations where the available fault current exceeds the equipment short circuit current rating, along with recommendations.

### 3.5 COORDINATION STUDY

- A. Perform coordination study and prepare a written report using the results of the short-circuit study and approved computer software program. Comply with IEEE 399.
- B. Comply with NFPA 70 for overcurrent protection of circuit elements and devices.
- C. Comply with IEEE 241 and IEEE 242 recommendations for fault currents and time intervals.
- D. Analyze alternate scenarios considering known operating modes.
- E. Transformer Primary Overcurrent Protective Devices:
  - 1. Device shall not operate in response to the following:
    - a. Inrush current when first energized.
    - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
    - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
  - 2. Device shall protect transformer according to IEEE C57.12.00, for fault currents.
- F. Motors served by voltages more than 600 V shall be protected according to IEEE 620.
- G. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Verify adequacy of phase conductors at maximum three-phase bolted fault currents, equipment grounding conductors, and grounding electrode conductors at maximum ground-fault currents.
- H. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:
  - 1. Tabular Format of Settings Selected for Overcurrent Protective Devices:
    - a. Device tag.
    - b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
    - c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
    - d. Fuse-current rating and type.
    - e. Ground-fault relay-pickup and time-delay settings.
  - 2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve the level of selective coordination required in the contract documents or by the edition of the National Electrical Code (including any local jurisdiction amendments) the project must comply with. Graphically illustrate that adequate time separation exists

between series devices, including power utility company's upstream devices. Show the following specific information:

- a. For protective Devices:
    - 1) Device tags.
    - 2) Circuit Breakers: Include long time pickup and delay, short time pickup and delay, and instantaneous pickup.
    - 3) Protective Relays: Include current/potential transformer ratios, tap, time dial, and instantaneous pickup.
    - 4) Include ground fault pickup and delay.
    - 5) Include fuse ratings.
  - b. Voltage and current ratio for curves.
  - c. Three-phase and single-phase damage points for each transformer.
  - d. No damage, melting, and clearing curves for fuses.
  - e. Cable damage curves.
  - f. Generator full load current, overload curves, decrement curves and short-circuit withstand points.
  - g. Transformer inrush points.
  - h. Maximum fault current cutoff point.
  - i. Capacitor full load current and damage curves.
3. Include conclusions and recommendations.
  4. Completed data sheets for setting of overcurrent protective devices.
  5. For emergency, legally required standby and health care essential power systems, such systems must selectively coordinate to the values indicated below unless local amendments to the National Electrical Code require a different value.
    - a. Emergency (NEC article 700) 0.01 seconds
    - b. Legally Required Standby (NEC article 701) 0.01 seconds
    - c. Elevator Systems (NEC article 620) 0.01 seconds
    - d. Health Care Essential Electrical Systems (NEC article 517)
      - 1) Equipment Branch 0.10 seconds
      - 2) Critical Branch 0.01 seconds
      - 3) Life-Safety Branch 0.01 seconds

### 3.6 HARMONIC STUDY

- A. Perform harmonic study and prepare a written report using the results of the harmonic study and approved computer software program.
- B. Comply with IEEE Std. 519 at the Point of Common Coupling (PCC) for allowable individual (odd) harmonic distortion and Total Harmonic Current Distortion (THDi).
- C. Harmonic Study Report: Prepare a written report indicating the following results of the harmonic study:
  1. The following assumptions are to be made for the purposes of determining initial conditions and recommendations.
    - a. All motors, pumps, and mechanical equipment to be in a running, steady-state condition.
    - b. All panelboards to be operating at 25% of rated capacity at 80% power factor.
  2. Tabular form of modeled individual harmonics and THDi under base case (no active harmonic filter correction).
  3. Provide specific recommendations for improving the electrical distribution performance found in the study, to correct to IEEE Std. 519 minimum requirements, including but not limited to:
    - a. Active Harmonic Filter (AHF) location in electrical distribution system, amperage rating, and voltage rating.
    - b. Tabular form of modeled individual harmonics and THDi with recommended option(s).
    - c. Provide voltage and current waveform plots of each case at the PCC.

### 3.7 ARC-FLASH HAZARD ANALYSIS

- A. Determine arc-flash incident energy levels and flash protection boundary distances based on the results of the Short-Circuit and Coordination studies in accordance with IEEE 1584. Perform the analysis under worst-case arc-flash conditions for all modes of operation.
- B. In addition to the requirements outlined in IEEE 1584, the study shall include all equipment rated less than 240 Volts fed by transformers less than 125 kVA in the calculations.
  - 1. Where reasonable, study preparer may assume a maximum clearing time of two seconds in accordance with IEEE 1584, provided that the conditions are such that a worker's egress from an arc flash event would not be inhibited.
  - 2. For single-phase systems, the calculations may be performed assuming a three-phase system in accordance with IEEE 1584, yielding conservative results.
- C. For equipment with main devices mounted in separate compartmentalized sections, perform calculations on both the line and load side of the main device.
- D. Identify all locations and equipment to be included in the arc-flash hazard analysis:
  - 1. Include a copy of the facility one-line in the report.
  - 2. Identify the possible system operating modes including tie-breaker positions, and parallel generation.
  - 3. Calculate the arcing fault current flowing through each branch for each fault location.
  - 4. Determine the time required to clear the arcing fault current using the protective device settings and associated trip curves.
  - 5. Select the working distances based on system voltage and equipment class.
  - 6. Calculate the incident energy at each fault location at the prescribed working distance.
  - 7. Determine the hazard/risk category (HRC) for the estimated incident energy.
  - 8. Calculate the flash protection boundary at each fault location.
  - 9. Document the assessment in reports and one-line diagrams.
  - 10. Provide labels to be placed on each piece of equipment analyzed. Label shall show the calculated incident energy and hazard/risk category for the calculated incident energy.
- E. Results of the arc-flash study shall be summarized in a final report containing the following:
  - 1. Basis, method of hazard assessment, description, purpose, scope, and date of the study.
  - 2. Tabulations of the data used to model the system components and a corresponding one-line diagram.
  - 3. Descriptions of the modes of operation evaluated and identification of the worst case scenario used to evaluate equipment ratings.
  - 4. Tabulations of equipment incident energies, hazard risk categories, and flash protection boundaries. The tabulation shall identify and clearly note equipment that exceeds allowable incident energy ratings.
  - 5. Required arc-flash labeling and placement of labels.
  - 6. Conclusions and recommendations, including recommendations for reducing incident energy at locations where calculated maximum incident energy exceeds 8 calories per sq cm.

### 3.8 OVERCURRENT PROTECTIVE DEVICE SETTING

- A. Manufacturer's Field Service: Engage a factory-authorized service representative, of electrical distribution equipment being set and adjusted, to assist in setting of overcurrent protective devices within equipment.
  - 1. After installing overcurrent protective devices and during energizing process of electrical distribution system, perform the following:
    - a. Verify that overcurrent protective devices meet parameters used in studies.
    - b. Adjust devices to values listed in final study results.
    - c. Adjust devices according to recommendations in Chapter 7, "Inspection and Test Procedures," and Tables 100.7 and 100.8 in NETA ATS.

**3.9 INSTALLATION**

- A. Install arc flash warning labels. Refer to Division 26 section Identification for Electrical Systems for additional requirements.

**3.10 FIELD QUALITY CONTROL**

- A. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
  - 1. Inspect and test protective devices in accordance with the NETA Acceptance Testing Specification. Certify compliance with test parameters.
- C. Overcurrent protection devices will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports, including a certified report that identifies protective device settings have been adjusted in accordance with the requirements of the study. Include notation of conflicts with or deviations made from the studies or the contract documents, deficiencies detected, remedial action taken, and observations after remedial action.

**3.11 TRAINING**

- A. Provide training for Owner's personnel on electrical safety pertaining to arc flash and shock hazards.
- B. Use site-specific arc flash and shock risk assessment report as training reference, supplemented with additional training materials as required.
- C. Provide minimum of eight hours of training performed by a representative of the entity performing the study.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 09 10 - CENTRALIZED DIMMING SYSTEM****PART 1 - GENERAL REQUIREMENTS****1.1 SUMMARY**

- A. Contractor shall install, provide, and test State of Alabama energy code compliant architectural dimming control system(s) as specified herein for the areas indicated on the drawings and load schedules. Contractor shall coordinate all work described in this section with applicable plans and specifications, including but not limited to, wiring diagrams, conduit diagrams, emergency power systems, A/V systems, shade devices, fire alarm, and security systems.
- B. Work within this section shall include low voltage wallbox controls, low voltage wired control devices, architectural dimming panels, interface components, and/or modules, emergency transfer system, and Digital-Network Lighting Control System equipment and software including wired devices for energy code compliance. System to contain internet connected processing Hub with Ethernet connection and dedicated IP address furnished by owner for internet diagnostics and connection to BAS system. System to connect to building Wi-Fi system and to include networked dimming panels for normal and emergency loads as designated and with networked power supply units. Refer to Section 27 for coordination with internet requirements and IP addressing. All network equipment, including routers, network switches, and network cables to be included in base bid, whether supplied by manufacturer or by others that comply with ETC requirements. System to also be compatible with iPad tablet devices already furnished by owner for portable control of entire system with CAD-based footprint of all areas described herein including the exterior facade and site, vestibules and entry lobbies, concourse areas, lounge and suites, and event level tunnel inscribed on iPad for clarity and ease of controlling lighting scenes, individual zone control, and remote visualization and control of rooms. Architect to provide CAD footprints of spaces to manufacturer at their requested schedule in order to imbed spatial footprints into server. Dimming system manufacturer to provide iPad App and license agreement for installing on to owner provided iPads.
- C. System to include a total of nine (9) wired Mosaic/ Pharos Tessera/TPC wall recessed touch screen panels connected via Cat5/6 cable to a remote EXT series single universe controllers and to light fixture's DMX wiring and DMX control boxes. These NINE (9) Pharos/ Tessera DMX touch screens and EXT single universe controllers to be provided as such **1.** Event Level Grand Hall storage area under stair for control of type "RL1A" DMX backbone as indicated per plans. **2.** Event Level Staff offices-room 01.05.04 for control of fixture type "SL1", "SL2", "SL6", "SL7", "SL8", "SL10", and "SL13" only. **3 4 5 6.** Event Level north ballrooms-rooms 01.07.01 to 01.10.01. Each of four (4) rooms to be furnished with Pharos/ Tessera touch screen as indicated per plan for control of type "WL2" fixtures and "RL1A" DMX backbone. Programming of the DMX touch screen to include additional pages for combinations of partitioned rooms typical for other convention center designs. **7.** Event Level west ballroom-rooms 01.31.02. Furnished with Pharos/ Tessera touch screen as indicated per plan for control of type "RL1A" DMX backbone. **8.** Event Level Home Locker Room-01.13.02 for control of fixtures "FL10" and "FL11" within room with separate pages to control color and color temperature. An additional page to control the tunnel experience with fixture type "TL5" and "TL6". **9.** Suite Level Video Production Room-03.21.02 to control fixture types "LL2", "SL2", "SL7", "SL8", "SL9", "SL13", "TL5", "TL6", "TL12", "TL13", "WL4", and "WL7" associated with site lighting poles "SLP1, SLP2, SLP5 series. Programming of the DMX touch screen to include pages for: Plaza Experience so that from the touch screen or through the 3rd party theatrical console, the plaza DMX based fixtures can be manipulated to coincide with arena activities, Arena activities, for fixtures "LL2", "TL12", "TL13", "WL4", and "WL7" for blackout conditions or pre-game festivities, and a final page for player introduction to control fixtures "TL5" and "TL6" of the tunnel area.

- D. Each of these "MTS" designated Mosaic/ Pharos touch screen device to playback scenes or macros as developed during commissioning with programming through computer program and not through TPC device due to complexity of macros. Color to be white as verified by architect. Costs for said devices and all programming time required to develop color scene triggers or macros/ programs at the request of the owner representative to be part of specified dimming system manufacturer's overall Bill of Materials and included in base bid. Time required for days or weeks worth of programming time based on the nine (9) areas to be included in the base bid for dimming system. Dimming system manufacturer to be responsible for DMX interface equipment to allow color and scene "triggers" from Mosaic/Pharos DMX control devices.
- E. At all corners of the catwalk/roof level, contractor to install a wireless DMX antenna connected to Acclaim's Aria wireless DMX transmitter/receiver on the roof and then connected via wired DMX within the building to the Pharos/ Mosaic single universe DMX touch screen designated as station "MTS" in the Event Level administration office. From the southwest antenna and wireless DMX transmitter/ receiver, an additional run of wired DMX running through the building to also connect to the Pharos touch screen noted above. The northwest Acclaim's Aria transmitter/ receiver and antenna to be within field of view of fixture types "SL1" and "SL2" along Civic Center Drive. The six (6) existing poles along Civic Center Drive to support the Acclaim Aria wireless transmitter/ receiver as per manufacturer's requirements so that existing power wiring to these poles can be re-used without additional expense of providing DMX control wiring. The southwest Aria transmitter/receiver and antenna to be within field of view of fixture types "SL6", "SL7", "SL8", "SL10", and lighting poles "SLP1", "SLP2", and "SLP5" series at the circular plaza. The northeast and southeast antennas to control DMX fixtures associated with site lighting poles "SLP5" series. A transmitter/receiver to be mounted to each of the "smart" site lighting poles, types "SLP1", "SLP2", and "SLP5" series which connects to specific fixtures on said poles through wired DMX. The wireless DMX system for Civic Center Drive and within the new southwest plaza and connecting paths allows DMX control without the need to run DMX or Ethernet cable underground.
- F. Within the Control booth/ video Production room-#03.21.02 at the Suite Level, and at the exit corridor of Event Level-room 01.27.10, both a DMX receptacle and Ethernet based receptacle at a designated wall to be provided by contractor for the use of a owner supplied or 3<sup>rd</sup> party temporary theatrical control console for outdoor stage productions with the capability of "take-command" functions. Only fixture types "LL2" at the main concourse with DMX control, type "SL2"-RGBW flood on existing poles along Civic Center Drive, type "SL7" RGBW flood at the new circular plaza, type "SL13" at the roof, and types "TL5" and "TL6" RGBW floods and spots at the player tunnel, types "TL12" and "TL13" mounted to the catwalk to illuminate underside of arena roof, type "WL4" at the south end of the Main Concourse, and type "WL7" along the main concourse to be controlled by this 3<sup>rd</sup> party theatrical control console in the Control booth. For the Event Level corridor location-room #01.27.10, the 3<sup>rd</sup> party temporary theatrical console by theatrical production company to have access to site poles "SLP1" and the temporary pipe clamp mounted fixtures to be provided by the theatrical production company as well as the roof mounted fixtures, type "SL13". Per type "SLP1" specification, the site pole to include a dedicated 120v service to feed 1-1/2" O.D black theatrical pipe permanently secured to these type "SLP1" poles for future theatrical stage lighting with DMX wireless control. The DMX/ Ethernet receptacles to be connected to the ETC or approved centralized architectural dimming system for control of DMX based architectural light fixtures. Only the specific fixtures noted in the schedule and per this section to be controlled at this position. The "take-command" function of the theatrical console to allow network or owner personnel the opportunity for black-out conditions or for the opportunity to control architectural light fixtures for pre-game activities. Control booth/Video Production room to also include an ETC 2-button preset station to control all suites, except the steplights required for egress during blackout, for blackout condition. In addition, said 2-button station to also control type "DL5A" accent fixtures in the suite level and on the arena side of the blackout curtain for control of these non-DMX fixtures for blackout conditions. Only the DMX based lighting equipment on the interior and exterior as defined in Section C. above to be controlled in this room; public areas including restrooms and bars that cannot be affected by blackout conditions for egress needs shall not be controlled from this room.

- G. For A/V integration within the Ballrooms or other designated spaces, the transferring of final, approved programmed scenes, fade rates, and zone intensity levels to the AMX/ Crestron control system as supplied by A/V provider shall be performed by A/V provider as needed. Costs associated with time required to transfer data from ETC or other manufacturers listed to A/V device included in base bid as well as interface devices required.
- H. Manufacturer to submit Shop Drawings as required by Division 1 and the GENERAL CONDITIONS.
- I. Submit riser diagram showing components and interconnecting wiring. Indicate size, type, and number of conductors.
- J. Manufacturer to submit a dimming load schedule with respective control zones and dedicated circuits indicated. Standard cut sheets shall be presented for additional control devices.

## 1.2 QUALIFICATIONS

- A. The architectural dimming system shall have been in production for a minimum of 10 years.

## 1.3 REGULATORY REQUIREMENTS

- A. Provide products listed and classified by Underwriter's Laboratories, Inc. as suitable for purpose intended. Each module shall be specifically listed by U.L. for control of type of load; i.e., incandescent, 0-10v LED, electronic, or magnetic low voltage, or phase-adaptive (PWM).
  - 1. Manufacturer shall be ISO 9001 certified. Provide a copy of the certificate if required.

## 1.4 MAINTENANCE MANUALS

- A. Provide operating instructions for all components.
- B. Provide record wiring diagrams of the system.

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 ACCEPTABLE MANUFACTURERS

- A. ETC Electronics shall be the preferred Basis of Design manufacturer for the project. System shall be based on ETC's centralized dimming system with integral Paradigm processor and main lug and feed through dimming panels for 277V normal or normal/emergency service with capabilities to control 0-10v loads or ELV loads as noted in the light fixture schedule or other panels as needed with 120V or 277V ELV/ Phase Adaptive loads as indicated. System to also include wireless ceiling occupancy (vacancy) sensors and daylight sensors with wired mini-hubs to send signals to wireless devices around the mini-hub as well as wired low voltage preset stations. System to include all component parts required for an operational and energy code compliant system. Furthermore, system to include any DMX interface network device and/ or contact closure interfaces to allow a "trigger" that accesses preset color scenes or macros through dimming system iPad devices furnished by dimming system manufacturer. During the installation and programming phase, dimming manufacturer to coordinate with university personnel to ensure communication with existing color-changing lighting equipment for a single point of control. Architectural dimming system manufacturer shall not be responsible for programming of color-changing scenes or effects; only the recall of said scenes and colors. Costs associated with programming time to establish colors and macros associated with color-changing fixtures to be coordinated through the contractor and local programmers as noted in light fixture schedule. As required with an A/V system, manufacturer to also provide network interfaces for coordination with A/V touch screen devices. Comparable systems from Lutron Electronics or Crestron to be an acceptable alternate manufacturer.

## 2.2 COMPONENTS

- B. General: ETC system includes computer-based software that provides control, configuration, monitoring, alerting and reports. Software to be installed within the desktop computer provided by dimming system manufacturer as noted in Section 1.1 System includes:
1. Lighting Management Panel
  2. Light management computer software.
  3. Building Automation System (BAS) communication through network/ IP address interface
  4. Factory assembled dimming and switching panels
  5. Low voltage wired wall stations
  6. Wired occupancy and daylight sensors to link back to central processor
  7. Network Interface Devices for AV integration as required
  8. Computer jacks for remote programming within all electrical closets.
  9. DMX input/ output interface for recall scenes and take-command function from console
  10. iPad control app and licenses by dimming system manufacturer for iPads provided by owner as part of their existing stock. Dimming system manufacturer is not required to supply iPads.

## 2.3 DIMMING CABINETS AND DIMMING PANELS

- A. Project Conditions:
1. Ambient temperature: 0 degrees to 40 degrees C (32 degrees to 104 degrees F).
  2. Relative humidity: Maximum 90 percent, non-condensing.
  3. Lighting control system must be protected from dust during installation.
  4. Ambient temperature for Q-Manager, system computer: 10 degrees C to 35 degrees C (50 degrees F – 90 degrees F)
- B. General:
1. Dimmers designed and tested to specifically control LED sources from specific manufacturers, inclusive of 0-10V dimming drivers, ELV drivers with requirements for Pulse-width modulation (PWM) modules, and MLV transformers operating LED sources. Dimmers to also be tested for standard, non-LED sources including incandescent/tungsten, magnetic low voltage, electronic low voltage, neon/cold cathode, fluorescent dimming ballasts, and non-dim loads.
  2. Utilize universal 16A continuous-use UL listed dimmer.
  3. Limit current rise time to minimum 350  $\mu$ sec as measured from 10-90 percent of load current waveform and minimum 525  $\mu$ sec as measured from 0-100 percent of load current waveform at 50 percent rated dimmer capacity at a 90 degree conduction angle. Current rise to be minimum 400  $\mu$ sec as measured from 10-90 percent of load current waveform and minimum 600  $\mu$ sec as measured from 0-100 percent of load current waveform at 100 percent rated dimmer capacity at a 90 degree conduction angle.
  1. Dimmers controlling public egress designated fixtures to have low end threshold factory set so as not to go below required code light levels.
- C. The dimmer cabinet shall be fabricated from 10 gauge formed steel. It shall have black epoxy painted finish. Contractor shall reinforce wall as required for wall-mounted panels.
- D. The cabinet door shall have a keyed lock. Manufacturer to furnish 2 spare keys.
- E. Dimming panel shall be completely pre-wired by the manufacturer. The contractor shall be required to provide input feed wiring and load wiring which terminates to a set of clearly marked terminals. No other wiring or assembly by the contractor shall be permitted. Contractor shall not remove jumpers or safety device load protection to dimmers until factory field commissioning has determined all loads are connected properly.

- F. Dimming cabinets shall be cooled via free-convection or integral fan. Panels shall allow full-rated dimmer capacity. Panels shall provide airflow across the heat sink areas and through the dimmer chassis. Contractor shall not install multiple cabinets directly above one another, or in any other means that restricts airflow and heat dissipation
- G. For a hybrid control system involving distributed load dimming packs, said devices shall be suitable for plenum conditions.

## 2.4 DIMMING MODULES

- A. General
  1. Dimmer modules shall be a self-contained assembly, factory wired and installed in a cabinet prior to shipment to the site.
  2. Quantities and sizes of each type of dimmer module shall be provided to control each type of load shown on the load schedule and/or drawings.
  3. All dimmers shall provide a smooth and continuous "square" law dimming curve throughout the range.
  4. A positive air gap relay shall be employed with each dimmer to ensure that the load circuits are open when the "off" function is selected.
  5. The maximum allowable asymmetry in the load wave form shall be  $\pm 1$  VDC.
  6. Electrolytic capacitors to operate at least 20 degrees C below the component manufacturer's maximum temperature rating when device is under fully-loaded conditions in 40 degrees C (104 degrees F) ambient temperature.
  7. Load Handling Thyristors (SCRs and triacs), Field Effect Transistors (FETs), and Isolated Gate Bipolar Transistors (IGBTs): The component's maximum current rating to be at least two times the dimmer's/relay's rated operating current.
  8. Capable of withstanding repetitive inrush current of 50 times operating current without impacting lifetime of dimmer/relay.
  9. Design and test dimmers/relays to withstand line-side surges without impairment to performance.
  10. Panels: Withstand surges without impairment of performance when subjected to surges of 6,000 volts, 3,000 amps per ANSI/IEEE C62.41 and per IEC 61000-4-5 surge requirements.
  11. When power is interrupted and subsequently returned, within 3 seconds lights will automatically return to same levels (dimmed setting, full on, or off) prior to power interruption
- B. Incandescent and Low Voltage Magnetic Transformer Dimmers
  1. Filtering shall be provided in each dimmer so that current rise time shall be at least 350 ma/microsecond at 50% rated dimmer capacity and at no point rise faster than 30ma/microsecond, measured from 10-90% of load-current waveform.
  2. Dimmers shall be capable of dimming lamps to 0% (Blackout)
  3. Each dimmer shall incorporate an electronic "soft-start" default at initial turn-on that smoothly ramps lights up to designated levels within 0.5 seconds.
  4. Provide real-time cycle-by-cycle compensation for incoming line voltage variations including changes in RMS voltage (plus or minus 2 percent change in RMS voltage/cycle), frequency shifts (plus or minus 2 Hz change in frequency/second), dynamic harmonics, and line noise.
  5. Contain circuitry designed to control and provide a symmetrical AC waveform to input of magnetic low voltage transformers per UL 1472, Section 5.11.
- C. Low Voltage Electronic Transformer Dimmers
  1. Dimming shall not adversely affect sound rating of the electronic transformers. In addition dimmer shall not allow any "flicker" at any point within the dimming range.
  2. Each dimmer shall incorporate and electronic "soft-start" default.

3. Dimmer to operate electronic low voltage transformers via reverse phase control. All ELV based loads, whether LED or quartz-based shall be connected to a Pulse-width modulation (PWM) module internal or external to the dimming cabinet or proper dimming of ELV loads.
- D. 0-10V dimming modules
  1. Dimming shall operate as constant current for all conditions including dimming from 10% to 1% where indicated. PWM (pulse width modulation) dimming for 0-10V shall not be allowed.

## 2.5 LOW VOLTAGE WALL STATIONS

- A. Allows control of any devices or parts of the Lutron System.
- B. Wired devices designated as SW1 to be a Heritage series 1-button devices (color to be white as verified by architect or otherwise designated by architect/ interior designer) for those areas defined as "SW1" on documents. Button to be programmed so that during hours of operation button is disengaged. During after hours, button to turn all lights in restrooms to full output if vacancy sensor in restrooms turn off lights.
- C. Wired devices designated as SW2 to be a Heritage series 2-button devices (color to be white as verified by architect or otherwise designated by architect/ interior designer) for those areas defined as "SW2" on documents. 2-button station to represent scenes on and scene 13 of bars to allow (2) alternate scenes for operator. 2-button stations for other areas to represent on/off scenes if vacancy sensor turns off lights. Buttons to be programmed and a Sequence of Operation to be developed per each area during field commissioning.
- D. Wired devices designated as SW3 to be a Heritage series 3-button devices (color to be white as verified by architect or otherwise designated by architect/ interior designer) for individual suites or other areas defined as "SW3" on documents. 3-button station to represent scenes 1-3 with NO "off" scene available for suites or scenes 1 and 2 with "off" scene as defined per area. 3 scenes consistent for each space to be programmed and a Sequence of Operation to be developed per each area during field commissioning.
- E. Wired devices designated as SW5 to be a Heritage series 5-button device (color to be white as verified by architect or otherwise designated by architect/ interior designer) for those areas defined as "SW5" on documents. 5-button station to represent scenes 1-4 with "off" scene available or scenes 1-5 without "off" scene as defined per individual area. 4 or 5 scenes to be programmed and a Sequence of Operation to be developed per each area during field commissioning.
- F. Wired devices designated as SW6 to be a Heritage series 6-button device (color to be white as verified by architect or otherwise designated by architect/ interior designer) for those areas defined as "SW6" on documents. Station to include 4-buttons for lighting scenes and 2 buttons for "open/ close" of automated shade motor control. Scenes to be programmed and a Sequence of Operation to be developed per each area during field commissioning.
- G. Wired devices designated as SW7 to be 7-button device (color to be white as verified by architect or otherwise designated by architect/ interior designer) for those areas defined as "SW7" on documents. 7-button station to represent scenes 1-4 with "off" scene available with separate raise/lower function to control all zones with universal raise/lower function. Scenes to be programmed and a Sequence of Operation to be developed per each area during field commissioning.
- H. Wired device designated as MS to be a multi-page 14" wide AMX/ Crestron, or ETC touch-screen panel for master control of all dimming system public domain controlled areas. Master control station to be located in Security Office-room 01.23.06 with separate pages for: Event Level, Main concourse, and Suite Level. Master control station shall not be able to access locker rooms or individual suites, however, master control station can control suite lounges or loge clubs. 14" wide touch screen with programming of pages for each level and additional pages per level of individual

rooms and scene names and Sequence of Operations to be included in base bid. An interface device required by dimming system manufacturer to communicate and coordinate with switch MS to be included by dimming system manufacturer.

- I. Wired devices designated as MTS to be a Mosaic/ Pharos TPC wall recessed touch screen panel connected via Cat5/6 cable to a remote EXT series single- universe controller and to light fixture's DMX wiring and DMX control boxes. Refer to documents regarding location of devices to be coordinated and approved by architect and operator representative prior to final installation of devices. Each "MTS" designated Mosaic/ Pharos touch screen device to playback scenes or macros as developed during commissioning with programming through computer program and not through TPC device due to complexity of macros. Color to be white as verified by architect. Costs associated with actual DMX devices and control boxes to be provided by dimming system manufacturer as stated in Section 1.1.D. All ten (10) DMX touch screen devices and controllers to be indicated on one-line control diagrams for coordination and located per space.
- J. Confirm Sequence of Operation with owner during commissioning. Stated sequences and labeling is for reference only.
- K. Electronics
  1. Use RS485 wiring for low voltage communication.
- L. Functionality
  1. Upon button press, LEDs to immediately illuminate.
  2. LEDs to reflect the true system status. LEDs to remain illuminated if the button press was properly processed or the LEDs turn off if the button press was not processed.
  3. Engrave wall stations in English with appropriate button, zone, and scene engraving descriptions. Scene names and engraving to be determined by owner after project completion. Costs associated with engraving to be included in base bid.

## 2.6 WIRELESS WIRED CEILING SENSORS

- A. Wireless or wired occupancy sensor operating at 431 MHZ on ceilings of spaces as indicated and designated as per electrical documents. During "occupied" hours, as times so stated by the operator, occupancy sensor to act as means to turn lights to 100% upon detection with the capability of dimming to 50% after 30 minutes of inactivity. During "unoccupied" hours, as so determined by the operator, occupancy sensor to act as means to turn lights to 50% upon detection and turning off after 30 minutes of inactivity. Vacancy sensors to be indicated where noted and designated as per electrical documents. "Vacancy" sensor in rooms noted to turn lights off automatically after a period of non-activity, but with manual "on" requirement. Sensor to be disengaged by wallstations.
- B. Wireless daylight sensors designated with a "D" on ceilings as indicated on electrical documents. Wired daylight sensors to control only those zones as indicated on the control matrix. Light levels above 20fc measured by sensor to dim controlled zones.
- C. Power Savr wireless hub to connect wireless devices. Quantity of devices and distance from hub to devices not to exceed manufacturer's requirements. Wireless hub to be wired back to main hub as per one-line diagram.

## 2.7 INFRARED PARTITION CONTROLS

- A. For the Ballrooms with partition, system to include an infrared receiver/ transmitter pair located at the terminating point of the partition. Infrared receiver/ transmitter to automatically connect (or disconnect) individual rooms together without need for manual connection or other graphic interface. Device to include additional contact closure interface. Devices to be located 5 feet away from wall surface partitions run into to allow intended gap for passage between rooms with rooms acting independently. A/V system to access partition condition through network interface.

Dimming system manufacturer is not required to provide additional equipment for A/V interface specific to partition control.

## **2.8 A V INTERFACE AND CONTACT CLOSURE CONTROLS**

- A. As required, system to include A/V interface device and contact closure devices for “take command” operation of lighting scenes and “take command” of Mecho shades or other vendors through dimming system preset station. Specific A/V interface or shade system interface control, whether network or RS232 or contact closure to be coordinated with A/V system or automated shade system providers to ensure compatibility.

## **2.9 COMPUTER ACKS**

- A. Dimming system's main server and processor to be located in Fire Command Center-room 01.23.04 with computer jack to allow access to software and manual override of all loads associated with dimming system. Additional computer jacks that allow programming and download to the system's hub to be located in every electrical closet and with public concourses at each corner of concourse. Costs associated with data/ network wiring to these locations to be included in base bid and included in one-line diagram. Manufacturer to label computer jacks and cover plate as “dimming system”.

## **2.10 OVERCURRENT**

- A. Provide a UL 489 molded case main breaker.
- B. Primary circuit breakers in the dimmer module shall be rated at the same capacity as the dimmer. Both the Primary and the secondary breakers shall be thermal magnetic or magnetic for both overload and dead short protection, and shall have a minimum rating of 10,000 A.I.C. with a visual trip indicator. The breaker shall serve as disconnect for the dimmer.
- C. Each dimmer shall operate over an input range of 90 to 140 VAC, at 60Hz in an ambient air Temperature from 0° to 40° C. Each dimmer shall have a thermal sensor to shut down the dimmer's output when the heatsink temperature exceeds 185°F (85°C).
- D. Each dimmer shall be solid state with encapsulated silicon controlled rectifiers to provide symmetrical alternating current output to the load at any output level from OFF to FULL intensity.
- E. The solid state switch devices shall be mounted in a substrate material for heat dissipation. The substrate shall be encapsulated in an epoxy filled high impact plastic case with an optical isolator, a snubbing network and gating circuitry on the high voltage side of an integral opto-coupled control voltage isolator. Provide a minimum of 2500V RMS isolation between line and control in the switch device.

## **2.11 EMERGENCY SYSTEM**

- A. Contactor shall refer to one-line schematic documents and dimming panel schedule on electrical sheets for loads which shall be connected to normal/ emergency power or normal power. Normal/ emergency panels to be Feed-through type panels only.
- B. In event of power failure those loads designated as normal/emergency shall pass to designated transfer cabinet as supplied by dimming manufacturer transfer cabinet shall be listed as U.L. 1008 and U.L 924 standard. Transfer relay shall be connected in line as per manufacturer's one-line diagram so that during power failure all loads controlled in transfer cabinet default to full light levels; regardless if the load is ELV, MLV, or 0-10V. in the case of 0-10V loads, the emergency transfer shall not interrupt the control signal and a signal shall be sent across the control wires to ensure that fixture retains its full output status.

1. Transfer cabinet shall comprise voltage sensing circuitry to automatically transfer loads from normal to emergency feed when one or more of the phases in the normal feed drops to 55% (65 Volts) or below.
  2. Transfer cabinet shall contain an integral test switch to simulate normal power source failure for periodic verification of system operation. Access inside the transfer cabinet for test purposes shall not be necessary.
  3. Contractor shall connect normal/ emergency dimming panels to generator or redundant system able to provide full power through ETC device or other means of transfer to designated fixtures. ETC device to bring designated fixture to full power for emergency egress regardless of current dimmed setting during power failure.
- C. Emergency loads with self-contained batter back-up ballast connected to dimming system shall be contained within dedicated dimming panel as indicated on one-line diagram and as per load panel schedule per engineering documents. Contractor shall connect emergency ballast to "B" or constant hot of terminal block as per manufacturer's wiring diagram so as to provide constant power to emergency battery..

## 2.12 QUALITY CONTROL

- A. Components used in the lighting control system shall be inspected per the most current revision of Military Standard 105 or equivalent.
- B. Dimming module main power semiconductors shall be tested at a case temperature of 100 degrees C and with rated voltage applied for a minimum of 48 hours.
- C. Prior to shipment, the completely assembled dimming system shall be operated at full-rated load for a period of time long enough to identify and replace any components or subassemblies which would have failed within a short time of system star-up. All the dimmer and/or relays within a panel shall be full-load tested at the same time. Manufacturer shall prove that they have the capability of proving this full- load test as specified.
- D. Finished system shall also be fully tested for proper operation of all control functions per the approved submittal drawings.
- E. Each panel shall be certified by the technician who built the equipment or a quality assurance inspector of the successful completion of the tests described in 2.8, C and D above.

## 2.13 WARRANTY

- A. All bidding manufacturers to provide owner/ operator with full 100% coverage of parts and material for 8-years with pro-rating schedules. Custom, 8-year pro-rated warranties to be written for pro-rated coverage spanning 8 years starting with the date of system start-up completion. Costs associated with 8-year pro-rated warranty to be included in base bid associated with system and specifically noted. 8-year warranty to exclude labor costs.
- B. Paradigm processor is covered by a 1-year parts and labor warranty

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. The system shall be installed utilizing complete manufacturer's shop drawings and in accordance with these specifications.
- B. The electrical Contractor shall run separate neutrals for all branch load circuits.
- C. Provide dedicated network between server/ processors and dimming panels.

- D. Define each dimmer's/relay's load type, assign each load to a zone, and set control functions.
- E. Facility Representative to coordinate meeting between Facility Representative, Lighting Control System Manufacturer and other related equipment manufacturers to discuss equipment and integration procedures.

### 3.2 TRAINING AND SYSTEM COMMISSIONING

- A. At the end of Substantial Completion, the system shall be completely commissioned by a factory-trained engineer. During the design and construction process, dimming system factory agent shall conduct three (3) site visits. Visit 1 to be a pre-shop drawing submittal meeting between approved manufacturer, A/V system provider (as required), operator's IT director or other personnel, and a BAS/ BMS commissioning agent to review design and coordinate and ensure compatible components prior to official dimming system submittals. Required changes to the electrical one-line diagram to account for coordination equipment shall be provided to design team. Visit 2 shall be a "pre-wire" commissioning exercise by factory-trained personnel that shall include review of installed dimming system wiring to date as well as other non- dimming system specific wiring systems including BMS/ BAS wiring or coordination with fire-alarm system and coordination with sports lighting DMX control system interfacing and coordination verified during Visit 1. Second visit to include review of IP address interface and means for BAS/ BMS operator to seamlessly and effectively extract information programmed through the architectural dimming system to be accessed through the BAS without added programming time. "Pre-wire" commissioning to ensure compliance and coordination with the dimming system design intent and other systems so as to reduce future complications at substantial completion. Visit 3 to be a final commissioning exercise at substantial completion and to be performed upon notification by the electrical contractor that the system installation is complete and that all loads have been tested live for continuity and freedom from defects and that all control wiring has been connected and checked for proper continuity. The electrical contractor shall provide both the manufacturer and the Architect with ten working days' notice of the scheduled commissioning date. Pre-established factory start-up costs shall be included in the base bid for all three (3) visits and shall include adequate number of days on site by commissioning agent to perform all tasks, provide troubleshooting as required, train necessary facility personnel, and ensure system is completely operational and functioning to the owner representative's satisfaction. Base bid costs associated with the commissioning exercises shall be clearly defined with time on site as noted in Section 3.2.C.
- B. Startup and Programming
  - 1. Provide factory certified field service engineer to make site visits to ensure proper system installation and operation under following parameters
    - a. Qualifications for factory certified field service engineer:
      - 1) Minimum experience of 2 years training in the electrical/electronic field.
      - 2) Certified by the equipment manufacturer on the system installed.
    - b. Make visit prior to installation of wiring. Review:
      - 1) Low voltage wiring requirements.
      - 2) Separation of power and low voltage/data wiring.
      - 3) Wire labeling.
      - 4) Lighting Management Panel locations and installations.
      - 5) Control locations.
      - 6) Computer jack locations.
      - 7) Load circuit wiring.
      - 8) Network wiring requirements.
      - 9) Connections to other equipment and other Lutron equipment.
      - 10) Installer responsibilities.
      - 11) Power Panel locations.
      - 12) BACNet system and confirmation of dimming system compliance and interface ability without additional program time from BAS operator.
    - c. Make final visit upon completion of installation of Centralized Lighting Control System:

- 1) Verify connection of power wiring and load circuits.
  - 2) Verify connection and location of controls.
  - 3) Energize Lighting Management Panels and download system data program.
  - 4) Address devices.
  - 5) Verify proper connection of panel links (low voltage/data) and address panel.
  - 6) Download system panel data to dimming/switching panels
  - 7) Check dimming panel load types and currents and supervise removal of by-pass jumpers.
  - 8) Verify system operation control by control.
  - 9) Verify proper operation of manufacturers interfacing equipment.
  - 10) Verify proper operation of manufacturers supplied PC and installed programs.
  - 11) Coordinate with owner password protection to ensure specific computers with software can control only designated areas of the facility and not the entire facility.
  - 12) Configure initial groupings of ballast for wall controls, daylight sensors and occupant sensors.
  - 13) Initial calibration of sensors.
  - 14) Ensure interface coordination between architectural dimming system and sports lighting DMX control
  - 15) Obtain sign-off on system functions
  - 16) Create and install Sequence of Operation functions for wall stations, preset scenes, etc. as defined in this document or subsequent documents for review by owner or owner's representative as a starting point. Commissioning agent to coordinate with owner to modify Sequences of Operation to their satisfaction.
  - 17) Demonstrate and educate Owner's representative on system capabilities, operation and maintenance.
- C. Programming of the centralized dimming system and scope areas noted below shall be done under the direction of the Architect, owner's representative, and/or Lighting Designer and during the period of final focusing. The factory field commissioning agent shall perform the programming as per criteria established in the Sequence of Operations noted within this document or subsequent documents during construction for more detailed and accurate Sequence of Operations and modified and adjusted by client and owner during the commissioning phase. Transferring final, approved programmed scenes, fade rates, and zone intensity levels to the AMX/ Crestron A/V system , if required by owner, or to the master control panel per requirements stated in Section 2.5.F shall be performed by A/V provider or building's IT operator. Lighting designer shall only be responsible for input and direction and not for actual programming or commissioning. Upon notification by Contractor that all fixtures affected by dimming or other control devices are functioning and properly landed to appropriate circuits and zones, Lighting Designer shall coordinate with Contractor as to a mutually agreed upon time to coincide with focusing efforts. Programming time as aforementioned shall be included in dimming manufacturer's commissioning costs. Programming time for DMX equipment and Pharos/ Mosaic touch-screens and color scenes and programming macros by dimming system manufacturer or 3<sup>rd</sup> party theatrical programmer well-versed in the Pharos/Mosaic systems to be a separate line-item for time dedicated to those functions, especially the time required for the Tunnel Experience to meet client demands. Manufacturer to include costs associated with three (3) visits as such: Visit 1-meeting one full day, Visit 2-pre-installation visit accounting for 1 week, and Visit 3-final commissioning and training accounting for a minimum of 2-week period of time due to large number of control zones to be coordinated and verified. Actual time required for visits to be coordinated with contractor and manufacturer, however, said schedules and fees as stated to be provided as a base bid cost.

**PART 4 - SYSTEMS****4.1 OVERALL SYSTEM**

## A. General Description

1. Contractor shall install a centralized/ networked dimming system with one (1) central processor/ hub as per electrical documents and noted as "Hub" and coordinated with owner representative and dimming system manufacturer during shop drawing submittal. Designated space on plans include Server that contains software and access and master control of all lighting zones associated with system for security needs. Final locations and quantities to be determined and coordinated with architect. Hubs to contain Ethernet connection and dedicated IP address furnished by owner for internet diagnostics and connection to BAS system located in the area as per plans or otherwise designated by owner's representative. System to connect to building Wi-Fi system and to include networked dimming panels for normal and emergency loads as designated and with networked power supply units. All network equipment, including routers, network switches, and network cables to be included in base bid, whether supplied by manufacturer or by others that comply with ETC requirements. Wired ceiling mounted occupancy sensors, daylight sensors, and low-voltage wired wall-mount preset stations to be included. Separate wall-mounted AMX/ Crestron touch-screen panels furnished for the facility in quantities and locations indicated on A/V documents shall be furnished by A/V supplier/ consultant and to be coordinated with dimming system for "take-command" operation of architectural dimming programmed scenes, zone intensities, and fade rates as per Sequence of Operations. Ethernet/ network cable interface devices to communicate BAS system to be furnished by dimming system manufacturer. Central processor/ lighting management hub to be included with software package to allow diagnostics and alerts, energy management, and remote viewing and control of the entire facility with a CAD-based layout of the facility. Software to reside in the computer server located furnished by owner in the area stated by owner with password protected access. System to include iPhone App and programming software license to allow owner provided iPads as noted per Section 2.1.1 access to remote viewing and control of facility with iPads as part of owner stock (as noted by IT department). Manufacturer to coordinate with owner representative during commissioning to determine which areas can be controlled from specific iPads. Quantum Hub processors to allow scene and zone programming for downloading directly through hub. All preset control and master control stations to be engraved with room name.

B. Refer to Section 1.1.C regarding wired Mosaic/ Pharos Tessera/TPC wall recessed touch screen panels connected via Cat5/6 cable to a remote EXT series single universe or 4-universe controllers and to light fixture's DMX wiring and DMX control boxes. Dimming system manufacturer to be responsible for DMX interface equipment to allow color and scene "triggers" from Pharos DMX control devices furnished by light fixture manufacturer.

C. Within the Control booth/ video Production room-#03.21.02 at the Suite Level, both a DMX receptacle and Ethernet based receptacle at a designated wall to be provided by contractor for the use of a owner supplied theatrical control console with the capability of "take-command" functions. Only fixture types "LL2" at the main concourse with DMX control, type "SL2"-RGBW flood on existing poles along Civic Center Drive, type "SL7" RGBW flood at the new circular plaza, type "SL13" roof mounted RGBW lights and types "TL5" and "TL6" RGBW floods and spots at the player tunnel, types "TL12" and "TL13" mounted to the catwalk to illuminate underside of arena roof, type "WL4" at the south end of the Main Concourse, and type "WL7" along the main concourse to be controlled by this 3<sup>rd</sup> party theatrical control console in the Control booth. The DMX/ Ethernet receptacle to be connected to the ETC or approved centralized architectural dimming system for control of DMX based architectural light fixtures. Only the specific fixtures noted in the schedule and per this section to be controlled at this position. The "take-command" function of the theatrical console to allow network or owner personnel the opportunity for black-out conditions or for the opportunity to control architectural light fixtures for pre-game activities

- C. Within the overall controlled system there will be connected areas that operate from exclusive timeclock/ astronomic timeclock control or in addition to the DMX control console noted in Section C above. These spaces to not have local preset stations as defined for specific spaces in Section 4.2. These spaces to also be accessed through iPad control as defined by owner representative
1. Event Level concourse within public access areas not controlled by Home Team Locker Room
  2. All concourse level markets
  3. Main and Suite level concourses.
  4. All concourse levels Hot and Cold Market interiors (not Back of House pantries or kitchens)
  5. All concourse level restrooms with override station SW1 for toggled on/off operation after hours and occupancy sensors to turn lights on automatically at all times of day.
  6. Exterior lighting for egress
- D. Equipment
1. To reduce and ensure network lengths are not overextend, system to include the number of Paradigm processors as directed by dimming system manufacturer. Components to include power panel links and all dimming panels
  2. Manufacturer shall provide common loaded dimming cabinets for 277V or 120V normal or emergency loads with required ETC device for UL-924 requirements. Common load main lug cabinets to maximize capacity and reduce locations of panels with specific panels indicated on electrical documents. Dimming cabinets to be, capable of accepting load inputs as per load/power panel schedule in engineering documents. Dimmers shall accept loads indicated on electrical documents.. Refer to manufacturer's equipment list for component parts.

#### 4.2 EVENT LEVEL-GRAND HALL

- A. General Description
1. Contractor shall install wireless daylight sensors along western window wall and within vestibules as indicated to control Zones within vestibules and types DL17, FL2A,PL7 and WL1 fixtures within daylight zone.
  2. Contractor shall install wired preset station within secured storage area under stairs and adjacent to "MTS" designated touch screen for DMX lighting equipment, to control Zones within those areas. Preset station to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station in office reception- room 01.04.04.
  3. Contractor to install "MTS" Pharos single-universe DMX controller and Mosaci/Pharos Tessera/TPC touch screen within storage area under for control of specific color-changing equipment within this area. Color scenes and macros programmed into the Mosaic/ Pharos touch screen to be transferred to iPad with password protection for Grand Hall/ Ballroom.
  4. Contractor to install DMX interface in storage area connected to DMX-based architectural lighting within Grand Hall for connection to DMX controller and touch screen as noted above.
  5. Owner provided iPad for this area to import type TR1/ TL1/ TL2 manufacturer's mesh network app so that iPad control can pan/ tilt all fixtures indicated on plan separately for remote control of aiming from the ground. Manufacturer of types TR1/ TL1/ TL2 to coordinate with dimming system manufacturer and owner representative so that mesh network and app can be accessed from owner provided Ipads and not from a phone app.
  6. Contractor shall install A/V interface device within same storage area under stairs to allow A/V touch screen to "take command" of architectural light fixtures. Theatrical color changing fixtures and DMX distribution system, type "RL1/RL1A" to only be controlled through the Pharos DMX touch screen. Provide additional interface for on/off control of TVs in this area in lieu of remote control. Content of TV to be accessed through separate A/V touch screen or iPad.
  7. Market area within Grand Hall area to be controlled with all other markets through the "MS" station in the Security Office.

8. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for review by owner representative and commentary throughout the commissioning process.

#### 4.3 EVENT LEVEL-WEST AND NORTH BALLROOMS

##### A. General Description

1. Contractor shall install vacancy sensors to be located within specific ballrooms on the west side as designated. During occupied hours and after 30 minutes of no activity, vacancy sensor to control type WL12 associated with each ballroom, typical of one (1), and turn fixture off. During occupied hours whenever any scene is pressed on the SW7 preset station, type WL12 associated with each of three (3) ballrooms shall turn to 100% to indicate to those in the Grand Hall or VIP bar area that the room is occupied and activities occurring.
2. Contractor shall install wired preset station SW7-for (4) scenes with "off" scene and raise/lower buttons as indicated on plans for west ballrooms and adjacent to "MTS" designated touch screen for DMX lighting equipment, to control Zones within those areas. An additional preset SW2- 2 button at certain entry doors to control scenes 1 and security scene 13. Preset station to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station office reception- room 01.04.04.
3. Contractor shall install wired preset station SW6-for (4) scenes with no "off" scene and open/ close preset buttons for automated mechoshades or other shade control device as indicated on plans for the north ballrooms and adjacent to "MTS" designated touch screen for DMX lighting equipment, to control Zones within those areas. An additional preset SW2- 2 button at the entry from the service corridor-room 01.13.06 to control all type pl3e fixtures in the entire area for security. Preset station to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station office reception- room 01.04.04.
4. Contractor to install "MTS" Pharos single-universe DMX controller and Mosaci/Pharos Tessera/TPC touch screen as indicated per plans for control of specific color-changing equipment within this area. Color scenes and macros programmed into the Mosaic/ Pharos touch screen to be transferred to iPad with password protection for Grand Hall/ Ballroom.
5. Contractor to install DMX interface above accessible ceiling or Back-of-House corridor ceiling and connected to DMX-based architectural lighting within ballrooms for connection to DMX controller and touch screen as noted above.
6. Owner provided iPad for this area to import type TR1/ TL3/ TL4 manufacturer's mesh network app so that iPad control can pan/ tilt all fixtures and select color temperature indicated on plan separately for remote control of aiming from the ground. Manufacturer of types TR1/ TL3/ TL4 to coordinate with dimming system manufacturer and owner representative so that mesh network and app can be accessed from owner provided Ipad and not from a phone app.
7. Contractor shall install A/V interface device within accessible area in corridor to allow A/V touch screen to "take command" of architectural light fixtures. Theatrical color changing fixtures and DMX distribution system, type "RL2/RL1A" to only be controlled through the Pharos DMX touch screen.
8. Contractor to install wireless, Infra-red receiver/ transmitter for automatic partition control of space. Receiver/ transmitter on opposite sides of the partition as indicated on architectural plans to be located 5 feet from the partition's end connection to the wall to prevent mistaken use of partition. With partition open, either station SW5 within the back hall entrance to ballrooms control to engage all fixtures within open ballrooms.
9. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for review by owner representative and commentary throughout the commissioning process.

**4.4 EVENT LEVEL-BUNKER CLUB**

1. No daylight or vacancy sensors to be located within Bunker Club. Contractor to provide occupancy sensors within the restroom hallway only as indicated on plans.
2. Contractor shall install wired preset station SW7 for (4) scenes with "off" scene and raise/lower as indicated on plans at bar area and SW2 station for scene 13 and 14 at entry to club from player corridor to control zones within this area and corridor to player tunnel, but not individual restrooms. Station SW1 at the entry from the player tunnel to be included and shall control of only type DL3 in the corridor and type DL10 at the bar. Preset stations to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station.
3. All TVs to be controlled by remote control at bar. No AV interface needed for power control of TVs.
4. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for review by owner representative and commentary throughout the commissioning process.

**4.5 EVENT LEVEL LOCKER ROOM COMPLEX****A. General Description**

1. Contractor shall install wireless occupancy sensors within corridor areas, wet areas of the locker room, treatment room, hydrotherapy room, and individual offices and coaches locker rooms. A vacancy sensor to be located for the home team locker room itself. Fixture types "LL10", "LL11" and "DL6" in the wet area to be on emergency circuit and 24-hours for security. Occupancy sensor in corridor surrounding locker room grooming area- room 01.13.01 to be engaged during occupied and non-occupied hours. During occupied hours, occupancy sensor to turn all zones of control to full output. During non-occupied hours, occupancy sensor to turn all zones to 50% output. Stations SW2 at corridor entries or stations within locker room to override 50% output as needed.
2. Contractor shall install wired preset station SW7 for 5 scenes with no "off" and raise/lower at locker room entry and adjacent to "MTS" designated touch screen for DMX lighting equipment, to control Zones within those areas. An additional station SW2 at the other entry off the wet area plus station SW2 to control the hallway. An additional station SW1 to be located at the exit from the locker room to the player tunnel to control non-DMX based light fixtures, types "DL4" and "FL14" for a "Go-Time" scene in conjunction with the DMX light fixtures controlled by the "MTS" DMX touch screen in the locker room. Treatment area, hydrotherapy, Street Locker and coach's locker-room 01.12.03 to be equipped with SW3 preset stations at room entries for control of scenes 1 and 2 plus "off" scene. Preset station to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area will not be controlled through "MS"-master control station in Security Office.
3. Contractor to install "MTS" Pharos single-universe DMX controller and Mosaci/Pharos Tessera/TPC touch screen as indicated per plans for control of specific color-changing equipment within this area. Color scenes and macros programmed into the Mosaic/ Pharos touch screen to be transferred to iPad with password protection for locker room and player tunnel. Said touch screen to be programmed with separate pages for "locker room" and "player tunnel" to control fixture types "TL5" and "TL6". Within the "locker room" page buttons to be programmed to allow control of types "FL10" and "FL11" separately.
4. Contractor to install DMX interface above accessible ceiling or corridor ceiling and connected to DMX-based architectural lighting within locker room and player tunnel and player corridor for connection to DMX controller and touch screen as noted above.
5. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for review by owner representative and commentary throughout the commissioning process.

**4.6 EVENT LEVEL AUXILIARY LOCKER ROOMS**

## A. General Description

1. Contractor shall install wireless occupancy sensors within entry vestibules to auxiliary locker rooms as indicated on plans as well as wet areas of the locker room and treatment rooms. A vacancy sensor to be located for the locker room itself.
2. Contractor shall install wired preset station SW3 at room entries for control of scenes 1 and 2 plus "off" scene as indicated on plans. Stations SW3 to also be located at treatment rooms and individual restrooms as indicated. Preset station to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area will not be controlled through "MS"-master control station in Security Office.
3. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for review by owner representative and commentary throughout the commissioning process.

**4.7 EVENT LEVEL-GREEN ROOM**

1. No daylight, occupancy, or vacancy sensors to be located within Green Room Lounge or dressing rooms. Occupancy sensors to be located in Officials locker rooms and meeting room
2. Contractor shall install wired preset station SW5 for (4) scenes plus "off" scene as indicated on plans at all entry points to green room lounge. Individual dressing rooms and Star/Officials toilet to be equipped with station SW3 for scene 1, and raise/lower function. The mirror lights within rooms to be locally dimmed. Restrooms or locker rooms to be equipped with station SW1 for "on" scene with control of all light fixtures. Preset station SW5 to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station in Security Office.
3. All TVs to be controlled by remote control within individual spaces. No AV interface needed for power control of TVs.
4. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for review by owner representative and commentary throughout the commissioning process.

**4.8 EVENT LEVEL SUPER VOMS-CORRIDORS-PLAYER CORRIDOR**

## A. General Description

1. Contractor shall install wireless occupancy sensors suspended from structural ceiling to be located 6" above bottom of open grid black ceiling where applicable or attached to ACT ceiling in other locations. For open grid conditions, occupancy sensor to be black finish and white everywhere else.
2. No preset stations to be provided for the concourse. Only the "MS" mater control station in the officereception-room 01.04.04 or iPad control to have access to the zones associated with the concourse or the individual markets. Refer to the section associated with public restrooms for control requirements.
3. DMX touch screen station designated as "MTS" Pharos single-universe DMX controller and Mosaci/Pharos Tessera/TPC touch screen within the locker room as noted in Section 4.5 to also control types "TL5" and "TL6" within the player tunnel as well as within the player corridor. No additional DMX touch screens required for the player corridor.
4. Contractor shall install A/V interface device at exposed ceiling on underside of slab for on/off control of TVs in this main concourse in lieu of remote control. Content of TV to be accessed through separate A/V touch screen or iPad.
5. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during

commissioning for university review and commentary throughout the commissioning process.

#### 4.9 MAIN CONCOURSE-SIDELINE CLUB

- A. General Description
1. No daylight, occupancy, or vacancy sensors to be located within public area of club itself. Occupancy sensor to be located within restrooms as typical for all public restrooms.
  2. Contractor shall install wired preset station SW5 for (5) with no "off" scene as indicated on plans at central bar to control all lights within this area only and not the other individual bars on this concourse. An additional preset station SW2 for on/off function to be located at the display kitchen. As per all public restrooms preset station SW1 to be provided at restroom entries with operating function as defined in section associated with public restrooms.
  3. All TVs to be controlled by remote control at bar. No AV interface needed for power control of TVs.
  4. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.

#### 4.10 MAIN CONCOURSE LEVEL BARS-ALL AREAS

- A. General Description
1. No daylight, occupancy, or vacancy sensors to be located within the confines of the bar itself. Occupancy sensors to be located for the concourse, not the bar.
  2. At each individual bar, typical of four (4) bars, contractor shall install wired preset stations designated as station SW3 at back bar area in location that does not interfere with architectural details. Stations SW3 to control only those zones associated with the bar for temporary override and preference of light levels and connects to scenes 1-3 with no "off" scene. Master control station at the Security office to have access to "off" scene only. Preset station to be programmed to be engaged during operating hours as stated by owner representative.
  3. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.

#### 4.11 MAIN CONCOURSE PUBLIC AREAS

- A. General Description
1. No preset stations to be provided for the concourse. Only the "MS" master control station in the officereception-room 01.04.04 or iPad control to have access to the zones associated with the concourse or the individual markets. Refer to the section associated with public restrooms for control requirements.
  2. Contractor shall install wireless daylight sensors at each vestibule as indicated on plans to control only type "DL6" fixtures within vestibules. Additional daylight sensors to be located within markets with access to windows only.
  3. Contractor shall install A/V interface device at exposed ceiling on underside of slab for on/off control of TVs in this main concourse in lieu of remote control. Content of TV to be accessed through separate A/V touch screen or iPad.
  4. Contractor to install DMX interface at exposed ceiling to control DMX-based light fixtures, types "LL2", "WL4", and "WL7" and connected to DMX-touch screen within Video Production room-03.21.02 for control during blackout conditions. No DMX touch screen to be located in concourse; only in Video Production room.

4. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.

#### 4.12 SUITE LEVEL INDIVIDUAL SUITES

- A. General Description
  1. No daylight, occupancy, or vacancy sensors to be located within suites.
  2. Contractor shall install wired preset station SW3 within each suite to control zones within those individual suites based on quantities of suites indicated. Preset stations to be programmed to be engaged during operating hours as stated by owner representative.
  3. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.
  4. All zones within suite except the zones dedicated for the food service/ entry steplights, type "WL18" to be accessed through an override within the Video Production room- 03.21.02 master control of the arena for blackout conditions. The steplights to remain on during blackout requirements

#### 4.13 SUITE LEVEL LOUNGES

- A. General Description
  1. No daylight, occupancy, or vacancy sensors to be located within suites.
  2. Contractor shall install wired preset station SW5 for (5) scenes with no "off" scene as indicated on plans at bar area. Preset stations to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station in Security Office. Only the master control station of iPad control to have access to an "off" scene.
  3. All TVs to be controlled by remote control at bar. No AV interface needed for power control of TVs.
  5. All zones within suite except the zones dedicated for the food service/ entry steplights, type "WL18" to be additionally accessed through an override within the Video Production room- 03.21.02 master control of the arena for blackout conditions. The steplights to remain on during blackout requirements
  6. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.

#### 4.14 SUITE LEVEL BARS

- A. General Description
  1. No daylight, occupancy, or vacancy sensors to be located within bars.
  2. Contractor shall install wired preset station SW5 for (5) scenes with no "off" scene as indicated on plans at bar area. Preset stations to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station in Security Office. Only the master control station of iPad control to have access to an "off" scene.
  3. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.

**4.15 SUITE LEVEL LOGE CLUB AND PUBLIC AREAS**

## A. General Description

1. No daylight, vacancy or occupancy sensors provided. Due to drapery along window wall daylight sensors to be rendered ineffective.
2. Contractor shall install wired preset station SW5 for (5) scenes with no "off" scene as indicated on plans at northwest buffet area-room 03.07.04 on west side of column for control of loge club-room 03.03.02 in areas A and B of plans. Buffet areas themselves to be controlled only through master control station-"MS" along with markets in the main concourse. Preset stations to be programmed to be engaged during operating hours as stated by owner representative. Lighting in this area to also be controlled through "MS"-master control station in Security Office. Only the master control station of iPad control to have access to an "off" scene.
3. Contractor shall install A/V interface device at exposed ceiling on underside of slab for on/off control of TVs in this suite level loge club in lieu of remote control. Content of TV to be accessed through separate A/V touch screen or iPad.
4. Control of type "DL5A" fixtures to also be accessed from Video Production Room as referenced in Section 1.1.F
5. Preliminary Sequence of Operation accessed through preset stations referenced above to be indicated in shop drawings so that scene light levels per zone can be downloaded during commissioning for university review and commentary throughout the commissioning process.

**4.16 CATWALK LEVEL**

## A. General Description

1. Contractor to install DMX interface at exposed ceiling to control DMX-based light fixtures, types "TL12" and "TL13" and to DMX-touch screen within Video Production room-03.21.02 for control during blackout conditions. No DMX touch screen to be located in concourse; only in Video Production room.

**4.17 ALL LEVEL PUBLIC RESTROOMS**

## A. General Description

1. Contractor shall install wireless occupancy sensors as indicated to control zones within these areas. Occupancy sensors to be engaged during operating hours.
2. Contractor shall install wired preset station noted as "SW1" single button station for use during off hours for cleanup requirements if occupancy sensor turnslights off. Preset stations to be located for each multi-occupant restroom indicated on every level except those restroom associated with player locker rooms. Preset station programmed to be engaged only during non-operating hours and dis-engaged during normal hours as stated by owner representative.

**4.18 FAÇADE AND SITE LIGHTING**

## A. General Description

1. At the northwest and southwest corners of the catwalk/roof level, contractor to install a wireless DMX antenna connected to Acclaim's Aria wireless DMX transmitter/receiver on the roof and then connected via wired DMX within the building to the Pharos/ Mosaic single universe DMX touch screen designated as station "MTS" in the Event Level administration office. From all corners of the building at the roof, an Acclaim Aria series antenna to be connected to wireless DMX transmitter/ receivers at each indicated site pole, types "SLP1", "SLP2", and "SLP5/A/B" series. The northwest Acclaim's Aria transmitter/ receiver and antenna to be within field of view of fixture types "SL1" and "SL2" along Civic Center

Drive. The six (6) existing poles along Civic Center Drive to support the Acclaim Aria wireless transmitter/ receiver as per manufacturer's requirements so that existing power wiring to these poles can be re-used without additional expense of providing DMX control wiring. The southwest Aria transmitter/receiver and antenna to be within field of view of fixture types "SL6", "SL7", "SL8", "SL10" at the circular plaza, and "SL13" at the roof. A transmitter/receiver to be mounted to each of the "smart" site lighting poles, types "SLP1", "SLP2", and "SLP5" series which connects to specific fixtures on said poles through wired DMX. The wireless DMX system for Civic Center Drive and within the new southwest plaza and connecting paths allows DMX control without the need to run DMX or Ethernet cable underground.

2. Zones within these areas to be operated by iPad control with password protection and automatic astronomic timeclock function with preliminary Sequence of Operations.
3. No preset stations to be provided for the concourse. Only the "MS" mater control station in the officereception-room 01.04.04 or iPad control to have access to the zones associated with the concourse or the individual markets. Refer to the section associated with public restrooms for control requirements.

END OF SECTION

**SECTION 26 09 23 - LIGHTING CONTROL DEVICES****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes the following lighting control devices:
  - 1. Line-voltage dimming wall switches.
  - 2. Line-voltage wall switch occupancy sensors.
  - 3. Line-voltage dimming wall switch occupancy sensors.
  - 4. Stand-Alone Low-voltage occupancy sensors.
  - 5. Stand-Alone Low-voltage photoelectric switches.
  - 6. Stand-Alone Low-voltage power packs.
  - 7. Stand-Alone Low-voltage switches.
  - 8. Automatic load control relays.
  - 9. Branch circuit transfer switches.
  - 10. Conductors and Cables for Lighting Control Devices.

**1.2 DEFINITIONS**

- A. Acoustic Type: Occupancy sensor detection type that detects occupancy by listening for acoustic noises.
- B. Closed loop: Photosensor control algorithm designed for influence by both daylight and electric light in a space or area.
- C. DPDT: Double pole, double throw.
- D. DPST: Double pole, single throw.
- E. Dual-Technology Type: Occupancy sensor detection type that detects occupancy by using a combination of PIR and ultrasonic or acoustic detection technologies.
- F. LED: Light-emitting diode.
- G. Open loop: Photosensor control algorithm designed for influence by daylight entering in a space or area.
- H. PIR Type: Passive infrared. Occupancy sensor detection type that detects occupancy by sensing a combination of infrared heat and movement.
- I. SPST: Single pole, single throw.
- J. Ultrasonic Type: Occupancy sensor detection type that detects occupancy by sensing a change in pattern of reflected ultrasonic energy.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

**1.4 SUBMITTALS**

- A. Product data for the following products:
  - 1. Catalog cut sheets, including major and minor motion coverage patterns sensors, time delay and sensitivity adjustability settings, load restrictions, and performance specification items indicating compliance with this specification for all lighting control devices.

- B. Shop Drawings:
  - 1. Occupancy sensors and photoelectric switches
    - a. Show installation details.
    - b. Lighting plan showing location, mounting height, orientation and coverage area of each sensor and coordination with other trades.
    - c. Interconnection diagrams showing field-installed wiring.
    - d. Include diagrams for power, signal, and control wiring.
    - e. For any manufacturer submitted other than that listed as the Basis of Design, provide the following information for Engineer review:
      - 1) Factory-generated occupancy sensor and photoelectric switch layouts on project lighting plans with sensor location, orientation and product type clearly marked on plans. Sensor placement shall be coordinated with project reflected ceiling plan layout, ceiling heights, lights, diffusers, and any other ceiling devices and equipment.
      - 2) List of any deviations to this specification or Basis of Design products.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.
  - 1. Occupancy sensors and photoelectric switches:
    - a. Manufacturer's installation instructions, including instructions for storage, handling, protection, examination, preparation, start-up calibration and installation.
    - b. Product data clearly showing sensor field adjustments, including dip switch setting definitions and location of settings within sensors.
    - c. Manufacturer's maintenance, including operating and adjustment instructions.
  - 2. Timeclocks
    - a. Description of programmed timeclock settings at time of substantial completion.
  - 3. Line-voltage wall box dimming switches
    - a. Provide operating instructions for each type of dimmer.

## 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Occupancy sensors and photoelectric switches
  - 1. Products supplied shall be from a single manufacturer that has been continuously involved in the manufacturing of occupancy sensors for a minimum of 5 years.
  - 2. Products shall be manufactured by an ISO 9001 certified manufacturing facility.
  - 3. Manufacturer shall test all equipment prior to shipment.

## 1.6 WARRANTY

- A. Manufacturers shall provide a five (5) year warranty for sensors and accessories from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 GENERAL INFORMATION

- A. PIR type requirements:
  - 1. Detector Sensitivity: Detect occurrences of 6-inch minimum movement of any portion of a human body that presents a target of not less than 36 sq. in.

2. Sensor shall utilize pulse count processing and digital signature analysis to respond only to those signals caused by human motion.
  3. Sensor shall provide high immunity to false triggering from RFI and EMI.
  4. Sensor shall have a multiple-segmented fresnel lens in a multiple-tier configuration, with grooves to eliminate dust and residue buildup. Sensor shall be capable of accepting mask inserts to mask specific portions of the lens to prevent false triggering.
- B. Ultrasonic type requirements:
1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
  2. Detection Frequency (Small Area – 500 sq ft and less): Ultrasonic operating frequency shall be crystal controlled at 40 kHz within  $\pm 0.005\%$  tolerance to assure reliable performance and eliminate sensor cross-talk.
  3. Detection Frequency (Medium and Large Areas – greater than 500 sq ft): Ultrasonic operating frequency shall be crystal controlled at 32 kHz within  $\pm 0.005\%$  tolerance, to assure reliable performance and eliminate sensor cross-talk.
  4. Sensors shall be capable of automatically adapting to airflow conditions or filtering frequency spectrum related to air movement.
- C. Acoustic type requirements:
1. Detector Sensitivity: Acoustic type technology shall only be used as secondary to PIR in a Dual-Technology Type sensor. Specific sensitivity is based on PIR technology.
  2. Sensors shall distinguish noises made by human activity (typing, talking, eating, etc.) and filter out noises made by the environment or building (HVAC, equipment, cars, etc.).
  3. Acoustic technology shall enhance reliability and accuracy of PIR sensor.
- D. Dual-Technology type requirements:
1. Dual-Technology sensors using ultrasonic technology shall have field-selectable controls on unit to determine if a particular technology or combination of technologies controls the on-off function.
  2. Dual-Technology sensors using acoustic technology shall have the PIR technology initially detect motion and a combination of PIR and acoustic technologies shall keep the load on.
  3. Sensitivity Adjustment: Separate for each sensing technology.
  4. Different LED indicator colors for each sensing technology
  5. PIR sensor component shall comply with all requirements listed under PIR type requirements.
  6. Ultrasonic sensor component shall comply with all requirements listed under Ultrasonic Type requirements.
  7. Acoustic sensor component shall comply with all requirements listed under Acoustic Type requirements.

## 2.2 LINE-VOLTAGE DIMMING WALL SWITCHES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. Dimmer shall be suitable for dimmed load type of connected light fixture. Load types shall be as indicated on Drawings and confirmed per load type for connected luminaire as indicated in Light Fixture Schedule and approved light fixture and dimmer shop drawings.

## 2.3 LINE VOLTAGE WALL SWITCH OCCUPANCY SENSORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for Sensors:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F (0 to 49 deg C), unless indicated elsewhere for specific model and application.
3. Switch Rating: Not less than 800-VA fluorescent at 120 V, 1200-VA fluorescent at 277 V, and 800-W incandescent.
4. Operations: Refer to drawings for Sequence of Operations or other operational instructions. If none appear on drawings, the follow shall apply.
  - a. Occupancy Sensor (auto-on): Upon occupancy of space, loads shall be energized. If occupancy is not detected within the time delay period, loads shall be de-energized.
  - b. Vacancy Sensor (manual-on): Upon occupancy of space, loads are enabled such that manual operation of the switch shall energize loads. If occupancy is not detected within the time delay period, loads shall be de-energized.
5. Operation adjustment: Concealed, field-adjustable for auto-on or manual-on operation.
6. Time Delay adjustment:
  - a. Concealed, field-adjustable.
  - b. Time delay for de-energizing loads shall be adjustable with multiple increments from 30 seconds up to 30 minutes.
7. Adaptive technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
8. Mounting: Single-gang wall box switch
9. Finish: Sensor finish shall be as directed by the Architect.
10. Sensor:
  - a. Vandal-resistant lens
  - b. Integral sliding blinders or pre-cut tape strips to block sensor views
  - c. Protrudes no greater than 0.50 inches from wall.
  - d. 180-degree field of view
  - e. Major and minor motion coverage patterns confirmed per Nema WD7 guidelines.
  - f. Detection types: Provide type or types indicated in Lighting Control Device Schedule. Refer to Section 2.1 General Information above for more information.
11. Indicators:
  - a. LED indicator for visual detection of motion
  - b. audible and/or visual alerts for pending shut-off
12. Suitable for switching load types used, including LED, fluorescent, incandescent, magnetic and electronic low voltage and motor load types. UL listed and labeled, zero-cross relay, no minimum load requirement, ground wire.
13. Wall switch shall have no leakage of current to load and integral service switch to permit a maintained off for servicing of lamps for safety purposes
14. Buttons/Relays: Provide control relay and push button quantities as indicated by model listed in Lighting Control Device Schedule.
15. Restriction on leakage to grounding conductor.
  - a. For new construction: Dual-technology wall switch sensor shall have not more than 0.5ma leakage of current to ground per UL requirements. Provide and connect a neutral conductor to these devices.

## 2.4 LINE-VOLTAGE DIMMING WALL SWITCH OCCUPANCY SENSORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for Sensors:
  1. Comply with all requirements listed under Line-Voltage Dimming Wall Switches in this specification and,

2. Comply with all requirements listed under Line-Voltage Wall Switch Occupancy Sensors in this specification.

## 2.5 LINE-VOLTAGE OCCUPANCY SENSORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for Sensors: Wall- or ceiling-mounted, solid-state indoor occupancy sensors. Integral relay unit for line voltage sensors.
  1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  2. UL Listed for dry locations and complies with local codes.
  3. Operation: Refer to drawings for Sequence of Operations or other operational instructions. If none appear on drawings, the follow shall apply. Upon occupancy of space, loads shall turn on. If occupancy is not detected within the time delay period, loads shall de-energize. Time delay for de-energizing loads shall be adjustable over a minimum range of 1 to 15 minutes with a maximum of 30 minutes.
  4. Switch Rating: As indicated in Lighting Control Device Schedule.
  5. Detection Coverage: As indicated in Lighting Control Device Schedule on Drawings.
  6. Mounting: Suitable for mounting in any position on a standard outlet box.
  7. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
  8. Indicator: LED, to show when motion is detected during testing and normal operation of the sensor.
  9. Bypass Switch: Override the "on" function in case of sensor failure, concealed on unit to prevent tampering.
  10. Finish: Sensor finish shall be as directed by the Architect.
  11. Operating temperatures: Unless indicated otherwise for specific models, 32 degree F through 104 degree F, and relative humidity of 0%-95%.
  12. Field selectable time delay and sensitivity settings or the capability for self-adjusting technologies to optimize time delay and sensitivity settings to respond to occupancy usage patterns. Occupancy usage patterns shall be saved in a non-volatile memory that retains settings in the event of a power outage.
  13. Device shall include isolated relay with NO and NC contacts to interface with BMS, HVAC and or other building monitoring systems as indicated on the Drawings
  14. Device and related relays shall be compatible with the specific load types controlled.
  15. Sensor:
    - a. Coverage pattern: As indicated in Lighting Control Device Schedule, and shall have been confirmed with NEMA WD7 Guide and Robotic test method.
    - b. Detection types: Provide type or types indicated in Lighting Control Device Schedule. Refer to Section 2.1 General Information above for more information.
- C. High-Bay Model:
  1. Detection type: PIR type. Refer to Section 2.1 General Information above for more information.
  2. Detection Coverage: Selectable by interchangeable PIR lenses, suitable for mounting heights from 12 to 50 feet.
- D. Extreme Temperature Model:
  1. Detection type: PIR type. Refer to Section 2.1 General Information above for more information.
  2. Operating Ambient Conditions: Temperatures from minus 40 to plus 125 degree F.

**2.6 STAND-ALONE LOW-VOLTAGE OCCUPANCY VACANCY SENSORS**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for Sensors: Wall- or ceiling-mounted, solid-state indoor occupancy sensor unit, for use with a separate stand-alone low-voltage power pack containing a line-voltage relay.
1. Occupancy sensors and all other associated system components shall be provided by the same manufacturer and compatible with each other such that the final installation meets all operational and functional requirements in addition to those listed in this specification.
  2. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  3. UL Listed for dry locations and complies with local codes.
  4. Operations: Refer to drawings for Sequence of Operations or other operational instructions. If none appear on drawings, the follow shall apply.
    - a. Occupancy Sensor (auto-on): Upon occupancy of space, loads shall be energized. If occupancy is not detected within the time delay period, loads shall be de-energized.
    - b. Vacancy Sensor (manual-on): Upon occupancy of space, loads are enabled such that manual operation of a separate, associated switch shall energize loads. If occupancy is not detected within the time delay period, loads shall be de-energized.
  5. Switch Rating: As indicated in Lighting Control Device Schedule.
  6. Detection Coverage: As indicated in Lighting Control Device Schedule on Drawings.
  7. Mounting: Suitable for mounting in any position on a standard outlet box.
  8. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
  9. Indicator: LED, to show when motion is detected during testing and normal operation of the sensor.
  10. Bypass Switch: Override the "on" function in case of sensor failure, concealed on unit to prevent tampering.
  11. Finish: Sensor finish shall be as directed by the Architect.
  12. Operating temperatures of 32 degree F through 104 degree F, and relative humidity of 0%-95%.
  13. Field selectable time delay and sensitivity settings or the capability for self-adjusting technologies to optimize time delay and sensitivity settings to respond to occupancy usage patterns. Occupancy usage patterns shall be saved in a non-volatile memory that retains settings in the event of a power outage.
  14. Sensors:
    - a. Sensor shall be compatible with lighting control system.
    - b. Sensors shall be capable of being combined with additional sensors to achieve adequate coverage.
    - c. Sensor coverage pattern: AS indicated on Lighting Control Device Schedule, and shall have been confirmed with Nema WD7 Guide and Robotic test method.
    - d. Detection types: Provide type or types indicated in Lighting Control Device Schedule. Refer to Section 2.1 General Information above for more information.
- C. High-Bay Model:
1. Detection type: PIR type. Refer to Section 2.1 General Information above for more information.
- D. Extreme Temperature Model:
1. Detection type: PIR type. Refer to Section 2.1 General Information above for more information.
  2. Operating Ambient Conditions: Temperatures from minus 40 to plus 125 degree F.

**2.7 STAND-ALONE LOW-VOLTAGE PHOTOELECTRIC SWITCHES**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for switches: Ceiling-mounted, solid-state indoor photoelectric switch, for use with a separate stand-alone low-voltage power pack, containing a line-voltage relay.
  - 1. Switches and all other associated system components shall be provided by the same manufacturer and compatible with each other such that the final installation meets all operational and functional requirements in addition to those listed in this specification.
  - 2. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. UL Listed for dry locations and complies with local codes.
  - 4. Operations: Refer to drawings for Sequence of Operations or other operational instructions. If none appear on drawings, the follow shall apply. Upon ambient light level measurement reading below setpoint, loads shall be de-energized. Upon ambient light level measurement reading above setpoint, loads shall be energized.
  - 5. Finish: Sensor finish shall be as directed by the Architect.
- C. Indoor:
  - 1. Photoelectric switches shall be Open Loop or Closed Loop as indicated on the Lighting Control Device Schedule on the Drawings.
  - 2. Description: Solid state, low voltage with contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the lighting control system or as indicated on the Drawings.
    - a. Light-Level Monitoring Range: 10 to 200 fc (108 to 2152 lx), with an adjustment for turn-on and turn-off levels within that range.
    - b. Time Delay: 30-second minimum, to prevent false operation.
    - c. Mounting: Twist lock complying with IEEE C136.10, with base.

**2.8 STAND-ALONE LOW-VOLTAGE POWER PACKS**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for power packs: Box mounted, solid-state indoor power pack/relay unit, for use with a separate stand-alone low-voltage sensor and switches.
  - 1. Power packs and all other associated system components shall be provided by the same manufacturer and compatible with each other such that the final installation meets all operational and functional requirements in addition to those listed in this specification.
  - 2. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. UL Listed for dry locations and complies with local codes.
  - 4. Unit shall include isolated relay with NO and NC contacts to interface with BMS, HVAC and or other building monitoring systems as indicated on the Drawings
  - 5. Relay shall be compatible with the specific lighting types controlled.
  - 6. Operations: Refer to drawings for Sequence of Operations or other operational instructions. Unit operates in conjunction with other system components. Refer to operations requirements of associated devices.
  - 7. Switch Rating: As indicated in Lighting Control Device Schedule.  
Mounting: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
  - 8. Operating temperatures of 32 degree F through 104 degree F, and relative humidity of 0%-95%.

**2.9 STAND-ALONE LOW-VOLTAGE SWITCHES**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings and complying with all requirements listed.
- B. General Requirements for switches: Wall-mounted, solid-state indoor manual switch, for use with a separate stand-alone low-voltage power pack, containing a line-voltage relay.
  - 1. Switches and all other associated system components shall be provided by the same manufacturer and compatible with each other such that the final installation meets all operational and functional requirements in addition to those listed in this specification.
  - 2. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. UL Listed for dry locations and complies with local codes.
  - 4. Operations: Refer to drawings for Sequence of Operations or other operational instructions. If none appear on drawings, the follow shall apply. Manual push of any button shall energize or de-energize loads.
  - 5. Mounting: Suitable for mounting in any position on a standard outlet box.
  - 6. Indicator: LED, for each button to indicate when loads are energized and de-energized.
  - 7. Finish: Sensor finish shall be as directed by the Architect.
  - 8. Operating temperatures of 32 degree F through 104 degree F, and relative humidity of 0%-95%.

**2.10 AUTOMATIC LOAD CONTROL RELAYS**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings.
- B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 924.
  - 1. For control of emergency lighting circuits: Loss of normal power shall cause relay to automatically shunt emergency power to lighting circuit regardless of manual or automatic switch position. Emergency lighting circuit shall continue to operate at full power until normal power has been restored.
  - 2. Coil Rating: 120 or 277 V, as indicated on Drawings.
  - 3. Mounting: a 2-gang outlet box with separation barrier and plaster ring. Mount per manufacturer's instructions.

**2.11 BRANCH CIRCUIT TRANSFER SWITCHES**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified in the Lighting Control Device Schedule on the Drawings.
- B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 1008.
  - 1. For control of emergency lighting circuits: Loss of normal power shall cause relay to automatically shunt emergency power to lighting circuit regardless of manual or automatic switch position. Emergency lighting circuit shall continue to operate at full power until normal power has been restored.
  - 2. Coil Rating: 120 or 277 V as indicated on Drawings.

**2.12 CONDUCTORS AND CABLES FOR LIGHTING CONTROL DEVICES**

- A. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

- B. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG.
- C. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG.
- D. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 14 AWG.
- E. Provide all necessary conductor and cabling required for operation of the controls and control systems specified. This includes power and control wiring required for the controls to operate as described.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. GENERAL
  - 1. Install devices and associated power packs and wiring in accordance with manufacturer's instructions and applicable codes.
- B. LINE VOLTAGE WALL SWITCHES
  - 1. Install dimming wall switches to achieve full rating specified on Lighting Control Device Schedule taking into account de-rating for ganging as instructed by the manufacturer.
  - 2. Provide a separate grounded (neutral) conductor for each circuit controlled by a line voltage switch.
    - a. Do not share neutral conductor on load side of dimmers.
    - b. If neutral termination is not required for the device, cap conductor and tag as "Neutral for future use".
- C. OCCUPANCY/VACANCY SENSORS AND PHOTOELECTRIC SWITCHES
  - 1. Arrange a pre-installation meeting with manufacturer's factory authorized field representative, at Owner's facility, to verify placement of sensors and installation criteria.
  - 2. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage areas specified in manufacturer's literature. The locations and quantities of sensors shown on the drawings are diagrammatic and indicate only the rooms or areas that are to be provided with sensors. Provide additional sensors as required to properly and completely cover the respective areas.
  - 3. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems and partition assemblies.
  - 4. Occupancy sensors with ultrasonic or dual-technology sensing technologies shall be located not closer than 4 feet from the nearest edge of air supply devices or similar obstructions that would adversely affect the sensor performance.
  - 5. Adjust time delay setting of occupancy sensors to de-energize loads after space has been unoccupied for period of time indicated on the Drawings.
  - 6. Install outdoor photoelectric switches with clear view of the northern sky unless noted otherwise on the Drawings.
  - 7. Adjust settings of photoelectric switches to turn on lighting at illumination level indicated on the Drawings.
  - 8. Install devices and auxiliary equipment in compliance with manufacturer's instructions and recommendations.
  - 9. Install relay units where concealed from view and where accessible.
  - 10. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
  - 11. Install switchbox mounted occupancy sensors at same elevation as other lighting control switches.

**D. AUTOMATIC LOAD CONTROL RELAYS**

1. When used with manual controls, install emergency shunt relay in accessible ceiling near the control device or wall mounted within electrical room. Label within enclosure the connected normal and emergency circuits.
2. When used with automatic controls, install where concealed from view in accessible ceiling near the automatic control device or wall mounted within electrical room. Label outlet box cover with connected normal and emergency circuits.

**E. BRANCH CIRCUIT TRANSFER SWITCHES**

1. Install branch circuit transfer switches where concealed from view in accessible ceiling near the automatic control device or wall mounted within electrical room. Label outlet box cover with connected normal and emergency circuits.

**F. WIRING**

1. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch (13 mm) insert size .
2. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
3. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
4. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

**3.2 IDENTIFICATION**

- A. General: Provide identification complying with requirements specified in Division 26 Section "Identification for Electrical Systems."
- B. Power and control wiring: Identify using marker tapes.
  1. Identify controlled circuits in lighting contactors.
  2. Identify circuits or luminaires controlled by photoelectric switches and occupancy sensors at each sensor.
- C. Components: Label each component with self-laminating computer printed labels, using a unique designation matching control drawing.
- D. Cover plates: Refer to drawings for labeling requirements of certain cover plates for manual switches, or similar devices, requiring labeling for user information.
- E. Buttons/switches:
  1. Engraved from manufacturer. Refer to drawings for detailed requirements and text for labeling.

**3.3 FIELD QUALITY CONTROL**

- A. Perform the following field tests and inspections and prepare test reports:
  1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.
  2. Operational Test: Test all occupancy sensors in test mode to confirm sensor coverage and sensitivity of sensor per manufacturer's instructions. Upon completion of tests, set sensor time delay as indicated on Lighting Control Device Schedule. Follow testing and adjustment procedures as written in the manufacturer's installation instructions for each sensor model.
- B. Lighting control devices that fail tests and inspections are defective work. Remove, replace, and retest devices that fail tests.

**3.4 ADJUSTING**

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
- B. Photoelectric switch Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project for this purpose.

**3.5 DEMONSTRATION**

- A. Coordinate demonstration of products specified in this Section with demonstration requirements for low-voltage, programmable lighting control system specified in Division 26 Section "Lighting Control Systems."
- B. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain lighting control devices. Refer to Division 01 Section "Demonstration and Training" for additional information

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 22 00 - LOW-VOLTAGE TRANSFORMERS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1500 kVA:
  - 1. Distribution transformers.

**1.2 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

**1.3 SUBMITTALS**

- A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, technical certification sheets and performance for each type and size of transformer indicated.
- B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
  - 2. Transformer ratings including:
    - a. kVA
    - b. Primary and secondary voltage
    - c. Taps
    - d. Basic impulse level (BIL) for equipment over 600 volts
    - e. Design impedance
    - f. Insulation class and temperature rise
    - g. Sound level.
- C. Source quality-control test reports.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

**1.4 QUALITY ASSURANCE**

- A. Source Limitations: Obtain each transformer type through one source from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."
- D. Transformers shall meet the requirements of the most current version of federal law 10 CFR Part 431 "Energy Efficiency Program for Certain Commercial and Industrial Equipment".

- E. All transformers shall be UL listed and bear the UL label.

## 1.5 DELIVERY STORAGE AND HANDLING

- A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

## PART 2 - PRODUCTS

### 2.1 GENERAL TRANSFORMER REQUIREMENTS

- A. Manufacturers:
  - 1. ACME Electric Corporation; Power Distribution Products Division
  - 2. Eaton Electrical Inc.; Cutler-Hammer Products.
  - 3. General Electric Company.
  - 4. Hammond Company
  - 5. Siemens Energy & Automation, Inc.
  - 6. Sola/Hevi-Duty
  - 7. Square D; Schneider Electric.
- B. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.
- C. Cores: One leg per phase. Cores shall be constructed of high grade, non-aging silicon steel. The core and coil assembly shall be impregnated with non-hydroscopic, thermosetting varnish and cured to reduce hot spots and seal out moisture. The completed core and coil shall be bolted to the base of the enclosure but isolated by means of rubber, vibration-absorbing mounts. There shall be no metal-to-metal contact between the core and coil and the enclosure. The core of the transformer shall be visibly grounded to the enclosure by means of a flexible grounding conductor or strap sized in accordance with UL and NEC requirements. The neutral shall be brought to a stud to facilitate the required external grounding of the secondary
- D. Coils: Continuous windings without splices except for taps.
  - 1. Internal Coil Connections: Brazed or pressure type.
  - 2. Coil Material: Aluminum.
- E. Connections to transformers shall be by flexible metal conduit and using flexible couplings.
- F. Transformers shall be designed for continuous operation at rated kVA, for 24 hours a day, 365 days a year operation, with normal life expectancy as defined in ANSI C57.96.
- G. Wiring/Terminations:
  - 1. Recommended external cable shall be rated 90 degrees C (sized at 75 degrees C ampacity) for encapsulated and 75 degrees C for ventilated designs.
  - 2. Connectors should be selected on the basis of the type and cable size used to wire the specific transformer.
  - 3. Lug kits shall be provided by the Manufacturer of the transformer.

### 2.2 DISTRIBUTION TRANSFORMERS

- A. Comply with NEMA ST 20, and list and label as complying with UL 1561.
- B. Enclosures: Unless otherwise specified, transformer enclosures shall be ventilated and be fabricated of heavy gauge, sheet steel construction. Enclosures shall have a baked polyester powder coat finish-gray in color and suitable for interior or exterior applications. Enclosures shall be constructed so that there are no exposed live parts. Enclosures shall have a removable front cover to allow access to internal parts and wiring terminations

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.
  2. Transformer locations:
    - a. Dry locations:
      - 1) Ventilated
      - 2) NEMA 250, Type 2.
    - b. Damp or wet:
      - 1) Ventilated. Provide weather shields over ventilation openings.
      - 2) NEMA 250, Type 3R.
    - c. Corrosive locations:
      - 1) Totally enclosed, non-ventilated
      - 2) NEMA 250, Type 4X, stainless steel
  3. The maximum temperature of the enclosure shall not exceed 90 degrees C.
  4. The maximum temperature of the top of the enclosure shall not exceed 50°C rise above a 40°C ambient.
- C. Transformer Enclosure Finish: Comply with NEMA 250.
1. Finish Color: ANSI 61 gray.
- D. Taps
1. Three-phase Transformers smaller than 24 kVA and all single phase transformers:
    - a. One 5 percent tap above and one 5 percent tap below normal full capacity
  2. Transformers 25 kVA through 500 kVA:
    - a. Two 2.5 percent taps above and four 2.5 percent taps below normal full capacity.
  3. Transformers 501 kVA and Larger:
    - a. Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity manufacturer's standard tap configuration.
- E. Insulation Class for transformers less than 15 kVA: 185 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.
- F. Insulation Class for transformers 15 kVA and larger: 220 deg C, UL-component-recognized insulation system with a maximum of 150 deg C rise above 40 deg C ambient temperature
- G. Energy Efficiency for Transformers Rated 15 kVA and Larger:
1. Complying with the requirements of the most current version of federal law 10 CFR Part 431 "Energy Efficiency Program for Certain Commercial and Industrial Equipment" efficiency levels.
  2. Tested in accordance with federal law 10 CFR Part 431.
- H. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.
1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
  2. Indicate value of K-factor on transformer nameplate.
  3. K-Factor rated transformers shall have an impedance range of 3% to 5%, and shall have a minimum reactance of 2% in order to prevent excessive neutral current when supplying loads with large amounts of third harmonic.
  4. 115 degree C temperature rise.
  5. All cores to be constructed with low hysteresis and eddy current losses. The core flux density shall be well below the saturation point to prevent core overheating and excessive sound level caused by harmonic voltage distortion.
  6. Transformers shall be common core construction. Transformers utilizing more than one core, or Scott-T connections, shall not be acceptable.
  7. Three-phase transformer secondary neutral terminals shall be sized for 200% of the secondary phase current.
  8. The transformer shall be mounted on vibration absorbing pads.

- I. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize inter-winding capacitance.
  1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
  2. Include special terminal for grounding the shield.
  3. Shield Effectiveness:
    - a. Capacitance between Primary and Secondary Windings: Not to exceed 33 Pico farads over a frequency range of 20 Hz to 1 MHz.
    - b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz; minimum of minus 40 dBA at 100 kHz to 1MHz.
    - c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz; minimum of minus 30 dBA at 10 kHz to 1MHz.
- J. Motor Drive Isolation
  1. Where shown on the drawings, provide motor drive isolation transformers
  2. Motor drive isolation transformers shall be designed for use with three-phase ac adjustable frequency drives 600 volts and below to provide isolation between the incoming line and drive circuitry. These drives minimize the line disturbances caused by SCR firing within the drive unit. Thermoguards shall be included in all motor drive isolation transformers to provide additional protection for the transformer from increased heating due to the non-sinusoidal characteristics of drive currents. The transformer shall provide reduced short-circuit currents and voltage line transients. The transformer shall be specifically sized to the drive kVA requirements dictated by the horsepower of the motor and, as such, will be mechanically braced to withstand the stress of current reversals and short-circuit currents associated with the specific drive kVA rating. Transformers shall be low loss type with minimum efficiencies per NEMA TP-1 when operated at 35% of full load capacity
- K. Mounting Methods.
  1. Transformers 75 KVA and larger shall be floor mounted unless indicated otherwise. Transformers 45 KVA and smaller may be wall mounted where wall construction is suitable for the load. Floor mounted transformers shall be securely bolted to a 4 inch, concrete housekeeping pad with vibration isolation pads. Wall mounted or suspended transformers shall have a means of isolating vibration from the support.
  2. Transformers up through 1000 KVA shall be mounted on elastomeric vibration isolation pads. Pad shall be constructed of neoprene, rubber, glass fiber, or a combination thereof. Pads shall be "ribbed" or "waffled" in texture. Pads shall be selected for smallest durometer (hardness), preferably less than 50. Deflection of pad shall be .25" static minimum. Stack pads until the desired deflection is achieved.
  3. Wall Mounting: Manufacturer's standard brackets.
  4. Suspended Mounting: See transformer mounting detail on plans.
- L. Fungus Proofing: Permanent fungicidal treatment for coil and core.
- M. Low-Sound-Level Requirements: Maximum sound levels (NEMA ST 20), when factory tested according to IEEE C57.12.91, as follows:
  1. 29 kVA and Less: 40 dBA
  2. 10 to 50 kVA: 45 dBA
  3. 51 to 150 kVA: 50 dBA
  4. 151 to 300 kVA: 55 dBA
  5. 301 to 500 kVA: 60 dBA
  6. 501 to 700 kVA: 62 dBA
  7. 701 to 1000 kVA: 64 dBA
  8. 1001 to 1500 kVA: 65 dBA

## 2.3 SOURCE QUALITY CONTROL

- A. Test and inspect transformers according to ANSI C57.12.01 and IEEE C57.12.91.

## 2.4 FACTORY TESTING

- A. The following standard factory tests shall be performed on the equipment provided under this section. All tests shall be in accordance with the latest version of ANSI and NEMA standards.
  - 1. Ratio tests at the rated voltage connection and at all tap connections
  - 2. Polarity and phase relation tests on the rated voltage connection
  - 3. Applied potential tests
  - 4. Induced potential test
  - 5. No-load and excitation current at rated voltage on the rated voltage connection

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Floor mounted transformers shall be mounted on a 4 inch concrete housekeeping pad 2 inches larger all around transformer.
- C. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.
- D. Use flexible conduit under the provisions of Division 26 Section "Raceways and Boxes for Electrical Systems" for connections to transformer case. Minimum flexible conduit length shall be two (2) feet.
- E. Mount transformers on vibration isolating pads suitable for isolating the transformer noise from the building structure.
- F. CONNECTIONS
  - 1. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
  - 2. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

### 3.3 IDENTIFICATION

- A. Nameplates: Label each transformer with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems." Nameplates shall be engraved with the following information
  - 1. Transformer name

2. Fed from (primary source)
  3. Secondary voltage, phase, wires
- B. Warning Labels: Label each panelboard with a warning label indicating NFPA 70 workspace clearance requirements, complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

### 3.4 FIELD QUALITY CONTROL

- A. Tests and Inspections:
1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
- B. Remove and replace units that do not pass tests or inspections and retest as specified above.
- C. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.
1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
  2. Perform 2 follow-up infrared scans of transformers, one at 4 months and the other at 11 months after Substantial Completion.
  3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.
- D. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

### 3.5 ADJUSTING

- A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.
- B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.
- C. Output Settings Report: Prepare a written report recording output voltages and tap settings.

### 3.6 CLEANING

- A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION

**SECTION 26 24 13 - SWITCHBOARDS****PART 1 - GENERAL****1.1 SUMMARY**

- A. This section includes switchboards rated 600 V and less, including the following:
  - 1. Service and distribution switchboards.
  - 2. Surge Protection Devices.
  - 3. Disconnecting and overcurrent protective devices.
  - 4. Instrumentation.
  - 5. Control power.
  - 6. Accessory components and features.

**1.2 DEFINITIONS**

- A. GFCI: Ground-fault circuit interrupter.
- B. NETA ATS: InterNational Electrical Testing Association Acceptance Testing Specification.
- C. SPD: Surge Protection Device

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Power System Studies."

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product Data: For each type of switchboard, switching and overcurrent protective device, instrumentation, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, weights, and finishes.
- C. Shop Drawings: For each switchboard and related equipment.
  - 1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.
    - a. Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 2. Detail enclosure types and details for types other than NEMA 250, Type 1.

3. Include outline and general arrangement drawing showing dimensions, shipping sections, and weights of each assembled section.
  4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses.
  5. Detail short-circuit current rating of switchboard assembly and overcurrent protective devices.
  6. Include descriptive documentation of barriers specified for electrical insulation and isolation.
  7. Detail utility company's metering provisions with indication of approval by utility company.
  8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  9. Include schematic and wiring diagrams for power, signal, and control wiring.
  10. Include nameplate legends.
  11. Include list of materials.
- D. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around switchboard where pipe and ducts are prohibited. Show switchboard layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
1. For each equipment room, provide dimensioned layout of the electrical equipment within the space, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved.
  2. Dimensioned concrete base, outline of switchboard, conduit entries, and ground rod locations; including equipment working clearances and manufacturer required access space.
  3. Indicate structural members, light fixtures, sprinkler piping and heads, HVAC equipment, ducts and diffusers, plumbing piping and access fittings. Include maintenance access clearances.
  4. Location of structural supports for structure-supported raceways.
  5. Location and clearance of electrical equipment and raceways impacting equipment installation.
- E. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.
- F. Qualification Data: For qualified Installer.
- G. Field Quality-Control Reports:
1. Test procedures used.
  2. Test results that comply with requirements.
  3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- H. Sample Warranty: For warranty.
- I. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.
- J. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
1. Routine maintenance requirements for switchboards and all installed components.
  2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
  3. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.
  4. Features and operating sequences, both automatic and manual.
  5. Video recording of operation training and demonstration.

- K. Follow-up service reports.

### 1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E; Employs installers and supervisors who are trained and approved by manufacturer.
- B. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."
- C. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with NEMA PB 2.
- F. Comply with NFPA 70.
- G. Comply with UL 891.

### 1.6 PROJECT CONDITIONS

- A. Maintain field conditions within manufacturer's required service conditions during and after installation.
- B. Environmental Limitations:
  - 1. Do not install switchboards until spaces are enclosed and weathertight. Equipment shall be protected from any remaining wet work in the space and work above secondary unit substation. Provide temporary HVAC system for maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not exceeding 104 deg F (40 deg C).
    - b. Altitude: Not exceeding 6600 feet (2000 m).

### 1.7 DELIVERY STORAGE AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.
- B. Coordinate delivery of equipment to allow movement into designated space.
- C. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.
- D. Handle and prepare switchboard components according to NEMA PB 2.1 and manufacturer's written instructions. Use factory-installed lifting provisions.

### 1.8 WARRANTY

- A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components and/or products of the switchboards that fail in materials or workmanship within the specified warranty period.
- B. Warranty Period: Three years from date of Substantial Completion.

**1.9 EXTRA MATERIALS**

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fuses: Refer to Division 26 section "Fuses" for spare fuse requirements. At a minimum, include spares for the following:
    - a. Fuses for fusible devices.
    - b. Potential transformer fuses.
    - c. Control power fuses.
  - 2. Indicating Lights: Four of each type installed.
  - 3. Primary Switch Contact Lubricant: One container.
  - 4. Touchup Paint: Two containers of paint matching enclosure finish, each 0.5 pint (250 mL).
  - 5. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Manufacturers:
  - 1. ABB Inc.
  - 2. Eaton.
  - 3. Schneider Electric.
  - 4. Siemens Energy & Automation, Inc.
- B. Front-Connected, Front-Accessible Switchboards:
  - 1. Main Devices: Fixed, individually mounted.
  - 2. Branch Devices: Panel mounted.
  - 3. Sections front and rear aligned.

**2.2 RATINGS**

- A. Nominal System Voltage: As indicated on the Drawings.
- B. Main-Bus Continuous: Ampacity as indicated on the Drawings.
- C. Short-Circuit Current Rating (SCCR):
  - 1. Refer to fault-current and coordination study submittal requirements listed in other parts of this section, in addition to specification section "Power System Studies".
  - 2. Rating value: Rated to interrupt symmetrical short-circuit current available at terminals. Switchboard shall be fully-rated, unless series-rated is indicated on the drawings. SCCR shall not be less than the highest AIC rating of any circuit breaker in switchboard.

**2.3 FABRICATION**

- A. Indoor Enclosures: Steel, NEMA 250, Type 1.
  - 1. Finish: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.
- B. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks.
- C. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.
- D. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

- E. Buses and Connections: Three phase, four wire unless otherwise indicated.
1. Bus bars shall connect between vertical sections and between compartments. Cable connections are not permitted.
  2. Phase- and Neutral-Bus Material: Silver- or tin-plated, high-strength, electrical-grade aluminum alloy, with copper or tin-plated aluminum circuit-breaker line connections.
  3. Main-Phase Bus Size: Ampacity as indicated on drawings, with uniform capacity for entire length of switchboard's main and distribution sections
  4. Neutral Bus: 100 percent of phase-bus ampacity, except as indicated. Equip bus with pressure-connector terminations for outgoing circuit neutral conductors.
  5. Vertical Section Bus Size: Ampacity equivalent to horizontal bus, with uniform capacity for entire length of vertical section bus.
  6. Ground Bus: Hard-drawn copper of 98 percent minimum conductivity, with pressure connector for feeder and branch-circuit ground conductors, minimum size required by UL 891.
  7. For solidly-grounded wye systems, provide factory-installed main bonding jumper between neutral and ground busses, and removable neutral disconnecting link for testing purposes.
  8. Provide for future extensions from either end of main phase, neutral, and ground bus by means of predrilled bolt-holes and connecting links.
  9. Equip distribution sections with full height vertical bussing to accommodate maximum utilization of space for devices.
  10. Line-Side Conductor and Feeder Circuit-Breaker Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with mechanical connectors for outgoing circuit conductors unless otherwise indicated on Drawings, suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 section "Low-Voltage Electrical Power Conductors and Cables". Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
- F. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.
- G. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.
- H. Service Entrance Equipment:
1. Label: Where used as service entrance equipment, provide NRTL label for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.
  2. Infrared Windows: Provide with infrared windows in quantities and locations to provide line-of-sight viewing of all cable terminations on the line side of the main overcurrent protective device.

## 2.4 SURGE PROTECTION DEVICES

- A. Provide surge protective devices as required by Division 26 Section "Surge Protective Devices".

## 2.5 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Ratings:
1. Continuous ampere rating: as indicated on drawings.
  2. Voltage and frequency rating: same as switchboard.
  3. Short-circuit current rating (SCCR): Same as requirements for switchboard.
  4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Switchboards shall be fully-rated, unless series-rated is indicated on the drawings.

- B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
  2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
  3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replaceable electronic trip; and the following field-adjustable settings:
    - a. Instantaneous trip.
    - b. Long- and short-time pickup levels.
    - c. Long- and short-time time adjustments.
    - d. Ground-fault pickup level, time delay, and  $I^2t$  response.
  4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
  5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
  6. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
  7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
  8. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
    - a. Standard frame sizes, trip ratings, and number of poles.
    - b. Lugs: Mechanical or compression style as indicated, suitable for number, size, trip ratings, and conductor material.
    - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
    - d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    - e. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
    - f. Under voltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
    - g. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
    - h. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
- C. Insulated-Case Circuit Breaker (ICCB): 80 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.
1. Fixed circuit-breaker mounting.
  2. Two-step, stored-energy closing.
  3. Standard-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
    - a. Instantaneous trip.
    - b. Long- and short-time time adjustments.
    - c. Ground-fault pickup level, time delay, and  $I^2t$  response.
  4. Remote trip indication and control.
  5. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
  6. Control Voltage: as indicated, or as required by control devices per power supply.
- D. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Boltswitch, Inc.
    - b. Eaton Corporation.
    - c. Schneider Electric.
    - d. Siemens Energy & Automation, Inc.
  2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
  3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
    - a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
    - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
  4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
  5. Service-Rated Switches: Labeled for use as service equipment.
  6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
    - a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    - b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
    - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
    - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
  7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.
- E. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and a spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
  3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
    - a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
    - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
  4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
  5. Service-Rated Switches: Labeled for use as service equipment.
  6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
    - a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    - b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
    - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
    - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
  7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.
- F. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

- G. Fuses are specified in Division 26 Section "Fuses."
- H. Arc Flash Mitigation
  - 1. Circuit breakers, 1200 A and larger, shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
  - 2. Fuses, 1200 A and larger, shall have a clearing time of 0.07 seconds or less at the available arcing current, or shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
  - 3. Documentation shall be provided in accordance with the NEC for location of overcurrent device and method of clearing time reduction.

## 2.6 INSTRUMENTATION

- A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:
  - 1. Potential Transformers: IEEE C57.13; 120 V, 60 Hz, single secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
  - 2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; wound type; single secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
  - 3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
  - 4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.
- B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
  - 1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
    - a. Phase Currents, Each Phase: Plus or minus 1 percent.
    - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
    - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
    - d. Megawatts: Plus or minus 2 percent.
    - e. Megavars: Plus or minus 2 percent.
    - f. Power Factor: Plus or minus 2 percent.
    - g. Frequency: Plus or minus 0.5 percent.
    - h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.
    - i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from five to 60 minutes.
    - j. Contact devices to operate remote impulse-totalizing demand meter.
  - 2. Mounting: Display and control unit flush or semi flush mounted in instrument compartment door.

## 2.7 CONTROL POWER

- A. Control Circuits: 120-V ac, supplied through secondary disconnecting devices from control-power transformer.

- B. Control Circuits: 120-V ac, supplied from remote branch circuit.
- C. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.
- D. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

## 2.8 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.
- C. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

## 2.9 IDENTIFICATION

- A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine switchboards before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.
- B. Examine areas, surfaces, substrates, and elements to receive switchboards with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.
  - 1. Verify that field measurements are as indicated.
  - 2. Verify that manufacturer's written instructions for environmental conditions have been established in spaces where equipment will be installed, before installation begins.
- C. Examine roughing-in of conduits and grounding systems to verify the following:
  - 1. Wiring entries comply with layout requirements.
  - 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install switchboards and accessories according to NEMA PB 2.1 and manufacturer's instructions.
- B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- C. Comply with mounting and anchoring requirements specified in Division 26 Section "Seismic Controls for Electrical Systems."
- D. Equipment Mounting: Install switchboards on concrete bases.

1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of switchboard unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
  2. Anchor switchboards to concrete bases according to manufacturer's written instructions, and requirements in Division 26 Sections "Hangers and Supports for Electrical Systems".
  3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
  4. Install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  6. Install anchor bolts to elevations required for proper attachment to switchboards.
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.
- F. Mount equipment plumb and rigid without distortion of enclosure.
- G. Install overcurrent protective devices, surge suppression devices and instrumentation.
- H. Install filler plates in unused spaces of panel-mounted sections.
- I. Arrange conductors in auxiliary compartments and gutters into groups and bundle and wrap with wire ties.
- J. Comply with NECA 1.

### 3.3 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

### 3.4 IDENTIFICATION

- A. Equipment Nameplates: Label each contiguous main, or entrance, section with equipment nameplate.
- B. Device Nameplates: Label each main, feeder and branch circuit device with a nameplate.
- C. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- D. Diagram and Instructions:
1. Engraved, Laminated Acrylic or Melamine Label. Mount on front of switchboard.
    - a. Operating Instructions: Printed operating instructions for switchboard, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.
    - b. System Power One-Line Diagrams: Provide color-coded, large-format one-line diagram showing the new work is to be provided and installed in the associated electrical room. Depict power sources, feeders, distribution components, and major loads.

2. Storage for Maintenance Instructions: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.
- E. Warning Labels: Label each switchboard with a warning label in accordance with NFPA 70 and NFPA 70E.
1. Provide Arc Flash and available fault current warning labels.

### 3.5 CLEANING

- A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

### 3.6 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions throughout periods when equipment environment is not controlled for temperature and humidity within manufacturer's stipulated service conditions.

### 3.7 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges and protective relay trip characteristics as specified in Division 26 Section "Power System Studies."

### 3.8 FIELD QUALITY CONTROL

- A. Testing: Perform the field quality-control tests and inspections listed below:
- B. Acceptance Testing Preparation:
1. After installing equipment but before equipment is energized, test for compliance with requirements.
  2. Verify that grounding system at the equipment tested at the specified value or less.
  3. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.
  4. Test continuity of each circuit.
- C. Tests and Inspections:
1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
  2. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
  3. Complete installation and startup checks according to manufacturer's written instructions.
  4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
  5. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  6. Report results of tests and inspections in writing. Record adjustable settings and measured insulation resistances. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- D. Infrared Scanning: Perform the following infrared scan tests and inspections and prepare reports:

1. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove necessary panels so joints and connections are accessible to portable scanner.
  2. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
  3. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- E. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the main incoming section of each service entrance switchboards. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
  2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
    - a. Rebalance loads.
    - b. Prepare written request for voltage adjustment by electric utility in accordance with Division 26 section "Provisions for Electric Utility Service".
  3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
- F. Switchboard will be considered defective if it does not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### **3.9 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment, overcurrent protective devices, instrumentation, and accessories.
- B. Video record demonstrations presentation for Owner's records.

END OF SECTION

**SECTION 26 24 16 - PANELBOARDS****PART 1 - GENERAL****1.1 SUMMARY**

- A. This section includes panelboards rated 600 V and less, including the following:
  - 1. Distribution panelboards.
  - 2. Lighting and appliance branch-circuit panelboards.
  - 3. Disconnecting and Overcurrent Protective Devices.
  - 4. Fused Lighting and Appliance Branch-Circuit Panelboards.
  - 5. Surge Protection Devices.
  - 6. Accessory Components and Features.

**1.2 DEFINITIONS**

- A. NETA ATS: InterNational Electrical Testing Association Acceptance Testing Specification.
- B. SVR: Suppressed voltage rating.
- C. SPD: Surge Protection Device

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Power System Studies."

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product Data: For each type of panelboard, switching and overcurrent protective device, furnished accessories and components. Include dimensions and Manufacturer's technical data on features, performance, electrical characteristics, ratings, weights, furnished options, specialties, accessories, and finishes.
- C. Shop Drawings: For each panelboard and related equipment.
  - 1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.
    - a. Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 2. Detail enclosure types and details for other than NEMA 250, Type 1.

3. Include general arrangement drawing showing dimensions and weights of each assembled section.
  4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses.
  5. Detail short-circuit current rating of panelboard assembly and overcurrent protective devices.
  6. Include descriptive documentation of barriers specified for electrical insulation and isolation.
  7. Detail utility company's metering provisions with indication of approval by utility company.
  8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  9. Include schematic and wiring diagrams for power, signal, and control wiring.
  10. Include nameplate legends.
  11. Include list of materials.
- D. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around panelboards where pipe and ducts are prohibited. Show panelboard layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
1. For each equipment room, provide dimensioned layout of the electrical equipment within the space, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved.
  2. Dimensioned concrete base, outline of panelboard sections, conduit entries, and ground rod locations; including equipment working clearances and manufacturer required access space.
  3. Indicate structural members, light fixtures, sprinkler piping and heads, HVAC equipment, ducts and diffusers, plumbing piping and access fittings. Include maintenance access clearances.
  4. Location of structural supports for structure-supported raceways.
  5. Location and clearance of electrical equipment and raceways impacting equipment installation.
- E. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.
- F. Field Quality-Control Reports:
1. Test procedures used.
  2. Test results that comply with requirements.
  3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- G. Sample Warranty: For warranty.
- H. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.
- I. Panelboard Schedules: Submit final panelboard directories.
- J. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
1. Routine maintenance requirements for panelboards and all installed components.
  2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
  3. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.
  4. Features and operating sequences, both automatic and manual.
  5. Video recording of operation training and demonstration.

- K. Follow-up service reports.

### **1.5 QUALITY ASSURANCE**

- A. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."
- B. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NEMA PB 1.
- E. Comply with NFPA 70.

### **1.6 PROJECT CONDITIONS**

- A. Maintain field conditions within manufacturer's required service conditions during and after installation.
- B. Environmental Limitations:
  - 1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above equipment is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C).
    - b. Altitude: Not exceeding 6600 feet (2000 m).

### **1.7 DELIVERY STORAGE AND HANDLING**

- A. Coordinate delivery of equipment to allow movement into designated space.
- B. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.
- C. Handle and prepare panelboards for installation according to NEMA PB 1 and manufacturer's written instructions. Use factory-installed lifting provisions.

### **1.8 WARRANTY**

- A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components and/or products of the panelboards that fail in materials or workmanship within the specified warranty period.
- B. Warranty Period: Three years from date of Substantial Completion.

### **1.9 EXTRA MATERIALS**

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Refer to Division 26 section "Fuses" for spare fuse requirements. At a minimum, include spares for the following:
  - a. Fuses for fusible devices.
  - b. Potential transformer fuses.
  - c. Control power fuses.
2. Indicating Lights: Four of each type installed.
3. Primary Switch Contact Lubricant: One container.
4. Touchup Paint: Two containers of paint matching enclosure finish, each 0.5 pint (250 mL).
5. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

## PART 2 - PRODUCTS

### 2.1 GENERAL

- A. Manufacturers:
  1. ABB Inc.
  2. Eaton.
  3. Schneider Electric.
  4. Siemens Energy & Automation, Inc.
- B. Enclosures: Flush- or surface-mounted cabinets as noted.
  1. Rated for environmental conditions at installed location.
    - a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
    - b. Outdoor Locations: NEMA 250, Type 3R.
    - c. Kitchen and/or Wash-Down Areas: NEMA 250, Type 4X, stainless steel.
    - d. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
    - e. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 5.
  2. Hinged Front Cover: Entire front trim hinged to box.
  3. Door: Standard door with concealed hinges, within hinged trim cover. Secured with vault-type latch with tumbler lock; keyed alike.
  4. Finishes:
    - a. Panels and Trim: Steel and galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    - b. Back Boxes: Galvanized steel.
    - c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.
  5. Directory Card: Inside panelboard door, mounted in transparent card holder.
- C. Incoming Mains Location: Top and/or bottom as required.
- D. Buses: Three phase, four wire unless otherwise indicated.
  1. Phase, and Neutral Buses:
    - a. Material:
      - 1) Tin-plated aluminum.
        - a) Hard-drawn copper, 98 percent conductivity, may be substituted if provided at no additional cost.
      - 2) Hard-drawn copper, 98 percent conductivity.
      - 3) Hard-drawn copper, 98 percent conductivity, silver-plated
    - b. Size: Ampacity as indicated on drawings, with uniform capacity for entire length of panelboard's sections.
      - 1) Neutral bus: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus

2. Ground Bus: Equipped with connectors for feeder and branch-circuit ground conductors. For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.
    - a. Material: Hard-drawn copper, 98 percent conductivity
    - b. Size: Minimum-size required by UL 67
  3. Provide any available breaker mounting space with bussing.
- E. Line-Side Conductor Connectors (Lugs):
1. General: Suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".
  2. Material: Same as bus material.
  3. Capacity rating: Same as associated bus.
  4. Type: Provide mechanical type unless otherwise indicated on Drawings, refer to schedules and one-line diagram.
  5. Provide properly sized lugs for all equipment, circuit breakers and other electrical devices to accommodate installed conductors. A larger frame, oversized lugs or non-standard product may be required in some instances.
    - a. Pin adapters may be utilized only as allowed by manufacturer and the authority having jurisdiction.
- F. Feed-Through Lugs:
1. General: Suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".
  2. Location: Locate at opposite end of bus from line side lugs or main device.
  3. Material: Same as line side conductor connectors.
  4. Capacity rating: Same as associated bus.
  5. Type: Same as line side conductor connectors.
- G. Subfeed lugs (Double Lugs):
1. General: Suitable for use with conductor material and sizes. Connections shall comply with requirements of Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".
  2. Location: Locate at same end of bus as incoming lugs or main device.
  3. Material: Same as line side conductor connectors.
  4. Capacity rating: Same as associated bus.
  5. Type: Same as line side conductor connectors.
- H. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.
- I. Short-Circuit Current Rating (SCCR):
1. Refer to fault-current and coordination study submittal requirements listed in other parts of this section, in addition to specification section "Power System Studies".
  2. Rating value: Rated to withstand symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings. SCCR shall not be less than the highest AIC rating of any circuit breaker in panelboard.

## 2.2 DISTRIBUTION PANELBOARDS

- A. Panelboards: NEMA PB 1, power and feeder distribution type.
- B. Doors: For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.
- C. Mains: As indicated on drawings.
- D. Branch Overcurrent Protective Devices:
  1. Connection to bus:

- a. For Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.
  - b. For Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
2. Type: Provide types as indicated on drawings and as defined below.
- E. Device Ratings:
1. Continuous ampere rating: as indicated on drawings.
  2. Voltage and frequency rating: same as panelboard.
  3. Short-circuit current rating (SCCR): Same as requirements for panelboard.
  4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings.

### 2.3 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

- A. Panelboards: Circuit breaker type: NEMA PB 1, lighting and appliance branch-circuit type.
- B. Mains: As indicated on drawings.
- C. Branch Overcurrent Protective Devices:
  1. Connection to bus: Plug-in circuit breakers, replaceable without disturbing adjacent units.
  2. Type: Provide types as indicated on drawings and as defined below.
- D. Device Ratings:
  1. Continuous ampere rating: as indicated on drawings.
  2. Voltage and frequency rating: same as panelboard.
  3. Short-circuit current rating (SCCR): Same as requirements for panelboard.
  4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings.

### 2.4 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
  1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
  2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
  3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:
    - a. Instantaneous trip.
    - b. Long- and short-time pickup levels.
    - c. Long- and short-time time adjustments.
    - d. Ground-fault pickup level, time delay, and  $I^2t$  response.
  4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
  5. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
  6. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
  7. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
  8. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
    - a. Standard frame sizes, trip ratings, and number of poles.

- b. Lugs: Mechanical type unless otherwise indicated on Drawings, suitable for number, size, trip ratings, and conductor materials.
  - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
  - d. Ground-Fault Protection: Relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    - 1) Mounting: Integral
  - e. Shunt Trip: 24-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
  - f. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
  - g. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
  - h. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
  - i. Multipole units enclosed in a single housing or factory assembled to operate as a single unit.
  - j. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
  - k. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.
- B. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
- 1. Fuses are specified in Division 26 Section "Fuses."
- C. Arc Flash Mitigation
- 1. Circuit breakers, 1200 A and larger, shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
  - 2. Fuses, 1200 A and larger, shall have a clearing time of 0.07 seconds or less at the available arcing current, or shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
  - 3. Documentation shall be provided in accordance with the NEC for location of overcurrent device and method of clearing time reduction.

## **2.5 FUSED LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS (30 TO 400A MAINS)**

- A. Basis-of-Design Product: Subject to compliance with requirements, provide comparable products by one of the following, the first listed manufacturer was used as the basis of design:
- 1. Eaton/Bussman Quik Spec Coordination Panelboards type QSCP
  - 2. Mersen
- B. Bus Bars: Shall be copper or tin-plated copper.
- C. Panelboards: listed to UL 67
- 1. Provide space behind locking door for a minimum of 6 spaces to store replacement branch circuit fuses.
- D. Mains:
- 1. Permanently installed lockout means shall be provided.
  - 2. Quick-make, quick-break type.

- E. Branch Overcurrent Protective Devices:
  - 1. Device shall have visible circuit ON/OFF indication with colored and international symbol markings
  - 2. Device shall provide open fuse indication via permanently installed neon or LED indicating light.
  - 3. Fuse and disconnect assembly shall be a finger-safe component with trim installed.
  - 4. No special tools shall be required for fuse removal.
  - 5. Devices shall have bolt-on style bus connectors.
  - 6. Device housing shall be clearly marked with device amperage.
  - 7. Permanently installed lockout means shall be provided on the device for lockout tagout procedures. Permanently installed means for locking device in the ON position shall also be provided.
  - 8. Device shall provide fuse amp rating rejection at the following ampacities to ensure continued circuit protection at the specified circuit rating: 15A, 20A, 30A, 40A, 50A, 60A, 70A, 90A & 100A.
  - 9. Branch circuit overcurrent protection shall be 600Vac UL Listed minimum 200kA IR and CSA Certified minimum 200kA IR finger-safe fuse with Class J or CC performance characteristics.
- F. Device Ratings:
  - 1. Continuous ampere rating: as indicated on drawings.
  - 2. Voltage and frequency rating: same as panelboard.
  - 3. Short-circuit current rating (SCCR): Same as requirements for panelboard.
  - 4. Ampere Interrupting Current (AIC) rating: Rated to interrupt symmetrical short-circuit current available at terminals. Panelboards shall be fully-rated, unless series-rated is indicated on the drawings.

## 2.6 SURGE PROTECTION DEVICES

- A. Provide surge protective devices as required by Division 26 Section "Surge Protective Devices".
- B. Panelboards requiring SPD and the location of the devices shall be as indicated on the Drawings.

## 2.7 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

## 2.8 IDENTIFICATION

- A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine panelboards before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.
- B. Examine areas, surfaces, substrates, and elements to receive panelboards with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.
  - 1. Verify that field measurements are as indicated.
  - 2. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.

- C. Examine roughing-in of conduits and grounding systems to verify the following:
  - 1. Wiring entries comply with layout requirements.
  - 2. Entries are within conduit-entry tolerances specified by manufacturer.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install panelboards and accessories according to NEMA PB 1.1 and manufacturer's instructions.
- B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- C. Wall-Mounted Panelboards: Install panelboards on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For panelboards not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."
- D. Floor-Mounted Panelboards: Install panelboards on concrete bases.
  - 1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of panelboards unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
  - 2. Anchor panelboards to concrete bases according to manufacturer's written instructions, and requirements in Division 26 Sections "Hangers and Supports for Electrical Systems".
  - 3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
  - 4. Install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 6. Install anchor bolts to elevations required for proper attachment to panelboards.
  - 7. Attach panelboards to the vertical finished or structural surface behind the panelboards.
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
- F. Mount top of trim 72 inches (1788 mm) above finished floor unless otherwise indicated.
- G. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
- H. Install overcurrent protective devices and controllers not already factory installed.
- I. Install fuses in fusible devices.
- J. Install filler plates in unused spaces.
- K. Stub four 1-inch (27-GRC) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch (27-GRC) empty conduits into raised floor space or below slab not on grade.
  - 1. Empty conduits shall be provided with pull strings.
  - 2. Cap and label empty conduits for future use.
- L. Comply with NECA 1.

**3.3 CONNECTIONS**

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

**3.4 IDENTIFICATION**

- A. Equipment Nameplates: Label each contiguous main, or entrance section with equipment nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
- B. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
- C. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- D. Diagram and Instructions:
  - 1. Engraved, Laminated Acrylic or Melamine Label. Mount on front of panelboard.
    - a. Operating Instructions: Printed operating instructions for panelboard, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.
- E. Warning Labels: Label each panelboard with a warning label in accordance with NFPA 70 and NFPA 70E.
  - 1. Exception: Do not install NFPA 70 working clearance requirements on flush panelboards and similar equipment in finished spaces.
- F. Panel Directories
  - 1. Create a directory to indicate installed circuit loads; incorporate Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
  - 2. Note the date the directory was created/updated.
  - 3. Create directory after loads have been balanced to reflect actual as-built conditions.
  - 4. Circuit descriptions shall be per code and shall be distinguishable from all others.

**3.5 CLEANING**

- A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

**3.6 PROTECTION**

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

**3.7 ADJUSTING**

- A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

- B. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 Section "Power System Studies."

### 3.8 FIELD QUALITY CONTROL

- A. Testing: Perform the following field quality-control tests and inspections:
- B. Acceptance Testing Preparation:
  - 1. After installing equipment but before equipment is energized, test for compliance with requirements.
  - 2. Verify that grounding system at the equipment tested at the specified value or less.
  - 3. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.
  - 4. Test continuity of each circuit.
- C. Tests and Inspections:
  - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
  - 2. Verify that electrical control wiring installation complies with manufacturer's submittal by means of point-to-point continuity testing. Verify that wiring installation complies with requirements in Division 26 Sections.
  - 3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  - 4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
  - 5. Report results of tests and inspections in writing. Record adjustable settings and measured insulation resistances. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- D. Infrared Scanning: Perform the following infrared scan tests and inspections and prepare reports:
  - 1. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
  - 2. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
  - 3. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- E. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
  - 1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the main incoming section of each service entrance panelboard. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
  - 2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
    - a. Rebalance loads.
    - b. Prepare written request for voltage adjustment by electric utility in accordance with Division 26 section "Provisions for Electric Utility Service".
  - 3. Retests: Repeat monitoring, after corrective action has been performed, until satisfactory results are obtained.
- F. Panelboards will be considered defective if they do not pass tests and inspections.

- G. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

**3.9 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain panelboards, overcurrent protective devices, instrumentation, and accessories.
- B. Video record demonstrations presentation for Owner's records.

END OF SECTION

**SECTION 26 27 26 - WIRING DEVICES****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes the following:
  - 1. Receptacles: Single, duplex, USB/duplex, USB-only, twist-lock, ground-fault circuit interrupters (GFCI), surge protective device (SPD), isolated ground (IG) and tamper resistant (TR).
  - 2. AC Wall Switches: Single- and double-pole, three- and four-way, maintained and momentary, pilot light and lighted toggle.
  - 3. Device Wall Plates.
  - 4. Multi-Outlet Assemblies.
  - 5. Emergency Power Off Buttons

**1.2 DEFINITIONS**

- A. GFCI: Ground-fault circuit interrupter.
- B. IG: Isolated Ground
- C. PIR: Passive Infrared.
- D. RFI: Radio Frequency Interference
- E. SPD: Surge Protective Device
- F. USB: Universal Serial Bus
- G. TR: Tamper Resistant

**1.3 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product data for the following products:
  - 1. Provide manufacturer's catalog information specifically marked to indicate which devices are being furnished, and showing dimensions, colors, and configurations for all devices, including, but not limited to: Receptacles, AC wall switches, cover plates, power poles, and multi-outlet assemblies.
- C. Shop drawings for:
  - 1. List of legends and description of materials and process used for pre-marking wall plates.
- D. Warranty: Special warranties specified in this Section.

**1.4 QUALITY ASSURANCE**

- A. Source Limitations: Obtain each type of wiring device and associated cover plate from a single manufacturer and through one source. Where practical and possible, obtain all wiring devices and associated cover plates from a single manufacturer and one source.
- B. Materials shall be manufactured by companies that have been specializing in the products specified in this Section, for a minimum of 10 years.
- C. Electrical Components, Devices, and Accessories:

1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that are acceptable to authorities having jurisdiction.
  2. Marked for intended use.
- D. Comply with NFPA 70.

### 1.5 COORDINATION

- A. Receptacles for Equipment Furnished by Owner or Under Other Divisions or Contracts: Match plug configurations.

### 1.6 SPARES

- A. Furnish spare parts described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Wall Plates: One for every 10 of each type (i.e., style, size, and finish) installed, but no fewer than two of each type.

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 GENERAL

- A. Wiring devices are defined as single discrete units of electrical distribution systems, such as convenience receptacles, switches, special purpose receptacles, and similar, which are intended to carry, but not use electrical energy. Install wiring devices as required by the Specifications and where indicated on the Drawings.

### 2.2 MANUFACTURERS

- A. Manufacturers:
1. Receptacles and Switches:
    - a. Eaton.
    - b. Hubbell Incorporated.
    - c. Legrand.
    - d. Leviton.
  2. Multioutlet Assemblies:
    - a. Hubbell Incorporated.
    - b. Legrand.
  3. Emergency Power Off Buttons:
    - a. Eaton.
    - b. GE Industrial.
    - c. Schneider Electric.
- B. In other Part 2 articles below, where manufacturers and device catalog numbers are included, the following additional requirements apply to product selection:
1. Product manufacturer and model numbers listed are to establish the quality of the wiring devices. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include manufacturers listed in individual articles below, in addition to those listed in Paragraph "Manufacturers" above.
  2. Coordinate the proper suffixes in order to provide the correct color as specified below.

### 2.3 FINISHES

- A. Color:
1. Wiring devices connected to normal power systems: As selected by Architect, unless otherwise indicated or required by NFPA 70. Cover plates: The same as the wiring device.

2. Wiring devices connected to emergency power systems: Red. Cover plates: The same as the wiring device and engraved with "EMERGENCY POWER" with white filler in the engraving. Engrave the panelboard designation and circuit number serving the emergency device into the cover plate.

## 2.4 CONVENIENCE RECEPTACLES

- A. The catalog numbers listed below are generally for 20A rated devices. Where 15A rated devices are indicated on the Drawings or required for circuit rating limitations, provide receptacles equivalent to those specified for 20A, but rated for 15A.
- B. Duplex convenience receptacles: Heavy Duty Specification grade, NEMA 5-20R, 125V, 20A, grounding type, UL listed and labeled, smooth nylon face, side and back wired, self-grounding.  
Basis of Design: Legrand 5362 duplex; similar for simplex.
- C. Duplex tamper resistant convenience receptacles: Heavy Duty Specification grade, NEMA 5-20R, 125V, 20A, grounding type, UL listed and labeled, smooth nylon face, side and back wired, self-grounding.  
Basis of Design: Legrand TR5362.
- D. Duplex weather resistant convenience receptacles: Heavy Duty Specification grade, NEMA 5-20R, 125V, 20A, grounding type, UL listed and labeled, smooth nylon face, side and back wired, self-grounding.  
Basis of Design: Legrand WR5862.
- E. Twist-Locking type receptacles: NEMA L5-20R, 125V, 20A, grounding type, UL listed and labeled, nylon face, side and back wired, self-grounding.  
Basis of Design: Legrand L520-R.
- F. USB/duplex convenience receptacles: NEMA 5-20R, 125V, 20A, tamper resistant, 3-wire, grounding type, UL listed and labeled, smooth nylon face, side and back wired, self-grounding; with integral USB charger having two ports, USB 2.0 compatible, 5VDC, 3A output (min).  
Basis of Design: Legrand TR5362USB.

## 2.5 GFCI RECEPTACLES

- A. Ground fault circuit interrupter type receptacles: Specification Grade UL listed and labeled complying with UL 943, Class A and NEMA WD-1-1.10, 125V, 20A, trip at 4-6mA within 0.025 second, and feed-thru type with integral heavy duty NEMA 5-20R receptacle arranged to protect receptacles down stream on the same circuit.  
Basis of Design: Legrand2097
- B. Ground fault circuit interrupter type weather-resistant receptacles: Specification Grade UL listed and labeled complying with UL 943, Class A and NEMA WD-1-1.10, 125V, 20A, trip at 4-6mA within 0.025 second, and feed-thru type with integral heavy duty NEMA 5-20R receptacle arranged to protect receptacles down stream on the same circuit.  
Basis of Design: Legrand2097TRWR

- C. Ground fault circuit interrupter type tamper and weather-resistant receptacles: Specification Grade UL listed and labeled complying with UL 943, Class A and NEMA WD-1-1.10, 125V, 20A, trip at 4-6mA within 0.025 second, and feed-thru type with integral heavy duty NEMA 5-20R receptacle arranged to protect receptacles down stream on the same circuit.  
Basis of Design: Legrand2097TRWR
- D. Ground fault circuit interrupter with Blank Face: Specification Grade UL listed and labeled complying with UL 943, Class A and NEMA WD-1-1.10, 125V, 20A, trip at 4-6mA within 0.025 second, and feed-thru type with integral heavy duty NEMA 5-20R receptacle arranged to protect receptacles down stream on the same circuit.  
Basis of Design: Legrand 2085.

## 2.6 SPECIAL MISCELLANEOUS DEVICES

- A. Special purpose receptacles: Grounding type, UL listed with NEMA configurations as indicated below or on the Drawings.  
Basis of Design: Legrand:
- |                         |       |
|-------------------------|-------|
| Dryer 14-30R            | 3864  |
| Range 14-50R            | 3849  |
| Switch/Receptacle Combo | 671   |
| Clock 5-15R             | S3733 |

## 2.7 SWITCHES

- A. The catalog numbers listed below are generally for 20A rated devices. Where 15A rated devices are indicated on the Drawings or required for circuit rating limitations, provide switches equivalent to those specified for 20A, but rated for 15A.
- B. Switches: Heavy Duty Specification grade, rated for 120/277V, 20A, back and side wired, and UL listed and labeled.  
Basis of Design: Legrand:
- |        |         |
|--------|---------|
| 1 pole | PS20AC1 |
| 2 pole | PS20AC2 |
| 3-way  | PS20AC3 |
| 4-way  | PS20AC4 |
- C. Pilot Light switches: 20A, single pole switch with red lighted handle. Toggle shall be illuminated when the switch is in the "ON" position. Provide appropriate voltage option.  
Basis of Design: Legrand:
- |        |             |
|--------|-------------|
| 1 pole | PS20AC1-XPL |
| 2 pole | PS20AC2-XPL |
| 3-way  | PS20AC3-XPL |
- D. Lighted Handle switches: 20A, single pole switch with clear lighted handle. Toggle shall be illuminated when the switch is in the "OFF" position. Provide appropriate voltage option.  
Basis of Design: Legrand:
- |        |             |
|--------|-------------|
| 1 pole | PS20AC1-XSL |
| 2 pole | PS20AC2-XSL |
| 3-way  | PS20AC3-XSL |
- E. Key operated light switches: Same as standard light switches except toggle handle shall be operated by a factory provided key.  
Basis of Design: Legrand:

1 pole	PS20AC1-L
2 pole	PS20AC2-L
3-way	PS20AC3-L
4-way	PS20AC4-L

- F. Switches for use with mechanically-held, electrically-operated lighting contactors: Single pole, double throw, momentary, center off switch, rated for 120/277V, and UL listed and labeled.  
Basis of Design: Legrand 1251.

## 2.8 MULTI-OUTLET ASSEMBLIES

- A. Surface type "plug-in" strips: Extruded aluminum 3-wire, single circuit with single grounding type, 15A, 125V receptacles, pre-wired on 18-inch centers. Provide all fittings, devices, end closures, elbows, boxes and conduit entrance fittings as required for a complete installation.  
Basis of Design: Hubbell ALU20.

## 2.9 EMERGENCY POWER OFF BUTTONS

- A. Push Button Operators: 30MM, watertight/oiltight, heavy duty, 600V maximum ac/dc, 10A continuous, momentary, non-illuminated, shrouded push button operator. Provide with 1 normally open and 1 normally closed contact block.  
Basis of Design: Schneider 9001KR1RH13.

## 2.10 REMOTE GROUND FAULT CIRCUIT INTERRUPTER (GFCI) DEVICES

- A. Manufacturers:
1. Hubbell
  2. Littlefuse
  3. North Shore Safety
- B. UL 943 Class A Ground Fault Circuit Interrupter (GFCI) device in NEMA 4X wet location enclosure, voltage, phase, and current rating as shown on drawings. UL 943. Device shall have power and fault status indication lights and manual test and reset buttons on exterior of enclosure. Device shall allow for reset as follows:
1. Automatic reset: Allows power downstream as long as power is available and will allow power downstream upon restoration of lost power. Requires reset button be pressed if unit trips due to fault condition.

## 2.11 COVER PLATES

- A. Damp Location Weatherproof Receptacle Cover Plates: UL-listed Wet Location (cover closed, not in use); die-cast, gasketed (factory-installed) self-closing covers, for vertical mounting:  
Basis of Design: Legrand 4512 vertical.
- A. Wet Location Weatherproof Receptacle Cover Plates (Outlet Box Hood): NEMA 3R weather resistant recessed or flush mount, die cast aluminum lockable cover. Configure cover for horizontal mounting of receptacle or as indicated otherwise. Back box must be suitable for conduit connections. Coordinate back box with wall depth.

Basis of Design: Leviton IUM1H-GY.

- B. Damp and Wet Location Weatherproof switch cover plates: Fabricated of cast aluminum or cast zinc, sealed water-tight and UL listed for wet locations.  
Basis of Design: Appleton FSK.
- C. Other locations: Single and combination types to match corresponding wiring devices and manufacturer of wiring devices specified herein.
  - 1. Plate securing screws: Metal with head color to match finish plate.
  - 2. Material for Finished Spaces: Brushed stainless steel Type 302 for back of house spaces. High impact nylon, minimum 0.10-inch thick for premium spaces. Refer to "Finishes" above for color.
  - 3. Material for Unfinished Spaces and surface mounted wiring devices: Galvanized steel.
  - 4. Masonry walls and oversized wall openings: Jumbo size plates with same material as indicated above.

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. Outlets are only approximately located on the small scale Drawings. Use great care in the actual location by consulting the various large scale detailed Drawings used by other Division trades, and by securing definite locations from the Contract Administrator.
- B. Do not use multi-conductor circuits, with a shared neutral, for any GFCI receptacle circuit. Provide a separate neutral conductor with all GFCI receptacle circuits.
- C. Provide twist-locking type receptacles or other special type receptacles where indicated on the Drawings.

#### **3.2 EXAMINATION**

- A. Verify existing conditions prior to beginning work.
- B. Verify that outlet boxes are installed at proper height and are flush with the finished surface.
- C. Verify that wall openings are neatly cut and will be completely covered by wall plates.
- D. Verify that floor boxes are adjusted properly and are flush with the finished surface.
- E. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

#### **3.3 PREPARATION**

- A. If required, provide extension rings to bring outlet boxes flush with finished surface.
- B. Clean debris from in and around outlet boxes.

#### **3.4 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Install all wiring devices plumb, level, and square with building lines. Wiring device bodies shall extend to the finished surface of the walls, ceiling or floor, as applicable, without projecting beyond them.

- C. Connect wiring devices by wrapping conductors around screw terminals. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- D. Connect wiring device grounding terminal to branch circuit equipment grounding conductor and bond to metal outlet box. Exception: Do not bond grounding terminals of isolated ground receptacles to the outlet box.
- E. Install devices shown on wood trim, cases or other fixtures symmetrically and, where necessary, set with the long dimensions of the plate horizontal, or ganged in tandem.
- F. Unless dimensioned otherwise, install wiring devices a minimum of 24 inches from the closest edge of any sink.
- G. Install switches with OFF position down.
- H. Install cover plates on all switches, receptacles, and blank outlets.
- I. Locate wiring devices so that the cover plate does not have to be cut to be installed.
- J. Where devices are shown near wall openings, coordinate location if corner guards are to be installed so that cover plates do not require cutting.
- K. Install cover plates after the wall has been finished (painted, wall paper, etc).
- L. Install device boxes in brick or block walls such that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
- M. Provide engraved nameplate on emergency off buttons.
- N. Provide ground fault circuit interruption capability for all 120V receptacles 50A or less and all 208/240V receptacles 100A or less in code required locations. Locations include, but are not limited to: bathrooms, kitchens/food prep areas, exterior locations and within 6' of sinks. Interruption capability can be achieved via a GFCI circuit breaker or a GFCI receptacle.
- O. Provide type and quantity of normally open and/or normally closed contacts for emergency off buttons to meet the sequence of operations shown.
- P. Install wiring devices shown back-to-back on a common wall offset a minimum of 12" horizontally to reduce sound transmission between rooms.

### 3.5 MOUNTING HEIGHTS

- A. Coordinate locations of outlet boxes provided under Division 26 Section "Common Work Results for Electrical".
- B. Unless noted otherwise, install wiring devices at mounting heights indicated in the Electrical Symbols Legend on the construction drawings.
  - 1. Receptacles:
    - a. General:
      - 1) Unless indicated otherwise, install vertically with the ground slot mounted at the top.
      - 2) Where Installed horizontally, install neutral slot mounted at the top.
    - b. Above counters:
      - 1) Mount vertically.
    - c. Mechanical and electrical equipment rooms and janitors closets:
      - 1) Mount horizontally.
    - d. Garages:
      - 1) Wet location: Mount horizontally.
      - 2) Other locations: Mount vertically.
    - e. Weatherproof exterior receptacles:
      - 1) Mount horizontally.

- f. GFCI receptacles: Same as general receptacles.
  - g. Concrete Block Walls: Dimensions above may be adjusted slightly, as required to compensate for variable joint dimensions, such that bottom or top of boxes, as applicable, are at block joints.
- 2. Switches:
    - a. Above counters: Same as for receptacles.
    - b. Concrete Block Walls: Dimension may be adjusted slightly, as required to compensate for variable joint dimensions, such that bottom of boxes are at block joints.
    - c. Walls with wainscoting: 6 inches minimum above wainscoting, but not exceeding 48 inches above finished floor.
  - 3. Multi-outlet assemblies:
    - a. 6 inches below counter top.
  - 4. Telephone/Data Outlet Boxes:
    - a. General: Match mounting height of adjacent wiring device listed above.
  - 5. Emergency Power Off Buttons and Break Glass Operators:
    - a. General: Match requirements of switches listed above.
    - b. Wall-mounted telephone: 40 inches above finished floor.

### 3.6 IDENTIFICATION

- A. Label all devices fed down stream of GFCI protected receptacles as "GFCI PROTECTED".
- B. Comply with Division 26 Section "Identification for Electrical Systems."
  - 1. Receptacles and Switches: Identify panelboard and circuit number from which served, using:
    - a. Durable wire markers or tags inside outlet boxes.
    - b. Adhesive film label, but with letter/number height of 1/4 inch, on face of plate.
    - c. Adhesive Film Label with Clear Protective Overlay, but with letter/number height of 1/4 inch, on face of plate, for exterior and damp/wet locations.

### 3.7 FIELD QUALITY CONTROL

- A. Inspect each wiring device for defects.
- B. Operate each wall switch with circuit energized and verify proper operation.
- C. Verify that each receptacle device is energized. After installing wiring devices and after electrical circuitry has been energized, test for proper polarity, ground continuity, and compliance with requirements.
- D. Test all wiring devices for electrical continuity and proper polarity of connections.
- E. Test each GFCI receptacle device for proper operation.
- F. Correct wiring devices incorrectly installed.
- G. Repair or replace all damaged items or damaged finishes at no expense to the Owner.

### 3.8 ADJUSTING

- A. Adjust devices and wall plates to be flush and level.

### 3.9 CLEANING

- A. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION

**SECTION 26 28 13 - FUSES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Cartridge fuses rated 600-V ac and less for use in:
    - a. Control circuits
    - b. Enclosed switches
    - c. Panelboards
    - d. Switchboards
    - e. Enclosed controllers
  - 2. Spare-fuse cabinets.

**1.2 ADMINISTRATIVE REQUIREMENTS**

- A. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Power System Studies."

**1.3 SUBMITTALS**

- A. Product Data: For each type of product indicated. Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:
  - 1. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
  - 2. Current-limitation curves for fuses with current-limiting characteristics.
  - 3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
  - 4. Coordination charts and tables and related data.
  - 5. Fuse sizes for elevator feeders and elevator disconnect switches.
- B. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
  - 1. All items requested under "Product Data".

**1.4 QUALITY ASSURANCE**

- A. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NEMA FU 1 for cartridge fuses.
- D. Comply with NFPA 70.
- E. Comply with UL 248.

**1.5 PROJECT CONDITIONS**

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C) or more than 100 deg F (38 deg C), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

**1.6 COORDINATION**

- A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.
- B. Coordinate location of and access to spare fuse cabinet(s) with final electrical equipment layouts within electrical equipment rooms.

**1.7 EXTRA MATERIALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Provide products listed, classified, and labeled as suitable for the purpose intended.
- B. Unless specifically indicated to be excluded, provide fuses for all fusible equipment as required for a complete operating system.
- C. Provide fuses of the same type, rating, and manufacturer within the same switch.
- D. Selectivity: Where selectivity is required by the Documents, furnish products as required to achieve selective coordination.

**2.2 MANUFACTURERS**

- A. Manufacturers:
  - 1. ABB Ltd.
  - 2. Eaton Corporation Plc
  - 3. Mersen Electrical Power
  - 4. Littelfuse, Inc.
  - 5. Schneider Electric SE
  - 6. Siemens AG

**2.3 CARTRIDGE FUSES**

- A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

**2.4 ACCESSORIES**

- A. Provide the following accessories where indicated or where required to complete installation:
  - 1. Fuseholders: Compatible with indicated fuses.
  - 2. Fuse Reducers: For adapting indicated fuses to permit installation in switch designed for fuses with larger ampere ratings.

3. Plug-Fuse Adapters: For using Type S, rejection-base plug fuses in Edison-base fuseholders or sockets; ampere ratings matching fuse ratings; irremovable once installed.

## 2.5 SPARE-FUSE CABINET

- A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
  1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
  2. Finish: Gray, baked enamel.
  3. Identification: "SPARE FUSES" in 1-1/2-inch- (38-mm-) high letters on exterior of door.
  4. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.
- B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Do not install fuses until circuits are ready to be energized.
- B. Install in accordance with manufacturer's instructions.
- C. Install fuses in fusible devices. Arrange fuses so manufacturer, type and rating information is readable without removing fuse.
- D. Install spare-fuse cabinet(s).

### 3.3 FUSE APPLICATIONS

- A. Cartridge Fuses:
  1. Service Entrance:
    - a. Greater than 600A:
      - 1) Class L, time delay
    - b. 600A or less:
      - 1) Class RK1, time delay
  2. Feeders:
    - a. Greater than 600A:
      - 1) Class L, time delay
    - b. 600A or less:
      - 1) Class RK1, time delay
      - 2) Class J, time delay
  3. Motor Branch Circuits:

- a. Class RK1 time delay
- 4. Other Branch Circuits:
  - a. Class RK1, time delay
- 5. Control Circuits:
  - a. Class CC fast acting

### **3.4 IDENTIFICATION**

- A. Install labels complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION

**SECTION 26 28 16 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Fusible switches.
- B. Non-fusible switches.
- C. Shunt trip switches.
- D. Enclosures.

**1.2 DEFINITIONS**

- A. NC: Normally closed.
- B. NO: Normally open.
- C. SPDT: Single pole, double throw.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of enclosed switches, circuit breakers and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Power System Studies".

**1.4 SUBMITTALS**

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensions and Manufacturer's technical data on features, performance, electrical characteristics, ratings, weights, furnished options, specialties, accessories, and finishes.
- C. Shop Drawings: For enclosed switches and circuit breakers.
  - 1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.
    - a. Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 2. Detail enclosure types and details for other than NEMA 250, Type 1.

3. Include general arrangement drawing showing dimensions and weights of each assembled section.
  4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses.
  5. Detail short-circuit current rating of enclosed switch or circuit breaker assembly and overcurrent protective devices.
  6. Include descriptive documentation of barriers specified for electrical insulation and isolation.
  7. Include time-current coordination curves for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Submit electronic files, in an SKM-compatible format.
  8. Include schematic and wiring diagrams for power, signal, and control wiring.
  9. Include nameplate legends.
  10. Include list of materials.
- D. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around enclosed switches and circuit breakers where pipe and ducts are prohibited. Show enclosed switch and circuit breaker layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
- E. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.
- F. Field quality-control reports.
1. Test procedures used.
  2. Test results that comply with requirements.
  3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- G. Sample Warranty: For warranty.
- H. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.
- I. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
1. Routine maintenance requirements for enclosed switches, circuit breakers and all installed components.
  2. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
  3. Time-current curves; include selectable ranges for each type of overcurrent protective device.
  4. Features and operating sequences, both automatic and manual.
  5. Video recording of operation training and demonstration.
- J. Follow-up service reports.

## 1.5 QUALITY ASSURANCE

- A. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."
- B. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.

### 1.6 PROJECT CONDITIONS

- A. Maintain field conditions within manufacturer's required service conditions during and after installation.
- B. Environmental Limitations:
  - 1. Do not deliver or install enclosed switches and circuit breakers until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above equipment is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).
    - b. Altitude: Not exceeding 6600 feet (2010 m).

### 1.7 DELIVERY STORAGE AND HANDLING

- A. Deliver enclosed switches and circuit breakers in sections or lengths that can be moved past obstructions in delivery path.
- B. Coordinate delivery of equipment to allow movement into designated space.
- C. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.
- D. Handle and prepare enclosed switches and circuit breakers components according to manufacturer's written instructions. Use factory-installed lifting provisions.

### 1.8 WARRANTY

- A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components and/or products of the enclosed switches and circuit breakers that fail in materials or workmanship within the specified warranty period.
- B. Warranty Period: Three years from date of Substantial Completion.

### 1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fuses: Refer to Division 26 section "Fuses" for spare fuse requirements. At a minimum, include spares for the following:
    - a. Potential transformer fuses.
    - b. Control power fuses.
    - c. Fuses for fusible devices.
  - 2. Indicating Lights: Four of each type installed.
  - 3. Primary Switch Contact Lubricant: One container.
  - 4. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

**PART 2 - PRODUCTS****2.1 FUSIBLE SWITCHES**

- A. Manufacturers:
  - 1. ABB Inc.
  - 2. Eaton.
  - 3. Schneider Electric.
  - 4. Siemens Energy & Automation, Inc.
- B. Type HD, Heavy Duty, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- C. Type HD, Heavy Duty, Six Pole, Single Throw, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- D. Short Circuit Current Rating: 100,000 rms symmetrical amps when fuses applied.
- E. Accessories:
  - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
  - 2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
  - 3. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
  - 4. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
  - 5. Hookstick Handle: Allows use of a hookstick to operate the handle.
  - 6. Lugs: Mechanical or Compression type, suitable for number, size, and conductor material.
- F. Arc Flash Mitigation
  - 1. Fuses, 1200 A and larger, shall have a clearing time of 0.07 seconds or less at the available arcing current, or shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
  - 2. Documentation shall be provided in accordance with the NEC for location of overcurrent device and method of clearing time reduction.

**2.2 NONFUSIBLE SWITCHES**

- A. Manufacturers:
  - 1. ABB Inc.
  - 2. Eaton.
  - 3. Schneider Electric.
  - 4. Siemens Energy & Automation, Inc.
- B. Type HD, Heavy Duty, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- C. Type HD, Heavy Duty, Six Pole, Single Throw, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- D. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
4. Hookstick Handle: Allows use of a hookstick to operate the handle.
5. Lugs: Mechanical or Compression type, suitable for number, size, and conductor material.

### 2.3 SHUNT TRIP SWITCHES

- A. Manufacturers:
  1. Eaton.
  2. Littelfuse, Inc.
  3. Mersen
  4. Siemens Energy & Automation, Inc.
- B. General Requirements: Comply with ASME A17.1, UL 50, and UL 98, with 200-kA interrupting and short-circuit current rating when fitted with Class J fuses.
- C. Switches: Three-pole, horsepower rated, with integral shunt trip mechanism and Class J fuse block; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.
- D. Control Circuit: 120-V ac; obtained from integral control power transformer, with primary and secondary fuses, with a control power transformer of enough capacity to operate shunt trip, connected pilot, and indicating and control devices.
- E. Accessories:
  1. Oiltight key switch for key-to-test function.
  2. Oiltight red ON pilot light.
  3. Isolated neutral lug; 100 percent rating.
  4. Form C alarm contacts that change state when switch is tripped.
- F. Arc Flash Mitigation
  1. Fuses, 1200 A and larger, shall have a clearing time of 0.07 seconds or less at the available arcing current, or shall be provided with an energy-reducing active arc flash mitigation capability. The energy-reducing active arc flash mitigation system shall allow the operator to enable a maintenance mode using a switch which enables a preset accelerated instantaneous override trip to reduce arc flash energy. An LED on the trip unit shall indicate the trip unit is in the maintenance mode.
  2. Documentation shall be provided in accordance with the NEC for location of overcurrent device and method of clearing time reduction.

### 2.4 ENCLOSURES

- A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
  1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.
  2. Outdoor Locations: NEMA 250, Type 3R.
  3. Kitchen and Wash-Down Areas: NEMA 250, Type 4X, stainless steel.
  4. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4.
  5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

## 2.5 IDENTIFICATION

- A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine enclosed switches and circuit breakers before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.
- B. Examine areas, surfaces, substrates, and elements to receive enclosed switches and circuit breakers with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.
  - 1. Verify that field measurements are as indicated.
  - 2. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.
- C. Examine roughing-in of conduits and grounding systems to verify the following:
  - 1. Wiring entries comply with layout requirements.
  - 2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install enclosed switches and circuit breakers and accessories in accordance with manufacturer's instructions.
- B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- C. Wall-Mounted Switches and Circuit Breakers: Install enclosed switches and circuit breakers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For enclosed switches and circuit breakers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."
- D. Floor-Mounted Switches and Circuit Breakers: Install enclosed switches and circuit breakers on concrete bases.
  - 1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of enclosed switches and circuit breakers unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
  - 2. Anchor enclosed switches and circuit breakers to concrete bases according to manufacturer's written instructions, and requirements in Division 26 Sections "Hangers and Supports for Electrical Systems".
  - 3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
  - 4. Install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  6. Install anchor bolts to elevations required for proper attachment to enclosed switches and circuit breakers.
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
  - F. Mount equipment plumb and rigid without distortion of enclosure.
  - G. Install fuses in fusible devices.
  - H. Comply with NECA 1.
  - I. Where installed on either side of a VFD, provide one normally open and one normally closed auxiliary contacts interlocked with the VFD.

### 3.3 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

### 3.4 IDENTIFICATION

- A. Equipment Nameplates: Label each section with equipment nameplate.
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- C. Diagrams and Instructions:
  1. Engraved, Laminated Acrylic or Melamine Label. Mount on front of equipment.
    - a. Operating Instructions: Printed operating instructions for switches and circuit breakers, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.
- D. Warning Labels: Label equipment with a warning label in accordance with NFPA 70 and NFPA 70E.
  1. Exception: Do not install NFPA 70 working clearance requirements on enclosed switches and circuit breakers in finished spaces.

### 3.5 CLEANING

- A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

### 3.6 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

**3.7 AD USTING**

- A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

**3.8 FIELD QUALITY CONTROL**

- A. Testing: Perform the following field quality-control tests and inspections:
- B. Acceptance Testing Preparation:
1. After installing equipment but before equipment is energized, test for compliance with requirements.
  2. Verify that grounding system at the equipment tested at the specified value or less.
  3. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
  4. Test continuity of each circuit.
- C. Tests and Inspections:
1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
  2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  3. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
  4. Report results of tests and inspections in writing. Record adjustable settings and measured insulation resistances. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- D. Infrared Scanning: Perform the following infrared scan tests and inspections and prepare reports:
1. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.
  2. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.
  3. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- E. Voltage Monitoring and Adjusting: After Substantial Completion, if requested by Owner, but not more than six months after Final Acceptance, perform the following voltage monitoring:
1. During a period of normal load cycles as evaluated by Owner, perform seven days of three-phase voltage recording at the main incoming section of each service entrance equipment. Use voltmeters with calibration traceable to the National Institute of Science and Technology standards. Voltage unbalance greater than 1 percent between phases, or deviation of any phase voltage from the nominal value by more than plus or minus 5 percent during the test period, is unacceptable.
  2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:
    - a. Rebalance loads.
    - b. Prepare written request for voltage adjustment by electric utility in accordance with Division 26 section "Provisions for Electric Utility Service".
- F. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

**3.9 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain equipment, overcurrent protective devices, instrumentation, and accessories.
- B. Video record demonstrations presentation for Owner's records.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 32 13 - PACKAGED ENGINE-DRIVEN GENERATORS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Gas-engine generator sets for emergency power supply with the following features and accessories:
  - 1. Engine-generator set.
  - 2. Battery charger.
  - 3. Starting battery
  - 4. Muffler/silencer.
  - 5. Generator overcurrent and fault protection.
  - 6. Outdoor enclosure.
  - 7. Vibration isolation devices.
  - 8. Remote annunciator.
  - 9. Unit-mounted cooling system.
  - 10. Unit-mounted control and monitoring.
  - 11. Remote stop switch.
  - 12. Load bank.

**1.2 DEFINITIONS**

- A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.
- B. Steady-State Voltage Modulation: The uniform cyclical variation of voltage within the operational bandwidth, expressed in Hertz or cycles per second.
- C. LP: Liquid petroleum.
- D. EPS: Emergency power supply.
- E. EPSS: Emergency power supply system.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of generators and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

**1.4 SUBMITTALS**

- A. Product Data: Include the following:
  - 1. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
  - 2. Thermal damage curve for generator.
  - 3. Time-current characteristic curves for generator protective device.
- B. Shop Drawings: Include the following:

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  2. Dimensioned plan and elevation drawings of engine-generator set and other components specified.
  3. Design Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
  4. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
  5. Diagrams for power, signal, and control wiring. Complete schematic, wiring, and interconnection diagrams showing terminal markings for engine generators and functional relationship between all electrical components.
- C. Coordination Drawings: For each equipment room and equipment yard, provide dimensioned layout of the electrical equipment within the space, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved.
1. Dimensioned concrete base, outline of equipment, conduit entries, and ground rod locations; including equipment working clearances and manufacturer required access space.
  2. Indicate structural members, light fixtures, sprinkler piping and heads, HVAC equipment, ducts and diffusers, plumbing piping and access fittings. Include maintenance access clearances.
  3. Location of structural supports for structure-supported raceways.
  4. Location and clearance of electrical equipment and raceways impacting equipment installation.
- D. Welding certificates.
- E. Qualification Data:
1. For Installer.
- F. Source Quality-Control Reports: Including, but not limited to, the following
1. Certified summary of prototype-unit test report.
  2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
  3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria.
  4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
  5. Report of sound generation.
  6. Report of exhaust emissions showing compliance with applicable regulations.
    - a. For installations where field-deployed after treatment devices are utilized to meet emission standards, provide manufacturer certification.
  7. Certification of Torsional Vibration Compatibility: Comply with NFPA 110.
- G. Field quality-control test reports.
- H. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals.
1. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
    - a. List of tools and replacement items recommended to be stored at the Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.
    - b. Operating instructions laminated and mounted adjacent to generator location.
    - c. Training plan.

## I. Warranty

**1.5 QUALITY ASSURANCE**

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.
- B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within 200 miles (160 km) of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
- C. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.
- D. Product Options: Drawings indicate size, profiles, and dimensional requirements of packaged generator sets and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with NFPA 54
- G. Comply with NFPA 37.
- H. Comply with NFPA 70.
- I. Comply with NFPA 110 requirements for Level 1, Type 10, Class "X" emergency power supply system.
- J. Engine Exhaust Emissions: Comply with applicable state and local government requirements.
- K. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

**1.6 COORDINATION**

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

**1.7 WARRANTY**

- A. Manufacturer's Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

**1.8 MAINTENANCE SERVICE**

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Maintenance agreements shall include parts and supplies as used in manufacture and installation of original equipment.

**1.9 EXTRA MATERIALS**

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fuses: One for every 10 of each type and rating, but not less than one of each.
  - 2. Indicator Lamps: Two for every six of each type used, but not less than two of each.
  - 3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

**PART 2 - PRODUCTS AND MATERIALS****2.1 MANUFACTURERS**

- A. Basis-of-Design Product: Subject to compliance with requirements provided in Generator Sizing Schedule on drawings, provide comparable products by one of the following, the manufacturer used as the basis of design is listed in schedule:
  - 1. Caterpillar; Engine Div.
  - 2. Cummins Power Generation, Inc
  - 3. MTU Onsite Energy
  - 4. Kohler Power Systems

**2.2 SERVICE CONDITIONS**

- A. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
  - 1. Ambient Temperature: 5 to 40 deg C.
  - 2. Relative Humidity: 0 to 95 percent.
  - 3. Altitude: Sea level to 1000 feet (300 m).
- B. Unusual Service Conditions: Engine-generator equipment and installation are required to operate under the following conditions:
  - 1. High salt-dust content in the air due to sea-spray evaporation.

**2.3 ENGINE GENERATOR ASSEMBLY DESCRIPTION**

- A. Factory-assembled and -tested, water-cooled engine, with brushless generator and accessories.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended location and use.
- C. Power Rating: Standby.
- D. Service Load: Generator system shall be sized to handle load scheduled on drawings.
- E. Power Factor: 0.8, lagging.
- F. Frequency: 60 Hz.
- G. Voltage: 480 V ac.
- H. Phase: Three-phase, four wire, wye.
- I. Governor: Adjustable isochronous, with speed sensing.
- J. Mounting Frame: Adequate strength and rigidity to maintain alignment of mounted components without depending on concrete foundation. Mounting frame shall be free from sharp edges and corners and shall have lifting attachments arranged for lifting with slings without damaging components.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.
- K. Capacities and Characteristics:
1. Power Output Ratings: Nominal ratings as indicated at 0.8 power factor excluding power required for the continued and repeated operation of the unit and auxiliaries, with capacity as required to operate as a unit as evidenced by records of prototype testing.
  2. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.
- L. Generator-Set Performance
1. Steady-State Voltage Operational Bandwidth: 3 percent of rated output voltage from no load to full load.
  2. Transient Voltage Performance: Refer to Generator Sizing Schedule on drawings. Voltage shall recover and remain within the steady-state operating band within three seconds.
  3. Steady-State Frequency Operational Bandwidth: 0.5 percent of rated frequency from no load to full load.
  4. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
  5. Transient Frequency Performance: Refer to Generator Sizing Schedule on drawings. Frequency shall recover and remain within the steady-state operating band within five seconds.
  6. Output Waveform: At no load, harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for single harmonics. The telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
  7. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, the system shall supply a minimum of 250 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to generator system components.
  8. Start Time: Refer to Generator Sizing Schedule on drawings. Comply with NFPA 110, Type 10, system requirements.

## 2.4 ENGINE

- A. Fuel: Natural gas.
- B. Rated Engine Speed: 1800 rpm.
- C. Lubrication System: The following items are mounted on engine or skid:
1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
  2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
  3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.
- D. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.
- E. Integral Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine generator mounting frame and integral engine-driven coolant pump.
1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
  2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.

3. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
  4. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
    - a. Rating: 50-psig (345-kPa) maximum working pressure with coolant at 180 deg F (82 deg C), and noncollapsible under vacuum.
    - b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.
- F. Muffler/Silencer
1. Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.
    - a. Minimum sound attenuation of 25 dB at 500Hz.
    - b. Sound level measured at a distance of 10 feet (3 m) from exhaust discharge shall be 85 dBA or less.
- G. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.
- H. Starting System: 24-V electric, with negative ground .
1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in "Environmental Conditions" Paragraph in "Service Conditions" Article.
  2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
  3. Cranking Cycle: As required by NFPA 110 for system level specified.
  4. Battery: Adequate capacity within ambient temperature range specified in "Environmental Conditions" Paragraph in "Service Conditions" Article to provide specified cranking cycle at least twice without recharging.
  5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
  6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in "Environmental Conditions" Paragraph in "Service Conditions" Article. Include accessories required to support and fasten batteries in place.
  7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
  8. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
    - a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
    - b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
    - c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
    - d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
    - e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.

- f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.
- i. Installation of equipment required for emissions compliance shall include a complete manufacturer certified system, including, but not limited to any additional piping, heating and structural support.

## 2.5 FUEL SUPPLY SYSTEM

- A. Natural Gas, Vapor-Withdrawal System:
  1. Comply with NFPA 54.
  2. Carburetor.
  3. Secondary Gas Regulators: One for each fuel type, with atmospheric vents piped to building exterior.
  4. Fuel-Shutoff Solenoid Valves: NRTL-listed, normally closed, safety shutoff valves; one for each fuel source.
  5. Fuel Filters: One for each fuel type.
  6. Manual Fuel Shutoff Valves: One for each fuel type.
  7. Flexible Fuel Connectors: Minimum one for each fuel connection.
  8. Fuel change gas pressure switch.

## 2.6 CONTROL AND MONITORING

- A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more separate automatic transfer switches initiate starting and stopping of the generator set. When mode-selector switch is switched to the on position, the generator set starts. The off position of the same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down the generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down the generator set.
- B. Configuration:
  1. Operating and safety indications, protective devices, basic system controls, and engine gages shall be grouped in a common control and monitoring panel mounted on the generator set. Mounting method shall isolate the control panel from generator-set vibration. Panel shall be powered from the engine generator battery.
- C. Control and Monitoring Panel:
  1. Digital controller with integrated LCD, controls, and microprocessor, capable of local and remote control, monitoring, and programming, with battery backup.
  2. Instruments: Located on the control and monitoring panel and viewable during operation.
    - a. Engine lubricating-oil pressure gage.
    - b. DC voltmeter (alternator battery charging).
    - c. Engine-coolant temperature gage.
    - d. Running-time meter.
    - e. AC voltmeter, for each phase
    - f. AC ammeter, for each phase
    - g. AC frequency meter.
    - h. Generator-voltage adjusting rheostat.
  3. Controls and Protective Devices: Controls, shutdown devices, and common visual alarm indication, including the following:
    - a. Cranking control equipment.
    - b. Run-Off-Auto switch.
    - c. Control switch not in automatic position alarm.
    - d. Start-stop switch.
    - e. Overcrank alarm.
    - f. Overcrank shutdown device.
    - g. Low water temperature alarm.

- h. High engine temperature prealarm.
  - i. High engine temperature.
  - j. High engine temperature shutdown device.
  - k. Low lub oil pressure alarm
  - l. Low lub oil pressure shutdown
  - m. Overspeed alarm.
  - n. Overspeed shutdown device.
  - o. Coolant low-level alarm.
  - p. Coolant low-level shutdown device.
  - q. EPS load indicator.
  - r. Battery high-voltage alarm.
  - s. Low cranking voltage alarm.
  - t. Battery-charger malfunction alarm.
  - u. Battery low-voltage alarm.
  - v. Contacts for local and remote common alarm.
  - w. Lamp test.
  - x. Coolant high-temperature prealarm.
  - y. Coolant high-temperature alarm.
  - z. Coolant low-temperature alarm.
  - aa. Coolant high-temperature shutdown device.
  - bb. Hours of operation.
  - cc. Engine generator metering, including voltage, current, Hz, kW, kVA, and power factor.
  - dd. Remote manual stop shutdown device.
  - ee. Air shutdown damper alarm when used.
  - ff. Air shutdown damper shutdown device when used.
  - gg. Generator overcurrent protective device not closed alarm.
- D. Remote Alarm Annunciator: An LED indicator light labeled with proper alarm conditions shall identify each alarm event, and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.
- 1. Overcrank alarm.
  - 2. Coolant low-temperature alarm.
  - 3. High engine temperature prealarm.
  - 4. High engine temperature alarm.
  - 5. Low lube oil pressure alarm.
  - 6. Overspeed alarm.
  - 7. Low fuel main tank alarm.
  - 8. Low coolant level alarm.
  - 9. Low cranking voltage alarm.
  - 10. Contacts for local and remote common alarm.
  - 11. Audible-alarm silencing switch.
  - 12. Air shutdown damper when used.
  - 13. Run-Off-Auto switch.
  - 14. Control switch not in automatic position alarm.
  - 15. Low cranking voltage alarm.
- E. Remote Emergency-Stop Switch: Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.
- F. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.

**2.7 GENERATOR OVERCURRENT AND FAULT PROTECTION**

- A. Overcurrent protective devices shall be coordinated to optimize selective tripping when a short circuit occurs.
- B. Generator Overcurrent Protective Device:
  - 1. Generator Circuit Breaker: Insulated-case, electronic-trip type; 100 percent rated; complying with UL 489.
    - a. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
    - b. Trip Settings: Matched to generator thermal damage curve as closely as possible.
    - c. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
    - d. Mounting: Adjacent to or integrated with control and monitoring panel.
- C. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground fault.
  - 1. Indicate ground fault with other engine generator alarm indications.
  - 2. Trip generator protective device on ground fault.

**2.8 GENERATOR EXCITER AND VOLTAGE REGULATOR**

- A. Comply with NEMA MG 1 and specified performance requirements.
- B. Drive: Generator shaft shall be directly connected to engine shaft. Exciter shall be rotated integrally with generator rotor.
- C. Electrical Insulation: Class H or Class F.
- D. Stator-Winding Leads: Brought out to terminal box to permit future reconnection for other voltages if required.
- E. Construction shall prevent mechanical, electrical, and thermal damage due to vibration, overspeed up to 125 percent of rating, and heat during operation at 110 percent of rated capacity.
- F. Excitation shall use no slip or collector rings, or brushes, and shall be arranged to sustain generator output under short-circuit conditions as specified.
- G. Enclosure: Drip-proof.
- H. Instrument Transformers: Mounted within generator enclosure.
- I. Voltage Regulator: Solid-state type, separate from exciter, providing performance as specified.
  - 1. Adjusting rheostat on control and monitoring panel shall provide plus or minus 5 percent adjustment of output-voltage operating band.
- J. Strip Heater: Thermostatically controlled unit arranged to maintain stator windings above dew point.
- K. Windings: Two-thirds pitch stator winding and fully linked amortisseur winding.
- L. Subtransient Reactance: 12 percent, maximum.

**2.9 LOAD BANK**

- A. Description:
  - 1. Permanent, radiator-mounted, resistive unit capable of providing a balanced three-phase, delta-connected load to engine generator at 70 percent rated-system capacity. Unit shall be capable of selective control of load in 25 percent steps of load-bank rating and with minimum step changes of approximately 5 and 10 percent available.
- B. Resistive Load Elements: Corrosion-resistant chromium alloy with ceramic and steel supports. Elements shall be double insulated and designed for repetitive on-off cycling. Elements shall be mounted in removable aluminized-steel heater cases.

- C. Reactive Load Elements: Epoxy-encapsulated reactor coils.
- D. Load-Bank Heat Dissipation: Integral fan with totally enclosed motor shall provide uniform cooling airflow through load elements. Airflow and coil operating current shall be such that, at maximum load, with ambient temperature at the upper end of the specified range, load-bank elements operate at not more than 50 percent of maximum continuous temperature rating of the resistance elements.
- E. Load Element Switching: Remote-controlled contactors switch groups of load elements. Contactor coils are rated 120 V. Contactors shall be located in a separate NEMA 250, Type 3R enclosure within load-bank enclosure, accessible from exterior through hinged doors with tumbler locks.
- F. Contactor Enclosures: Heated by thermostatically controlled strip heaters to prevent condensation.
- G. Load-Bank Enclosures: NEMA 250, Type 3R, complying with NEMA ICS 6. Louvers at cooling-air intake and discharge openings shall prevent entry of rain and snow. Openings for airflow shall be screened with 1/2-inch- (13-mm-) square, galvanized-steel mesh. Reactive load bank shall include automatic shutters at air intake and discharge.
- H. Protective Devices: Power input circuits to load banks shall be fused, and fuses shall be selected to coordinate with generator circuit breaker. Fuse blocks shall be located in contactor enclosure. Cooling airflow and overtemperature sensors shall automatically shut down and lock out load bank until manually reset. Safety interlocks on access panels and doors shall disconnect load power, control, and heater circuits. Fan motor shall be separately protected by overload and short-circuit devices. Short-circuit devices shall be noninterchangeable fuses with 200,000-A interrupting capacity.
- I. Remote-Control Panel: Separate from load bank in NEMA 250, Type 1 enclosure with a control power switch and pilot light, and switches controlling groups of load elements.
- J. Control Sequence: Control panel may be preset for adjustable single-step loading of generator during automatic exercising.

## 2.10 OUTDOOR GENERATOR-SET ENCLOSURE

- A. Description:
  - 1. Vandal-resistant, sound-attenuating, weatherproof steel housing. Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure.
    - a. Sound Attenuation Level: Level II
  - 2. Prefabricated or preengineered, galvanized-steel-clad, integral structural-steel-framed, walk-in enclosure erected on concrete foundation.
- B. Construction:
  - 1. Structural Design and Anchorage: Comply with ASCE/SEI 7 for wind loads up to 100 mph (160 km/h).
  - 2. Louvers: Equipped with bird screen and filter arranged to permit air circulation when engine is not running while excluding exterior dust, birds, and rodents.
  - 3. Hinged Doors: With padlocking provisions.
  - 4. Space Heater: Thermostatically controlled and sized to prevent condensation.
  - 5. Ventilation: Louvers equipped with bird screen and filter arranged to permit air circulation while excluding exterior dust, birds, and rodents.
  - 6. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine-generator-set components.
- C. Muffler Location: Within enclosure.

- D. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
  - 1. Louvers: Fixed-engine cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.
    - a. Automatic Dampers: At engine cooling-air inlet and discharge. Dampers shall be closed to reduce enclosure heat loss in cold weather when unit is not operating.
  - 2. Ventilation: Provide temperature-controlled exhaust fan interlocked to prevent operation when engine is running.
- E. Interior Lights with Switch: Factory-wired, vaporproof-type fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.
- F. Convenience Outlets: Factory-wired, GFCI. Arrange for external electrical connection.

## 2.11 VIBRATION ISOLATION DEVICES

- A. Elastomeric Isolator Pads: Oil and water resistant and factory cut to sizes that match requirements of the equipment supported.
  - 1. Rubber Isolator Pads: Elastomer (neoprene or silicone) arranged in single or multiple layers and molded with a nonslip pattern and steel baseplates of sufficient stiffness to provide uniform loading over the pad area.
  - 2. Fiberglass or cork isolator pads: molded cork or glass fiber not less than 1 inch thick and pre-compressed through 10 compression cycles at 3 times the rated load.
  - 3. Load range: from 10 to 50 psig and a deflection not less than 0.08 inch per 1 inch of thickness. Do not exceed a loading of 50 psig.
- B. Rubber Isolator Mounts: Double-deflection type, with molded, oil-resistant rubber or neoprene isolator elements, with encapsulated top- and baseplates. Factory-drilled and tapped top plate for bolted equipment mounting. Factory-drilled baseplate for bolted connection to structure. Color-code to indicate capacity range.
- C. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic restraint.
  - 1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment-mounting and -leveling bolt that acts as blocking during installation.
  - 2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
  - 3. Minimum Additional Travel: 50 percent of required deflection at rated load.
  - 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
  - 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
  - 6. Finishes: Baked enamel for metal components on isolators for interior use. Hot-dip galvanized for metal components on isolators for exterior use.
- D. Comply with requirements in Div. 23 "Vibration Isolation for HVAC" " for vibration isolation and flexible connector materials for steel piping, exhaust shroud and ductwork..

## 2.12 FINISHES

- A. Indoor and Outdoor Enclosures and Components: Manufacturer's standard enamel over corrosion-resistant pretreatment and compatible standard primer.

## 2.13 SOURCE QUALITY CONTROL

- A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.

1. Tests:
    - a. Comply with IEEE 115.
    - b. Comply with NFPA 110, Level 1 energy converters.
  2. Components and Accessories: Items furnished with installed unit that are not identical to those on tested prototype shall have been factory tested to demonstrate compatibility and reliability.
- B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:
1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
  2. Test generator, exciter, and voltage regulator as a unit.
  3. Full load run.
  4. Maximum power.
  5. Voltage regulation.
  6. Transient and steady-state governing.
  7. Single-step load pickup.
  8. Safety shutdown.
  9. Observation of Factory Tests: Provide 14 days' advance notice of tests and opportunity for observation of tests by Owner's representative.
- C. Report factory test results within 10 days of completion of test.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.
- B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Comply with engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.
  1. For installations where field-deployed after treatment equipment is utilized, install equipment in accordance with manufacturer's requirements to ensure the final installation meets the manufacturer's definition of a factory-certified arrangement.
- B. Equipment Mounting:
  1. Install packaged engine generators on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
  2. Coordinate size and location of concrete bases for packaged engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
  3. Install packaged engine generator with restrained spring isolators having a minimum deflection of 1 inch (25 mm) on 4-inch- (100-mm-) high concrete base. Secure to anchor bolts installed in concrete base.
- C. Install cooling-system piping, accessories, hangers and supports, and anchors for complete installation.

1. Hanger, support, and anchor devices are specified in Division 23 Section "Hangers and Supports." Comply with requirements below for maximum spacing of supports.
- D. Install exhaust-system piping. Extend to point of termination outside structure. Size piping according to manufacturer's written instructions.
  1. Install condensate drain piping for engine exhaust system. Extend drain piping from low points of exhaust system and from muffler to condensate traps and to point of disposition.
  2. Support exhaust piping and muffler with pipe hangers spaced a maximum of 20 feet (6 m) horizontally and at each floor vertically. Pipe hangers are specified in Division 23 Section "Hangers and Supports."
  3. Restrain exhaust piping and mufflers with cable-type bracing assemblies. Cable-type bracing assemblies are specified in Division 26 Section "Electrical Supports and Seismic Restraints."
- E. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

### 3.3 CONNECTIONS

- A. Piping installation requirements are specified in Division 23 Sections. Drawings indicate general arrangement of piping and specialties. The following are specific connection requirements:
  1. Install fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.
  2. Connect cooling-system water supply and drain piping to gas-engine heat exchangers. Install flexible connectors at connections to engine generator and remote radiator.
  3. Connect fuel piping to engines with a gate valve and union.
    - a. Natural- and LP-gas piping, valves, and specialties for gas distribution outside the building are specified in Division 02 Section "Natural Gas Distribution."
    - b. Natural- and LP-gas piping, valves, and specialties for gas piping inside the building are specified in Division 23 Section "Fuel Gas Piping."
  4. Connect exhaust-system piping to engines.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

### 3.4 IDENTIFICATION

- A. Identify system components according to Division 23 Section "Identification for HVAC piping and Equipment" and Division 26 Section "Identification for Electrical Systems."
- B. Install a sign indicating the generator neutral is bonded to the main service neutral at the main service location.

### 3.5 FIELD QUALITY CONTROL

- A. Testing Agency:
  1. Perform tests and inspections with the assistance of a factory-authorized service representative.
- B. Tests and Inspections:

1. Perform tests recommended by manufacturer and each visual and mechanical inspection and electrical and mechanical test listed in first two subparagraphs below, as specified in NETA ATS. Certify compliance with test parameters.
    - a. Visual and Mechanical Inspection:
      - 1) Compare equipment nameplate data with Drawings and the Specifications.
      - 2) Inspect physical and mechanical condition.
      - 3) Inspect anchorage, alignment, and grounding.
      - 4) Verify that the unit is clean.
    - b. Electrical and Mechanical Tests:
      - 1) Perform insulation-resistance tests according to IEEE 43.
        - a) Machines Larger Than 200 hp (150 kW): Test duration shall be 10 minutes. Calculate polarization index.
        - b) Machines 200 hp (150 kW) or Less: Test duration shall be one minute. Calculate the dielectric-absorption ratio.
      - 2) Test protective relay devices.
      - 3) Verify phase rotation, phasing, and synchronized operation as required by the application.
      - 4) Functionally test engine shutdown for low oil pressure, overtemperature, overspeed, and other protection features as applicable.
      - 5) Verify correct functioning of the governor and regulator.
  2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here, including, but not limited to, single-step full-load pickup test.
  3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
    - a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
    - b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
    - c. Verify acceptance of charge for each element of the battery after discharge.
    - d. Verify that measurements are within manufacturer's specifications.
  4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
  5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
  6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg (120 kPa). Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
  7. Exhaust Emissions Test: Comply with applicable government test criteria.
  8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
  9. Harmonic-Content Tests: Measure harmonic content of output voltage at 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
  10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at four locations on the property line, and compare measured levels with required values.
- C. Coordinate tests with tests for transfer switches and run them concurrently.
- D. Test instruments shall have been calibrated within the last 12 months, traceable to standards of the National Institute for Standards and Technology, and adequate for making positive observation of test results. Make calibration records available for examination on request.
- E. Leak Test: After installation, charge exhaust, coolant, and fuel systems and test for leaks. Repair leaks and retest until no leaks exist.

- F. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation for generator and associated equipment.
- G. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- H. Remove and replace malfunctioning units and retest as specified above.
- I. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.
- J. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.

### **3.6 STARTUP SERVICE**

- A. Engage a factory-authorized service representative to perform startup service.
- B. Inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
- C. Complete installation and startup checks according to manufacturer's written instructions.
- D. Provide sufficient fuel for testing, commissioning and start up, and turn the generator over to the owner with a full tank upon the Owner's acceptance of the completed generator and standby/emergency power distribution systems.
- E. For installations that utilize a Diesel Exhaust Fluid (DEF) or other type of urea dosing system as part of the field-deployed after-treatment, Provide sufficient DEF for testing, commissioning and start up, and turn the generator over to the owner with a full tank upon the Owner's acceptance of the completed generator and standby/emergency power distribution systems.

### **3.7 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain packaged engine generators.
  - 1. Coordinate this training with that for transfer switches..

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 33 53 - STATIC UNINTERRUPTIBLE POWER SUPPLIES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
1. Three-phase, on-line, double-conversion, static-type, UPS units with the following features:
  2. Surge suppression.
  3. Input harmonics reduction.
  4. Rectifier-charger.
  5. Inverter.
  6. Static bypass transfer switch.
  7. Battery and battery disconnect device.
  8. Remote UPS monitoring provisions.
  9. Battery monitoring.

**1.2 SUBMITTALS**

- A. Product Data: For each type of product indicated. Include data on features, components, ratings, and performance.
- B. Shop Drawings: For UPS. Include plans, elevations, sections, details, and attachments to other work.
1. Detail equipment assemblies and indicate dimensions, weights, components, and location and identification of each field connection. Show access, workspace, and clearance requirements; details of control panels; and battery arrangement.
  2. Wiring Diagrams: For power, signal, and control wiring.
- C. Qualification Data: For qualified testing agency.
- D. Manufacturer Certificates: For each product, from manufacturer.
- E. Factory Test Reports: Comply with specified requirements.
- F. Field quality-control reports.
- G. Performance Test Reports: Indicate test results compared with specified performance requirements, and provide justification and resolution of differences if values do not agree.
- H. Operation and Maintenance Data: For UPS units to include in emergency, operation, and maintenance manuals.
1. Manufacturer's written instructions for testing central battery equipment.
  2. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
  3. Manufacturer's written instructions for selecting and setting field-adjustable controls and status and alarm points.
- I. Warranties: Sample of special warranties.

**1.3 DEFINITIONS**

- A. EMI: Electromagnetic interference.
- B. LCD: Liquid-crystal display.
- C. LED: Light-emitting diode.
- D. PC: Personal computer.

- E. THD: Total harmonic distortion.
- F. UPS: Uninterruptible power supply.

#### 1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
- B. Testing Agency Qualifications: Member company of NETA or an NRTL acceptable to authorities having jurisdiction.
  - 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. UL Compliance: Listed and labeled under UL 1778 by an NRTL.
- E. NFPA Compliance: Mark UPS components as suitable for installation in computer rooms according to NFPA 75.

#### 1.5 FIELD CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
  - 1. Ambient Temperature: Less than 0 deg F (minus 18 deg C) or exceeding 104 deg F (40 deg C), with an average value exceeding 95 deg F (35 deg C) over a 24-hour period.
  - 2. Ambient Storage Temperature: Not less than minus 4 deg F (minus 20 deg C) and not exceeding 140 deg F (60 deg C).
  - 3. Humidity: More than 95 percent (condensing).
  - 4. Altitude: Exceeding 3300 feet (1000 m).
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for central battery equipment, including clearances between central battery equipment and adjacent surfaces and other items.

#### 1.6 WARRANTY

- A. Special UPS and Lithium Battery Warranties: Specified form in which manufacturer and Installer agree to repair or replace components that fail in materials or workmanship within special warranty period.
  - 1. Special Warranty Period: Two years from date of Substantial Completion.

#### 1.7 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
  - 2. Cabinet Ventilation Filters: One complete set(s).

### PART 2 - PRODUCTS

#### 2.1 OPERATIONAL REQUIREMENTS

- A. Automatic operation includes the following:

1. Normal Conditions: Load is supplied with power flowing from the normal power input terminals, through the rectifier-charger and inverter, with the battery connected in parallel with the rectifier-charger output.
  2. Abnormal Supply Conditions: If normal supply deviates from specified and adjustable voltage, voltage waveform, or frequency limits, the battery supplies energy to maintain constant, regulated inverter power output to the load without switching or disturbance.
  3. If normal power fails, energy supplied by the battery through the inverter continues supply-regulated power to the load without switching or disturbance.
  4. When power is restored at the normal supply terminals of the system, controls automatically synchronize the inverter with the external source before transferring the load. The rectifier-charger then supplies power to the load through the inverter and simultaneously recharges the battery.
  5. If the battery becomes discharged and normal supply is available, the rectifier-charger charges the battery. On reaching full charge, the rectifier-charger automatically shifts to float-charge mode.
  6. If any element of the UPS system fails and power is available at the normal supply terminals of the system, the static bypass transfer switch switches the load to the normal ac supply circuit without disturbance or interruption.
  7. If a fault occurs in the system supplied by the UPS, and current flows in excess of the overload rating of the UPS system, the static bypass transfer switch operates to bypass the fault current to the normal ac supply circuit for fault clearing.
  8. When the fault has cleared, the static bypass transfer switch returns the load to the UPS system.
  9. If the battery is disconnected, the UPS continues to supply power to the load with no degradation of its regulation of voltage and frequency of the output bus.
- B. Manual operation includes the following:
1. Turning the inverter off causes the static bypass transfer switch to transfer the load directly to the normal ac supply circuit without disturbance or interruption.
  2. Turning the inverter on causes the static bypass transfer switch to transfer the load to the inverter.
- C. Environmental Conditions: The UPS shall be capable of operating continuously (non-derated) in the following environmental conditions without mechanical or electrical damage or degradation of operating capability, except battery performance.
1. Ambient Temperature for Electronic Components: 32 to 104 deg F (0 to 40 deg C).
  2. Ambient Temperature for Battery: 41 to 95 deg F (5 to 35 deg C).
  3. Relative Humidity: 0 to 95 percent, noncondensing.
  4. Altitude: Sea level to 4000 feet (1220 m).

## 2.2 PERFORMANCE REQUIREMENTS

- A. The UPS shall perform as specified in this article while supplying rated full-load current, composed of any combination of linear and nonlinear load, up to 100 percent nonlinear load with a load crest factor of 3.0, under the following conditions or combinations of the following conditions:
1. Inverter is switched to battery source.
  2. Steady-state ac input voltage deviates up to plus or minus 10 percent from nominal voltage.
  3. Steady-state input frequency deviates up to plus or minus 5 percent from nominal frequency.
  4. THD of input voltage is 15 percent or more with a minimum crest factor of 3.0, and the largest single harmonic component is a minimum of 5 percent of the fundamental value.
  5. Load is 50 100 percent unbalanced continuously.
- B. Minimum Duration of Supply: If battery is sole energy source supplying rated full UPS load current at 80 percent power factor, duration of supply is 5 minutes.

- C. Input Voltage Tolerance: System steady-state and transient output performance remains within specified tolerances when steady-state ac input voltage varies plus 10, minus 15 percent from nominal voltage.
- D. Overall UPS Efficiency: Equal to or greater than 89 percent at 100 percent load, 88 percent at 75 percent load, and 87 percent at 50 percent load.
- E. Maximum Acoustical Noise: 75 dBA, "A" weighting, emanating from any UPS component under any condition of normal operation, measured 5 feet from nearest surface of component enclosure.
- F. Maximum Energizing Inrush Current: Five times the normal full-load current.
- G. Maximum AC Output-Voltage Regulation for Loads up to 50 Percent Unbalanced: Plus or minus 2 percent over the full range of battery voltage.
- H. Power Walk-In: Configurable from 20% to 100% over 20 seconds
- I. Output Frequency: 60 Hz, plus or minus 0.5 percent over the full range of input voltage, load, and battery voltage.
- J. Limitation of harmonic distortion of input current to the UPS shall be as follows:
  - 1. Description: Either a tuned harmonic filter or an arrangement of rectifier-charger circuits shall limit THD to 10 percent, maximum, at rated full UPS load current, for power sources with X/R ratio between 2 and 30.
- K. Maximum Harmonic Content of Output-Voltage Waveform: 5 percent rms total and 3 percent rms for any single harmonic, for rated full load with THD up to 50 percent, with a load crest factor of 3.0.
- L. Minimum Overload Capacity of UPS at Rated Voltage: 125 percent of rated full load for 10 minutes, and 150 percent for 30 seconds in all operating modes.
- M. Maximum Output-Voltage Transient Excursions from Rated Value: For the following instantaneous load changes, stated as percentages of rated full UPS load, voltage shall remain within stated percentages of rated value and recover to, and remain within, plus or minus 2 percent of that value within 100 ms:
  - 1. 50 Percent: Plus or minus 5 percent.
  - 2. 100 Percent: Plus or minus 8 percent.
  - 3. Loss of AC Input Power: Plus or minus 1 percent.
  - 4. Restoration of AC Input Power: Plus or minus 1 percent.
  - 5. Manual Return of Load to UPS: Plus or minus 45 percent.
- N. Input Power Factor: A minimum of 0.85 lagging when supply voltage and current are at nominal rated values and the UPS is supplying rated full-load current without input filter.
- O. EMI Emissions: Comply with FCC Rules and Regulations and with 47 CFR 15 for Class A equipment.
- P. Fault Clearing Current: Up to 1000% for 16 milliseconds or up to 500% for 40 milliseconds.
- Q. Output Phase Balance: 120 degrees plus or minus 1 degree for balanced loads, 120 degrees plus or minus 3 degrees for 50% unbalanced load.
- R. Overload: 125% of full load for 5 minutes. 150% of full load for 30 seconds.
- S. Load Power Factor: Unity to rated lagging power factor with no derating.

### 2.3 UPS SYSTEMS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - 1. ABB.
  - 2. Eaton Corporation Inc.

3. Emerson Electric Co.
  4. APC; Schneider Electric.
  5. Mitsubishi Electric Automation, Inc.
  6. Toshiba Power Electronics.
  7. Vertiv Group Corp.
- B. Electronic Equipment: Solid-state devices using hermetically sealed, semiconductor elements. Devices include rectifier-charger, inverter, static bypass transfer switch, and system controls.
- C. Enclosures: Comply with NEMA 250, Type 1, unless otherwise indicated.
- D. Control Assemblies: Mount on modular plug-ins, readily accessible for maintenance.
- E. Surge Suppression: Protect internal UPS components from surges that enter at each ac power input connection including main disconnect switch, static bypass transfer switch. Protect rectifier-charger, inverter, controls, and output components.
1. Use factory-installed surge suppressors tested according to IEEE C62.41.1 and IEEE C62.41.2, Category B.
  2. Additional Surge Protection: Protect internal UPS components from low-frequency, high-energy voltage surges described in IEEE C62.41.1 and IEEE C62.41.2. Design the circuits connecting with external power sources and select circuit elements, conductors, conventional surge suppressors, and rectifier components and controls so input assemblies will have adequate mechanical strength and thermal and current-carrying capacity to withstand stresses imposed by 40-Hz, 180 percent voltage surges described in IEEE C62.41.1 and IEEE C62.41.2.

## 2.4 RECTIFIER-CHARGER

- A. Capacity: Adequate to supply the inverter during rated full output load conditions and simultaneously recharge the battery from fully discharged condition to 95 percent of full charge within 10 times the rated discharge time for duration of supply under battery power at full load.
- B. Output Ripple: Limited by output filtration to less than 0.5 percent of rated current, peak to peak.
- C. Control Circuits: Immune to frequency variations within rated frequency ranges of normal and emergency power sources.
1. Response Time: Field adjustable for maximum compatibility with local generator-set power source.
- D. Battery Float-Charging Conditions: Comply with battery manufacturer's written instructions for battery terminal voltage and charging current required for maximum battery life.

## 2.5 INVERTER

- A. Description: Pulse-width modulated, with sinusoidal output. Include a bypass phase synchronization window adjustment to optimize compatibility with local engine-generator-set power source.

## 2.6 STATIC BYPASS TRANSFER SWITCH

- A. Description: Solid-state switching device providing uninterrupted transfer. A contactor or electrically operated circuit breaker automatically provides electrical isolation for the switch.
- B. Switch Rating: Continuous duty at the rated full UPS load current, minimum.

## 2.7 BATTERY

- A. Description: Lithium-ion, factory assembled in an isolated compartment of UPS cabinet, complete with battery disconnect switch.

- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Schneider Electric (Galaxy)
  2. C&D Technologies, Inc.; Standby Power Division.
  3. Eaton Corporation; Powerware Division.
  4. EnerSys.
  5. Panasonic Corporation of North America; Panasonic Industrial Company

## 2.8 CONTROLS AND INDICATIONS

- A. Description: Group displays, indications, and basic system controls on a common control panel on front of UPS enclosure.
- B. Minimum displays, indicating devices, and controls include those in lists below. Provide sensors, transducers, terminals, relays, and wiring required to support listed items. Alarms include audible signals and visual displays.
- C. Indications: Plain-language messages on a digital LCD or LED.
1. Quantitative indications shall include the following:
    - a. Input voltage, each phase, line to line.
    - b. Input current, each phase, line to line.
    - c. Bypass input voltage, each phase, line to line.
    - d. Bypass input frequency.
    - e. System output voltage, each phase, line to line.
    - f. System output current, each phase.
    - g. System output frequency.
    - h. DC bus voltage.
    - i. Battery current and direction (charge/discharge).
    - j. Elapsed time discharging battery.
  2. Basic status condition indications shall include the following:
    - a. Normal operation.
    - b. Load-on bypass.
    - c. Load-on battery.
    - d. Inverter off.
    - e. Alarm condition.
  3. Alarm indications shall include the following:
    - a. Bypass ac input overvoltage or undervoltage.
    - b. Bypass ac input overfrequency or underfrequency.
    - c. Bypass ac input and inverter out of synchronization.
    - d. Bypass ac input wrong-phase rotation.
    - e. Bypass ac input single-phase condition.
    - f. Bypass ac input filter fuse blown.
    - g. Internal frequency standard in use.
    - h. Battery system alarm.
    - i. Control power failure.
    - j. Fan failure.
    - k. UPS overload.
    - l. Battery-charging control faulty.
    - m. Input overvoltage or undervoltage.
    - n. Input transformer overtemperature.
    - o. Input circuit breaker tripped.
    - p. Input wrong-phase rotation.
    - q. Input single-phase condition.
    - r. Approaching end of battery operation.
    - s. Battery undervoltage shutdown.
    - t. Maximum battery voltage.

- u. Inverter fuse blown.
- v. Inverter transformer overtemperature.
- w. Inverter overtemperature.
- x. Static bypass transfer switch overtemperature.
- y. Inverter power supply fault.
- z. Inverter transistors out of saturation.
- aa. Identification of faulty inverter section/leg.
- bb. Inverter output overvoltage or undervoltage.
- cc. UPS overload shutdown.
- dd. Inverter current sensor fault.
- ee. Inverter output contactor open.
- ff. Inverter current limit.
- 4. Controls shall include the following:
  - a. Inverter on-off.
  - b. UPS start.
  - c. Battery test.
  - d. Alarm silence/reset.
  - e. Output-voltage adjustment.
- D. Dry-form "C" contacts shall be available for remote indication of the following conditions:
  - 1. UPS on battery.
  - 2. UPS on-line.
  - 3. UPS load-on bypass.
  - 4. UPS in alarm condition.
  - 5. UPS off (maintenance bypass closed).
- E. Emergency Power Off Switch: Capable of local operation and operation by means of activation by external dry contacts.

## 2.9 MONITORING BY REMOTE STATUS AND ALARM PANEL

- A. Description: Labeled LEDs on panel faceplate indicate five basic status conditions. Audible signal indicates alarm conditions. Silencing switch in face of panel silences signal without altering visual indication.
  - 1. Cabinet and Faceplate: Surface or flush mounted to suit mounting conditions indicated.

## 2.10 BASIC BATTERY MONITORING

- A. Manufacturers:
  - 1. Albercorp.
  - 2. Schnieder Electric.
  - 3. BTECH, Inc.
  - 4. Eaton.
- B. Battery Ground-Fault Detector: Initiates alarm when resistance to ground of positive or negative bus of battery is less than 5000 ohms.
- C. Battery compartment smoke/high-temperature detector initiates an alarm when smoke or a temperature greater than 75 deg C occurs within the compartment.
- D. Annunciation of Alarms: At UPS control panel.

## 2.11 SOURCE QUALITY CONTROL

- A. Factory test complete UPS system before shipment. Use simulated battery testing. Include the following:
  - 1. Test and demonstration of all functions, controls, indicators, sensors, and protective devices.

2. Full-load test.
3. Transient-load response test.
4. Overload test.
5. Power failure test.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Equipment Mounting: Install UPS on concrete base for locations at concrete slabs. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete."
  1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
  2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- D. Connections: Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams unless otherwise indicated.

#### **3.2 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for conditions affecting performance of the UPS.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.3 IDENTIFICATION**

- A. Identify components and wiring according to Division 26 Section "Identification for Electrical Systems."
  1. Identify each battery cell individually.

#### **3.4 BATTERY EQUALIZATION**

- A. Equalize charging of battery cells according to manufacturer's written instructions. Record individual-cell voltages.

#### **3.5 FIELD QUALITY CONTROL**

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
  1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  1. Comply with manufacturer's written instructions.
  2. Inspect interiors of enclosures, including the following:
    - a. Integrity of mechanical and electrical connections.

- b. Component type and labeling verification.
    - c. Ratings of installed components.
  3. Inspect batteries and chargers according to requirements in NETA Acceptance Testing Specifications.
  4. Test manual and automatic operational features and system protective and alarm functions.
  5. Test communication of status and alarms to remote monitoring equipment.
  6. Load the system using a variable-load bank to simulate kilovolt amperes, kilowatts, and power factor of loads for unit's rating. Use instruments calibrated within the previous six months according to NIST standards.
    - a. Simulate malfunctions to verify protective device operation.
    - b. Test duration of supply on emergency, low-battery voltage shutdown, and transfers and restoration due to normal source failure.
    - c. Test harmonic content of input and output current less than 25, 50, and 100 percent of rated loads.
    - d. Test output voltage under specified transient-load conditions.
    - e. Test efficiency at 50, 75, and 100 percent of rated loads.
    - f. Test remote status and alarm panel functions.
    - g. Test battery-monitoring system functions.
- D. The UPS system will be considered defective if it does not pass tests and inspections.
- E. Record of Tests and Inspections: Maintain and submit documentation of tests and inspections, including references to manufacturers' written instructions and other test and inspection criteria. Include results of tests, inspections, and retests.
- F. Prepare test and inspection reports.

### 3.6 PERFORMANCE TESTING

- A. Monitoring and Testing Schedule: Perform monitoring and testing in a single 10-day period .
  1. Schedule monitoring and testing activity with Owner, through Architect, with at least 14 days' advance notice.
  2. Schedule monitoring and testing after Substantial Completion, when the UPS is supplying power to its intended load.
- B. Monitoring and Testing Instruments: Three-phase, recording, power monitors. Instruments shall provide continuous simultaneous monitoring of electrical parameters at UPS input terminals and at input terminals of loads served by the UPS. Instruments shall monitor, measure, and graph voltage current and frequency simultaneously and provide full-graphic recordings of the values of those parameters before and during power-line disturbances that cause the values to deviate from normal beyond the adjustable threshold values. Instruments shall be capable of recording either on paper or on magnetic media and have a minimum accuracy of plus or minus 2 percent for electrical parameters. Parameters to be monitored include the following:
  1. Current: Each phase and neutral and grounding conductors.
  2. Voltage: Phase to phase, phase to neutral, phase to ground, and neutral to ground.
  3. Frequency transients.
  4. Voltage swells and sags.
  5. Voltage Impulses: Phase to phase, phase to neutral, phase to ground, and neutral to ground.
  6. High-frequency noise.
  7. Radio-frequency interference.
  8. THD of the above currents and voltages.
  9. Harmonic content of currents and voltages above.
- C. Monitoring and Testing Procedures:
  1. Exploratory Period: For the first two days, make recordings at various circuit locations and with various parameter-threshold and sampling-interval settings. Make these

- measurements with the objective of identifying optimum UPS, power system, load, and instrumentation setup conditions for subsequent test and monitoring operations.
2. Remainder of Test Period: Perform continuous monitoring of at least two circuit locations selected on the basis of data obtained during exploratory period.
    - a. Set thresholds and sampling intervals for recording data at values selected to optimize data on performance of the UPS for values indicated, and to highlight the need to adjust, repair, or modify the UPS, distribution system, or load component that may influence its performance or that may require better power quality.
    - b. Perform load and UPS power source switching and operate the UPS on generator power during portions of test period according to directions of Owner's power quality specialist.
    - c. Operate the UPS and its loads in each mode of operation permitted by UPS controls and by the power distribution system design.
    - d. Using loads and devices available as part of the facility's installed systems and equipment, create and simulate unusual operating conditions, including outages, voltage swells and sags, and voltage, current, and frequency transients. Maintain normal operating loads in operation on system to maximum extent possible during tests.
    - e. Make adjustments and repairs to UPS, distribution, and load equipment to correct deficiencies disclosed by monitoring and testing and repeat appropriate monitoring and testing to verify success of corrective action.
  - D. Coordination with Specified UPS Monitoring Functions: Obtain printouts of built-in monitoring functions specified for the UPS and its components in this Section that are simultaneously recorded with portable instruments in this article.
    1. Provide the temporary use of an appropriate PC and printer equipped with required connections and software for recording and printing if such units are not available on-site.
    2. Coordinate printouts with recordings for monitoring performed according to this article, and resolve and report any anomalies in and discrepancies between the two sets of records.
  - E. Monitoring and Testing Assistance by Contractor:
    1. Open UPS and electrical distribution and load equipment and wiring enclosures to make monitoring and testing points accessible for temporary monitoring probe and sensor placement and removal as requested.
    2. Observe monitoring and testing operations; ensure that UPS and distribution and load equipment warranties are not compromised.
    3. Perform switching and control of various UPS units, electrical distribution systems, and load components as directed by power quality specialist. Specialist shall design this portion of monitoring and testing operations to expose the UPS to various operating environments, conditions, and events while response is observed, electrical parameters are monitored, and system and equipment deficiencies are identified.
    4. Make repairs and adjustments to the UPS and to electrical distribution system and load components, and retest and repeat monitoring as needed to verify validity of results and correction of deficiencies.
    5. Engage the services of the UPS manufacturer's factory-authorized service representative periodically during performance testing operations for repairs, adjustments, and consultations.
  - F. Documentation: Record test point and sensor locations, instrument settings, and circuit and load conditions for each monitoring summary and power disturbance recording. Coordinate simultaneous recordings made on UPS input and load circuits.
  - G. Analysis of Recorded Data and Report: Review and analyze test observations and recorded data and submit a detailed written report. Include the following in report:
    1. Description of corrective actions performed during monitoring and survey work and their results.

2. Recommendations for further action to provide optimum performance by the UPS and appropriate power quality for non-UPS loads. Include a statement of priority ranking and a cost estimate for each recommendation that involves system or equipment revisions.
  3. Copies of monitoring summary graphics and graphics illustrating harmonic content of significant voltages and currents.
  4. Copies of graphics of power disturbance recordings that illustrate findings, conclusions, and recommendations.
  5. Recommendations for operating, adjusting, or revising UPS controls.
  6. Recommendation for alterations to the UPS installation.
  7. Recommendations for adjusting or revising generator-set or automatic transfer switch installations or their controls.
  8. Recommendations for power distribution system revisions.
  9. Recommendations for adjusting or revising electrical loads, their connections, or controls.
- H. Interim and Final Reports: Provide an interim report at the end of each test period and a final comprehensive report at the end of final test and analysis period.

### **3.7 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the UPS.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 36 00 - TRANSFER SWITCHES****PART 1 - GENERAL REQUIREMENTS****1.1 SUMMARY**

- A. This section includes transfer switches rated 600 V and less, including the following:
  - 1. Automatic transfer switches.
  - 2. Nonautomatic transfer switches.
  - 3. Remote annunciation systems.
  - 4. Remote annunciation and control systems.
- B. This section does not include the following:
  - 1. Double throw (manual type) switches. Refer to Division 26 section "Enclosed Switches and Circuit Breakers" for this equipment.

**1.2 DEFINITIONS**

- A. Closed Transition (Make-Before-Break): In a switching device, a configuration in which the new connection path is established before the previous contacts are opened. This prevents the switched path from ever seeing an open circuit.
- B. Open Transition (Break-Before-Make): A switch that is configured to break (open) the first set of contacts before engaging (closing) the new contacts. This prevents the momentary connection of the old and new circuit paths together.
- C. Withstand duration: The withstand rating value is the level of fault current that must be withstood for a specified length of time, i.e., 42000 amps at 3 cycles.
- D. Level 1 Equipment: Level 1 is the more stringent NFPA emergency life safety requirement and is imposed when failure of the emergency system, including the transfer equipment could result in loss of human life or serious injury.
- E. Level 2 Equipment: Level 2 is the less stringent NFPA emergency life safety requirement and is imposed when failure of the emergency system including the transfer equipment is less critical to human life safety.
- F. NETA ATS: InterNational Electrical Testing Association Acceptance Testing Specification.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Overcurrent Protective Device Coordination Study"

**1.4 SUBMITTALS**

- A. Product Data: For each type of transfer switch, switching and overcurrent protective device, instrumentation, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- B. Shop Drawings: For each transfer switch and related equipment.
  - 1. Include dimensioned plans, elevations, sections, and details, including required clearances, service space around equipment, and attachments to other work. Show tabulations of installed devices, equipment features, and ratings.
    - a. Tabulate features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 2. Detail enclosure types and details for other than NEMA 250, Type 1.
  - 3. Include general arrangement drawing showing dimensions and weights of each assembled section.
  - 4. Detail bus configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus. Indicate mains and branches of phase, neutral, and ground buses. Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.
  - 5. Detail short-circuit current rating of transfer switch assembly and overcurrent protective devices.
  - 6. Include descriptive documentation of barriers specified for electrical insulation and isolation.
  - 7. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
  - 8. Include schematic and wiring diagrams for power, signal, and control wiring.
  - 9. Include nameplate legends.
  - 10. Include list of materials.
- C. Coordination Drawings: Floor plans showing dimensioned layout, required working clearances, and required area above and around transfer switches where pipe and ducts are prohibited. Show transfer switch layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
  - 1. For each equipment room, provide dimensioned layout of the electrical equipment within the space, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved.
  - 2. Dimensioned concrete base, outline of transfer switch, conduit entries, and ground rod locations; including equipment working clearances and manufacturer required access space.
  - 3. Indicate structural members, light fixtures, sprinkler piping and heads, HVAC equipment, ducts and diffusers, plumbing piping and access fittings. Include maintenance access clearances.
  - 4. Location of structural supports for structure-supported raceways.
  - 5. Location and clearance of electrical equipment and raceways impacting equipment installation.
- D. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.
- E. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.
- F. Qualification Data: For qualified manufacturer and testing agency.
- G. Factory test reports.
- H. Field Quality-Control Reports:
  - 1. Test procedures used.

2. Test results that comply with requirements.
- I. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- J. Manufacturer's field service report.
- K. Sample Warranty: For warranties.
- L. Project Record Documents: Record actual installed equipment and circuiting arrangements. Record actual routing for underground circuits. Record actual installed location of ground rods.
- M. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
  1. Routine maintenance requirements for panelboards and all installed components.
  2. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
  3. Time-current curves; include selectable ranges for each type of overcurrent protective device. Provide relay-settings and calibration instructions, including software, where applicable.
  4. Features and operating sequences, both automatic and manual.
  5. Video recording of operation training and demonstration.
- N. Follow-up service reports.

## 1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.
- B. Source Limitations: Obtain automatic transfer switches, non-automatic transfer switches and remote annunciator and control panels through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with NEMA ICS 1.
- E. Comply with NFPA 70.
- F. Comply with NFPA 110.
- G. Comply with UL 1008 unless requirements of these Specifications are stricter.

## 1.6 PROJECT CONDITIONS

- A. Maintain field conditions within manufacturer's required service conditions during and after installation.
- B. Environmental Limitations:
  1. Do not deliver or install transfer switches until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above equipment is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not exceeding 23 deg F (minus 5 deg C) to plus 104 deg F (plus 40 deg C).

- b. Altitude: Not exceeding 6600 feet (2000 m).

### 1.7 DELIVERY STORAGE AND HANDLING

- A. Deliver transfer switches in sections or lengths that can be moved past obstructions in delivery path.
- B. Coordinate delivery of equipment to allow movement into designated space.
- C. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish. Provide temporary heating according to manufacturer's written instructions.
- D. Handle and prepare transfer switch components according to manufacturer's written instructions. Use factory-installed lifting provisions.

### 1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of the Transfer Switch that fail in materials or workmanship within specified warranty period.
  1. Failures include, but are not limited to, the following:
    - a. Damage from transient voltage surges.
- B. Warranty Period: Cost to repair or replace any parts for two years from date of Substantial Completion.

### 1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. Indicating Lights: Four of each type installed.
  2. Switching Contact Lubricant: One container.
  3. Alarm Contacts: Equal to 10 percent of quantity supplied, but no fewer than two of each type.
  4. Touchup Paint: Two containers of paint matching enclosure finish, each 0.5 pint (250 mL).
  5. Enclosure Keys: Two for each enclosure type. All distribution equipment keyed alike.

## PART 2 - PRODUCTS

### 2.1 GENERAL

- A. Manufacturers:
  1. Contactor Transfer Switches:
    - a. Caterpillar; Engine Div.
    - b. Eaton Electrical Inc.; Cutler-Hammer
    - c. Emerson; ASCO Power Technologies, LP.
    - d. GE Zenith Controls.
    - e. Kohler Power Systems; Generator Division.
    - f. Onan/Cummins Power Generation; Industrial Business Group.
    - g. Russelectric, Inc.
    - h. Spectrum Detroit Diesel.

- B. Indicated Voltage and Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated. Voltage ratings shall be consistent with applications from 115 volts AC to 600 volts and single or three phase as required by the application. Current ratings and the number of poles shall be as indicated on the plans.
- C. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
  - 1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
  - 2. Where the transfer switch internal fault-current protection can not exceed the indicated fault-current values, an enclosed fused switch with current limiting fuses shall be installed ahead of the transfer switch.
- D. Controls: Solid State control having repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C. All internal controls components shall be accessible from the equipment front.
- E. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- F. Electrical Operation: Accomplish by a non-fused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
- G. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
  - 1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
  - 2. Switch Action: Double throw; mechanically held in both directions.
  - 3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.
- H. Neutral Switching: Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.
- I. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.
- J. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. All factory wiring shall be accessible from the equipment front. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."
  - 1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
  - 2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated. Power terminals shall be rated for 90 degree C and copper or aluminum cable.
  - 3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.
- K. Enclosures: General-purpose NEMA 250, Type 1 3R 12, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.
- L. Bus and Wiring: All Bus and cable /control wire shall be copper.
- M. Cable Entry: Cable entry shall be from the top and bottom.

## 2.2 AUTOMATIC TRANSFER SWITCHES

- A. Comply with Level 1 equipment according to NFPA 110.
- B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.
- C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.
- D. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.
- E. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.
- F. Automatic open-transition transfer switches: Include the following functions and characteristics:
  - 1. Fully automatic break-before-make.
- G. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.
- H. Automatic Transfer-Switch Features:
  - 1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
  - 2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
  - 3. Frequency: Monitor the frequency of the incoming normal power circuit. For the normal source, initiate transfer if the frequency varies more than 5% from the rated nominal value. For the emergency source, inhibit transfer if the normal source circuit frequency varies more than 5% from the rated nominal value.
  - 4. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
  - 5. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
  - 6. Test Switch: Simulate normal-source failure.
  - 7. Switch-Position Pilot Lights: Indicate source to which load is connected.
  - 8. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
    - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
    - b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
  - 9. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.

10. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
11. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
12. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
  - a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
  - b. Push-button programming control with digital display of settings.
  - c. Integral battery operation of time switch when normal control power is not available.
13. Elevator Application: Provide the following functions if automatic transfer is for elevator control:
  - a. Auxiliary contact closure upon the transfer to the alternate source to signal the elevator controller(s) for emergency operation.
  - b. Auxiliary contact closure, adjustable from 0 to 20 seconds before retransfer to normal source to allow for elevator motor-generator sets to disconnect from the power source.
  - c. Auxiliary contact closure, adjustable from 0 to 20 seconds before testing transfer operation to signal the elevator controller(s) for emergency operation.

### 2.3 NONAUTOMATIC TRANSFER SWITCHES

- A. Operation: Electrically actuated by push buttons designated "Normal Source" and "Alternate Source." Switch shall be capable of transferring load in either direction with either or both sources energized.
- B. Double-Throw Switching Arrangement: Incapable of pauses or intermediate position stops during switching sequence.
- C. Nonautomatic Transfer-Switch Accessories:
  1. Pilot Lights: Indicate source to which load is connected.
  2. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and alternate-source sensing circuits.
    - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
    - b. Emergency Power Supervision: Red light with nameplate engraved "Alternate Source Available."
  3. Unassigned Auxiliary Contacts: One set of normally closed contacts for each switch position, rated 10 A at 240-V ac.

### 2.4 REMOTE ANNUNCIATOR AND CONTROL SYSTEM

- A. Functional Description: Include the following functions for indicated transfer switches:
  1. Indication of sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
  2. Indication of switch position.
  3. Indication of switch in test mode.
  4. Indication of failure of digital communication link.
  5. Key-switch or user-code access to control functions of panel.
  6. Control of switch-test initiation.
  7. Control of switch operation in either direction.

8. Control of time-delay bypass for transfer to normal source.
- B. Malfunction of annunciator, annunciation and control panel, or communication link shall not affect functions of automatic transfer switch. In the event of failure of communication link, automatic transfer switch automatically reverts to stand-alone, self-contained operation. Automatic transfer-switch sensing, controlling, or operating function shall not depend on remote panel for proper operation.
- C. Remote Annunciation and Control Panel: Solid-state components. Include the following features:
  1. Controls and indicating lights grouped together for each transfer switch.
  2. Label each indicating light control group. Indicate transfer switch it controls, location of switch, and load it serves.
  3. Digital Communication Capability: Matched to that of transfer switches supervised.
  4. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.

## 2.5 SOURCE QUALITY CONTROL

- A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

## 2.6 IDENTIFICATION

- A. Nameplates: Nameplates and label products are specified in Division 26 Section "Identification for Electrical Systems."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine transfer switches before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.
- B. Examine areas, surfaces, substrates, and elements to receive transfer switches with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.
  1. Verify that field measurements are as indicated.
  2. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.
- C. Examine roughing-in of conduits and grounding systems to verify the following:
  1. Wiring entries comply with layout requirements.
  2. Entries are within conduit-entry tolerances specified by manufacturer and no feeders will have to cross section barriers to reach load or line lugs.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install transfer switches and accessories in accordance with manufacturer's instructions.
- B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

- C. Wall-Mounted Switch: Install transfer switches on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For transfer switches not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."
- D. Floor-Mounted Switch: Install transfer switches on concrete bases.
  - 1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 3 inches (75 mm) in all directions beyond the maximum dimensions of transfer switches unless otherwise indicated or unless required for seismic anchor support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
  - 2. Anchor transfer switches to concrete bases according to manufacturer's written instructions, , and requirements in Division 26 Sections "Hangers and Supports for Electrical Systems".
  - 3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
  - 4. Install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 6. Install anchor bolts to elevations required for proper attachment to transfer switches.
- E. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.
- F. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts from enclosure and components.
- G. Mount equipment plumb and rigid without distortion of enclosure.
- H. Arrange conductors in auxiliary compartments and gutters into groups and bundle and wrap with wire ties.
- I. Comply with NECA 1.

### 3.3 CONNECTIONS

- A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to Owner if necessary to accommodate required wiring.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

### 3.4 IDENTIFICATION

- A. Equipment Nameplates: Label each contiguous main, or entrance, section with equipment nameplate.
- B. Device Nameplates: Label each main and bypass device with a nameplate.
- C. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

- D. Diagram and Instructions:
  - 1. Engraved, Laminated Acrylic or Melamine Label. Mount on front of transfer switch.
    - a. Operating Instructions: Printed operating instructions for transfer switch, including key interlocking, control sequences, elementary single-line diagram, and emergency procedures.
    - b. System Power One-Line Diagrams: Provide color-coded, large-format one-line diagram showing the new work is to be provided and installed in the associated electrical room. Depict power sources, feeders, distribution components, and major loads.
  - 2. Storage for Maintenance Instructions: Include a rack or holder, near the operating instructions, for a copy of maintenance manual.
- E. Warning Labels: Label each panelboard with a warning label in accordance with NFPA 70 and NFPA 70E.

### 3.5 CLEANING

- A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

### 3.6 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

### 3.7 ADJUSTING

- A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

### 3.8 FIELD QUALITY CONTROL

- A. Testing: Perform the following field quality-control tests and inspections:
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, to assist in testing, and to assist in adjusting device settings.
- B. Coordinate tests with tests of generator and run them concurrently.
- C. Acceptance Testing Preparation:
  - 1. After installing equipment but before equipment is energized, test for compliance with requirements.
  - 2. Test insulation resistance for each bus, component, connecting supply, feeder, and control circuit.
  - 3. Test continuity of each circuit.
- D. Tests and Inspections:
  - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters. After electrical circuitry has been energized, test for compliance with requirements.
  - 2. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
    - a. Check for electrical continuity of circuits and for short circuits.

- b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
    - c. Verify that manual transfer warnings are properly placed.
    - d. Perform manual transfer operation.
  3. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
    - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
    - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
    - c. Verify time-delay settings.
    - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
    - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
    - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
    - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
  4. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
    - a. Verify grounding connections and locations and ratings of sensors.
    - b. Observe reaction of circuit-interrupting devices when simulated fault current is applied at sensors.
  5. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  6. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- E. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
  1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
  2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
  3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.
- F. Transfer switches will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports, including a certified report that identifies transfer switches included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain equipment, instrumentation, and accessories, and to use and reprogram microprocessor-based control, monitoring, and display functions.
- B. Video record demonstrations presentation for Owner's records.
- C. Coordinate this training with that for generator equipment.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 41 13 - LIGHTNING PROTECTION FOR STRUCTURES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes requirements for UL 96A Master Labeled lightning protection system consisting of air terminals on roofs, roof mounted mechanical equipment, stacks, bonding of structure and miscellaneous metal objects; Grounding electrodes; and interconnecting conductors.
- B. System Design: Contractor shall perform all calculations and develop all plan and detail drawings required, in conjunction with these specifications, for installation of a complete and fully functional lightning protection system.

**1.2 CODES REFERENCES AND STANDARDS**

- A. Applicable Codes and Standards
  1. NFPA 70 – National Electrical Code
  2. UL 96 – Lightning Protection Components
  3. UL 96A – Installation requirements for Lightning Protection Systems
  4. NFPA 780 – Lightning Protection Systems
  5. LPI 175 – Standard of Practice for the Design – Installation – Inspection of Lightning Protection Systems

**1.3 DEFINITIONS**

- A. The following definitions apply to terms used in this section:
  1. Air Terminal: A strike termination device that is a receptor for attachment of flashes to the lightning protection system and is UL listed for that purpose.
  2. Bonding: An electrical connection between an electrically conductive object and a component of a lightning protection system that is intended to significantly reduce potential differences created by lightning currents.
  3. Class I Materials: Lightning conductors, air terminals, ground terminals, and associated fittings required by NFPA 780 for protection of structures not exceeding 75 feet (23 meters) in height.
  4. Class II Materials: Lightning conductors, air terminals, ground terminals, and associated fittings required by NFPA 780 for the protection of structures exceeding 75 feet (23 meters) in height.
  5. Bonding conductor: A conductor intended to be used for equalization between grounded metal bodies and a lightning protection system.
  6. Main conductor: A conductor intended to be used to carry lightning currents between strike termination devices (air terminals) and ground terminals.
  7. UL: Underwriters Laboratories, Inc.
  8. LPI: Lightning Protection Institute

**1.4 SUBMITTALS**

- A. Product Data: Submit product data showing dimensions and materials of each component including listing in accordance with UL 96A.
- B. Shop Drawings: For air terminals and mounting accessories.
  1. Layout of the lightning protection system showing layout of air terminals grounding electrodes, and bonding connections, along with details of the components to be used in the installation.

2. Include indications for use of raceway, conductor sizes, roof and/or floor penetrations, data on how concealment requirements will be met, and calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.
  3. Layout and installation drawings shall be fully coordinated with other trades. Failure of the lightning protection contractor to perform this coordination shall not relieve said contractor from properly completing the work.
- C. Qualification Data: For qualified manufacturer. Include data on listing or certification by UL.
1. Manufacturer: A company specializing in lightning protection equipment with minimum 3 years documented experience and membership in good standing with the Lightning Protection Institute.
- D. Certification, signed by Contractor, that roof adhesive is approved by manufacturer of roofing material.
- E. Field quality-control reports.
- F. Comply with recommendations in NFPA 780, Annex D, "Inspection and Maintenance of Lightning Protection Systems," for maintenance of the lightning protection system.
- G. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features, including the following:
1. Ground rods.
  2. Ground loop conductor.

## 1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
1. Certified by UL, trained and approved for installation of units required for this Project.
  2. The contractor shall be recognized as being regularly engaged in the design and installation of lightning protection systems with a minimum of 3 years documented experience.
  3. Include documentation of certification and experience with all submitted bids.
- B. System Certificate:
1. UL Master Label.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 780, "Definitions" Article.

## 1.6 COORDINATION

- A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.
- B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.
- C. Flashings of through-roof assemblies shall comply with roofing manufacturers' specifications.

## PART 2 - PRODUCTS

### 2.1 LIGHTNING PROTECTION SYSTEM COMPONENTS

- A. All materials used in the installation shall be new and shall comply in weight, size, and composition with UL 96 and NFPA 780. Materials shall be labeled or listed by UL for use on lightning protection systems.
- B. Roof-Mounted Air Terminals: NFPA 780, Class II, aluminum unless otherwise indicated.

1. Available Manufacturers:
    - a. East Coast Lightning Equipment Inc.
    - b. ERICO International Corporation.
    - c. Harger.
    - d. Heary Bros. Lightning Protection Co. Inc.
    - e. Independent Protection Co.
    - f. Preferred Lightning Protection.
    - g. Robbins Lightning, Inc.
    - h. Thompson Lightning Protection, Inc.
    - i. VFC
  2. Air Terminals More than 24 Inches (600 mm) Long: With brace attached to the terminal at not less than half the height of the terminal.
  3. Single-Membrane, Roof-Mounted Air Terminals: Designed specifically for single-membrane roof system materials. Comply with requirements in Division 07 roofing Sections.
- C. Main and Bonding Conductors: Aluminum and Class II.
- D. Ground Loop Conductor: The same size and type as the main conductor except tinned.
- E. Ground Rods: Copper-clad steel; 5/8 inch (16 mm) in diameter by 96 inches (2400 mm) long.
- F. Heavy-Duty, Stack-Mounted, Lightning Protection Components:
1. Stainless steel.
  2. Main and Bonding Conductors: Lead (1/16" thick) covered copper from the top of the stack to 25 feet below the top of the stack.

## 2.2 SURGE PROTECTIVE DEVICES

- A. Surge Protective Devices SPD's required to meet UL 96A for UL Master Labeling shall be as specified in Division 26 Section "Surge Protective Devices".

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install lightning protection components and systems according to UL 96A and NFPA 780.
- C. Install conductors with two direct paths from air terminals to ground connections. Avoid sharp bends. Follow the manufacturer's written installation instructions.
- D. Conceal the following conductors:
1. System conductors.
  2. Down conductors.
  3. Interior conductors.
  4. Conductors within normal view of exterior locations at grade within 200 feet (60 m) of building.
- E. Cable Connections: Use crimped or bolted connections for all conductor splices and connections between conductors and other components. Use exothermic-welded connections in underground portions of the system.
- F. Cable Connections: Use exothermic-welded connections for all conductor splices and connections between conductors and other components.
1. Exception: In single-ply membrane roofing, exothermic-welded connections may be used only below the roof level.

- G. Air Terminals on Single-Ply Membrane Roofing: Comply with roofing membrane and adhesive manufacturer's written instructions.
- H. Air Terminals on Mechanical Equipment: Air terminals on mechanical equipment shall be mounted such that maintenance operations can be performed without relocation of the air terminal or interconnecting conductors.
- I. Bond extremities of vertical metal bodies exceeding 60 feet (18 m) in length to lightning protection components.
- J. Ground Loop: Install ground-level, potential equalization conductor and extend around the perimeter of structure.
  - 1. Bury ground ring not less than 24 inches (600 mm) from building foundation.
  - 2. Bond ground terminals to the ground loop.
  - 3. Bond grounded building systems to the ground loop conductor within 12 feet (3.6 m) of grade level.
  - 4. Interconnect lightning protection ground loop with the building electrical service grounding electrode system at one place only.
- K. Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot (18-m) intervals.

### **3.2 CORROSION PROTECTION**

- A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
- B. Use conductors with protective coatings where conditions cause deterioration or corrosion of conductors.

### **3.3 FIELD QUALITY CONTROL**

- A. Notify Architect at least 48 hours in advance of inspection before concealing lightning protection components.
- B. UL Inspection: Meet requirements to obtain a UL Master Label for system.

END OF SECTION

**SECTION 26 43 13 - SURGE PROTECTIVE DEVICES****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. This section includes field-mounted Surge Protective Devices (SPDs) for low-voltage (120 to 600 V) power distribution and control equipment, including:
  - 1. Surge Protection Devices at Service Entrance Equipment
  - 2. Surge Protection Devices at Distribution Equipment
  - 3. Surge Protection Devices at Branch Panelboards

**1.2 DEFINITIONS**

- A. ATS: Acceptance Testing Specifications.
- B. *In* or *Inominal*: Nominal Discharge Current. Peak value of surge current, selected by the manufacturer, through the SPD having current wave shape of 8/20 microseconds where the SPD remains functional after 15 surges. *In* is posted on the device UL label.
- C. MCOV: Maximum Continuous Operating Voltage. The maximum continuous operating voltage rating of a Metal Oxide Varistor (MOV) that can be applied without the MOV being damaged and/or destroyed by thermal runaway. MCOV is posted on the device UL label.
- D. SCCR: Short Circuit Current Rating. The maximum current rating the SPD can sustain without being damaged and/or destroyed. SCCR is posted on the device UL label.
- E. SPD: Surge Protective Device. A broad class of protective devices, installed parallel with the distribution panel or service disconnect, meant to protect downstream electrical distribution equipment from the effects of high voltage surges on the line.
- F. SPD Type definitions:
  - 1. TYPE 1: Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including watt-hour meter socket enclosures and intended to be installed without an external overcurrent protective device. Type 1 devices are required for Master Certification of Lightning Protection System installations under UL 96A.
  - 2. TYPE 2: Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device, including SPDs located at the branch circuit panel.
  - 3. TYPE 3: Point-of-utilization SPDs, installed at a minimum conductor length of 10 meters (30 feet) from the electrical service panel to the point of utilization, e.g., cord-connected, direct plug-in, receptacle type and SPDs installed at the utilization equipment being protected. The distance (10 meters or 30 feet) is exclusive of conductors provided with or used to attach SPD's.
  - 4. TYPE 4: Component SPDs, including discrete components as well as component assemblies for installation on panelboards or control panels.
- G. VPR: Voltage Protection Rating. The average of measured limiting voltage before and after Nominal Discharge Testing (*In*), rounded up to one of UL's VPR categories (indicated in the latest ANSI/UL 1449 edition) such as 330 volt, 400 volt, 500 volt, etc. VPR is posted on each device UL label.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of SPDs and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment,

raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access.

- B. Fault-Current Study, Coordination Study, and Overcurrent Protective Device Settings report must be completed and submitted for review prior to final order, assembly or shipping of the electrical distribution system components. If studies have not been approved prior to shipping, assembly or final ordering of the electrical distribution system components, all changes to the equipment necessitated by the results of the study will be provided by the contractor at no additional cost to the project. Refer to specification section "Overcurrent Protective Device Coordination Study".
- C. Do not energize or connect any electrical or low voltage equipment to their sources until SPDs are installed and connected.
- D. Do not perform insulation resistance tests of the distribution wiring equipment with the SPD installed. Disconnect before conducting insulation resistance tests and reconnect immediately after the testing is over.

#### 1.4 SUBMITTALS

- A. General: Submit the following in accordance with Division 01 and Division 26 Section "General Electrical Requirements".
- B. Product Data: For each SPD type, accessory, component and enclosure indicated. Include dimensions and Manufacturer's technical data on features, performance, electrical characteristics, ratings, weights, furnished options, specialties, accessories, and finishes. Tabulate model number, SPD type, system voltage, phases, modes of protection, MCOV, VPR, and  $I_n$ .
- C. Shop Drawings: For SPDs.
  - 1. Detail enclosure types and details.
  - 2. Include general arrangement drawing showing dimensions and weights of each assembled device.
  - 3. Include installation and mounting details for SPDs internal to equipment.
  - 4. Detail bus connection configuration, current, and voltage ratings, including size and number of bus bars and current rating for each bus.
  - 5. Detail short-circuit current rating of SPD assembly and overcurrent protective devices.
  - 6. Include schematic and wiring diagrams for power, signal, and control wiring.
  - 7. Include nameplate legends.
  - 8. Include list of materials.
- D. Product Certificates: For SPDs, from manufacturer.
- E. Sustainable Design Documentation: Submit manufacturer's product data on materials and assemblies showing compliance with building rating standard(s) requirements.
- F. Field quality-control reports.
  - 1. Test procedures used.
  - 2. Test results that comply with requirements.
  - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- G. Sample Warranty: For warranty.
- H. Project Record Documents: Record actual installed equipment and circuiting arrangements.
- I. Operation and Maintenance Data: For SPDs to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
  - 1. Routine maintenance requirements for SPDs and all installed components.
  - 2. Manufacturer's written instructions for testing and adjusting SPDs.
  - 3. Time-current curves for each type of overcurrent protective device.

4. Features and operating sequences, both automatic and manual.
  5. Video recording of operation training and demonstration.
- J. Follow-up service reports.

### 1.5 QUALITY ASSURANCE

- A. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."
- B. Source Limitations: Obtain SPDs of each type and associated components and accessories through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.
- D. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.
- E. Comply with NEMA LS 1.
- F. Comply with ANSI/ UL 1449.
- G. Comply with NFPA 70.
- H. The SPDs shall be compliant with the restrictions of the Hazardous Substances (RoHS) Directive 2002/95/EC.

### 1.6 PROJECT CONDITIONS

- A. Maintain field conditions within manufacturer's required service conditions during and after installation.
- B. Environmental Limitations:
  1. Do not install SPDs until spaces are enclosed and weathertight. Equipment shall be protected from any remaining wet work in the space and work above equipment. Provide temporary HVAC system for maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
  2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
    - a. Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).
    - b. Operating Temperature: 30 to 120 deg F (0 to 50 deg C).
    - c. Humidity: 0 to 85 percent, noncondensing.
    - d. Altitude: Less than 20,000 feet (6090 m) above sea level.
- C. Interruption of Existing Electrical Service: Refer to Division 26, Section "General Electrical Requirements".

### 1.7 DELIVERY STORAGE AND HANDLING

- A. Store in a clean, dry space, protected from weather and so condensation will not form on or in units. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic. Handle carefully in accordance with manufacturer's instructions to avoid damage to equipment components, enclosure, and finish.
- B. Handle and prepare SPD components according to manufacturer's written instructions.

**1.8 WARRANTY**

- A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

**1.9 EXTRA MATERIALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Replaceable Protection Modules: One of each size and type installed.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Manufacturers:
  - 1. ABB USA.
  - 2. Eaton.
  - 3. Intermatic, Inc.
  - 4. LEA International.
  - 5. Leviton Mfg. Company Inc.
  - 6. Siemens.
  - 7. Schneider Electric.
  - 8. Surge Suppression Incorporated.
  - 9. Vertiv.
- B. Surge Protective Device Ratings: Device type ratings shall be:
  - 1. Type 1 - Service entrances
  - 2. Type 2 - Service entrance equipment or distribution equipment
  - 3. Type 3 - Utilization equipment or point of use.
- C. Nominal System Voltage: Match the system voltage to which the SPD is connected, as indicated on the drawings.
- D. Maximum Continuous Operating Voltage: Not less than 125 percent of nominal system voltage for 240V or less power systems, and not less than 115 percent of nominal system voltage for 600V and 480V power systems.
- E. Comply with ANSI/UL 1449.
- F. SPDs for Lightning Protection: For Lightning Protection Systems specified or otherwise required to be "Master Labeled" per UL 96A utilize Type 1 (20kA rated  $I_n$ ) SPDs.
- G. SPDs for PV systems: For Photovoltaic Systems specified, SPDs shall be either DC rated or Dual Rated for AC and DC.

**2.2 SURGE PROTECTION DEVICES AT SERVICE ENTRANCE EQUIPMENT**

- A. Surge Protection Devices: Integrally mounted, wired-in, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:
  - 1. Fuses, rated at 200-kA interrupting capacity.
  - 2. Fabrication using bolted compression lugs for internal wiring.
  - 3. Redundant suppression circuits; with individually fused metal-oxide varistors,
  - 4. Redundant replaceable modules.

5. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
  6. LED indicator lights for power and protection status.
  7. Audible alarm, with silencing switch, to indicate when protection has failed.
  8. Six-digit transient-event counter set to totalize transient surges.
- B. Nominal Discharge current ( $I_n$ ): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.
1. Type 1 SPD's shall be tested and labeled at 20kA per mode.
  2. Type 2 SPD's shall be tested and labeled at 20kA per mode.
- C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 200 kA. Peak surge current rating must be arithmetic sum of the ratings of individual MOVs in a given mode.
- D. Protection Modes:
1. Protection mode VPR for grounded wye circuits 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500
  2. Protection mode VPR for 240/120 V circuits shall be as follows:

	240/120V, 1ph, 3w	240/120V, 3ph, 4w (high leg)
Line to Neutral	700	700, 1400 from high leg
Line to Ground	1000	1000, 1400 from high leg
Neutral to Ground	700	700
  3. Protection mode VPR for 3-phase, 3-wire, delta circuits shall be as follows:

	240V	240V (Delta)	480V	600V
Line to Line	1000	1500	2000	2500
Line to Ground	800		2000	2500

### 2.3 SURGE PROTECTION DEVICES AT DISTRIBUTION EQUIPMENT

- A. Surge Protection Devices: Integrally mounted, wired-in, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:
1. Fuses, rated at 200-kA interrupting capacity.
  2. Fabrication using bolted compression lugs for internal wiring.
  3. Redundant suppression circuits; with individually fused metal-oxide varistors,
  4. Redundant replaceable modules.
  5. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
  6. LED indicator lights for power and protection status.
  7. Audible alarm, with silencing switch, to indicate when protection has failed.
- B. Nominal Discharge current ( $I_n$ ): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.
1. Type 1 SPD's shall be tested and labeled at 20kA per mode.
  2. Type 2 SPD's shall be tested and labeled at 20kA per mode.
- C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 150 kA. Peak surge current rating must be arithmetic sum of the ratings of individual MOVs in a given mode.

## D. Protection Modes:

1. Protection mode VPR for grounded wye circuits, 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2. Protection mode VPR for 1-phase, 3-wire circuits shall be as follows:

	240/120V, 1ph, 3w	240/120V, 3ph, 4w (high leg)
Line to Neutral	700	700, 1500 from high leg
Line to Ground	1000	1000
Neutral to Ground	700	700

3. Protection mode VPR for 3-phase, 3-wire, delta circuits shall be as follows:

	240V	240V (Delta)	480V	600V
Line to Line	1000	1500	2000	2500
Line to Ground	800		1500	2500

## 2.4 SURGE PROTECTION DEVICES AT BRANCH PANELBOARDS

- A. Surge Protection Device: Externally or Integrally mounted, wired-in, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, short-circuit current rating matching or exceeding the available short-circuit indicated on the plans, and with the following features and accessories:

1. Fuses, rated at 200-kA interrupting capacity.
2. Fabrication using bolted compression lugs for internal wiring.
3. Redundant suppression circuits; with individually fused metal-oxide varistors,
4. Redundant replaceable modules.
5. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
6. LED indicator lights for power and protection status.
7. Audible alarm, with silencing switch, to indicate when protection has failed.
8. One set of dry contacts rated at 5 A and 250-V ac, for remote monitoring of protection status.

- B. Nominal Discharge current ( $I_n$ ): The SPD shall be tested to meet UL 1449 Nominal Discharge Current requirements. All modes of protection shall be tested including any required overcurrent protection.

1. Type 2 SPD's shall be tested and labeled at 20kA per mode.

- C. Peak Surge Current Rating: Minimum single-pulse surge current withstand rating per phase must not be less than 100 kA. Peak surge current rating must be arithmetic sum of the ratings of individual MOVs in a given mode.

## D. Protection Modes:

1. Protection mode VPR for grounded wye circuits, 3-phase, 4-wire circuits shall be as follows:

	480Y/277 V	208Y/120 V	600Y/347 V
Line to Neutral	1200	700	1500
Line to Ground	1200	700	1500
Neutral to Ground	1200	700	1500

2. Protection mode VPR for 1-phase, 3-wire circuits shall be as follows:

	240/120V, 1ph, 3w	240/120V, 3ph, 4w (high leg)
Line to Neutral	700	700, 1500 from high leg
Line to Ground	1000	1000
Neutral to Ground	700	700

3. Protection mode VPR for 3-phase, 3-wire, delta circuits shall be as follows:

	240V	240V (Delta)	480V	600V
Line to Line	1000	1500	2000	2500
Line to Ground	800		1500	2500

## 2.5 ENCLOSURES

- A. All SPD Units shall be fully enclosed unless otherwise noted. Provide enclosures suitable for the locations indicated and as described below:
1. Indoor Enclosures:
    - a. NEMA 250 Type 1 constructed of a polymer or steel material
    - b. NEMA 250 Type 12 constructed of a polymer or steel material with a gasket to exclude dust.
  2. Outdoor Enclosures:
    - a. NEMA 250 Type 3R constructed of steel material and with a gasket to exclude dirt, windblown dust, and water (rain, sleet, and snow) from entering the enclosure when shut.
    - b. NEMA 250 Type 4 constructed of steel material and with a gasket to exclude dirt, windblown dust, and water (rain, sleet, snow, splashing water or hose directed water) from entering the enclosure when shut.
    - c. NEMA 250 Type 4X constructed of stainless steel material and with a gasket to exclude dirt, windblown dust, and water (rain, sleet, snow, splashing water or hose directed water) from entering the enclosure when shut.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine surge suppression devices before installation. Reject equipment that is damaged, or rusted, or have been subjected to water saturation.
- B. Examine areas, surfaces, substrates, and elements to receive SPDs with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.
  1. Verify that field measurements are as indicated.
  2. Verify that manufacturer's written instructions for environmental conditions have been established in spaces where equipment will be installed, before installation begins.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install SPDs and accessories in accordance with manufacturer's instructions.
- B. Coordinate layout and installation of equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access.
- C. Wall-Mounted Surge Protective Devices: Install SPDs on walls adjacent to equipment served, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall.

For SPDs not at walls, mount to similar support structure for equipment served by device. Comply with Division 26 Section "Hangers and Supports for Electrical Systems."

- D. Install SPD devices at service entrance on load side, with ground lead bonded to service entrance ground.
- E. Install SPD devices for panelboards and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.
  - 1. Provide circuit breaker as a dedicated disconnecting means for SPD unless otherwise indicated.
- F. Mount equipment plumb and rigid without distortion of enclosure.
- G. Install fuses in fusible devices.
- H. Comply with NECA 1.

### **3.3 CONNECTIONS**

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools for control wiring.

### **3.4 IDENTIFICATION**

- A. Nameplates: Label external device enclosures with equipment served.
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- C. Warning Labels: Label device with a warning label in accordance with NFPA 70 and NFPA 70E.

### **3.5 CLEANING**

- A. After completing equipment installation and before energizing, inspect unit components. Vacuum dirt and debris from interior of equipment; do not use compressed air to assist in cleaning. Remove paint splatters and other spots. Repair exposed surfaces to match original finish.

### **3.6 ADJUSTING**

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

### **3.7 FIELD QUALITY CONTROL**

- A. Testing: Perform the following field quality-control tests and inspections:
- B. Acceptance Testing Preparation:
  - 1. After installing SPD but before equipment is energized, test for compliance with requirements.
  - 2. Verify that electrical wiring installation complies with manufacturer's written installation requirements.
  - 3. Complete startup checks according to manufacturer's written instructions.

4. Test continuity of each circuit.
- C. Tests and Inspections:
1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  3. Report results of tests and inspections in writing. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- D. SPDs will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### **3.8 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain equipment, overcurrent protective devices, instrumentation, and accessories.
- B. Video record demonstrations presentation for Owner's records.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 51 00 - INTERIOR LIGHTING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Included in the work of this section are labor, material, and appurtenances required to complete the work of this Section as specified herein, including, but not limited to:
1. Interior light fixtures, lamps, LEDs, reflectors, lenses or faceplates, ballasts, transformers, drivers and power supplies (includes exterior light fixtures normally installed on exterior surfaces of buildings).
  2. Exit signs.
  3. Light fixture supports.
  4. Coordination.
  5. Quality assurances.
  6. Specific requirements.

**1.2 SUBMITTALS**

- A. General:
1. Only those light fixtures and manufacturers per each fixture type designated and listed in the Light Fixture Schedule or on the Drawings, and approved in accordance with paragraph 1.4-SUBSTITUTIONS of this Section, or both, will be accepted. Where the Light Fixture Schedule indicates an allowance to be made for a specific light fixture, the price is a contractor price and monies shall be allotted for freight, installation, and lamping (if designated). Alternate manufacturers presented at bid shall be disqualified.
  2. Submit all light fixtures, specified for use on this Project, in a single submittal package of portfolios, so that all light fixtures can be reviewed at one time.
  3. Prepare portfolios from manufacturer's standard specification sheets, and include the fixture tag indicated on the Light Fixture Schedule to identify each light fixture. Do not combine more than one light fixture type on a single sheet.
  4. Fixture or other materials shall not be shipped, stored, or installed into the work without approval of shop drawings.
  5. Modifications to fixtures shall be in accordance with Architect's comments.
- B. Product Data: For each type of light fixture, collated and bound in sets, and arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
1. Summary page with the following for each light fixture type
    - a. The number, type and wattage of the light fixture lamps or LEDs (including, but not limited to, assemblies, arrays, bars or modules).
    - b. Light fixture ballast, driver or auxiliary device manufacturer, number and type.
  2. Fixture cut sheets with name of manufacturer and options to be provided marked, including, but not limited to, voltage, lensing, and finish/color.
    - a. Descriptive information providing physical characteristics of light fixture, including, but not limited to, materials, dimensions, fixture efficacy and/or efficiency, and verification of indicated parameters.
    - b. For LED fixtures, include also L70 lifetime and wattage of luminaire including driver/power supply losses.
      - 1) Include MacAdam ellipse step information for:
        - a) All interior light fixtures
        - b) Exterior luminaires installed on exterior building surfaces specified with 80 CRI or greater.
  3. Light fixture mounting details, including non-standard outlet boxes.
  4. Construction of light fixture housing and door (if applicable).

5. Ballast cut sheet with options marked, providing physical description of ballast including, but not limited to, voltage, lamp, ballast factor, power factor, amperage and wattage.
  6. Power supply, transformer, and/or driver cut sheet with options marked, providing physical description of auxiliary device including, but not limited to, voltage, power factor, amperage, wattage, and maximum remote distance charts between device and light fixture.
  7. Light fixture finish and color (if applicable).
  8. Lamp cut sheet with options marked, providing physical description of lamps, including, but not limited to, voltage, wattage, efficacy, CCT, CRI, lumens, and life expectancy.
    - a. For LED lamps, include also number of MacAdam ellipse steps and L70 lifetime.
  9. Photometric data, in IESNA format, including LM-79 for LED luminaires, based on laboratory tests of each light fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the light fixture as applied in this Project.
    - a. Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.
- C. Shop Drawings: Show details of non-standard or custom light fixtures. Indicate dimensions, finish color, including, but not limited to, custom color, weights, methods of field assembly, components, features, accessories, and modifications. Scaled documents shall be provided for custom fixtures.
- D. Submittal Schedule
1. Within 30 days of Division 26 contractor award, shop drawings covering all light fixtures within this section shall be forwarded to architect to begin approval process. Any shop drawings submitted after the required time frame will require the contractor to submit only the 1st named manufacturer and associated specification data listed on the fixture schedule as the only approved manufacturer. No substitutions will be allowed after the specified time frame.
  2. Within 15 days of "approved" and "approved as noted" shop drawings, contractor shall forward to Architect a guaranteed ship date for each specified fixture.
  3. Within 15 days after contractor's receipt of "reject and resubmit" or "not approved" shop drawings, contractor shall provide Architect with resubmitted shop drawings for only those fixtures deemed unacceptable.
  4. Contractor is responsible to call to the attention of the Architect any submittals that have not been returned to him in a timely manner that may affect delivery of fixtures or as otherwise affecting Section 1.4.D of this specification.
- E. Control Wiring
- F. Coordination Drawings: Refer to architectural reflected ceiling plans or details for exact location of light fixtures; engineering documents shall not be referenced for exact fixture positions. Contractor shall check and verify dimensions and details on drawings before proceeding with the work. If any question arises about the true meaning of drawings, refer the matter to the Architect, whose decision is final. In no case proceed with work with any uncertainty. Architectural documents shall show and coordinate with assistance from installers of items involved:
1. Light fixtures.
  2. Suspended ceiling components.
  3. Structural members to which suspension systems for light fixtures will be attached.
  4. Other items in finished ceiling including the following:
  5. Air outlets and inlets.
  6. Speakers.
  7. Sprinklers.
  8. Smoke and fire detectors.
  9. Occupancy sensors.
  10. Access panels.
  11. Perimeter moldings.

- G. Product Certificates: For each type of ballast for bi-level and dimmer-controlled fixtures, signed by product manufacturer.
- H. Field quality-control test reports.
- I. Operation and Maintenance Data: For lighting equipment and fixtures to include in operation and maintenance manuals.
- J. Warranties: Special warranties specified in this Section.

### 1.3 SUBSTITUTIONS

- A. Refer to Division 26 Section "General Electrical Requirements".
- B. Prior to the Bid Date, substitutions will not be considered unless the Architect/Engineer have received written request for approval at least ten calendar days prior to the date for receipt of Bids. Include in each such request the Light Fixture Schedule designation, name of the material or equipment for which it is to be substituted and complete Product Data for the proposed substitute, as defined in SUBMITTALS above, and all other information necessary for an evaluation. Provide interior point-by-point photometric calculations, under both normal and emergency lighting conditions, as applicable, if required by the Engineer. Submit a 100.00 review fee to the Engineer with each such point-by-point calculation for use of electronic base files. The fee will be returned if the substitution is added to the specification.
- C. During the Bid
  - 1. Any proprietary, sole-sourced light fixture listed in the fixture schedule shall be unit priced only. Unit prices shall be clearly identified on the bid form.
  - 2. Representative agents shall be allowed to offer mini-lot pricing (MLP). MLP shall be defined as:
    - a. Agents can group only specified fixtures they represent, and
    - b. Only represent in the region where the specification originated, and
    - c. Exclude all fixtures outside their represented lines from the MLP, and
    - d. Sole-sourced (proprietary) light fixtures shall not be included in the MLP.
  - 3. Packaging of light fixtures will not be considered nor approved. Packaging is defined as: distributor(s) providing a single price for a light fixture package made up of specified and non-specified light fixtures. Any submittal package containing non-specified light fixtures or inclusion of lighting control systems will be immediately rejected in its entirety.
- D. After the Bid Date, proposals to substitute light fixtures for those shown on the Drawings or specified herein, will only be considered as a deduct. Submit proposed substitutions separately, in Submittal form, with a list of proposed substitutions together with a deduct price for each substitution. Proposed substitutions will then be reviewed by the Architect/Engineer.
- E. During the construction period, no substitutions shall be considered if product delay is due to contractor's failure to order products in a timely manner after presentation of fixture schedules and specifications. Additional costs associated with air freight or special factory runs to meet schedule due to contractor's error shall be at the expense of contractor.
- F. The Architect/Engineer has the final authority as to whether the light fixture is an acceptable replacement to the specified item. The proposed substitution may also be rejected for aesthetic reasons if felt necessary or desirable. In the event the proposed substitutions herein described are rejected, provide the specified item(s).

### 1.4 DEFINITIONS

- A. BF: Ballast factor.
- B. CCT: Correlated color temperature
- C. CFL: Compact Fluorescent

- D. CRI: Color-rendering index.
- E. CU: Coefficient of utilization.
- F. EISA: Energy Independence and Security Act of 2007.
- G. HID: High-intensity discharge.
- H. L70: minimum 70% maintained initial-rated lumens at average rated life for LEDs
- I. LED: Light Emitting Diode
- J. LED Lamp: Replaceable LED light source with an integral driver within envelope of lamp. Lamp/Base types may include MR16/bi-pin, PAR/medium base, etc.
- K. LED Module: Light source that contains LEDs, and may include additional components such as lenses, reflectors, or refractors, however do not include drivers.
- L. LER: Light fixture (Luminaire) efficiency rating.
- M. Light Fixture: Complete light fixture, including ballast housing if provided.
- N. RCR: Room cavity ratio.

### 1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories:
  - 1. Listed and labeled as defined in NFPA 70, Article 100, by an NRTL as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
  - 2. Marked for intended use.
- B. Comply with NFPA 70.
- C. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- D. Regulatory Agencies: Provide fixtures conforming to nationally- or internationally-recognized accredited testing agencies, such as U.S., ETL, ARL, or others in acceptance with local code enforcement policy.
- E. Electrical Components and Devices: Provide only fixtures that comply with National Electric Code (NEC), and in particular to Section 410. All ceiling recessed fixtures, whether indicated in a catalog number or not, shall be equipped with an integral thermal protection device.
- F. Mockups: Provide interior light fixtures for room or module mockups, complete with power and control connections.
  - 1. Obtain Architect's approval of fixtures for mockups before starting installations. Costs shall not be added to the base bid if Owner or Architect does not approve mockup.
  - 2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work and documenting of final conditions.
  - 3. Approved fixtures in mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

### 1.6 COORDINATION

- A. Unless otherwise noted, perform all electrical Work required for the proper installation and operation of equipment, furnishings, devices and systems specified in other Divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.
- B. Coordinate layout and installation of light fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including, but not limited to, HVAC equipment,

fire-suppression system, and partition assemblies. Contractor shall arrange his installation in proper relation to other work so that there shall be no interference, damage or delay to other trades' work

- C. Give ample notice of any special openings or rough-in work required for placing electrical/lighting work so as to avoid cutting or removal of completed work.
- D. Where work of this Section is to be flush or concealed, install it so it does not project beyond finished lines of walls, ceilings or floor surface.
- E. Verify all ceiling systems and coordinate light fixture type and accessories prior to ordering light fixtures. Coordinate and cooperate with ceiling installer in regards to the location and installation of light fixtures.

## 1.7 WARRANTY

- A. General Guarantee: For a period of one year after Owner's initial acceptance and establishment of the beginning date of the guarantee period, and at no cost to the Owner, Contractor shall promptly furnish and install replacements for any fixtures or components deemed by the Owner as defective in workmanship under normal operating conditions, excluding lamp replacement as noted in Section 1.10.A.1. Contractor shall repair installed equipment on the job site to Owner's satisfaction. For any time during said guarantee period that fixtures are not fully functional due to defects in material or workmanship, Contractor shall provide or pay for suitable temporary light fixtures, and shall remove said temporary fixtures upon installation of replacement elements. Contractor shall furthermore guarantee replacement fixtures for a period of one year following replacement.
- B. Contractor shall not be held responsible for damage of fixtures or equipment components occurring after the beginning of the guarantee period due to acts of vandalism, acts of war, or acts of God.
- C. LED Warranties: Shall be free from defects in materials and workmanship for the period indicated from date of factory shipment.
  - 1. LED Luminaires, including LED modules, arrays and drivers: Five years.
  - 2. LED Lamps: Three years.

## 1.8 SPARES

- A. Furnish spare materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
  - 2. Plastic Diffusers and Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
  - 3. Battery and Charger Data: One for each emergency lighting unit.
  - 4. Ballasts and/or Drivers: 2 for every 100 of each type and rating installed. Furnish at least one of each type.
  - 5. Globes and Guards: 1 for every 20 of each type and rating installed. Furnish at least one of each type.

## PART 2 - PRODUCTS AND MATERIALS

### 2.1 MANUFACTURERS

- A. In Light Fixture Schedule, the following requirements apply to product selection:
  - 1. Basis-of-Design Product: The design for each light fixture is based on the product named. Subject to compliance with requirements, provide either the named product or a

comparable product by one of the other manufacturers specified that meets or exceeds performance characteristics of the named product.

## 2.2 LIGHT FIXTURES AND COMPONENTS GENERAL REQUIREMENTS

- A. Provide light fixtures as shown on the drawings and/or specified. This shall include all lamps, material and labor to securely hang light fixtures, clean them and make them completely ready for use. Provide all hangers, supports, and miscellaneous hardware required to install light fixtures. Provide additional tie wires connected to structure to conform to applicable seismic requirements where required.
- B. Light fixture models scheduled on the Drawings are to show the manufacturer, grade and style of light fixtures required. Regardless of the manufacturer's catalog number suffixes indicated, provide all options and features as described in the Light Fixture Schedule.
- C. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures. Manufacturer of recessed fixtures shall provide mounting brackets suitable for connection to ceiling system structure. Modifications to standard mounting brackets shall be coordinated with contractor and delivered with fixture so that no delays to product delivery shall be allowed.
- D. Incandescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5A. Minimum gauge of sheet steel to be 18 gauge.
- E. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable. Minimum gauge of sheet steel to be 22 gauge.
- F. HID Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5B.
- G. Metal Parts: Free of burrs and sharp corners and edges.
- H. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.
- I. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
- J. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
  - 1. White Surfaces: 85 percent.
  - 2. Specular Surfaces: 83 percent.
  - 3. Diffusing Specular Surfaces: 75 percent.
  - 4. Laminated Silver Metallized Film: 90 percent.
- K. Plastic Diffusers, Covers, and Globes:
  - 1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
    - a. Lens Thickness: At least 0.125 inch minimum unless different thickness is indicated.
    - b. UV stabilized.
  - 2. Glass: Annealed crystal glass, unless otherwise indicated.
- L. Where located within structural concrete, light fixture housing and any other luminaire components in direct contact with concrete shall be effectively coated and/or covered to prevent chemical reactions with the concrete in accordance with the American Concrete Institute Code.
- M. Fixture Finishes:
  - 1. Apply fixture finishes after fabrication in a manner that assures a durable wear-resistant surfacing. Give exposed metal surfaces (brass, bronze, aluminum and others) and finished castings, except chromium-plated or stainless steel parts, an even coat of high-grade meth/acrylate lacquer or transparent epoxy.

2. For corrosive or salt water environments, manufacturer shall provide fixtures with low copper/zinc cast aluminum (AB-47100 aluminum with less than 0.6% copper – classified for corrosive areas) housings to prevent salts from “pitting” aluminum housing. Manufacturer shall provide, in addition to or in lieu of, AB-47100 aluminum, ion added or pre-anodized polyester powder cast finish for “marine grade” applications. Manufacturer shall otherwise provide all stainless steel housing in conjunction with stainless steel hardware.
  3. Recessed downlights in corrosive or salt water interior environments shall be equipped with a “natatorium” finish comprised of a zinc-chromated and phosphated process, then powder-coated on the exterior of the housing.
- N. Reflectors:
1. Provide aluminum reflectors or reflecting cones for downlight style fixtures comprised of #12 aluminum reflector sheet, 0.57 inch (15 gauge) or heavier and free of tool-making indentations, including spinning lines caused by assembly techniques. All reflectors shall be of first-quality, anodized finish :Alzak” with specular or semi-specular finish and color as selected. Provide specular reflectors with no apparent brightness above 45 degrees from Nadir and semi-specular, diffuse reflectors with no apparent brightness above 75 degrees from Nadir.
- O. Mounting hardware and trims:
1. Coordinate as need to suit ceiling conditions.
  2. Light fixtures near or in contact with insulation shall comply with code.
  3. Maintain a 3” minimum working clearance between non-IC rated light future housings and insulation on all adjacent ductwork, piping, walls and ceilings.
- P. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps, LEDs, ballasts and/or drivers. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
1. Label shall include the following lamp, LEDs, ballast and/or driver characteristics:
    - a. "USE ONLY" and include specific lamp or LED type.
    - b. Lamp diameter code (T-4, T-5, T-8, T-12, etc.), tube configuration (twin, quad, triple, etc.), base type, and nominal wattage for fluorescent and compact fluorescent luminaires.
    - c. Lamp type, wattage, bulb type (ED17, BD56, etc.) and coating (clear or coated) for HID luminaires. Indicate maximum allowed wattage.
    - d. LED type, wattage, beam angle (if applicable) for LED luminaires. Indicate maximum allowed wattage.
    - e. Start type (preheat, rapid start, instant start, etc.) for fluorescent and compact fluorescent luminaires.
    - f. ANSI ballast type (M98, M57, etc.) for HID luminaires.
    - g. CCT and CRI for all luminaires.

## 2.3 EXIT SIGNS

- A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with authorities having jurisdiction.
- B. Internally Lighted Signs:
1. Lamps for AC Operation: LEDs, 50,000 hours minimum rated lamp life.

## 2.4 DRIVERS FOR LED LUMINAIRES

- A. Description: Designed for type and quantity of LED diodes of light fixture. Drivers shall tolerate sustained open circuit and short circuit output conditions without damage. Driver shall be designed for full light output unless dimmer or bi-level control is indicated:
1. Sound Rating: A.

2. Total Harmonic Distortion Rating: Less than 20 percent. Shall comply with ANSI C82.77.
  3. Transient Voltage Protection: IEEE C62.41, Category A or better.
  4. Power Factor: 0.90 or higher at full load.
  5. Interference: Comply with 47 CFR, Chapter 1, Part 15, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.
  6. Driver shall operate with maximum sustained variations of +/-10% input voltage and frequency with no damage to driver.
  7. Driver output shall be regulated to maximum +/- 5% published load range or requirements of downstream LED fixture.
  8. LED Current Crest Factor: 1.5 or less.
  9. LED drivers shall not over-drive LEDs at a current or voltage above LED rated values in order to increase LED lumen output.
  10. Meets EN610000 for input harmonics.
  11. ROHS Compliant.
- B. Dimming Drivers:
1. Dimming Range: Visually flicker-free, strobe-free, continuous dimming of source as follows, unless specifically noted otherwise in the Light Fixture Schedule whichever is more stringent:
    - a. Luminaires: 100 to 10 percent of rated lumens.
    - b. Lamps: 100 to 20 percent of rated lumens.
  2. 0-10V dimming drivers: Compliant with IEC 60929 standard for 4-wire dimming.
  3. Compatibility: Certified by manufacturer for use with specific dimming control system and LED indicated.
  4. Control: Coordinate to ensure that the dimming driver, power supply, controller, dimming module, and/or wallbox dimmer and connecting wiring are compatible.

## 2.5 LED LAMPS AND LUMINAIRES

- A. Comply with ANSI C78.377 for white light LED color range. Unless noted otherwise in the Light Fixture Schedule, LED color quality characteristics shall be 80 CRI minimum and 3500K CCT.
- B. LED binning specification tolerance to be within 3 MacAdam ellipses of rated values or as indicated in the Light Fixture Schedule, whichever is more stringent. All LEDs used for same fixture type throughout the project to originate from same production bin.
- C. Unless indicated otherwise in the Light Fixture Schedule, minimum 70% maintained initial-rated lumens at average rated life of as follows:
  1. LED lamps: 20,000 hours
  2. LED luminaires: 50,000 hours
- D. ROHS compliant
- E. Manufacturer of LED chips will be evaluated based on the manufacturer's product literature and data. At a minimum, LED fixtures or lamps will incorporate Bridgelux, Cree, Nichia, Osram or Xicato LEDs; additional manufacturers may be considered however the Architect or Engineer has the authority to reject other manufacturers for technical or aesthetic reasons if felt necessary or desirable.

## 2.6 AUXILIARY DEVICES FOR LOW VOLTAGE AND LED FIXTURES

- A. Provide remote power supplies, drivers and/or transformers for light fixtures as required for a complete and operational system. Where equipment is not indicated as plenum rated, provide an additional enclosure for the device(s) suitable for the installed environment.

**2.7 LIGHT FIXTURE SUPPORT COMPONENTS**

- A. Comply with Sections "260548 Seismic Controls for Electrical" and "260529 - Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.
- B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.
- C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.
- D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage.
- E. Rod Hangers: 3/16-inch minimum diameter, cadmium-plated, threaded steel rod.
- F. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

**2.8 TRANSFORMERS FOR LOW VOLTAGE FIXTURES**

- A. Provide transformers to low voltage lamps which are suitable for the electrical characteristics of the supply circuits to which they are to be connected. For remote electronic or magnetic transformers, contractor shall remote transformers so as to reduce voltage drop. For 25 amp low-voltage linear systems, contractor shall not daisy-chain 25A loaded runs together. Contractor shall provide home-run from end of run to remote transformer.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Verify conditions of equipment and installation prior to beginning work.
- B. Verify that equipment is ready for connecting, wiring, and energizing.

**3.2 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Light Fixtures: All work shall be executed to present a neat appearance. Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.
- C. Temporary Lighting: If it is necessary, and approved by Architect, to use permanent luminaires for temporary lighting, install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires, disassemble, clean thoroughly, install new lamps, and reinstall.
- D. Support for Light Fixtures in or on Grid-Type Suspended Ceilings: Use grid as a support element.
  - 1. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each fixture. Locate not more than 6 inches from light fixture corners.
  - 2. Support Clips: Fasten to light fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
  - 3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.
  - 4. Install at least one independent support rod or wire from structure to a tab on light fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.
- E. Suspended Light Fixture Support:
  - 1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.

2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end. Provide suitable connectors or collars to connect adjoining units to appear as a continuous unit.
4. Decorative pendant mounted light fixtures
  - a. Provide cord and/or stem lengths to match elevations above finished floor as indicated on architectural elevations. If architectural elevations do not indicate suspension heights, coordinate with Architect to determine final suspension heights. Regardless, contractor shall not field cut pendants or order rigid stems without elevation approval from Architect. Pendant suspensions on electrical documents are for reference only.
    - 1) Cord-mounted: Manufacturers shall supply luminaires with flexible, field cutting cords. Contractor shall field cut cords as required.
    - 2) Field-cuttable, rigid-stem mounted: Manufacturers shall supply luminaires with field cutting rigid stems. Contractor shall field cut stems as required.
    - 3) Factory-cut rigid stem mounted: Contractor shall provide rigid stem dimensions to the manufacturer as required.
  - b. Junction boxes used to feed light fixtures shall be covered by manufacturer supplied canopy plates.
- F. Installation within non-standard ceilings, including, but not limited to, wood and metal ceilings.
  1. For recessed downlight light fixtures, specification is based on standard throats to accommodate ceiling thicknesses of  $\frac{3}{4}$ " or less. If non-standard ceiling (such as wood, thickened gypsum ceilings and metal plank type) require throats greater than  $\frac{3}{4}$ ", modifications to manufacturer's standard  $\frac{3}{4}$ " throat shall be determined by Architect and Contractor prior to shop drawing submission.
  2. For light fixtures recessed into metal ceilings, rigidly support light fixture to ensure that trim fits flush with ceiling plane.
- G. Connect wiring according to Section "260519 - Low-Voltage Electrical Power Conductors and Cables."
- H. Through wiring of recessed light fixtures, in suspended ceilings, is not permitted. Connect each light fixture by a whip to a junction box. The whip shall be of sufficient length to allow the light fixture to be relocated within a 6-foot radius.
- I. Wall Mounted Light fixtures
  1. Unless otherwise noted, conceal all raceways and back boxes for wall mounted light fixtures. Coordinate all wall-mounted light fixtures with interior elevations. Where specific elevations or dimensions are not indicated, verify the correct location with Architect prior to installation. Contractor shall supply structure to support weight of fixture.
- J. Contractor shall construct light coves according to architectural details. Contractor shall ensure, unless otherwise directed, that top of fixture lamp is flush with top of cove lip. Contractor shall provide blocking as needed under fixture to ensure stated requirement.
- K. Auxiliary Devices for low voltage and LED Fixtures
  1. Install device within maximum remote distances and with wiring sized per manufacturer's recommendations.
  2. In public areas or other areas where remote device visibility is undesirable, install device where concealed from view, well ventilated and accessible. Provide access panels as required.
  3. Provide label on device indicating fixture type and location/room served along with panelboard circuit number.
  4. Properly support remote lighting devices, including transformers, power supplies, and drivers, per Code and manufacturer's recommendations.

**3.3 DIMMING**

- A. For dimmable light fixtures, provide both control and power wiring between light fixture and control device and between light fixtures. Quantity of low voltage and line voltage wiring and wire type shall be per manufacturer's recommendations. At a minimum, provide the following based on control type at either 120V or 277V, unless recommended otherwise by the manufacturer:
  - 1. 0-10V – two low voltage conductors and two line voltage conductors plus ground
  - 2. 2-Wire dimming – two line voltage conductors plus ground
  - 3. 3-Wire dimming – three line voltage conductors (1 for control and two for power) plus ground
  - 4. DALI – two low voltage conductors and two line voltage conductors plus ground
  - 5. Proprietary digitally addressable – as required per the manufacturer
  - 6. DMX – two line voltage conductors plus ground and DMX cabling
- B. Coordinate light fixture and control device dimming types for compatibility.

**3.4 COORDINATION**

- A. Light fixtures shown on the Electrical Drawings represent general arrangements only. Refer to Architectural Drawings for exact locations.
- B. Coordinate the installation and location of light fixtures with other work and all other trades before installation to avoid conflicts. Coordinate light fixture locations in mechanical rooms with final installed piping and ductwork layouts.
- C. Verify all ceiling systems and coordinate light fixture type and accessories prior to ordering light fixtures. Coordinate and cooperate with ceiling installer in regards to the location and installation of light fixtures.
- D. Coordinate final light fixture locations in walk-in coolers and freezers with refrigeration coils and other trades.
- E. Wall-Mounted Light fixtures
  - 1. Coordinate all wall-mounted light fixtures with the architectural features of the building. Where specific elevations or dimensions are not indicated, verify the correct location with the Architect prior to beginning any work.

**3.5 ADJUSTING**

- A. Contractor shall adjust all light fixture sockets to match the lamp specified and aim all adjustable light fixtures as directed by the Architect.
- B. At the time of substantial completion, aim all track lights, flood lights, spot lights, and other fixtures requiring aiming per the Architect's direction. Contractor shall make provisions for supplying all scaffolds, lifts, and other tools and equipment as required.
- C. Where required, focusing shall be done during hours of darkness. Upon notification by contractor that all fixtures are correct as per shop drawings and functioning, that specified lamps have been verified, lighting designer or Architect shall coordinate with contractor as to a mutually agreed upon time to complete focusing. Failure of contractor to notify Architect during substantial completion will result in failure to comply with specifications.

**3.6 FIELD QUALITY CONTROL**

- A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

- B. Clean light fixtures of dirt and debris upon completion of the installation. Protect installed light fixtures from damage during the remainder of the construction period.
- C. Upon completion of the installation of light fixtures, and after building circuits have been energized, energize lighting branch circuits to demonstrate capability and compliance with the requirements. Where possible, correct malfunctioning units at the site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and proceed with retesting.
- D. At the time of final acceptance of this project by the Owner, ensure that all lamps are in working order and all light fixtures are fully lamped.
- E. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

### **3.7 STARTUP SERVICE**

- A. Burn-in all lamps that require specific aging period to operate properly, prior to occupancy by Owner. Burn-in fluorescent and compact fluorescent lamps intended to be dimmed, for at least 100 hours at full voltage.

### **3.8 ADJUSTING**

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aimable luminaires to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Some of this work may be required after dark.
  - 1. Adjust aimable luminaires in the presence of Architect.

END OF SECTION

**SECTION 26 5300 - INDOOR ARENA LIGHTING****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. The following specifications detail the minimum performance and related criteria for illumination of indoor arena playing surfaces and associated spectator areas including luminaires, support and mounting components and accessories. Any deviations from this specification must be documented in writing and submitted to the Engineer for approval, in addition to the submittal requirements listed in this document.
- B. System Design: The Contractor shall perform all calculations and develop all plan and detail drawings required, in conjunction with these specifications, for installation of a complete and operational athletic field lighting system.
- C. This specification section is intended to define the performance and design requirements for illumination of the arena and spectator area. The Contractor shall provide the arena lighting system to meet or exceed the requirements set forth by the criteria in these specifications.

**1.2 SYSTEM DESCRIPTION**

- A. Scope:
  - 1. The arena lighting system shall be designed to include the necessary equipment in order to provide the illumination required for the following functions:
    - a. Multi-level floor event lighting.
    - b. Lower level event seating lighting.
    - c. Upper level event seating lighting.
    - d. Maintenance work lighting.
    - e. Emergency egress lighting.
- B. General:
  - 1. Interior arena lighting system complete with fixtures, lamps and accessories. Securely attach fixtures to supports, wired, tested, adjusted and cleaned when necessary.
  - 2. Provide light fixtures on the light rigging grid as indicated.
  - 3. Fixture location and counts are based on a specific manufacturer. If additional fixtures are required by other manufacturers that are listed in the "Lighting Fixture Schedule" in order to meet the Design Requirements for Illumination and Uniformity Levels, the fixtures, including all associated mounting equipment, relays, dimmer modules, protective devices, glare shields, shutters/shades, conduit, wiring, and increased size of distribution equipment (if applicable), shall be provided at no additional cost to the Owner. In no case will fewer fixtures be provided unless approved by the Engineer.

**1.3 DEFINITIONS**

- A. Definition of "maintained average illuminance" is based on the minimum average value of illuminance over a given area that must be maintained based on the manufacturer's lamp data and "normal" or "regular" maintenance for the life of the system.
- B. Vertical illuminance is defined as illuminance perpendicular to a referenced camera location unless otherwise indicated.
- C. Definition of areas for specified illuminance values:

1. If project requires additional activities beyond Basketball, add playing and seating area specifics per additional activity needs.
  2. Basketball Primary Playing Area (BPPA): This area is defined as the boundary lines of the court (110' x 60').
  3. Basketball Seating Area (BSA): The area from the edge of the BPPA up to Row 5 on the sidelines.
- D. Lp: Lumen maintenance percentage.
- E. L70: Lumen maintenance of 70 percent. Time in hours when the light output from the LED has dropped to 70% of its initial light output.
1. Calculated: Life (in hours) extrapolated from LM-80 test data and formulae that represents the theoretical time point where the luminous flux output decreases to the minimum acceptable 70% level.
  2. Reported: Life (in hours) limitation set by TM-21-11. One example is the reported life can not exceed 6 times the total test duration, i.e. 6 X 10,000 hours testing 60,000 hours reported.
- F. LM-79-08: IES (Illuminating Engineering Society) Electrical and Photometric Measurements of Solid-State Lighting Products
- G. nm: nanometers
- H. TM-21-11: Projecting Long Term Lumen Maintenance of LED Light Sources
- I. TM-30-15: IES (Illuminating Engineering Society) Method for Evaluating Light Source Color Rendition
- J. TLCI: Television Lighting Consistency Index
- K. CRI: Color-rendering index.
- L. CU: Coefficient of utilization.
- M. CV: Coefficient of Variation; a statistical measure of the weighted average of all relevant illumination values for the playing area, expressed as the ratio of the standard deviation for all illuminance values to the mean illuminance value.
- N. Delegated-Design Submittals: Documents, including drawings, calculations, and material and product specifications prepared as a responsibility of Contractor to obtain acceptance by Owner and Authorities Having Jurisdiction.
- O. Illuminance: The density of luminous flux, or flow of light, reaching a surface divided by the area of that surface.
1. Horizontal Illuminance: Measurement in foot-candles (lux), on a horizontal surface 36 inches (915 mm) above the ground, unless otherwise indicated.
  2. Vertical Illuminance: Measurement in foot-candles (lux) on a vertical surface at an elevation coinciding with plane height of horizontal measurements.
- P. HID: High-intensity discharge.
- Q. LED: Light Emitting Diode.
- R. LER: Light fixture efficacy rating.
- S. Light fixture: Used interchangeably in this section with "Luminaire."
- T. Light Trespass: Light spill into areas outside the playing areas, which is either annoying or unwanted.
- U. LLD: Lamp Lumen Depreciation, which is the decrease in lamp output as the lamp ages.
- V. LLF: Light Loss Factor, which is the product of all factors that contribute to light loss of the system.

- W. Luminaire: Complete lighting fixture.
- X. NRTL: National Recognized Testing Laboratory.
- Y. NVLAP: National Voluntary Laboratory Accreditation Program.
- Z. Playing Surface: Area of athletic play such as the field, court, pool, track, or pitch.
- AA. Spectator Area: Seating and egress areas designed for spectators adjacent to and facing the Playing Surface, including but not limited to grand stands, seating bowls, walkways, and aisles.
- BB. Support Structure: Free-standing or building mounted structure used for support and mounting of luminaires and accessories. Includes but is not limited to arms, brackets and truss systems.
- CC. Target Illumination: Average maintained illumination level, calculated by multiplying initial illuminance by LLF.
- DD. UG: Uniformity Gradient; the rate of change of illuminance on the playing field, expressed as a ratio between the illuminances of adjacent measuring points on a uniform grid.

#### 1.4 SUBMITTALS

- A. General:
  - 1. Submit all components of the arena lighting system specified for use on this Project, in a single submittal package of portfolios, so that all components can be reviewed at one time.
  - 2. Prepare portfolios from manufacturer's standard specification sheets and identify each component. Do not combine more than one component on a single sheet.
  - 3. Submit Shop Drawings as required by Division 1.
- B. Product Data: For each luminaire and support/mounting component, arranged in order of luminaire designation. Include data on features, accessories, finishes, and the following:
  - 1. Name of manufacturer.
  - 2. Descriptive cut sheets providing physical description of luminaire including materials, dimensions, effective projected area, and verification of indicated parameters.
    - a. Fixture efficacy.
    - b. Coefficient of utilization tables.
    - c. Light fixture voltage.
    - d. The number, type and wattage of the light fixture lamps (including product data, where applicable).
    - e. Lens type (if applicable).
  - 3. Light fixture options that are to be provided.
  - 4. Details of attaching light fixtures, mounting and accessories.
  - 5. Construction of light fixture housing and door (if applicable).
  - 6. Driver cut sheet with options marked, providing physical description of ballast including, but not limited to, voltage, lamp, power factor, amperage and wattage. Include energy-efficiency data (if applicable).
  - 7. Light fixture finish and color (if applicable).
  - 8. Life, output, and energy-efficiency data for lamps. Lamp data certified by NVLAP, or NRTL. Energy data shall comply with IESNA LM-47.
  - 9. Details of installation and construction.
  - 10. Photometric data based on laboratory tests of each light fixture type, complete with indicated lamps, ballasts, and accessories. Comply with IESNA LM-5.
    - a. Photometric data shall be certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.

11. Dimensions, and finishes of poles/light fixture supports. Means of attaching light fixtures to supports, and indication that attachment is suitable for components involved.
- C. Delegated-Design Submittals: For arena lighting indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified Professional Engineer responsible for their preparation:
1. Drawings and specifications for construction of the arena lighting system.
  2. Manufacturer's determination of LLF used in design calculations. Lighting calculations shall include a LLF of 0.90. Provide a list of recoverable and non-recoverable LLFs used in the submitted calculations for review by the Engineer.
  3. Manufacturer Cut-sheets: For support structures, including mounting brackets, arms, appurtenances and anchorages from manufacturer.
  4. Design calculations for the following:
    - a. Illumination Calculations: Computer-analyzed point method complying with IESNA RP-6 to optimize selection, location, and aiming of luminaires. Scans for both initial and maintained light levels shall be submitted along with the specified spill light calculations. Target illuminance.
      - 1) Point Calculations of horizontal and vertical illuminance, CV, and UG at minimum grid size and area.
  5. Electrical system design calculations for the following:
    - a. Short-circuit current calculations for rating of panelboards, where applicable.
    - b. Total connected and estimated peak-demand electrical load, in kilowatts, of lighting system.
    - c. Ampacity requirements of feeder required to supply the lighting system.
  6. Wiring requirements, including required conductors and cables and wiring methods.
- D. Informational Submittals:
1. Shop Drawings:
    - a. Wiring Diagrams: Power and control wiring.
    - b. Aiming Diagrams: Playing surface and spectator area plans showing aiming points for light fixtures.
  2. Qualification Data: For qualified manufacturer.
- E. Field quality-control reports.
- F. Operation and Maintenance Data: For light fixtures, support structures, and mounting equipment to include in operation and maintenance manuals.
- G. Warranty: Sample of special warranties specified in this Section.

## 1.5 SUBSTITUTIONS

- A. Refer to Division 26 Section "General Electrical Requirements".
- B. Prior to the Bid Date, substitutions will not be considered unless the Architect/Engineer have received written request for approval at least ten calendar days prior to the date for receipt of Bids. Include in each such request the fixture designation, name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including cut sheets, photometric data, and all other information necessary for an evaluation.
- C. After the Bid Date, proposals to substitute light fixtures for those shown on the Drawings or specified herein, will only be considered as a deduct. Submit proposed substitutions separately, in Submittal form, with a list of proposed substitutions together with a deduct price for each substitution. Proposed substitutions will then be reviewed by the Architect/Engineer.

- D. The Architect/Engineer have the final authority as to whether the light fixture is an acceptable replacement to the specified item. The proposed substitution may also be rejected for aesthetic reasons if felt necessary or desirable. In the event the proposed substitutions herein described are rejected, provide the specified item(s).

**1.6 PERFORMANCE REQUIREMENTS**

- A. Facility Type: Collegiate.
- B. Illumination Criteria:
  - 1. Athletic Playing surface type: Basketball and Hockey.
    - a. IESNA RP-6, Class of Play: Class I.
    - b. Speed of Sport: Moderate
    - c. Athletic organization standard: NCAA, National Championship Final Site National Broadcast.
  - 2. Performance Requirements:
    - a. Lighting (and associated controls) will be designed to include at least the following events:
      - 1) Basketball
      - 2) Hockey
    - b. Television camera locations in accordance with NCAA requirements and per locations indicated on the architectural and broadcast drawings.
    - c. Athletic Playing Surfaces and Spectator Areas shall be lit to the levels specified in the charts below. Manufacturer shall provide computer models guaranteeing average maintained light levels on the field and spectator areas for the length of the warranty.
      - 1) Basketball Primary Playing Area (BPPA): Maintained average illumination levels and maximum uniformity ratios in accordance with the following schedule:

Basketball Primary Playing Area (BPPA)		
Illuminance (fc)	Vertical Uniformity Ratio	Horizontal Uniformity Ratio
Horizontal Illumination	--	125 fc
Main Cameras	125 fc	--
End Cameras	75 fc	--
Max./Min. Uniformity Ratio for Main Cameras	1.5:1	1.5:1
Max./Min. Uniformity Ratio for End Cameras	2.5:1	--
Horizontal Uniformity	--	1.5:1
Uniformity Gradient	1.35:1	1.35:1
Coefficient of Variance	0.15	--

- 1) Hockey Primary Playing Area (HPPA): Maintained average illumination levels and maximum uniformity ratios in accordance with the following schedule:

Hockey Primary Playing Area (HPPA)		
Illuminance (fc)	Vertical Uniformity Ratio	Horizontal Uniformity Ratio
Horizontal Illumination	--	125 fc
Main Cameras	125 fc	--
End Cameras	75 fc	--

Max./Min. Uniformity Ratio for Main Cameras	1.5:1	1.5:1
Max./Min. Uniformity Ratio for End Cameras	2.5:1	--
Horizontal Uniformity	--	1.5:1
Uniformity Gradient	1.35:1	1.35:1
Coefficient of Variance	0.15	--

- 2)
- 2) Maintained average illumination levels and maximum uniformity ratios for miscellaneous function in accordance with the following schedule:

A	H I	H U R	
Lower Level Seating	10 fc	Average to Minimum	1.5:1
		Maximum to Minimum	2.0:1
Upper Level Seating	10 fc	Average to Minimum	3.0:1
		Maximum to Minimum	6.0:1
Event Floor Work Lights	20 fc	Average to Minimum	1.4:1
		Maximum to Minimum	1.5:1
Seating Worklights	10 fc	Average to Minimum	2.5:1
		Maximum to Minimum	3.5:1
Event Floor Emergency Lights	5 fc	Average to Minimum	2.5:1
		Maximum to Minimum	3.5:1
Seating Emergency Lights	2 fc	Maximum to Minimum	40:1

- 3. Recoverable Light Loss Factor of 0.90 for LED, per standards from the NCAA shall be applied to the initial light level design to achieve the maintained light levels listed above. Lighting Systems that use the IESNA recognized time power adjustments (IESNA 10th edition handbook) will be acceptable and must achieve the specified Target Illumination. Lighting calculations shall be developed based on the grid spacing as specified in the chart above.
- 4. Measured average illumination level shall meet or exceed the requirements listed above, be +/- 10% of predicted mean in accordance with IESNA RP-6-01, and measured at the first 100 hours of operation. If measured initial average illumination levels in manufacturer's submittals cannot be met additional fixtures shall be added to meet the requirements at no additional cost to the Owner. Increases to electrical distribution system including but not limited to additional panelboards, transformers, circuit breakers, feeders, and branch circuits caused by additional fixtures shall also be provided at no additional cost to the Owner.
- 5. CV and maximum-to-minimum uniformity ratios for each lighted area shall be equal to or less than those listed in IESNA RP-6 for the indicated class of play.
- 6. UG levels within each lighted area equal to or less than those listed in IESNA RP-6 for the indicated speed of sport.
- 7. Lighting shall be directed at the playing surface and spectator areas.

- C. Illumination Calculations: Computer-analyzed point method complying with IESNA RP-6 to optimize selection, location, and aiming of luminaires. Scans for both initial and maintained light levels shall be submitted with the bid.
1. Grid Pattern Dimensions: For playing areas of each sport and areas of concern for spill-light control, correlate and reference calculated parameters to the grid areas and intersection points of the indicated grid pattern. Grid Spacing specified charts above.
  2. Building reflectance shall not be included in the lighting design calculations.
  3. Determine LLF according to IESNA RP-6 and manufacturer's test data.
    - a. Use LLD at 70 percent of rated lamp life for LED lamp sources. LLF shall be applied to initial illumination to ensure that target illumination is achieved at 100 percent of lamp life and shall include consideration of field factor.
    - b. LLF shall not be higher than 70 percent, and may be lower when determined by manufacturer after application of the ballast output and optical system output according to IESNA RP-6.
  4. Use a field factor of 15 percent according to IESNA RP-6, in establishing initial illuminance.
  5. Light Fixture Mounting Height: as indicated on the Drawings, with consideration for requirements to minimize spill light and glare.
  6. Luminaire Placement: Luminaire clusters shall be outside of glare zones defined by NCAA.
- D. Emergency Egress Lighting: In case of normal power failure, provide minimum illumination levels of 1.0 fc average with a minimum point calculation of 0.1 fc and maximum to minimum illumination ratio of 40 to 1 measured at the level of the playing surface, in spectator areas, and at egress paths illuminated by the arena lighting system.
1. Emergency illumination levels shall be available within 10 seconds of normal power failure.
  2. Duration of emergency illumination shall be not less than 90 minutes.
- E. Electrical Power Distribution Requirements:
1. Electrical power available for Arena Lighting System:
    - a. Normal Power: 480Y/277 volts, three phase, four wire.
    - b. Emergency Power: 480Y/277 volts, three phase, four wire.
      - 1) Only luminaires required for emergency egress lighting shall be connected to emergency power circuits.
  2. Include roughing-in of service indicated for non-sports improvements on the Project site.
  3. Balance load between phases. Install wiring to balance three phases at each support structure.
  4. Include required overcurrent protective devices and individual lighting control for the arena or venue.
  5. Include indicated feeder capacity and panelboard provisions for future lighted arena construction.
  6. Maximum Total Voltage Drop from Source to Load: 5 percent, including voltage drops in branch circuit, subfeeder and feeder.
- F. Lighting Controls System: Manual, low voltage, or digital; providing the following functions, integrated into a single control station with multiple subcontrol stations as indicated on the Drawings.
1. Control Station: Low voltage touch screen(s).
  2. Control Zones: Provide multiple levels of control as indicated below. Each level of control shall have a dedicated switch labeled with the zone it controls. Provide an additional master control switch that turns all zones on and off via a single switch.
    - a. Event Floor: Provide one level of control for all luminaires aimed at the event floor.

- b. Event Floor: Provide two levels of control for all luminaires aimed at the event floor. Each level shall provide 50 percent illumination uniformly over the playing surface. The first level shall provide 80 percent illumination and the second shall provide 33 percent illumination over the playing surface. Both levels shall provide uniform lighting over the playing surface.
  - c. Spectator Areas: Provide one level of control for all luminaires aimed at spectator seating areas.
  - d. Spectator Areas: Provide two levels of control for all luminaires aimed at the spectator seating areas and egress paths. Each level shall provide 50 percent illumination uniformly over the spectator areas and egress paths.
- G. Miscellaneous Obstructions:
- 1. To achieve the illumination and uniformity design levels required, the manufacturers design calculations and fixture aiming positions must compensate for miscellaneous obstructions, equipment sound system speakers, mechanical ducts, roof support cross bracing, rigging beams, support hangers, etc.

## 1.7 POWER DISTRIBUTION AND CONTROL

- A. Wiring Method for Subfeeders, Branch Circuits, and Control Wiring:
  - 1. Metallic raceway as specified within other sections or drawings; No. 10 AWG copper minimum conductor size for power wiring.
- B. Electrical Enclosures: NEMA 250, Type 1 enclosure constructed from steel, with hinged doors fitted with padlock hasps or lockable latches.
- C. All wiring for emergency luminaires shall be run in separate raceways from the normal lighting circuits.
- D. The circuit conductors, feeders, circuit breakers to lighting indicated are based on preliminary lighting system designs from the basis of design manufacturer. The final number of branch circuit/feeder conductors, the sizes of the branch circuit/feeder conductors, number of circuit breakers, sizes of circuit breakers and other system components required to provide a complete functioning lighting system shall be provided and included within the Contractor's bid based the final lighting system design that meets the illumination requirements specified herein and on the drawings.
- E. Voltage drop shall be considered for all branch/feeder conductors. Engineer may request a submittal for all voltage drop calculations for the lighting power distribution system.

## 1.8 QUALITY ASSURANCE

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this project.
- B. Manufacturer Qualifications: Maintain, within 200 miles of Project site, a service center capable of providing training, parts, and emergency maintenance repairs.
- C. Manufacturer's responsibilities include fabricating sports lighting and providing professional engineering services needed to assume engineering responsibility.
  - 1. Engineering Responsibility: Preparation of delegated-design submittals and comprehensive engineering analysis by a qualified Professional Engineer.
- D. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the NVLAP Program for Energy Efficient Lighting Products.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Authorities Having Jurisdiction, and marked for intended use.

- F. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel" and AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- G. Comply with IEEE C2, "National Electrical Safety Code."
- H. Comply with NFPA 70 National Electrical Code (NEC).

### 1.9 FIELD VERIFICATION

- A. All testing and computer analysis shall generate values based upon the grid size and number of target points referenced in Illumination per LM-5, the IESNA guide for photometric testing of area and sports lighting installations as indicated below:

AREA OF ILLUMINATION	GRID SIZE	MIN. NUMBER OF TEST POINTS
BASKETBALL	10' x 10'	60
HOCKEY	14' x 14'	84

- B. Playing Surface and Spectator Area Measurements:
  - 1. Horizontal footcandles (fc): The light meter shall be in a horizontal position 36" above the playing surface. The cell of the meter shall be self-leveling and mounted on a tri-pod.
  - 2. Vertical footcandles (fc) the light meter shall be in a vertical position 36" above the playing surface pointed toward each camera position indicated in the Performance Requirements Section above.
  - 3. These readings shall be taken with the Owner or their representative present.
- C. Evaluation Procedures
  - 1. All luminaires shall be operating and properly aimed.
  - 2. All lamps shall have been in operation for at least 100 hours prior to testing. If the lamps and/or luminaires have been in operation for more than 100 hours, the approximate operating hours shall be recorded.
  - 3. The system shall be operating for at least 30 minutes prior to testing to allow for lamp stabilization.
  - 4. Testing shall be done when the air and sky are clear and extraneous light is at a minimum.
  - 5. The test personnel shall take all possible precautions not to cast shadows or reflect light from items such as clothing, PPE, or measurement instruments.
  - 6. The test personnel shall use a light meter that has been calibrated within 12 months of the test. The light meter shall have been calibrated to the lamp type or light source being used.
  - 7. A variation between computer generated performance and field measured results is expected. Field measured results shall be within plus or minus 10% of the predicted computer generated results.
- D. Prior to Project completion, the manufacturer's representative shall provide a final report from the test results that shall provide the following items:
  - 1. Name of installation.
  - 2. Date and time of the test.
  - 3. Description of the lighting system. This shall include the number and types of luminaire for each location, the mounting heights, and lamp manufacture and type, and other pertinent details.
  - 4. Type, make, model, serial number, and copy of calibration certificate for the light meter used. Light meter must display to the 0.01.
  - 5. Identification of number and location of test grid.
  - 6. Actual horizontal and vertical footcandle readings taken at each test point.
  - 7. Average illumination levels.
  - 8. Maximum to minimum ratios.

9. Coefficient of Variation.
10. Uniformity Gradient.

### 1.10 COORDINATION

- A. Unless otherwise noted, perform all electrical work required for the proper installation and operation of equipment, furnishings, devices and systems specified in other Divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.

### 1.11 WARRANTY & MAINTENANCE SERVICE

- A. 10-Year Warranty: Each manufacturer shall supply a signed warranty which shall include all parts, labor and equipment necessary to maintain the system for 10 years and shall include: all lamp replacements; guaranteed minimum light levels; routine maintenance.
  1. Warranty may exclude fuses, impact damage, vandalism, abuse and unauthorized repairs or alterations.
- B. Special Warranty: Include a full service product assurance and warranty program providing trouble-free lighting equipment operation, including parts and labor as well as group lamp replacements as often as required during the term of the warranty to ensure minimum lighting design levels are maintained each season.
  1. Warranty Period for Light fixtures: Free from defects in materials and workmanship (excluding fuses and lamps) for a period of 10 years from date of Substantial Completion.
  2. Warranty Period for Lamps: Replace lamps and fuses that fail within the terms of the warranty agreement for a period of 10 years.
  3. Warranty Period for Mounting Supports: Repair or replace light support structures and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than 10 years from date of Substantial Completion.
- C. The fixture mountings shall be warranted (Limited Warranty) for a period of 10 years and warrants to the purchaser that all assembly(s) shall be free from defects in materials and workmanship from the date of shipment. A copy of the manufacturer's warranty shall be submitted to the Owner.
- D. Alignment Warranty: Accuracy of alignment of light fixtures shall remain within specified illuminance uniformity ratios for a period of 5 years from date of successful completion of acceptance tests. Realign fixtures that become misaligned during the warranty period. Replace alignment products that fail within the warranty period. Retest distribution to verify proper realignment.
- E. Preventative and Spot Maintenance: Manufacturer shall provide all preventative and spot maintenance, including parts and labor for 10 years from the date of equipment shipment. Per IES individual lamp outages shall be repaired when the outage causes the light on the field to drop below 10% of the maintained light levels or when a fixture outage, at Owner's discretion, materially impacts safety and/or playability of the field. Owner agrees to check fuses in the event of a luminaire outage.
- F. Services: Repair or replace components of luminaires, lamps, and drivers; align luminaires. Provide lifting equipment as required.

### 1.12 SPARES

- A. Furnish spare materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. LED Boards – For LED light fixtures with LED boards that are field replaceable by electricians or non-factory technicians, 10% of each type and optical distribution of LED boards installed. Furnish at least two of each type.

2. Light Fixtures – For LED light fixtures with LED boards that require factory technician replacement either at the factory or on-site, 10% of each light fixture type with different optical distributions installed. Furnish at least two of each type.
3. Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
4. Drivers: 5 for every 100 of each type and rating installed. Furnish at least two of each type.
5. Visors and Shields: 2 for every 100 of each type and rating installed. Furnish at least one of each type.

### 1.13 DELIVERY STORAGE AND HANDLING

- A. Storage and Protection: Comply with manufacturer's recommendations.
  1. Protect from elements and damage.
  2. Fixtures not to be installed until the roof is completed sufficiently to protect the equipment from moisture.

## PART 2 - PRODUCTS

### 2.1 ARENA LIGHTING SYSTEM REQUIREMENTS

- A. Base bid:
  1. LED luminaires, NCAA National Championship Broadcast NCAA National Broadcast light lighting standards.

### 2.2 MANUFACTURERS

- A. Manufacturers:
  1. Ephesus;
  2. Hubbell;
  3. Musco;
- B. Substitutions of comparable products must provide a complete submittal package as outlined in this section for Engineer review at least (10) days prior to bid.
  1. Acceptance of a substitution does not negate the Contractor and lighting manufacturer's responsibility to comply fully with the requirements of these specifications. Any exceptions to the specifications must be clearly stated in the prior approval submittal documents.

### 2.3 LUMINAIRES – LED GENERAL REQUIREMENTS

- A. Luminaires: Listed and labeled, by an NRTL acceptable to Authorities Having Jurisdiction, for compliance with UL 1598 for installation in wet locations.
  1. Doors, Frames, and Other Internal Access: Smooth operating, free from light leakage under operating conditions, and arranged to permit relamping without using tools. Arrange doors, frames, lenses, diffusers, and other pieces to prevent their accidental falling during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lens.
  2. Exposed Hardware: Stainless-steel latches, fasteners, and hinges.
  3. Spill-Light Control Devices: Internal lenses, internal louvers, or external baffles furnished by manufacturer and designed for secure attachment to specific luminaire.
  4. All luminaires shall be constructed with a die-cast aluminum housing to protect the luminaire system.
  5. Luminaires shall be bracket-mounted, full-cutoff type with remote or integral drivers.

- B. Luminaires shall be provided with aiming devices, degree scale and position locks. Luminaires shall be factory marked to correspond with proper pole, position on pole, and aiming angles.
- C. For safety, the entire system shall be NRTL Listed as a complete system.
- D. Metal Parts: Free of burrs and sharp corners and edges.
- E. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Formed and supported to prevent warping and sagging.
- F. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed light fixtures.
- G. Light Shields: Metal baffles, louvers, or lenses, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field. Provide as applicable per AHJ requirements.
- H. Gaskets for Lenses and Refractors: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in light fixture doors.
- I. Light Fixture Finish: Manufacturer's standard paint applied to factory-assembled and -tested light fixture before shipping. Where indicated, match finish process and color of pole or support materials.
  - 1. Factory-Applied Finish for Steel Light Fixtures: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
    - a. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
    - b. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
    - c. Color: As indicated on the Light Fixture Schedule.
  - 2. Factory-Applied Finish for Aluminum Light Fixtures: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
    - a. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
    - b. Color: Color as selected by the Architect from the Manufacturer's standard color options.
    - c. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
    - d. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
    - e. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
- J. LED Lamp Technology
  - 1. Minimum L70 of 100,000 hour lamp life, instant on/off and dimming capabilities.
  - 2. Color Temperature: Provide tunable white light color temperature.
  - 3. Color Rendering: 80 CRI minimum
  - 4. Maximum of 44,000 initial delivered fixture lumens to minimize glare potential.

5. Fixture Operating Temperature Range of -30 Degrees C to 55 Degrees C. Maximum Junction Temperature for the diodes of 80 Degrees C
6. Flicker of  $\leq 2\%$ .

## 2.4 ACCESSORIES

- A. All fixtures to be equipped with safety cables, unless otherwise indicated. Provide minimum 1/8-inch airplane cable unless otherwise indicated or required to be larger by the weight of the specific manufacturer's equipment.
- B. Custom Mounting Hardware: Manufacturer shall provide all design work, brackets, and hardware for mounting the lighting system to the facility's structural steel. Fixture mounting brackets must be customized to the structure to ensure a clean appearance and easy installation.
- C. Fixtures must have internal optic control to minimize glare in the seats and on the event floor. Fixtures must also have an external visor to minimize glare. Fixtures must include thermal management and come with a 10 year full coverage warranty.
- D. Secondary Wiring: Manufacturer shall supply all necessary wiring to connect the fixture to the driver enclosure. Wiring shall be protected with either a jacketed cord or conduit.
- E. Electronic Driver with an efficiency of 95% or greater. Maximum Starting inrush of 7 Amps at 25 degrees C.
- F. Electric Power Requirements for the Sports Lighting Equipment:
  1. Electric power: 277V
  2. Maximum total voltage drop: Voltage drop to the remote enclosure shall not exceed three (3) percent of the rated voltage.
- G. All fixtures shall be equipped with both horizontal and vertical degree aiming angle plates and adjustment locking devices, unless otherwise indicated. Details of plates with degree markings along with adjustment and locking devices shall be included with the shop drawings.

## 2.5 CONTROLS

- A. Control wiring shall be hardwired. Due to RF frequency interference and possible security concerns, wireless controls are not acceptable.
- B. For DMX controls, preference is for use of DMX over Ethernet cabling.

## 2.6 FABRICATION

- A. Shop/Factory Finish:
  1. Fixtures, wireways, ballast boxes, drivers, connector strip back boxes, and other miscellaneous equipment associated with the arena lighting system (that is installed on the rigging grid or in the ceiling of the arena) shall be powder-coat painted.
  2. All components shall be designed and manufactured as a system. All luminaires, wire harnesses, ballast, drivers and other enclosures shall be factory assembled, aimed, wired and tested.
  3. All system components shall be UL Listed for the appropriate application.

## 2.7 SOURCE QUALITY CONTROL

- A. Fixture Aiming:
  1. The fixtures are to be aimed by the Contractor in accordance with the manufacturers aiming charts.

2. The manufacturer is responsible for providing adequate on-site observation during the aiming process. Any labor required for adjusting or relocating the fixtures due to obstructions, or in order to meet the illumination level schedule criteria, shall be the responsibility of the Contractor. Aiming is to be done after the fixtures are installed but before the building is in operation for events.
3. After fixture aiming is complete, the manufacturer, using approved illuminance meter equipment, shall take the following readings to verify that all of the illuminance and uniformity levels have been met.
4. Following readings to verify that all of the illuminance and uniformity levels have been met.
  - a. Vertical (perpendicular to the television camera locations) and horizontal illuminance readings on the (BPPA) at 72 grid points on a 30'-0" by 30'-0" spacing.
  - b. Horizontal readings to be taken in the upper level seating area (ULSA) at the first row, middle of the seating area and last row of the seating area on 30 foot centers on at least one side.
  - c. All readings are to be recorded and verified by the Architect/Engineer for approval.
5. When readings are complete, fixture aiming should be adjusted, if necessary, to meet the design illuminance and uniformity levels. After final adjustments have been made and the design levels met, a slash mark, with a permanent pen of contrasting color, shall be made across the vertical and horizontal rotation adjustment plates.
6. Fixture aiming shall be checked and adjusted if required, by the lighting manufacturer factory Engineer, 3 months after the building is in operation.
7. Fixture illumination level readings shall not be taken until after 100 hours of operation, unless otherwise required by the lamp manufacturer.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Verify conditions of equipment and installation prior to beginning work.
- B. Verify that equipment is ready for connecting, wiring and energizing.

#### **3.2 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Complete installations for design of lighting systems for the field shall comply with requirements of the local Building Code and NEC.
- C. Use web fabric slings (not chain or cable) to raise and set support structures. Protect equipment during installation to prevent damage.
- D. Install lamps in each light fixture.
- E. Fasten light fixture to indicated structural supports.
- F. Adjust light fixtures that require field adjustment or aiming.
- G. Baffles and Louvers for Spill Light Correction: Install on lighting fixtures with fasteners provided by the manufacturer. Install and adjust to correct out-of-limit spill-light and glare measurements.
- H. Install remote drivers and other auxiliary devices as required by manufacturer.
  1. Install drivers and devices within maximum remote distances and with wiring sized per manufacturer's recommendations.
  2. Provide label on device indicating panelboard circuit number.
  3. Properly support remote lighting devices, including, but not limited to ballasts, power supplies, and drivers, per Code and manufacturer's recommendations.
  4. Install controls and remote driver housings in cabinets mounted to support structures.
  5. Provide cabinets and enclosures suitable for installation environment as required.

- I. For controllable light fixtures, provide both control and power wiring between light fixture and control device and between light fixtures. Quantity of low voltage and line voltage wiring and wire type shall be per manufacturer's recommendations. At a minimum, provide the following based on control type at either 120V or 277V, unless recommended otherwise by the manufacturer:
  1. 0-10V – two low voltage conductors and two line voltage conductors plus ground
  2. Proprietary digitally addressable – as required per the manufacturer
  3. DMX – two line voltage conductors plus ground and DMX cabling.

### 3.3 FIELD QUALITY CONTROL

- A. Testing: Perform tests, inspections, and analysis according to IESNA RP-6 and IESNA LM-5 where applicable.
- B. Tests and Inspections:
  1. After installing sports lighting system and after electrical circuits have been energized, perform proof-of-performance field measurements and analysis for compliance with requirements.
  2. Illumination Measurements: Upon substantial completion of the project and in the presence of the Contractor, Project Engineer, Owner's Representative, and Manufacturer's Representative, illumination measurements shall be taken and verified. The illumination measurements shall be conducted in accordance with IESNA RP-6-01, Appendix B.
    - a. Basketball: Measure at least 60 points on the court. Extend the grid 10 feet (3.0 m) outside the baselines and sidelines.
    - b. Hockey: Measure at least 84 points on the ice. Extend the grid 7 feet (2.25 m) outside the boards.
  3. Make field measurements at established test points in areas of concern for spill light and glare.
  4. Where sports lighting system is providing normal and emergency egress lighting for spectator areas measurements shall be taken and verified. Illumination measurements shall be conducted once under normal power conditions will all sports light fixtures on and again with only emergency sports light fixtures on. Measurements shall be conducted at the following locations:
    - a. Seating areas: Measure points in all seating areas illuminated by the sports lighting fixtures on a 20 foot by 20 foot grid. Measurements shall be taken at 36" above finished floor.
  5. Perform analysis to demonstrate correlation of field measurements with specified illumination quality and quantity values and corresponding computer-generated values that were submitted with engineered design documents. Submit a report of the analysis. For computer-generated values, use manufacturer's lamp lumens that are adjusted to lamp age at time of field testing.
- C. Prior to installation of the support structures, inspect each installed fixture for damage. Replace damaged fixtures and components.
- D. Adjust all light fixture sockets to match the lamp specified and aim all adjustable light fixtures as directed by the Architect.
- E. Upon completion of the installation of light fixtures, and after building circuits have been energized, apply electrical energy to demonstrate capability and compliance with the requirements. Where possible, correct malfunctioning units at the site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and proceed with retesting.
- F. Clean light fixtures of dirt and debris upon completion of the installation. Protect installed light fixtures from damage during the remainder of the construction period.

- G. At the time of Substantial Completion, aim all adjustable fixtures, such as flood and spot lights, per the Architect's direction. Provide all necessary equipment to support this effort, such as scaffolds and lifts, as required.
- H. At the time of Final Acceptance of this Project by the Owner, all lamps shall be in working order and all light fixtures shall be fully lamped.
- I. Illumination Observations: Verify normal operation of lighting units after installing light fixtures and energizing circuits with normal power source.
- J. Illumination Tests:
  - 1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards.
  - 2. Comply with the following IESNA testing guide(s): IESNA LM-5, "Photometric Measurements of Area and Sports Lighting."
- K. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.
- L. Sports lighting will be considered defective if it does not pass tests and inspections.
- M. Correction of Illumination Deficiencies: Make corrections to illumination quality or quantity, measured in field quality-control tests, that varies from specified illumination criteria by plus or minus 10 percent. If, in the opinion of the Owner or his appointed Representative, the actual performance levels including footcandles, uniformity ratios, and peak-demand kilowatt consumptions are not in conformance with the requirements of the performance specifications and submitted information, the Manufacturer and/or Contractor shall be liable to any or all of the following:
  - 1. Add or replace luminaires, change mounting height, revise aiming, or install louvers, shields, or baffles.
  - 2. If luminaires are added or mounting height is changed, revise aiming and recalculate and modify or replace support structures if indicated. Luminaire mounting heights shall not be adjusted without Engineer's approval.
  - 3. Do not replace luminaires with units of higher or lower wattage without Engineer's approval.
  - 4. Retest as specified above after repairs, adjustments, or replacements are made.
  - 5. Report results in writing.
  - 6. Contractor and/or manufacturer shall pay for additional trips made by Contractor, Project Engineer, Owner's Representative, and Manufacturer's Representative at no cost to the owner to re-measure illumination test after corrective measures have been performed.

### 3.4 AD USTING

- A. Two (2) site visits, one for initial adjusting during construction and installation of light fixtures and one for final adjustment and aiming of light fixtures after substantial completion, will be provided by the manufacturer.
- B. Manufacturer shall adjust and aim all adjustable light fixtures as required to achieve the submitted and specified lighting levels. Contractor shall make provisions for supplying all scaffolds, lifts, and other tools and equipment as required.
- C. Where required, adjusting shall be done during hours of darkness. Upon notification by Contractor that all fixtures are correct as per shop drawings and functioning, that specified lamps have been verified, lighting designer or Architect shall coordinate with Contractor as to a mutually agreed upon time to complete adjusting. Failure of Contractor to notify Architect during substantial completion will result in failure to comply with specifications.

**3.5 DEMONSTRATION**

- A. Manufacturer's authorized representative will be responsible to train Owner's maintenance personnel to adjust, operate, and maintain light fixtures. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 26 56 00 - EXTERIOR AREA LIGHTING****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes the following lighting equipment:
1. Exterior light fixtures with lamps and ballasts.
  2. Exterior LED light fixtures with LED modules and drivers.
  3. Poles and accessories.

**1.2 SUBMITTALS**

- A. General:
1. Only those light fixtures and manufacturers per each fixture type designated and listed in the Light Fixture Schedule or on the Drawings, and approved in accordance with paragraph 1.4-SUBSTITUTIONS of this Section, or both, will be accepted. Where the Light Fixture Schedule indicates an allowance to be made for a specific light fixture, the price is a contractor price and monies shall be allotted for freight, installation, and lamping (if designated). Alternate manufacturers presented at bid shall be disqualified.
  2. Submit all light fixtures, specified for use on this Project, in a single submittal package of portfolios, so that all light fixtures can be reviewed at one time.
- B. Prepare portfolios from manufacturer's standard specification sheets, and include the number indicated on the Light Fixture Schedule to identify each light fixture. Do not combine more than one light fixture type on a single sheet.
1. Fixture or other materials shall not be shipped, stored, or installed into the work without approval of shop drawings.
  2. Modifications to fixtures shall be in accordance with Architect's comments.
- C. Product Data: For each light fixture, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, finishes, and the following:
1. Summary page with the following for each light fixture type
    - a. The number, type and wattage of the light fixture lamps or LEDs (including, but not limited to, assemblies, arrays, bars or modules).
    - b. Light fixture ballast, driver or auxiliary device manufacturer, number and type.
  2. Fixture cut sheets with name of manufacturer and options to be provided marked, including, but not limited to, voltage, lensing, and finish/color.
    - a. Descriptive information providing physical characteristics of light fixture, including, but not limited to, materials, dimensions, effective projected area, fixture efficacy and/or efficiency, and verification of indicated parameters.
    - b. For LED fixtures, include also L70 lifetime and wattage of luminaire including driver/power supply losses.
      - 1) Include MacAdam ellipse step information for luminaires specified with 80 CRI or greater.
  3. Light fixture mounting details, including, but not limited to, non-standard outlet boxes.
  4. Construction of light fixture housing and door (if applicable).
  5. Ballast cut sheet with options marked, providing physical description of ballast including, but not limited to, voltage, lamp, ballast factor, power factor, amperage and wattage.
    - a. For dimming ballasts, also include dimming type technology and dimming range/limits.
  6. Power supply, transformer, and/or driver cut sheet with options marked, providing physical description of auxiliary device including, but not limited to, voltage, power factor, amperage, wattage, and maximum remote distance charts between device and light fixture.
    - a. For dimming LED, also include dimming type technology and dimming range/limits.

7. Lamp cut sheet with options marked, providing physical description of lamps, including, but not limited to, voltage, wattage, efficacy, CCT, CRI, lumens, and life expectancy.
    - a. For LED lamps, include also number of MacAdam ellipse steps and L70 lifetime.
  8. Details of attaching light fixtures and accessories.
  9. Details of installation and construction.
  10. Photometric data, in IESNA format, including LM-79 for LED luminaires, based on laboratory tests of each light fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the light fixture as applied in this Project.
    - a. Photometric data shall be certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
  11. For pole-mounted LED area lighting fixtures, IES-TM-21 LED luminaire lifetime and lumen maintenance projections.
  12. Materials, dimensions, and finishes of poles.
  13. Means of attaching light fixtures to supports, and indication that attachment is suitable for components involved.
  14. Anchor bolts for poles.
- D. Delegated-Design Submittals for Pole-Mounted Area Lighting: Submit the following documents, signed and sealed by a qualified professional engineer:
1. Structural analysis data and calculations used for pole selection and foundations.
    - a. Manufacturer Seismic Qualification Certification: Submit certification that lighting components and their mounting and anchorage provisions are designed to remain in place with out separation of any parts when subject to seismic forces defined in Division 26 Section "Vibration and Seismic and Seismic Controls for Electrical Systems" Include the following:
      - 2) Basis for Certification: Indicate whether withstand certifications are based on actual test of assembled components or calculation.
      - 3) Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
    - b. Manufacturer Wind-Load Strength Certification: Submit certification that selected total support system, including poles and equipment anchorage devices, complies with AASHTO LTS-4 or as required by the local authority having jurisdiction, whichever is more stringent, for location of project.
  2. Anchor-bolt templates keyed to specific poles and certified by manufacturer.
  3. Design calculations for the following:
    - a. Design calculations for determination of poured-in-place concrete foundation size and reinforcement
  4. Shop Drawings:Submittal Schedule
    - a. Within 30 days from Division 26 Contractor award, shop drawings covering all light fixtures within this section shall be forwarded to architect to begin approval process. Any shop drawings submitted after the required time frame will require the contractor to submit only the 1st named manufacturer and associated specification data listed on the fixture schedule as the only approved manufacturer. No substitutions will be allowed after the specified time frame.
    - b. Within 15 days of "approved" and "approved as noted" shop drawings, Contractor shall forward to Architect a guaranteed ship date for each specified fixture.
    - c. Within 15 days after Contractor's receipt of "reject and resubmit" or "not approved" shop drawings, Contractor shall provide Architect with resubmitted shop drawings for only those fixtures deemed unacceptable.
    - d. Contractor is responsible to call to the attention of the Architect any submittals that have not been returned to him in a timely manner that may affect delivery of fixtures or as otherwise affecting Section 1.4.D of this specification.
  5. Show details of non-standard or custom light fixtures. Indicate dimensions, finish color, including, but not limited to, custom color, weights, methods of field assembly, components,

- features, accessories, and modifications. Scaled documents shall be provided for custom fixtures.
6. Anchor-bolt templates keyed to specific poles and certified by manufacturer.
  7. Wiring Diagrams: Power and control wiring.
- E. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4 or as noted elsewhere in this specification and that loads imposed by light fixtures and attachments have been included in design. This certification shall be based on design calculations by a professional engineer.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For light fixtures and poles to include in operation and maintenance manuals.
- H. Warranty: Special warranties specified in this Section.

### 1.3 SUBSTITUTIONS

- A. Refer to Division 26 Section "General Electrical Requirements".
- B. Prior to the Bid Date, substitutions will not be considered unless the Architect/Engineer have received written request for approval at least ten calendar days prior to the date for receipt of Bids. Include in each such request the Light Fixture Schedule designation, name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including cut sheets, photometric data, and all other information necessary for an evaluation. Provide interior point-by-point calculations if required by the Engineer. Submit a 100.00 review fee to the Engineer with each such point-by-point calculation for use of electronic base files. The fee will be returned if the substitution is added to the specification.
- C. During the Bid
1. Any proprietary, sole-sourced light fixture listed in the fixture schedule shall be unit priced only. Unit prices shall be clearly identified on the bid form.
  2. Representative agents shall be allowed to offer mini-lot pricing (MLP). MLP shall be defined as:
    - a. Agents can group only specified fixtures they represent, and
    - b. Only represent in the region where the specification originated, and
    - c. Exclude all fixtures outside their represented lines from the MLP, and
    - d. Sole-sourced (proprietary) light fixtures shall not be included in the MLP.
  3. Packaging of light fixtures will not be considered nor approved. Packaging is defined as: distributor(s) providing a single price for a light fixture package made up of specified and non-specified light fixtures. Any submittal package containing non-specified light fixtures or inclusion of lighting control systems will be immediately rejected in its entirety.
- D. After the Bid Date, proposals to substitute light fixtures for those shown on the Drawings or specified herein, will only be considered as a deduct. Submit proposed substitutions separately, in Submittal form, with a list of proposed substitutions together with a deduct price for each substitution. Proposed substitutions will then be reviewed by the Architect/Engineer.
- E. The Architect/Engineer have the final authority as to whether the light fixture is an acceptable replacement to the specified item. The proposed substitution may also be rejected for aesthetic reasons if felt necessary or desirable. In the event the proposed substitutions herein described are rejected, provide the specified item(s).

### 1.4 DEFINITIONS

- A. BF: Ballast factor.
- B. CCT: Correlated color temperature

- C. CFL: Compact Fluorescent
- D. CRI: Color-rendering index.
- E. CU: Coefficient of utilization.
- F. Delegated-Design Submittals: Documents, including, but not limited to, drawings, calculations, and material and product specifications prepared as a responsibility of Contractor to obtain acceptance by Owner and authorities having jurisdiction.
- G. EISA: Energy Independence and Security Act of 2007.
- H. HID: High-intensity discharge.
- I. L70: minimum 70% maintained initial-rated lumens at average rated life for LEDs
- J. LED: Light Emitting Diode
- K. LED Lamp: Replaceable LED light source with an integral driver within envelope of lamp. Lamp/Base types may include MR16/bi-pin, PAR/medium base, etc.
- L. LED Module: Light source that contains LEDs, and may include additional components such as lenses, reflectors, or refractors, however do not include drivers.
- M. LER: Light fixture efficacy rating.
- N. Light fixture: Complete light fixture, including ballast housing if provided.
- O. LLD: Lamp Lumen Depreciation.
- P. LLF: Light Loss Factor.
- Q. Luminaire: Complete lighting fixture, including ballast housing if provided.
- R. Pole: Light fixture support structure, including tower used for large area illumination.
- S. Standard: Same definition as "Pole" above.

### **1.5 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION**

- A. Dead Load: Weight of light fixture and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in latest AASHTO LTS-4.
- B. Live Load: Single load of 500 lbf, distributed as stated in latest AASHTO LTS-4.
- C. Ice Load: As stated in latest AASHTO LTS-4 or as required by the local authority having jurisdiction, whichever is more stringent.
- D. Wind Load: As stated in latest AASHTO LTS-4 or as required by the local authority having jurisdiction, whichever is more stringent.

### **1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this project.
- B. Light Fixture Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with IEEE C2, "National Electrical Safety Code."
- E. Comply with NFPA 70.

**1.7 COORDINATION**

- A. Unless otherwise noted, perform all electrical Work required for the proper installation and operation of equipment, furnishings, devices and systems specified in other Divisions of these Specifications, furnished under other contracts, and/or furnished by the Owner for installation under this Contract.
- B. Coordinate layout and installation of light fixtures, poles, foundations, and underground raceway system with other above- and below-grade site construction and utilities. Notify Architect/Engineer of conflicts before proceeding with the Work.

**1.8 WARRANTY**

- A. General Guarantee: For a period of one year after Owner's initial acceptance and establishment of the beginning date of the guarantee period, and at no cost to the Owner, Contractor shall promptly furnish and install replacements for any fixtures or components deemed by the Owner as defective in workmanship under normal operating conditions, excluding lamp replacement as noted in Section 1.12.A.1. Contractor shall repair installed equipment on the job site to Owner's satisfaction. For any time during said guarantee period that fixtures are not fully functional due to defects in material or workmanship, Contractor shall provide or pay for suitable temporary light fixtures, and shall remove said temporary fixtures upon installation of replacement elements. Contractor shall furthermore guarantee replacement fixtures for a period of one year following replacement.
- B. Contractor shall not be held responsible for damage of fixtures or equipment components occurring after the beginning of the guarantee period due to acts of vandalism, acts of war, or acts of God.
- C. LED Warranties: Shall be free from defects in materials and workmanship for the period indicated from date of factory shipment.
  - 1. LED Luminaires, including LED modules, arrays and drivers: Five years.
  - 2. LED Lamps: Three years.

**1.9 DELIVERY STORAGE AND HANDLING**

- A. Package aluminum poles for shipping according to ASTM B 660.
- B. Store poles on decay-resistant-treated skids at least 12 inches above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- C. Retain factory-applied pole wrappings on metal poles until right before pole installation.
- D. Handle all poles with web fabric straps.

**1.10 SPARES**

- A. Furnish spare materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
  - 2. Glass and Plastic Lenses, Covers, and Other Optical Parts: 5 for every 100 of each type and rating installed. Furnish at least one of each type.
  - 3. Ballasts and/or Drivers: 2 for every 100 of each type and rating installed. Furnish at least one of each type.
  - 4. Globes and Guards: 2 for every 20 of each type and rating installed. Furnish at least one of each type.
  - 5. Fuses: 10 for every 100 of each type and rating installed.

**PART 2 - PRODUCTS AND MATERIALS****2.1 MANUFACTURERS**

- A. In Light Fixture Schedule, the following requirements apply to product selection:
  - 1. Basis-of-Design Product: The design for each light fixture is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified that meets or exceeds performance characteristics of the named product.

**2.2 LIGHT FIXTURES GENERAL REQUIREMENTS**

- A. Light fixture models scheduled on the Drawings are to show the manufacturer, grade and style of light fixtures required. Regardless of the manufacturer's catalog number suffixes indicated, provide all options and features as described in the Light Fixture Schedule.
- B. Light fixtures shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
- C. Comply with IES RP-8 for parameters of lateral light distribution patterns indicated for light fixtures.
- D. Comply with IES BUG ratings where indicated on the Light Fixture Schedule.
- E. Metal Parts: Free of burrs and sharp corners and edges.
- F. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Form and support to prevent warping and sagging.
- G. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed light fixtures.
- H. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.
- I. Exposed Hardware Material: Stainless steel for latches, fasteners, and hinges.
- J. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
- K. Light Shields: Metal baffles or louvers, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.
- L. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
  - 1. White Surfaces: 85 percent.
  - 2. Specular Surfaces: 83 percent.
  - 3. Diffusing Specular Surfaces: 75 percent.
- M. Gaskets for Lenses and Refractors: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in light fixture doors.
- N. Where located within structural concrete, light fixture housing and any other luminaire components in direct contact with concrete shall be effectively coated and/or covered to prevent chemical reactions with the concrete in accordance with the American Concrete Institute Code.
- O. Factory-Applied Finish for Steel Light Fixtures: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
  - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds

- and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
    - a. Color: As indicated on the Light Fixture Schedule.
- P. Factory-Applied Finish for Aluminum Light Fixtures: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
  2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
  3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
  4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
    - a. Color: As indicated on the Light Fixture Schedule.
- Q. Luminaires supplied with 150W to 500W metal halide lamps and ballasts shall contain a capital E printed in a circled on the ballast label and the fixture packaging per EISA requirements.
- R. Factory-Applied Labels: Comply with UL 1598. Include recommended lamps, LEDs, ballasts and/or drivers. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
1. Label shall include the following lamp, LEDs, ballast and/or driver characteristics:
    - a. "USES ONLY" and include specific lamp or LED type.
    - b. Lamp diameter code (T-4, T-5, T-8), tube configuration (twin, quad, triple), base type, and nominal wattage for fluorescent and compact fluorescent luminaires.
    - c. Lamp type, wattage, bulb type (ED17, BD56, etc.) and coating (clear or coated) for HID luminaires.
    - d. LED type, wattage, beam angle (if applicable) for LED luminaires. Include maximum allowed wattage.
    - e. Start type (preheat, rapid start, instant start) for fluorescent and compact fluorescent luminaires.
    - f. ANSI ballast type (M98, M57, etc.) for HID luminaires.
    - g. For LED luminaires, includes CCT and CRI.

### 2.3 DRIVERS FOR LED LUMINAIRES

- A. Description: Designed for type and quantity of LED diodes of light fixture. Drivers shall tolerate sustained open circuit and short circuit output conditions without damage. Driver shall be designed for full light output unless dimmer or bi-level control is indicated:
1. Sound Rating: A.
  2. Total Harmonic Distortion Rating: Less than 20 percent. Shall comply with ANSI C82.77.
  3. Transient Voltage Protection: IEEE C62.41, Category A or better.
  4. Power Factor: 0.90 or higher at full load.
  5. Driver shall operate with maximum sustained variations of  $\pm 10\%$  input voltage and frequency with no damage to driver.
  6. Driver output shall be regulated to  $\pm 5\%$  published load range.
  7. LED Current Crest Factor: 1.5 or less.
  8. LED drivers shall not over-drive LEDs at a current or voltage above LED rated values in order to increase LED lumen output.

9. Meets EN61000 for input harmonics.
10. ROHS Compliant.
11. Suitable for use in outdoor light fixtures.
12. Dimming Drivers
  - a. Dimming Range: Visually flicker-free, strobe-free, continuous dimming of source as follows, unless specifically noted otherwise in the Light Fixture Schedule whichever is more stringent:
    - 4) Luminaires: 100 to 10 percent of rated lumens.
    - 5) LED Lamps: 100 to 20 percent of rated lumens.
  - b. 0-10V dimming drivers: Compliant with IEC 60929 standard for 4-wire dimming.
  - c. Compatibility: Certified by the manufacturer for use with specific dimming control system and LED indicated.
  - d. Control: Coordinate to ensure that the dimming driver, power supply, controller, dimming module, and/or wallbox dimmer and connecting wiring are compatible.

## 2.4 LED LAMPS AND LUMINAIRES

- A. Comply with ANSI C78.377 for white light LED color range. Unless noted otherwise in the Light Fixture Schedule, LED color quality characteristics shall be 70 CRI minimum and 4000K CCT. Additionally, color-important light fixtures, as indicated with 80 CRI or better the Light Fixture Schedule shall be 80 CRI minimum and 4000K CCT. All LEDs used for same fixture type throughout the project to originate from same production bin.
- B. Unless indicated otherwise in the Light Fixture Schedule, minimum 70% of maintained initial-rated lumens at the average rated life as follows:
  1. LED outdoor pole mounted area lights: 100,000 hours
  2. LED lamps: 20,000 hours
  3. Other LED luminaires: 50,000 hours
- C. ROHS compliant
- D. Manufacturer of LED chips will be evaluated based on the manufacturer's product literature and data. At a minimum, LED fixtures or lamps will incorporate Bridgelux, Nichia, Cree, Xicato or Osram LEDs; additional manufacturers may be considered however the Architect or Engineer has the authority to reject other manufacturers for technical or aesthetic reasons if felt necessary or desirable.

## 2.5 AUXILIARY DEVICES FOR LOW VOLTAGE AND LED FIXTURES

- A. Provide remote power supplies, drivers and/or transformers for light fixtures as required for a complete and operational system.

## 2.6 POLES AND SUPPORT COMPONENTS GENERAL REQUIREMENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4.
  1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in Part 1 "Structural Analysis Criteria for Pole Selection" Article.
  2. Strength Analysis: For each pole, multiply the actual equivalent projected area of light fixtures and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.
- B. Light Fixture Attachment Provisions: Comply with light fixture manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts, unless otherwise indicated.
- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
  1. Materials: Shall not cause galvanic action at contact points.

2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication, complying with ASTM A 123/A 123M or ASTM A 153/A 153M unless stainless-steel items are indicated.
  3. Anchor-Bolt Template: Plywood or steel.
- D. Concrete Pole Foundations: Cast in place, 3000-psi (28-day minimum compressive strength, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."

## 2.7 STEEL POLES

- A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig; 1-piece construction up to 40 feet in height with access handhole in pole wall.
1. Shape: As indicated in the Light Fixture Schedule.
  2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Steel Mast Arms: As indicated in the Light Fixture Schedule type, continuously welded to pole attachment plate. Material and finish same as pole.
- C. Brackets for Light Fixtures: Detachable, cantilever, without underbrace.
1. Adapter fitting welded to pole and bracket, then bolted together with galvanized-steel bolts.
  2. Cross Section: Tapered oval, with straight tubular end section to accommodate light fixture.
  3. Match pole material and finish.
- D. Pole-Top Tenons: Fabricated to support light fixture or light fixtures and brackets indicated, and securely fastened to pole top.
- E. Vibration Dampeners: Factory furnish for poles over 20' high.
- F. Steps: Fixed steel, with nonslip treads, positioned for 15-inch vertical spacing, alternating on opposite sides of pole; first step at elevation 10 feet above finished grade.
- G. Intermediate Handhole and Cable Support: Weathertight, 3-by-5-inch handhole located at midpoint of pole with cover for access to internal welded attachment lug for electric cable support grip.
- H. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- I. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.
- J. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
  2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
  3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
    - a. Color: As indicated in the Light Fixture Schedule.

**2.8 ALUMINUM POLES**

- A. Poles: Seamless, extruded structural tube complying with ASTM B 429, Alloy 6063-T6 with access handhole in pole wall.
- B. Poles: ASTM B 209, 5052-H34 marine sheet alloy with access handhole in pole wall.
  - 1. Shape: As indicated in the Light Fixture Schedule.
  - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- C. Pole-Top Tenons: Fabricated to support light fixture or light fixtures and brackets indicated, and securely fastened to pole top.
- D. Vibration Dampeners: Factory furnish for poles over 20' high.
- E. Grounding and Bonding Lugs: Welded 1/2-inch threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- F. Brackets for Light fixtures: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
  - 1. Tapered oval cross section, with straight tubular end section to accommodate light fixture.
  - 2. Finish: Same as pole.
- G. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- H. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
  - 1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
  - 2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
  - 3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
  - 4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
    - a. Color: As indicated in the Light Fixture Schedule.

**PART 3 - EXECUTION****3.1 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.

**3.2 EXAMINATION**

- A. Verify conditions of equipment and installation prior to beginning work.
- B. Verify that equipment is ready for connecting, wiring, and energizing.

**3.3 LIGHT FIXTURE INSTALLATION**

- A. Install lamps in each light fixture.
- B. Fasten light fixture to indicated structural supports.
  - 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.

- C. Adjust light fixtures that require field adjustment or aiming.
- D. Baffles and Louvers for Spill Light Correction: Install on lighting fixtures with fasteners provided by the manufacturer. Install and adjust to correct out-of-limit spill-light measurements.
- E. Auxiliary devices for low voltage and LED fixtures installation
  1. Install device within maximum remote distances and with wiring sized per manufacturer's recommendations.
  2. In public areas or other areas where remote device visibility is undesirable, install device where concealed from view, well-ventilated and accessible. Provide access panels as required.
  3. Provide label on device indicating fixture type and location/room served along with panelboard circuit number.
  4. Properly support remote lighting devices, including, but not limited to, transformers, power supplies, and drivers, per Code and manufacturer's recommendations.
  5. Provide enclosures suitable for installation environment as required.

### 3.4 DIMMING

- A. For dimmable light fixtures, provide both control and power wiring between light fixture and control device and between light fixtures. Quantity of low voltage and line voltage wiring and wire type shall be per manufacturer's recommendations. At a minimum, provide the following based on control type at either 120V or 277V, unless recommended otherwise by the manufacturer:
  1. 0-10V – two low voltage conductors and two line voltage conductors plus ground
  2. 2-Wire dimming – two line voltage conductors plus ground
  3. 3-Wire dimming – three line voltage conductors (1 for control and two for power) plus ground
  4. DALI – two low voltage conductors and two line voltage conductors plus ground
  5. Proprietary digitally addressable – as required per the manufacturer
  6. DMX – two line voltage conductors plus ground and DMX cabling
- B. Coordinate light fixture and control device dimming types for compatibility.

### 3.5 POLE INSTALLATION

- A. Align pole foundations and poles for optimum directional alignment of light fixtures and their mounting provisions on the pole. Install poles and other structural units level, plumb, and square.
- B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features, unless otherwise indicated on Drawings:
  1. Fire Hydrants and Storm Drainage Piping: 60 inches.
  2. Water, Gas, Electric, Communication, and Sewer Lines: 10 feet .
  3. Trees: 15 .
- C. Concrete Pole Foundations: Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- D. Foundation-Mounted Poles: Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
  1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
  2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space. Grout materials, installation, and finishing requirements are specified in Division 05 Section "Metal Fabrications".
  3. Install base covers, unless otherwise indicated.
  4. Use a short piece of 1/2-inch- diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.

- E. Poles and Pole Foundations Set in Concrete Paved Areas: Install poles with minimum of 6-inch-wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with pea gravel to a level 1 inch below top of concrete slab.
  - 1. Install protective pipe bollards on two sides of each embedded pole installed in paved areas. Refer to Division 05 "Metal Fabrications" for pipe bollards.
- F. Raise and set poles using web fabric slings (not chain or cable).

### **3.6 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LIGHT FIXTURES**

- A. Install on concrete base with top 4 inches above finished grade or surface at light fixture location. Cast conduit into base, and finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

### **3.7 CORROSION PREVENTION**

- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Division 26 Section "Raceways and Boxes for Electrical Systems", including use of coated conduits in concrete foundations.

### **3.8 GROUNDING**

- A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
  - 1. Install grounding electrode for each pole, unless otherwise indicated.
  - 2. Install grounding conductor pigtail in the base for connecting light fixture to grounding system.
- B. Ground nonmetallic poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
  - 1. Install grounding electrode for each pole.
  - 2. Install grounding conductor and conductor protector.
  - 3. Ground metallic components of pole accessories and foundations.

### **3.9 FIELD QUALITY CONTROL**

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Adjust all light fixture sockets to match the lamp specified and aim all adjustable light fixtures as directed by the Architect.
- C. Upon completion of the installation of light fixtures, and after building circuits have been energized, apply electrical energy to demonstrate capability and compliance with the requirements. Where possible, correct malfunctioning units at the site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and proceed with retesting.
- D. Clean light fixtures of dirt and debris upon completion of the installation. Protect installed light fixtures from damage during the remainder of the construction period.
- E. At the time of Substantial Completion, aim all adjustable fixtures, such as flood and spot lights, per the Architect's direction. Provide all necessary equipment to support this effort, such as scaffolds and lifts, as required.
- F. At the time of Final Acceptance of this Project by the Owner, all lamps shall be in working order and all light fixtures shall be fully lamped.

- G. Illumination Observations: Verify normal operation of lighting units after installing light fixtures and energizing circuits with normal power source.
  - 1. Verify operation of photoelectric controls.

### **3.10 CORRECTION OF DEFICIENCIES**

- A. Correction of Illumination Deficiencies: Make corrections to illumination quality or quantity measured in field quality-control tests that vary from specified illumination criteria by plus or minus 10 percent or more; add or replace lighting fixtures, or change mounting height, revise aiming, or install louvers, shields, or baffles. If lighting fixtures are added or mounting height is changed, revise aiming and recalculate and modify or replace support structures, if indicated. Retest as specified above after repairs, adjustments, or replacements are made. Report results in writing.
- B. Correction of Excessive Illumination in Spill-Light-critical Areas: If measurements indicate that specified limits for spill light are exceeded, make corrections to illumination quantity measured in field quality-control tests that reduce levels to within specified maximum values. Replace lighting fixtures, or change mounting heights, revise aiming, or install louvers, shields, or baffles. Obtain Architect's approval to replace luminaires with units of higher or lower wattage. If mounting height is changed, revise aiming and recalculate and modify or replace support structures, if indicated. Retest as specified above after repairs, adjustments, or replacements are made. Report results in writing.
- C. Exterior athletic lighting will be considered defective if it does not pass tests and inspections.

### **3.11 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain light fixtures. Refer to Division 01 Section "Demonstration and Training."

#### 1.4 DEFINITIONS

- A. Indicated: Refers to graphic representations, notes or schedules on the Drawings, or other Paragraphs or Schedules in Specifications, and similar requirements in Contract Documents. Where terms such as "shown", "noted", "scheduled", and "specified" are used, it is to help locate the reference; no limitation on location is intended except as specifically noted.
- B. Directed: Terms such as "directed", "requested", "authorized", "selected", "approved", "required", and "permitted" mean "directed by the Architect", "requested by the Architect", and similar phrases. However, no implied meaning shall be interpreted to extend the Architect's responsibility into the Contractor's area of construction supervision.
- C. Approve: The term "approved", where used in conjunction with the Architect's action on the contractor's applications and requests, is limited to the duties and responsibilities of the Architect as stated in General and Supplementary Conditions. Such approval shall not release the Contractor from responsibility to fulfill Contract requirements unless otherwise provided in the Contract Documents.
- D. Regulation: The term "Regulations" includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work, whether lawfully imposed by authorities having jurisdiction or not.
- E. Furnish: The term "furnish" is used to mean "supply and deliver to the Project site, ready for unloading, unpacking, assembly, installation, and similar operations."
- F. Install: The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations."
- G. Provide: The term "provide" means "to furnish and install, complete and ready for the intended use."
- H. Installer: An "Installer" is the Contractor engaged by the Contractor, either as an employee, subcontractor, or sub-subcontractor for performance of a particular construction activity, including installation, erection, application, and similar operations. Installers are required to be experienced in the operations they are engaged in performing.
- I. Project Site: Is the space available to the Contractor for performance of construction activities, either exclusively or in conjunction with others performing other construction activities as part of the Project. The extent of the Project Site is shown in the Drawings and may or may not be identical with the description of the land upon which the Project is to be built.
- J. Testing Laboratories: A "testing laboratory" is an independent entity engaged to perform specific inspections or tests, either at the Project Site or elsewhere, and to report on and, if required, to interpret results of those inspections or tests.

**1.5 SUBMITTALS**

- A. Product Data: For sleeve seals.
- B. Material Safety Data Sheets: For all hazardous materials.

**1.6 COORDINATION**

- A. Coordinate arrangement, mounting, and support of communications equipment:
  - 1. To allow maximum headroom unless specific mounting heights that reduce headroom are indicated.
  - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
  - 3. To allow right of way for piping and conduit installed at required slope.
  - 4. So, connecting pathways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are being constructed.
- C. Coordinate location of access panels and doors for communications items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."
- D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping."

**1.7 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. The system shall be registered under the most current applicable rulings of the Federal Communications Commission (FCC). Provide the FCC registration number with the equipment submittal. All components and installations should bear an Underwriters' Laboratories (UL) listing.
  - 2. Ordinances and Codes: Perform all work in accordance with applicable Federal, State, and local ordinances and regulations and in accordance with the Rules, Regulations and Accepted Practices of the following Agencies:
    - a. ANSI American National Standards Institute
    - b. ASTM American Society for Testing and Materials
    - c. BICSI Building Industry Consulting Service International
    - d. EIA Electronics Industries Association
    - e. FCC Federal Communications Commission
    - f. ICEA Insulated Cable Engineers Association
    - g. IEEE Institute of Electrical and Electronics Engineers
    - h. ISO International Organization for Standardization
    - i. NEC National Electrical Code
    - j. NEMA National Electrical Manufacturer's Association
    - k. NFPA National Fire Protection Association.
    - l. NECA National Electrical Contractors Association
    - m. TIA Telecommunications Industry Association
    - n. UL Underwriters Laboratories, Inc.

- o. VESA Video Electronics Standards Association
  - 3. Notify the Engineer/Communications Designer before submitting this proposal should any changes in Drawings or Specifications be required to conform to the above codes, rules, or regulations. After entering into Contract, make all changes required to conform to above ordinances, rules, and regulations without additional expense to the Owner.
  - 4. The code or standard establishing the more stringent requirement shall be followed where areas of conflict occur between codes and standards or between codes and standards and specifications.
  - 5. Barrier-Free Regulations: All materials and installations shall comply with the requirements of the Handicapped Barrier-Free Regulations and with the Americans With Disabilities Act (ADA).
  - 6. Comply with federal, state, and local labor regulations and applicable union regulations.
- B. Equipment Manufacturer Qualifications: The equipment shall be built and tested by a manufacturer who has regularly engaged in the production of said equipment for a minimum of five (5) years to assure one source of supply and responsibility.
- C. Equipment Supplier Qualifications: The supplier of the equipment shall maintain permanent service facilities within the area of the installation. The facilities shall include a permanent source of factory-trained service technicians on 24-hour call experienced in servicing this type of equipment and shall provide warranty and routine maintenance service to afford the Owner maximum coverage. He shall also provide a central source of support to warranty immediate answers to Owner's problems resulting from misunderstanding of the operation of the equipment.
- D. Equipment Installer Qualifications: Fully qualified personnel shall perform the installation of the equipment, having had experience on the installation of this type and able to certify that they have had no less than five (5) years of continuous experience in this area and have made installation similar to this and of this size or larger.
- E. Project Management Qualifications: The Contractor Project Manager shall have a minimum of five (5) years of project management experience. Upon request, the contractor will provide a resume for all staff assigned to these positions.
- F. Field Measurements:
- 1. Drawings are not intended to be scaled for roughing-in or to serve as shop drawings. Take all field measurements required for fitting the installation to the building.
- G. Parts listed shall be complete, accurate part/model numbers and equipment furnished shall conform to manufacturer's specifications.
- H. All materials shall be new and shall conform to applicable provisions of Underwriters Laboratories and the American Standards Association.

## 1.8 DELIVERY, STORAGE AND HANDLING

- A. Store Communications equipment, at the vendor's location, as recommended in manufacturer's written instructions and in manufacturer's sealed protective packages until time of installation.
- B. If spare parts are specified, store spare parts at the vendor's location, as recommended in manufacturer's written instructions and in manufacturer's sealed protective packages. Deliver spare parts as part of the project close-out procedure.
- C. Protect Communications equipment from damage and theft.

**1.9 WARRANTY**

- A. Warranty: Refer to Communications sections for specific warranty requirements.

**1.10 OCCUPATIONAL HEALTH AND SAFETY**

- A. Comply with 29 CFR 1910.1200 "Hazard Communication"
  - 1. Ensure that the hazards of all chemicals used, stored, produced, or imported are evaluated, and that information concerning their hazards is transmitted to employees by means of comprehensive hazard communication programs, which shall include:
    - a. Container labeling and other forms of warning.
    - b. Material safety data sheets.
    - c. Employee training.

**PART 2 - PRODUCTS****2.1 SAFETY DATA SHEETS (SDS) FORMERLY (MSDS) MATERIAL SAFETY DATA SHEETS**

- A. Provide and ensure that SDS for all hazardous materials are readily accessible during each work shift to employees when they are in their work area.
- B. Provide copies of all SDS to other trades, contractors, general contractor, construction managers and owners as required.

**2.2 LEED® CERTIFIED COMMUNICATIONS PRODUCTS**

- A. Where practical, provide products that are LEED® certified for certification credits. Examples include material with recycled content, Energy Star® compliant and material produced within 500 miles of the jobsite and CFC Free Communications cables.

**2.3 SLEEVES FOR PATHWAYS AND CABLES**

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, reamed and bushed ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water stop, unless otherwise indicated.
- C. Sleeves for Rectangular Openings: Galvanized sheet steel.
  - 1. Minimum Metal Thickness:
    - a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and no side more than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
    - b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches (1270 mm) and 1 or more sides equal to, or more than, 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

**2.4 SLEEVE SEALS**

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.
1. Manufacturers: Subject to compliance with requirements.
  2. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of pathway or cable.
  3. Pressure Plates: Plastic, Carbon steel or Stainless steel. Include two for each sealing element.
  4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

**2.5 GROUT**

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

**PART 3 - EXECUTION****3.1 COMMON REQUIREMENTS FOR COMMUNICATIONS INSTALLATION**

- A. Comply with NECA 1. (Install in a "Neat and Workmanlike Manner" NFPA70 section 110.12)
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange, and install components and equipment to provide maximum headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- E. Right of Way: To Life Safety systems or piping installed at a required slope.

**3.2 SLEEVE INSTALLATION FOR COMMUNICATIONS PENETRATIONS**

- A. Communications penetrations occur when pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting with bushings on both surfaces of walls.
- F. Extend sleeves installed in floors 3 inches (75 mm) above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pathway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry.
  - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
- K. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using **cast-iron** pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.

### 3.3 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install them in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

### 3.4 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for communications installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

**END OF SECTION 270500**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 270526****GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Grounding conductors.
  - 2. Grounding connectors.
  - 3. Grounding busbars.
  - 4. Grounding labeling.

**1.3 DEFINITIONS**

- A. BCT: Bonding conductor for telecommunications. AKA: TBC (Telecommunications Bonding Conductor)
- B. TGB: Telecommunications grounding busbar. AKA: SBB (Secondary Bonding Busbar)
- C. TMGB: Telecommunications main grounding busbar. AKA: PBB (Primary Bonding Busbar)
- D. Service Provider: The operator of a service that provides telecommunications transmission delivered over access provider facilities.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For communications equipment room signal reference grid. Include plans, elevations, sections, details, and attachments to other work.

**1.5 INFORMATIONAL SUBMITTALS**

- A. As-Built Data: Plans showing as-built locations of grounding and bonding infrastructure, including the following: and routing of their bonding conductors.
- B. Qualification Data: For Installer, installation supervisor, and field inspector.
- C. Qualification Data: For testing agency and testing agency's field supervisor.
- D. Field quality-control reports.

**1.6 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For grounding to include in emergency, operation, and maintenance manuals.
  - 1. In addition to items specified in Section 01 "Operation and Maintenance Data," include the following:
    - a. The result of the ground-resistance test measured at the point of BCT connection.
    - b. Result of the bonding-resistance test at each SBB and its nearest grounding electrode.

**1.7 QUALITY ASSURANCE**

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
  - 1. Installation Supervision: Installation shall be under the direct supervision of ITS Technician Level 2 Installer, who shall be present at all times when Work of this Section is performed at Project site.
  - 2. Field Inspector: Currently registered by BICSI as a designer RCDD to perform the on-site inspection.

**PART 2 - PRODUCTS****2.1 SYSTEM DESCRIPTION**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with UL 467 for grounding and bonding materials and equipment.
- C. Comply with TIA-607.

**2.2 CONDUCTORS**

- A. Comply with UL 486A-486B.
- B. Insulated Conductors: Stranded copper wire, green or green with yellow stripe insulation, insulated for 600 V, and complying with UL 83.
  - 1. Ground wire for custom-length equipment ground jumpers shall be No. 6 AWG, 19-strand, UL-listed, Type THHN wire.
  - 2. Cable Tray Equipment Grounding Wire: No. 6 AWG.
- C. Cable Tray Grounding Jumper:
  - 1. Not smaller than No. 6 AWG and not longer than 12 inches (300 mm). If jumper is a wire, it shall have a crimped grounding lug with two holes and long barrel for two crimps.
  - 2. If jumper is a flexible braid, it shall have a 2 Hole Irreversible lug. Attach with grounding screw or connector as specified by cable tray manufacturer.

## 2.3 CONNECTORS

- A. Irreversible connectors listed for the purpose. Listed by an NRTL as complying with NFPA 70 for specific types, sizes, and combinations of conductors and other items connected. Comply with UL 486A-486B.
- B. Compression Wire Connectors: Crimp-and-compress connectors that bond to the conductor when the connector is compressed around the conductor. Comply with UL 467.
  - 1. Electroplated tinned copper, C and H shaped.
- C. Signal Reference Grid Connectors: Combination of compression wire connectors, access floor grounding clamps, bronze U-bolt grounding clamps, and copper split-bolt connectors, designed for the purpose.
- D. Busbar Connectors: Cast silicon bronze, solderless compression or exothermic-type, mechanical connector; with a long barrel and two holes spaced on 5/8- or 1-inch (15.8- or 25.4-mm) centers for a two-bolt connection to the busbar.
- E. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

## 2.4 GROUNDING BUSBARS

- A. PBB: Predrilled, wall-mounted, rectangular bars of hard-drawn solid copper, 1/4 by 4 inches (6.3 by 100 mm) in cross section, length as indicated on Drawings. The bus bar shall be NRTL listed for use as PBB and shall comply with TIA-607.
  - 1. Predrilling shall be with holes for use with lugs specified in this Section.
  - 2. Mounting Hardware: Stand-off brackets that provide a 4-inch (100-mm) clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.
  - 3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600-V switchboards, impulse tested at 5000 V.
- B. SBB Predrilled rectangular bars of hard-drawn solid copper, 1/4 by 2 inches (6.3 by 50 mm) in cross section, length as indicated on Drawings. The busbar shall be for wall mounting, shall be NRTL listed as complying with UL 467, and shall comply with TIA-607.
  - 1. Predrilling shall be with holes for use with lugs specified in this Section.
  - 2. Mounting Hardware: Stand-off brackets that provide at least a 2-inch (50-mm) clearance to access the rear of the busbar. Brackets and bolts shall be stainless steel.
  - 3. Stand-off insulators for mounting shall be Lexan or PVC. Comply with UL 891 for use in 600-V switchboards, impulse tested at 5000 V.
- C. Rack and Cabinet Grounding Busbars: Rectangular bars of hard-drawn solid copper, accepting conductors ranging from No. 14 to No. 2/0 AWG, NRTL listed as complying with UL 467, and complying with TIA-607. Predrilling shall be with holes for use with lugs specified in this Section.
  - 1. Cabinet-Mounted Busbar: Terminal block, with stainless-steel or copper-plated hardware for attachment to the cabinet.
  - 2. Rack-Mounted Horizontal Busbar: Designed for mounting in 19- or 23-inch (483- or 584-mm) equipment racks. Include a copper splice bar for transitioning to an adjoining rack, and stainless-steel or copper-plated hardware for attachment to the rack.
  - 3. Rack-Mounted Vertical Busbar: 72 or 36 inches (1827 or 914 mm) long, with stainless-steel or copper-plated hardware for attachment to the rack.

**2.5 IDENTIFICATION**

- A. Comply with requirements for identification products in DIVISION 27 "Identification for Communications Systems."

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine the ac grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of the electrical system.
- B. Inspect the test results of the ac grounding system measured at the point of BCT connection.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with connection of the BCT only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Bonding shall include the ac utility power service entrance, the communications cable entrance, and the grounding electrode system. The bonding of these elements shall form a loop so that each element is connected to at least two others.
- B. Comply with NECA 1.
- C. Comply with TIA-607.

**3.3 APPLICATION**

- A. Conductors: Install solid conductor for No. 8 AWG and smaller and stranded conductors for No. 6 AWG and larger unless otherwise indicated.
  - 1. The bonding conductors between the SBB and structural steel of steel-frame buildings shall not be smaller than No. 6 AWG.
  - 2. The bonding conductors between the TBB and structural steel of steel-frame buildings shall not be smaller than No. 6 AWG.
- B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2 AWG minimum.
- C. Conductor Terminations and Connections:
  - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
  - 2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
  - 3. Connections to Structural Steel: Welded connectors.
- D. Conductor Support:
  - 1. Secure grounding and bonding conductors at intervals of not less than 36 inches (900 mm).

- E. Grounding and Bonding Conductors:
  - 1. Install in the straightest and shortest route between the origination and termination point, and no longer than required. The bend radius shall not be smaller than eight times the diameter of the conductor. No one bend may exceed 90 degrees.
  - 2. Install it without splices.
  - 3. Support at not more than 36-inch (900-mm) intervals.
  - 4. Install grounding and bonding conductors in 3/4-inch (21-mm) PVC conduit until conduit enters a telecommunications room. The grounding and bonding conductor pathway through a plenum shall be in EMT. Conductors shall not be installed in EMT unless otherwise indicated.

### 3.4 GROUNDING ELECTRODE SYSTEM

- A. The BCT between the PBB and the ac service equipment ground shall not be smaller than No. 1/0 AWG.

### 3.5 GROUNDING BUSBARS

- A. Indicate locations of grounding busbars on Drawings. Install busbars horizontally, on insulated spacers 2 inches (50 mm) minimum from wall, 12 inches (300 mm) above finished floor unless otherwise indicated.
- B. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

### 3.6 CONNECTIONS

- A. Bond metallic equipment in a telecommunications equipment room to the grounding busbar in that room, using equipment grounding conductors not smaller than No. 6 AWG.
- B. Stacking of conductors under a single bolt is not permitted when connecting to busbars.
- C. Assemble the wire connector to the conductor, complying with manufacturer's written instructions and as follows:
  - 1. Use crimping tool and the die specific to the connector.
  - 2. Pre-twist the conductor.
  - 3. Apply an antioxidant compound to all bolted and compression connections.
- D. Primary Protector: Bond to the PBB with insulated bonding conductor.
- E. Interconnections: A TBB is the TBC For equalization of potential between multiple spaces and ,rooms containing SBBs to effectively bond them all together at the PBB with connection to the Main Building Ground. The accepted Alternatives for this TBB (Telecommunication Bonding Backbone) is to bond each SBB to Building Steel if present and the nearest electrical panelboard, All such connections SHALL be tested to insure that a low resistance ground is present
- F. Interconnect all SBBs with the PBB with the telecommunications backbone conductor. If more than one PBB is installed, interconnect PBBs using the grounding equalizer conductor. The telecommunications backbone conductor and grounding equalizer conductor size shall not be less than 2 kcmils/linear foot (1 sq. mm/linear meter) of conductor length, up to a maximum size of No. 3/0 AWG unless otherwise indicated.

- G. Telecommunications Enclosures and Equipment Racks: Bond metallic components of enclosures to the telecommunications bonding and grounding system. Install top-mounted or vertically mounted rack grounding busbar unless the enclosure and rack are manufactured with the busbar. Bond the equipment grounding busbar to the SBB No. 2 AWG bonding conductors.
- H. Structural Steel: Where the structural steel of a steel frame building is readily accessible within the room or space, bond each SBB and to the vertical steel of the building frame.
- I. Electrical Power Panelboards: Where an electrical panelboard for telecommunications equipment is located in the same room or space, bond each SBB to the ground bar of the panelboard.
- J. Shielded Cable: Bond the shield of shielded cable to the SBB in communications rooms and spaces. Comply with TIA-568 and TIA-568 when grounding shielded balanced twisted-pair cables.
- K. Rack- and Cabinet-Mounted Equipment: Bond powered equipment chassis to the cabinet or rack grounding bar. Power connection shall comply with NFPA 70; the equipment grounding conductor in the power cord of cord- and plug-connected equipment shall be considered as a supplement to bonding requirements in this Section.
- L. Access Floors: Bond all metal parts of access floors to the TBB.
- M. Equipment Room Signal Reference Grid: Provide a low-impedance path between telecommunications cabinets, equipment racks, and the reference grid, using No. 6 AWG bonding conductors.
  - 1. Install the conductors in grid pattern on 4-foot (1200-mm) centers, allowing bonding of one pedestal from each access floor tile.
  - 2. Bond the SBB of the equipment room to the reference grid at two or more locations.
  - 3. Bond all conduits and piping entering the equipment room to the SBB at the perimeter of the room.
- N. Towers and Antennas:
  - 1. Ground Ring: Buried at least 30 inches (760 mm) below grade and at least 24 inches (610 mm) from the base of the tower or mounting.
  - 2. Bond each tower base and metallic frame of a dish to the ground ring, buried at least 18 inches (460 mm) below grade.
  - 3. Bond the ground ring and antenna grounds to the equipment room TBB or SBB, buried at least 30 inches (760 mm) below grade.
  - 4. Bond metallic fences within 6 feet (1.8 m) of towers and antennas to the ground ring, buried at least 18 inches (460 mm) below grade.
    - a. Roof Ring: Meet requirements for the ground ring except the conductors shall comply with requirements in Section 264113 "Lightning Protection for Structures."
    - b. Bond tower base footings steel, the SBB in the equipment room, and antenna support guys to the roof ring.
    - c. Connect roof ring to the perimeter conductors of the lightning protection system.
  - 5. Waveguides and Coaxial Cable:
    - a. Bond cable shields at the point of entry into the building to the SBB and to the cable entrance plate, using No. 2 AWG bonding conductors.
    - b. Bond coaxial cable surge arrester to the ground or roof ring using bonding conductor size recommended by surge-arrester manufacturer.

### 3.7 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

- A. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.
- B. Comply with IEEE C2 grounding requirements.
- C. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches (100 mm) extends above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, non-shrink grout.
- D. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, bonding conductor. Train conductors' level or plumb around corners and fasten to manhole walls. Connect grounding conductors to cable armor and cable shields per written instructions by manufacturer of splicing and termination kits.

### 3.8 IDENTIFICATION

- A. Labels shall be preprinted or computer-printed type.
  - 1. Label TBB(s) with "fs-TBB," where "fs" is the telecommunications space identifier for the space containing the TBB.
  - 2. Label SBB(s) with "fs-SBB," where "fs" is the telecommunications space identifier for the space containing the SBB.
  - 3. Label the BCT and each telecommunications backbone conductor at its attachment point: "WARNING! TELECOMMUNICATIONS BONDING CONDUCTOR. DO NOT REMOVE OR DISCONNECT!"

### 3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
  - 1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench per manufacturer's written instructions.
  - 2. Test the bonding connections of the system using an ac earth ground-resistance tester, taking two-point bonding measurements in each telecommunications equipment room containing a TBB and a SBB and using the process recommended by BICSI TDMM. Conduct tests with the facility in operation.
    - a. Measure the resistance between the busbar and the nearest available grounding electrode. The maximum acceptable value of this bonding resistance is 100 milliohms.
  - 3. Test for ground loop currents using a digital clamp-on ammeter, with a full-scale of not more than 10 A, displaying current in increments of 0.01 A at an accuracy of plus/minus 2.0 percent.

- a. With the grounding infrastructure completed and the communications system electronics operating, measure the current in every conductor connected to the TBB and in each SBB. The maximum acceptable ac current level is 1 A.
- D. Excessive Ground Resistance: If resistance to ground at the BCT exceeds 5 ohms, notify Architect promptly and include recommendations to reduce ground resistance.
- E. Grounding system will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

**END OF SECTION 270526**

**SECTION 270528****PATHWAYS FOR COMMUNICATIONS SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Ladder cable trays
  - 2. Wire-basket cable trays
  - 3. Metal conduits and fittings.
  - 4. Nonmetallic conduits and fittings.
  - 5. Metal wireways and auxiliary gutters.
  - 6. Nonmetallic wireways and auxiliary gutters.
  - 7. Metallic surface pathways.
  - 8. Nonmetallic surface pathways.
  - 9. Hooks.
  - 10. Boxes, enclosures, and cabinets.

**1.3 DEFINITIONS**

- A. ARC: Aluminum rigid conduit.
- B. GRC: Galvanized rigid conduit.
- C. IMC: Intermediate metal conduit.
- D. RTRC: Reinforced thermosetting resin conduit.

**1.4 ACTION SUBMITTALS**

- A. Product data for the following:
  - 1. Surface pathways
  - 2. Wireways and fittings.
  - 3. Boxes, enclosures, and cabinets.
- B. Shop Drawings: For custom enclosures and cabinets and custom underground handholes and boxes. Include plans, elevations, sections, and attachment details.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Pathway routing plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of items involved:
  - 1. Structural members in paths of pathway groups with common supports.
  - 2. HVAC and plumbing items and architectural features in paths of conduit groups with common supports.
- B. Qualification Data: For professional engineer.
- C. Source quality-control reports.

**PART 2 - PRODUCTS****2.1 GENERAL REQUIREMENTS FOR CABLE TRAYS**

- A. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
  - 1. Source Limitations: Obtain cable trays and components from single manufacturer.
- B. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.
- C. Structural Performance: See articles for individual cable tray types for specific values for the following parameters:
  - 1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
  - 2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
  - 3. Load and Safety Factors: Applicable to both side rails and rung capacities.

**2.2 LADDER CABLE TRAYS**

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 1. Allied Tube & Conduit; a Tyco International Ltd. Co.
  - 2. Chalfant Manufacturing Company.
  - 3. Cooper B-Line, Inc.
  - 4. Mono-Systems, Inc.
  - 5. MP Husky.
- B. Description:
  - 1. Configuration: Two I-beam side rails with transverse rungs welded to side rails.
  - 2. Rung Spacing: 9 inches o.c.
  - 3. Radius-Fitting Rung Spacing: 9 inches (225 mm) at center of tray's width.
  - 4. Minimum Cable-Bearing Surface for Rungs: 7/8-inch (22-mm) width with radius edges.

5. No portion of the rungs shall protrude below the bottom plane of side rails.
6. Structural Performance of Each Rung: Capable of supporting a maximum cable load, with a safety factor of 1.5, plus a 200-lb (90-kg) concentrated load, when tested according to NEMA VE 1.
7. Straight Section Lengths: 10 feet (3 m) except where shorter lengths are required to facilitate tray assembly.
8. Width: 12 inches (300 mm) unless otherwise indicated on Drawings.
9. Class Designation: Comply with NEMA VE 1
10. Splicing Assemblies: Bolted type using serrated flange locknuts.
11. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.
12. Splice Plate Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.

### 2.3 WIRE-BASKET CABLE TRAYS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  1. Chatsworth.
  2. Cablofil/Legrande.
  3. Chalfant Manufacturing Company.
  4. Cooper B-Line, Inc.
  5. NIEDAX Mono-Systems, Inc.
  6. MP Husky.
  7. Snaketray.
  8. Wiremaid Products Division; Vutec Corporation.
- B. Description:
  1. Configuration: Wires are formed into a standard 2-by-4-inch wire mesh pattern with intersecting wires welded together. Mesh sections must have at least one bottom longitudinal wire along entire length of section.
  2. Materials: High-strength-steel longitudinal wires with no bends.
  3. Safety Provisions: Wire ends along wire-basket sides (flanges) rounded during manufacturing to maintain integrity of cables and installer safety.
  4. Sizes:
    - a. Straight sections shall be furnished in standard 118-inch lengths.
    - b. Wire-Basket Depth: 4-inch usable loading depth by 12 and 24 inches wide.
  5. Connector Assemblies: Bolt welded to plate shaped to fit around adjoining tray wires and mating plate. Mechanically joins adjacent tray wires to splice sections together or to create horizontal fittings.
  6. Connector Assembly Capacity: Splices located within support span shall not diminish rated loading capacity of cable tray.
  7. Hardware and Fasteners: Steel, zinc plated according to ASTM B 633.

### 2.4 METAL CONDUITS AND FITTINGS

- A. Description: Metal raceway of circular cross section with manufacturer-fabricated fittings.
- B. General Requirements for Metal Conduits and Fittings:

1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
  2. Comply with TIA-569.
- C. GRC: Comply with ANSI C80.1 and UL 6.
- D. ARC: Comply with ANSI C80.5 and UL 6A.
- E. IMC: Comply with ANSI C80.6 and UL 1242.
- F. PVC-Coated Steel Conduit: PVC-coated GRC or IMC.
1. Comply with NEMA RN 1.
  2. Coating Thickness: 0.040 inch (1 mm), minimum.
- G. EMT: Comply with ANSI C80.3 and UL 797.
- H. Fittings for Metal Conduit: Comply with NEMA FB 1 and UL 514B.
1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 1203 and NFPA 70.
  2. Fittings for EMT:
    - a. Material: Steel or die cast.
    - b. Type: Set screw or compression.
  3. Expansion Fittings: PVC or steel to match conduit type, complying with UL-467, rated for environmental conditions where installed, and including flexible external bonding jumper.
  4. Coating for Fittings for PVC-Coated Conduit: Minimum thickness of 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.
- I. Joint Compound for IMC, GRC, or ARC: Approved, as defined in NFPA 70, by authorities having jurisdiction for use in conduit assemblies, and compounded for use to lubricate and protect threaded conduit joints from corrosion and to enhance their conductivity.

## **2.5 NONMETALLIC CONDUITS AND FITTINGS**

- A. Description: Nonmetallic raceway of circular section with manufacturer-fabricated fittings.
- B. General Requirements for Nonmetallic Conduits and Fittings:
1. Listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for intended location and application.
  2. Comply with TIA-569.
- C. RNC: Type EPC-40-PVC, complying with NEMA TC 2 and UL 651 unless otherwise indicated.
- D. Rigid HDPE: Comply with UL 651A.
- E. Continuous HDPE: Comply with UL 651A.
- F. RTRC: Comply with UL 2515A and NEMA TC 14.

- G. Fittings: Comply with NEMA TC 3; match to conduit or tubing type and material.
- H. Solvents and Adhesives: As recommended by conduit manufacturer.

## **2.6 METAL WIREWAYS AND AUXILIARY GUTTERS**

- A. Description: Sheet metal trough of rectangular cross section fabricated to required size and shape, without holes or knockouts, and with hinged or removable covers.
- B. General Requirements for Metal Wireways and Auxiliary Gutters:
  - 1. Comply with UL 870 and NEMA 250, Type 1 unless otherwise indicated, and sized per NFPA 70.
  - 2. Metal wireways installed outdoors shall be listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for intended location and application.
  - 3. Comply with TIA-569.
- C. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
- D. Wireway Covers: Screw-cover type unless otherwise indicated.
- E. Finish: Manufacturer's standard enamel finish.

## **2.7 NONMETALLIC WIREWAYS AND AUXILIARY GUTTERS**

- A. Description: Fiberglass polyester, extruded and fabricated to required size and shape, without holes or knockouts. Cover shall be gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections shall be flanged and have stainless-steel screws and oil-resistant gaskets.
- B. Description: PVC, extruded and fabricated to required size and shape, and having snap-on cover, mechanically coupled connections, and plastic fasteners.
- C. General Requirements for Nonmetallic Wireways and Auxiliary Gutters:
  - 1. Listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for intended location and application.
  - 2. Comply with TIA-569.
- D. Fittings and Accessories: Couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings shall match and mate with wireways as required for complete system.
- E. Solvents and Adhesives: As recommended by conduit manufacturer.

**2.8 SURFACE METAL PATHWAYS**

- A. Description: Galvanized steel with snap-on covers, complying with UL 5.
- B. Finish: Manufacturer's standard enamel finish in color selected by Architect.
- C. Listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for intended location and application.
- D. Comply with TIA-569.

**2.9 SURFACE NONMETALLIC PATHWAYS:**

- A. Description: Two- or three-piece construction, complying with UL 5A, and manufactured of rigid PVC.
- B. Finish: Texture and color selected by Architect from manufacturer's standard colors.
- C. Product shall comply with UL 94 V-0 requirements for self-extinguishing characteristics.
- D. Listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for intended location and application.
- E. Comply with TIA-569.

**2.10 HOOKS**

- A. Description: Prefabricated sheet metal cable supports for telecommunications cable.
  - 1. Approved for use in limited applications to support Horizontal cabling. Bundle sizes may not exceed 20 Category 6A.
- B. Listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for intended location and application.
- C. Comply with TIA-569.
- D. Galvanized or stainless steel.
- E. J shape.
- F. Accept 3/8" (or 10mm) threaded rod for attachment to building structure or sub-structure.
- G. Holes for easy attachment to wall surfaces, beams, trusses and direct attachment to cable trays and rack systems. Can be tiered in a single column, as well as back-to-back.
- H. White, red, green, yellow, or blue color identifiers for content designation of segregated cables.
- I. Center Hanger Connector Plate

1. Bracket that allows for back-to-back non-continuous open top cable support mounting.
2. Continuous cable division shall be fully maintained within each open top cable support.
3. Fittings shall be manufactured of galvanized steel or stainless steel.

J. Multi-tier Assembly

1. Bracket that allows for top-to-bottom non-continuous open top cable support mounting.
2. Continuous cable division shall be fully maintained within each open top cable support.
3. Fittings shall be manufactured of galvanized steel.

## 2.11 BOXES, ENCLOSURES, AND CABINETS

A. Description: Enclosures for communications.

B. General Requirements for Boxes, Enclosures, and Cabinets:

1. Comply with TIA-569.
2. Boxes, enclosures, and cabinets installed in wet locations shall be listed and labeled as defined in NFPA 70, by an NRTL (NATIONAL RECOGNIZED TESTING LABORATORY), and marked for use in wet locations.
3. Box extensions used to accommodate new building finishes shall be of same material as recessed box.
4. Device Box Dimensions: 4 inches square by 2-1/4 inches deep (100 mm square by 65 mm deep).
5. Gangable boxes are prohibited.

C. Sheet Metal Outlet and Device Boxes: Comply with NEMA OS 1 and UL 514A.

D. Cast-Metal Outlet and Device Boxes: Comply with NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

E. Metal Floor Boxes:

1. Material: Cast metal or sheet metal.
2. Type: Fully adjustable.
3. Shape: Rectangular.
4. Metal floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Nonmetallic Floor Boxes: Nonadjustable, round, or rectangular.

1. Nonmetallic floor boxes shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

H. Cast-Metal Access, Pull, and Junction Boxes: Comply with NEMA FB 1 and UL 1773, galvanized, cast iron with gasketed cover.

I. Nonmetallic Outlet and Device Boxes: Comply with NEMA OS 2 and UL 514C.

J. Hinged-Cover Enclosures: Comply with UL 50 and NEMA 250, Type 1, with continuous-hinge cover with flush latch unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
2. Nonmetallic Enclosures:
  - a. Material: Plastic.
  - b. Finished inside with radio-frequency-resistant paint.
3. Interior Panels: Steel; all sides finished with manufacturer's standard enamel.

K. Cabinets:

1. NEMA 250, Type 12 galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.
6. Nonmetallic cabinets shall be listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## PART 3 - EXECUTION

### 3.1 RACEWAY INSTALLATION REQUIREMENTS

- A. Minimum conduit size shall be 1" for serving one outlet box. Daisy chaining of outlet boxes is unacceptable. Instead, multiple outlets may be served from an appropriately sized junction box. The conduit feeding the junction box shall be sized as follows:
- a. 1-1/4" for serving two outlet boxes.
  - b. 1-1/2" for serving three outlet boxes.
  - c. Two (2) 1-1/4" for serving floor boxes.
  - d. 1-1/4" for serving up to three outlets in a surface raceway.
- B. Communications ducts and conduits entering the building from the outside shall transition to galvanized rigid steel conduit or intermediate metal conduit at the building wall and shall continue as galvanized rigid steel conduit or intermediate metal conduit until entering the BE room or TR. Maximum conduit length to meet Code shall be 50'. Notify the Project Manager if this length is exceeded.
- C. Riser conduits and sleeves connecting BE rooms and TRs shall be 4". Install conduits and sleeves as close as possible to the walls, at the locations shown. Stub up floor conduits and sleeves 4" AFF. Stub wall conduits and sleeves 4" into the room, and cable trays 6" into the room.
- D. When conduits are needed to bypass a large interference in a cable tray run, the cross-sectional area of the conduits shall equal or exceed the cross-sectional area of the cable tray. These bypass conduits shall have sweeps and bends as noted below and shall be braced well to allow pulling of communication cables.

- E. Conduit bends and offsets shall be made with sweeps or manufactured elbows. Conduits shall not have more than the equivalent of 2 ninety-degree bends between pull points. Pull boxes shall not be used to make directional changes. Provide pull boxes in straight sections of conduit only.
- F. Provide insulated bushings on both ends of conduits.
- G. Provide double gang sheet metal outlet boxes 2-1/8" deep and provide double gang plaster rings.
- H. Bond the entire raceway system together and connect it to the ground system.
- I. Provide nylon pull strings in conduits and sleeves. Label pull strings with room number and wall (N, S, E, or W) of the outlet.

### 3.2 PATHWAY APPLICATION

- A. Outdoors: Apply pathway products as specified below unless otherwise indicated:
  - 1. Exposed Conduit: GRC.
  - 2. Concealed Conduit, Aboveground: GRC.
  - 3. Underground Conduit: RNC, Type EPC-40-PVC Type EPC-80-PVC, direct buried concrete encased.
  - 4. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R or Type 4.
- B. Indoors: Apply pathway products as specified below unless otherwise indicated:
  - 1. Exposed, Not Subject to Physical Damage: EMT or RNC.
  - 2. Exposed, Not Subject to Severe Physical Damage: EMT or RNC identified for such use.
  - 3. Exposed and Subject to Severe Physical Damage: GRC. Pathway locations include the following:
    - a. Loading dock.
    - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    - c. Mechanical rooms.
    - d. Gymnasiums
  - 4. Concealed in Ceilings and Interior Walls and Partitions: EMT or innerduct.
  - 5. Damp or Wet Locations: GRC.
  - 6. Pathways for Optical-Fiber or Communications Cable in Spaces Used for Environmental Air: Plenum-type, optical-fiber-cable pathway Plenum-type, communications-cable pathway, EMT.
  - 7. Pathways for Optical-Fiber or Communications-Cable Risers in Vertical Shafts: Riser-type, optical-fiber-cable pathway Riser-type, communications-cable pathway, EMT.
  - 8. Pathways for Concealed General-Purpose Distribution of Optical-Fiber or Communications Cable: General-use, optical-fiber-cable pathway Riser-type, optical-fiber-cable pathway Plenum-type, optical-fiber-cable pathway General-use, communications-cable pathway Riser-type, communications-cable pathway Plenum-type, communications-cable pathway, EMT.
  - 9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4 stainless steel units in institutional and commercial kitchens and damp or wet locations.
- C. Minimum Pathway Size: 1-inch (25-mm) trade size for copper, aluminum cables, and optical-fiber cables.

- D. Pathway Fittings: Compatible with pathways and suitable for use and location.
  - 1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings unless otherwise indicated. Comply with NEMA FB 2.10.
  - 2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with this type of conduit. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
  - 3. EMT: Use setscrew or compression, steel fittings. Comply with NEMA FB 2.10.
- E. Do not install aluminum conduits, boxes, or fittings in contact with concrete or earth.
- F. Install surface pathways only where indicated on Drawings.
- G. Do not install nonmetallic conduit where ambient temperature exceeds 120 deg F (49 deg C).

### 3.3 INSTALLATION

- A. Comply with the following standards for installation requirements except where requirements on Drawings or in this Section are stricter:
  - 1. NECA 1.
  - 2. NECA/BICSI 568.
  - 3. TIA-569.
  - 4. NECA 101
  - 5. NECA 102.
  - 6. NECA 105.
  - 7. NECA 111.
- B. Comply with NFPA 70 limitations for types of pathways allowed in specific occupancies and number of floors.
- C. Comply with requirements in Section 07 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- D. Keep pathways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal pathway runs above water and steam piping.
- E. Complete pathway installation before starting conductor installation.
- F. Arrange stub-ups so curved portions of bends are not visible above finished slab.
- G. Install no more than the equivalent of two 90-degree bends in any pathway run. Support within 12 inches (300 mm) of changes in direction. Utilize long radius ells for all optical-fiber cables.
- H. Conceal rigid conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
- I. Support conduit within 12 inches (300 mm) of enclosures to which attached.
- J. Pathways Embedded in Slabs:

1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support. Secure pathways to reinforcement at maximum 10-foot (3-m) intervals.
  2. Arrange pathways to cross building expansion joints at right angles with expansion fittings. Comply with requirements for expansion joints specified in this article.
  3. Arrange pathways to keep a minimum of 2 inches (50 mm) of concrete cover in all directions.
  4. Do not embed threadless fittings in concrete unless specifically approved by Architect for each specific location.
  5. Change from nonmetallic conduit and fittings to GRC and fittings before rising above floor.
- K. Stub-ups to Above Recessed Ceilings:
1. Use EMT, IMC, or RMC for pathways.
  2. Use a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.
- L. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of pathway and fittings before making up joints. Follow compound manufacturer's written instructions.
- M. Coat field-cut threads on PVC-coated pathway with a corrosion-preventing conductive compound prior to assembly.
- N. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install insulated bushings on conduits terminated with locknuts.
- O. Install pathways square to the enclosure and terminate at enclosures with locknuts. Install locknuts hand tight plus one additional quarter-turn.
- P. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure, to assure a continuous ground path.
- Q. Cut conduit perpendicular to the length. For conduits of 2-inch (50-mm) trade size and larger, use roll cutter or a guide to ensure cut is straight and perpendicular to the length.
- R. Install pull wires in empty pathways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire. Secure pull wire, so it cannot fall into conduit. Cap pathways designated as spare alongside pathways in use.
- S. Surface Pathways:
1. Install surface pathway for surface telecommunications outlet boxes only where indicated on Drawings.
  2. Install surface pathway with a minimum 2-inch (50-mm) radius control at bend points.
  3. Secure surface pathway with screws or other anchor-type devices at intervals not exceeding 48 inches (1200 mm) and with no less than two supports per straight pathway section. Support surface pathway per manufacturer's written instructions. Tape and glue are not acceptable support methods.
- T. Pathways for Optical-Fiber and Communications Cable: Install pathways, metal and nonmetallic, rigid, and flexible, as follows:

1. 4-Inch (100-mm) Trade Size and Larger: Install pathways in maximum lengths of 75 feet (23 m).
  2. Install with a maximum of two 90-degree bends or equivalent for each length of pathway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.
- U. Install pathway-sealing fittings at accessible locations per NFPA 70 and fill them with listed sealing compound. For concealed pathways, install each fitting in a flush steel box with a blank cover plate having a finish like that of adjacent plates or surfaces. Install pathway-sealing fittings per NFPA 70.
- V. Install devices to seal pathway interiors at accessible locations. Locate seals, so no fittings or boxes are between the seal and the following changes of environments. Seal the interior of all pathways at the following points:
1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
  2. Where an underground service pathway enters a building or structure.
  3. Where otherwise required by NFPA 70.
- W. Comply with manufacturer's written instructions for solvent welding PVC conduit and fittings.
- X. Expansion-Joint Fittings:
1. Install in each run of aboveground RNC that is located where environmental temperature change may exceed 30 deg F (17 deg C), and that has straight-run length that exceeds 25 feet (7.6 m). Install in each run of aboveground RMC and EMT that is located where environmental temperature change may exceed 100 deg F (55 deg C), and that has straight-run length that exceeds 100 feet (30 m).
  2. Install type and quantity of fittings that accommodate temperature change listed for each of the following locations:
    - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F (70 deg C) temperature change.
    - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F (86 deg C) temperature change.
    - c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F (70 deg C) temperature change.
    - d. Attics: 135 deg F (75 deg C) temperature change.
  3. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F (0.06 mm per meter of length of straight run per deg C) of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F (0.0115 mm per meter of length of straight run per deg C) of temperature change for metal conduits.
  4. Install expansion fittings at all locations where conduits cross building or structure expansion joints.
  5. Install each expansion-joint fitting with position, mounting, and piston setting selected per manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.
- Y. Hooks:

1. Size to allow a minimum of 25 percent future capacity without exceeding design capacity limits.
  2. Shall be supported by dedicated support wires. Do not use ceiling grid support wire or support rods.
  3. Hook spacing shall allow no more than 6 inches (150 mm) of slack. The lowest point of the cables shall be no less than 6 inches (150 mm) adjacent to ceilings, mechanical ductwork and fittings, luminaires, power conduits, power, and telecommunications outlets, and other electrical and communications equipment.
  4. Space hooks no more than 5 feet (1.5 m) o.c.
  5. Provide a hook at each change in direction.
- Z. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
- AA. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block and install box flush with surface of wall. Prepare block surface to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box.
- BB. Horizontally separate boxes mounted on opposite sides of walls, so they are not in the same vertical channel.
- CC. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for the purpose.
- DD. Fasten junction and pull boxes to or support from building structure. Do not support boxes by conduits.
- EE. Set metal floor boxes level and flush with finished floor surface.
- FF. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

### **3.4 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR COMMUNICATIONS PENETRATIONS**

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies.

### **3.5 FIRESTOPPING**

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

### **3.6 PROTECTION**

- A. Protect coatings, finishes, and cabinets from damage or deterioration.
1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
  2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

**END OF SECTION 270528**

**SECTION 270543****UNDERGROUND PATHWAYS AND STRUCTURES FOR COMMUNICATION SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. ANSI/TIA-758 is the Primary guidance for our Minimum acceptable Installation Specification Criteria and shall always be used unless superseded by the Project Scope of work and/or AHJ guidelines.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Metal conduit and fittings, including GRC and PVC-coated GRC.
  - 2. Rigid nonmetallic duct.
  - 3. Duct accessories, including rigid innerduct and fabric innerduct.
  - 4. Precast concrete handholes.
  - 5. Polymer concrete handholes and boxes with polymer concrete cover.
  - 6. Utility structure accessories.

**1.3 DEFINITIONS**

- A. Direct Buried: Duct or a duct bank that is buried in the ground, without any additional casing materials, such as concrete.
- B. Duct: A single duct or multiple ducts. Duct may be either installed singly or as component of a duct bank.
- C. Duct Bank:
  - 1. Two or more ducts installed in parallel, with or without additional casing materials.
  - 2. Multiple duct banks.
- D. GRC: Galvanized rigid conduit.
- E. IMC: Intermediate metal conduit.
- F. RNC: Rigid nonmetallic conduit.
- G. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include duct-bank materials, including spacers and miscellaneous components.
  - 2. Include duct and conduits and their accessories, including elbows, end bells, bends, fittings, duct spacers and solvent cement.
  - 3. Include accessories for manholes, handholes, and boxes, and other utility structures.
  - 4. Include underground-line warning tape.
  
- B. Shop Drawings:
  - 1. Precast or Factory-Fabricated Underground Utility Structures:
    - a. Include plans, elevations, sections, details, attachments to other work, and accessories.
    - b. Include duct entry provisions, including location and duct size.
    - c. Include reinforcement details.
    - d. Include frame and cover design and manhole chimneys.
    - e. Include grounding details.
    - f. Include dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
    - g. Include joint details.
  
  - 2. Factory-Fabricated Handholes and Boxes Other Than Precast Concrete:
    - a. Include dimensioned plans, sections, and elevations, and fabrication and installation details.
    - b. Include duct entry provisions, including location and duct size.
    - c. Include cover design.
    - d. Include grounding details.
    - e. Include dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Duct and Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.
  - 1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
  - 2. Drawings shall be signed and sealed by a qualified professional engineer.
  
- B. Product Certificates: For concrete and steel used in precast concrete handholes, as required by ASTM C 858.
  
- C. Qualification Data: For professional engineer and testing agency responsible for testing nonconcrete handholes and boxes.
  
- D. Source quality-control reports.
  
- E. Field quality-control reports.

**1.6 MAINTENANCE MATERIALS SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

**1.7 QUALITY ASSURANCE**

- A. Testing Agency Qualifications: Qualified per ASTM E 329 for testing indicated.

**1.8 FIELD CONDITIONS**

- A. Interruption of Existing Communications Service: Do not interrupt communications service to facilities occupied by Owner or others unless permitted under the following conditions, and then only after arranging to provide temporary communications service according to requirements indicated:
  - 1. Notify Owner no fewer than two days in advance of proposed interruption of communications service.
  - 2. Do not proceed with interruption of communications service without Owner's written permission.
- B. Ground Water: Assume ground-water level is at grade level unless a lower water table is noted on Drawings.
- C. Ground Water: Assume ground-water level is 36 inches (900 mm) below ground surface unless a higher water table is noted on Drawings.

**PART 2 - PRODUCTS****2.1 METAL CONDUITS AND FITTINGS**

- A. GRC: Comply with ANSI C80.1 and UL 6.
- B. PVC-Coated Steel Conduit: PVC-coated GRC.
  - 1. Comply with NEMA RN 1.
  - 2. Coating Thickness: 0.040 inch (1 mm), minimum.
- C. General Requirements for Metal Conduits and Fittings:
  - 1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
  - 2. Comply with TIA-569 and TIA-758.

**2.2 RIGID NONMETALLIC DUCTS**

- A. Underground Plastic Utilities Duct: Type EPC-80-PVC RNC, complying with NEMA TC 2 and UL 651, with matching fittings complying with NEMA TC 3 by same manufacturer as duct.

- B. Underground Plastic Utilities Duct: Type DB-120-PVC RNC, complying with NEMA TC 6 & 8 and with ASTM F-512 for direct burial, with matching fittings complying with NEMA TC 9 by same manufacturer as duct.
- C. Underground Plastic Utilities Duct: Type EB-20 PVC RNC, complying with NEMA TC 6 & 8, ASTM F-512, and UL 651, with matching fittings complying with NEMA TC 9 by same manufacturer as duct.
- D. General Requirements for Nonmetallic Ducts and Fittings:
  - 1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
  - 2. Comply with TIA-569 and TIA-758.
- E. Solvents and Adhesives: As recommended by duct manufacturer.

### **2.3 FLEXIBLE NONMETALLIC DUCTS**

- A. HDPE Duct: Type EPEC 80-HDPE complying with NEMA TC 7 and UL 651A.
  - 1. Listed and labeled as defined in NFPA 70, by a nationally recognized testing laboratory, and marked for intended location and application.
  - 2. Comply with TIA-569 and TIA-758.

### **2.4 DUCT ACCESSORIES**

- A. Duct Spacers: Factory-fabricated rigid PVC interlocking spacers, sized for type and size of duct with which used, and selected to provide minimum duct spacing indicated while supporting duct during concreting or backfilling.
- B. Underground-Line Warning Tape: Underground-line warning tape specified in Section 270553 "Identification for Communications Systems."

### **2.5 PRECAST CONCRETE HANDHOLES AND BOXES**

- A. Description: Monolithically poured, factory-fabricated, reinforced-concrete walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.
- B. Comply with ASTM C 858 for design and manufacturing processes.
- C. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
- D. Frame and Cover: Weatherproof steel frame, with steel cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
- E. Frame and Cover: Weatherproof steel frame, with hinged steel access door assembly with tamper-resistant, captive, cover-securing bolts.

1. Cover Hinges: Concealed, with hold-open ratchet assembly.
  2. Cover Handle: Recessed.
- F. Frame and Cover: Weatherproof aluminum frame, with hinged aluminum access door assembly with tamper-resistant, captive, cover-securing bolts.
1. Cover Hinges: Concealed, with hold-open ratchet assembly.
  2. Cover Handle: Recessed.
- G. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
- H. Cover Legend: Molded lettering, "COMMUNICATIONS."
- I. Configuration: Units shall be designed for flush burial and have integral closed bottom unless otherwise indicated.
- J. Extensions and Slabs: Designed to mate with bottom of enclosure and made of same material as enclosure.
1. Extension shall provide increased depth of 12 inches (300 mm).
  2. Slab: Same dimensions as bottom of enclosure and arranged to provide closure.
- K. Joint Sealant: Asphaltic-butyl material with adhesion, cohesion, flexibility, and durability properties necessary to withstand maximum hydrostatic pressures at the installation location with the ground-water level at grade.
- L. Knockout Panels: Precast openings in walls, arranged to match dimensions and elevations of approaching duct and duct banks, plus an additional 6 inches (150 mm) vertically and horizontally to accommodate alignment variations.
1. Knockout panels shall be located no less than 6 inches (150 mm) from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
  2. Knockout panel opening shall have cast-in-place, welded-wire fabric reinforcement for field cutting and bending to tie into concrete envelopes of duct banks.
  3. Knockout panel openings shall be framed with at least two additional No. 3 steel reinforcing bars in concrete around each opening.
  4. Knockout panels shall be 1-1/2 to 2 inches (38 to 50 mm) thick.
- M. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
1. Type and size shall match fittings to duct or conduit to be terminated.
  2. Fittings shall align with elevations of approaching duct and be located near interior corners of handholes to facilitate racking of cable.
- N. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

**2.6 POLYMER CONCRETE HANDHOLES AND BOXES WITH POLYMER CONCRETE COVER**

- A. Description: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.
- B. Standard: Comply with SCTE 77. Comply with tier requirements in "Underground Enclosure Application" Article.
- C. Color: Gray.
- D. Configuration: Units shall be designed for flush burial and have integral closed bottom unless otherwise indicated.
- E. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
- F. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
- G. Cover Legend: Molded lettering, "COMMUNICATIONS."
- H. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.
- I. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering duct for secure, fixed installation in enclosure wall.
- J. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have factory-installed inserts for cable racks and pulling-in irons.

**2.7 UTILITY STRUCTURE ACCESSORIES**

- A. Accessories for Utility Structures: Utility equipment and accessory items used for utility structure access and utility support, listed and labeled for intended use and application.
- B. Manhole Frames, Covers, and Chimney Components: Comply with structural design loading specified for manhole.
  - 1. Frame and Cover: Weatherproof, gray cast iron complying with ASTM A 48/A 48M, Class 30B, with milled cover-to-frame bearing surfaces; 29-inch (725-mm) diameter.
    - a. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
    - b. Special Covers: Recess in face of cover designed to accept finish material in paved areas.
  - 2. Cover Legend: Cast in. Selected to suit system.
- C. Manhole Sump Frame and Grate: ASTM A 48/A 48M, Class 30B, gray cast iron.
- D. Pulling Eyes in Concrete Walls: Eyebolt with reinforcing-bar fastening insert, 2-inch- (50-mm-) diameter eye, and 1-by-4-inch (25-by-100-mm) bolt.

1. Working Load Embedded in 6-Inch (150-mm), 4000-psi (27.6-MPa) Concrete: 13,000-lbf (58-kN) minimum tension.
- E. Pulling Eyes in Nonconcrete Walls: Eyebolt with reinforced fastening, 1-1/4-inch- (31-mm-) diameter eye, rated 2500-lbf (11-kN) minimum tension.
- F. Pulling-In and Lifting Irons in Concrete Floors: 7/8-inch- (22-mm-) diameter, hot-dip galvanized, bent steel rod; stress relieved after forming; and fastened to reinforcing rod. Exposed triangular opening.
  1. Ultimate Yield Strength: 40,000-lbf (180-kN) shear and 60,000-lbf (270-kN) tension.
- G. Bolting Inserts for Concrete Utility Structure Cable Racks and Other Attachments: Flared, threaded inserts of noncorrosive, chemical-resistant, nonconductive thermoplastic material; 1/2-inch (13-mm) ID by 2-3/4 inches (69 mm) deep, flared to a minimum of 1-1/4 inches (31 mm) at base.
  1. Tested Ultimate Pullout Strength: 12,000 lbf (53 kN) minimum.
- H. Ground Rod Sleeve: 3-inch (75-mm), PVC duct sleeve in manhole floors 2 inches (50 mm) from the wall adjacent to, but not underneath, the duct entering the structure.
- I. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip, with 1/2-inch (13-mm) bolt, 5300-lbf (24-kN) rated pullout strength, and minimum 6800-lbf (30-kN) rated shear strength.
- J. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F (2 deg C). Capable of withstanding temperature of 300 deg F (150 deg C) without slump and adhering to clean surfaces of plastic duct, metallic duct, duct coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.
- K. Cover Hooks: Light duty, designed for lifts less than 60 lbf (270 N). Two required.

## 2.8 SOURCE QUALITY CONTROL

- A. Test and inspect precast concrete utility structures per ASTM C 1037.
- B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
  1. Tests of materials shall be performed by an independent testing agency.
  2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
  3. Testing machine pressure gages shall have current calibration certification, complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

**PART 3 - EXECUTION****3.1 PREPARATION**

- A. Coordinate layout and installation of duct, duct bank, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field. Notify Architect if there is a conflict between areas of excavation and existing structures or archaeological sites to remain.
- B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Architect.
- C. Clear and grub vegetation to be removed and protect vegetation to remain according to Section 311000 "Site Clearing." Remove and stockpile topsoil for reapplication according to Section 311000 "Site Clearing."

**3.2 UNDERGROUND DUCT APPLICATION**

- A. Duct for Communications: Type EPC-80-PVC RNC, in concrete-encased duct bank unless otherwise indicated.
- B. Duct for Communications: Type DB-120-PVC RNC, in direct-buried duct bank unless otherwise indicated.
- C. Duct for Communications: Type EPEC-80-HDPE duct in direct-bored duct bank unless otherwise indicated.
- D. Underground Duct Crossing: Paved Paths, Walks and Driveways: Type EPC-40-PVC RNC, encased in reinforced concrete.
- E. Stub-Ups for Communications: Concrete-encased GRC.

**3.3 UNDERGROUND ENCLOSURE APPLICATION**

- A. Handholes and Boxes for Communications:
  - 1. Units in Roadways and Other Deliberate Traffic Paths: Precast concrete. AASHTO HB 17, H-20 structural load rating.
  - 2. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 structural load rating.
  - 3. Units in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Precast concrete, AASHTO HB 17, H-10 structural load rating.
  - 4. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin or High-density plastic, structurally tested per SCTE 77 with 3000-lbf (13 345-N) vertical loading.
  - 5. Cover design load shall not exceed the design load of the handhole or box.

**3.4 EARTHWORK**

- A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restoration: Replace area immediately after backfilling is completed.
- C. Restore surface features at areas disturbed by excavation and re-establish original grades unless otherwise indicated.
- D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching. Comply with Section 329200 "Turf and Grasses" and Section 329300 "Plants."
- E. Cut and patch existing pavement in the path of underground duct, duct bank, and utility structures per the "Cutting and Patching" Article in Section 017300 "Execution."

**3.5 DUCT AND DUCT-BANK INSTALLATION**

- A. Where indicated on Drawings, install duct, spacers, and accessories into the duct configuration shown. Duct installation requirements in this Section also apply to duct bank.
- B. Install duct and duct bank per NEMA TCB 2 and TIA-758.
- C. Slope: Pitch duct and duct bank a minimum slope of 1:100 down toward manholes and handholes and away from buildings and equipment. Slope duct and duct bank from a high point in runs between two manholes, to drain in both directions.
- D. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1200 mm), both horizontally and vertically, at other locations unless otherwise indicated.
  - 1. Duct and duct banks shall have maximum of two 90-degree bends, or the total of all bends shall be no more 180 degrees between pull points.
- E. Joints: Use solvent-cemented joints in duct and fittings and make watertight according to manufacturer's written instructions. Stagger couplings, so those of adjacent ducts do not lie in same plane.
- F. Installation Adjacent to High-Temperature Steam Lines: Where duct or duct banks are installed parallel to underground steam lines, perform calculations showing the duct or duct bank will not be subject to environmental temperatures above 40 deg C. Where environmental temperatures are calculated to rise above 40 deg C, and anywhere the duct or duct bank crosses above an underground steam line, install insulation blankets listed for direct burial to isolate the duct bank from the steam line.
- G. End-Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct, and vary proportionately for other duct sizes.
  - 1. Begin change from regular spacing to end-bell spacing 10 feet (3 m) from the end bell without reducing duct slope and without forming a trap in the line.

2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each duct in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight-line direct-buried duct and duct banks, with calculated expansion of more than 3/4 inch (19 mm).
  3. Grout end bells into structure walls from both sides to provide watertight entrances.
- H. Terminator Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inches (150 mm) o.c. for 4-inch (100-mm) duct and vary proportionately for other duct sizes.
1. Begin change from regular spacing to terminator spacing 10 feet (3 m) from the terminator without reducing duct slope and without forming a trap in the line.
  2. Expansion and Deflection Fittings: Install an expansion and deflection fitting in each duct in the area of disturbed earth adjacent to manhole or handhole. Install an expansion fitting near the center of all straight-line duct or duct bank, with calculated expansion of more than 3/4 inch (19 mm).
- I. Building Wall Penetrations: Make a transition from underground duct to GRC at least 10 feet (3 m) outside the building wall, without reducing duct slope away from the building or forming a trap in the duct. Use fittings manufactured for RNC duct-to-GRC conduit transition. Install GRC penetrations of building walls as specified in Section 270544 "Sleeves and Sleeve Seals for Communications Pathways and Cabling."
- J. Sealing: Provide temporary closure at terminations of duct that has cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.
- K. Innerduct: Install immediately after mandrelling duct. Size and type as indicated on Drawings.
- L. Pulling Cord: Install 200-lbf- (1000-N-m) test nylon cord in empty duct and innerduct.
- M. Concrete-Encased Duct and Duct Bank:
1. Excavate trench bottom to provide firm and uniform support for duct or duct bank. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes less than 6 inches (150 mm) in nominal diameter.
  2. Width: Excavate trench 12 inches (300 mm) wider than duct or duct bank on each side.
  3. Width: Excavate trench 3 inches (75 mm) wider than duct or duct bank on each side.
  4. Depth: Install top of duct and duct bank at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated.
  5. Support duct and duct bank on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
  6. Minimum Space Between Duct: 3 inches (75 mm) between edge of duct and exterior envelope wall, 2 inches (50 mm) between ducts for like services, and 4 inches (100 mm) between power and communications ducts.
  7. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around duct or duct bank.

8. Elbows: Use manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct run unless otherwise indicated. Extend concrete encasement throughout length of elbow.
9. Elbows: Use manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct run.
  - a. Couple GRC to duct with adapters designed for this purpose and encase coupling with 3 inches (75 mm) of concrete.
  - b. Stub-Ups to Outdoor Equipment: Extend concrete-encased GRC horizontally a minimum of 60 inches (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
    - 1) Stub-ups shall be minimum 4 inches (100 mm) above finished floor and minimum 3 inches (75 mm) from conduit side to edge of slab.
  - c. Stub-Ups to Indoor Equipment: Extend concrete-encased GRC horizontally a minimum of 60 inches (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
    - 1) Stub-ups shall be minimum 4 inches (100 mm) above finished floor and no less than 3 inches (75 mm) from conduit side to edge of wall.
10. Reinforcement: Reinforce concrete-encased duct and duct bank where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
11. Forms: Use trench walls to form side walls of duct and duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
12. Concrete Cover: Install a minimum of 3 inches (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inches (50 mm) between ducts, and 4 inches (100 mm) between power and communications duct.
13. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
  - a. Start at one end and finish at the other, allowing for expansion and contraction of duct as its temperature changes during and after the pour. Use expansion fittings installed per manufacturer's written recommendations or use other specific measures to prevent expansion-contraction damage.
  - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch (19-mm) reinforcing-rod dowels extending a minimum of 18 inches (450 mm) into concrete on both sides of joint near corners of envelope.
14. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between ducts and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto duct. Allow concrete to flow to center of bank and rise in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

N. Direct-Buried Duct and Duct Banks:

1. Excavate trench bottom to provide firm and uniform support for duct and duct bank. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for duct less than 6 inches (150 mm) in nominal diameter.
  2. Install duct with a minimum of 3 inches (75 mm) between duct for like services and 6 inches (150 mm) between power and signal duct.
  3. Width: Excavate trench 12 inches (300 mm) wider than duct or duct bank on each side.
  4. Width: Excavate trench 3 inches (75 mm) wider than duct or duct bank on each side.
  5. Depth: Install top of duct or duct bank at least 36 inches (900 mm) below finished grade unless otherwise indicated.
  6. Set elevation of bottom of duct or duct bank below frost line.
  7. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
  8. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 feet (6 m) of duct. Place spacers within 24 inches (600 mm) of duct ends. Stagger spacers approximately 6 inches (150 mm) between tiers. Secure spacers to earth and duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around duct or duct bank.
  9. Elbows: Install manufactured duct elbows for stub-ups, at building entrances through floor, and at changes of direction in duct unless otherwise indicated. Encase elbows for stub-ups throughout length of elbow. Extend encasement minimum of 36 inches (900 mm) beyond elbow joints.
  10. Install manufactured GRC elbows for stub-ups, at building entrances, and at changes of direction in duct.
    - a. Couple GRC to duct with adapters designed for this purpose and encase coupling with 3 inches (75 mm) of concrete.
    - b. For equipment mounted on outdoor bases, extend GRC horizontally a minimum of 60 inches (1500 mm) from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
  11. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving duct at end of run free to move with expansion and contraction, as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfills to 4 inches (100 mm) over duct and hand tamp. Firmly tamp backfill around duct to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.
    - a. Place minimum of 3 inches (75 mm) of sand as a bed for duct and duct bank. Place sand to a minimum of 6 inches (150 mm) above top level of duct and duct bank.
    - b. Place minimum of 6 inches (150 mm) of engineered fill above concrete encasement of duct bank.
- O. Underground-Line Warning Tape: Bury conducting underground-line warning tape specified in Section 270553 "Identification for Communication Systems" no less than 12 inches (300 mm) below grade. Align tape parallel to and within 3 inches (75 mm) of centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

**3.6 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES**

- A. Precast Concrete Handhole and Manhole Installation:
1. Comply with ASTM C 891 unless otherwise indicated.
  2. Install units' level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances.
  3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch (25-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
- B. Elevations:
1. Manhole Roof: Install with rooftop at least 15 inches (380 mm) below finished grade.
  2. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch (25 mm) above finished grade.
  3. Install handholes with bottom below frost line, no less than 24 inches below grade.
  4. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
  5. Where indicated, cast handhole cover frame integrally with handhole structure.
- C. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
- D. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
- E. Damp proofing: Apply damp proofing to exterior surfaces of manholes and handholes after concrete has cured at least three days. Damp proofing materials and installation are specified in Section 071113 "Bituminous Damp proofing." After duct has been connected and grouted, and before backfilling, dampproof joints and connections, and touch up abrasions and scars. Dampproof exterior of manhole chimneys after mortar has cured at least three days.
- F. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.
- G. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches (97 mm) for manholes and 2 inches (50 mm) for handholes, for field-installed anchor bolts installed. Use a minimum of two anchors for each cable stanchion.

**3.7 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE**

- A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct and duct bank, and seal joint between box and extension as recommended by manufacturer.

- B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.5-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.
- C. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
- D. Install handholes and boxes with bottom below frost line, a minimum of 24 inches below grade.
- E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
- F. Field cut openings for duct per enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring, encircling, and in contact with, enclosure, and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
  - 1. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with a troweled finish.
  - 2. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep).

### 3.8 GROUNDING

- A. Ground underground duct, duct bank, and utility structures per Section 270526 "Grounding and Bonding for Communications Systems."

### 3.9 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections and prepare test reports:
  - 1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
  - 2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide a minimum 12-inch- (300-mm-) long mandrel equal to duct size minus 1/4 inch (6 mm). If obstructions are indicated, remove obstructions and retest.
  - 3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 270526 "Grounding and Bonding for Communications Systems."
- B. Correct deficiencies and retest as specified above to demonstrate compliance.

**3.10 CLEANING**

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris.
  
- B. Clean internal surfaces of manholes, including sump.
  - 1. Sweep floor, removing dirt and debris.
  - 2. Remove foreign material.

**END OF SECTION 270543**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 270553****IDENTIFICATION FOR COMMUNICATIONS SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. The Contractor shall label all Spaces and installed equipment such as racks, patch panels, conduit, cable, jacks/modules, terminations, junction/pull boxes and other equipment This Shall be in accordance with ANSI/TIA-606, owners requirements and as shown on the Drawings and/or required in the Specifications.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Color and legend requirements for labels and signs.
  - 2. Labels.
  - 3. Bands and tubes.
  - 4. Underground Warning Tape
  - 5. Signs.
  - 6. Cable ties.
  - 7. Fasteners for labels and signs.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for communications identification products.
- B. Samples: For each type of label and sign to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of identification products.
- C. Identification Schedule:
  - 1. Outlets: Scaled drawings indicating location and proposed designation.
  - 2. Patch Panels: Enlarged scaled drawings showing rack row, number, and proposed designations.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Comply with NFPA 70 and TIA 606.
- B. Comply with ANSI Z535.4 for safety signs and labels.
- C. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
  - 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

**2.2 COLOR AND LEGEND REQUIREMENTS**

- A. Equipment Identification Labels:
  - 1. Black letters on a white field.

**2.3 LABELS**

- A. Vinyl Wraparound Labels: Preprinted, flexible labels laminated with a clear, weather- and chemical-resistant coating and matching wraparound clear adhesive tape for securing label ends.
- B. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameters sized to suit diameters of raceway or cable they identify, that stay in place by gripping action.
- C. Self-Adhesive Wraparound Labels: Preprinted, 3-mil- (0.08-mm-) thick, vinyl flexible labels with acrylic pressure-sensitive adhesive.
  - 1. Self-Lamination: Clear; UV-, weather- and chemical-resistant; self-laminating protective shields over the legend. Labels sized such that the clear shield overlaps the entire printed legend.
  - 2. Marker for Labels: Permanent, waterproof black ink marker recommended by tag manufacturer.
  - 3. Marker for Labels: Machine-printed, permanent, waterproof black ink recommended by printer manufacturer.
- D. Self-Adhesive Labels: Vinyl, thermal, transfer-printed, 3-mil- (0.08-mm-) thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.
  - 1. Minimum Nominal Size:
    - a. 1-1/2 by 6 inches (37 by 150 mm) for raceway and conductors.
    - b. 3-1/2 by 5 inches (76 by 127 mm) for equipment.

- c. As required by authorities having jurisdiction.

## 2.4 BANDS AND TUBES

- A. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches (50 mm) long, with diameters sized to suit diameters of raceway or cable they identify, that stay in place by gripping action.

## 2.5 UNDERGROUND-LINE WARNING TAPE

- A. Tape:
1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground communications utility lines.
  2. Printing on tape shall be permanent and shall not be damaged by burial operations.
  3. Tape material and ink shall be chemically inert and not subject to degradation when exposed to acids, alkalis, and other destructive substances commonly found in soils.
- B. Color and Printing:
1. Comply with ANSI Z535.1, ANSI Z535.2, ANSI Z535.3, and ANSI Z535.4.
  2. Inscriptions for Orange-Colored Tapes: "TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL-FIBER CABLE".
- C. Tag: Type I:
1. Pigmented polyolefin, bright colored, compounded for direct-burial service.
  2. Width: 3 inches (75 mm).
  3. Thickness: 4 mils (0.1 mm).
  4. Weight: 18.5 lb/1000 sq. ft. (9.0 kg/100 sq. m).
  5. Tensile per ASTM D 882: 30 lbf (133.4 N) and 2500 psi (17.2 MPa).
- D. Tag: Type II:
1. Multilayer laminate, consisting of high-density polyethylene scrim coated with pigmented polyolefin; bright colored, compounded for direct-burial service.
  2. Width: 3 inches (75 mm).
  3. Thickness: 12 mils (0.3 mm).
  4. Weight: 36.1 lb/1000 sq. ft. (17.6 kg/100 sq. m).
  5. Tensile per ASTM D 882: 400 lbf (1780 N) and 11,500 psi (79.2 MPa).
- E. Tag: Type ID:
1. Detectable three-layer laminate, consisting of a printed pigmented polyolefin film, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright colored, compounded for direct-burial service.
  2. Width: 3 inches (75 mm).
  3. Overall Thickness: 5 mils (0.125 mm).
  4. Foil Core Thickness: 0.35 mil (0.00889 mm).
  5. Weight: 28 lb/1000 sq. ft. (13.7 kg/100 sq. m).
  6. Tensile per ASTM D 882: 70 lbf (311.3 N) and 4600 psi (31.7 MPa).
- F. Tag: Type IID:

1. Reinforced, detectable three-layer laminate, consisting of a printed pigmented woven scrim, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core; bright-colored, compounded for direct-burial service.
2. Width: 3 inches (75 mm).
3. Overall Thickness: 8 mils (0.2 mm).
4. Foil Core Thickness: 0.35 mil (0.00889 mm).
5. Weight: 34 lb/1000 sq. ft. (16.6 kg/100 sq. m).
6. Tensile per ASTM D 882: 300 lbf (1334 N) and 12,500 psi (86.1 MPa).

## 2.6 SIGNS

### A. Baked-Enamel Signs:

1. Preprinted aluminum signs punched or drilled for fasteners, with colors, legend, and size required for application.
2. 1/4-inch (6.4-mm) grommets in corners for mounting.
3. Nominal Size: 7 by 10 inches (180 by 250 mm).

### B. Metal-Backed Butyrate Signs:

1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with 0.0396-inch (1-mm) galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
2. 1/4-inch (6.4-mm) grommets in corners for mounting.
3. Nominal Size: 10 by 14 inches (250 by 360 mm).

### C. Laminated-Acrylic or Melamine-Plastic Signs:

1. Engraved legend.
2. Thickness:
  - a. For signs up to 20 sq. in. (129 sq. cm), minimum 1/16 inch (1.6 mm) thick.
  - b. For signs larger than 20 sq. in. (129 sq. cm), 1/8 inch (3.2 mm) thick.
  - c. Engraved legend with black letters on white face.
  - d. Punched or drilled for mechanical fasteners with 1/4-inch (6.4-mm) grommets in corners for mounting.
  - e. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

## 2.7 CABLE TIES

### A. General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 deg F (23 deg C) per ASTM D 638: 12,000 psi (82.7 MPa).
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black, except where used for color-coding.

### B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch (5 mm).

2. Tensile Strength at 73 deg F (23 deg C) per ASTM D 638: 12,000 psi (82.7 MPa).
  3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
  4. Color: Black.
- C. Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.
1. Minimum Width: 3/16 inch (5 mm).
  2. Tensile Strength at 73 deg F (23 deg C) per ASTM D 638: 7000 psi (48.2 MPa).
  3. UL 94 Flame Rating: 94V-0.
  4. Temperature Range: Minus 50 to plus 284 deg F (Minus 46 to plus 140 deg C).
  5. Color: Black.

## 2.8 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Paint: Comply with requirements in painting Sections for paint materials and application requirements. Retain paint system applicable for surface material and location (exterior or interior).
- B. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Self-Adhesive Identification Products: Before applying communications identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

### 3.2 INSTALLATION

- A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.
- B. Install identifying devices before installing acoustical ceilings and similar concealment.
- C. Verify the identity of each item before installing identification products.
- D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.
- E. Apply identification devices to surfaces that require finish after completing finish work.
- F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of communications systems and connected items.
- G. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from the floor.

- H. Vinyl Wraparound Labels:
  - 1. Secure tight to surface of raceway or cable at a location with high visibility and accessibility.
  - 2. Attach labels that are not self-adhesive type with clear vinyl tape, with adhesive appropriate to the location and substrate.
  - 3. Provide label 6 inches (150 mm) from cable end.
- I. Snap-Around Labels:
  - 1. Secure tight to surface at a location with high visibility and accessibility.
  - 2. Provide label 6 inches (150 mm) from cable end.
- J. Self-Adhesive Wraparound Labels:
  - 1. Secure tight to surface at a location with high visibility and accessibility.
  - 2. Provide label 6 inches (150 mm) from cable end.
- K. Self-Adhesive Labels:
  - 1. On each item, install unique designation label that is consistent with wiring diagrams, schedules, and operation and maintenance manual.
  - 2. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on 1-1/2-inch- (38-mm-) high label; where two lines of text are required, use labels 2 inches (50 mm) high.
- L. Snap-Around, Color-Coding Bands: Secure tight to surface at a location with high visibility and accessibility.
- M. Underground-Line Warning Tape:
  - 1. During backfilling of trenches, install continuous underground-line warning tape directly above cable or raceway at 12 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches (400 mm) overall.
  - 2. Limit use of underground-line warning tape to direct-buried cables.
  - 3. Install underground-line warning tape for direct-buried cables and cables in raceways.
- N. Cable Ties: General purpose, except as listed below:
  - 1. Outdoors: UV-stabilized nylon.
  - 2. In Spaces Handling Environmental Air: Plenum rated.

### 3.3 IDENTIFICATION SCHEDULE

- A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.
- B. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations with high visibility. Identify by system and circuit designation.
- C. Accessible Fittings for Raceways and Cables within Buildings: Identify covers of each junction and pull box with self-adhesive labels containing wiring system legend.

1. System legends shall be as follows:
  - a. Telecommunications
  - b. Security
  - c. Audio Visual
  
- D. Faceplates: Label individual faceplates with self-adhesive labels. Place label at top of faceplate. Each faceplate shall be labeled with its individual, sequential designation, numbered clockwise when entering room from primary egress, composed of the following, in the order listed:
  1. Wiring closet designation.
  2. Colon.
  3. Faceplate number.
  
- E. Equipment Room Labeling:
  1. Patch Panels: Label individual rows and outlets, starting to left and working down, with self-adhesive labels.
  2. Data Outlets: Label each outlet with a self-adhesive label indicating the following, in the order listed:
    - a. Room number being served.
    - b. Colon.
    - c. Faceplate number.
  
- F. Horizontal Cables: Label each cable with a vinyl-wraparound label indicating the following, in the order listed:
  1. Room number.
  2. Colon.
  3. Faceplate number.
  
- G. Locations of Underground Lines: Underground-line warning tape for copper, coaxial, hybrid copper/fiber, and optical-fiber cable.
  
- H. Instructional Signs: Self-adhesive labels.
  
- I. Warning Labels for Indoor Cabinets, Boxes, and Enclosures: Self-adhesive labels.
  1. Apply to exterior of door, cover, or other access.
  
- J. Equipment Identification Labels:
  1. Indoor Equipment: Self-adhesive label.
  2. Outdoor Equipment: Laminated-acrylic or melamine-plastic sign.
  3. Equipment to Be Labeled:
    - a. Communications cabinets.
    - b. Uninterruptible power supplies.
    - c. Computer room air conditioners.
    - d. Fire-alarm and suppression equipment.
    - e. Egress points.
    - f. Power distribution components.

**END OF SECTION 270553**

**SECTION 271100****COMMUNICATIONS EQUIPMENT ROOM FITTINGS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Backboards.
  - 2. Racks.
  - 3. Cabinets.
  - 4. Power strips.
  - 5. UPS.

**1.3 DEFINITIONS**

- A. Access Provider: An operator that provides a circuit path or facility between the service provider and user. An access provider can also be a service provider.
- B. RCDD: Registered communications distribution designer.
- C. Service Provider: The operator of a telecommunications transmission service delivered through access provider facilities.
- D. TGB: Telecommunications grounding bus bar.
- E. TMGB: Telecommunications main grounding bus bar.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for equipment racks and cabinets.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For communications equipment room fittings. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Equipment Racks and Cabinets: Include workspace requirements and access for cable connections.
3. Grounding: Indicate location of grounding bus bar and its mounting detail showing standoff insulators and wall mounting brackets.

## 1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.

## 1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Cabling installer must have personnel certified by BICSI on staff.
  1. Layout Responsibility: Preparation of Shop Drawings shall be under direct supervision of Technician.
  2. Installation Supervision: Installation shall be under direct supervision of Technician, who shall always be present when Work of this Section is performed at Project site.
  3. Field Inspector: Currently registered by BICSI as Technician to perform the on-site inspection.

## PART 2 - PRODUCTS

### 2.1 BACKBOARDS

- A. Backboards: A/C grade, 3/4 by 48 by 96 inches (19 by 1220 by 2440 mm) Plywood, fire-retardant treated, comply with requirements for plywood backing panels specified in Division 06 Section "Rough Carpentry."

### 2.2 RACKS

- A. Manufacturers: Subject to compliance with requirements.
- B. General Frame Requirements:
  1. Distribution Frames: Freestanding and wall-mounting, modular-steel units designed for telecommunications terminal support and coordinated with dimensions of units to be supported.
  2. Module Dimension: Width compatible with EIA 310 standard, 19-inch (480-mm) panel mounting.
  3. Finish: Manufacturer's standard, baked powder coat.
- C. Four Post Floor-Mounted Racks:
  1. 84" high, modular-type, steel construction.
  2. Integral 6 inch (150 mm) wide vertical cable management with metal hinged covers. Plastic removable covers are prohibited.

3. Baked powder coat finish, black in color.

### 2.3 MODULAR WALL CABINETS

1. Minimum 36" overall high x 23.4" wide x 36" deep.
2. Steel construction.
3. Treated to resist corrosion.
4. Lockable front door and rear pivot frame.
5. Louvered side panels.
6. Cable access provisions top and bottom.
7. Horizontal optical fiber cable management.
8. Grounding lug.
9. Roof-mounted, 250 (118-L/s)-cfm fan.
10. Horizontal power strip.

### 2.4 MODULAR FREESTANDING CABINETS:

1. Cabinet shall have overall dimension of 83-1/2 H x 30 W x 36 D inches.
2. Fully welded construction with static load of 10,000 lbs.
3. 14-gauge steel top and bottom panels.
4. 19 inch (482 mm) wide 11-gauge adjustable rack-rails.
5. 10-32 threaded holes on EIA standard spacing.
6. Removable and lockable steel side panels.
7. Hinged and lockable front Plexiglas and vented rear steel doors.
8. Built-in 4.25 inch (108 mm) front vertical cable management with hinged covers.
9. Adjustable feet for leveling.
10. Cable access and conduit provisions in the roof and base.
11. Grounding bus bar.
12. Four (4) Roof-mounted 4.5 inch (114 mm) fans.
13. Vertical 20Amp Power Strip.
14. Baked-polyester powder coat black finish.
15. Cable access provisions in the roof and base.
16. Baked powder coat finish, black in color.
17. All cabinets keyed alike.

### 2.5 OPTICAL FIBER HORIZONTAL CABLE MANAGEMENT FOR RACKS AND CABINETS

1. Metal, 3.5-inch-high (89 mm) (2RU) front integral wire retaining fingers and hinged front cover. Plastic removable covers are prohibited.
2. Baked-polyester black powder coat finish.
3. Provide one (1) 2RU horizontal cable manager below each optical patch panel.

### 2.6 POWER STRIPS

- A. Power Strips: Equipment rack power strips shall be 125-volt, 20-amp, 3 wire, single circuit type with 10 NEMA 5-20R single receptacle outlets on 6" centers.
  1. Horizontal rack mounting.
  2. Six, 15-A, 120-VAC, NEMA WD 6, Configuration 5-20R receptacles.
  3. LED indicator lights for power and protection status.
  4. LED indicator lights for reverse polarity and open outlet ground.

5. Circuit Breaker and Thermal Fusing: When protection is lost, circuit opens and cannot be reset.
6. Circuit Breaker and Thermal Fusing: Unit continues to supply power if protection is lost.
7. Cord connected with 15-foot (4.5-m) line cord.
8. Peak Single-Impulse Surge Current Rating: 33 kA per phase.
9. Protection modes shall be line to neutral, line to ground, and neutral to ground. UL 1449 clamping voltage for all 3 modes shall be not more than 330 V.

## 2.7 RACK MOUNT UPS

- A. UPS: Equipment UPS shall be Smart-UPS, 3000VA, 120V with SmartConnect Port.
  1. Horizontal rack mounting.
  2. Output power capacity: 2.7kWatts / 2.88kVA
  3. Rack Height: 2U
  4. Output Connections: (2) NEMA 5-20R (Battery Backup); (6) NEMA 5-15R (Battery Backup)
  5. Nominal Output Voltage: 110V, 120V, 125V
  6. Nominal Input Voltage: 110V, 120V, 125V
  7. Input Connections: NEMA L5-30P
  8. Cord Length: 8.01ft (2.4meters)

## 2.8 GROUNDING

- A. Comply with requirements in Division 27 Section "Grounding and Bonding for Communications Systems." for grounding conductors and connectors.
- B. Telecommunications Main Grounding Bus Bar:
  1. Connectors: Mechanical type, cast silicon bronze, solder less compression-type wire terminals, and long-barrel, two-bolt non-twisting connection to ground bus bar.
  2. Main Telecommunications Ground Bus (MTGB) bar: Copper, minimum 1/4-inch-thick by 4 inches wide (6 mm thick by 100 mm wide) with two vertical 5/16-inch (8-mm) holes spaced 5/8 inches (16 mm) apart.
  3. Telecommunications Ground Bus (TGB) bar: Copper, minimum 1/4-inch-thick by 2 inches wide (6 mm thick by 50 mm wide) with two vertical 5/16-inch (8-mm) holes spaced 5/8 inches (16 mm) apart.
  4. Stand-Off Insulators: Comply with UL 891 for use in switchboards, 600 V. Lexan or PVC, impulse tested at 5000 V.
  5. Provide a TMGB in the Main Equipment Room and a TGB in each Telecommunications Room.
- C. Comply with TIA-607.
- D. Comply with NECA-BICSI-607.

## 2.9 LABELING

- A. Comply with TIA-606 and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers. Reference sheet T-601 for owner approved labeling standard

**PART 3 - EXECUTION****3.1 INSTALLATION**

- A. Comply with NECA 1.
- B. Comply with BICSI's "Telecommunications Distribution Methods Manual" for layout of communications equipment spaces.
- C. Comply with BICSI's "Information Technology Systems Installation Methods Manual" for installation of equipment in communications equipment spaces.
- D. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- E. Coordinate layout and installation of communications equipment in tracks and in room. Coordinate service entrance configuration with service provider.
  - 1. Meet jointly with systems providers, equipment suppliers, and Owner to exchange information and agree on details of equipment configurations and installation interfaces.
  - 2. Record agreements reached in meetings and distribute them to other participants.
  - 3. Adjust configurations and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize configurations and space requirements of communications equipment.
  - 4. Adjust configurations and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in equipment room.
- F. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.
- G. Backboards:
  - 1. Install from 6 inches (150 mm) to 8 feet, 6 inches (2588 mm) above finished floor. If plywood is fire rated, ensure that fire-rating stamp is visible after installation.
  - 2. Paint all sides of backboard with two coats of paint, leaving fire rating stamp visible.
  - 3. Comply with requirements for backboard installation in BICSI's "Information Technology Systems Installation Methods Manual" and TIA-569.

**3.2 BE ROOM AND TR REQUIREMENTS**

- A. Provide ceiling-hung lighting with a wall switch at the door.
- B. Provide power to HVAC equipment.
- C. Provide dedicated 120-volt, 20 ampere circuits to duplex receptacles 48" AFF and 10' apart on the plywood backboards. Plywood backboards are by others.
- D. Provide dedicated 120-volt, 30 ampere circuits to NEMA L5-30R receptacles and provide dedicated 120-volt, 20 ampere circuits to power strips on the telecom equipment racks. See Standard Details.
- E. In rooms with DAS, ERRC, and Security equipment plywood backboards, provide two dedicated 120-volt, 20 ampere circuits to quad receptacles on each DAS backboard.

- F. Provide one 120-volt, 20 ampere normal power circuit to a duplex receptacle on the wall near the door.
- G. Coordinate all receptacle locations with Owner.
- H. Provide a copper ground bus bar where shown. Connect it to the unit substation room ground bus bar and to the ground bus bars in the receptacle panels feeding the telecom room receptacles. Ground cables shall be No. 6 AWG green insulated, stranded, copper. The resistance to building ground shall be 1 ohm maximum.

### **3.3 SLEEVE AND SLEEVE SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS**

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies.

### **3.4 FIRESTOPPING**

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569, Annex A, "Firestopping."
- C. Comply with BICSI's "Information Technology Systems Installation Methods Manual," "Firestopping Practices" Ch.

**END OF SECTION 271100**

**SECTION 271300****COMMUNICATIONS BACKBONE CABLING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Pathways.
  - 2. 8/125-micrometer, optical fiber cabling.
  - 3. Cable connecting hardware, patch panels, and cross-connects.
  - 4. Cabling identification products.

**1.3 DEFINITIONS**

- A. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
- B. EMI: Electromagnetic interference.
- C. IDC: Insulation displacement connector.
- D. LAN: Local area network.
- E. RCDD: Registered Communications Distribution Designer.

**1.4 BACKBONE CABLING DESCRIPTION**

- A. Backbone cabling system shall provide interconnections between communications equipment rooms, main terminal space, and entrance facilities in the telecommunications cabling system structure. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.
- B. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities. Bridged taps and splitters shall not be used as part of backbone cabling.

**1.5 PERFORMANCE REQUIREMENTS**

- A. General Performance: Backbone cabling system shall comply with transmission standards in TIA/EIA-568, when tested according to test procedures of this standard.

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings:
  - 1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
  - 2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
  - 3. Cabling administration drawings and printouts.
  - 4. Wiring diagrams to show typical wiring schematics including the following:
    - a. Cross-connects.
    - b. Patch panels.
    - c. Patch cords.
  - 5. Cross-connects and patch panels. Detail mounting assemblies, and show elevations and physical relationship between the installed components.
- C. Sustainable Design Submittals:

**1.7 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.
- C. Field quality-control reports.
- D. Maintenance Data: For splices and connectors to include in maintenance manuals.

**1.8 CLOSEOUT SUBMITTALS**

- A. Software and Firmware Operational Documentation:
  - 1. Software operating and upgrade manuals.
  - 2. Program Software Backup: On magnetic media or compact disk, complete with data files.
  - 3. Device address list.
  - 4. Printout of software application and graphic screens.

**1.9 QUALITY ASSURANCE**

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
  - 1. Layout Responsibility: Preparation of Shop Drawings and Cabling Administration Drawings by an RCDD.
  - 2. Installation Supervision: Installation shall be under the direct supervision of Level 2 Installer, who shall always be present when Work of this Section is performed at Project site.
  - 3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

- B. Testing Agency Qualifications: An NRTL.
  - 1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.
- C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.
  - 2. Smoke-Developed Index: 50 or less.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Telecommunications Pathways and Spaces: Comply with TIA/EIA-569.
- F. Grounding: Comply with ANSI-J-STD-607.

#### **1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Test cables upon receipt at Project site.
  - 1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical loss test set.
  - 2. Test optical fiber cable while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.

#### **1.11 PROJECT CONDITIONS**

- A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

#### **1.12 COORDINATION**

- A. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

### **PART 2 - PRODUCTS**

#### **2.1 PATHWAYS**

- A. General Requirements: Comply with TIA/EIA-569.
- B. Cable Support: NRTL labeled for support of cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.

1. Support brackets with cable tie slots for fastening cable ties to brackets.
2. Lacing bars, spools, J-hooks, and D-rings.
3. Straps and other devices.

## 2.2 OPTICAL FIBER CABLE

- A. Singlemode Cable Elements (OS2) shall conform to the following specification:
1. 8.3-micron core diameter, 125-micron cladding diameter (+/- 1 micron)
  2. Mode field diameter of between 8.7 and 9.3 (with +/- 0.5 micron tolerance) at 1310 nm
  3. Attenuation coefficient at 1310 nm of 1.0 db/km or less
  4. Attenuation coefficient at 1550 nm of 1.0 db/km or less
  5. Cladding non-circularity of +/- 1%
  6. Core to cladding concentricity error of or more than 0.8 micron
  7. Maximum dispersion rate of 2.80 ps/nm-km at 1300 nm
  8. Maximum dispersion rate of 17.00 ps/nm-km at 1550 nm
  9. Individual glass elements proof tested at 100 kpsi (100,000 lbs. per square inch)
  10. Number of elements as indicated on the drawings
- B. Backbone Optical Fiber Cable: Cable shall be plenum rated (OFCP) for use as an internal cable in a plenum environment. The cable shall be tight-buffered construction with optical fibers contained within 900-micron color-coded buffers. Interlocking armored cable shall be provided. The cable will be an all-dielectric construction, with a central strength member.
- C. Internal/External Cable: Provide internal/external optical fiber cable. The cable shall be riser rated (OFNR) for use as an internal cable in a non-plenum environment. The cable shall also be recommended by the manufacturer for use as an external cable suitable for installation in an underground duct. Optical fibers shall be contained within loose buffer tubes utilizing water blocking tapes or compounds surrounding these tubes. The cable will be an all-dielectric construction, with a central strength member.
- D. External Cable: Provide external optical fiber cable. The cable shall be recommended by the manufacturer for use as an external cable suitable for installation in an underground duct. Optical fibers shall be contained within loose buffer tubes utilizing water blocking tapes or compounds surrounding these tubes. The cable will be an all-dielectric construction, with a central strength member.

## 2.3 OPTICAL FIBER CABLE HARDWARE

- A. Rack Mounted optical fiber patch panel, conforming to the following specification:
1. Each panel shall be suitable for installation in EIA 19" mounting frame.
  2. Provide strain relief for each cable at the rear of the patch panel.
  3. Allow for labeling of each individual connector.
  4. Allow any individual cable to be terminated or otherwise handled without disturbing other cables.
  5. Each panel shall provide fiber handling for fiber elements, including 36" fiber reserve (service loop) inside the patch panel with or bends sharper than 2" bend radius.
  6. Provide blanking adapter plates to cover all unused spaces as necessary.

## 2.4 OPTICAL FIBER CONNECTORS

- A. Singlemode Optical Fiber Connectors. Provide singlemode duplex LC optical fiber connectors, conforming to the following specification.
1. Small form factor LC connectors
  2. Duplex, handling one pair (two elements) per connector.
  3. Blue in color.
  4. Compatible with both 900 micron buffered strands and 250micron loose tube strands.
  5. Maximum insertion loss, of mated pair, less than 0.5 dB at acceptance.
  6. Minimum return loss of greater than or equal to 40 (50 for LC) dB.
  7. Durability better than 500 matings, with a maximum increase in insertion loss of not more than 0.2 dB.
  8. Meets ANSI/TIA/EIA 568-B and ISO 11801 standards.

## 2.5 PATCH CORDS

- A. Optical Fiber. Provide one optical fiber patch cord per optical fiber pair installed. These shall be sourced from the same manufacturer as the optical fiber connectors provided as a part of this project. Each cord shall meet or exceed the optical fiber performance specifications in this document.
1. 20% of the patch cords shall be 3 feet in length and yellow in color
  2. 60% of the patch cords shall be 7 feet in length and yellow in color
  3. 20% of the patch cords shall be 11 feet in length and yellow in color
- B. The patch cords are to be passed to the client on completion of the project. Each cord is to have a manufacturer's certificate of conformance and shall be in its original, unopened packaging.

## 2.6 GROUNDING

- A. Comply with ANSI-J-STD-607.

## 2.7 IDENTIFICATION PRODUCTS

- A. Comply with TIA/EIA-606 and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

## 2.8 SOURCE QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to evaluate cables.
- B. Factory test cables on reels according to TIA/EIA-568.
- C. Factory test singlemode optical fiber cables.
- D. Cable will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

## PART 3 - EXECUTION

**3.1 ENTRANCE FACILITIES**

- A. Coordinate backbone cabling with the protectors and demarcation point provided by communications service provider.

**3.2 WIRING METHODS**

- A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.
  - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
  - 2. Comply with requirements for raceways and boxes specified in Section 260533 "Raceway and Boxes for Electrical Systems."
- B. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- C. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

**3.3 INSTALLATION OF PATHWAYS**

- A. Cable Trays: Comply with NEMA VE 2 and TIA/EIA-569.
- B. Comply with requirements for demarcation point, pathways, cabinets, and racks specified in Section 271100 "Communications Equipment Room Fittings." Drawings indicate general arrangement of pathways and fittings.
- C. Comply with TIA/EIA-569 for pull-box sizing and length of conduit and number of bends between pull points.
- D. Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.
- E. Install manufactured conduit sweeps and long-radius elbows whenever possible.
- F. Pathway Installation in Communications Equipment Rooms:
  - 1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
  - 2. Install cable trays to route cables if conduits cannot be located in these positions.
  - 3. Secure conduits to backboard when entering room from overhead.
  - 4. Extend conduits 3 inches (76 mm) above finished floor.
  - 5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.
- G. Backboards: Install backboards with 96-inch (2440-mm) dimension vertical. Butt adjacent sheets tightly and form smooth gap-free corners and joints.

### 3.4 INSTALLATION OF CABLES

- A. Comply with NECA 1.
- B. General Requirements for Cabling:
  - 1. Comply with TIA/EIA-568.
  - 2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
  - 3. Install 110-style IDC termination hardware unless otherwise indicated.
  - 4. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
  - 5. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
  - 6. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
  - 7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
  - 8. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
  - 9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
  - 10. In the communications equipment room, install a 10-foot- (3-m-) long service loop on each end of cable.
  - 11. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- C. Optical Fiber Cable Installation:
  - 1. Comply with TIA/EIA-568
  - 2. Cable may be terminated on connecting hardware that is rack or cabinet mounted.
- D. Open-Cable Installation:
  - 1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
  - 2. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.
- E. Installation of Cable Routed Exposed under Raised Floors:
  - 1. Install plenum-rated cable only.
  - 2. Install cabling after the flooring system has been installed in raised floor areas.
  - 3. Coil cable 6 feet (1800 mm) long not less than 12 inches (300 mm) in diameter below each feed point.
- F. Group connecting hardware for cables into separate logical fields.
- G. Separation from EMI Sources:
  - 1. Comply with BICSI TDMM and TIA/EIA-569 recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.

2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (610 mm).
3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).
5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).

### **3.5 FIRESTOPPING**

- A. Comply with TIA/EIA-569, Annex A, "Firestopping."
- B. Comply with BICSI TDMM, "Firestopping Systems" Article.

### **3.6 GROUNDING**

- A. Install grounding per BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with ANSI-J-STD-607.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

### 3.7 IDENTIFICATION

- A. Identify system components, wiring, and cabling complying with TIA/EIA-606.
  - 1. Administration Class: 2.
  - 2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.
- B. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- C. Paint and label colors for equipment identification shall comply with TIA/EIA-606 for Class 3 level of administration.
- D. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
- E. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.
- F. Cable and Wire Identification:
  - 1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
  - 2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
  - 3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 feet (4.5 m).
  - 4. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
    - a. Individually number wiring conductors connected to terminal strips and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device with name and number of particular device as shown.
    - b. Label each unit and field within distribution racks and frames.
  - 5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.
- G. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA/EIA 606, for the following:
  - 1. Cables use flexible vinyl or polyester that flexes as cables are bent.

**3.8 FIELD QUALITY CONTROL**

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
  - 1. Visually inspect optical fiber jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments and inspect cabling connections for compliance with TIA/EIA-568.
  - 2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
    - a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
  - 3. General Instructions.
    - a. The testing is to show beyond reasonable doubt that there are no errors, damaged or incorrectly installed components, that the installation is correctly labeled and that all the installed components meet or exceed the criteria detailed in these specifications and applicable standards. Any test that does not show that a component is satisfactorily installed, as per these specifications, shall be repeated. If a test procedure needs to be modified to satisfactorily test some components, the modification shall be submitted for approval of the Owner's Representative, prior to the tests being conducted.
    - b. Following optical fiber and data cable installation, including labeling and termination at both ends, undertake and record tests to ensure that the cabling system will perform satisfactorily in service. In addition to the tests detailed in this specification, the Installer shall carry out any additional tests that the Installer deems necessary to ensure the satisfactory operation of the telephone and data systems. The costs of these additional tests shall be borne by the Installer.
    - c. All outlets, cables, patch panels and associated components shall be fully assembled and labeled prior to testing. Any testing performed on incomplete systems shall be redone on completion of the work.
    - d. Provide the Owners' Representative with the opportunity to witness all testing. On reasonable request, the installer shall demonstrate that the test procedure competently identifies the fault conditions being tested for.
    - e. Complete and record all of the tests identified in these specifications.
    - f. Notify the Owners' Representative ten working days before the date of commencement of the cable tests. Provide details in writing, on that advance date, of proposed tests, the test schedule, equipment to be used, its certification and calibration and the names and qualifications of test personnel.
    - g. The Owner and Owners Representative shall be invited, to the first instance of each type of test conducted. In the event of a number of tests being conducted by the Installer prior to this first inspection, the Owner's Representative reserves the right to reject these tests as non-compliant and to require them to be repeated at the Installer's cost.
    - h. Personnel shall be competent in and qualified by experience or training for comprehensive OTDR operation and troubleshooting, for both copper and optical fiber testing.

- i. Include the cost of obtaining, calibrating and maintaining test equipment and the cost of carrying out and recording the tests detailed in this specification, including labor costs, in the bid sum. Or extra costs will be entertained.
- j. Ensure that all test equipment is in calibration before delivery to site and throughout the testing period. The Installer shall be responsible for ensuring that any necessary tests and rework to maintain equipment's calibration status is carried out. Any tests performed on uncalibrated test equipment shall be repeated at the Installer's cost.
- k. The test documentation shall be available for inspection by the Owners' Representative during the installation period and copies shall be passed to the Owners' Representative within five working days of completion of tests on cables in each area. The Installer shall retain a copy to aid preparation of as-built information.
- l. Failures detected during the testing shall be noted on the test results schedule, rectified and re-tested. On the fault being rectified, this shall also be noted. These notes shall not be deleted or obliterated.
- m. Rectification of all damaged cables shall include replacing damaged cables with new cables in complete runs, replacing damaged connectors or remaking poor terminations. In-line cable joints, splices or distribution points will not be acceptable except where specified in this document. All damaged cables shall be removed from site.
- n. If on submittal of the As-Built documentation there are any missing test results or incorrectly named files, the test shall be repeated at the Installer's expense.

D. Optical Fiber Cabling

- 1. Test each Optical Fiber Cable and its associated connectors. Carry out the following tests on every element of every optical fiber cable:
  - a. Length
  - b. End-to-End Attenuation
  - c. Connector Loss
  - d. Splice Loss
  - e. Power Loss
- 2. The tester shall have the following parameters:
  - a. Optical Time Domain Reflectometer (OTDR) shall be used to test every optical fiber cabling
  - b. OTDR shall be used to test optical in both directions and take the average. Provide a launch lead and far end drop off lead.
  - c. Singlemode optical fibers shall be tested at 1310nm and 1550nm
- 3. Test each optical fiber cable element and its associated connectors. Carry out the following test on every element of every optical fiber cable:
  - a. Visually check optical connectors using microscope (minimal magnification x200) to ensure that or physical damage has occurred during the installation process. There are to be or scratches on the core of the fiber or pits on the core or cladding. If any defect cannot be rectified with polishing, the connector is to be replaced.
  - b. Carry out OTDR tests on all elements at 1310 nm for singlemode. These tests shall be carried out from both ends using a near end launch lead and a far end drop lead.
  - c. The number of samples (averages) for each OTDR test shall be such that the noise amplitude is significantly less than the smallest loss of any component under test. This may vary for different cable runs, for shorter runs and fusion splices etc.; it may be necessary to run many samples.
  - d. Record the length and loss of each mated connector pair on the test results schedule for all elements.
  - e. Verify the labeling of the cable and connectors is correct.
  - f. If a element has an excessive attenuation coefficient, a sudden step in attenuation coefficient (greater than 0.2 dB) or back scatter, losses due to micro bending or

- macro bending or has any other fault then the fault on that element shall be rectified.
- g. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted like Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
  - h. Remove and replace cabling where test results indicate that they do not comply with specified requirements.
  - i. End-to-end cabling will be considered defective if it does not pass tests and inspections.
  - j. Prepare test and inspection reports.
  - k. The following table lists the pass/fail criteria for all connectors and fusion splices under test. Any component that does not pass these figures shall be re-worked or replaced.

Element Type	Maximum attenuation across mated connector pair (dB) – outward test	Maximum attenuation across mated connector pair (dB) – return test	Maximum Attenuation across fusion splice – averaged over both directions(dB)	Minimum Return Loss (dB) – outward test	Minimum Return Loss (dB) – return test
<b>MM</b>	<b>0.7</b>	<b>N/A</b>	<b>0.1</b>	<b>N/A</b>	<b>N/A</b>
<b>SM</b>	<b>0.5</b>	<b>0.5</b>	<b>0.1</b>	<b>36dB</b>	<b>36dB</b>

- l. The attenuation of each singlemode connector shall be measured in both directions.
- m. Each fusion splice shall be tested in both directions for singlemode elements. The measurements for each direction shall be averaged for the final attenuation figure for each fusion splice.
- n. The return loss must be measured in both directions for singlemode connectors. The return loss shall be greater or equal to the value shown in the table above.
- o. Any failures shall be recorded (including value of excessively lossy terminations) and the results obtained after rectification of the fault shall be recorded.
- p. Graphical printouts shall be taken of OTDR tests for each element. These printouts shall be stapled or otherwise attached to 11" x 8.5" size sheets. They shall be printed at an appropriate scale, such as 0.5 dB per division for the attenuation axis. Provide diskette copies of the OTDR traces to the owner on completion of the testing. Provide a copy of the emulation software and the appropriate license to the client.

**END OF SECTION 271300**

**SECTION 271500****COMMUNICATIONS HORIZONTAL CABLING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. UTP cabling.
  - 2. Singlemode optical fiber cabling.
  - 3. Multiuser telecommunications outlet assemblies. (MUTOA)
  - 4. Consolidation Points
  - 5. Cable connecting hardware, patch panels, and cross-connects.
  - 6. Telecommunications outlet/connectors.
  - 7. Cabling system identification products.
  - 8. Cable management system.

**1.3 DEFINITIONS**

- A. Consolidation Point: A location for interconnection between horizontal cables extending from building pathways and horizontal cables extending into furniture pathways.
- B. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.
- C. EMI: Electromagnetic interference.
- D. IDC: Insulation displacement connector.
- E. LAN: Local area network.
- F. MUTOA: Multiuser telecommunications outlet assembly, a grouping in one location of several telecommunications outlet/connectors.
- G. Outlet/Connectors: A connecting device in the work area on which horizontal cable or outlet cable terminates.
- H. RCDD: Registered Communications Distribution Designer.
- I. UTP: Unshielded twisted pair.

**1.4 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate layout and installation of telecommunications cabling with Owner's telecommunications and LAN equipment and service suppliers.
- B. Coordinate telecommunications outlet/connector locations with location of power receptacles at each work area.

**1.5 ACTION SUBMITTALS**

- A. Shop Drawings:
  - 1. System Labeling Schedules: Electronic copy of labeling schedules, in software and format selected by Owner.
  - 2. System Labeling Schedules: Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.
  - 3. Cabling administration drawings and printouts.
  - 4. Wiring diagrams to show typical wiring schematics, including the following:
    - a. Cross-connects.
    - b. Patch panels.
  - 5. Cross-connects and patch panels. Detail mounting assemblies and show elevations and physical relationship between the installed components.

**1.6 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer, qualified layout technician, installation supervisor, and field inspector.
- B. Source quality-control reports.
- C. Field quality-control reports.

**1.7 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For splices and connectors to include in maintenance manuals.
- B. Software and Firmware Operational Documentation:
  - 1. Software operating and upgrade manuals.
  - 2. Program Software Backup: On compact disk, complete with data files.
  - 3. Device address list.
  - 4. Printout of software application and graphic screens.

**1.8 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Patch-Panel Units: One of each type.
2. Connecting Blocks: One of each type.
3. Device Plates: One of each type.
4. Multiuser Telecommunications Outlet Assemblies: One of each type.

## 1.9 QUALITY ASSURANCE

- A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.
1. Layout Responsibility: Preparation of Shop Drawings and Cabling Administration Drawings, Cabling Administration Drawings, and field-testing program development by an RCDD.
  2. Installation Supervision: Installation shall be under the direct supervision of Registered Technician, who shall always be present when Work of this Section is performed at Project site.
  3. Testing Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

## 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Test cables upon receipt at Project site.
1. Test each pair of UTP cable for open and short circuits.
  2. Factory test Singlemode optical fiber cable.

## PART 2 - PRODUCTS

### 2.1 HORIZONTAL CABLING DESCRIPTION

- A. Horizontal cable and its connecting hardware provide the means of transporting signals between the telecommunications outlet/connector and the horizontal cross-connect located in the communications equipment room. This cabling and its connecting hardware are called a "permanent link," a term that is used in testing protocols.
1. TIA/EIA-568 requires that a minimum of two telecommunications outlet/connectors be installed for each work area.
  2. Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the telecommunications outlet/connector.
  3. Bridged taps and splices shall not be installed in the horizontal cabling.
- B. The work area is approximately 100 sq. ft. (9.3 sq. m) and includes the components that extend from the telecommunications outlet/connectors to the station equipment.
- C. The maximum allowable horizontal cable length is 295 feet (90 m). This maximum allowable length does not include an allowance for the length of 16 feet (4.9 m) to the workstation equipment or in the horizontal cross-connect.

## 2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA/EIA-568 when tested per test procedures of this standard.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: 25 or less.
  - 2. Smoke-Developed Index: 50 or less.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Grounding: Comply with ANSI/TIA-607.

## 2.3 UTP CABLE

- A. Provide Category 6A UTP cable for Voice and Data use. Provide Cat 6A for wireless Access Points and surveillance cameras. Each cable shall have four pairs of unshielded twisted-pair solid copper conductors. The cable shall be plenum-rated (CMP). Each cable shall meet or exceed the performance specifications in this document when installed as part of the end-to-end cabling system described in this specification.
- B. The high-performance copper cabling system shall meet or exceed the performance specifications for a Category 6A system as detailed in ANSI/TIA 568. This covers all Category 6A components installed as a part of the installation.
- C. Contractor shall coordinate final color requirements with Owner prior to installation.
- D. Description: 100-ohm, four-pair UTP.
  - 1. Comply with ICEA S-90-661 for mechanical properties.
  - 2. Comply with TIA/EIA-568 for performance specifications.
  - 3. Comply with TIA/EIA-568, Category 6A.
  - 4. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444 and NFPA 70 for the following types:
    - a. Communications Plenum Rated: Type CMP or MPP, complying with NFPA 262.

## 2.4 UTP CABLE HARDWARE

- A. General Requirements for Cable Connecting Hardware: Comply with ANSI/TIA-568, IDC type, with modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of same category or higher.
- B. Patch Panel: Modular panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cables.
  - 1. Number of Jacks per Field: One for each four-pair UTP cable indicated conductor group of indicated cables, plus spares and blank positions adequate to suit specified expansion criteria.

- C. Provide 8P8C/ RJ-45 Connector type Patch Panels, or equal conforming to the following specification:
  - 1. Suitable for mounting in standard EIA 19" racks.
  - 2. Configured with 48 jacks housed in each 2U (3.5") of usable rack space.
  - 3. Provide strain relief for each cable terminated on the connector at the rear of the patch panel.
  - 4. Allow for labeling of each individual connector.
  - 5. Allow any individual cable to be terminated or otherwise handled without disturbing other cables.
  
- D. Jacks and Jack Assemblies: Modular, color-coded, eight-position modular receptacle units with integral IDC-type terminals.
  - 1. Provide eight-position modular RJ45 TYPE jacks. Each connector shall meet or exceed the channel performance specifications in this document when installed as part of the end-to-end cabling system described in this specification. The pin outs for the jack shall conform to the T568B wiring scheme.
  - 2. Colors of work area connector colors shall be coordinated with Owner prior to installation.

## 2.5 OPTICAL FIBER CABLE

- A. Description: Singlemode, 8/125-micrometer, 2-fiber, nonconductive, tight buffer, optical fiber cable.
  - 1. Comply with ICEA S-83-596 for mechanical properties.
  - 2. Comply with TIA/EIA-568 for performance specifications.
  - 3. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:
    - a. General Purpose, Nonconductive: Type OFN or OFNG.
    - b. Plenum Rated, Nonconductive: Type OFNP, complying with NFPA 262.
    - c. Riser Rated, Nonconductive: Type OFNR, complying with UL 1666.
    - d. General Purpose, Conductive: Type OFC or OFCG.
    - e. Plenum Rated, Conductive: Type OFCP, complying with NFPA 262.
    - f. Riser Rated, Conductive: Type OFCR, complying with UL 1666.
  - 4. Conductive cable shall be steel armored type.
  
- B. Jacket:
  - 1. Jacket Color: Yellow for 8/125-micrometer cable.
  - 2. Cable cordage jacket, fiber, unit, and group color shall be according to TIA-598
  - 3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches (1000 mm).

## 2.6 OPTICAL FIBER CABLE HARDWARE

- A. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered, duplex cable connectors.
  - 1. Number of Connectors per Field: One for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit specified expansion criteria.

- B. Patch Cords: Factory-made, dual-fiber cables in 36-inch (900-mm) lengths.
- C. Cable Connecting Hardware:
  - 1. Comply with Optical Fiber Connector Intermateability Standards (FOCIS) specifications. Comply with ANSI/TIA-604-10.
  - 2. Quick-connect, simplex and duplex, Type LC connectors. Insertion loss is not more than 0.75 dB.
  - 3. Type SFF connectors may be used in termination racks, panels, and equipment packages.

## 2.7 WORK AREA FACEPLATES

- A. Wall-mounted Faceplate. Provide wall-mounted flush modular faceplate to house work area jacks, capable of housing a minimum of four jacks. The faceplate shall fit over a standard NEMA electrical 2-gang outlet box fitted with a single gang plaster ring cover and shall be office white in color.
- B. Blanking Inserts. Provide blanking inserts, matching faceplates, in enough quantities to cover all unused openings in every faceplate.
- C. Stainless Steel Wallphone Faceplate. Provide stainless steel wall-mounted flush modular faceplate to house a single work area jack. The faceplate shall fit over a standard NEMA electrical 2-gang outlet box fitted with a single gang plaster ring cover. The faceplate shall be capable of having a wall-mounted telephone fitted directly over it.
- D. Furniture Faceplate. Provide flush-mounted modular faceplate to house work area jacks. The faceplate shall fit over a modular raceway.
- E. Stainless Steel Faceplate. Provide decorative stainless-steel faceplate covers for locations where decorative wall outlets are required. Provide stainless-steel covers wherever stainless-steel electrical receptacles are provided.
- F. Floorbox Faceplate. Provide an internal blank bracket to house combinations of work area connectors in a flush-mounted floorbox. The bracket shall be provided by the manufacturer of the flush floorbox and shall be designed to fit in the floorbox installed as a part of this project.

## 2.8 GROUNDING

- A. Comply with requirements in Section 270526 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.
- B. Comply with ANSI/TIA-607.

## 2.9 IDENTIFICATION PRODUCTS

- A. Comply with TIA/EIA-606 and UL 969 for labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- B. Provide labels for connectors, cables, outlets, termination frames, patch panels, cabinets and racks.

- C. The lettering on each label shall be as large as is practicable. All labels shall be machine-produced. Hand-written labels will not be acceptable.
- D. A standard relative orientation shall be adopted for all labels unless otherwise specified.
- E. Labels shall be robust, durable, shall resist abrasion and shall be UV inhibiting, permanent and indelible. Labels shall be proof to 140 degrees Fahrenheit.
- F. All labels shall be readily visible and shall be fixed so that they remain in a visible position wherever practical.
- G. Labels shall carry the full complement of characters to designate the unique identification for the item that they identify.
- H. Outlet & Jack Labeling
  - 1. Outlet and patch panel labeling shall adhere to the following labeling convention
    - a. IDFX-PPY-ZZ (TR–Patch Panel - Port)  
Example: IDF4-PPC-29 (Closet 4, Patch Panel C, Port 29)
    - b. Closet number can be left off if only one closet per floor.
  - 2. Patch Panel Labeling
    - a. The labeling of cable shall remain the same as this number on the wiring closet end.
    - b. The labeling system shall be as follows:
    - c. IDFX-PPY-ZZ (TR–Patch Panel - Port)

## 2.10 SOURCE QUALITY CONTROL

- A. Factory test UTP cables per ANSI/TIA-568.
- B. Cable will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

## PART 3 - EXECUTION

### 3.1 ENTRANCE FACILITIES

- A. Coordinate backbone cabling with the protectors and demarcation point provided by communications service provider.

### 3.2 WIRING METHODS

- A. Install cables in pathways and cable trays except within consoles, cabinets, desks, and counters. Conceal pathways and cables except in unfinished spaces.
  - 1. Install plenum cable in environmental air spaces, including plenum ceilings.
  - 2. Comply with requirements in Section 270528 "Pathways for Communications Systems."
- B. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- C. Wiring within Enclosures:

1. Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
2. Install lacing bars and distribution spools.
3. Install conductors parallel with or at right angles to sides and back of enclosure.

### 3.3 INSTALLATION OF CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with ANSI/TIA-568.
2. Comply with BICSI ITSIMM for "Cable Termination Practices."
3. Install 110-style IDC termination hardware unless otherwise indicated.
4. MUTOA shall not be used as a cross-connect point.
5. Consolidation points may be used only for making a direct connection to telecommunications outlet/connectors:
  - a. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
  - b. Locate consolidation points for UTP at least 49 feet (15 m) from communications equipment room.
6. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
7. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
8. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
9. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, "Cabling Termination Practices". Install lacing bars and distribution spools.
10. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
11. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
12. In the communications equipment room, install a 10-foot- (3-m-) long service loop on each end of cable.
13. Pulling Cable: Comply with BICSI ITSIMM, "Pulling Cable." Monitor cable pull tensions.

C. UTP Cable Installation:

1. Comply with ANSI/TIA-568.
2. Do not untwist UTP cables more than 1/2 inch (12 mm) from the point of termination to maintain cable geometry.

D. Optical Fiber Cable Installation:

1. Comply with ANSI/TIA-568.
2. Cable may be terminated on connecting hardware that is rack or cabinet mounted.

## Open-Cable Installation:

3. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
4. Suspend UTP cable not in a wireway or pathway a minimum of 8 inches (200 mm) above ceilings by cable supports not more than 60 inches (1524 mm) apart.
5. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

## E. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Coil cable 6 feet (1800 mm) long not less than 12 inches (300 mm) in diameter below each feed point.

## F. Group connecting hardware for cables into separate logical fields.

## G. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569 for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches (127 mm).
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches (300 mm).
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches (610 mm).
3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches (64 mm).
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches (150 mm).
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches (300 mm).
4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:
  - a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
  - b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches (76 mm).
  - c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches (150 mm).
5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches (1200 mm).
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches (127 mm).

**3.4 FIRESTOPPING**

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

**3.5 GROUNDING**

- A. Install grounding per BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
- B. Comply with ANSI/TIA-607.
- C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch (50-mm) clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground. Increase to 3AWG if over 100Ft.
- D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

**3.6 IDENTIFICATION**

- A. Identify system components, wiring, and cabling complying with ANSI/ TIA -606.
  - 1. Administration Class: 2.
  - 2. Color-code cross-connect fields. Apply colors to voice and data service backboards, connections, covers, and labels.
- B. Using cable management system software specified in Part 2, develop Cabling Administration Drawings for system identification, testing, and management. Use unique, alphanumeric designation for each cable and label cable, jacks, connectors, and terminals to which it connects with same designation. At completion, cable and asset management software shall reflect as-built conditions.
- C. Comply with requirements in Section 099123 "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- D. Paint and label colors for equipment identification shall comply with TIA/EIA-606 for Class 2 level of administration.
- E. Cable Schedule: Post in prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.
- F. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, backbone pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding

conductors. Follow convention of TIA/EIA-606. Furnish electronic record of all drawings, in software and format selected by Owner.

G. Cable and Wire Identification:

1. Label each cable within 4 inches (100 mm) of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
3. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
  - a. Individually number wiring conductors connected to terminal strips and identify each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with name and number of devices as shown.
  - b. Label each unit and field within distribution racks and frames.
4. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.
5. Uniquely identify and label work area cables extending from the MUTOA to the work area. These cables may not exceed the length stated on the MUTOA label.

H. Labels shall be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in ANSI/TIA-606.

1. Cables use flexible vinyl or polyester that flex as cables are bent.

### 3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
1. Visually inspect UTP materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments and inspect cabling connections for compliance with ANSI/TIA-568.
  2. Visually confirm Category 6A, marking of outlets, cover plates, outlet/connectors, and patch panels.
  3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
  4. Test UTP backbone copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
    - a. Test instruments shall meet or exceed applicable requirements in ANSI/TIA-568. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified

in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

5. UTP Performance Tests:
  - a. Test for each outlet and MUTOA. Perform the following tests per ANSI/TIA-568:
    - 1) Wire map.
    - 2) Length (physical vs. electrical, and length requirements).
    - 3) Insertion loss.
    - 4) Near-end crosstalk (NEXT) loss.
    - 5) Power sum near-end crosstalk (PSNEXT) loss.
    - 6) Equal-level far-end crosstalk (ELFEXT).
    - 7) Power sum equal-level far-end crosstalk (PSELFEXT).
    - 8) Return loss.
    - 9) Propagation delay.
    - 10) Delay skew.
6. Optical Fiber Cable Performance Tests: Perform optical fiber end-to-end link tests per TIA/EIA-568.
7. Final Verification Tests: Perform verification tests for UTP and optical fiber systems after the complete communications cabling and workstation outlet/connectors are installed.
  - a. Voice Tests: These tests assume that dial tone service has been installed. Connect to the network interface device at the demarcation point. Go off-hook and listen and receive a dial tone. If a test number is available, make and receive a local, long distance, and digital subscription line telephone call.
  - b. Data Tests: These tests assume the Information Technology Staff has a network installed and is available to assist with testing. Connect to the network interface device at the demarcation point. Log onto the network to ensure proper connection to the network.
- D. Document data for each measurement. Data for submittals shall be printed in a summary report that is formatted like Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
- E. End-to-end cabling will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

**END OF SECTION 271500**

**SECTION 273124**  
**IP TELEPHONE SYSTEM**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 00 and Division 01 Specifications Sections, apply to this Section.

**1.2 SUMMARY**

- A. This section includes a VoIP Telephone solution . The handsets are to include necessary hardware, licenses, etc. Voice mail will be set up and programmed, licenses are to be provided for each phone.
- B. This section includes providing all the equipment specified within this section and installing all physical connections for the system to be fully operational and integrated with other systems specified within the building. Provide installation of the equipment per this specification. Provide all documentation required within this document and onsite technical assistance for, what has been provided, during the owner's implementation and integration to the system. All programming and configuration for the IP voice communication system shall be coordinated with the owner.
- C. Provide all analog connections within the building to each device needed as defined in the construction documents and specifications from the local service provider demarcation.
- D. Manufacturer support for Open System Standards: The manufacturer should be committed to supporting open system industry standards, such as H.323, 802.1p and 802.1q, MGCP, TAPI, JTAPI, etc.
- E. Voice Messaging: Scalable, cost-effective voice messaging solution that supports industry standards, such as AMIS-A, VPIM, LDAP and IMAP.
- F. Provide all additional devices, connections, and programming as needed for intercom devices and auxiliary annunciator as shown on drawings.
- G. The telephone system shall adhere to the following:
1. Keri's Law – requires direct dial 911 without using a code.
  2. Ray Baum's Act – requires the call origination location be identified

**1.3 SCOPE OF WORK**

- A. Provide all new phones and provide limited call availability via local POTS lines in the event of communications failure.
- B. Coordinate installation with Owner.
- C. The VoIP telephone system shall be inter-connected with the Central Sound System to provide paging, time tone and emergency tone activation from any telephone on the system with proper access code.
- D. UTP patch cables to connect telephone system patch panel/cabling in each wiring closet are furnished under the specification Section 27 15 13. This contract shall be responsible for installing and labeling all patch cables between patch panels to activate telephone handsets.

**1.4 SYSTEM DESCRIPTION**

- A. Contractor shall coordinate the installation of central office services. The campus system shall provide a single point of connection to incoming telephone services and the ability to share these incoming lines with each building.
- B. System shall provide analog trunk ports and access to the paging system. Provide hardware and wiring to interface with building paging system. Provide eight (8) interconnection ports in each building.
- C. Provide Power Failure Transfer (PFT) unit for 911 and emergency back-up including one (1) PFT emergency backup phone.
- D. Provide five (5) analog lines within the building. Coordinate exact location with Owner.

**1.5 QUALITY ASSURANCE**

- A. All equipment shall be UL listed.
- B. Compliance with the National Electric Code.
- C. Compliance with FCC rules.
- D. Comply with latest NENA E-911 requirements.
- E. The Contractor shall maintain a fully equipped, factory certified service organization capable of providing full maintenance and service of the installed system within 24 hours. This facility shall be available for inspection by the Engineer.
- F. The Contractor shall employ factory trained service personnel for the service and maintenance of the system.

- G. All materials furnished under this contract shall be new, of highest quality, and shall be of a regularly manufactured line, currently in production at the time of installation.

#### **1.6 CONTRACTOR QUALIFICATIONS**

- A. The handsets shall be furnished, installed and programmed by a contractor who meets all the requirements listed herein. It shall not be acceptable for the system contractor to utilize a subcontractor for any portion of the work, unless the subcontractor has been approved in writing by the Architect/Engineer based upon adherence to the qualifications listed herein.
- B. The Contractor shall maintain a fully equipped, factory certified service organization capable of providing full maintenance and service of the installed system within 24 hours. This facility shall be available for inspection by the Architect/Engineer.
- C. The Contractor shall employ factory trained service personnel for the service and maintenance of the system.
- D. The Contractor shall have had a minimum of one (1) year experience with the specified telephone system. This experience shall include having completed a minimum of two (2) installations in the past 12 months of similar size and scope. The Contractor shall provide references and contact information for the project sites in which the qualifying installations occurred.

#### **1.7 SHOP DRAWINGS**

- A. A complete list of materials with model and part numbers and references to the Part 2 specification paragraph numbers.
- B. Manufacturers Data Sheets of all products and cabling, specific to the project. Data sheets shall show the exact parts, with model numbers and options as required and clearly identified.
- C. Qualifications
  - 1. A statement of contractor's qualifications to verify compliance with other provisions within the specifications, unless the contractor has been pre-approved.
- D. Software data—The data package shall consist of manufacturer's data sheets of all system and application software being provided with sufficient information to verify that all specified features and functions are being addressed.

#### **1.8 PROJECT CONDITIONS**

- A. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted below under the following conditions and then only after arranging temporary utility services according to requirements indicated:

- B. Notify Architect not less than two days in advance of proposed utility interruptions.
- C. Do not proceed with utility interruptions without Architect's written permission.

### **1.9 COORDINATION**

- A. Coordinate Work of this Section with the owner, owner's integrator, owner's ITC-site, CM and Architect.
- B. Meet jointly with representatives of above organizations and Owner's representatives to exchange information and agree on details of equipment arrangements and installation interfaces.
- C. Record agreements reached in meetings and distribute record to other participants.
- D. Adjust arrangements and locations of distribution frames, patch panels, and cross connects in equipment rooms and wiring closets to accommodate and optimize arrangement and space requirements of all related equipment.
- E. Confirm a schedule time frame that all equipment will be installed, all documentation will be delivered that is needed for the implementation, and service provider requirements and installation time frame.
- F. Coordinate telephone system with requirements of local telephone exchange carrier. The telephone service shall be a 10Mbit fiber connection through the A-site local router then to the router specified within, and analog lines for the router for remote survivability. Connect all analog lines assigned by owner to router. Remaining lines will connect to auxiliary devices as indicated by the owner.
- G. Coordinate with all other trades and provide connection interfaces as applicable.
- H. Coordinate all power and load requirements with UPS requirements so that all UPS equipment is properly sized for submittals.

### **1.10 WORK BY THE LOCAL TELEPHONE COMPANY**

- A. The local telephone company shall provide the main entrance from their telephone grid outside through the building to the telephone room as shown on the Drawings.
- B. This Contractor must coordinate all requirements with the local serving utilities.

### **1.11 CHARGES AND REQUIREMENTS BY THE LOCAL TELEPHONE COMPANY**

- A. The Technology/Telephone System Contractor shall install the telephone enclosure, conduits, cable and trench complete as directed or as required by the local telephone company. Additionally, the contractor shall initiate the calls for the owner as they engage the local Telco to adapt and/or upgrade their telephone service.

**1.12 SYSTEM WARRANTY**

- A. Provide three (3) year warranty of the IP telephones against defects in material and workmanship. If any defects are found within the warranty period, the defective equipment shall be replaced at no extra cost to the Owner for parts or labor.
- B. The telephone vendor shall be responsible to provide service during normal working hours within (8) hours after notification by the Owner for normal service or within (2) hours for emergency service. Emergency service is defined as the loss of 25% or more of outside line capacity, the loss of 25% or more of telephone stations, or the loss of the main console.
- C. If equipment cannot be repaired within 24 hours of service visit. Contractor shall provide "loaner" equipment to the Owner at no charge.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. This specification is intended to establish a carefully planned minimum level of quality and performance for all components, and will be rigorously enforced by the Owner. Acceptable manufacturers of components described herein are:
  - 1. Ericsson-LG iPECS UCP
  - 2. NEC
  - 3. Mitel

**2.2 IP TELEPHONES**

- A. This specification is intended to establish a carefully planned minimum level of quality and performance for all components and will be rigorously enforced by Owner.
- B. General Requirements
  - 1. The telephone sets shall be multifunction fully digital sets with full duplex speakers.
  - 2. All telephones shall receive Power-Over-Ethernet from powered switches. All telephone sets shall be IEEE 802.3af compliant. Power supplies at the handsets are not acceptable.
  - 3. All telephone sets shall be the latest model available.
  - 4. Provide all required licenses for all telephones.
  - 5. System shall be provided with all equipment to support connections to equipment such as distance learning, video conferencing equipment, digital fax, etc.
  - 6. As a minimum, the system telephone sets shall support the following features:
  - 7. Access Codes (for restricting long distance or local calling)
  - 8. All call, zone call, and room call Voice Page with integration to PA system.

9. Automatic Dialing Buttons
10. Automatic Hold/Park Recall
11. Automatic Location Identifier
12. Automatic Number Identification Support
13. Automatic Off-Hook Line Selection
14. Background Music (while on hold)
15. Call Accounting
16. Call Conferencing
17. Call Forwarding on busy
18. Call Hold.
19. Call Transfer
20. Direct Inward Dialing
21. Do Not Disturb
22. Flash Button
23. Handsfree full duplex speakerphone
24. Hearing Aid Compatible
25. Malicious Call Trace/Hold
26. Message Waiting Light
27. Modular Handset and Line Cord
28. On-Hook Dialing
29. Programmable panic button
30. Repeat Last Number Dialed
31. Ringing Line Preference
32. Saved Number Redial
33. Station Speed Dial (50 Numbers Per Station)
34. User Programmable Feature Buttons
35. Volume Control

### **2.3 ATTENDANT CONSOLE TERMINAL—PROVIDE TWO (2) IN THE MAIN OFFICE AREA**

- A. LIP-9030 Ericsson-LG iPECS with LIP-9048DSS side car.
- B. IP multi-lined keyset
- C. Minimum of 32 Character LCD Display.
- D. Display day, date and time.
- E. Display call durations.
- F. Display caller name and extension/telephone number and incoming caller-ID information.
- G. Hands free, Full-Duplex, Speakerphone.
- H. Pre-programmed E-911 button that automatically puts the phone into a hands-free mode and initiates a 3-way conference call with the Emergency Attendant Console, records

and sends email alerts as well as provide overhead page alerts while contacting the local 911 center.

- I. Shall have a system display panel capable of showing all system extension numbers and their status and capable of extending calls via single touch operation.
- J. Provide a button and LED in attendant console for each telephone in the building. This will show which phones are in use in the system and will allow "one button" connection to all extensions. A separate console must be provided for each building.
- K. Provide any additional licenses required.
- L. Provide each set with a 12' connector cord to interface with the specified voice jacks.
- M. Provide Unit Price

#### 2.4 EXECUTIVE DISPLAY DIGITAL VOICE TERMINAL—(MAIN OFFICE AREAS)

- A. Ericsson-LG iPECS LIP-1020i
- B. Provide executive phone for all administrative areas, conference rooms, small group rooms, and offices.
- C. At least sixteen characters display window.
- D. At least **sixteen** user programmable keys.
- E. Hands free, Full-Duplex, Speakerphone.
- F. Display caller name and extension/telephone number.
- G. Message Waiting Lamp.
- A. Pre-programmed E-911 button that automatically puts the phone into a hands-free mode and initiates a 3-way conference call with the Emergency Attendant Console, records and sends email alerts as well as provide overhead page alerts while contacting the local 911 center.
- B. Provide any additional licenses required.
- C. Provide Unit Price
- D. Provide six (6) additional phones and licenses

**2.5 STANDARD DISPLAY DIGITAL VOICE TERMINAL (SPORTING & KITCHEN OFFICES)**

- A. Ericsson-LG iPECS LIP-9008 (10/100) or LIP-9008G Gigabit
- B. Provide one standard 8 button phone for all classrooms, labs, and other areas not covered above in section 2.3.
- C. At least sixteen characters display window.
- D. At least eight (8) programmable keys.
- E. Hands free, Full-Duplex, Speakerphone.
- F. Display caller name and extension/telephone number.
- G. Message Waiting Lamp.
- H. Pre-programmed E-911 button that automatically puts the phone into a hands-free mode and initiates a 3-way conference call with the Emergency Attendant Console, records and sends email alerts as well as provide overhead page alerts while contacting the local 911 center.
- I. Provide any additional licenses required.
- J. Provide Unit Price
- K. Provide six (6) additional phones and licenses

**2.6 STANDARD DIGITAL WIRELESS PHONE (ALL MEP AND NON-OFFICE AREAS)**

- A. Ericsson-LG iPECS LG Smart Phone with UCS Mobile Client on Android Mobile Device.
- B. Provide voicemail
- C. Provide initiate call
- D. Provide Conference capabilities
- E. Provide Transfer capabilities
- F. Provide Mute capabilities
- G. Provide Forwarding capabilities
- H. 2-Line alphanumeric display
  - 1. Icons
  - 2. Function keys
  - 3. Status indicators
  - 4. Speed dial options

- I. Provide any additional license required.
- J. Provide 6 wireless sets and licenses to be placed where owner determines.
- K. Provide Unit Price

## **2.7 Analog Telephone Adapter**

- A. UCP-SLTM4
- B. 4-port analog telephone adaptor to turn analog phones into IP phones.
- C. Power supply
- D. Provide a minimum of one.

## **2.8 LIGHTNING PROTECTION**

- A. Provide UL listed combination primary/secondary protector between the Telco. DMARC primary protector and the telephone switch CO port connections. Protector shall provide solid state surge protection and PTC self-resetting sneak current protection. Coordinate proper surge voltage rating for incoming lines with telephone company prior to application.

- 2.9 Base bid includes 5% spare Digital telephones and one spare digital Executive telephone. Spare devices shall be turned over to Owner at time of final acceptance.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. FCC registration number and certificate shall be provided.
- B. Install systems in accordance with NEC 760 and other applicable codes. Install system to comply with drawings and final shop drawings in compliance with manufacturer instructions. Provide all required hardware and labor for rack mounting of head-end system components.
- C. Coordinate complete system installation, and Technology Head End Integration with Owner and other Technology Trades.
- D. Coordinate installation and interconnect with local and long-distance Service
- E. Provider (SP). Contractor shall be responsible for all final cross connects and system Data Base loading and verification.

- F. Contractor shall connect to, and interface with the in-house paging system and provide paging from any telephone handset.
- G. Connect system to IP Data Network and program required VLANs and 803.11e support.
- H. Interconnect with existing systems via VoIP trunking.
- I. Integrate system with Owner's Numbering Plan.

### **3.2 NETWORKING LICENSE**

- A. Provide all necessary IP networking licenses as required to provide a complete working solution for all network devices.
- B. Provide a network licenses for spare equipment and all identified attic stock.

### **3.3 GROUNDING**

- A. Ground cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
- B. Bond all rack mounted equipment to the Common Grounding Network within the equipment rack or cabinet using an equipment bonding jumper kit. The cabinet/rack grounding busbar shall be bonded to the electronic equipment bonding pad using a minimum #6 AWG insulated copper bonding conductor with a green jacket and yellow horizontal stripe using compression style lugs. Using the manufacture supplied grounding lug when available, attach one end of the binding jumper to the equipment bonding pad. Attach the remaining end to the equipment grounding busbar in the equipment rack/cabinet. If an equipment bonding pad is not available, follow the equipment manufacturer's recommendations for bonding the equipment chassis. Provide bonding conductor length as required to reach the grounding busbar.

### **3.4 SYSTEM PROGRAMMING**

- A. Contractor shall provide the Owner/architect with a complete set of forms for the
- B. entire system and extension feature for final programming.
- C. Final programming of the system shall be co-developed between the Owner/architect and the contractor and must be approved prior to being implemented for system start-up.
- D. Contractor shall supply the "latest" software updates as part of the system
- E. configuration for two (2) years after system acceptance.

**3.5 IMPLEMENTATION**

- A. Provide on-site technical assistance that is capable of all installation criteria within this specification for the scheduled implementation by the owner and the owner's owner representative. Assist with any identification of system components and connections as needed. On-site assistance is to assure there are no issues with the scope of this specification during the implementation.
- B. The implementation will include final system configuration by the owner's representative, and testing with owner of all call routing, user functions from each handset device, remote survivability testing, paging, and all other analog and telephone adapter devices.
- C. The owner's representative will perform the following:
  - 1. Review topologies and bill of materials.
  - 2. Configure the following:
    - a. Network switches
    - b. UCP gateways
    - c. UCP call Manager
    - d. Telephone sets
    - e. Develop dial plan.
    - f. Final testing of all network devices.
    - g. Phone feature deployment.
    - h. End-user Training.

**3.6 FIELD QUALITY CONTROL**

- A. Testing agency to perform the following field quality-control testing:
- B. A factory trained/certified technician shall test connectivity and operation of instruments at the completion of the installation of the telephone equipment and shall provide the Owner and Architect/Engineer a checklist test report showing that the system is fully operational.
- C. Notify the Owner and Construction Manager/Engineer at least 72 hours prior to start of the test.
- D. All deficiencies discovered in cabling, wiring, etc. provided by other trades, shall be reported to the Owner and Architect/Engineer for correction by the trade providing the work.
- E. All deficiencies discovered with equipment provide within this specification shall be replaced, such as equipment dead on arrival or failing during burn in time.

**3.7 IDENTIFICATION/LABELING**

- A. Contractor shall identify all major items of equipment and tag all cables with permanent type markers to denote equipment served. Cables shall be tagged at both ends and at each point where the cable is administered.

- B. The Contractor shall be responsible for generating and programming the labeling for camera information within the recorder software.
- C. All labeling and recording shall be approved by the Owner and the Engineer prior to application.

### **3.8 TELEPHONE SERVICE**

- A. Provide all labor and material required to make all final connections to the telephone service provider(s) Demarcation location and equipment. Coordinate with Owner selected telephone service provider(s).

### **3.9 TRAINING**

- A. Contractor shall provide a minimum of sixty (60) hours of system user training. Sixteen (16) hours of attendant console training and forty hours (40) of system programming and administration training to the Owner. Training shall be provided to all staff and shall be scheduled in advance with the Owner.
- B. Provide all training and utilize specified manuals and record documentation. Training shall be provided to all staff at the project site and coordinated with the Owner.
- C. Training shall utilize the equipment provided at the project site. Coordinate use, time and availability of equipment with the Owner.
- D. Demonstrate adjustment, operation and maintenance of the system including each component and control.
- E. All training shall be recorded and stored in digital content for the Owner's future use. Contractor is responsible for providing required video recording and digital encoding equipment.

### **3.10 PROJECT RECORD DOCUMENTS**

- A. Submit in accordance with Section 27 05 00 for the complete system. Record drawings shall include and indicate all components of the installed systems, including the routing of conduit, raceways and cable.
- B. Drawings shall be coordinated and referenced to the O&M manuals and related wiring diagrams. Floor plan drawings shall be 0.125"-1' AutoCad drawings to provide for clear, legible documents. Provide the Owner a digital copy containing all final AutoCad drawing files of the entire system and the floor plans.
- C. Component Operation Manual including technical data sheets
  - 1. Control Settings
  - 2. Amplifier load

- D. Information for reordering replacement parts
  - 1. Provide a replacement parts list
  - 2. Provide a list of recommended parts, tools, and instruments for testing maintenance purposes.
  
- E. Wiring Diagrams/details
  - 1. System functional block diagrams
  - 2. System schematic diagrams
  - 3. System wiring list
  - 4. Identify terminals to facilitate installation, operating and maintenance
  
- F. System Operating Instructions: Provide a clear and concise description of operation which gives, in detail, the information required to properly operate the equipment and system.
  
- G. Component Service Manual: Include information for testing, repair, troubleshooting, assembly, disassembly, and required/recommended maintenance intervals.

END OF SECTION 273123

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 27 32 44 - EMERGENCY RESPONDER RADIO COVERAGE TESTING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The General Conditions, Special Conditions, Instruction to Bidders and all applicable portions of Division 1 – GENERAL are part of this Section as if written in full herein. Contractor is held to have familiarized himself with these provisions contained herein.

**1.2 DESCRIPTION OF WORK**

- A. Provide radio frequency testing for emergency responder radio coverage throughout the building for all first responder radio frequencies in use by the Authority Having Jurisdiction.

**1.3 QUALITY ASSURANCE**

- A. Codes and Regulations
1. Georgia Fire Code
  2. IFC Section 510
  3. IFC Section 510.5.3 Acceptance Test Procedure
  4. NFPA 1NFPA 72 – Chapter 24
  5. TIA TSB-88.1-D – Wireless Communications Systems Performance in Noise and Interference - Limited Situations Part 1: Recommended Methods for Technology - Independent Performance Modeling
- B. Qualifications
1. A valid FCC issued general radio operators license and certification of in-building system training issued by a nationally recognized organization, school or a certificate issued by the manufacturer of the equipment being installed; or
  2. A professional engineer license or certification (i.e., P.E. or RCDD).
  3. OEM Certification
- C. Definitions
1. AHJ – Authority Having Jurisdiction
  2. RF – Radio Frequency
  3. DAQ – Delivered Audio Quality

**PART 2 – PRODUCTS**

- A. Test Equipment
1. Anritsu Spectrum Analyzer

**PART 3 - EXECUTION**

### 3.1 SUBMITTALS

- A. Contractor shall submit the following:
  - 1. Copies of Contractor certifications as required in section 1.03-B.
  - 2. A list of the frequencies to be tested.
  - 3. Cut sheets of the instruments used for testing. Instruments shall be approved by the Owner or Engineer.
  - 4. Contact information of the AHJ official.

### 3.2 TESTING

- A. Before testing, the Contractor shall verify and/or coordinate the following with the AHJ:
  - 1. All frequencies are used by the first responder radio system.
  - 2. Utilization of repeaters or boosters in the radio system, and if so, where they are located.
  - 3. AHJ representation during the test. If representation is required, any costs involved shall be included in the Bid.
- B. The radio frequencies used by the AHJ shall be tested to ensure two-way coverage on each floor of the building to ensure the following:
  - 1. Measurements in 95 percent of all areas on each floor of the building meet the following signal strengths:
    - a. Minimum signal strength into the building shall be sufficient to provide coverage not less than DAQ 3.4.
    - b. Minimum signal strength out of the building shall be sufficient to provide not less than DAQ 3.4
- C. The following testing procedure shall be followed:
  - 1. RF Signal Strength Test
    - a. The test shall be conducted using a calibrated portable radio of the latest brand and model used by the public agency in question, talking through the agency's radio communication system.
    - b. Contractor shall verify with public agency officials on which frequencies are to be tested.
    - c. If the presence of public agency officials is required to be present for the test, it shall be at no expense to said agency.
    - d. Each floor of the building shall be divided into a minimum of twenty (20) approximately equal test areas.
    - e. A spot located approximately in the center of each test area shall be selected for the test, then the radio will be keyed to verify two-way communications to and from the outside of the building through the public agency's radio communication system. Once the test spot has been selected, that spot shall represent the entire test area and failure in the selected spot shall be considered failure of that test area. Prospecting for a better spot within the test area is not permitted.
    - f. Measurements shall be made with the antenna held in a vertical position

- at three (3) to four (4) feet above the floor to simulate portable radios worn on the belt or turnout coat pocket.
- g. A maximum of one (1) or (5 percent) of nonadjacent test areas shall be allowed to fail the test per floor.
- h. In the event that three or more (or >5 percent) test areas fail the 20-area test, in order to be more statistically accurate, the floor shall be divided into forty (40) equal test areas. In such an event, a maximum of two (2) or (5 percent) nonadjacent areas will be allowed to fail the test per floor. If the system fails the 40-area test, the system shall be altered to meet the 95 percent coverage requirement per floor.
- i. The gain values of all amplifiers shall be measured, and the test measurement results shall be kept on file with the building Owner so that the measurements can be verified during annual tests.
- j. As part of the installation, a spectrum analyzer or other suitable test equipment shall be utilized to ensure spurious oscillations are not being generated by the subject signal boosters.

## 2. Signal Quality Test

- a. For quality purposes, DAQ readings shall be taken at the same time as the above RF signal strength measurements. The DAQ scale is as follows:
  - 1) DAQ 1: Unusable. Speech present but not understandable.
  - 2) DAQ 2: Speech understandable with considerable effort. Requires frequent repetition due to noise or distortion.
  - 3) DAQ 3: Speech understandable with slight effort. Requires occasional repetition due to noise or distortion.
  - 4) DAQ 3.4: Speech understandable without repetition. Some noise or distortion present.
  - 5) DAQ 4: Speech easily understandable; little noise or distortion.
  - 6) DAQ 4.5: Speech easily understandable; rare noise or distortion.
  - 7) DAQ 5: Perfect; no distortion or noise discernible

### 3.3 DOCUMENTATION

- A. Upon completion of the testing, the Contractor shall provide test results for approval by the Owner or Engineer. The test results shall be in the form of building floor plans with each floor overlaid with the test grid used in the testing procedures above. Each grid on the drawings shall show the test results measured for uplink signal, downlink signal and DAQ measurement for that grid square.
- B. Test results shall indicate weather conditions at the time of the testing (i.e., temperature, humidity, fog, rain, snow, etc.).
- C. Small scale drawings (11" x 17" maximum) of these same test results shall also be included in the O&M documentation.

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 273523****EMERGENCY RESPONDER RADIO COVERAGE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 260513 - Medium, Low & Control Voltage Cables.
  - 2. Section 260526 - Grounding and Bonding for Electrical.
  - 3. Section 270526 - Grounding and Bonding for Communications Systems
  - 4. Section 270528 - Pathways for Communications Systems
  - 5. Section 273524 – Cellular Signal Reinforcement DAS

**1.2 SUMMARY**

- A. Scope of Work:
  - 1. The work under this section includes all final design, material, equipment, supplies, labor, testing, and accessories required to furnish and install a complete Emergency Responder Radio Coverage system (ERRC) as indicated on the drawings and as specified herein. These systems shall be defined as all cables, equipment, products, and etcetera, as indicated on the drawings and mentioned in these specifications.
  - 2. **It is the intent of the Drawings and Specifications, which are presented in a "design-build" format, for the Contractor to design, provide and install a complete, fully operational, and tested system.**
  - 3. All miscellaneous system components including, but not limited to, cables, cable supports, termination equipment, punch blocks, patch panels, patch cords, device outlets, ladder runway, backboards, equipment racks, equipment cabinets, enclosures, terminal cabinets, equipment grounding, and any other related items shall be furnished and installed complete under this section, such that the system shall perform all functions listed herein in compliance with all of the specified requirements.
  - 4. Schedule is paramount to the project's success. With this, the Contractor will have to be a team player, continually working with the team to facilitate expeditious design, procurement, and construction processes.
  - 5. This project will be performed in a phased construction format. Each phase of construction will be completely installed, labeled, and tested, to the greatest extent physically possible, before moving to the next phase.
    - 1. Enables 700Mhz, analog and digital Public Safety 2-way communication support within each building.
- B. Project Description
  - 1. We are seeking out more cost-efficient methods of delivering all services in various campus buildings.

2. This Section includes the requirements for an Emergency Responder Radio System for the purposes of amplifying Emergency Responder radio signals to achieve minimum signal strength in 95% of all areas on each floor of the building.
3. Final acceptance and approval are required from the local Fire Department in writing prior to contract closeout.
4. Outline:
  - a. The Contractor shall develop all ERRC Design Documentation in accordance with this document.
  - b. To support the deployments planned for construction, the Contractor shall provide survey and design services for each indoor building as identified. Services shall include:
    - 1) Pre –Installation: (Design Services)
    - 2) Secure approval and schedule from the Owner to conduct an on-site walk survey per approved plan.
    - 3) Plan and conduct on-site, building-wide, location-specific measurements of existing macro-cell signal and noise levels for wireless service providers (WSPs). Survey can be conducted during normal business hours.
    - 4) Using data collected, prepare an ERRC report that:
      - a) Defines areas in which reinforcement will be required, to meet signal level requirements and that will not cause issues to the Owner or the AHJ.
      - b) Recommended antenna placement, including a signal heat map, to reinforce first responder radios with the exterior of the building. iBwave native files shall include collected and normalized survey data, design files, and the building/signal model. Native iBwave files shall be provided to the Owner.
      - c) Identifies preliminary antenna placement, including a signal heat map, based on a predictive analysis done in iBwave.
  - 5) Submit initial draft of report for the Owner to review, provide written response to Owner review comments, and update report to incorporate Owner comments
  - 6) System Coverage Drawings:
    - a) XXX - TBD
  - 7) Additional Requirements:
    - a) Supplier shall provide all items, instrumentation, materials, equipment, vehicles, and personnel to conduct the survey and inspections.
    - b) Supplier shall comply with all applicable federal, state, and local codes, regulations, and ordinances, including, but not limited to, OSHA regulations.
  - 8) Revit Documentation
    - a) Once the iBwave design is completed, some venues will require conversion of the iBwave to AutoCAD shop level drawings for university review/approval and installation cost estimation efforts. If requested, the Contractor shall be responsible for:
      - b) Converting the iBwave design to Revit.
      - c) Providing detail in Revit of cable routes, mounting details, and related items such that sufficient information is available for the Owner to bid for system installation.

### 1.3 DEFINITIONS

- A. Bi-Directional Amplifier BDA: Device used to amplify band-selective or multi-band RF signals in the uplink, to the base station for enhanced signals and improved coverage.
- B. Emergency Responder Radio Coverage System: A two-way radio communication system installed to assure the effective operation of radio communications systems for fire, emergency medical services or law enforcement agencies within a building or structure. A system used by firefighters, police, and other emergency services personnel.
- C. Delivered Audio Quality Definitions (DAQ): This is a universal standard often cited in system designs and specifications.
  - 1. DAQ 1: Unusable, speech present but unreadable.
  - 2. DAQ 2: Understandable with considerable effort. Frequent repetition due to noise/distortion.
  - 3. DAQ 3: Speech understandable with slight effort. Occasional repetition required due to noise/distortion.
  - 4. DAQ 3.5: Speech understandable with repetition only rarely required. Some noise/distortion
  - 5. DAQ 4: Speech easily understood. Occasional noise/distortion.
  - 6. DAQ 4.5: Speech easily understood. Infrequent noise/distortion.
  - 7. DAQ 5: Speech easily understood. Coupled Bonding Conductor (CBC) – The term "Coupled Bonding Conductor" shall mean a bonding conductor placed, e.g., strapped, on the outside of any technology cable, used to suppress transient noise.
- D. FCC: Federal Communications Commission
- E. OET 65 Standards: FCC's Bulletin 65 provides Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.
- F. Public Safety/First Responder: Public Safety or First Responder agencies which are charged with the responsibility of responding to emergency situations. These include, but are not limited to law enforcement departments, fire departments, and emergency medical companies.

### 1.4 QUALITY ASSURANCE

- A. Codes, regulations, and standards referenced in the Section are:
  - 1. NFPA 1 – The National Fire Code
  - 2. NFPA 70 – The National Electrical Code
  - 3. NFPA 101, Life Safety Code, the California Basic Building Code, and Local Code and Building Authority requirements.
  - 4. NFPA 72-07 National Fire Alarm Code
  - 5. NFPA 1221
  - 6. FCC 47 CFR Private Land Mobile Radio
  - 7. 90.219-2007 Services-Use of Signal Boosters
  - 8. IFC Section 510
  - 9. ICC International Fire Code, Code and Commentary
  - 10. Alabama Fire Code
  - 11. ADA "Americans with Disabilities Act"
  - 12. FCC's OET 65 Standards "Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields".
  - 13. FCC Rules Part 22, Part 90, and Part 101.

- B. Qualifications: Contractor shall have minimum of 3 years' full-time experience executing work of similar scope and complexity.
- C. Certifications:
  1. Contractor shall provide manufacturer certification that their personnel have been trained on components being installed.
  2. Manufacture(s) of active components shall maintain a formal authorized and certified value-added reseller program, which consists of routine quality audits of participating value-added resellers. List of authorized value-added resellers shall be published.
  3. Contractor shall be an authorized and certified value-added reseller for proposed active components.
  4. Contractor shall provide certification that their personnel have been trained in RF design and analysis software
- D. The design shall utilize radio interface modules to filter and combine frequencies and optical modules to convert RF to an optical format (and vice-versa). The optical signal shall then be routed via single-mode fiber to remote modules located throughout each building, usually installed in communication/telco/telecom closets. Where possible, a passive infrastructure solution is preferred in the cable/antenna system.

## 1.5 WARRANTY

- A. Warranty period of service shall include all parts, labor, travel, and trip charges.
- B. Manufacturer Warranty:
  1. Passive devices (splitters, couplers, and antennas): minimum 1-year limited warranty from date of system acceptance.
  2. Cable and Connectors: 20-year limited warranty from date of system acceptance.
  3. Warranty shall include 1 year of customer service from date of acceptance.
- C. Contractor Warranty:
  1. Contractor shall warranty system performance, as approved, for 1 year.
  2. Warranty shall include first annual system test and maintenance.
  3. Response time shall be on-site within 48 hours of notification.
- D. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion. Provide add alternate for 5-year warranty.

## PART 2 - PRODUCTS

### 2.1 GENERAL PERFORMANCE REQUIREMENTS

- A. Compatibility: The equipment, including but not limited to repeaters, transmitters, receivers, signal boosters, cabling, fiber distributed antenna system, etc., shall not interfere with the existing communication systems utilized by the Public Safety and First Responder agencies.
- B. Power Supplies: At least two (2) independent and reliable power supplies shall be provided, one primary and one secondary. The primary power source shall be supplied from a dedicated 20 ampere branch circuit and comply with 4.4.1.4 of NFPA 72. The secondary power source shall

be a dedicated battery, capable of operating the in-building radio system for at least 12 hours of 100% system operation. The battery system shall automatically charge in the presence of external power input. The battery system shall be contained in one NEMA 4 or 4X type enclosure. Monitoring the integrity of power supplies shall be in accordance with 4.4.7.3 of NFPA 72.

C. Manufacturers

1. System
  - a. Comba (Basis of Design)
  - b. CommScope/Andrew
  - c. Corning
  - d. Times Microwave
  - e. Tessco
  - f. CCI (Communication Components Inc.)
  - g. Solid Technologies
  - h. Owner approved equal
2. Cable:
  - a. Material Characteristics:
    - 1) Jacket: Halogenated, Fire-Retardant
    - 2) Mechanical Characteristics:
    - 3) Maximum Diameter Over Jacket:  $\leq 0.627$  in
    - 4) Minimum Bending Radius: 5 in
    - 5) One Time Minimum Bending Radius: 2 in
3. Other Characteristics:
  - a. When installed outdoors, cable shall be outdoor installation rated.
  - b. When installed in a plenum, cable shall be plenum rated.
4. RF Amplification, Filtering, and Distribution Equipment Shall have FCC Certification.
5. Shall be wall or rack mounted.
6. Active equipment shall be of modular design and allow for digital filtering.
7. Operating Temperature Range:  $-10^{\circ}\text{F}$  to  $+120^{\circ}\text{F}$ , 85% humidity.
8. Shall include monitoring, diagnostics, and notification for degraded operation or system failure.
9. Power: 120 VAC, 60 Hz.

D. Survivability

1. Physical Protection: All wiring and fiber optics shall be installed in conduit. Refer to electrical specifications "Conduit and Fittings" for type, sizing, and installation standards.
2. Fire Performance: All main risers or trunks of the antenna system shall be installed with resistance to attack from a fire using one of the following methods:
  - a. A 2-hour fire rated cable or cable system.
  - b. Routing the cable through a 2-hour fire rated enclosure(s) or shaft(s).
  - c. A system configured in a looped design, routed through 1-hour fire rated enclosure(s) or shaft(s). The circuit shall be capable of transmitting and receiving a signal during a single open or non-simultaneous single ground fault on a circuit conductor.
  - d. Performance alternative approved by the authority having jurisdiction.

3. Cabinet: The signal booster and all associated RF filters shall be housed in a single, NEMA 4 certified, painted steel weather tight box. The cabinet shall be large enough to dissipate internal heat without venting the inside of the cabinet to the outside atmosphere. Operating temperatures: -22 degrees F to +120 degrees F (-30 degrees C to +50 degrees C) minimum temperature range, including microprocessors. Equipment installed on the roof of structures shall be rated for the expected extreme temperatures associated with rooftop installations.
4. Passive Equipment: Passband shall be 700-900 MHz, IP rating of 2 GHz.
5. Cable: Passband shall be 700-900 MHz Cable shall be rated for fire plenum and riser rating.
6. Constructed of plenum rated components when installed in a plenum.
7. WHITE, ultraviolet light resistant.
8. Capable of operation from -20°F to +140°F at 100% humidity.

## 2.2 SYSTEM COMPONENTS

### A. Signal Strength

1. Downlink: A minimum signal strength of -95 dBm shall be provided throughout the coverage area.
2. Uplink: Minimum signal strength of -95 dBm received at the local Fire Department Radio System from the coverage area.
3. A donor antenna must maintain isolation from the distributed antenna system. The donor antenna signal level shall be a minimum of 15 dB above the distributed antenna system under all operating conditions.

### B. Permissible Systems

1. Buildings and structures shall be equipped with an FCC Certificated Class B Bi-Directional UHF Amplifier(s) as needed.
2. The distributed antenna system may utilize a radiating cable, fixed antennas, or a combination of both.

### C. Supported Frequencies: The radio system shall support frequencies in the 700 and 800 MHz public safety bands as utilized by the local Fire Department.

### D. Reject Filters: Notch filter sections shall be incorporated to minimize adjacent channel cellular and SMR (Nextel) degradation of the signal booster performance. The minimum downlink band adjacent band rejection shall be 35 dB or greater at 865 MHz and 870 MHz.

### E. Band Migration Capability: The signal booster shall include re-tunable or replaceable filters to accommodate rapid and economic passband changes in the event of mandatory FCC changes within the NPSPAC band. The use of non-adjustable and non-replaceable RF input and output filters is prohibited.

### F. Output Level Control: An automatic output leveling circuit shall be included for both passbands with a minimum dynamic range of 60 dB, less any gain reduction setting, to maintain FCC out of band and spurious emission compliance.

### G. Degraded Performance in Emergencies: The system shall be designed to allow degraded performance in adverse conditions, such as abnormally high temperatures resulting from nearby fires, extreme voltage fluctuations or other abnormal conditions that may occur during an emergency. Circuits that intentionally disable the signal booster in such situations (i.e., under/over

voltage, over/under current, over/under temperature, etc.) will not be implemented as the standard mode for public safety applications.

- H. Mode of Operation: The system shall be normally powered on and shall continuously provide passing of frequencies within the Public Safety and First Responder bands.
- I. All in-building radio systems shall be compatible with both analog and digital communications simultaneously at the time of installation.

### **2.3 SYSTEM MONITORING**

- A. The distributed antenna system shall include a connection to the fire alarm system to monitor the integrity of the circuit of the signal booster(s) and power supplies and annunciate this malfunction on the fire alarm system shall comply with 4.4.7.1 of NFPA 72.
- B. A sign shall be located at the fire alarm panel with the name and telephone number of the local Fire Department indicating that they shall be notified of any failures that extend past the 2-hour time limit

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Contractor shall design, install, commission, and test system, in accordance with all manufacturer's instructions and recommendations.
- B. Contractor shall supply all personnel and equipment necessary for testing.

### **3.2 SURVEY**

- A. Confirm coordination of equipment locations shown on drawings for space, power, and pathway.
- B. Confirm suitability of provided power and telecommunications grounding system. Note issues to Owner before beginning installation.
- C. Review antenna styles and mounting locations with Owner and A/E for aesthetic concerns and approval.
- D. After complete façade installation and internal framing is complete, conduct RF survey and pre-installation testing to validate coverage areas, proposed antenna locations, and document prevailing signals. Survey a minimum of 20 diverse locations per floor. Walking tests are acceptable. Include survey results.

### **3.3 INSTALLATION**

- A. Obtain approval of all antenna locations with A/E and Owner prior to installation.
- B. Mount equipment securely provided backboard or rack at coordinated locations.
- C. Antennas shall be securely attached, independent of other trades, unless previously approved.

- D. Cables shall be secured using cable colored Velcro cable wraps suitable for the installation environment.
- E. Maintain clearances:
  - 1. Head end enclosure: minimum 12 inches from telecommunications equipment.
  - 2. Antennas, omnidirectional: minimum 36 inches from communications cable, wireless access points and LED lighting fixtures
- F. Install equipment to provide coverage per design requirements and as confirmed in Survey phase.
- G. Cables shall be routed as follows:
  - 1. Coordinated with all ceiling and above ceiling systems.
  - 2. Accessible ceiling: above ceiling, concealed from view.
  - 3. Inaccessible ceiling: above ceiling in conduit
  - 4. Open ceiling: as high as practical, above lighting plane.
  - 5. Mechanical spaces: routed to avoid damage, maintenance space, and environmental extremes.
  - 6. Electrical spaces: do not route cables in electrical rooms.
  - 7. Run parallel and perpendicular to building walls and structure. Do not take direct route.
- H. Antennas may be installed exposed on the underside of ceilings at approved locations. Do not install antennas in wood ceilings.
- I. Ceiling tiles stained or damaged by contractor shall be replaced by contractor at no cost to owner.
- J. Label all devices:
  - 1. Labeling shall be machine-made; no hand labeling is acceptable.
  - 2. Minimum devices label text height is 0.25 inch.
  - 3. Show labels on as-built drawings.
  - 4. "XXXX" in the scheme below is a sequential 4-digit number starting at 0001.
  - 5. Cable: ERRC-C-XXXX.
  - 6. Antenna: ERRC-A-XXXX.
  - 7. Couplers and taps: ERRC-S-XXXX.
  - 8. Active Equipment: ERRC-E-XXXX.

### 3.4 ACCEPTANCE TESTING

- A. Final testing shall not be performed until after the building is fully enclosed (roof, doors, windows, interior walls, and ceilings are in place).
- B. Notify the Owner two (2) weeks in advance of testing.
- C. All licenses, system documentation, and test plans shall be up to date.
- D. Record all equipment settings before test and after adjustments.
- E. Conduct testing for system RF performance
- F. Test, measure, and record the percent of coverage and signal strength and signal quality at all test points per service provider.

- G. A failure of any test parameter shall cause the test area to be considered a fail. A maximum of (2) non-adjacent areas will be allowed to fail the test. If (3) or more areas fail the test, to be more statistically accurate, the floor should be divided into (40) equal areas and the rest should be redone. In such event, a maximum of (4) non-adjacent areas will be allowed to fail the test. After the (40) area test, if the system continues to fail, the Contractor shall have the system altered to meet the minimum coverage requirement.
- H. Conduct testing in coordination with the Owner.
- I. Modify or add equipment, cables, and antennas required to achieve the required performance. This shall be at no additional cost to the Owner.

### **3.5 TRAINING**

- A. Provide written materials for all training sessions.
- B. Provide (1) 4-hour training session for system operation and testing accommodating up to (4) attendees.
- C. Provide (1) 4-hour training session for system maintenance and configuration accommodating up to (4) attendees.

END OF SECTION 273523

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 276000**  
**NETWORK ELECTRONICS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

**1.2 SUMMARY**

- A. This Section includes patch cables, installation and programming including, but not limited, to the following:
  - 1. Network Core Switches
  - 2. Network Edge Switches
  - 3. Network Edge Fiber Switches
  - 4. Extended Range Ethernet device
  - 5. Patch cables
  - 6. Installation of equipment

**1.3 SYSTEM DESCRIPTION**

- A. All network electronics shall be furnished and installed by the Contractor. Programming shall be coordinated in close cooperation with the Owners IT Staff.
- B. The network will consist of stackable switches provisioned as a single logical unit.
- C. The equipment under this contract shall be provided and configured with all net hardware and programming to permit seamless integration into the high-speed data network.
- D. A new VoIP telephone system will be integrated into the data network.
- E. A new IP security system will be integrated into the data network.
- F. Audio Visual networks will be integrated into the data network.
- G. Public address networks will be integrated into the data network.
- H. Lighting control, building automation, and snow melt systems will be integrated into the data network.
- I. The Owner has organized their network utilizing a private IP scheme.
- J. Furnish and Install all patch cables in a professional manner. Utilize existing wire management where applicable. Where wire management is not available, route patches neatly in such a way

to protect the patch cables from damage. Utilize Velcro tie wraps as needed. Plastic tie wraps are not acceptable and will be rejected.

#### 1.4 WARRANTY

- A. Warranty: All patch cords and optical fiber jumpers shall be warranted to be free from defects in material and workmanship upon installation.

#### 1.5 SPARE PARTS

- A. None

### PART 2 - PRODUCT

#### 2.1 APPROVED MANUFACTURERS

- A. Subject to compliance with requirements, provide network electronics, associated modules and optics as manufactured by one of the following:
  - 1. Aruba (Basis of Design)
  - 2. Cisco
  - 3. Extreme
  - 4. Juniper

#### 2.2 NETWORK ELECTRONICS

- A. General:
  - 1. The network electronics shall be new, of modern design, and the current standard production of the manufacturer. All equipment within the same product line shall be the same manufacturer revision.
  - 2. The following sections specifically list the acceptable equipment types and items for this project.
- B. Uplink Interface
  - 1. Provide the following Uplink interface modules:
    - a. 50GBE Long Range SMF
    - b. 100GBE Long Range SMF
- C. Network Ethernet Switches:
  - 1. Provide the following Switch types
    - a. Chassis Core Fiber Ethernet with 1G/10G/25GbE/50GbE/100GbE uplinks
    - b. 24-port Edge Fiber Ethernet 10/100/1000Base-T switches with Fiber Uplinks
    - c. 48-port Edge Ethernet 10/100/1000Base-T switches
    - d. 24-port Edge Fiber MultiGig Ethernet 1G/2.5G/5G/10G Base-T switches

## D. Network Ethernet Switches

1. Provide the following switch types and accessories as part of the base bid:

Line#	Part Number	Description	Quantity
<b>Core</b>			
1.0	R0X26C	HPE Aruba Networking CX 6405 v2 Switch	1
1.1	HR7H9E	Aruba 5Y FC NBD Exch 6405 SVC [for R0X26C]	1

**2.3 EXTENDED RANGE ETHERNET DEVICES**

- A. Provide quantity of extended range Ethernet devices located on the drawings as indicated. These shall be sourced from the same manufacturer as the connectors provided as a part of this project. Each device shall meet or exceed the performance specifications in this document when installed as part of the end-to-end cabling system described in this specification.
1. Industrial unmanaged 100W Gigabit PoE Extender
  2. Multiple port configurations:
  3. Auto-negotiate PoE power level requested by attached device
  4. DIN-rail mountable
  5. Industrial (-40 to +75°C) operating temperature range

**2.4 28AWG 6-INCH COPPER PATCH CABLES**

- A. Provide quantity of high-performance copper patch cords to match 100% of work area connectors installed. These shall be sourced from the same manufacturer as the connectors provided as a part of this project. Each cord shall meet or exceed the performance specifications in this document when installed as part of the end-to-end cabling system described in this specification.
- B. The patch cords are to be passed to the client on completion of the project. Each cord is to have a manufacturer's certificate of conformance and shall be in its original, unopened packaging.
- C. Category 6A compliant per EIA/TIA 568.
- D. Each patch cable shall be bootless and labeled sequentially with the patch panel port number.
- E. Patch cables shall be bootless, and color coded as follows:
1. Telecommunications Closet Patch Cables:
    - a. Red – Critical
    - b. Orange – Wi-Fi
    - c. Yellow – Temporary show connections
    - d. Purple – Digital signage
    - e. Pink – Security cameras
    - f. Grey – Other VLANs
- F. The Contractor shall install the cable to provide neat and organized patches to equipment. The Contractor is required to review site conditions to ensure the proper cable lengths are installed.

**2.5 OPTICAL FIBER JUMPERS**

- A. Duplex optical fiber jumper cable, OS2 1m long with a 3.0mm Duplex LC optical fiber connectors on each end.
- B. Each optical fiber jumper cable shall be a duplex Kevlar reinforced cable with a PVC or Teflon jacket.

**2.6 LABELING**

- A. All cable designations and color-coding shall be in full compliance with ANSI/TIA- 606.
- B. Clearly label all cables, including patch cables at both ends with permanently applied mechanically printed labels. Handwritten labels will not be acceptable. Use standardized colors and alphanumeric codes. All patch cables shall be numbered sequentially with port numbers on both ends of the cable. Technology Designer/Engineer will approve labeling system and method.

## PART 3 - EXECUTION

**3.1 INSTALLATION-GENERAL**

- A. Install switches.
- B. Furnish and install new category 6A patch cables and optical fiber jumpers.
- C. Support the final installation to ensure defect free installation.

**3.2 PROJECT RECORD DOCUMENTS**

- A. Provide 3 sets of documentation. All documentation shall be provided electronically or on a CD/DVD and in print delivered in a tabbed 3-ring binder as directed by and agreed upon with the client.
- B. All drawings and documentation and the information contained therein become the sole property of the Owner.

**END OF SECTION 276000**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 276200****WIRELESS NETWORK SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

**1.2 SUMMARY**

- A. This Section includes wireless network equipment, software, associated peripherals, installation, and training including, but not limited, to the following:
  - 1. Installation of wireless network access points.
  - 2. Record drawings and documented configuration.

**1.3 SYSTEM DESCRIPTION**

- A. All wireless access points and external antenna shall be purchased, programmed, and furnished by the Contractor in close cooperation with the Owner.
- B. All wireless access point mounts and mounting hardware shall be furnished and installed by the Contractor.
- C. This Contractor shall be responsible to furnish and install vinyl covers intended to mask/hide various access points.
- D. This Contractor shall be responsible for all wireless access point physical installation including mounting hardware, specialty mounts, cabling, and any miscellaneous hardware.

**1.4 WARRANTY/SERVICE**

- A. Warranty: All products shall be warranted to be free from defects in material and workmanship upon installation.

**1.5 SPARE PARTS**

- A. Provide one (1) spare mount of each type.

## PART 2 - PRODUCT

**2.1 WIRELESS ACCESS POINTS**

- A. Wireless access points located within high foot traffic, low supervisory locations shall utilize integrated antennas.
- B. Wireless access points located within low foot traffic, high supervisory locations shall utilize integrated or external antennas.
- C. Wireless access points shall meet the following minimum specifications:
1. Minimum tri radios 5GHz; 2.4GHz and 5GHz; 2.4GHz/5GHz/Sensor
  2. Variable power transmit settings.
  3. Automatic power and channel selection.
  4. Wall or ceiling mountable.
  5. Auto sensing 10/100/1000BASE-T Ethernet uplink.
  6. High Density versions with multi-gig Ethernet uplink.
  7. Power, link, and activity status LEDs.
  8. 802.11ax certified and compliant.
  9. Subject to compliance with requirements, provide wireless access points as manufactured by one of the following:
    - a. Aruba (Basis of Design)
    - b. Cisco
    - c. Extreme
    - d. Or Equal
  10. Wireless access point final quantities will be determined based upon building surveys. AP types to be included with base bid shall be as follows:

Line#	Part Number	Description
1.0	R7J28A	HPE Aruba Networking AP-635 (US) Tri-radio 2x2 802.11ax Wi-Fi 6E Internal Antennas Campus AP (Standard Density Areas)
2.0	R7J39A	Aruba AP-655 Tri-radio 4x4:4 802.11ax Wi-Fi 6E Internal Antennas Campus AP (High Density Areas)
3.0	R4H18A	Aruba AP-575 (US) AP (Outdoor Area)
4.0	R3J18A	HPE Aruba Networking AP-MNT-D Campus AP mount bracket kit (individual) type D: solid surface
5.0	S0J40A	HPE Aruba Networking AP-MNT-MP10-U Campus AP 10-pack Universal Mount Bracket Kit
6.0	Q9Y59AAE	HPE Aruba Networking Central AP Foundation 3-year Subscription E-STU

**2.2 WIRELESS ACCESS POINT MOUNTS**

- A. Wireless access points shall be located within high foot traffic, low supervisory locations shall utilize integrated antennas.

- B. Wireless access points located within low foot traffic, high supervisory locations shall utilize integrated or external antennas.
- C. Wireless access points shall be either wall or ceiling mountable.

### 2.3 VINYL WRAPS

- A. Vinyl wraps shall be provided where indicated on the drawings. The Contractor is responsible for coordinating final wireless access point locations, providing any necessary photographs to the vinyl wrap supplier, and shipping to and receiving from the vinyl wrap supplier all wireless access points and external antenna.
- B. Vinyl wraps shall be supplied by Acceltex Solutions <https://www.acceltex.com/skins/>.
- C. Isaac Juarez Regional Sales Manager AccelTex Solutions | 12000 Crownpoint Drive, Suite 165 San Antonio, Texas 78233 USA Main: 1.888.406.8906 Mobile: 1.210.556.9007 (Preferred)

### 2.4 LABELING

- A. The Contractor shall provide and apply a mechanically produced identification label on each piece of equipment provided under this bid. The label shall follow the following Owner standards:
  - 1. Wireless access points:
    - a. Consult with the Owner to develop a labeling scheme.
    - b. This label shall be programmed into each device.

## PART 3 - EXECUTION

### 3.1 INSTALLATION-GENERAL

- A. Unpack and assemble equipment.
- B. Furnish and install vinyl wraps where necessary.
- C. Install, configure, program, and test the systems.
- D. Support the final installation to ensure defect free installation.

### 3.2 INSTALLATION-WIRELESS ACCESS POINTS

- 1. All ceiling pad penetrations shall be dressed out using a grommet or escutcheon ring to provide a neat and professional finish.
- 2. All access points shall be installed utilizing PoE switch ports.
- 3. All wireless access points shall be securely mounted utilizing manufacturer provided mounts suitable for the application (i.e., ceiling grid mounts, wall mounts, etc.)

### 3.3 TESTING

- A. Testing shall be performed by the Contractor. The following shall be tested and documented:
  - 1. Device density throughput requirements
  - 2. Device roaming while maintaining authentication and security parameters
- B. The methodology and the tools used to perform tests shall be documented and delivered to the Owner.
- C. This Contractor shall use Owner owned equipment for testing where possible to best simulate the results the Owner will experience.
- D. All test results shall be documented and delivered to the Owner.
- E. The following performance specifications shall be tested and documented through post-installation surveys and management tools:
  - 1. Signal strength: -75dBm
  - 2. Signal to noise ratio: 20dB
  - 3. Building RF visualization
  - 4. Rogue access point detection, location, and containment
  - 5. Device location awareness
  - 6. NAC identification, validation, policy enforcement, quarantine, and remediation

### 3.4 PROJECT RECORD DOCUMENTS

- A. This Contractor must provide record drawings including, but not limited to:
  - 1. WAP labeling
  - 2. Mounting hardware
  - 3. Final record drawings

**END OF SECTION 276200**

**SECTION 27 00 01 - DIVISION 27 - COMMUNICATIONS - AUDIO-VIDEO**

- 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO**
- 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO**
- 27 41 00 - AUDIO VIDEO SYSTEMS**
- 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT**
- 27 41 22 - LARGE FORMAT DISPLAY SYSTEMS**
- 27 41 51 - BROADCAST SYSTEMS PRE-WIRE**

**END OF DIVISION 27 TABLE OF CONTENTS**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO****PART 1 GENERAL****1.1 RELATED SECTIONS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and to the following sections:
  - 1. 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO
  - 2. 27 41 00 - AUDIO VIDEO SYSTEMS
  - 3. 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT
  - 4. 27 41 22 - LARGE FORMAT DISPLAY SYSTEMS
  - 5. 27 41 33 - TELEVISION DISTRIBUTION SYSTEM
  - 6. 27 41 51 - BROADCAST SYSTEMS PRE-WIRE

**1.2 SECTION INCLUDES**

- A. This Division requires providing complete functioning systems, and each element thereof, as specified, indicated, or reasonably inferred, on the Drawings and in these Specifications, including every article, device, or accessory (whether or not specifically called for by item) reasonably necessary to facilitate each system's functioning as indicated by the design and the equipment specified. Elements of the work include, but are not limited to, materials, labor, supervision, supplies, tools, equipment, transportation and utilities.
- B. Division 27 of these Specifications, and Drawings numbered with prefixes TA and TB, generally describe these systems, but the scope of the Communications Work includes all such Work indicated in all of the Contract Documents, including, but not limited to: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Mechanical, Plumbing, Electrical and Telecommunications Drawings and Specifications; and Addenda.
- C. Drawings are graphic representations of the Work upon which the Contract is based. They show the materials and their relationship to one another, including sizes, shapes, locations, and connections. They also convey the scope of Work, indicating the intended general arrangement of the equipment, fixtures, outlets and cabling without showing all of the exact details as to elevations, offsets, and other installation requirements. Use the Drawings as a guide when laying out the Work and to verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers' requirements, will ensure a complete, coordinated, satisfactory and properly operating system.
- D. Specifications define the qualitative requirements for products, materials, and workmanship upon which the Contract is based.

**1.3 ABBREVIATIONS AND ACRONYMS**

- A. ADA - Americans with Disabilities Act
- B. AFF - Above Finished Floor
- C. AHJ - Authority Having Jurisdiction
- D. ANSI - American National Standards Institute
- E. ASTM - American Society for Testing and Materials

- F. BICSI - Building Industry Consulting Service International
- G. ETL - Electrical Testing Laboratories, Inc.
- H. FCC - Federal Communications Commission
- I. FM - Factory Mutual
- J. IEEE - Institute of Electrical and Electronic Engineers
- K. LED - Light Emitting Diode
- L. NEC - National Electrical Code
- M. NESC - National Electrical Safety Code
- N. NEMA - National Electrical Manufacturers Association
- O. NFPA - National Fire Protection Association
- P. NRTL - Nationally Recognized Testing Laboratory
- Q. OEM - Original Equipment Manufacturer
- R. OFCI - Owner Furnished Contractor Installed
- S. OSHA - Occupational Safety and Health Administration
- T. OSP - Outside Plant
- U. RCDD - Registered Communications Distribution Designer
- V. TIA - Telecommunications Industries Association
- W. UL - Underwriters Laboratories
- X. UON - Unless Otherwise Noted

#### 1.4 DEFINITIONS

- A. Whenever used in specifications or drawings, the following terms shall have the indicated meanings:
  - 1. AHJ - The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.
  - 2. Approved Equivalents or Equal - For specific products, materials, equipment, or systems for which this Division specifically identifies the Contractor shall use as the basis for their bid. Where the term approved equivalent or equal is listed the Contractor may submit documentation for review by the Design Consultant for approval. The Design Consultant's acceptance or rejection is final.
  - 3. As Directed - means as directed by the Contract Administrator, or their representative.
  - 4. Basis-of-Design Product: Subject to compliance with requirements, provide either the named product or a comparable product by one of the other equivalent manufacturers specified.
  - 5. Communications Room - means the location of a floor-serving facility for housing telecommunication equipment, cable terminations, and cross-connect wiring, as well as those for audio video systems and potentially other low-voltage systems such as security and fire alarm (electronic safety and security). This room is recognized in TIA-569 as the transition point between the telecommunications horizontal (station) pathway facilities and the backbone (riser) pathway facilities.

6. Concealed - means embedded in masonry or other construction, installed behind wall furring or within drywall partitions, or installed within hung ceilings.
7. Conditionally Approved – the manufacturer has been found reputable by the design professional, but the design professional has not verified that the product offering by manufacturer meets to all specification requirements. Contractor shall adhere to submittal review process for final approval on products.
8. Contract Administrator: Where referenced in this Division, “Contract AdministratorContract Administrator” is the primary liaison between the Owner and the Contractor. Specifically, for this project this is "the Architect".
9. Design Consultant - Where referenced in this Division, “Design Consultant” is the Design Professional for the Work under this Division, and is a consultant to, and an authorized representative of, the Contract Administrator, as defined in the Section 00 72 00 - General Conditions and/or Section 00 73 00 - Supplementary Conditions. When used in this Division, it means increased involvement by, and obligations to, the Design Professional, in addition to involvement by, and obligations to, the “Contract Administrator”.
10. Furnish - “To supply and deliver to the project site, ready for unloading, unpacking, assembling, installing, and similar operations.”
11. Furnished by Owner (or Owner-Furnished) or Furnished by Others: “An item furnished by the Owner or under other Divisions or Contracts, and installed under the requirements of this Division, complete, and ready for the intended use, including all items and services incidental to the Work necessary for proper installation and operation. Include the installation under the warranty required by this Division.
12. Install - “To perform all operations at the project site, including, but not limited to, and as required: unloading, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, testing, commissioning, starting up and similar operations, complete, and ready for the intended use.”
13. NRTL - Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the Authority having Jurisdiction (AHJ) over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other NRTL’s that are acceptable to the AHJ, and standards that meet the specified criteria.
14. Provide - “To furnish and install complete, and ready for the intended use.” When ‘furnish’, ‘install’, ‘perform’, or ‘provide’ is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of Contractor, “provide” is implied.
15. Submit - means submit to Contract Administrator for review.
16. Substitution - means a product meeting all requirements and specifications and having been approved by the Design Consultant to replace another product specifically identified herein.
17. Wet Location - means a pathway that does not protect cables from moisture levels that are beyond the intended operating range of “inside” premises cable.
  - a. For example: Slab-on-grade construction where pathways are installed underground or in concrete slabs that are in direct contact with soil (e.g., sand and gravel) is considered a “wet location.”
  - b. Also refer to the BICSI TDMM for definitions of wet locations
18. Value Engineering: A systematic method to improve the “value” of goods and services by using an examination of function. Value, as defined, is the ratio of function to cost. Value

can therefore be increased by either improving the function or reducing the cost. The goal of VE is to achieve the desired function at the lowest overall cost consistent with required performance.

19. ( ) – Where appearing in product part or model numbers; shall represent wild card character to be filled in by the Contractor to meet required specifications.
- B. The terms "approved equal", "equivalent", or "equal" are used synonymously and shall mean "accepted by or acceptable to the Design Consultant as equivalent to the item or manufacturer specified".
- C. The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.
- D. The following definitions apply to excavation operations:
  1. Additional Excavation: Where excavation has reached indicated sub-grade elevations, if unsuitable bearing materials are encountered, continue excavation until suitable bearing materials are reached. The Contract Sum may be adjusted by an appropriate Contract Modification.
  2. Sub-base: as used in this Section refers to the compacted soil layer used in pavement systems between the sub-grade and the pavement base course material.
  3. Sub-grade: as used in this Section refers to the compacted soil immediately below the slab or pavement system.
  4. Unauthorized excavation consists of removal of materials beyond indicated sub-grade elevations or dimensions without specific direction from the Contract Administrator.

## 1.5 REFERENCE STANDARDS

- A. Execute all Work in accordance with, and comply at a minimum with, National Fire Protection Association (NFPA) codes, state and local building codes, and all other applicable codes and ordinances in force, governing the particular class of Work involved, for performance, workmanship, equipment, and materials. Additionally, comply with rules and regulations of public utilities and municipal departments affected by connection of services. Where conflicts between various codes, ordinances, rules, and regulations exist, comply with the most stringent. Wherever requirements of these Specifications, Drawings, or both, exceed those of the above items, the requirements of these Specifications, Drawings, or both, shall govern. Code compliance, at a minimum, is mandatory. Construe nothing in these Construction Documents as permitting work not in compliance, at a minimum, with these codes. Bring all conflicts observed between codes, ordinances, rules, regulations and these documents to the Contract Administrator's and Design Consultant's attention in sufficient time, prior to the opening of Bids, to prepare the Supplementary Drawings and Specifications Addenda required to resolve the conflict.
- B. If the conflict is not reported timely, prior to the opening of bids, resolve the conflict and provide the installation in accordance with the governing codes and to the satisfaction of the Contract Administrator and Design Consultant, without additional compensation. Contractor will be held responsible for any violation of the law.
- C. Project shall be executed in accordance with the sustainable building standard rating as indicated in Division 27 section, Sustainable Design Requirements.
- D. Obtain timely inspections by the constituted authorities having jurisdiction; and, upon final completion of the Work, obtain and deliver to the Owner executed final certificates of acceptance from these authorities having jurisdiction.

- E. All material, manufacturing methods, handling, dimensions, methods of installation and test procedures shall conform to industry standards, acts, and codes, including, but not limited to the following, except where these Drawings and Specifications exceed them.
- F. The references to the following codes, references and standards represent the most current and up-to-date revisions or printing as of the issue of this document including all sections, parts and their addenda. The Contractor is responsible for following the latest revision or printing (UON):
  - 1. TIA-569 - "Commercial Building Standard for Telecommunications Pathways and Spaces"
  - 2. NFPA 70 - National Electrical Code (NEC)
  - 3. IEEE C2 - National Electrical Safety Code (NESC)
  - 4. ADA Standards - Americans with Disabilities Act (ADA) of 1990, as amended.

#### **1.6 ADMINISTRATIVE REQUIREMENTS**

- A. Coordinate with other Divisions for Communications work to be included but not listed in Division 27 or indicated on Communications Drawings.
- B. Visit the site and ascertain the conditions to be encountered in installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make do provisions for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, and incorrect or faulty installation of any of the Work under this Division or for additional compensation for any Work covered by this Division.
- C. Refer to Communications Drawings and Divisions of the other trades and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. Follow these drawings as closely as the actual construction and the work of other trades will permit. Provide all offsets, fittings, and accessories, required to clear equipment, beams and other structural members which may be required but not shown on the Drawings.
- D. Provide materials with trim that will fit properly the types of ceiling, wall, or floor finishes installed.
- E. Maintain a project manager on the jobsite always to coordinate this Work with other trades so that various components of the Communications systems are installed at the proper time, fits the available space, allows proper service access to all equipment, and meets all required codes and standards.
- F. Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.
- G. Carry on the Work in such a manner that the Work of the other trades will not be handicapped, hindered, or delayed at any time.
- H. Work of this Division shall progress according to the "Construction Schedule" as described in Division 01 and as approved by the Contract Administrator. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule to ensure successful achievement of all schedule dates.
- I. Examine and compare the Contract Drawings and Specifications with the Drawings and specifications of other trades and report any discrepancies between them to the Contract Administrator and obtain written instructions for changes necessary in the work. Install and coordinate the work in cooperation with other related trades. Before installation, make proper

provisions to avoid interferences.

- J. Before commencing work, examine adjoining work on which this work is in any way affected and report conditions, which prevent performance of the work. Become thoroughly familiar with actual existing conditions to which connections shall be made or which shall be changed or altered.
- K. In cases of doubt as to the work intended, or in the event of need for explanation, request supplementary instructions from the Contract Administrator.
- L. Measurements and Layouts: The Drawings are schematic in nature but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the Work. Figured dimensions take precedence to scaled dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. Correct, at no additional costs to the Owner, errors that could have been avoided by proper checking and inspection.

### 1.7 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to the requirements of individual Sections. Additionally, prepare coordination drawings as required scope of installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one trade.
  - 1. Information shall be project specific and drawn accurately to a scale large enough to resolve conflicts. Do not base coordination drawings on standard dimensional data.
  - 2. Prepare floorplans, sections, elevations, and details as needed to adequately describe relationship of various systems and components.
  - 3. Clearly indicate functional and spatial relationships of components of all systems specified in the Contract Documents, including but not limited to: architectural, structural, civil, mechanical, electrical, fire protection, and specialty systems.
  - 4. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
  - 5. Show location and size of access doors required for access to concealed equipment, fittings, controls, terminations, and cabling.
  - 6. Indicate required installation sequence to minimize conflicts between entities.
  - 7. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Contract Administrator indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
  - 8. The details of the coordination are the responsibility of the Contractor and, where indicated on the Drawings, minor adjustments in raceway routing, device placement, device type, or equipment arrangement are not to be considered changes to the Contract.
- B. Equipment Room Coordination Drawings: In accordance with the submittal procedures outlined within these Specifications, provide dimensioned layouts of communications equipment locations within communications (telecom and AV) rooms, electrical rooms/closets, mechanical rooms, generator rooms, and fire pump rooms with equipment drawn to scale and identified therein.
  - 1. Clearly identify all required working clearances and access provisions required for installation and maintenance.

2. Equipment layouts should be arranged accounting for considerations for required door openings and the clearances required by the equipment manufacturer.
  3. Indicate path to allow the future removal of each large piece of equipment (including but not limited to communications racks and cabinets) without removal of nonrelated equipment or architectural elements.
  4. Include work provided by others routed through the equipment rooms.
- C. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.
  2. BIM File Incorporation: Develop and incorporate coordination drawing files into Building Information Model established for Project.
    - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Contract Administrator.
  3. Where the Engineer's digital data files are provided to the Contractor for use in preparing coordination digital data files, the Engineer makes no representations as to the accuracy or completeness of digital data files as they relate to the Drawings or Specifications.
  4. Submit coordination drawings in accordance with the submittal procedures outlined within these Specifications.
- D. Refer to Coordination requirements in specific sections for additional information.

## 1.8 SUBMITTALS

- A. Refer to Division 01 and General Conditions for submittal requirements in addition to requirements specified herein.
- B. Refer to Division 01 for acceptance of electronic submittals. If not specified by Division 01, provide electronic submittals. If Division 01 requires paper submittals, provide the quantity of submittals required, but no fewer than seven (7) sets.
- C. For electronic submittals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 01. Contractor shall notify the Contract Administrator and Design Consultant that the submittals have been posted. If electronic submittal procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Contract Administrator's and Design Consultant's designated representatives. Contractor shall allow for the Design Consultant Review Time as specified. Contractor shall submit only the documents required to purchase the materials and/or equipment in the submittal.
- D. Design Consultant Review Time: Transmit submittals as early as required to support the project schedule. Allow two weeks for Design Consultant review time or time specified in the Engineer's Agreement with the Client, plus to/from mailing time via the Contract Administrator, plus a duplication of this time for resubmittal if required. Transmit submittals as soon as possible after Notice to Proceed and before Mechanical construction starts.
- E. Submittals and shop drawings shall not contain the firm name, logo, seal, or signature of the Design Professional. They shall not be copies of the work product of the Design

Professional. If the Contractor desires to use elements of such product, the license agreement for transfer of information obtained from the Engineer must be used.

- F. Assemble and submit for review manufacturer product literature for material and equipment to be furnished and/or installed under this Division. Literature shall include shop drawings, manufacturer product data, performance sheets, samples, and other submittals required by this Division as noted in each individual Section. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.
- G. Separate submittals according to individual specification sections. Only resubmit those sections requested for resubmittal.
- H. Unless noted otherwise within each individual section, submittals shall be provided for approval in four distinct stages:
  - 1. Pre-bid
    - a. Required no less than two weeks prior to the due date for the submission of bids, such as:
      - 1) Product substitutions, approved alternate or equivalent requests to be reviewed for approval (Prior to Bid)
      - 2) Alternate personnel credentials to be reviewed for approval.
      - 3) And as required by individual sections in this Division.
  - 2. Bid
    - a. Required at the time of the submission of bids, such as:
      - 1) Bid Response Forms
      - 2) Unit Pricing (if required by sections in this Division)
      - 3) Personnel Qualifications
      - 4) Contractor Qualifications (Previous project references)
      - 5) Voluntary Bid Alternates
      - 6) And as required by individual sections in this Division
  - 3. Pre-construction
    - a. Required after the award of the project to the winning bidder and prior to starting construction.
    - b. Submit the following items no longer than four weeks after receiving the notice to proceed:
      - 1) Division of Labor amongst sub-Contractors. Include:
        - a) Company Name
        - b) Address
        - c) Name of project manager for this project, including:
          - (1) E-mail
          - (2) Telephone number
      - 2) Construction schedule showing important milestone dates and activities. Schedule shall be coordinated with overall project construction schedule.
      - 3) Updated Personnel and Contractor Qualifications where different from those submitted during Bid.
      - 4) A typed list, indexed by Specification section, of products specifically identified by part number (no wild card characters) within each specification section in this Division. Products are to be listed in the same order as in the specification. List is to include length of manufacturer warranty for each product.

- 5) Manufacturers' cut sheets:
    - a) Cut sheets are to be in the same order as in the specification sections.
    - b) At a minimum all cut sheets shall contain the following:
      - (1) Cross-reference to the specification section and/or drawings for which the product is to be reviewed for compliance and acceptance.
      - (2) Every product cut-sheet submitted for review shall contain the manufacturers' name and logo somewhere on the page.
      - (3) All parts, pieces, and equipment submitted for review shall be clearly identified by stamp, markup, or highlight in such a manner that the product(s) being submitted are clearly identifiable and distinguished from all other materials, parts, or equipment that may be on the submittal.
      - (4) For cut sheets with accessories, additional parts, or derivations of the product being submitted, all shall be clearly identified for the reviewer and acceptance.
      - (5) Sufficient detail for reviewer to identify all required information, such as size, weight, color, NRTL listings, approval or certification information, and other necessary identifying information to confirm product meets specifications.
  - 6) Samples – refer to individual sections for specific sample requirements.
    - a) Samples requested shall be physical examples that represent materials, equipment or workmanship and establish standards by which the work will be judged. Contractor or Manufacturer shall cover all associated fabrication and shipping costs.
  - c. Submit the following items sufficiently prior to installation of each respective portion of work:
    - 1) Shop Drawings
      - a) Shall be furnished per the requirements of each Division 27 specification Section.
4. Project Completion
- a. Required after the substantial completion but prior to final approval for completion, such as:
    - 1) Record Drawings
    - 2) Operation and Maintenance Data
    - 3) Project test reports
    - 4) Cable Databases (as applicable)
    - 5) Warranty Certificate(s)
    - 6) Lead Installer / Project manager letter with signature stating the project has been installed in accordance with referenced industry standards and contract documents.
    - 7) And as required by individual sections in this Division
  - I. Provide submittals in sufficient detail so as to demonstrate compliance with these Contract Documents and the design concept. Highlight, mark, list or indicate the materials, performance criteria and accessories that are being proposed. Illegible submittals will be rejected and returned without review.
  - J. Refer to individual Sections for additional submittal requirements.
-

- K. No part of the work shall be started in the shop or in the field until the shop drawings and /or samples for that portion of the work have been submitted and accepted.
- L. Before transmitting submittals and material lists, verify that the equipment submitted is mutually compatible with and suitable for the intended use. Verify that the equipment will fit the available space and maintain manufacturer recommended service clearances. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.
- M. Submittals shall contain the following information:
  - 1. The project name.
  - 2. The applicable specification section and paragraph.
  - 3. Equipment identification acronym as used on the drawings.
  - 4. The submittal date.
  - 5. The Contractor's stamp, which shall certify that the stamped drawings have been checked by the Contractor, comply with the Drawings and Specifications, and have been coordinated with other trades.
  - 6. Submittals not so identified will be returned to the Contractor without action.
- N. The checking and subsequent acceptance by the Design Consultant and/or Contract Administrator of submittals shall not relieve responsibility from the Contractor for (1) deviations from Drawings and Specifications; (2) errors in dimensions, details, sizes of equipment, or quantities; (3) omissions of components or fittings; and (4) not coordinating items with actual building conditions and adjacent work. Contractor shall request and secure written acceptance from the Design Consultant and Contract Administrator prior to implementing any deviation.
- O. BIM Incorporation: Develop and incorporate Shop Drawing files into BIM established for Project.
- P. Video Recordings: Record training and demonstrations in .AVI format, unless noted otherwise in Division 01 specifications or where approved by the Owner.

### 1.9 SUBSTITUTIONS

- A. Refer to Bid documents, General and Supplementary Conditions and Division 01 Specification Sections for limitations and restrictions on substitutions in addition to requirements specified in this section.
- B. For products, materials, equipment, or systems for which this Division specifically identifies, the Contractor shall use it as the basis for their bid. However, if the Contractor feels a substitute is appropriate for consideration they may submit, as required in these documents prior to bid, for approval by the Design Consultant.
- C. Materials, products, equipment, and systems described in the Bidding Documents establish a standard of required function, dimension, appearance, and quality to be met by the proposed substitution.
- D. The base bid shall include only the products from manufacturers specifically named in the drawings and specifications.
- E. Request for Substitution:
  - 1. Complete and send the Substitution Request Form attached at the end of this section for each material, product, equipment, or system that is proposed to be substituted.
  - 2. The burden of proof of the merit of the proposed substitution is upon the proposer.

3. Unless stated otherwise in writing to the Design Consultant by the Contractor, Contractor warrants to the Design Consultant, Contract Administrator, and Owner the following:
  - a. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
  - b. Proposed substitution is consistent with the Contract Documents and will produce indicated results, including functional clearances, maintenance service, and sourcing of replacement parts.
  - c. Proposed substitution has received necessary approvals of the Authorities Having Jurisdiction.
  - d. Same warranty will be furnished for proposed substitution as for specified Work.
  - e. If accepted substitution fails to perform as required, Contractor shall replace substitute material or system with that originally specified and bear costs incurred thereby.
  - f. Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.
- F. Substitution Consideration:
  1. No substitutions will be considered unless the Substitution Request Form is completed and attached with the appropriate substitution documentation.
  2. No substitutions will be considered prior to receipt of bids unless written request for approval to bid has been received by the Engineer at least ten (10) calendar days prior to the date for receipt of bids.
  3. If the proposed substitution is approved prior to receipt of bids, such approval will be stated in an addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.
  4. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

#### **1.10 ELECTRONIC DRAWING FILES**

- A. In preparation of shop drawings or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of 200 for a drawing set up to 12 sheets and 15 per sheet for each additional sheet.
- B. Contractor shall request and complete the Electronic File Release Agreement form from the Engineer. Send the form along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached form.
- C. Contact the Contract Administrator for written authorization.
- D. The following must be received before electronic drawing files will be sent:
  1. Contract Administrator's written authorization
  2. Engineer's release agreement form
  3. Payment

#### **1.11 QUALITY ASSURANCE**

- A. Execute all work under this Division in a thorough and professional manner by competent and experienced workmen duly trained to perform the work specified.

- B. Install all work in strict conformance with all manufacturers' requirements and recommendations, unless these Documents exceed those requirements. Install all equipment and materials in a neat and professional manner, aligned, leveled, and adjusted for satisfactory operation, in accordance with NECA guidelines.
- C. Unless indicated otherwise on the Drawings, provide all material and equipment new, of the best quality and design, free from defects and imperfections and with markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Provide all material and equipment of the same type from the same manufacturer whenever practicable.
- D. Unless specified otherwise, manufactured items of the same types specified within this Division shall have been installed and used, without modification, renovation, or repair for not less than one year prior to date of bidding for this Project.

#### **1.12 OPERATION AND MAINTENANCE MANUALS**

- A. Refer to Division 01 and General Conditions for Operation and Maintenance Manuals in addition to requirements specified herein.
- B. Submit manuals prior to requesting the final punch list and before all requests for Substantial Completion.
- C. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.
- D. Prior to Substantial Completion of the project, furnish to the Contract Administrator, for Engineer's review, and for the Owner's use, four (4) copies of Operation and Maintenance Manuals in labeled, hard-back three-ring binders, with cover, binding label, tabbed dividers and plastic insert folders for Record Drawings. Include local contacts, complete with address and telephone number, for equipment, apparatus, and system components furnished and installed under this Division of the specifications.
- E. Each manual shall contain equipment data, approved submittals, shop drawings, diagrams, capacities, spare part numbers, manufacturer service and maintenance data, warranties and guarantees.
- F. Refer to Division 01 for acceptance of electronic manuals for this project. For electronic manuals, Contractor shall submit the documents in accordance with this Section and the procedures specified in Division 1. Contractor shall notify the Contract Administrator and Design Consultant that the manuals have been posted. If electronic manual procedures are not defined in Division 01, Contractor shall include the website, username and password information needed to access the manuals. For manuals sent by e-mail, Contractor shall copy the Contract Administrator's and Design Consultant's designated representatives.

#### **1.13 SPARE PARTS**

- A. Provide to the Owner the spare parts specified in the individual sections of this Division.

#### **1.14 RECORD DRAWINGS**

- A. Refer to Division 01 and General Conditions for Record Drawings in addition to requirements specified herein.

- B. A set of work prints of the Contract Documents shall be kept on the jobsite during construction for the purpose of noting changes. During construction, the Contractor shall indicate on these Documents changes made from the original Contract Documents. Particular attention shall be paid to those items which need to be located for servicing. Underground utilities shall be located by dimension from column lines.
- C. At the completion of the project, the Contractor shall obtain, at their expense, reproducible copies of the final drawings and incorporate changes noted on the jobsite work prints onto these drawings. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", along with the date. These drawings shall be delivered to the Contract Administrator.

#### **1.15 DELIVERY STORAGE AND HANDLING**

- A. Refer to Division 01 and General Conditions for Delivery, Storage and Handling in addition to requirements specified herein.
- B. Deliver equipment and material to the job site in their original containers with labels intact, fully identified with manufacturer's name, make, model, model number, type, size, capacity and Underwriter's Laboratories, Inc. labels and other pertinent information necessary to identify the item.
- C. Deliver, receive, handle and store equipment and materials at the job site in the designated area and in such a manner as to prevent equipment and materials from damage and loss. Store equipment and materials delivered to the site on pallets and cover with waterproof, tear resistant tarp or plastic or as required to keep equipment and materials dry. Follow manufacturer's recommendations, and always, take every precaution to properly protect equipment and material from damage, including the erection of temporary shelters to adequately protect equipment and material stored at the Site. Equipment and/or material which becomes rusted or damaged shall be replaced or restored by the Contractor to a condition acceptable to the Contract Administrator.
- D. Be responsible for the safe storage of tools, material, and equipment.

#### **1.16 WARRANTIES**

- A. Refer to Division 01 and General Conditions for Warranties in addition to requirements specified herein.
- B. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.
- C. Warrant each system and each element thereof against all defects due to faulty workmanship, design, or material for a period of 12 months from date of Substantial Completion, unless specific items are noted to carry a longer warranty in these Construction Documents or manufacturer's standard warranty exceeds 12 months. Remedy all defects, occurring within the warranty period(s), as stated in the General Conditions and Division 01.
- D. The above warranties shall include labor and material. Make repairs or replacements without any additional costs to the Owner.
- E. Perform the remedial work promptly, upon written notice from the Contract Administrator or Owner.
- F. At the time of Substantial Completion, deliver to the Owner all warranties, in writing and properly executed, including term limits for warranties extending beyond the one-year period,

each warranty instrument being addressed to the Owner and stating the commencement date and term.

### 1.17 TEMPORARY FACILITIES

- A. Refer to Division 01 and General Conditions for Temporary Facilities requirements.
- B. Temporary Utilities: The types of services required include, but are not limited to, electricity, telephone, and internet. When connecting to existing franchised utilities for required services, comply with service companies' recommendations on materials and methods, or engage service companies to install services. Locate and relocate services (as necessary) to minimize interference with construction operations.

### 1.18 FIELD CONDITIONS

- A. Conditions Affecting Work in Existing Buildings: The following project conditions apply:
  - 1. The Drawings describe the general nature of remodeling to the existing building; however, visit the Site prior to submitting bid to determine the nature and extent of work involved.
  - 2. Schedule Work in the existing building with the Owner.
  - 3. Perform certain demolition work prior to the remodeling. Perform the demolition that involves Communications systems, equipment, raceways, equipment supports or foundations and materials.
  - 4. Remove articles that are not required for the new Work. Unless otherwise indicated, remove each item removed during this demolition from the premises and dispose in accordance with applicable federal, state, and local regulations.
  - 5. Relocate and reconnect Communications facilities that shall be relocated to accomplish the remodeling shown in the Drawings or indicated in the Specifications. Where communications equipment or materials are removed, cap unused raceways below the floor line or behind the wall line to facilitate restoration of finish.
  - 6. Obtain permission from the Contract Administrator for channeling of floors or walls not specifically noted on the Drawings.
  - 7. Protect adjacent materials indicated to remain. For Work specific to this Division, install, and maintain dust and noise barriers to keep dirt, dust, and noise from being transmitted to adjacent areas. Remove protection and barriers after demolition operations are complete.
  - 8. Locate, identify, and protect communications services passing through demolition area and serving other areas outside the demolition limits. Maintain services to areas outside demolition limits. When services shall be interrupted, provide temporary services for affected areas.
- B. Conditions Affecting Excavations: The following project conditions apply:
  - 1. Maintain and protect existing building services that transit the area affected by selective demolition.
  - 2. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by excavation operations.
- C. Site Information: Subsurface conditions were investigated during the design of the Project. Reports of these investigations are available for information only; data in the reports are not intended as representations or warranties of accuracy or continuity of conditions. The Owner will not be responsible for interpretations or conclusions drawn from this information.

- D. Use of explosives is not permitted.
- E. Environmental Conditions: Apply joint sealers under temperature and humidity conditions within the limits specified by the joint sealer manufacturer. Do not apply joint sealers to wet substrates.

## **PART 2 PRODUCTS**

### **2.1 NOT USED**

## **PART 3 EXECUTION**

### **3.1 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.

### **3.2 EXISTING CONDITIONS**

- A. Existing conditions indicated on the Drawings are taken from the best information available from the Owner, existing record drawings, and from limited, in-situ, visual site observations; and, they are not to be construed as "AS BUILT" conditions. The information is shown to help establish the extent of the new Work.
- B. Verify existing conditions at the project site and perform the Work as required to meet the existing conditions and the intent of the Work indicated.

### **3.3 EXISTING UTILITIES**

- A. Existing utility services not specifically indicated to be removed or altered shall remain as they presently exist.
- B. Where existing services interfere with demolition or construction, alter, or reroute such existing equipment to facilitate demolition or construction after obtaining written permission from the Contract Administrator. Notify in writing giving two weeks advance notice or planned alteration prior to altering any existing condition is required.
- C. Schedule and coordinate with the utility service provider, Owner, and Contract Administrator connections to, relocation of, or discontinuation of services from existing utility service providers. Include premium time required for such work in the Bid.
- D. Preserve continuity of service of existing facilities (related to damage or alteration due to new construction). Unauthorized alteration to existing equipment shall be corrected without additional cost to the Owner.
- E. Repair existing utilities damaged due to construction operations to the satisfaction of the Owner or utility provider without additional cost.
- F. Do not leave utilities disconnected at the end of a workday or over a weekend unless authorized by representatives of the Owner or Contract Administrator.
- G. Make repairs and restoration of utilities before workmen leave the project at the end of the workday in which the interruption takes place.
- H. Include in Bid the cost of furnishing temporary facilities to provide services during interruption of normal utility service.

### **3.4 EXAMINATION OF SITE**

- A. Prior to the submitting of bids, visit the project site and become familiar with all conditions affecting the proposed installation and make provisions as to the cost thereof.

- B. The Contract Documents do not make representations regarding the character or extent of the sub-soils, water levels, existing structural, mechanical, electrical, communications, and electronic safety and security installations, above or below ground, or other sub-surface conditions which may be encountered during the work. Evaluate existing conditions, which may affect methods or cost of performing the work, based on examination of the site or other information. Failure to examine the Drawings or other information does not relieve the Contractor of responsibility for satisfactory completion of the work.

### 3.5 PERMITS AND FEES

- A. Secure and Pay all required fees and obtain all required permits related to the Communications Infrastructure installation.
- B. Pay royalties or fees in connection with the use of patented devices and systems.

### 3.6 SELECTIVE DEMOLITION

- A. Refer to Division 01, Division 02, and General Conditions for Selective Demolition requirements.
- B. General: Demolish, remove, demount, and disconnect abandoned communications materials and equipment indicated to be removed and not indicated to be salvaged or saved.
- C. Materials and Equipment to Be Salvaged:
  - 1. Communications Infrastructure equipment to be removed that is in good working order shall be carefully removed and offered to the Owner. Items rejected by the Owner shall be removed from the project site and legally and properly disposed of.
  - 2. Remove, demount, and disconnect existing communications materials and equipment indicated to be removed and salvaged, and deliver materials and equipment to the location designated for storage.
- D. Remove existing conduit and wire back to the Communications Equipment room unless a specific extent of removal is indicated on the Drawings.
- E. Communications Materials and Equipment: Demolish, remove, demount, and disconnect the following items:
  - 1. Inactive and obsolete raceways, fittings, supports and specialties, equipment, wiring, controls, fixtures, and insulation:
    - a. Raceways and outlets embedded in floors, walls, and ceilings may remain if such materials do not interfere with new installations. Cut embedded raceways to below finished surfaces, seal, and refinish surfaces as specified or as indicated on the Architectural Finish Drawings. Remove materials above accessible ceilings. Cap raceways allowed to remain.
    - b. Perform cutting and patching required for demolition in accordance with Division 01, General Conditions and "Cutting and Patching" portion of this Section in Division 27.

### 3.7 ACCESS TO EQUIPMENT

- A. Locate all pull boxes, junction boxes and controls to provide easy access for operation, service inspection and maintenance. Provide an access door where equipment or devices are located above inaccessible ceilings. Refer to 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO.
- B. Maintain all code required clearances and clearances required by manufacturers.

**3.8 PENETRATIONS**

- A. Unless otherwise noted as being provided under other divisions, provide sleeves, box frames, or both, for openings in floors, walls, partitions, and ceilings for all electrical work that passes through construction. Refer to 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO.
- B. Provide sleeves, box frames, or both, for all conduit, cable, and cable trays that pass-through masonry, concrete or block walls.
- C. The cutting of new and/or existing construction will not be permitted except by written approval of the Contract Administrator.

**3.9 EXCAVATION AND BACKFILLING**

- A. Refer to Division 01, Division 02 and General Conditions for Excavation and Backfilling in addition to the requirements specified herein.
- B. Perform excavation of every description, of whatever substance encountered and to the depth required in connection with the installation of the work under this division. Excavation shall be in conformance with applicable Divisions and sections of the Specifications.
- C. Restore roads, alleys, streets, and sidewalks damaged during this work to the satisfaction of Authorities Having Jurisdiction.
- D. Do not excavate trenches close to walks or columns without prior consultation with the Contract Administrator.
- E. Erect barricades around excavations, for safety, and place an adequate number of amber lights on or near the work and keep those burning from dusk to dawn. Be responsible for all damage that any parties may sustain in consequence of neglecting the necessary precautions in prosecuting the work.
- F. Slope sides of excavations to comply with local, state, and federal codes and ordinances. Shore and brace as required for stability of excavation.
- G. Shoring and Bracing: Establish requirements for trench shoring and bracing to comply with local, state, and federal codes and authorities. Maintain shoring and bracing in excavations regardless of period excavations will be open.
  - 1. Remove shoring and bracing when no longer required. Where sheeting is allowed to remain, cut top of sheeting at an elevation of 30 inch below finished grade elevation.
- H. Install sediment and erosion control measures in accordance with local codes and ordinances.
- I. Dewatering: Prevent surface water and subsurface or ground water from flowing into excavations and from flooding project site and surrounding area.
  - 1. Do not allow water to accumulate in excavations. Remove water to prevent softening of bearing materials. Provide and maintain dewatering system components necessary to convey water away from excavations.
  - 2. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey surface water to collecting or run-off areas. Do not use trench excavations as temporary drainage ditches. In no case shall sewers be used as drains for such water.
- J. Material Storage: Stockpile satisfactory excavated materials where directed, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.

1. Locate and retain soil materials away from edge of excavations. Do not store within dripline of trees indicated to remain.
  2. Remove and legally dispose of excess excavated materials and materials not acceptable for use as backfill or fill.
- K. Excavation for Underground Structures: Conform to elevations and dimensions shown within a tolerance of plus or minus 0.10 ft; plus, a sufficient distance to permit placing and removal of concrete formwork, installation of services, other construction, and for inspection.
1. Excavate, by hand, areas within dripline of large trees. Protect the root system from damage and dry-out. Maintain moist conditions for root system and cover exposed roots with burlap. Paint root cuts of 1 inch in diameter and larger with emulsified asphalt tree paint.
  2. Take care not to disturb bottom of excavation. Excavate by hand to final grade just before concrete reinforcement is placed.
- L. Trenching: Excavate trenches for communications installations as follows:
1. Excavate trenches to the uniform width, sufficiently wide to provide ample working room and a minimum of 6 to 9 inches clearance on both sides of raceway and cables.
  2. Excavate trenches to depth indicated or required for raceway and cables to establish slope, away from buildings and indicated elevations. Beyond building perimeter, excavate trenches to an elevation below frost line.
  3. Limit the length of open trench to that in which raceway and cables can be installed, tested, and the trench backfilled within the same day.
  4. Where rock is encountered, carry excavation below required elevation and backfill with a layer of crushed stone or gravel prior to installation of raceway and cables. Provide a minimum of six inches of stone or gravel cushion between rock bearing surface and raceway and cables.
  5. Excavate trenches for raceway, cables, and equipment with bottoms of trench to accurate elevations for support of raceway and cables on undisturbed soil.
- M. Cold Weather Protection: Protect excavation bottoms against freezing when atmospheric temperature is less than 35 degrees F.
- N. Backfilling and Filling: Place soil materials in layers to required subgrade elevations for each area classification listed below, using materials specified in Part 2 of this Section.
1. Under walks and pavements, use a combination of subbase materials and excavated or borrowed materials.
  2. Under building slabs, use drainage fill materials.
  3. Under raceway and cables, use subbase materials where required over rock bearing surface and for correction of unauthorized excavation.
  4. For raceway and cables less than 30 inch below surface of roadways, provide 4 inch thick concrete base slab support. After installation and testing of raceway and cables, provide a 4 inch thick concrete encasement (sides and top) prior to backfilling and placement of roadway subbase.
  5. Other areas use excavated or borrowed materials.
- O. Backfill excavations as promptly as work permits, but not until completion of the following:
1. Inspection, testing, approval, and locations of underground utilities have been recorded.
  2. Removal of concrete formwork.
  3. Removal of shoring and bracing, and backfilling of voids.

4. Removal of trash and debris.
- P. Placement and Compaction: Place backfill and fill materials in layers of not more than 8 inch in loose depth for material compacted by heavy equipment, and not more than 4 inch in loose depth for material compacted by hand-operated tampers.
  1. For vertical and diagonal raceway installations, thoroughly support raceways from permanent structures or undisturbed earth at no less than 10 ft intervals, while placing backfill materials, so that raceways are not deflected, crushed, broken, or otherwise damaged by the backfill placement.
- Q. Before compaction, moisten or aerate each layer as necessary to provide optimum moisture content. Compact each layer to required percentage of maximum dry density or relative dry density for each area classification specified below. Do not place backfill or fill material on surfaces that are muddy, frozen, or contain frost or ice.
- R. Place backfill and fill materials evenly adjacent to structures, piping, and equipment to required elevations. Prevent displacement of raceways and equipment by carrying material uniformly around them to approximately same elevation in each lift.
- S. Compaction: Control soil compaction during construction, providing minimum percentage of density specified for each area classification indicated below:
  1. Percentage of Maximum Density Requirements: Compact soil to not less than the following percentages of maximum density for soils which exhibit a well-defined moisture-density relationship (cohesive soils), determined in accordance with ASTM D1557 and not less than the following percentages of relative density, determined in accordance with ASTM D4253, for soils which will not exhibit a well-defined moisture-density relationship (cohesionless soils).
    - a. Areas Under Structures, Building Slabs and Steps, Pavements: Compact top 12 inch of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
    - b. Areas Under Walkways: Compact top 6 inch of subgrade and each layer of backfill or fill material to 90 percent maximum density for cohesive material, or 95 percent relative density for cohesionless material.
    - c. Other Areas: Compact top 6 inch of subgrade and each layer of backfill or fill material to 85 percent maximum density for cohesive soils, and 90 percent relative density for cohesionless soils.
  2. Moisture Control: Where subgrade or layer of soil material must be moisture conditioned before compaction, uniformly apply water. Apply water in minimum quantity necessary to achieve required moisture content and to prevent water appearing on surface during, or after, compaction operations.
- T. Subsidence: Where subsidence occurs at mechanical installation excavations during the period 12 months after Substantial Completion, remove surface treatment (i.e., pavement, lawn, or other finish), add backfill material, compact to specified conditions, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent areas.

### 3.10 CUTTING AND PATCHING

- A. Cut walls, floors, ceilings, and other portions of the facility as required to install work under this Division.

- B. Obtain permission from the Contract Administrator prior to cutting. Do not cut or disturb structural members without prior approval from the Contract Administrator and Structural Engineer.
- C. For post-tension slabs, x-ray slab and closely coordinate all core drill locations with Contract Administrator and Structural Engineer prior to performing any work. Obtain approval from Contract Administrator and Structural Engineer for all core drills and penetrations at least four days prior to performing work.
- D. Penetrations shall be made as small as possible while maintaining required clearances between the building element penetrated and the system component.
- E. Patch around openings to match adjacent construction, including fire ratings, if applicable.
- F. Repair and refinish areas disturbed by work to the condition of adjoining surfaces in a manner satisfactory to the Contract Administrator.

### **3.11 PAINTING**

- A. Refer to Division 09 Section "Painting" for painting requirements.
- B. Paint exposed ferrous surfaces, including, but not limited to, hangers, equipment stands and supports using materials and methods as specified under individual sections and Division 09 of the Specifications; colors shall be as selected by the Contract Administrator.
- C. Re-finish all field-threaded ends of galvanized conduits and field-cut ends of galvanized supports with a cold-galvanizing compound approved for use on conductive surfaces. Follow closely manufacturer's instructions for pre-cleaning surfaces and application.
- D. Factory finishes and shop priming, and special finishes are specified in the individual equipment Specification sections.
- E. Where factory finishes are provided and no additional field painting is specified, touch up or refinish, as required by, and to the acceptance of, the Contract Administrator, marred or damaged surfaces so as to leave a smooth, uniform finish. If, in the opinion of the Contract Administrator, the finish is too badly damaged to be properly re-finished, replace the damaged equipment or materials at no additional costs to the Owner.

### **3.12 CLEANING**

- A. Remove dirt and refuse, resulting from the performance of the Work, from the premises as required to prevent accumulation. Cooperate in always maintaining reasonably clean premises.
- B. Immediately prior to final inspection, make a final cleanup of dirt and refuse resulting from Work and assist in making the premises vacuum clean. Clean all material and equipment installed under this Division.
- C. Remove dirt, dust, plaster, stains, and foreign matter from all surfaces.
- D. Touch up and restore damaged finishes to their original condition.
- E. All communications equipment shall be thoroughly vacuumed and wiped clean prior to startup and at the completion of the project. Equipment shall be opened for observation as required.

### **3.13 ADJUSTING ALIGNING AND TESTING**

- A. Adjust, align, and test all equipment furnished and/or installed under this Division.
- B. Check and test protective devices for specified and required application and adjust as required.

- C. Verify that completed wiring system is free from short circuits, unintentional grounds, low insulation impedances, and unintentional open circuits.
- D. Notify the Contract Administrator immediately of all operational failures caused by defective material, labor, or both.
- E. Refer to individual Sections for additional and specific requirements.

### **3.14 START-UP OF SYSTEMS**

- A. Prior to start-up of each system, check all components and devices to confirm compliance with manufacturers' recommended installation procedures.
- B. Demonstrate that all equipment and systems perform properly as designed per Drawings and Specifications.
- C. Refer to individual Sections for additional and specific requirements.

### **3.15 SUBSTANTIAL COMPLETION REVIEW**

- A. Prior to requesting a site observation for "CERTIFICATION OF SUBSTANTIAL COMPLETION", complete the following items:
  - 1. Submit results of systems tests and adjustments per each individual section.
  - 2. Submit complete Operation and Maintenance Data.
  - 3. Submit complete Record Drawings.
  - 4. Perform all required training of Owner's personnel.
  - 5. Turn over all spares and extra materials to the Owner, along with a complete inventory of spares and extra materials being turned over.
  - 6. Perform start-up tests of all systems.
  - 7. Remove all temporary facilities from the site.
  - 8. Comply with all requirements for Substantial Completion in the Division 01 and General Conditions.
- B. Request in writing a review for Substantial Completion and scheduling of final acceptance. Provide a minimum of 8 business days' notice.
- C. State in the written request that the Contractor has complied with the requirements for Substantial Completion.
- D. Upon receipt of a request for review, the Contract Administrator will either proceed with the review or advise the Contractor of unfilled requirements.
- E. If the Contractor requests a site visit for Substantial Completion review prior to completing the above-mentioned items, then provide reimbursement to the Contract Administrator and Design Consultant for time and expenses incurred for the visit.
- F. Upon completion of the review, the Contract Administrator and Design Consultant will prepare a "final list" of outstanding items to be completed or corrected for final acceptance.
- G. Omissions on the "final list" shall not relieve the Contractor from the requirements of the Contract Documents.
- H. Prior to requesting a final review, submit a copy of the final list of items to be completed or corrected. State in writing that each item has been completed, resolved for acceptance or the reason it has not been completed.

### **3.16 EARLY OCCUPANCY**

- A. Failure to meet the Substantial Completion date can result in the Owner needing to take early occupancy. Complete the systems which are necessary to allow partial early occupancy of the building by original Substantial Completion date.
  - 1. Refer to individual sections for additional requirements.
- B. Verify and comply with requirements for temporary occupancy with the local Building and Fire Departments.

**END OF SECTION**

**SUBSTITUTION REQUEST FORM**

To Project Engineer: \_\_\_\_\_ Request # (GC Determined): \_\_\_\_\_

Project Name: \_\_\_\_\_

Project No/Phase: \_\_\_\_\_ Date: \_\_\_\_\_

Specification Title: \_\_\_\_\_

Section Number: \_\_\_\_\_ Page: \_\_\_\_\_ Article/Paragraph: \_\_\_\_\_

Proposed Substitution: \_\_\_\_\_

Manufacturer: \_\_\_\_\_ Model No.: \_\_\_\_\_

Address: \_\_\_\_\_ Phone: \_\_\_\_\_

History:  New product  1-4 years old  5-10 years old  More than 10 years old

Differences between proposed substitution and specified Work: \_\_\_\_\_

Point-by-point comparative data attached – REQUIRED BY ENGINEER  
Comparative data may include but not be limited to performance, certifications, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements. Include all information necessary for an evaluation.

Supporting Data Attached:  Drawings  Product Data  Samples  
 Tests  Reports  Other: \_\_\_\_\_

Reason for not providing specified item: \_\_\_\_\_

Similar Installation:  
Project: \_\_\_\_\_ Architect: \_\_\_\_\_  
Address: \_\_\_\_\_ Owner: \_\_\_\_\_  
Date Installed: \_\_\_\_\_

Proposed substitution affects other parts of Work:  No  Yes; explain: \_\_\_\_\_

**Substitution Certification Statement:**

Unless stated otherwise in writing to the Engineer by the Contractor, Contractor warrants to the Engineer, Architect, and Owner that the:

- A. Proposed substitution has been fully investigated and determined to meet or exceed the specified Work in all respects.
- B. Proposed substitution is consistent with the Contract Documents and will produce indicated results.
- C. Proposed substitution does not affect dimensions and functional clearances.
- D. Proposed substitution has received necessary approvals of authorities having jurisdiction.
- E. Same warranty will be furnished for proposed substitution as for specified Work.
- F. Same maintenance service and source of replacement parts, as applicable, is available.
- G. Proposed substitution will not adversely affect other trades or delay construction schedule.
- H. Coordination, installation, and changes in the Work as necessary for accepted substitution will be complete in all respects.

Submitting Contractor	Date	Company
-----------------------	------	---------

**Manufacturer's Certification of Equal Quality:**

I \_\_\_\_\_ represent the manufacturer of the Proposed Substitution item and hereby certify and warrant to Architect, Engineer, and Owner that the function and quality of the Proposed Substitution meets or exceeds the Specified Item.

Manufacturer's Representative	Date	Company
-------------------------------	------	---------

**Engineer Review and Recommendation Section**

Recommend Acceptance     Yes     No

Additional Comments:     Attached     None

**Acceptance Section:**

Contractor Acceptance Signature	Date	Company
Owner Acceptance Signature	Date	Company
Architect Acceptance Signature	Date	Company
Engineer Acceptance Signature	Date	Company

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO****PART 1 GENERAL****1.1 SECTION INCLUDES**

- A. Grounding and bonding for communications systems
- B. Pathways for communications systems
  - 1. Hangers and Supports
    - a. Cable hook supports (J-hooks)
    - b. Cable supports (saddle or loop)
  - 2. Conduits and Backboxes
    - a. Conduit
    - b. Pull boxes
    - c. Floor boxes and poke throughs
  - 3. Underground ducts and raceways
  - 4. Sleeves and sleeve seals
    - a. Sleeves in unrated barriers
    - b. Sleeves in acoustical barriers
  - 5. Access panels
- C. Fire Stop Systems
- D. Identification for communications system

**1.2 RELATED REQUIREMENTS**

- A. Section 07 84 00 - Firestopping.
- B. Section 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS.
- C. Section 26 05 36 - CABLE TRAYS FOR ELECTRICAL SYSTEMS.
- D. Section 26 05 39 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS.
- E. Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.
- F. Section 27 05 43 - UNDERGROUND DUCTS AND RACEWAYS FOR COMMUNICATIONS SYSTEMS
- G. Section 27 05 48 - SEISMIC CONTROLS FOR COMMUNICATIONS SYSTEMS
- H. Section 27 10 00 - STRUCTURED CABLING
- I. Section 27 41 00 - AUDIO VIDEO SYSTEMS
- J. Section 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT

**1.3 DEFINITIONS**

- A. AV: Audio Video
- B. Cable Tray or Cable Tray System: A unit or assembly of units or sections and associated fittings forming a structural system used to securely fasten or support cables and raceways.
- C. Common Work: Work specified in this section.

- D. Conduit Body: A separate portion of a conduit or tubing system that provides access through a removeable cover(s) to the interior of the system at a junction of two or more sections of the system or at a terminal point of the system. Boxes such as FS and FD or larger cast or sheet metal boxes are not classified as conduit bodies.
- E. Conveniently Accessible: Capable of being reached from the floor or via the use of an 8 ft step ladder without crawling or climbing over or under obstacles such as piping, duct work, motors, transformers, pumps, etc.
- F. Firestop System Assembly: Firestopping products tested and rated by a Nationally Recognized Testing Laboratory (NRTL), such as UL, to provide the required flame (F), fire and temperature (T), air and smoke (L), and water (W) containment for a given partition/penetration.
- G. Floor Box Assembly (Floor Box): An on-grade solution or above grade (with a native fire classification or in combination with an approved Firestopping System) solution for in-floor terminations. The Assembly consists of pour pan (as applicable), Firestopping System (as applicable), floor box (compartment), plate mounting brackets, line voltage divider plates, termination plates, termination connectors, electrical receptacle(s), gang plates (termination cover plates), and access door / cover / lid.
- H. Ground or Grounding: A conducting connection, whether intentional or accidental, between an electrical circuit (e.g. telecommunications) or equipment and the earth, or to some conducting body that serves in place of earth.
- I. IMC: Intermediate Metal Conduit
- J. Plenum: A compartment or chamber to which one or more air ducts are connected and forms part of the air distribution system.
- K. Plenum-rated: A product listed by a NRTL as being suitable for installation into a plenum space.
- L. Point of Entrance (Building Entrance): The point within a building where the Outside Plant (OSP) communications cabling emerges from an external wall, a concrete floor slab, or IMC/RMC. If Communications Point of Entrance isn't identified on the drawings, assume the Main Communications (MDF) also acts as the Point of Entrance.
- M. Poke Through Assembly (Poke-Thru): An above grade solution with a native fire classification for in-floor terminations. The Assembly consists of pre-pour sleeve (as applicable), Firestopping System, fire resistant conduit stub, poke thru (compartment), plate mounting brackets, line voltage divider plates, termination plates, termination connectors, electrical receptacle(s), gang plates (termination cover plates, as applicable), and access door / cover / lid.
- N. Quality Control Specialist: as it pertains to Work within this Section, quality control specialist is Project AVIXA CTS-I.
- O. RMC: Rigid Metal Conduit
- P. Surface Metal Raceway: A metallic raceway intended to be mounted to the surface of a structure, with associated couplings, connectors, boxes, and fittings for the installation of electrical conductors.
- Q. Surface Nonmetallic Raceway: A nonmetallic raceway intended to be mounted to the surface of a structure, with associated couplings, connectors, boxes, and fittings for the installation of electrical conductors.

R. UL: Underwriters Laboratory

#### 1.4 REFERENCE STANDARDS

- A. ADA Standards - 2010 ADA Standards for Accessible Design; 2010.
- B. ASHRAE Handbook - ASHRAE Handbook Online; Online Edition.
- C. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.
- D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.
- E. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.
- F. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.
- G. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2023.
- H. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2023.
- I. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2023a.
- J. FM 4991 - Approval Standard of Firestop Contractors; 2013.
- K. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2020.
- L. NEMA VE 1 - Metal Cable Tray Systems; 2017.
- M. NEMA VE 2 - Cable Tray Installation Guidelines; 2018.
- N. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- O. TIA-569 - Telecommunications Pathways and Spaces; 2019e, with Addendum (2022).
- P. TIA-607 - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises; 2019d, with Addendum (2021).
- Q. UL (DIR) - Online Certifications Directory; Current Edition.
- R. UL (FRD) - Fire Resistance Directory; Current Edition.
- S. UL 263 - Standard for Fire Tests of Building Construction and Materials; Current Edition, Including All Revisions.
- T. UL 1479 - Standard for Fire Tests of Penetration Firestops; Current Edition, Including All Revisions.
- U. UL 2043 - Fire Test for Heat and Visible Smoke Release for Discrete Products and Their Accessories Installed in Air-Handling Spaces; Current Edition, Including All Revisions.

#### 1.5 ADMINISTRATIVE REQUIREMENTS

- A. Adjust location of pathways for communications systems to accommodate the work to prevent interferences, both anticipated and encountered. Determine the route and location of each conduit prior to fabrication:
  - 1. Right-of-Way: Lines which pitch shall have the right-of-way over those which do not pitch. For example: condensate, steam, and plumbing drains normally have right-of-way. Lines whose elevations cannot be changed have right-of-way over lines whose elevations can be changed.
  - 2. Provide offsets, transitions and changes in direction of conduit as required to maintain proper headroom and pitch on sloping lines.
  - 3. So connecting raceways, cables, and wireways will be clear of obstructions and of the working and access space of other equipment.
- B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.
- C. Coordinate location of access panels and doors for communications items that are behind finished surfaces or otherwise concealed.

## 1.6 SUBMITTALS

- A. Refer to 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO for submittal procedures.
- B. Pre-construction submittal
  - 1. Manufacturers' cut sheets or catalog cut sheets
    - a. Size - including physical and loading dimensions
    - b. Maximum span length
    - c. Weight supported
    - d. Type
    - e. Fittings to be used
    - f. Method of attachment to structure
    - g. Firestop system assembly information for each system to be installed:
      - 1) Firestop manufacturer
      - 2) UL system number
      - 3) F, T, L and W Ratings
      - 4) The complete description of the firestop system; To include what specific construction the system is intended to pass through such as a wall or floor assembly, the penetrating items allowed to pass through the opening in the wall or floor assembly, and the materials designed to prevent the spread of fire through the openings.
  - 2. Shop drawings
    - a. Submit for review scaled layout drawings showing the size/routing of all pathways and the size/information/locations of all boxes, pull boxes, firestops, and access panels.
      - 1) Each pathway shall be identified by type and size on the drawings.
        - a) Example #1: 4" EMT
        - b) Example #2: 4" x 12" Cable Tray
      - 2) Each grounding conductor shall be identified by size (and insulation)

- a) Example: #3/0 insulated ground
  - 3) Each firestop system shall be identified by manufacturer and product, as well as UL system number for each location.
    - a) Example #1: EZ-Path Series 22, UL System W-L-3255
    - b) Example #2: Specseal Power Shield, UL QCSN/CLIV.R14288
  - 4) Each pull box and access panel shall be identified by size and height above finished floor.
    - a) Pull box Example: Pull box 8" x 24" x 40" approximately 12' AFF.
  - b. Unless otherwise required by these specifications, it is permissible to show pathways systems (conduit, cable tray, auxiliary supports, etc.) on the same shop drawing along with the cabling and system work to be installed through those pathways. Individual pathways shall be separate shop drawings. Shared pathways such as cable tray shall be shown on both shop drawings. Refer to individual sections for specific requirements.
- 1) 27 41 00 - AUDIO VIDEO SYSTEMS

C. Project Completion

1. As-Built Drawings:

- a. The quality control specialist shall review the installation and as-built drawings for the common work results required for their scope of work and shall stamp the final as-built drawings with CTS-I stamp before submission. By stamping the as built drawings, the quality control specialist indicates that the common work results have been installed per the contract documents and associated codes, standards, and guidelines, and changes to the drawings have been incorporated into the as-built drawings.

2. Pictures of each firestop system

**1.7 QUALITY ASSURANCE**

- A. Submittals and shop drawings for common work results specified in this section shall, if not created by, be reviewed by the Quality Control Specialist.

- 1. The Quality Control Specialist shall stamp relevant submittals for their associated Division 27 sections, which indicates at a minimum, the proposed work has been reviewed by them and found to be in compliance in regard to:
  - a. Applicable codes and industry standards and guidelines referenced in Division 27.
  - b. Full coordination with other trades and to be installed per the construction documents.
  - c. Installed per manufacturer's direction.

- B. The Quality Control Specialist shall make weekly inspections during construction to ensure all work installed per this section is correct.

- 1. Identified deficiencies encountered prior to and during installation shall be corrected by the installing Contractor under the direction of the Quality Control Specialist and/or the Design Consultant.

C. Firestopping systems

- 1. Firestopping material and systems shall be tested and listed by UL. Firestopping products shall bear UL classification marking.
- 2. Installation technicians shall be by qualified and trained personnel. Acceptable installer qualifications are as follows:

- a. FM Research, approved in accordance with FM 4991.
- b. Individuals who are trained and certified by the firestopping manufacturer. For Specified Technologies, installers shall have FIT Level 1 certification.
- D. Copies of documents at project site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.
- E. Products: Listed, classified, and labeled as suitable for the purpose intended.
- F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

### 1.8 DELIVERY STORAGE AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Keep stored products clean and dry.

### 1.9 WARRANTY

- A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective work within a 2 year period after date of substantial completion.

### 1.10 NOISE CRITICAL SPACES

- A. Many areas of the building, referred to as "noise-critical spaces", require special attention (special acoustical provisions and restrictions). The table below designates a partial list of noise-critical spaces. See ASHRAE Handbook: HVAC Applications, "49. Noise and Vibration Control" for full list.

<u>Space</u>	<u>RC Level</u>
Teleconference Rooms	25
Meeting/Banquet Rooms	30
Conference Rooms	30

## PART 2 PRODUCTS

### 2.1 GROUNDING AND BONDING FOR COMMUNICATIONS

- A. Refer to Drawings and following Division 27 Sections for grounding and bonding requirements.
  - 1. 27 41 00 - AUDIO VIDEO SYSTEMS

### 2.2 PATHWAYS FOR COMMUNICATIONS SYSTEMS

- A. Hangers and Supports
  - 1. Cable hook supports (J-hooks)
    - a. Basis of design
      - 1) Above ceiling: Eaton Corporation PLC; B-Line series BCH21, BCH32, BCH64
      - 2) Below raised floor: Eaton Corporation PLC; B-Line series BCH21, BCH32, BCH64 with appropriate underfloor support bracket
    - b. Other acceptable manufacturers
      - 1) Hilti, Inc
      - 2) MonoSystems
      - 3) nVent Electric PLC; Caddy

- 4) Panduit Corporation
- 5) Snake Tray
- 6) Substitution: See Section 01 60 00 - Product Requirements.
- c. Description
  - 1) Non-continuous cable supports shall be designed to prevent degradation of cable performance and pinch points that could damage cable.
  - 2) Non-continuous cable supports shall have flared edges to prevent damage while installing cables.
  - 3) Have a flat bottom and sufficient width to comply with the minimum bend radius of all cabling as required by the referenced standards and manufacturers recommendations.
  - 4) Be open for easy lay-in and removal of cabling.
  - 5) Be designed so the mounting hardware is recessed to prevent cable damage.
  - 6) Cable hooks for non-corrosive areas shall be pre-galvanized steel, ASTM A653/A653M. Where additional strength is required, cable hooks shall be spring steel with a zinc-plated finish, ASTM B633, SC3
  - 7) Cable hooks for corrosive areas shall be stainless steel, AISI Type 304
  - 8) Be factory assembled for direct attachment to walls, hanger rods, beam flanges, purlins, strut, floor posts, etc. to meet job conditions.
  - 9) Be factory assembled multi-tiered cable hooks, shall be used where required to provide separate cabling compartments, or where additional capacity is needed.
2. Cable supports (saddle or loop)
  - a. Basis of design
    - 1) Above ceiling: nVent CADDY CAT 425, 425A6
  - b. Other acceptable manufacturers
    - 1) Arlington Fittings
    - 2) nVent Electric PLC; Caddy
    - 3) Substitution: See Section 01 60 00 - Product Requirements
  - c. Description
    - 1) Non-continuous cable supports shall be designed to prevent degradation of cable performance and pinch points that could damage cable.
    - 2) Suitable for air handling spaces (plenum)
    - 3) Adjustable strap allows for multiple support sizes to reduce inventory.
- B. Conduit and Backboxes
  1. Conduit
    - a. Manufacturers
      - 1) Refer to Section 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for list of Manufacturers.
    - b. Description
      - 1) Refer to Section 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for product and material information. Sizes, methods, and more stringent requirements shall be adhered to when specified in this Division.
      - 2) Conduits provided as connection to incoming services, utilities, including private services to other buildings or outside connection points shall be rigid metal or

intermediate metal conduit at the point it enters the building, emerges from an exterior wall or ground floor slab to the final termination/transition point.

- 3) If services enter a room or space such as a mechanical room, electrical room or other intermediate room due to convenience or proximity to the exterior and adequate space has not been provided within 50 ft for the equipment needed for transitioning these and future cables/services to an appropriately rated indoor cable then those conduits shall be continued uninterrupted (except for necessary pull boxes) to the final connection point or location where the transition point has been designated. Generally, this connection point will be a designated Entrance Room for Communications or the Main Telecommunication space. If space has not been identified the Contractor shall request information prior to bid.
- 4) Provide conduit as indicated on the drawings or required by this specification. Minimum conduit size for structured cabling shall be 1 inch. Provide a polypropylene or monofilament plastic line with not less than 200 lb tensile strength in each empty conduit. Permanently mark or tag each conduit or pull box, identifying it as communications (Telecom), AV, TV, Broadcast, Intercom, etc.), at intervals of not more than 75 ft. Each conduit stubbed into the ceiling space from an outlet box shall be permanently marked or tagged; refer to labeling requirements in Part 3 Execution.
- 5) Route an empty conduit from each outlet box into the ceiling space above and terminate with a nylon bushing. In rooms with a non-accessible ceiling, route conduits to the nearest accessible corridor ceiling or communications space.
- 6) Typical conduit size for number of telecommunications cables. Size per TIA-569.

Number of Telecommunications Cables	Conduit Size
Up to 4	1 inch
Up to 8	1-1/4 inch

2. Pull Boxes
  - a. Basis of design: nVent Electric PLC; Hoffman Screw-Cover, Type 1
  - b. Other acceptable manufacturers:
    - 1) NEMA Enclosures
    - 2) Madison Electric, Smart L
    - 3) Wiegmann
    - 4) Or Approved Substitution (submitted and accepted in the pre-bid submittal)
  - c. Description
    - 1) NEMA 250 Type 1
    - 2) Interior use only
    - 3) Refer to Part 3 Execution for sizing requirements.
    - 4) Flat, removable covers fastened with plated steel screws
    - 5) Shall be keyed
3. Floor Boxes and Poke Throughs
  - a. Refer to floor box and poke through schedule on Audio Video, Electrical, and Telecommunications drawings.

- b. Include provisions for mounting communications faceplate and connectors in accordance with the requirements of the structured cabling manufacturer.  
Telecommunications outlet termination plate and termination connectors shall be provided per 27 10 00 - STRUCTURED CABLING. Coordinate all other assembly components to ensure compatibility.
  - c. Audio Video custom termination plates and connectors shall be provided per Section 27 41 00 - AUDIO VIDEO SYSTEMS and/or 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT. Coordinate assembly components to ensure compatibility.
- C. Underground Ducts and Raceways
- 1. General
    - a. Refer to Section 26 05 39 - UNDERFLOOR RACEWAYS FOR ELECTRICAL SYSTEMS and Section 27 05 43 - UNDERGROUND DUCTS AND RACEWAYS FOR COMMUNICATIONS SYSTEMS for additional requirements. Where a conflict exists between Division 26 and Division 27 the more stringent requirements shall apply.
  - 2. Handholes - for exterior, in-grade applications
    - a. Basis of Design: Hubbell Incorporated; Quazite PG
    - b. Other Acceptable Manufacturers
      - 1) Armorcast Products Company
      - 2) CRH PLC; Oldcastle Infrastructure
      - 3) MacLean Highline
      - 4) NewBasis
      - 5) Substitution: See Section 01 60 00 - Product Requirements
    - c. Description
      - 1) Size: 11 inch x 18 inch x 12 inch
      - 2) Design Load: 22,500 lb, tier 22
      - 3) For use with one or two conduits, 2 inch diameter and smaller are installed.
      - 4) Construction: Polymer Concrete with straight side with open bottom
- D. Sleeves and Sleeve Seals
- 1. Sleeves in unrated barriers
    - a. Manufacturers
      - 1) Refer to Section 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS for list of Manufacturers.
    - b. Description
      - 1) Nylon bushings at cable entry and exit, UL listed for plenum (UL 2043)
      - 2) Conduit waterfall at areas where cables exiting sleeve will be damaged from pinch point or over bending. Panduit Corporation CWF400 or equal.
  - 2. Sleeves in acoustical barriers
    - a. Basis of Design: Specified Technologies, Incorporated 33NEZ
    - b. Other Acceptable Manufacturers
      - 1) 3M
      - 2) Hilti Corporation
      - 3) Or Approved Substitution (submitted and accepted in the "pre-bid" phase)
    - c. Description
      - 1) For use in place of conduit sleeves through walls of noise critical spaces.
-

- 2) Plenum Rated (to UL 2043)
  - 3) Sound Transmission Classification (STC) as tested per ASTM E90 shall be greater than 60.
- E. Access Panels
1. Manufacturers
    - a. Activar/J.L Industries
    - b. Acudor Products
    - c. Alfab/Barco
    - d. Elmdor Products
    - e. Karp Associates, Inc.
    - f. Milcor
    - g. Nystrom Building Products
    - h. Williams Brothers
    - i. Wind-lock
    - j. Substitution: See Section 01 60 00 - Product Requirements
  2. Description
    - a. Where pull boxes are required above inaccessible ceiling spaces, or for other required conditions, provide an appropriately sized access panel.
    - b. Steel access doors and frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation.
      - 1) Joints and seams: continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
      - 2) Frames: 16-gauge steel, with a 1 inch wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling:
      - 3) For installation in masonry, concrete, ceramic tile, or wood paneling: 1 inch wide exposed perimeter flange and adjustable metal masonry anchors.
      - 4) For gypsum wallboard or plaster: perforated flanges with wallboard bead.
      - 5) For full-bed plaster applications: galvanized expanded metal lath and exposed casing bead, welded to perimeter of frame.
      - 6) Flush panel doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
      - 7) Fire-rated units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.
    - c. Locking devices: Where indicated, provide 5-pin or 5-disc type cylinder locks, individually keyed; provide 2 keys.
    - d. Indicate proposed size and locations on pre-construction shop drawings. No access panels shall be installed without Architect and Design Consultant approval.

### 2.3 FIRE STOP SYSTEMS

- A. Basis of design
1. Barrier penetration: Specified Technologies Incorporated EZ-Path
  2. Back boxes in fire-rated wall: Specified Technologies Incorporated SpecSeal Power Shield

3. Other applications: Specified Technologies Inc. - submit UL System documentation for each floor/wall type and product cutsheets for all STI materials to be utilized.
- B. Other acceptable manufacturers
1. 3M
  2. Hilti
  3. Substitution: See Section 01 60 00 - Product Requirements
- C. Description
1. General
    - a. Refer to Section 07 84 00 - Firestopping for additional requirements. Where a conflict exists between Division 07 and Division 27 the more stringent requirements shall apply.
    - b. Communications ladder rack and cable tray shall not continue through a fire-rated wall. Stop the tray, install multiple fire-rated pathway devices, and continue tray on the other side. Ensure grounding of the tray is continuous through the wall.
  2. Barrier penetration - for sleeves through a single penetration (wall or floor)
    - a. Minimum performance requirements: Shall meet testing requirements of ASTM E814 or UL 1479; Shall be installed in accordance with the NRTL. Provide fire stop systems appropriate for the specific application and in accordance with manufacturer's instructions.
    - b. Shall meet or exceed the ratings of the wall or floor that it penetrates.
    - c. Shall be a prefabricated and zero-maintenance solution which requires no action to activate the fire and smoke protective characteristics of the device.
    - d. Allows the installation and removal of cables without the need to remove or add materials.
    - e. Used to seal penetrations of cables through fire rated partitions.
  3. Back boxes in fire-rated walls
    - a. Used to seal backboxes in fire rated partitions.
    - b. Minimum performance requirements: Shall meet UL testing requirements of UL 263 and classified as Wall Opening Protective Material (QCSN or CLIV); Shall be installed in accordance with the NRTL. Shall meet or exceed the ratings of the wall or floor that it is located in.
    - c. Provide fire stop systems appropriate for the specific application and in accordance with manufacturer's instructions.
  4. Other applications
    - a. For fire-rated penetrations where the conduit pathway extends beyond a single fire-rated partition/floor, and other required firestopping applications not previously addressed in this specification.
    - b. Shall be UL listed for the specific application; Shall meet or exceed the ratings of the wall or floor that it penetrates.
- D. Identification
1. Label Printers
    - a. Manufacturer
      - 1) Aptiv PLC; HellermannTyton
      - 2) Brady Corporation
-

- 3) Brother International Corporation
  - 4) Epson Labelworks PX
  - 5) Newell Company; DYNMO
  - 6) Panduit Corporation
  - 7) Substitution: See Section 01 60 00 - Product Requirements
- b. Description
- 1) Refer to additional requirements in Part 3.
  - 2) Refer to individual sections for additional identification requirements for work.

## **PART 3 EXECUTION**

### **3.1 INSTALLATION**

- A. Install in accordance with manufacturer's instructions.
- B. Pathways for communications
1. General
    - a. Refer to Division 26 for additional installation requirements.
      - 1) Where a conflict exists between Division 26 and Division 27, the more stringent requirements shall apply.
    - b. Refer to Section 27 11 00 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS for pathway requirements in telecommunications spaces.
    - c. Supports shall be manufactured to support the required cable weight and volume. Field fabricated supports will not be accepted.
    - d. Install a pull cord in each pathway (empty or not) for installation of new wires or cables. Use polypropylene or monofilament plastic line with not less than 200 lb tensile strength. Leave at least 12 inch of slack at each end of pull cord.
    - e. Unless otherwise noted, pathway routing shown on the drawings is illustrative only and meant to indicate the general configuration of the work. Install pathways so that adequate clearances and offsets between pathways and other trades are provided. Coordinate all pathways with other trades prior to installation.
    - f. Pathways shall include empty space for a minimum of 25% growth beyond initial installation of cabling.
    - g. Cables shall be rigidly supported by cable pathways as indicated on the drawings. Cables shall be physically supported at intervals not to exceed 5 ft.
    - h. Store and keep products dry in original container in a climate-controlled environment until installation is to occur.
    - i. Install communications pathways:
      - 1) So that cables are pulled in accordance with referenced standards and guidelines.
      - 2) So that cables are pulled without damage to conductors, shield, armor, or jacket.
      - 3) So that cables are not forced or exceed minimum bend radius by manufacturer or referenced standards and guidelines.
      - 4) So that the maximum pulling tension is not exceeded.
      - 5) To meet the requirements of the structure and the requirements of other work on the project.
      - 6) To clear openings, depressions, ducts, pipes, reinforcing steel, etc.

- 7) Within or passing through the concrete structure in such a manner so as not to adversely affect the integrity of the structure. Become familiar with the Architectural and the Structural Drawings and their requirements affecting the raceway installation. If necessary, consult with the Architect.
  - 8) Parallel or perpendicular to building lines or column lines.
  - 9) When concealed, with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.
- j. Cables shall remain unattached to pathways or other cables and shall simply lay at rest on the supports provided by its pathway (including cable trays, wire basket, j-hooks, conduit, etc.). Zip ties, Velcro straps, electrical tape or other methods shall not be used to attach cables to cable supports, UON.
- 1) Except when supported by ladder racking within each telecommunications room, UON.
- k. Provide sufficient communications pathways so that cables are not forced to attach, be supported, or use other pathways not specifically designed and provided for communications cable purposes. Deviation from this will not be accepted.
- 1) At no point shall cables come in contact with, be supported by, or attach to other trades equipment or supports. UON
- l. Provide appropriately sized sleeves where cables are required to pass through non-rated full-height partitions. Where allowed, sleeves shall extend a minimum of 3 inch beyond the partition surface on both sides and shall be rigidly supported to support the weight of cables. Sleeves shall be sized no more than 50% of the cross-sectional area is utilized by the cabling to be installed. The minimum inside diameter of each sleeve shall be nominal 2 inch.
- m. Suspended cables shall be installed with at least 3 inch of clear vertical space above the ceiling tiles and support channels (T-bars).
- n. Waterproofing
- 1) Avoid, if possible, the penetration of waterproof membranes such as roofs, machine room floors, basement walls, and the like. If such penetration is necessary, make penetration prior to the waterproofing and furnish any sleeves or pitch-pockets required. Advise the architect and obtain written permission before penetrating waterproof membrane, even where such penetration is shown on the drawings.
  - 2) Restore waterproofing integrity of walls or surfaces after they have been penetrated without additional cost to the Owner.
- o. Cutting and Patching
- 1) Where cutting, channeling, chasing, or drilling of floors, walls, partitions, ceilings or other surfaces is necessary for the proper installation, support or anchorage of conduit or other equipment, layout the work carefully in advance. Repair damage to the building, piping, equipment or defaced finished plaster, woodwork, metalwork, etc. using skilled tradespeople of the trades required at no additional cost to the Owner.
    - a) Do not cut, channel, chase or drill masonry, tile, etc., unless permission from the architect is obtained. If permission is granted, perform this work in a manner acceptable to the Architect.

- b) Patch around openings to match adjacent construction.
  - c) Where conduit or equipment is mounted on a painted finished surface, or a surface to be painted, paint to match the surface. Cold galvanize bare metal whenever support channels are cut.
  - d) Provide slots, chases, openings and recesses through floors, walls, ceilings, and roofs as required. Where these openings are not provided, provide cutting and patching to accommodate penetrations at no additional cost to the Owner.
  - e) After the final waterproofing membrane has been installed, roofs may be cut only with written permission by the Architect.
- p. Mounting Heights
- 1) Mounting heights for equipment and devices requiring operational access shall conform to ADA Standards.
    - a) Unobstructed forward reach - Wall mounted devices requiring operational access shall be mounted a minimum of 15 inch above finished floor to bottom of device and a maximum of 48 inch above finished floor to top of device.
    - b) Obstructed forward reach with less than 20 inch counter - Wall mounted devices requiring operational access shall be mounted a minimum of 34 inch above finished floor to bottom of device and a maximum of 48 inch above finished floor to top of device.
    - c) Obstructed forward reach with 20 inch to 25 inch counter - Wall mounted devices requiring operational access shall be mounted a maximum of 44 inch above finished floor to top of device.
    - d) Unobstructed side reach - Wall mounted devices requiring operational access shall be mounted a minimum of 15 inch above finished floor to bottom of device and a maximum of 48 inch above finished floor to top of device.
    - e) Obstructed side reach with less than 10 inch counter - Wall mounted devices requiring operational access shall be mounted a maximum of 48 inch above finished floor to top of device.
    - f) Obstructed side reach with 10 inch to 24 inch counter - Wall mounted devices requiring operational access shall be mounted a maximum of 46 inch above finished floor to top of device.
  - 2) Mounting heights shall be from floor to center of device, unless otherwise noted. Verify locations and mounting heights with the architect before installation.
  - 3) Typical mounting heights shall match nearest adjacent electrical outlet mounting height UON or as directed by the architect.
- q. Painting
- 1) Refer to Division 09 for painting requirements.
  - 2) Paint exposed ferrous surfaces, including, but not limited to, hangers, equipment stands and supports using materials and methods as specified under Division 09; colors shall be as selected by the architect.
  - 3) Re-finish field-threaded ends of galvanized conduits and field-cut ends of galvanized supports with a cold-galvanizing compound approved for use on conductive surfaces. Follow closely manufacturer's instructions for pre-cleaning

- surfaces and application.
- 4) Factory finishes and shop priming and special finishes are specified in the individual equipment Specification sections.
  - 5) Where factory finishes are provided and no additional field painting is specified, touch-up or refinish, as required by, and to the acceptance of, the architect and design consultant, marred or damaged surfaces to leave a smooth, uniform finish. If, in the opinion of the architect or design consultant, the finish is too badly damaged to be properly re-finished, replace the damaged equipment or materials at no additional costs to the Owner.
  - 6) Provide touch-up paint as required by specification Sections in this Division.
- r. Fastenings
- 1) Fasten equipment to building structure in accordance with the best industry practice.
    - a) Where weight applied to the attachment points is 100 lb or less, conform to the following as a minimum:
      - (1) Wood: Wood screws.
      - (2) Concrete and solid masonry: Bolts and expansion shields.
      - (3) Hollow construction: Toggle bolts.
      - (4) Solid metal: Machine screws in tapped holes or with welded studs.
      - (5) Steel decking or sub-floor: Fastenings as specified below for applied weights in excess of 100 lb.
    - b) Where weight applied to building attachment points exceeds 100 lb, but is 300 lb or less, conform to the following as a minimum:
      - (1) At concrete slabs provide 24 inch x 24 inch x 1/2 inch steel fishplates on top with through bolts. Fishplate assemblies shall be chased in and grouted flush with the top of slab screed line, where no fill is to be applied.
      - (2) At steel decking or sub-floor for fastenings, provide through bolts or threaded rods. The tops of bolts or rods shall be set at least 1 inch below the top fill screed line and grouted in. Suitable washers shall be used under bolt heads or nuts. In cases where the decking or sub-floor manufacturer produces specialty hangers to work with his decking or sub-floor such hangers shall be provided.
    - c) Where weight applied to building attachment points exceeds 300 lb, coordinate with and obtain the approval of architect and conform to the following as a minimum:
      - (1) Provide suitable auxiliary channel or angle iron bridging between building structural steel elements to establish fastening points. Bridging members shall be suitably welded or clamped to building steel. Provide threaded rods or bolts to attach to bridging members.
    - d) For items, which are shown as being ceiling mounted at locations where fastening to the building construction element above is not possible, provide suitable auxiliary channel or angle iron bridging tying to the building structural elements.
    - e) Wall mounted equipment may be directly secured to wall by means of steel bolts. Groups or arrays of equipment may be mounted on adequately sized

- steel angles, channels, or bars. Prefabricated steel channels as manufactured by Kindorf or Unistrut are acceptable.
- s. For large quantities of cables (greater than 50) that converge upon a common run such as at a rack, in corridors, and other areas, provide cable trays or other special supports manufactured to support the required cable weight and volume.
  - t. Areas identified as noise critical spaces shall have penetrations sealed to minimize sound transmission between adjacent spaces. Install acoustical pathway(s) through walls of noise critical spaces.
2. Access to pathways and associated equipment
- a. Locate cable trays, open hanger cable supports, j-hooks, pull boxes, junction boxes and fire stopping systems to provide easy access for operation, service inspection and maintenance.
  - b. Provide an access panel where equipment or devices are located above inaccessible ceilings. Where access doors are necessary but not shown on the plans, coordination type and location with architect and design consultant through an RFI.
    - 1) Pathways requiring access such as open hanger cable supports, j-hooks, and cable trays shall have an access door or other means of direct access at a minimum of 10 ft intervals.
    - 2) Cables or cable pathways requiring access such as open hanger cable supports, j-hooks, and cable trays may not change directions above an inaccessible ceiling unless complete access to the change of direction in pathway or cable route is within arm's reach 3 ft from adjacent accessible point.
  - c. Maintain code required clearances and clearances required by manufacturers.
3. Cable distribution
- a. Provide pathways for telecommunications (structured cabling system) to allow cabling to be installed in the following manner:
    - 1) For typical new walls:
      - a) Conduit from outlet location to accessible ceiling then j-hooks to main run of cable tray.
    - 2) For existing walls:
      - a) For stud walls (ring and string): Mud ring for faceplate, cabling run in hollow cavity of the wall and then j-hooks are utilized back to the nearest cable tray or serving Telecommunications Room/Space
      - b) For masonry or inaccessible walls - Surface-mounted raceway to accessible ceiling space.
    - 3) For phone and data lines to all elevator equipment rooms and fire alarm panels:
      - a) Homerun method: Conduit from outlet location all the way back to the telecommunications room/space.
    - 4) See drawings for clarification.
  - b. Provide pathways for audio video systems to allow cabling to be installed in the following manner:
    - 1) For typical new walls:
      - a) Homerun method: Conduit from outlet/box location to the AV rack identified on the drawings.
    - 2) For existing walls:

- a) For stud walls (ring and string): Mud ring for faceplate, cabling run in hollow cavity of the wall and then j-hooks are utilized back to the nearest cable tray or serving Telecommunications Room/Space
  - b) For masonry or inaccessible walls - Surface-mounted raceway.
  - 3) See drawings for clarification.
4. Conduits
- a. Conduit shall be of the appropriate type required by code and Division 26.
  - b. Adequate access shall be available where cables enter conduits.
  - c. Bond and ground metallic conduits and boxes in accordance with national or local requirements and with TIA-607.
  - d. Install conduits in the most direct route possible, running parallel to building lines.
  - e. Ream conduit ends and fit ends with an insulated bushing to eliminate sharp edges that can damage cables during installation or service.
  - f. Conduits which enter telecommunications rooms shall extend 3 inch AFF or through the wall.
  - g. Conduits which enter Entrance Facilities shall extend 4 inch AFF or below the finished ceiling (if exists).
  - h. Flexible conduits shall be limited to where specifically allowed by these contract documents.
    - 1) Flexible conduit sections shall be less than 20 ft in length.
  - i. No continuous section of a conduit may exceed 100 ft without a pull box.
  - j. No more than (2) 90° bends, or equivalent will be allowed between pull boxes.
    - 1) Each offset shall be considered a 90° bend.
      - a) A pull box is required wherever a reverse bend is installed.
  - k. The minimum bend radius for conduits is
    - 1) (6) times the inside diameter for 2 inch conduits or less.
    - 2) (10) times the inside diameter for conduits greater than 2 inch.
  - l. Single conduit run may not serve more than (1) outlet location unless expressly indicated on the drawings.
  - m. Where building entrance conduits (for service provider and Owner's WAN cabling) do not enter the building directly into the Communications Entrance Room/Facility, extend those entrance conduits via RMC or IMC into the Communications Entrance Room/Facility.
    - 1) Coordinate with Contractor for 27 13 00 - COMMUNICATIONS BACKBONE CABLING and 27 15 00 - COMMUNICATIONS HORIZONTAL CABLING for potential other pathways where IMC/RMC are required.
  - n. Conduits shall contain no electrical condulets (also known as LBs).
    - 1) Exception: Pre-approved (by the design consultant) condulets manufactured specifically for the purpose of maintaining the minimum bend radius for communications cables. Identify condulet locations on the shop drawings.
  - o. Underground conduit requirements
    - 1) For audio video system cabling serving pole-mounted loudspeakers, broadcast boxes, etc.
    - 2) Requirements
      - a) Refer to applicable details on drawings for illustrative requirements.

- b) Wherever practical, slab-on-grade floor boxes shall have conduit extended underground or in-slab from box to serving communications room or equipment cabinet.
  - (1) Only one horizontal bend is allowed, 90 degrees or less.
  - (2) Indicate proposed routing and stub-up locations on shop drawings.
- c) Route underground conduit so there is no more than (3) 90 degree bends, including stub-up bend at communications room/equipment cabinet.
  - (1) For underground conduit serving outlets/boxes outside the footprint of the building that require more than (3) 90 degree bends, provide appropriately-sized handhole(s). Coordinate location with Architect and Owner, indicate proposed location(s) on shop drawings, and include product information in pre-construction submittals. In general, handholes are not to be in roadways, parking lots, sidewalks, or location subject to vehicular traffic.
- 3) Approved conduit types:
  - a) When routed in slab-on-grade:
    - (1) Horizontal conduit shall be RMC or Schedule 40 PVC, including horizontal bends. If PVC is installed, also install tracer wire.
    - (2) Vertical bends shall be RMC.
  - b) When routed below slab-on-grade or outside the footprint of the building:
    - (1) Horizontal conduit shall be RMC or Schedule 40 PVC a minimum of 12 inch below grade. If PVC is installed, also install tracer wire.
    - (2) All vertical and horizontal bends shall be RMC.
- p. Install approved expansion/deflection fittings where raceways pass through or over building expansion joints.
- q. Route raceway through roof openings for piping and ductwork or through roof seals approved by the architect, the roofing Contractor, or both. Obtain approval for roof penetrations and seal types from the Architect, Owner, roofing Contractor, or all three as required to maintain new or existing roofing warranties.
- 5. Pull Boxes
  - a. Pull boxes shall be placed in conveniently accessible locations.
  - b. Coordinate the location and installation of pull boxes to ensure adequate access is provided.
  - c. Pull boxes above an accessible ceiling shall:
    - 1) Be aligned directly over the ceiling grid to allow access.
    - 2) Be installed with a minimum of 3 inch clearance to ceiling grid and tiles
  - d. No directional changes shall be allowed in pull boxes. Conduit shall continue in the same direction as it enters and then change direction via an appropriately sized bend in the conduit.
  - e. Size pull boxes according to the following chart (all sizes are minimums):

Conduit Trade Size	Width	Length	Depth	Width Increase for Additional Conduit (of same size)

3/4" or smaller	4"	4"	2-1/8"	Not applicable
1"	4"	16"	3"	2"
1-1/4"	6"	20"	3"	3"
1-1/2"	8"	28"	4"	4"
2"	8"	36"	4"	5"
2-1/2"	10"	42"	5"	6"
3"	12"	48"	5"	6"
4"	16"	60"	8"	6"

6. Back boxes
  - a. No back boxes shall be located back-to-back in a wall cavity.
    - 1) Where possible offset to next stud cavity, with a minimum of 6 inch 6 inch separation.
  - b. Outlet boxes shall be within 3 ft of nearest electrical outlet.
  - c. Outlet boxes located in fire-rated walls are to have the appropriate firestopping for backboxes. These locations are to be identified on shop drawings.
  - d. Where cabling enters a backbox directly (not via conduit), provide black rubber grommet on knockout.
7. Cable Tray
  - a. Cable trays shall be installed in accordance with the applicable electrical code and standards.
  - b. The inside of the cable support system shall be free of burrs, sharp edges or projections that can damage cable insulation. Abrasive supports (e.g., threaded rod) installed within the cable fill area shall have portion within the tray rigidly protected with a smooth, non-scratching covering so cable can be pulled without physical damage, such as appropriately rated (plenum) plastic tubing.
  - c. Cables shall remain unattached to its pathway and shall simply lay at rest on the supports provided by its pathway. Zip ties, Velcro straps, electrical tape or other methods shall not be used to attach cables to cable supports, UON.
  - d. Installation of cables shall not exceed the fill requirements stated above.
  - e. Cable trays shall not extend through fire-rated walls and walls for noise critical spaces.
  - f. Cable trays shall not extend over 6 ft length (or greater) of inaccessible ceilings. Stop cable trays just before the inaccessible ceiling and provide overhead conduits of quantity and size bridging the two sections of cable tray so that conduit cable capacity (square inches per fill ratio) is equal to that of the cable tray.
    - 1) The cable fill ratio for cable tray shall be 50%.
    - 2) The cable fill ratio for conduits shall be 40%.
      - a) Example: a 4" x 12" cable tray has 48 square inches of total capacity, and 24 square inches of cable capacity. Per the NEC, a 4" trade size EMT conduit has a 40% cable capacity of 4.62 inches. 24 divided by 4.62, rounding up to the next whole number equals (6) 4" conduits shall be provided for a 4" x 12" cable tray.
  - g. Cable trays and cable runways shall not be used as walkways or ladders.

- h. A minimum of 12 inch access headroom shall be provided and maintained above a cable tray system or cable runway.
  - i. Care shall be taken to ensure other building components (e.g., air conditioning ducts, pipes, conduits) do not restrict access.
  - j. Flexible cable trays shall be supported according to manufacturer's instruction via one of the following:
    - 1) Trapeze/Unistrut under the cable connected to the cable tray and to (2) 3/8 inch (or greater) rods to structure above.
      - a) Center-hung, single-rod supports are not allowed.
    - 2) Shelf or L-brackets attached to wood or metal studs.
  - k. Test cable tray systems to ensure electrical continuity of bonding and grounding connections, and to demonstrate compliance with maximum grounding resistance.
- C. Firestopping
- 1. General
    - a. Refer to Division 07 for additional installation requirements.
      - 1) Where a conflict exists between Division 07 and Division 27, the more stringent requirements shall apply.
    - b. Provide fire-resistant materials of a type and composition necessary to restore fire ratings to wall, floor or ceiling penetrations, including membrane penetrations. Materials shall be classified or listed as a complete system by UL (FRD) (or an approved NRTL by the design consultant and AHJ) and meet NFPA 70 and local codes. The use of partial systems or components of systems is not allowed unless specifically identified in the documents.
    - c. All penetrations through fire rated floors and walls shall be sealed to prevent the passage of smoke, flame, toxic gas or water through the penetration before, during or after a fire. The fire rating (F and T) of the penetration seal shall be at least that of the floor or wall into which it is installed, so the original fire rating of the floor or wall is maintained as required by referenced building codes.
      - 1) Assume floors are fire-rated, unless otherwise noted.
      - 2) Also install fire stops at other locations indicated in the Specifications or Drawings.
    - d. Provide a label on both sides of fire rated assembly at all fire stop locations indicating:
      - 1) Firestop Manufacturer
      - 2) Installer and company
      - 3) Date installed
      - 4) UL system number with relevant ratings indicated.
    - e. Include labels in each telecom room in which one or more fire rated walls is installed. Provide a 2 inch block letter stencil label on the inside of the telecom room to indicate rating for each barrier.
    - f. Provide systems as identified on the drawings and specified herein. At locations where the cabling routing encounters a fire-rated barrier provide an adequately sized firestop device for the quantities and types for cables to be installed plus 25% growth.
  - 2. Penetration Sealant - Conduits
    - a. Provide listed system to seal around openings between wall, floor or partition around conduits in accordance with system listing and manufacturer's instructions.

3. Penetration Sealant - Voids, Cavities, and Openings
    - a. Install firestop materials in the framed openings through fire rated partitions per the Architect's drawings and in accordance with the NRTL listed system instructions.
    - b. Firestop voids, cavities, and openings left by the removal of cabling, conduits, conduit sleeves, cable trays or other equipment related to the communications systems not to be reused.
    - c. Install the firestop system in accordance with the manufacturer's instructions and local codes.
  4. Fire-Rated Pathway Device
    - a. Provide fire-rated pathway device anywhere cables are required to pass through fire-rated walls, floors or partitions.
    - b. Devices shall be installed in locations where required by the Contract Drawings, arranged individually or appropriately ganged.
    - c. Install the devices in strict accordance with the approved shop drawings and the equipment manufacturer's recommendations.
    - d. Apply the factory supplied gasketing material (where required) prior to the installation of the wall plates.
    - e. Secure wall plates (where required) to devices per the equipment manufacturer's recommendations.
- D. Identification for communications systems
1. Labeling Installation
    - a. Remove dust, dirt, oil, etc. prior to install which impede the adhesion of labels to mounting surface.
    - b. For adhesive labels, provide adhesive appropriate for mounting surface.
  2. Labels are to be installed on:
    - a. Firestopping systems. For wall and floor penetrations, label on both sides. Take picture of each firestop system assembly (with label visible) to include with Project Completion Submittal.
    - b. Pathways (e.g., conduit, innerduct, etc.) installed under this work.
    - c. Label conduit and innerduct with "TELECOM" or "AV" according to the intended system/use of the installed (or future) cabling. Conduit labels shall utilize text readable from a standing position on the finished floor. Conduit sleeves which pass through a single wall or floor need not be labeled.
    - d. For wall stub-up locations, label overhead only.
    - e. For conduits greater than 10 ft, label both ends of conduit with far end location and Room/Number.
      - 1) Example - "AV to AV Rack R01".
    - f. For conduits that stub directly up or into a Communications Room, label both ends of conduit.
      - 1) Example: under slab conduit from Telecom Room 1A to the Floor Box in Conference Room 101A shall be labeled as follows:
        - a) Conduit stub-up location in Telecom Room 1A - "Telecom to Conf. Rm 101A Floor box"
        - b) Bottom of floor box, immediately adjacent to serving Telecom conduit - "Telecom to Telecom Room 1A"

- g. Pull boxes and junction boxes for Communications shall be labeled such as "TELECOM PULL BOX", "AV JUNCTION BOX", "TV", etc. on the cover, such that the text is of sufficient size to be readable from a standing position on the finished floor.
- h. Conduits entering and exiting pull boxes and junction boxes shall be labeled with their destination/room number - ie "To AV Box Q:212:01 in Control Rm 212".
- i. For pathways above accessible ceiling, paint the cover of pull boxes/junction boxes blue and stripe all conduits every 5 ft with that color.
- j. Wherever raceways for future use are terminated outside of the building, stake the location with a 2 ft long, 1 inch x 1 inch clear heart redwood stake.
- k. In general, the label is to be provided and installed by whomever installed the item that is being labeled.
- l. Refer to individual Division 27 sections and to the drawings for additional information on labeling requirements.

### **3.2 FIELD QUALITY CONTROL**

- A. See Section 01 40 00 - Quality Requirements, for additional requirements.

### **3.3 SYSTEM STARTUP**

- A. Provide manufacturer's field representative to perform systems startup.
- B. Prepare in accordance with manufacturers' instructions and recommendations.
- C. Adjust for proper operation within manufacturer's published tolerances.

### **3.4 CLEANING**

- A. See Section 01 74 19 - Construction Waste Management and Disposal 01 74 19 - Construction Waste Management and Disposal, for additional requirements.

### **3.5 COMMISSIONING**

- A. See Section 001 91 13 - General Commissioning Requirements, for commissioning requirements.
- B. Test electrical grounding for compliance with requirements of authorities having jurisdiction.

### **3.6 CLOSEOUT ACTIVITIES**

- A. See Section 01 78 00 - Closeout Submittals, for closeout submittals.
- B. See Section 01 79 00 - Demonstration and Training, for additional requirements.
- C. Demonstrate proper operation of equipment to Owner's designated representative.
- D. Demonstration: Demonstrate operation of system to Owner's personnel.
  - 1. Use operation and maintenance data as reference during demonstration.
  - 2. Conduct walking tour of project.
  - 3. Briefly describe function, operation, and maintenance of each component.

### **3.7 MAINTENANCE**

- A. See 01 70 00 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

### **END OF SECTION**

**SECTION 27 41 00 - AUDIO VIDEO SYSTEMS****PART 1 GENERAL REQUIREMENTS****1.1 SECTION INCLUDES**

- A. Contractor Qualifications
- B. System Description
- C. Temporary Technical System
- D. Computer System
- E. Ethernet Switches & Accessories
- F. Data Patch Panels & Accessories
- G. A/V Control System - General Programming Requirements
- H. Cable - Bulk
- I. Cables - Factory Terminated - Installed
- J. Connectors
- K. Equipment Rack
- L. Equipment Rack Accessories
- M. AC Power
- N. This parent section pertains to subsections 27 41 01 through 27 41 99. Requirements found in this section shall apply to all subsections unless otherwise noted.
  - 1. Exception: Section 27 41 33 - TELEVISION DISTRIBUTION SYSTEM stands alone.

**1.2 RELATED REQUIREMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO
- C. Section 27 00 13 - SUSTAINABLE DESIGN REQUIREMENTS
- D. Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO
- E. Section 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT
- F. Section 27 41 33 - TELEVISION DISTRIBUTION SYSTEM
- G. All category and fiber optic cabling and terminations shall adhere to Section 27 10 00 - STRUCTURED CABLING.

**1.3 DEFINITIONS**

- A. Structured Cabling System: the physical infrastructure installed to support information technology/transport for voice and data applications, commonly referred to as a Telecommunications System. This includes, but is not limited to: Category cabling, terminations/blocks, modules, faceplates, etc., and optical fiber cabling, terminations, modules, etc.
- B. Suspension System: A unique assembly of rated hardware elements and accessories required for overhead installation (and attachment to building structure) of loudspeakers and other

technical system components. Elements of a suspension system may include: wire rope, shackles, eyebolts, chain, beam clamps, strut channel, etc.

#### 1.4 REFERENCE STANDARDS

- A. ANSI E1.6-1 - Entertainment Technology - Powered Hoist Systems; 2021.
- B. ANSI E1.6-2 - Design, Inspection, And Maintenance Of Electric Chain Hoists For The Entertainment Industry; current edition.
- C. ANSI E1.6-3 - Selection And Use Of Serially Manufactured Chain Hoists In The Entertainment Industry; current edition.
- D. ANSI E1.8 - Entertainment Technology - Loudspeaker Enclosures Intended For Overhead Suspension - Classification, Manufacture And Structural Testing; current edition.
- E. ANSI E1.47 - Entertainment Technology - Recommended Guidelines For Entertainment Rigging System Inspections; current edition.
- F. ANSI/Infocomm 10 - Audiovisual Systems Performance Verification; 2013.
- G. AVIXA A102.01 - Audio Coverage Uniformity in Listener Areas; 2017.
- H. AVIXA F501.01 - Cable Labeling for Audiovisual Systems; current edition.
- I. AVIXA F502.01 - Rack Building for Audiovisual Systems; current edition.
- J. JBL Professional Technical Note Volume 1, Number 14 - Basic Principles for Suspending Loudspeaker Systems; current edition.
- K. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.
- L. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- M. RaneNote 110 - Sound System Interconnection; last revised 11/15.
- N. TIA-607 - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises; 2019d, with Addendum (2021).

#### 1.5 SUBMITTALS

- A. Refer to requirements in Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.
- B. Include the following items:
  - 1. Submittal #1: System Product Data (Pre-Construction). A separate product data submittal is required for each specification section, i.e., 27 41 00, 27 41 16, etc.
    - a. Equipment List (1A)
    - b. Manufacturers' cut sheets (1B)
    - c. Product Substitutions (1C)
    - d. Project Implementation Schedule (1D)
  - 2. Submittal #2: System Shop Drawings (Pre-Construction)
    - a. Pathways, Devices, and Cabling (2A) – Follow requirements of Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO. Indicate locations of all devices and equipment.
    - b. Signal Flow Shop Drawings (2B) – Any generic diagrams found within the Construction Documents shall be drawn to specific requirements. Alterations from

- basis of design found within the Construction Documents shall be reflected and identified. Include wire numbering scheme.
- c. Control System (2C) - Control system panel/screen layouts suitable for the Owner's Representative to understand the operation and flow (submitted no less than five months prior to system first use).
  - d. DSP Signal Flow (2D) - DSP signal flow configuration (submitted no less than three months prior to system first use).
3. Submittal #3: System Fabrication Drawings (Pre-Construction)
- a. Structural Details (3A)
    - 1) No suspended device shall be installed prior to the final approval of structural detail submittals by the HENDERSON ENGINEERS.
    - 2) For suspended equipment provide detailed, dimensioned drawings of each Suspension hardware assembly. Also indicate location relative to structure, location relative to other component(s) (Technical System or otherwise), configuration of suspended components, attachment to structure, suspension method, and calculations.
      - a) Calculations shall include weights of Technical System equipment including suspension hardware, and details of all suspension hardware including: manufacturer(s), part number(s) and pertinent technical information (i.e., Working Load Limit) of each part including nuts, bolts, and other accessories. All weight bearing hardware must be traceable, load rated, and domestically manufactured. All welds must be certified.
    - 3) Prior to submission, these drawings must be approved and signed/sealed by a structural engineer licensed for the location of the project. The following guidelines are applicable:
      - a) Contractors participating in the Suspension of Technical System components shall conform to industry best practice standards as set forth in:
        - (1) JBL Professional Technical Note Volume 1, Number 14
        - (2) ANSI E1.6-1
        - (3) ANSI E1.6-2
        - (4) ANSI E1.6-3
      - b) All Suspended loudspeakers shall conform to ANSI E1.8.
  - b. Equipment Rack Shop Drawings (3B) - Equipment rack front elevation for each rack showing equipment, panel layout, and electrical circuiting.
  - c. Panel, Patch Panel, and Plate Shop Drawings (3C) - All panel, patch panel, and plate layouts indicating locations of connectors, engraving, nomenclature, panel material, and finish. Include Structured Cabling Work required by the technical system.
  - d. Millwork Shop Drawings (3D) - Millwork details, and related equipment and panel layout.
  - e. Video Wall Shop Drawings (3E) – Dimensioned elevations (front and side) for each video wall showing mounting requirements, panel layout, ancillary equipment at wall location, low voltage/signal circuiting, and electrical circuiting.
4. Submittal #4: System Test Results (Prior to Substantial Completion)
- a. Preliminary Testing Documentation Package (4A) – Provide preliminary results of system testing as described in Part 3 of this section for review prior to final acceptance. Include final results with Closeout Documentation.

5. Submittal #5 : Digital Signal Processing and AV Control System Custom Programming (Per Milestones)
  - a. The successful deployment of the Digital Signal Processing and AV Control System aspects of this project require significant interactive input from a variety of project stakeholders including the HENDERSON ENGINEERS, Architect, Owner's Representative and others. During development, consistent and timely communication will be required among all the stakeholders to yield a final product capable of meeting the needs of the Owner's Representative.
    - 1) No less than four months after award of contract, the Contractor shall, with the assistance of the Contract Administrator, coordinate a custom programming kickoff meeting for the above-mentioned stakeholders.
    - 2) Ongoing meetings will be required and may occur as web or phone-based meetings.
  - b. Custom Programming Timeline – Digital Signal Processing and AV Control System programming development and related submittals shall be delivered per the following milestones:
    - 1) Digital Signal Processing
      - a) Milestone 1: DSP file(s) indicating basic system configuration including input/output hardware and audio network configuration.
      - b) Milestone 2: Updated DSP file(s) indicating continued development including subsystem specific (i.e., meeting rooms, Pre-Function, etc.) signal routing, equalization control strategy and presets, etc.
      - c) Milestone 3: Coordinate fire alarm processing and digital audio network connection strategy if applicable with appropriate Contractor(s).
      - d) Milestone 4: Final DSP file(s) with completed coordination to AV control system.
    - 2) AV Control System
      - a) Milestone 1: Narrative of intended control parameters and flow diagrams indicating control page hierarchy for each subsystem. Preliminary graphical user interface (GUI) of control system touch screen for review by HENDERSON ENGINEERS, Architect, and Owner's Representative – primary systems/spaces to convey intent.
      - b) Milestone 2: Updated control system narrative. Screen shots of GUI – all unique system types and GUI pages. Copy of source code and screen files developed to date.
      - c) Milestone 3: Finalized control system narrative. Screen shots of all final GUI pages throughout project.
6. Project Closeout
  - a. Refer to Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO and the Record Drawings and Operation and Maintenance Data sub-sections in Part 3 of this section for requirements.
7. Refer to child sections for additional requirements.

## 1.6 COORDINATION

- A. Contact the Architect, in writing, regarding the selection of colors for all exposed equipment.
- B. In addition to a complete set of the system project drawings and specifications, maintain at the job site a complete set of manufacturer's original operation, instruction, installation, and service

manuals for each equipment item, for reference.

- C. Comply with all applicable national and local codes and ordinances and obtain all required permits.
  - 1. Contractor shall be responsible for any and all violations within the scope of this work.
- D. Electronic File Sharing
  - 1. Refer to Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO for information on obtaining electronic versions of the construction drawings.

## 1.7 QUALITY ASSURANCE

- A. Contractor Qualifications:
  - 1. Compliance with the requirements of Division 01.
  - 2. Licensed to perform work of this type in the project jurisdiction.
  - 3. At least five (5) years of verifiable direct experience with the devices, equipment and systems of the type and scope specified herein.
  - 4. Prior successful experience of projects of similar size, scope and type as outlined in the Construction Documents.
  - 5. Active membership in the National Systems Contractors Association (NSCA).
  - 6. Active membership in The Audiovisual and Integrated Experience Association (AVIXA).
  - 7. Fully staffed and equipped maintenance and repair facility.
  - 8. Factory-authorized dealer and current certifications for the components specified.
- B. Personnel Qualifications:
  - 1. Skilled workers thoroughly trained and experienced in the necessary crafts and completely familiar with the specified requirements and the methods needed for proper performance of the work in this section. The workers shall have at least three (3) years direct experience in similar work, evidence of which shall be verified in writing with appropriate references.
  - 2. Supervisor with at least five (5) years direct experience in similar work. The supervisor shall be present for and in responsible charge of all work in the fabrication shop and on the project site during all phases of the installation and testing of the system(s). To assure continuity, this supervisor shall be the same individual throughout the execution of the work unless illness, loss of personnel, or other reasonable circumstances intervene. This person shall act as the Technical System Project manager and shall attend all scheduled project meetings.
  - 3. Minimum of one full-time staff member who has attended technical system design and installation courses taught by Syn-Aud-Con, Audio Engineering Society (AES), Professional Lighting and Sound Association (PLASA), National Systems Contractors Association (NSCA) and/or AVIXA in the past 5 years.
  - 4. Minimum of one AVIXA CTS-I (Certified Technology Specialist - Installation) systems technician.
  - 5. Minimum of one full-time staff member who has a minimum of three (3) years direct experience with and is factory-certified on the most recent version of the selected Digital Signal Processor (DSP) software and technology. This individual shall be responsible for the implementation of the DSP system including software. This individual shall be the same throughout the execution of the work unless illness, loss of personnel, or other reasonable circumstances intervene.

6. Minimum of one full-time staff member who has a minimum of three (3) years direct experience with the selected network-based AV transport and is factory-certified on the most recent version of the selected AV transport technology. The individual shall hold a current manufacturer's certification. This individual shall be responsible for the implementation and preliminary testing of the AV transport system. This individual shall be the same throughout the execution of the work unless illness, loss of personnel, or other reasonable circumstances intervene.
7. Minimum of one full-time staff member who has a minimum of three (3) years direct experience and is a factory certified Master Level Programmer on the most recent version of the selected AV control system software and technology. This individual shall be the same throughout the execution of the work unless illness or loss of personnel intervenes. A factory authorized independent programmer will also be accepted, providing the programmer meets the criteria identified in this paragraph.

## 1.8 WARRANTY

- A. Warrant all work executed under this contract, including all in-shop and onsite material, parts, and labor, for a period of twelve months after the date of final acceptance.
  1. Existing or any other Owner-furnished equipment shall not be included in this warranty.
  2. For equipment that has an advertised manufacturer's warranty longer than twelve months, include end date of warranty period.
- B. The warranty services are limited to normal business hours unless additional agreements are made between the Owner's Representative and the Contractor.
- C. Warranty work relating to technically complex equipment and/or programming such as for digital signal processing, control systems, and video projectors shall be performed by a factory authorized technician.
- D. Damage to the system resultant from improper use or adjustment by others, negligence, acts of nature, or other causes which are beyond the Contractor's control shall be excluded from the warranty.
- E. Visit the job six months after substantial completion and two weeks prior to the end of the warranty period to check all equipment for proper system operation. Any defective equipment found shall be replaced or repaired under the terms of the system warranty.
- F. Update Record Drawings and Operation and Maintenance Data to reflect work done during Warranty period and provide the updates to the Owner's Representative and HENDERSON ENGINEERS.

## PART 2 PRODUCTS

### 2.1 SYSTEM DESCRIPTION

- A. Scope of Work
  1. These specifications and the associated TA and TB series drawings describe the audio-video (AV) systems (hereafter referred to as the "Technical System") requirements to be furnished and installed as a portion of the project scope of work.
  2. Work includes all such work indicated in all of the Contract Documents, including, but not limited to: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Communications, Fire Alarm and Electronic Safety and Security Drawings and Specifications; and Addenda.

3. Work under this section of the specifications includes all labor, equipment, and installation as required to provide a complete technical system in compliance with the contract documents.
    - a. The Contract Documents are detailed to the extent of providing design intent and signal flow. Additional engineering, equipment, and/or coordination may be required for a complete technical system. The Contractor is required to provide a complete and working system.
  4. The work in this section shall be coordinated with other work to determine installation scope for conduit, outlet boxes, junction boxes, pull boxes, terminal cabinets, 120-volt AC power circuits, and insulated ground cables required for the technical system.
    - a. Provide related low-voltage "on/off" AC power control system wiring, low-voltage "on/off" control switches, and certain AC power/ground requirements internal to the equipment racks as specifically noted herein and/or on the drawings.
  5. Employ the services of a qualified Structural Engineer to review all overhead mounting and suspension details of the technical system equipment. All mounting and suspension schemes indicated on the drawings are shown for concept only. Submit shop drawings stamped by a Structural engineer of all details and weights for review by the project's Architect, Structural Engineer, and HENDERSON ENGINEERS.
- B. Examination of Site
1. This is a new facility.
- C. Equipment Requirements
1. Unless otherwise designated, provide all of one type of equipment from one manufacturer. For example, microphones of one type by one manufacturer, data switches of one type by one manufacturer, cabling of one type by one manufacturer, or loudspeakers of one type by one manufacturer.
  2. Equipment and wiring shown on the drawings represents the basis of design. Ensure similar or better performance is achieved by substituted equipment.
  3. All major components of technical system equipment shall be provided and installed by a qualified Contractor as outlined in Part 1 of this section.
  4. All equipment shall be new and of professional quality.
  5. Some items listed in these specifications are custom-made products. Ensure when pricing and ordering equipment that the exact part number called out is used. If there is a discrepancy, contact the HENDERSON ENGINEERS for clarification.
  6. Each software programmable device furnished (i.e., Digital Signal Processor, control system, etc.) shall include most recent software and appropriate computer interface (wired cable or wireless). Cable, software, source (uncompiled) code and all related aspects of all software-controlled equipment shall become the property of the Owner and will be furnished as a portion of the Operation & Maintenance (O&M) Data manuals (see Operation & Maintenance Manuals near the end of Part 3).
  7. The quantities of each item of portable or mobile equipment (and other portable or loose accessories), as well as those items associated with Alternates, are indicated in parenthesis. Such equipment is intended to be shared between rooms having technical systems, except where noted for use in one specific room.

## 2.2 TEMPORARY TECHNICAL SYSTEM

- A. Provide and operate a temporary technical system of reasonably equivalent function as determined by the HENDERSON ENGINEERS if the work in this section, as a failure of the

Contractor, is incomplete or found not in conformance with the contract documents. The temporary system shall remain in use until acceptance of the permanent system.

### **2.3 COMPUTER SYSTEM**

- A. Computer furnished shall be as recommended and approved by the manufacturer of the connected/controlled devices and the Owner's Representative. A UPS shall be included to keep the system operational for at least 10 minutes during a power failure.
- B. Configure the computer to allow for remote access on the facility LAN. Access shall be password protected.
- C. Submittal required showing all specifics relating to the computer system.

### **2.4 ETHERNET SWITCHES & ACCESSORIES**

- A. Ethernet switches are provided as a portion of Section 27 20 10 - DATA COMMUNICATIONS REQUIREMENTS. Coordination with party responsible for that section is required for a successful system implementation.
- B. Network Coordination:
  - 1. Coordinate required VLAN's as necessary for system operation. Obtain the network's IP addressing scheme prior to system configuration. At a minimum, provide the network engineer with the following information for network configuration:
    - a. Device Name / ID
    - b. Device Serial Number
    - c. Device MAC Address
    - d. Required VLAN
  - 2. Provide system protocol standards and requirements to the network engineer for each protocol type within the system.
  - 3. Label all devices per the network labeling standard.
- C. Audio-Video Network Protocol Requirements
  - 1. Coordinate standards based and manufacturer specific protocol requirements with the network configuration. Certain protocols may necessitate specific hardware, software, and/or licensing packages to facilitate protocol compliance.

### **2.5 DATA PATCH PANELS & ACCESSORIES**

- A. Data Patch Panels are acceptable for use in Ethernet, audio network, AVLAN, and digital multimedia network applications as required to provide a complete technical system.
- B. All Category and Fiber Optic cabling (of the acceptable applications listed above) entering a technical system rack shall be terminated to a Data Patch Panel. Rack inter- and intra-connect cabling utilizing factory-terminated cable assemblies are not required to pass thru a Data Patch Panel unless shown otherwise.
- C. Data Patch Panels shall be labeled per specification part 3 of this section.
- D. Category Cabling Patch Panels –
  - 1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.
- E. Fiber Optic Patch Panels & Enclosures –
  - 1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.

- F. Cable Management – 19” wide horizontal patch cable management system, 1 rack unit, with pass-through opening to allow patch cables access to rear of rack (one required per 24 port patch panel / switch):
  - 1. Chatsworth Velocity 13930-701; or
  - 2. Cooper B-Line RCM SB87019S1; or
  - 3. Middle Atlantic HHCM Series; or
  - 4. Panduit NetManager NMF1; or
  - 5. Approved equal.

## 2.6 A V CONTROL SYSTEM – GENERAL PROGRAMMING REQUIREMENTS

- A. Touch screen control interfaces shall follow the guidelines outlined in the “Dashboard for Controls” documents created on behalf of AVIXA International. Reference the Design Guide, Design Reference, and Integrators Guide for this project. Documents are available for download on the AVIXA web site.
- B. Contractor shall be responsible for complete configuration of the control system features including touch screen layouts, colors, appearance, operation, and coordination with systems external to the Technical System.
- C. Participate in planning meeting(s) (web/phone) with HENDERSON ENGINEERS and Owner’s Representative to review programming concepts and requirements before commencement of work.
- D. Panel layout and navigational flow concepts shall be developed during planning meeting(s) with HENDERSON ENGINEERS and Owner’s Representative.
- E. Refer to submittal requirements for additional information.
- F. This specification describes the initial touch screen programming concepts and requirements. Account for four (4) distinct changes for revisions requested by the Owner’s Representative or HENDERSON ENGINEERS after the system is substantially complete.
- G. Touch screen and keypad overall user interfaces shall comply with the following general guidelines where applicable:
  - 1. A common theme shall be employed and used with consistency throughout the layouts. Theme shall be discussed with the Owner’s Representative. The Owner’s standard theme template shall be used if available.
  - 2. Where Owner logos or colors are used, Owner branding guidelines shall be followed. Trademarks shall be used appropriately. Official graphical representations (logos, word marks, logotypes, etc.) may not be altered. Owner colors shall utilize official and exact color (Pantone, CMYK, RGB, hex, etc.) as provided by the Owner, visual matching is not allowed. Content shall be obtained from an official and authorized source, e.g., the use of content from Google images is not appropriate. Owner branding is encouraged where appropriate; however, proper use and compliance remains the responsibility of the Contractor.
  - 3. The use of a password hierarchy shall be employed as directed by the Owner's Representative as they deem appropriate.
  - 4. Power ON/OFF sequence shall control all applicable devices. Sequence time shall be the required time for all controlled devices to cycle. Projector lamp warm-up and cool-down period shall be taken into account. Shutdown shall utilize two-step verification.

5. Animated activity indicators (spinning ring, progress bar, etc.) shall be utilized to provide visual feedback while the system is processing tasks in the background. This will prohibit multiple button presses by the user and show feedback that the control system is processing the request. Relevant text shall be utilized where appropriate, e.g., "Please wait while the system shuts down."
6. Source selection shall be available for all devices. Sources shall be laid out and grouped in a logical manner. A 'blank source' or 'image blanking' feature shall be utilized to result in no image being displayed.
7. Button presses shall show instant visual feedback that they have been engaged and shall accurately reflect the response received from the device being controlled.
8. Current system status shall be always visible and be consistent across all adjoined screens. Buttons shall show current status (engaged or disengaged) via color, illumination, outline, greyscale, etc. as relevant. Sliders and level indicators shall show current and true system status (i.e., show true level based on system feedback, not status based on last touch screen input) via color, knob location, percentage, etc. as relevant.
9. All program source devices shall have the control screens emulate the appearance and functionality of all operational controls of the handheld remote control or user interface furnished with each device. The furnished handheld remote control and control system shall be interoperable allowing either to be used simultaneously without causing any lockups, inconsistencies, or false control system visual status. The use of (properly vetted) manufacturer control system modules is recommended.
10. Volume control of wired microphones, wireless microphones, and/or AV system program volume levels shall be discrete and shall be properly interfaced with the DSP (where applicable). Volume travel thresholds should be discussed with the Owner and HENDERSON ENGINEERS. The use of a master volume control is prohibited.
11. Audio Conferencing mode shall emulate a traditional audio-conferencing unit, allowing for all typical operational controls including automated dialing, privacy microphone mute, level adjustments, control of individual microphones, storage of frequently called sites, manual dialing, answering, etc.
12. Where applicable, show the current operation mode. For example, in the case where two rooms combine/separate, the word "Combined" or "Separated" shall be displayed on each applicable screen.
13. Room combining/separating shall utilize an image of the floor plan of the associated spaces with a button residing on the operable wall which will toggle "Combined" (green) and "Separated" (red). When combined, all touch screens shall operate in unison providing full control/selection of all aspects of the combined rooms as if they were one.
14. Control of other building systems shall be coordinated with appropriate parties. Lighting and shading systems shall be controlled via preset recall. Refer to the TA series drawings showing required interfaces.

## 2.7 CABLE - BULK

- A. The products in this section have been approved for use in the project as necessary to facilitate a complete and working system. Inclusion in this section does not indicate a requirement for use.
- B. Product must be procured from the original cable manufacturer.
- C. AWG wire sizes indicated herein or on the drawings are the minimum size conductors required. Larger size conductors (i.e., smaller AWG number) are permitted assuming no impact on the

project will occur (such as the resulting need for larger or additional conduit, cable trays, chases, etc.) to accommodate such cable.

- D. Where cable is run exposed (such as in ceiling plenums, cable trays, chases, or below accessible floors):
  - 1. Verify which locations do and do not require plenum-rated cable.
  - 2. Furnish the appropriate cable type.
  - 3. Obtain written authorization from the Architect (or the Architect's designated Engineer) in this regard.
- E. Category cabling:
  - 1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.
- F. Fiber Optic cabling:
  - 1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.
- G. Twisted Pair – Shielded: Twisted pair, shielded 22 AWG cable; interior rated 2 conductor cable with drain wire suitable for microphone, line, or production intercom level circuits:
  - 1. Communications plenum rated cable (CMP) is suitable for use in all indoor environments including environmental air plenums as defined per NFPA 70 Article 800.
    - a. The use of performance equivalent substituted cables of lesser type is permitted at the Contractor's discretion where allowable by NFPA 70 Article 800, local codes, and the connected equipment manufacturer's listed requirements.
    - b. Performance equivalence to the below specified products shall be determined by the cable manufacturer's listed product equivalents provided in tables and cut sheets.
  - 2. Tinned copper cables are required in locations subject to corrosion, such as natatoriums.
  - 3. 22 AWG/CMP: 22 AWG Communications Plenum rated bare copper conductor cable:
    - a. Belden 9451P or 6500FC; or
    - b. Clark Wire SPA22GSP; or
    - c. Gepco IP222AL or 61801HS; or
    - d. West Penn 25291B.
  - 4. 22 AWG/CMR: 22 AWG Communications Riser rated bare copper conductor cable:
    - a. Belden 8451 or 9451 or 5500FE; or
    - b. Clark Wire SPA22GS; or
    - c. Gepco IR222AL or 61801 or 61801EZ; or
    - d. West Penn 291 or 452.
- H. Twisted Pair – Unshielded: Twisted pair, 2-conductor interior installation loudspeaker cable:
  - 1. Class 3 remote-control, signaling, and power-limited plenum rated cable (CL3P) is suitable for use in all environments including environmental air plenums as defined per NFPA 70 Article 725.
    - a. The use of performance equivalent substituted cables of lesser type is permitted at the Contractor's discretion where allowable by NFPA 70 Article 725, local codes, and the connected equipment manufacturer's listed requirements.
    - b. Performance equivalence to the below specified products shall be determined by the cable manufacturer's listed product equivalents provided in tables and cut sheets.
    - c. Wire gauge shall not be reduced to gain a higher cable rating.

2. Tinned copper cables are required in locations subject to corrosion, such as natatoriums.
3. AWG/CL3P: As listed AWG Class 3 Plenum rated bare copper conductor cable:
  - a. Belden 1862A or 6200UE (16 AWG), 6300UE (18 AWG); or
  - b. Gepco IP122BA19 (12 AWG), IP142BA19 (14 AWG), IP162BA19 (16 AWG), IP182BA7 (18 AWG); or
  - c. West Penn 25210 (10 AWG), 25227B (12 AWG), 25226B (14 AWG), 25225B (16 AWG), 25224B (18 AWG).
4. AWG/CL2P: As listed AWG Class 2 Plenum rated bare copper conductor cable:
  - a. Belden 6T00UP (10 AWG), 1860A or 6000UE (12 AWG), 1861A or 6100UE (14 AWG), 1863A (18 AWG); or
  - b. Clark Wire CW1002P (10 AWG), CW1202P (12 AWG), CW1402P (14 AWG), CW1602P (16 AWG), CW1802P (18 AWG).
5. AWG/CL3R: As listed AWG Class 3 Riser rated bare copper conductor cable:
  - a. Belden 5000UE (12 AWG), 5100UE (14 AWG), 5200UE (16 AWG), 5300UE (18 AWG); or
  - b. Clark Wire CW1202HS (12 AWG), CW1402HS (14 AWG); or
  - c. Gepco IR122BA19 (12 AWG), IR142BA19 (14 AWG), IR162BA19 (16 AWG), IR182BA7 (18 AWG); or
  - d. West Penn 227 (12 AWG), 226 (14 AWG), 225 (16 AWG), 224 (18 AWG).
6. AWG/CL2R: As listed AWG Class 2 Riser rated bare copper conductor cable:
  - a. Clark Wire CW0802 (8 AWG), CW1002 (10 AWG), CW1202 (12 AWG), CW1402 (14 AWG), CW1602 (16 AWG), CW1802 (18 AWG).
7. AWG/CL3: As listed AWG Class 3 rated bare copper conductor cable:
  - a. Belden 1313A (10 AWG), 1311A (12 AWG), 1309A (14 AWG), 1307A (16 AWG); or
  - b. Gepco 122HBW (12 AWG), 142HBW (14 AWG).
8. AWG/CL2: As listed AWG Class 2 rated bare copper conductor cable:
  - a. Belden 5T00UP (10 AWG); or
  - b. West Penn HA210 (10 AWG).
9. AWG/CL1: As listed AWG Class 1 rated bare copper conductor cable (subject to specific NFPA 70 requirements):
  - a. Belden 8806 (6 AWG), 8808 (8 AWG), 8810 (10 AWG), 8812 (12 AWG), 8814 (14 AWG).
- I. Twisted Pair – Unshielded – EXT: Twisted pair, unshielded exterior use cable; 2-conductor loudspeaker, sunlight resistant, direct burial:
  1. Exterior cable shall be listed as suitable for use in Class 3 General Purpose indoor environments as defined per NFPA 70 Article 725.
  2. AWG/EXT: As listed AWG indoor/outdoor rated bare copper conductor cable:
    - a. Belden 8808WB (8 AWG), 1313A (10 AWG), 1311A (12 AWG), 1309A (14 AWG), 1307A (16 AWG); or
    - b. Clark Wire CW1002DB (10 AWG), CW1202DB (12 AWG), CW1402DB (14 AWG), CW1602DB (16 AWG); or
    - c. Gepco SSUB102 (10 AWG), SSUB122 (12 AWG), SSUB142 (14 AWG), SSUB162 (16 AWG); or
    - d. West Penn C208 (8 AWG), C210 (10 AWG), AQ227 (12 AWG), AQ226 (14 AWG), AQ225 (16 AWG).

- J. RG-59: Single 75-ohm coax, RG-59/U precision video cable:
1. RG-59/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 1505A; or
    - b. Clark Wire CD7559; or
    - c. Gepco VPM2000; or
    - d. West Penn 819.
  2. RG-59/P: Plenum rated cable:
    - a. Belden 1506A; or
    - b. Clark Wire CD7559P; or
    - c. Gepco VPM2000TS; or
    - d. West Penn 25819.
  3. RG-59/Flex: Non-plenum flexible cable, for use with portable cables, exposed, or other locations where cable movement can or does occur:
    - a. Belden 1505F; or
    - b. Clark Wire CD7559F; or
    - c. Gepco VHD2000M.
- K. RG-6: Single 75-ohm coax, RG-6/U precision video cable:
1. RG-6/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 1694A or Gepco VSD2001; or
    - b. Belden 1694wb (outdoor water block); or
    - c. Clark Wire CD7506; or
    - d. Clark Wire CD7506DB (direct burial, water block); or
    - e. West Penn 6350.
  2. RG-6/P: Plenum rated cable:
    - a. Belden 1695A; or
    - b. Clark Wire CD7506P; or
    - c. Gepco VSD2001TS; or
    - d. West Penn 256350.
- L. RG-11: Single 75-ohm coax, RG-11/U precision video cable:
1. RG-11/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 7731A; or
    - b. Clark Wire CD7511; or
    - c. Gepco VHD1100; or
    - d. West Penn 1135.
  2. RG-11/P: Plenum rated cable:
    - a. Belden 7732A; or
    - b. Clark Wire CD7511P; or
    - c. Gepco VHD1100TK.
- M. RG-58: Single 50-ohm coax, RG-58/U radio frequency cable (50-ohm lowest performance):
1. RG-58/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:

- a. Belden 7806R; or
    - b. Clark Wire CV5058; or
    - c. West Penn 812.
  2. RG-58/P: Plenum rated cable:
    - a. Belden 82240; or
    - b. Clark Wire CV5058P; or
    - c. West Penn 25812.
  3. RG-58/P/WR: Indoor/Outdoor Plenum rated cable:
    - a. Belden 88240.
- N. RG-8X: Single 50-ohm coax, RG-8X radio frequency cable (50-ohm good performance):
1. RG-8X/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 9258; or
    - b. Clark Wire CV5008X; or
    - c. West Penn 807X.
  2. RG-8X/WR: Outdoor rated cable:
    - a. West Penn 808XWB.
- O. RG-213: Single 50-ohm coax, RG-213/U radio frequency cable (50-ohm better performance):
1. RG-213/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 8267; or
    - b. Clark Wire CV50213; or
    - c. West Penn 810.
  2. RG-213/P: Plenum rated cable:
    - a. West Penn 25810.
- P. RG-8/U: Single 50-ohm coax, RG-8/U radio frequency cable (50-ohm best performance):
1. RG-8/U/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 9913; or
    - b. Clark Wire RF50LL; or
    - c. West Penn 98G8.
  2. RG-8/U/P: Plenum rated cable:
    - a. Belden 89913; or
    - b. Clark Wire RF50LLP; or
    - c. West Penn 2598G8.
  3. RG-8/U/WR: Indoor/Outdoor rated cable:
    - a. Belden 9914.
- Q. Control cable, power and control in one jacket, one unshielded 18 WG pair, one shielded 22 AWG pair:
1. Control cable - NP, not plenum rated:
    - a. Belden 1502R or Gepco 18/22AXL; or
    - b. Clark Wire ULK2218; or
    - c. Crestron CRESNET-NP; or
    - d. West Penn 77350.

2. Control cable - P, plenum rated:
  - a. Belden 1502P or Gepco 18/22AXLP; or
  - b. Clark Wire ULK2218P; or
  - c. Crestron CRESNET-P; or
  - d. West Penn D25350.
- R. RS-232: Low capacitance computer cable for EIA RS-232/422, 24 AWG, 4-conductor, shielded, minimum conductor-to-conductor capacitance: 22pF/ft, PVC jacket:
  1. RS-232/NP: Non-plenum cable installed in conduit, equipment racks, or other non-plenum spaces:
    - a. Belden 8102; or
    - b. Clark Wire SMP2404.
  2. RS-232/P: Plenum rated cable:
    - a. Belden 88102; or
    - b. Clark Wire SMP2404P.

## 2.8 CABLES – FACTORY TERMINATED – INSTALLED

- A. The products in this section have been approved for use in the project as necessary to facilitate a complete and working system. Inclusion in this subsection does not indicate a requirement for use.
- B. Factory terminated cable assemblies specified in this subsection are only permitted for use within racks or between devices external to racks. Permitted for rack inter-connect when racks are in close proximity (same room) and may pass thru conduit if necessary, in this situation. Not permitted for use in conduit unless specifically noted as such.
- C. Factory terminated cable assemblies shall be the minimum length needed to accomplish the connection. Portable cable assemblies are specified in Section 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT and are required to be furnished in addition to those required for system installation.
- D. All cable assemblies must be factory tested and certified.
- E. Category cabling:
  1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.
- F. Fiber Optic cabling:
  1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.
- G. DisplayPort, version 1.1a or higher, Acceptable lengths: 1'-25':
  1. Clark Wire DP Series (3', 6', 10', 15'); or
  2. Comprehensive DisplayPort Standard Series (3', 6', 10', 15', 25'); or
  3. Extron DisplayPort M-M Series (3', 6', 12', 25'); or
  4. Approved equal.
- H. HDMI Locking Cable, version 1.4 or higher compliant, locking connectors, male HDMI to male HDMI, Acceptable lengths: 1'-25':
  1. Belden HD-800 Series (2', 4', 8', 25'); or
  2. Clark Wire HDMI-L Series (3', 6', 10', 16'); or
  3. Perfect Path 800 Series (2', 4', 8', 16', 25'); or

4. Approved equal.
- I. USB, Type B male (device square) to Type A male (computer flat) or Type A male to Type A male USB 2.0 compliant, Acceptable lengths: 1'-25':
  1. Comprehensive; or
  2. Extron; or
  3. Approved equal.
- J. Video Cable BNC, RG-59 BNC to BNC, 75-ohm, Acceptable lengths: 1'-25':
  1. Canare VAC Series (3', 5', 25'); or
  2. Comprehensive Pro AV/IT Series (3', 6', 10', 25'); or
  3. Hosa BNC-59-1 Series (3', 5', 25'); or
  4. Whirlwind VID BNC3 Series (5', 25'); or
  5. Approved equal.

## 2.9 CONNECTORS

- A. The products in this section have been approved for use in the project as necessary to facilitate a complete and working system. Inclusion in this section does not indicate a requirement for use.
- B. All XLR receptacles located outdoors, in boxes that are located outdoors, in natatoriums, or in areas where moisture or other corrosive materials are present shall have gold plated contact pins.
- C. XLR Cable Connector, cable mounted connector for line-level, microphone level, and intercom circuits:
  1. Amphenol AC series; or
  2. Neutrik X-series; or
  3. Switchcraft E Series Q-G.
- D. XLR Panel Connector, panel mounted audio connector for line-level, microphone level, and intercom circuits, color shall match plate color where possible:
  1. Amphenol AC "DZ" series; or
  2. Neutrik D-Series; or
  3. Switchcraft standard AAA Series Q-G with metal handle.
- E. XLR Combo Connector, female XLR and 1/4" TRS receptacle in one chassis-mount connector:
  1. Neutrik NCJ6FI-S.
- F. 1/4" TRS Cable Connector, three-conductor (Tip Ring Sleeve) connector with a metal barrel and solder lugs:
  1. Amphenol TS3PN; or
  2. Canare F-16; or
  3. Neutrik NP3C; or
  4. Switchcraft 267.
- G. 1/4" TS Cable Connector, two-conductor (Tip Sleeve) connector with a metal barrel and solder lugs:
  1. Amphenol TM2PN; or
  2. Canare F-15 plug; or
  3. Neutrik NP2C plugs; or
  4. Switchcraft 250.

- H. 1/4" TRS Panel Connector, three-conductor (Tip Ring Sleeve) connector with the sleeve contact isolated from the panel or plate to which it is mounted:
    - 1. Neutrik NJ3FP6C; or
    - 2. Switchcraft E112BL.
  - I. 1/8" TRS Cable Connector, 1/8" (3.5mm) three-conductor mini-plugs which have a metal barrel and solder lugs:
    - 1. Amphenol KS3P; or
    - 2. Canare F-12; or
    - 3. Neutrik NTP3RC; or
    - 4. Switchcraft 35HDNN plug.
  - J. Locking LS Cable Connector, twist-lock cable mount male loudspeaker connector, minimum 2-two conductors. Coordinate connector with associated intended panel mount connector, including those on loudspeakers:
    - 1. Amphenol SP-2-FN (two conductor); or
    - 2. Neutrik speakON NL2FC (two conductor); or
    - 3. Amphenol SP-4-FN (four conductor); or
    - 4. Neutrik speakON NL4FC (four conductor); or
    - 5. Neutrik speakON NL8FC (eight conductor).
  - K. Locking LS Panel Receptacle, twist-lock chassis mount female loudspeaker connector, minimum two conductors. Coordinate receptacle with associated intended cable connector:
    - 1. Amphenol SP-2-MD (two conductor); or
    - 2. Neutrik speakON NL2MP (two conductor); or
    - 3. Amphenol SP-4-MD (four conductor); or
    - 4. Neutrik speakON NL4MP. Male connector (four conductor); or
    - 5. Neutrik speakON NL8MPR-BAG (eight conductor)
  - L. RJ45 Keystone Connector, permanent link connector for category cable:
    - 1. Cabling shall be terminated with tested permanent link per Section 27 10 00 - STRUCTURED CABLING.
    - 2. Provide keystone connector plate for adaptation of keystone termination to the provided faceplate.
  - M. RJ45 Panel Mount Connector, D-Mount pass-thru connector for category cable:
    - 1. Cabling shall be terminated with tested permanent link per Section 27 10 00 - STRUCTURED CABLING.
    - 2. Provide Neutrik EtherCON pass-thru connector panel mount. EtherCON connector series shall be coordinated with category cable type and data rate.
    - 3. The following structured cabling termination conditions are approved:
      - a. Field terminated RJ45 plug, meeting all warranty requirements per the Section listed above. The use of field terminated crimp connectors is not permitted. Provide pass-thru EtherCON connector for plate.
      - b. Biscuit enclosure with keystone punch down connectors and patch cable. Provide pass-thru EtherCON connector for plate.
  - N. BNC Cable Connector, 75-ohm BNC, compression fitting for coaxial cable furnished:
    - 1. Liberty CM-RG-BNC series; or
    - 2. West Penn CN-CS-BNC and CN-FS-BNC series.
-

- O. BNC Panel Connector, 75-ohm BNC, pass-through, D-style mounting:
  - 1. Neutrik NBB75DFI; or
  - 2. Approved equal.
- P. Terminator, RF or SDI terminator plug:
  - 1. Extron T-BNC series; or
  - 2. Pomona 3840 series; or
  - 3. Trompeter TNA series.
- Q. Terminal Block Terminations
  - 1. Utilize as applicable and only as allowed per Part 3.
  - 2. Acceptable mounting methods include:
    - a. For small quantities in AV Closets: Mount DIN rail within rear of AV equipment rack. Utilize as preferred method wherever feasible and provide a compatible DIN rail rack mount kit.
    - b. For large quantities in AV Closets: Mount DIN rail(s) to plywood backing on wall. Utilize wall mounting DIN rail brackets.
      - 1) Microphone level cable shall be mounted within an enclosure.
      - 2) Ensure mounting location is safe from accidental damage, mounting all terminations within an enclosure may be necessary.
    - c. For field locations: Provide a minimum NEMA 1 rated enclosure and locate DIN rail(s) within enclosure. Ensure enclosure is properly labeled and identified on as-builts.
  - 3. Insulation Displacement Connection (IDC) Type Terminal Block: modular terminal blocks for mounting on DIN rails; required for all microphone, line level, intercom, and similar cable types:
    - a. Entrelec (TE); or
    - b. Omega; or
    - c. Phoenix Contact; or
    - d. Approved equal.
  - 4. Spring Loaded Conductor Connection Type Terminal Block: modular terminal blocks for mounting on DIN rails; required for all speaker level cable types:
    - a. Entrelec (TE); or
    - b. Omega; or
    - c. Phoenix Contact; or
    - d. Approved equal.
  - 5. Terminal Block DIN Mounting Rails: DIN rails for mounting of terminal blocks:
    - a. Crestron DIN-EN series; or
    - b. Entrelec (TE); or
    - c. Hoffman DIN Rail LMK series; or
    - d. Middle Atlantic FWD-DIN1H; or
    - e. Omega; or
    - f. Phoenix Contact; or
    - g. Approved equal.

## 2.10 EQUIPMENT RACKS

- A. Furnish complete equipment racks including all top, bottom, and sides as necessary.

- B. Furnish all necessary accessories including ganging hardware, blank plates (to fill all unoccupied space), vent panels (as applicable), shelves, security covers, mounting screws, trim kits, lacing bars, cable management, leveling feet, casters, etc. to provide a complete solution which complies with "best practice" guidelines.
  - 1. Full-solution accessories are not detailed in this specification. They shall be provided as needed and shall be approved by the manufacturer for use with the intended rack series (i.e., Middle Atlantic casters must be used with a Middle Atlantic rack).
- C. Furnish all required components for a complete thermal management solution within each location to ensure enclosure interior temperature does not exceed manufacturer's recommended operating temperatures.
  - 1. Rack fans shall be quiet, such as the Middle Atlantic QFAN.
  - 2. Thermostatic fan control shall be utilized where available.
- D. Furnish all required components for a complete rack ground isolation solution.
  - 1. Racks shall be isolated from the floor by the use of isolated leveling feet (such as Middle Atlantic LF-ISO) or an isolation pad/system (such as Middle Atlantic ISO-1).
- E. Equipment racks and all associated blank panels located in equipment rooms shall be factory finished semi-gloss black. Equipment racks and associated blank panels located in control booths or other visible locations shall be factory-finished color as selected by the Architect.
- F. Furnish locking storage drawers, hinged security covers, and racks with locking doors all keyed alike. Furnish four keys total.
- G. Equipment rack specification indicates the system basis of design. Verify equipment layout, rack size, and number of equipment racks required for equipment furnished. Refer to "Audio-Video Equipment Rack Schedule" for specific model, depth, and height information.
- H. Floor Rack:
  - 1. Open Sides, open-rack style with open sides, rear locking door, minimum 44RU height, depth as scheduled. Furnish one side panel at each end of each row of equipment racks:
    - a. Lowell LGR Series; or
    - b. Middle Atlantic Products BGR Series; or
    - c. Middle Atlantic Products WRK Series.
  - 2. SA, standalone floor rack, rear locking door, minimum 44RU height, depth as scheduled:
    - a. Lowell LER Series; or
    - b. Middle Atlantic Products BGR SA Series; or
    - c. Middle Atlantic Products WRK SA Series.

## 2.11 EQUIPMENT RACK ACCESSORIES

- A. The following equipment rack accessories shall be provided as indicated on the rack elevations or within this section.
- B. Equipment rack accessories located in equipment rooms shall be factory finished semi-gloss black. Equipment rack accessories located in control booths or other visible locations shall be factory-finished color as selected by the Architect.
- C. Logo rack panel, single vertical rack space, labeled with contact information for the Contractor and HENDERSON ENGINEERS. Panel specified is custom and already has the information for the HENDERSON ENGINEERS; the Contractor shall coordinate their logo/information with the panel manufacturer (shop drawing required). One required to be installed at the top of each

- bank of equipment racks:
1. Liberty AV Solutions model HEI-RHIM-TEMPLATE.
- D. Storage drawer, specification indicates the system basis of design. " " in part number denotes (RU) height as indicated in rack elevations.
1. Locking rack drawer keyed to match rack rear door, approximately 16" deep, color to match adjacent rack-mounting panels:
    - a. Atlas Sound SD -14 with optional SD-LOCK installed; or
    - b. Middle Atlantic D -LK; or
    - c. Chief SDR- -L.
  2. Rack drawer, approximately 16" deep, color to match adjacent rack-mounting panels:
    - a. Atlas Sound SD -14; or
    - b. Middle Atlantic D ; or
    - c. Chief SDR- .
- E. Rack Shelf:
1. 1RU, utility rack shelf, 3.5" high, approximately 10" deep, color to match adjacent rack-mounting panels:
    - a. Atlas Sound SH1-10; or
    - b. Lowell 1556-USV110; or
    - c. Middle Atlantic UTR1.
  2. 2RU, utility rack shelf, 3.5" high, approximately 16" deep, color to match adjacent rack-mounting panels:
    - a. Atlas Sound SH2-15; or
    - b. Lowell 1556-USV110; or
    - c. Middle Atlantic U2.
  3. Pull-out shelf, requires rear rack rails, approximately 1.75" high (1RU), color to match equipment rack:
    - a. Atlas Sound VTD1-16; or
    - b. Lowell 1191-SLS; or
    - c. Middle Atlantic SS.
- F. Display rack mount, VESA mount for rack mounting a display, 3RU mount, provide one per display indicated in an equipment rack:
1. Middle Atlantic RM-LCD-PNLK.
- G. Gooseneck Lamp – LED – Rack, rack-mount, 1RU, dual LED, 12" gooseneck:
1. Littlite Raklite RL-10-D-LED with included power supply; or
  2. Approved equal.

## 2.12 AC POWER

- A. General
1. A complete AC power connection solution for each equipment rack and cabinet is required.
  2. Provide spare NEMA 5-15R or 5-20R outlets (single duplex receptacle) for temporary equipment (beyond that required for connected equipment, rack fan, etc.). These outlets shall be fed from an un-switched "Normal" power circuit.
    - a. For racks 16 RU or less: two spare outlets (minimum)
    - b. For racks greater than 16 RU: four spare outlets (minimum)

3. All power strips shall maintain integrity of system grounding requirements.
  4. All equipment shall be connected such that maximum rated performance can be obtained without exceeding the AC circuit load capacity.
  5. Coordinate with Electrical drawings and Division 26 specifications. Where outlets are provided under this section as a portion of power strips or power distribution units, receptacle types and colors shall match the supplied AC power circuit.
  6. Comply with all NFPA 70 requirements, including separation of loads classified as Life Safety from Normal loads via an independent Vertical / Horizontal Power Strip, PDU, and/or UPS.
- B. Uninterruptable Power Supply Requirements
1. UPS shall be provided in quantities as indicated on signal flows and/or rack elevations, and as described for components and equipment within this section and associated subsections.
  2. A UPS connected to a Normal power load shall be provided with enough battery capacity to bridge short duration loss of power and brownout events. The intent is to protect and prolong the life of sensitive processor-based equipment, reduce power cycle time upon restoration of Normal power, and/or allow the User time to safely shut down components.
  3. A UPS connected to Emergency (NFPA 70 Article 700), Legally Required Standby (NFPA 70 Article 701), or Optional Standby (NFPA 70 Article 702) AC power circuits shall be provided with enough battery capacity to bridge the maximum operation load of the connected equipment during the time from loss of Normal power to load handover to the electrical standby power system (typically generator startup time).
  4. Each UPS with an ethernet port shall be connected to the network. The Contractor shall configure the UPS (using additional software where required) per direction from the Owner's Representative. Configuration shall include, but not be limited to:
    - a. Remote access and diagnostics
    - b. Automated reporting for non-normal events (such as battery condition or power interruption)
- C. PS/V: Vertical Power Strip, single 120V 20A circuit, NEMA 5-20P plug input, minimum fourteen NEMA 5-15R outlets, mount to rear of rack interior (furnish where provided electrical receptacle quantities do not meet system requirements):
1. APC AP7530 with 40170-6INCH L5-20P adaptor; or
  2. Eaton EPBZ97; or
  3. Middle Atlantic PD-2420SC-NS; or
  4. Tripp Lite PDUV20 with included L5-20P adaptor; or
  5. Approved equal.
- D. PS/H: Horizontal Power Strip, single 120V 20A circuit, NEMA 5-20P plug input, minimum eight rear-facing NEMA 5-15R outlets, single rack space (furnish where provided electrical receptacle quantities do not meet system requirements):
1. APC AP9563; or
  2. Eaton EPBZ85; or
  3. Middle Atlantic PD-920R-NS; or
  4. Tripp Lite PDU 1220; or
  5. Approved equal.

- E. PDU/V: Vertical Power Distribution Unit, capable of multiple circuits and outlets, configured for circuit quantity, voltage, and amperage provided to rack; mount to rear of rack interior (furnish in coordination with provided electrical power):
  - 1. Juice Goose PD Series; or
  - 2. Middle Atlantic MPR Series; or
  - 3. Middle Atlantic PDW Series; or
  - 4. Approved equal.
- F. UPS:
  - 1. 1RU: Uninterruptable Power Supply, single rack space chassis, line interactive, surge suppression, 120V 20A circuit, minimum 750VA load, plug input, minimum four rear-facing NEMA 5-15R outlets:
    - a. APC Smart-UPS SUA750RM1U; or
    - b. Eaton 5P750R; or
    - c. Middle Atlantic UPS-S1000R; or
    - d. Tripp Lite SmartPro SMART750RM1U; or
    - e. Approved equal.
  - 2. 2RU: Uninterruptable Power Supply, two rack space chassis, line interactive, surge suppression, 120V 20A circuit, minimum 1950VA load, plug input, minimum eight rear-facing NEMA 5-15R outlets:
    - a. APC Smart-UPS SMT2200RMUS; or
    - b. Eaton 5P2200RT; or
    - c. Middle Atlantic UPS-2200R-8IP; or
    - d. Tripp Lite SmartPro SM2200RMXL2UP; or
    - e. Approved equal.
  - 3. 2RU/30: Uninterruptable Power Supply, two rack space chassis, line interactive, surge suppression, 120V 30A circuit, minimum 2880VA load, plug input, minimum four rear-facing NEMA 5-15R and two rear-facing NEMA 5-20R outlets:
    - a. APC Smart-UPS SMT3000RMUS; or
    - b. Eaton 5P3000RT; or
    - c. Middle Atlantic UPS-OL3000R; or
    - d. Tripp Lite SmartPro SMART3000RMXL2U; or
    - e. Approved equal.
  - 4. 3RU: Uninterruptable Power Supply, three rack space chassis, line interactive, surge suppression, 120/208V 3PH 5W 30A circuit, minimum 6000VA load, locking plug input, minimum four rear-facing NEMA 5-20R outlets:
    - a. APC Smart-UPS RT 6000 VA RM 208V to 208/120V; or
    - b. Approved equal.

## **PART 3 EXECUTION**

### **3.1 GENERAL**

- A. Install in accordance with manufacturer's instructions.
- B. Comply with Section 27 00 13 - SUSTAINABLE DESIGN REQUIREMENTS.

### **3.2 PREPARATION**

- A. Coordinate locations and sizes of junction boxes, outlets, and conduit with the work of other trades. Field verify compliance with the construction documents.
- B. Carefully inspect areas where equipment will be installed. Notify the Contract Administrator of any conditions that would adversely affect the installation and subsequent operation of the system.
  - 1. Repeat inspection on a regular basis to ensure ongoing work by other trades does not pose a conflict to Contractor's pending work.

### 3.3 PROTECTION OF WORK

- A. Protect all work, materials, and equipment from damage due to any cause. Provide for the safety and new condition of the equipment and materials until final acceptance by the Owner's Representative. Replace all damaged or defective materials and/or equipment as directed by the Contract Administrator or HENDERSON ENGINEERS.
- B. Equipment racks, cabling racks, junction boxes, termination boxes, and other exposed equipment shall be kept covered and protected from airborne contaminants. Clean all debris from the equipment room(s)/location(s) and control areas, and clean all equipment and the interior rack floor, prior to system final acceptance activities.

### 3.4 INSTALLATION

- A. General
  - 1. Contractor shall demonstrate a reasonable standard of care. Installation shall be rendered in a workmanlike manner observing direction set forth herein as well as industry standard best practices. Comply with NECA 1.
  - 2. In addition to any spare cabling shown on drawings, utilize industry best practice to pull additional spare cabling in conduit where logical. Neatly bundle a usable length of cable at each end of each spare circuit. All spare circuits shall be labeled and noted on the field drawings for inclusion into the record drawings.
  - 3. Install any floor-mounted receptacles so that release buttons (for both receptacles and cable connectors) are easily accessible when cable connectors are installed.
  - 4. Blank panels and/or vent panels shall be installed in unused rack spaces. Ensure that air flow within the rack is maintained (i.e., cool air can enter the rack and hot air can exit the rack).
  - 5. Equipment racks and other exposed equipment shall be kept covered and protected from airborne contaminants. Clean all equipment racks and the interior rack floor, prior to system final acceptance activities.
  - 6. Where the design location requires products, materials, or equipment to be visible to the public, manufacturers logos shall be removed if possible. Unless otherwise directed, neatly remove logos.
  - 7. AC power switches located on the front panel of equipment mounted in racks shall be covered by a security cover or utilize front panel lockout features. Exclusions from this list are items requiring user interface such as tuners and wireless microphone receivers. This is not required in controlled access equipment rooms.
  - 8. Furnish all equipment with factory finish where possible using the standard available factory color(s) as selected by the Architect. Notify the Architect regarding color options of relevant equipment prior to ordering equipment from each manufacturer.
  - 9. Pathways shall meet Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO.

**B. Suspended Systems****1. General**

- a. Contractor shall provide Suspension system, including connection to structure, for all suspended components including but not limited to: loudspeakers, video projectors, flat panel displays, televisions, projection screens, etc.
- b. Suspension system design shall be created by the Contractor and include fully dimensioned detail documentation stamped by a Structural Engineer licensed in the location of the project per submittal requirements in Part 1 of this document.
- c. Contractor shall include a safety cable or other backup support mechanism.
- d. Suspension systems and installation shall conform to industry best practice standards as set forth in:
  - 1) JBL Professional Technical Note Volume 1, Number 14
- e. Coordinate with General Contractor any supplemental building structure necessary to facilitate the approved suspension design.
- f. Field verify conditions for compliance with the approved suspension plan prior to installation, placement of equipment orders, or material fabrication. Coordinate with other trades as necessary.

**2. Loudspeakers**

- a. Install loudspeakers so there are no obstructions to loudspeakers' coverage pattern.
- b. Loudspeakers shall be installed such that they do not produce or cause mechanical rattles in the surrounding structure. There shall be no audible vibration or noise caused by improper mechanical installation or defective components.
- c. Paint loudspeaker and/or grille assembly (at discretion of Architect or HENDERSON ENGINEERS) color as selected by the Architect. Use primer per manufacturer's recommendations. Do not paint loudspeaker cones or high frequency diaphragms. Materials and labor provided by Contractor.
- d. Provide access to loudspeakers during installation, testing, and final acceptance activities to allow for modifications to location or installation. Access includes all necessary resources required to obtain direct physical contact to loudspeakers (front and rear), including: scaffolding, motorized lift, etc.
- e. Provide ability to reorient loudspeakers in all axes (yaw, pitch, and/or roll) if so requested by HENDERSON ENGINEERS during system final acceptance activities.
  - 1) Do not perform final suspension connections prior to final acceptance by the HENDERSON ENGINEERS including: permanent cable swage, elimination of wire rope service loop, etc.

**C. Video**

1. Coordinate structural backing required for wall mounted flat panel displays/televisions prior to the installation of drywall or other wall materials.

**D. Bonding and Grounding**

1. Comply with NFPA 70 and TIA-607 bonding and grounding requirements.
2. Each equipment rack within a row of racks and each row of racks within a room shall be electrically bonded to each other. Bonding shall be via copper ground bus. Any bolts shall fasten to unpainted sheet metal.

**E. Equipment Power Control**

1. Low voltage "ON/OFF" control of system equipment shall be provided via the control system.
2. Operation of the following components is required, at a minimum:
  - a. Power amplifiers as indicated in Part 2 requirements.
  - b. UPS connected devices where components do not require power under system shutdown.
  - c. Components equipped with power state control.
3. Make all low-voltage connections as required to provide a complete and working control system.
4. Refer to drawings for additional low-voltage sequencing system requirements.
5. Refer to electrical drawings for AC power information.
6. Coordinate with Electrical Contractor as necessary to verify proper circuit assignment and sequencing order.
7. UPS and PDU equipment with an IP / LAN connection shall be configured to e-mail up to (3) Owner e-mail accounts for each type of alarm. Also, train Owner on use of web interface and how to update e-mail alarm settings.

### **3.5 RACK BUILDING CABLE MANAGEMENT AND TERMINATION**

- A. Employ techniques to fulfill AVIXA F502.01 as a minimum standard with the additional requirements as described in this paragraph.
  1. Reference below for additional requirements and stipulations related to zip tie utilization.
- B. General
  1. Do not violate the minimum cable bend radius as specified by the cable manufacturer.
  2. Dress cables so terminations are free from stress due to gravity acting on the cabling. Use cable supports as required depending on the size and stiffness of the cable.
  3. Terminate cables with sufficient service loop to allow at least two re-terminations without having to open a cable bundle or pathway.
  4. All circuits, including various audio signal levels, shall be separated according to function. Where audio and video circuits are installed in conduit or other raceway, separate conduits are required for the various circuit functions.
  5. Where circuits are exposed in the equipment racks or large junction or pull boxes, circuits shall be bundled according to function. Refer to "Conduit/Circuit Group Divisions" and "Conduit Routing and Separation" schedules for additional information.
  6. All solder connections shall be made with soldering iron and rosin core solder. All solder connections shall be checked for "cold" solder joints.
  7. If equipment is removed or replaced for service, ensure the proper cable termination points are apparent when the equipment is re-installed.
  8. Use hook and loop tie wraps for all category, coaxial, or fiber cables and additionally as practical for other types of cables. Do not use zip ties on any category, coaxial, or fiber cables and limit use where possible otherwise.
  9. Do not tighten cable wraps so the cable is deformed. Zip ties should never be used in locations prone to damage due to cable sagging.
- C. Equipment Racks
  1. Utilize hook and loop cable wraps for dressing cables within the rack(s). Cable wraps shall be hand tightened and spaced at various inconsistent distance intervals. The use of zip ties is not allowed inside equipment racks.

2. Install rack-mounted equipment manufactured without IEC removable power cords so the power cords are dressed using removable fasteners such as hook and loop wraps and there are no obstructions to the item being pulled out from the front of the rack. Avoid coiled or bundled cable loops.
  3. For rack-mounted equipment manufactured with IEC removable power cords, provide power cord assemblies of the minimum length needed to accomplish connection to the PDU. Avoid excess power cabling including coiled or bundled cable.
  4. Factory terminated cable assemblies are only permitted for use within racks, between devices external to racks, as portable equipment, or for use in conduit as specifically noted as follows: Permitted for rack inter-connect when racks are in close proximity (same room) and may pass thru conduit, if necessary, in this situation. Cable assemblies shall be the minimum length needed to accomplish the connection.
  5. Install rack equipment to enable repair or replacement without hindrance. If there are obstructions prohibiting the disconnection of terminations on the back side of the technical equipment, there must be sufficient cabling to permit the equipment to be pulled from the front allowing for easy disconnection and reconnection.
- D. Paralleling and Extension Connections
1. Circuits shall not be joined by butt-splice, solder-splice, wire nut, or similar.
  2. Circuits requiring parallel connection as indicated on signal flows shall be extended via approved termination in an appropriately sized junction box and shall conform to the following guidelines:
    - a. Approved connections include DIN mounted terminal blocks as specified in Part 2.
    - b. Field splicing techniques such as wire nuts, "twist and solder", etc. are not allowed.
    - c. Any circuit requiring parallel connection shall be permanently labelled on every cable as defined herein.
    - d. Care must be taken to maintain appropriate protection and shielding of circuits in order to maintain a fully functional system.
  3. Circuits requiring extension (non-data) due to field conditions such as excessive conduit bends, etc., shall be extended via approved termination in an appropriately sized junction box and shall conform to the following guidelines:
    - a. Extension of circuits is to be avoided if at all possible.
    - b. Contact the HENDERSON ENGINEERS via documented project communication. Inform the HENDERSON ENGINEERS of the circumstances regarding the desired extension. Contractor and HENDERSON ENGINEERS will coordinate to determine the most appropriate course of action.
    - c. Approved connections include DIN mounted terminal blocks as specified in Part 2.
    - d. Any circuit requiring extension shall be permanently labelled on every cable as defined herein.
    - e. Care must be taken to maintain appropriate protection and shielding of circuits in order to maintain a fully functional system.
  4. Document each parallel connection and extension on the field drawings and transfer same to the final record drawings.
- E. Telecommunications Cabling
1. Refer to Section 27 10 00 - STRUCTURED CABLING for all work associated with data-related cabling including Category and Fiber Optic cabling.

2. All data-related cabling entering a rack shall be terminated to a Data Patch Panel. Rack inter- and intra-connect cabling utilizing factory-terminated cable assemblies are not required to pass thru a Data Patch Panel.
  3. All Fiber Optic cabling entering a rack shall be terminated to a Fiber Patch Panel. Rack inter- and intra-connect cabling utilizing factory-terminated cable assemblies are not required to pass thru a Fiber Patch Panel.
- F. Microphone/Line Level Audio
1. Audio circuit termination shall observe the methods set forth in RaneNote 110.
  2. Key methods include, but are not limited to the following:
    - a. All audio circuits shall be balanced two-wire circuits, with a separate grounding shield conductor, unless noted otherwise. All circuits shall have either the red or white wires as the "high" or " " side of the line and connect to pin 2 of microphone-type XLR audio connectors and the tip of 3-conductor phone connectors. The black wire of the two-wire circuit shall be the "low" or "- " side of the line and connect to pin 3 of microphone connectors and the ring of 3-conductor phone connectors. The shield conductor shall connect to pin 1 of microphone connectors or to the sleeve of phone connectors.
    - b. Shield conductors shall be connected at each end of each wire to the pin 1 of each XLR, shield connection for each electronic device, etc. No shield wires shall be left unconnected except where noted on the drawings, nor shall any shield come in contact with conduit, pull boxes, or other building steel. Audio line-level circuit shield wires shall be grounded to rack sheet metal only via rack-mounted equipment. Shields shall be electrically isolated in multi-conductor cables. Shields for audio line-level circuits connected to audio transformers shall be connected to transformer electro-static shields and case ground.
    - c. In the case of an unbalanced source feeding into a balanced input and the cable run is short (i.e., less than fifteen feet), connect the signal connection of the unbalanced connector to the "high" side of the balanced input. Connect the "ground" connection of the unbalanced line to the "low" side of the balanced connector. Connect the cable shield to the shield connection of the balanced input but do not connect it to the unbalanced connector. If the cable run is longer than fifteen feet, balance the line at the unbalanced source using specified balancing devices.
    - d. In the case of a balanced source feeding into an unbalanced input and the cable run is short (i.e., less than fifteen feet), connect the "high" side of the balanced output to the signal input of the unbalanced connection. Connect the "shield" of the balanced connection to the "ground" of the unbalanced connection. Leave the "low" side of the balanced output floating.
- G. Loudspeaker Level Audio
1. Loudspeakers in the same acoustic space shall all be wired to produce consistent polarity with a mono input signal. They shall also be polarized such that a positive acoustic pressure on a microphone results in a positive acoustic pressure at all loudspeakers.
- H. Video
1. Compression fittings shall be used for all BNC and F connector terminations.
  2. Terminate all unused RF and SDI outputs with impedance matching terminators.
  3. Neatly dress all cables behind a flat panel display/television. Cables and connections should not be visible from the viewing locations. Power cables for displays shall not be

- bundled with signal cables nor visible.
4. For fixed projector or pole mounted flat panel display installations, signal cables shall be routed within the mounted pipe. Signal cables shall not be tied to the outside of the pipe. Provide cabling of appropriate distance to minimize excess cable at device. Bundle excess cable above the ceiling, not at the device.

### 3.6 LABELING

- A. Adhere to AVIXA F501.01 as a minimum standard with additional requirements as described in this paragraph.
- B. Refer to Section 27 10 00 - STRUCTURED CABLING for all labeling requirements associated with data-related cabling including Category and Fiber Optic cabling.
- C. Develop and utilize a consistent numbering scheme across the entire project. Utilize system names and building references where applicable, such as the rack number or rack room in a distributed system. All labels for input/output plates and control panels shall be consistent with the final room numbering for the facility.
- D. Adhere to the labeling standard across all platforms, including within the DSP programming.
- E. Refer to general notes, the signal flows, and panel and plate details for expected labeling scheme of system equipment and components. Comply with any specific color coding as described.
- F. All equipment in equipment racks shall be labeled front and rear for ease of identification. Labels shall be of a contrasting color with that of equipment color to promote visibility.
- G. Install permanent labeling on the front of each equipment rack in a row of racks identifying the rack designation (number).
- H. Within each rack and at other remote locations for technical system equipment, label all associated AC power receptacles reflecting the appropriate circuit breaker. Ensure that the circuit breakers are labeled as to the rack or remote equipment location.
- I. Document the labeling standard for inclusion in the Operation and Maintenance Data.
- J. Document all labels for the Record Drawings.
- K. Pre-approved labelling systems include:
  1. Cable Labeling:
    - a. Brady Jet-30 Type; or
    - b. Phoenix Contact Adhesive Wrap Labels.
  2. Equipment Labeling:
    - a. Lamacoid.

### 3.7 SYSTEM CONFIGURATION

- A. Coordination
  1. Coordinate and take responsibility for the approval of all system configuration components as described in this paragraph.
  2. Coordinate all aspects of the technical system network, including configuration and connection with to the Owner's LAN. Utilize Owner's designated configuration style, standards, and security requirements.
- B. Software

1. Furnish, install, and configure the most recent approved, non-beta, software for each device or system.
  2. Provide software as identified in other areas of these specifications or on the drawings.
  3. Provide software not specifically identified but required to allow for system operation and/or to allow for more efficient system configuration, setup, and operation.
- C. Firmware
1. Ensure the firmware for each device is the most recent manufacturer approved version and is installed and operational.
- D. Operating Systems
1. Gain approval of the operating system version and type from the Owner's IT representative and associated equipment manufacturer(s).
  2. Ensure the operating system for each device is the most recent, installed, and fully operational.
  3. Ensure the latest security patches are installed.
- E. Network Configuration
1. All technical system devices with an Ethernet port shall be connected to the associated network.
  2. Secure the entire network, documenting all passwords. Comply with the Owner's IT representative's requirements with respect to password selection and network security implementation.
- F. Network Documentation
1. Document the IP and MAC addresses of all IP capable equipment for inclusion with the Operation & Maintenance Manuals.

### 3.8 TESTING AD USTMENT AND SUBMITTAL REQUIREMENTS

- A. At the completion of the installation, perform the following tests on the system to ensure proper installation and operation. The technical system shall be fully tested with all equipment on site, installed, connected, and fully operational.
- B. Adhere to ANSI/Infocomm 10 as a minimum standard with additional requirements as described in this paragraph.
- C. The Contractor shall submit the results of all tests prior to on-site system review by the HENDERSON ENGINEERS. Where available, provide documentation obtained directly from the test equipment. Other acceptable documentation includes screen captures, photos, and spreadsheets.
- D. General
1. Utilize the technical support services offered by the manufacturers of the various technical system components to ensure optimum performance.
  2. All test equipment used for these tests shall be on site during the system final acceptance activities should verification of submitted measurements be required.
  3. Ensure that all equipment is on the jobsite and fully operational. This includes portable (not installed) items and other loose equipment. Remove all devices from shipping or packaging containers, ready for use, and place in equipment storage cabinet.
  4. The functional tests shall include operational tests of all program source equipment (record and playback), wireless microphone system, mixing console, system inputs and outputs, all patch panel receptacles, intercom system, video routing, video distribution,

- operational controls, AC power sequencing, operation of software, and all system electronics. Functional tests include examination for hum, buzz, hiss, ghosts, hum bars, oscillation, thumps, unintended reception of other signals such as AM or FM radio, TV, CB, ham radio, cell phones, or any other unwanted signals through the system.
5. Ensure all inputs and outputs are wired to the appropriate devices per construction documents.
  6. Verify system startup and shutdown operates in the proper sequence.
    - a. System head end components shall be energized at the beginning of the startup sequence in an appropriate order to guarantee proper communication with associated devices.
    - b. Loudspeaker power amplifiers shall be energized at the end of the sequence in order to eliminate unwanted transients being reproduced through system loudspeakers.
    - c. System shutdown sequence shall be in reverse order.
  7. Where a system computer is furnished, load and configure all necessary control software. Examples include but are not limited to the following as applicable: wireless microphone management, amplification management, projector/display management, audio console configuration/control, DSP configuration/management, and active loudspeaker management.
  8. Where audio or video digital signal transport is required, ensure all network setup is complete including the installation and licensing of network management application software.
- E. Required testing equipment:
1. Certain systems/subsystems require testing and documentation via approved test equipment.
    - a. Systems requiring testing via approved devices will be identified below.
    - b. Required test devices will be listed in related sections.
    - c. Provide unified testing results of similar systems. Describe testing procedure including all test equipment used.
    - d. Provide original results from testing equipment (as applicable).
    - e. Failure to submit testing documentation conducted via approved devices will result in delayed final acceptance by the Design Consultant.
    - f. Contractors unable to provide required test equipment shall employ the services, at their own expense, of a certified Sub-Contractor to assist in testing and documentation.
- F. Audio System
1. Electronics
    - a. Test all system audio electronic components for uniform frequency response from input to power amplifier output:
      - 1) Supply pink noise to a single system input which engages most of the system electronics. For example, connect pink noise to a microphone receptacle at the presenter location.
      - 2) With all signal processing bypassed (equalization band pass filters, crossovers, dynamics, etc.), independently route the signal through audio console, DSP, and any other system processing components to an amplifier output.
      - 3) With speaker load disconnected, measure the signal response of the selected amplifier output (to obtain viable measurement results, ensure output level is set

- to match the ability of the measurement device to display accurate information. This can be accomplished via attenuation of signal or insertion of a speaker level to line level attenuator).
- 4) Verify the measured response is uniform and matches the reference input signal within  $\pm 1$ dB from 30 Hz to 18 kHz.
  - 5) Required test equipment - Signal Generation:
    - a) Terrasonde/Sencore Audio-Toolbox; or
    - b) Japan Audio Society CD-1 test compact disc
    - c) NTI Minirator MR-PRO
  - 6) Required test equipment – Measurement Device:
    - a) AFMG Sys-Tune system; or
    - b) Rational Acoustics SMAART system v7 or later; or
    - c) NTI Audio XL2 Analyzer; or
    - d) Studio Six Digital Audio Tools RTA or FFT Module, with
      - (1) Studio Six Digital iAudioInterface 2
- b. Repeat measurement for each amplifier output channel.
2. Loudspeaker Impedance
    - a. Measure and record the impedance of all loudspeaker circuits at the output of each amplifier. During this process, also check each loudspeaker circuit for shorts to ground.
    - b. Required test equipment:
      - a) Dayton Audio DATS; or
      - b) NTI Minirator MR-PRO; or
      - c) Sennheiser ZP-3; or
      - d) Terrasonde/Sencore Audio Toolbox; or
      - e) Approved equal.
    - 2) Unacceptable measurement devices for loudspeaker impedance include the following:
      - a) Digital Multimeter (DMM); or
      - b) TOA ZM-104; or
      - c) TOA ZM-104A; or
      - d) Approved equal.
  3. Loudspeaker Band Pass/Amplifier Assignment Confirmation
    - a. For full range loudspeakers, apply full spectrum pink noise at sufficient level in order to:
      - 1) Verify subjectively that each loudspeaker is emitting full spectrum signal (both woofer and tweeter/horn are operating)
      - 2) Confirm each loudspeaker is connected to the proper amplifier chassis and output channel.
      - 3) Verify proper phase of each loudspeaker.
      - 4) Required test equipment:
        - a) Galaxy Audio CPTS Cricket Polarity Tester; or
        - b) NTI Audio MR-PRO generator with XL2 Analyzer; or
        - c) Studio Six Digital Audio Tools Speaker Polarity Module; with
          - (1) Studio Six Digital iAudioInterface 2 and Type 1 or 2 Test microphone; or

- (2) Studio Six Digital iPrecisionMic; or
      - (3) Studio Six Digital iTestMic; or
    - d) Studio Six Digital Speaker Pop; with
      - (1) Studio Six Digital iAudioInterface 2 and Type 1 or 2 Test microphone; or
      - (2) Studio Six Digital iPrecisionMic; or
      - (3) Studio Six Digital iTestMic; or
    - e) Approved equal.
  - b. For loudspeakers with multiple band pass sections (bi-amp, tri-amp, etc.), apply appropriately band-limited pink noise at sufficient level to each device or band pass (i.e., high frequency section, mid frequency section, low frequency section):
    - 1) Verify subjectively that each loudspeaker is emitting appropriately band-passed spectrum signal.
    - 2) Confirm each band pass is connected to the proper amplifier chassis and output channel.
    - 3) Verify phase of each band pass
    - 4) Required test equipment:
      - a) Galaxy Audio CPTS Cricket Polarity Tester; or
      - b) NTI Audio MR-PRO generator with XL2 Analyzer; or
      - c) Studio Six Digital Audio Tools Speaker Polarity Module; with
        - (1) Studio Six Digital iAudioInterface 2 and Type 1 or 2 Test microphone; or
        - (2) Studio Six Digital iPrecisionMic; or
        - (3) Studio Six Digital iTestMic; or
      - d) Studio Six Digital Speaker Pop; with
        - (1) Studio Six Digital iAudioInterface 2 and Type 1 or 2 Test microphone; or
        - (2) Studio Six Digital iPrecisionMic; or
        - (3) Studio Six Digital iTestMic; or
      - e) Approved equal.
4. Loudspeaker Rattle
- a. Verify each loudspeaker is connected to the respective power amplifier and test each loudspeaker throughout its usable frequency range using 1/3-octave bands of pink noise to ensure loudspeaker and related building systems do not rattle.
  - b. Required 1/3-octave band pink noise sources and test equipment include:
    - 1) Terrasonde/Sencore Audio-Toolbox; or
    - 2) Japan Audio Society CD-1 test compact disc
    - 3) NTI Minirator MR-PRO
5. Loudspeakers Uniformity of Coverage
- a. Perform audio system verification per AVIXA A102.01 for all loudspeakers. Document per guidelines set forth in the standard.
6. Loudspeakers Equalization
- a. Perform sound system equalization to optimize system performance for the intended uses.
  - b. Every loudspeaker shall be equalized.
  - c. Required test equipment:

- 1) Calibrated Type 1 or Type 2 microphones shall be used
  - 2) Studio Six Digital Audio Tools (for applicable spaces); with
    - a) Studio Six Digital iPrecisionMic; or
    - b) Studio Six Digital iTestMic; or
    - c) Approved equal.
  - 3) SmaartLive (most current non-beta version) with SmaartLive approved:
    - a) Appropriate laptop
    - b) Microphone interface
  - 4) AFMG Sys-Tune (most current non-beta version) with Sys-Tune approved:
    - a) Appropriate laptop
    - b) Microphone interface
7. Microphone/Line Level
- a. Verify that all microphone and line level cabling and connectors are installed with Pins 1, 2, and 3 wired properly and there are no shorts to ground. Ensure proper polarity.
  - b. Verify that all microphone connectors, extension cables, and microphones are wired properly and in polarity.
  - c. Required test equipment:
    - 1) Alphon ACT-100 Remote Tester; or
    - 2) NTI Minirator MR-PRO with Cable Test Adapter; or
    - 3) Approved equal.
    - 4) A microphone is NOT an acceptable measurement device for cable tests.
8. Wireless Microphones
- a. Setup and configure each wireless microphone system using the software provided by the manufacturer of the wireless microphone system. The following tasks are required:
    - 1) Utilize wireless microphone management system if applicable, e.g., Shure Wireless Workbench, to perform an RF spectrum sweep.
    - 2) Perform frequency coordination with Owner. Take into account any existing wireless microphone system(s).
    - 3) Calculate spare RF channels (based on 5% of the total wireless system channels).
    - 4) Perform frequency assignment of all transmitters/receivers per the results of the frequency coordination and RF spectrum sweep.
    - 5) Verify all receivers are set to maximum line level audio output.
    - 6) Set all handheld wireless transmitter microphone sensitivity settings to allow high level voice output without AF over modulation. All transmitters should be set the same.
    - 7) Set all body pack wireless transmitter microphone sensitivity settings to allow high level voice output without AF over modulation. All transmitters should be set the same.
    - 8) Using subjective listening, adjust the body pack settings to match the audio level of the handheld transmitters.
    - 9) Walk the entire performance coverage area using speech as the program material to verify signal performance. Utilize wireless microphone management system (software) if applicable to perform a QOS test.

- 10) Document wireless microphone frequency assignments including coordinated spare channels.
9. Production Intercom System
  - a. Verify that all intercom level cabling is installed with pins 1, 2, and 3 wired properly and there are no shorts to ground. Ensure intercom system power supply is disconnected for these tests.
  - b. Required test equipment:
    - 1) Alphonson ACT-100 Remote Tester; or
    - 2) NTI Minirator MR-PRO with Cable Test Adapter; or
    - 3) Approved equal.
10. Assistive Listening System
  - a. Setup and configure the assistive listening system. Verify proper input signal level.
  - b. Walk the entire coverage area using speech as the program material to verify signal performance.
  - c. Set all receivers to match the selected transmit channel(s).
- G. Video System
  1. Verify that all coax video cables pass a DC continuity cable test and contain no electrical shorts. Required test equipment includes:
    - a. Fluke MicroScanner2; or
    - b. Test-Um CX200; or
    - c. Triplet 8-Way WireMaster Coax; or
    - d. Approved equal.
  2. Verify that all coax video cables pass a frequency sweep test for the bandwidth of intended use. Required test equipment includes:
    - a. Tektronix RSA5000; or
    - b. Rhode & Schwarz FPC1500; or
    - c. Keysight Technology N9340B; or
    - d. Approved equal.
  3. Verify that all video cabling intended for use in SDI signals are tested to allow system conformance with SMPTE 424M. Required test equipment includes:
    - a. Phabrix SxE; or
    - b. Harris VideoTek HD-Star; or
    - c. Quantum Data QD780C; or
    - d. Approved equal.
  4. Verify that all video systems utilizing DVI cabling are tested to confirm the signal path passes full system bandwidth, full system resolution, HDCP as applicable, correct color space and bit depth, and correct frame rate. Required test equipment includes:
    - a. Murideo Fox & Hound A/V Testing and Troubleshooting Kit; or
    - b. Murideo Fresco Field Test Suite; or
    - c. Proton-LVDS Video Generator Analyzer; or
    - d. Purelink HDG 2.0; or
    - e. Approved equal.
  5. Verify that all video systems utilizing HDMI or DisplayPort cabling are tested to confirm the signal path passes full system bandwidth, full system resolution, HDCP, correct color space and bit depth, correct frame rate, HDR signal and metadata as applicable, and

- audio as applicable. Required test equipment includes:
- a. Hall Research PGA-VHD; or
  - b. Murideo Fox & Hound A/V Testing and Troubleshooting Kit; or
  - c. Murideo Fresco Field Test Suite; or
  - d. Quantum Data QD780C; or
  - e. Purelink HDG 2.0; or
  - f. Approved equal.
6. Setup and calibrate each visual display using current edition of Spears & Munsil High-Definition Benchmark Disc. Perform calibration with environmental lighting set to level representative of the system while in use. Verify each source and variety of resolutions. For projector/screen combinations, the screen drop shall be set to maximize observation from all seats and the image shall fill the available space on the screen.
  7. Calibrate each video image using a repeatable, calibrated system. Provide documentation for each calibrated image. Results shall also become a part of the Operation/maintenance manuals. Required test equipment includes:
    - a. Datacolor Spyder5ELITE Display Calibration; or
    - b. SpectraCal CalMAN Ultimate software (most recent version) running on Contractor-provided laptop which exceeds the minimum requirements stipulated by SpectraCal.
      - 1) Supported Meters: as recommended by SpectraCal
      - 2) Supported Pattern Sources: as recommended by SpectraCal; or
    - c. X-Rite ColorMunki Display; or
    - d. Approved equal.
- H. Control System
1. Verify performance of the Control System including the operation of all control features.
- I. Adjustment
1. Repair or replace any defects or malfunctions found prior to the commencement of final acceptance activities by the HENDERSON ENGINEERS.
- J. Testing Documentation Submittal
1. Document the results of all tests and compile into a complete Testing Documentation submittal with the following items:
    - a. Results of the tests detailed herein; and
    - b. Documentation of changes to the systems as a result of any project Change Order, ASI, field directive, Owner's Representative direction or the Testing and Adjustment process. Scans of current field set are acceptable for this submittal; and
    - c. Digital photographs or explanation of reasoning for failed test results due to reasons such as site conditions, constraints, equipment availability, equipment failure, direction required from design team or Owner's Representative, etc.; and
    - d. Written notice to the HENDERSON ENGINEERS that the system(s) are ready for final acceptance.
  2. Include the final approved Testing Documentation package in the Operation and Maintenance Data package.
  3. Modify the Record Drawings to include any changes as a result of the adjustment process.
- K. Contact the HENDERSON ENGINEERS should problems or concerns arise during the testing activities.

- L. Transmit the Testing Documentation submittal to the HENDERSON ENGINEERS in a timely fashion to allow the HENDERSON ENGINEERS appropriate time for review and comment prior to scheduling of final acceptance. The HENDERSON ENGINEERS cannot visit the site or begin the acceptance phase until the submittal has been approved.
- M. Should the HENDERSON ENGINEERS be required to invest time performing some or all of the tests, the Contractor will compensate the HENDERSON ENGINEERS for all associated costs.

### 3.9 FINAL ACCEPTANCE

- A. After completion of the system installation and after the preliminary tests and adjustments are complete, the Contractor in conjunction with the HENDERSON ENGINEERS shall perform on-site acceptance of the technical system. This process will include, but not be limited to the following, as applicable:
  - 1. Random verification of Contractor tests
  - 2. System check-out
  - 3. Tailoring of the technical system's frequency response to the facility's acoustical environment (where required)
  - 4. Observation of video system to verify proper image display
  - 5. Function and operability of the control system.
- B. Provide the services of the designated supervisor and any other technicians who are familiar with the system, for approximately four ten-hour days. Additional time may be required due to Alternates accepted by the Owner's Representative, or due to Addenda or Change Orders (if any) which modify the scope of work. The supervisor shall provide personal assistance during these activities. This duration does not include time for correcting wiring errors, equipment malfunctions, or problems related to the installation of the technical system. This work could occur at any time day, night, weekends, or holidays without additional claims for expense.
- C. At the discretion of the HENDERSON ENGINEERS, the Contractor shall participate in the control and adjustment of computer-controlled systems including but not limited to the following systems: main control system, DSP, wireless microphone, amplifier, active loudspeaker, display systems, etc.
- D. At the completion of the final acceptance period, the Contractor shall compile all system configuration settings (files) with copies as required for inclusion in the O&M Manuals described later in these specifications.
- E. In addition, provide the following: hand and power tools appropriate for the type of installation, ladders, lifts, and/or scaffolding as required to reach all high-mounted devices, spare wire and cable of the types used in the installation, selection of wiring fasteners used in the installation, complete set of the most recent reviewed shop drawings, complete set of all manufacturers' original installation/operation/maintenance manuals, and specific test equipment used during the preliminary testing activities.
- F. After the technical system is operational, the Contractor shall provide verbal instruction to designated Owner's Representative as to proper methods of system operation. Video record the instruction class and provide the recording in a usable digital format to the Owner's Representative.
- G. Provide operational assistance for the first major use of the completed system as directed by the Owner's Representative, including being present for: one prior rehearsal associated with the event (if applicable); a technical check immediately prior to the event; and the event itself.

**3.10 OPERATION AND MAINTENANCE DATA**

- A. At the completion of the project, compile thorough copies of the Operation and Maintenance (O&M) Data per Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.
- B. O&M data shall be assembled according to rooms or areas as it relates to the project site. The intent is to allow the Owner's Representative to easily locate information relating to a specific system/room without having to spend an inordinate amount of time searching. Include complete information for each system/room – this may involve duplication of information.
- C. Include ANSI E1.47 within the O&M data.
- D. As applicable, save full digital version to the system computer.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT****PART 1 GENERAL****1.1 SUMMARY**

- A. This section describes the equipment for the audio-video (AV) system (hereafter referred to as the "Technical System").

**1.2 RELATED REQUIREMENTS**

- A. Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO
- B. Section 27 41 00 - AUDIO VIDEO SYSTEMS

**PART 2 PRODUCTS****2.1 GENERAL**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for general product requirements.
- B. All components of the technical system equipment shall be provided and installed by a qualified contractor as outlined in Section 27 41 00 - AUDIO VIDEO SYSTEMS.
- C. All electronic audio devices shall have electronic or transformer balanced inputs and outputs except for specific program source equipment and mixing console inputs and/or outputs. If an electronic device specified or furnished has an unbalanced input and/or output, make provisions to balance said input/output (i.e., active signal balancing device as approved) unless other arrangements have been agreed upon with the HENDERSON ENGINEERS.

**2.2 COMMON EQUIPMENT**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for common equipment and components.

**2.3 EQUIPMENT LIST**

- A. Refer to the attached Appendix A equipment list for major components of the Technical System basis of design. Alterations from the established basis of design product selections shall follow the Product Substitution and Submittal requirements per Section 27 41 00 - AUDIO VIDEO SYSTEMS.
- B. Major components are included herein to convey design intent and may not reflect every element required for a complete and working system. A fully functional and complete system including minor components is required, whether explicitly indicated or not.

**2.4 WIRELESS MICROPHONE SYSTEMS - GENERAL REQUIREMENTS**

- A. Furnish complete wireless microphone system(s) including all accessory components from a single manufacturer for the entire project. Where applicable, multi-channel receiver chassis models are preferred to reduce hardware counts.
- B. Each receiver shall be connected via Ethernet to the computer. Furnish the most recent configuration software, install on the computer, and configure each receiver and transmitter for optimum operation. Test each and all receiver/transmitters to ensure no problems arise.
- C. Rechargeable batteries shall be provided for all transmitters. Label each battery using a logical scheme so batteries can be tracked as they are shuffled among transmitters. Document labels into a spreadsheet which will become a portion of the Operation & Maintenance manuals described in Part 3 of these specifications.
  - 1. Charging equipment shall be provided to accommodate all batteries / transmitters.

- D. Where remote 1/4 wavelength antennas are used, and mounting conditions allow, mount each antenna on a standard metal wall plate to serve as a ground plane.
- E. Provide all connections and components necessary for proper operation of the wireless systems described above.
- F. Coordinate the selection of transmitter/receiver frequencies to be free of interference from outside sources or interference between wireless systems. Select the frequency from an unused channel between (470 - 698 MHz) per FCC regulations Part 74, subpart H.
- G. Label each receiver/transmitter combination as noted on the drawings or as coordinated with the Owner's Representative. See Labeling in Section 27 41 00 - AUDIO VIDEO SYSTEMS for additional labeling requirements.

## **2.5 PROGRAM SOURCE EQUIPMENT**

- A. Rack-mount kit for equipment that requires rack mounting but is not provided with rack mount ears or optional rack mount kit:
  - 1. Lowell RMK series; or
  - 2. Middle Atlantic Products RSH series; or
  - 3. Approved equal.
- B. For each portable item of program source equipment, furnish one set of input/output cables (6-foot minimum length) and adapters (as required) to allow for connection to technical system inputs/outputs.

## **2.6 MIXING CONSOLES**

- A. The drawings reflect specific mixing consoles. If a mixing console different from the mixer shown on the drawings is furnished, shop drawings are required indicating proposed wiring configuration, patch panel configuration / labeling, I/O configuration, and any modifications to the console millwork. All of the features shown for the console on the drawings shall be maintained with the substitute mixer.

## **2.7 DIGITAL SIGNAL PROCESSING (DSP)**

- A. The AC power cord of the DSP shall be connected to a rack-mount uninterruptible power supply (UPS). Refer to the AC Power in Section 27 41 00 - AUDIO VIDEO SYSTEMS for specific models. The UPS shall be connected to an unswitched (unsequenced) AC power circuit.
- B. The Contractor shall create all schematics for the DSP and submit as a shop drawing. Refer to Submittals section for additional information.
- C. Provide one computer with mouse and system features as recommended and approved by the manufacturer of the DSP system for use during final acceptance.
  - 1. If a computer is provided or designated for use as a system operation and configuration device, DSP software shall be loaded, and the computer shall be operational during system final acceptance.
  - 2. If a permanent computer is not configured for technical system usage, furnish a wireless 802.11ac router and laptop computer configured to allow for wireless control of the DSP during system final acceptance. This equipment shall remain on site until final acceptance activities have been completed. Retain ownership of the router and laptop computer.

- D. Password protection shall be included. One password shall be provided to allow operator access to select functions. Another password shall be provided for technical staff to access all aspects of the software.
- E. DSP programming of Fire Alarm connection
  - 1. General
    - a. Sound system operation in relation to fire alarm system is subject to NFPA, local building codes, and the local Authority Having Jurisdiction.
    - b. Sound system mute for fire alarm audible notification shall be provided for all assembly areas, locations with systems capable of prolonged operation in excess of 100dBA, and all facility background music systems.
    - c. Coordinate with the fire alarm contractor and local AHJ.
  - 2. Sound system mute initiation signal
    - a. Fire alarm system connection to audio system shall be via contact closure circuit in location as indicated on signal flows.
      - 1) Normal condition of contact closure circuit shall be "closed".
      - 2) Alarm condition of contact closure circuit shall be "open".
    - b. Upon fire alarm activation, all sound system audio shall mute.
    - c. DSP shall be programmed to mute audio sources until the alarm is cleared, upon which normal operation shall resume. Activation of Alarm signal may include General Alarm, keying of the fire alarm microphone, or initiation of preprogrammed severe weather (or the like) announcement.
    - d. DSP programming shall include clear visible status of alarm state for troubleshooting purposes.
  - 3. Supplemental voice via fire alarm system (seating bowl)
    - a. Fire alarm supplemental voice connection shall be via DSP mic/line level input in location as indicated on signal flows.
    - b. Sound system mute via contact closure shall operate independent of supplemental voice operation. When in Alarm signal mode, the supplemental voice input shall be the only active audio source.
    - c. Sound system shall enter supplemental voice DSP state upon receipt of system Alarm signal or via keying of the fire alarm microphone.
  - 4. Refer to signal flows and coordinate connections with Fire Alarm System Contractor to ensure compatibility with connections to Fire Alarm System. The following components may be required, dependent on system configurations:
    - a. Loudspeaker Level to Line Level Transformer: 25V, 70V, or 100V loudspeaker level input, unbalanced line level output, selectable input voltage, for connection from loudspeaker level fire alarm connection to line level DSP input:
      - 1) RDL TX-70A.
    - b. Logic Controlled Relay – Momentary: momentary latching logic-controlled relay, contact closure output, for connection from DSP GPIO to fire alarm relay module when DSP GPIO does not have native contact closure outputs:
      - 1) RDL ST-LCR1.
- F. Furnish all components for a fully functioning digital signal processing system.
- G. DSP system basis of design is shown on the signal flows. Unterminated I/O or additional I/O cards shall be provided as shown on the signal flows for future use or additional requirements.

- H. Substitutes to the basis of design will be considered if all features and functionality of the system requirements are met. I/O requirements shall meet or exceed the quantity of the basis of design. Processing requirements shall meet or exceed the basis of design to ensure proper operation of the system. The following manufacturers are pre-approved substitutes to the basis of design shown on the signal flows:
  - 1. Biamp Tesira with:
    - a. The most recent Tesira software; or
  - 2. BSS Soundweb with:
    - a. The most recent Architect software; or
  - 3. QSC Q-Sys with:
    - a. The most recent Q-Sys Designer software
    - b. The following software licenses per core:
      - 1) UCI deployment; and
      - 2) Scripting engine; and
      - 3) Dante channel license (as required).
- I. Audio Network Management Server: Audio network control, monitoring, and management platform; virtual application with dedicated hardware appliance for facility audio network management; provide server setup and system configuration (one required):
  - 1. Audinate Dante Domain Manager, with:
    - a. Dante Domain Manager virtual application
    - b. Software license tier as required per quantity of audio network endpoints
    - c. Audinate approved hypervisor
    - d. Audinate approved hardware appliance (server) per specifications as listed with the selected hypervisor:
      - 1) Dell Server
      - 2) HP Server
      - 3) IBM Server.

## 2.8 POWER AMPLIFIERS

- A. Power amplifiers shall be selected in a manner to reduce quantity of distinct manufacturers for consistency of product across the project. Multi-channel amplifiers shall be selected to reduce chassis counts.
- B. All power amplifier inputs shall be either balanced analog inputs or digital network.
- C. All front panel controls and AC power switches shall be either:
  - 1. concealed via a perforated metal security cover,
  - 2. concealed via manufacturer-supplied security cover,
  - 3. electronically disabled.
  - 4. The security cover shall not block air-flow for amplifier internal cooling.
- D. All power amplifiers shall have standby/sleep mode functionality. This functionality shall be implemented on a system wide scale to provide a fully controlled power sequencing system. Preferred solution is network based; if amplifier does not have necessary features via network control, contact closure solution shall be utilized. Contact closure solution shall utilize a control system for triggering power on/off cycle.
  - 1. Upon system shutdown, power amplifiers shall enter standby/sleep mode per manufacturer's functionality.

- E. Power amplifiers are listed by series, with the basis of design model shown on the amplifier schedule(s) and/or signal flows. Deviation from the basis of design to an approved substitute shall be allowed as follows:
1. Power rating for high impedance (70V) operation shall meet or exceed the basis of design load requirement on the channel. Load shall be calculated based on total power (addition of all loudspeaker tap values) as indicated on the signal flows.
  2. Power rating for low impedance operation shall meet or exceed the basis of design load requirement on the channel. Load shall be as indicated on the loudspeaker schedules and/or signal flows.
  3. Channel count per chassis shall produce the most efficient solution of maximum channels vs appropriate power rating.
  4. Proposed substitute should take into account:
    - a. alterations of audio network requirements, as applicable. Alterations may include the need for additional network infrastructure, including network switches.
    - b. alterations of audio system requirements, as applicable. Alterations may include the need for additional digital signal processing infrastructure.
    - c. standby/sleep mode functionality. Alterations may include the need for additional network infrastructure or control system infrastructure.
    - d. all other parameters, including but not limited to rack requirements and environmental considerations (AC power, thermal dissipation, weight, etc.).
- F. Specification naming scheme: Power Amplifier – Type ( )x/( )N(A)(B)(C)(D)(E)(Q)
1. Key:
    - a. x minimum power rating listed at 8-ohm load, also capable of providing high impedance (70V) operation (x)
    - b. / number of channels per chassis
    - c. N network control capabilities
    - d. A AVB network capability
    - e. B BLU-Link
    - f. C Cobranet capability
    - g. D Dante network capability
    - h. E EtherSound
    - i. Q Q-SYS network capability
- G. Basis of Design
1. Refer to Audio Video Amplifier Schedule for basis of design product information.

## 2.9 LOUDSPEAKERS – INSTALLED

- A. General loudspeaker requirements:
1. Loudspeaker, and related mounting bracket(s) where appropriate, color shall be as selected by the Architect from the available color selection offered from each loudspeaker manufacturer.
  2. For loudspeakers located outdoors or in an indoor humid environment (such as natatoria):
    - a. Encapsulate all exposed loudspeaker wiring terminations in clear silicon type sealant or Star Brite Liquid Electrical Tape (800) 327-8583.
  3. Utilize the most recent manufacturer-recommended DSP settings if available.
- B. Basis of Design

1. Refer to Audio Video Loudspeaker Type Schedule for basis of design product information.

#### **2.10 ASSISTIVE LISTENING SYSTEM - GENERAL REQUIREMENTS**

- A. The transmitter shall be installed in the audio equipment racks and the transmitting antenna shall be remotely mounted/suspended at the location shown on the drawings. The antenna shall be installed in a vertical orientation.
- B. Select interference-free frequencies corresponding to the space assignments listed in the documents. Coordinate system wording with the Owner's Representative. Permanently and clearly label each receiver.
- C. The Assistive Listening System (ALS) shall include all hardware as required to provide a fully-functional system.
- D. A single manufacturer shall be selected for all systems.
- E. Signage shall be handed over to the Owner's Representative for installation at a location of their choosing.

#### **2.11 PRODUCTION INTERCOM SYSTEM - WIRED**

- A. The production intercom system equipment shall be supplied from one manufacturer only. Ensure that power supply can operate all intercom equipment without interruption.
- B. Contractor shall clearly and accurately document all locations where intercom wiring is connected in parallel. Utilize industry best-practices to eliminate excessive parallel connections. Connection locations are required to be accessible, with all wiring clearly labeled.

#### **2.12 PRODUCTION INTERCOM SYSTEM – WIRELESS**

- A. The wireless production intercom system shall be configured to function as a stand-alone system or to interface with the wired intercom system.
- B. The wireless intercom system equipment shall be supplied from one manufacturer only.

#### **2.13 VIDEO DISTRIBUTION SYSTEM - EQUIPMENT**

- A. The AC power cord of the Video Distribution System Processor shall be connected to a rack-mount uninterruptable power supply (UPS). Refer to the AC Power in Section 27 41 00 - AUDIO VIDEO SYSTEMS for specific models. The UPS shall be connected to an unswitched (unsequenced) AC power circuit).
- B. Video distribution system equipment shall either be furnished from one manufacturer only or shall conform to an industry standard with demonstrated compatibility with non-proprietary devices.
- C. The drawings reflect a specific system manufacturer(s) as the basis of design. If a different system is furnished, shop drawings are required indicating proposed wiring configuration and equipment used. All of the features shown for the system on the drawings shall be maintained with the substitute system. Include coordination and costs related to back boxes, electrical, and other associated items.
- D. System shall be compatible and coordinated with selected Control System.
- E. All equipment necessary shall be furnished to provide a complete operating system. Additionally required accessories and components may not be indicated on the signal flows, such as routing processors, control system interface processors, software licenses, etc.

- F. The system shall utilize an IP network-based topology as the primary transport method. Coordination with the network system is required.
- G. The following manufacturers are pre-approved substitutes to the basis of design found on the signal flows:
  - 1. Crestron NVX
    - a. Approved with Crestron control
  - 2. Extron NAV
    - a. Approved with Extron control

#### **2.14 VIDEO DISPLAY EQUIPMENT – PROJECTORS**

- A. Projector lens recommendations are based on conditions anticipated during the design phase. Site conditions may differ from the design documents. The Contractor shall be responsible for field verifying the screen size/location, projector mounting location, throw distance, lens shift capability and selection of the appropriate lens. Projectors shall be installed perpendicular to their objective screen or projection surface. Image alignment shall be via projector placement and lens shift only. Digital keystone correction is not acceptable. Digital manipulation of the image size is not an acceptable alternative to incorrect lens selection. Incorrect selection of the projector lens or incorrect installation of the projector in relation to the projection surface will not be an acceptable request for a change order.
- B. All projectors specified in this section shall have the following features or options included, unless noted otherwise for specific projectors:
  - 1. Aspect ratio as indicated on the schedule
  - 2. Capable of minimum native resolution no less than 1920x1080
  - 3. Ability to calculate lumen output per ANSI standard specification
  - 4. Potential for DVI, HDMI, or SDI input (as indicated on signal flows)
  - 5. Control via LAN or RS-232
  - 6. Include or provide lens capable of meeting site conditions as described above
  - 7. Include one spare/replacement lamp assembly (one spare lamp required per non-laser projector)
- C. Basis of Design
  - 1. Refer to Audio Video Projector Schedule for basis of design product information.

#### **2.15 PROJECTOR MOUNTS & ACCESSORIES**

- A. Unless noted otherwise, provide the appropriate mount for each projector furnished. Mount color as selected by Architect. Match mount to the projector and the mounting surface.
- B. Full assembly (projector, mount, and all associated connections/equipment) shall be adequately supported with the appropriate safety factor to building structure. Appropriate structural support shall be provided. No mounts shall fasten directly to the roof deck.
- C. Shop drawing required. Refer to submittal requirements.
- D. Furnish all components to provide a complete installation, including fastening systems suitable for the mounting surface.
- E. All recessed or built-in projectors require shop drawings showing the surrounding architecture to ensure proper fit and ventilation requirements.

#### **2.16 FRONT PROJECTION SCREENS – INSTALLED**

- A. All projection screens specified in this section shall have the following features or options included, unless noted otherwise for specific screens:
  - 1. Ambient Light Rejecting screen surface, 0.9 gain
  - 2. Black backing on screen surface
  - 3. Extra drop to allow for bottom of screen image to reach height per schedule
    - a. Screen fabric shall be fully deployed when at the specified height
  - 4. Aspect ratio as indicated on the schedule
  - 5. Motorized screen and concealment door, if applicable
  - 6. Externally mounted electrical junction box / low voltage control interface
  - 7. Low voltage wall switch, location as shown on plans
- B. Projection screens are specified by series. Refer to drawings for exact screen size required per screen. Size listed as: (height in inches)-(width in inches). Deviance from basis of design size allowed  $\pm 2"$ .
- C. Coordinate final mounting position with appropriate parties. Ensure screen is mounted such that screen drop is not impeded by wall mounted devices, including any electrical devices or marker boards and trays. Screen drop shall not impact wall during deployment.
- D. Ceiling mounted screens shown directly parallel to a wall surface without a given dimension are intended to be mounted such that the deployed screen surface is no more than 12" off the wall surface. If mounting conditions necessitate violation of this dimension, approval is required on an individual basis.
- E. Basis of Design
  - 1. Refer to Audio Video Projector Screen Schedule for basis of design product information.

## 2.17 FLAT PANEL DISPLAYS - GENERAL REQUIREMENTS

- A. Flat panels in this section shall be LCD, by one manufacturer, unless noted otherwise.
- B. All LCD flat panel displays specified in this section shall have the following features or options included, unless noted otherwise:
  - 1. Display response time of 10ms or less
  - 2. LED backlighting
  - 3. VESA mounting compatible
  - 4. Minimum viewing angle of 175°horizontal x 175°vertical
- C. LCD flat panels are listed by series, with the basis of design model shown on the schedules and/or signal flows. The minimum requirements for inputs, outputs, control connections and optional interfaces/accessories shall be as indicated on signal flow diagrams.
- D. Deviation from the basis of design to a proposed substitute will be allowed as follows:
  - 1. All audio, video, and control connections shown on signal flow (connectors shown on equipment block but without any connections are not required for substitution) shall meet or exceed the basis of design with respect to quantity, type, version, and supported protocols. This shall include the standard features of the display as well as any optional interfaces/accessories.
    - a. Example connections include but are not limited to:
      - 1) TV tuner (NTSC, ATSC, and Clear QAM compatible),
      - 2) HDMI (HDCP compatible),
      - 3) DVI-D (HDCP compatible),

- 4) SDI (SD, HD, 3G, Dual Link, 6G),
  - 5) DisplayPort (HDCP Compatible),
  - 6) HD15 RGB with 3.5mm audio,
  - 7) Component with stereo audio,
  - 8) Composite with stereo audio,
  - 9) Multi-channel audio,
  - 10) RJ45 LAN,
  - 11) RJ45 HDBaseT,
  - 12) RS232 control via DB9 connector, and
  - 13) USB.
2. Contractor shall be responsible that the proposed substitute meets or exceeds the basis of design and will:
    - a. have an equivalent aspect ratio.
    - b. have an equivalent rated operation (24/7, 16/7, etc.)
    - c. meet the capabilities of any built-in speakers.
    - d. physically fit in the location with sufficient space for ventilation and servicing.
    - e. have an equivalent brightness rating and backlighting technology (edge light, direct back light, etc.)
    - f. utilize the same touch sensing technology (resistive, capacitive, etc.)
    - g. be compatible with the display mount.
    - h. allow for multiple mounting orientation capabilities (horizontal, vertical/portrait, etc.).
    - i. have an equivalent manufacturer's warranty.
  3. Contractor shall submit details (and shop drawings where applicable) for each proposed substitute. Include information relating to the above.

E. Basis of Design

1. Refer to Audio Video Flat Panel Display Schedule for basis of design product information.

## 2.18 FLAT PANEL DISPLAY TELEVISION MOUNTS

- A. Unless noted otherwise, provide the appropriate mount for each display furnished. Mount color as selected by Architect. Match mount to the display and the mounting surface.
- B. Full assembly (display, mount, and all associated connections/equipment) shall be adequately supported with the appropriate safety factor to building structure. Appropriate structural backing/support shall be provided. No mounts shall fasten directly to the roof deck. Refer to submittal requirements.
- C. Furnish all components to provide a complete installation, including fastening systems suitable for the mounting surface.
- D. All recessed or built-in displays/televisions require shop drawings showing the surrounding architecture to ensure proper fit and ventilation requirements.
- E. Refer to drawings for anticipated mount type required for each display location.
- F. Provide outdoor rated mount variants in locations as applicable.
- G. Mounts shall be selected and installed to ensure the full display/mount assembly meets all ADA requirements, including Protrusion Limits into Circulation Paths of no more than 4" (as defined by the ADA Accessibility Guidelines). Additional considerations may include:

1. The use of thin mounts in lieu of standard depth display mounts to reduce mounting depth.
  2. Where wall standoffs are utilized, ensure overall depth is no greater than 4”.
  3. The use of “right angle” plugs or terminations may be required to maintain minimum cable bend radius.
  4. The use of recessed back boxes may be required to accommodate plugs or terminations and any display mounted equipment.
  5. The use of recessed back boxes with thin profile articulating mounts may be utilized in lieu of thin mounts.
- H. Flat Panel Mount – Wall - Fixed: fixed wall mount, fully adjustable, lockable, sized for display as required:
1. Chief FUSION SM Series; or
  2. Peerless SF Series; or
  3. Premier Mounts P F Series.
- I. Flat Panel Mount – Wall – Tilt: tilt wall mount, fully adjustable, lockable, sized for display as required:
1. Chief FUSION TM Series (OD for outdoor series); or
  2. Peerless ST Series (EPT for outdoor series); or
  3. Premier Mounts P T Series (-EX for outdoor series).
- J. Flat Panel Mount – Wall – Fixed Thin: fixed wall mount, low profile, fully adjustable, lockable, sized for display as required:
1. Chief FUSION ST; or
  2. Peerless Ultra Slim SUF Series; or
  3. Premier Mounts Low-Profile P F Series.
- K. Flat Panel Mount – Wall – Tilt Thin: tilt wall mount, low profile, fully adjustable, lockable, sized for display as required:
1. Chief FUSION TT; or
  2. Peerless Ultra Slim SUT Series; or
  3. Premier Mounts Low-Profile P T Series (-EX for outdoor series).
- L. Flat Panel Mount – Wall – Articulating: articulating arm wall mount that pulls out, rotates, and tilts down, fully adjustable, lockable, sized for display as required:
1. Chief TS T Series (OD for outdoor series); or
  2. Peerless SA Series (ESA for outdoor series); or
  3. Premier Mounts AM Series.
- M. Flat Panel Mount – Wall – Articulating ADA: articulating arm wall mount that pulls out, rotates, and tilts down, fully adjustable, lockable, sized for display as required; with recessed back box for retain mount within wall cavity, maximum depth of mount at face of wall no greater than 0.5”:
1. Chief RIW Series mount with PAC501B in-wall back box; or
  2. RP Visuals Wallmate Series; or
  3. Approved equal.
- N. Flat Panel Mount – Desk – Articulating Computer: articulating arm mount that permanently mounts to a desk or lectern, full rotation, sized for computer monitor display as required:
1. Chief KC Series; or
  2. Peerless LCT Series; or

3. Premier Mounts MM Series.
- O. Flat Panel Mount – Videowall: arrayed video wall flat panel mount, micro adjustment in all axis, adjustable depth, front service display release, requires coordination with surrounding architectural elements, refer to Shop Drawing requirements:
  1. Chief ConnexSys Video Wall Series; or
  2. Peerless EDS-VW765 Series (outdoor rated); or
  3. Premier Mounts LMV Series (standard) or LMVS Series (slim); or
  4. RP Visuals RPMM Matrix Series.
- P. Flat Panel Mount – Ceiling - Pole: ceiling mounts one display from 1.5" pipe, fully adjustable, locking, sized for display as required:
  1. Chief FUSION CM Series; or
  2. Peerless PLCM Series (ECMU for outdoor series); or
  3. Premier Mounts CTM Series.
- Q. Flat Panel Mount – Ceiling – Pole – Dual Display: ceiling mounts two back-to-back displays from one 2" pipe, fully adjustable, locking, sized for two like displays as required:
  1. Chief FUSION CB Series; or
  2. Peerless DST Series; or
  3. Premier Mounts ECM Series.
- R. The maximum allowable lateral movement of a ceiling pole mounted display assembly shall not exceed one inch at the bottom of the display. Where these conditions cannot be met by the standard installation requirements, the following components are approved where necessary to facilitate compliance with this guideline.
  1. Where pole length creates excessive "shaking" of the display under normal operating conditions due to structural deflections, the following components may be utilized to mitigate the issue.
  2. Mitigation methods do not alleviate the Contractor's responsibility for proper rigid support methods to prevent these concerns.
- S. Flat Panel Mount Accessory – Lateral Bracing – Wall: Provides additional lateral support to flat panel displays or other equipment suspended by NPT pipe assemblies. For use in close proximity to wall or other structural element. Minimum two (2) assemblies required per installation. Install per Anvil International Seismic-10.13, pg. 5.
  1. Anvil International Q Brace Clamp, P/N: fig.770; with
    - a. Anvil International Sway Brace Swivel Attachment, P/N: fig.770; or
  2. Approved equal.
- T. Flat Panel Mount Accessory – Lateral Bracing – Cable: Provides additional lateral support to flat panel displays or other equipment suspended by NPT pipe assemblies. For use when primary support pipe is not in close proximity to wall or other structural element.
  1. Display Devices Pole Stabilizing Kit; or
  2. Approved equal.
- U. Flat Panel Mount Accessory – Column Mount: Adapts standard display mounts to a structural column:
  1. Chief FCAVCA Variable Column Adapter, with:
    - a. FCAVCSU80 Square 8"x6" U-Bolt Set (for rectangular columns)
    - b. FCASCA Structural Column Adapter (for round columns between 12" – 24" diameter)

2. For conditions outside the above parameters, a custom mounting assembly provided by miscellaneous metals and produced as a shop drawing is required.

### **2.19 A V CONTROL SYSTEM – EQUIPMENT**

- A. The AC power cord of the Control System Processor shall be connected to a rack-mount uninterruptible power supply (UPS). Refer to the AC Power in Section 27 41 00 - AUDIO VIDEO SYSTEMS for specific models. The UPS shall be connected to an unswitched (unsequenced) AC power circuit.
- B. Control system equipment shall be furnished from one manufacturer only. Program the system to provide acceptable operation by the HENDERSON ENGINEERS and/or Owner's Representative.
- C. Select equipment that can be fully controlled by the control system furnished.
- D. The drawings reflect a specific system manufacturer as the basis of design. If a different system manufacturer is furnished, shop drawings are required indicating proposed wiring configuration, control panel layouts, and equipment used. All of the features shown for the system on the drawings shall be maintained with the substitute system. Include coordination and costs related to back boxes, electrical, and other associated items.
- E. All systems shall be accessible remotely via the Owner's LAN as directed by the Owner's Representative.
- F. All control equipment necessary shall be furnished to provide a complete operating system. Additionally required accessories and components may not be indicated on the signal flows, such as power supplies, expansion modules, software licenses, etc.
- G. The following manufacturers are pre-approved substitutes to the basis of design found on the signal flows:
  1. AMX; or
  2. Crestron 4-Series; or
  3. QSC Qsys.

### **2.20 A V CONTROL SYSTEM – GENERAL PROGRAMMING REQUIREMENTS**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for general programming requirements with the following revisions and additions:
  1. No additional requirements.

### **2.21 CABLES – FACTORY TERMINATED – PORTABLE**

- A. Factory terminated cable assemblies in this section are approved for portable use only.
- B. Portable cable assembly quantities are identified in parenthesis and are required to be furnished in addition to those required for system installation. Portable cable lengths are a minimum not to exceed the maximum acceptable length identified in the cable descriptions below. Where specific lengths are cited adjacent to quantities, these lengths are to be taken as ideal lengths. If a pre-approved model series is not offered in the specific length cited, then the cable length closest to the cited length shall be provided unless the difference is greater than twenty percent. In this case, contact the HENDERSON ENGINEERS for direction.
- C. All cable assemblies must be factory tested and certified.
- D. Microphone Cable – Microphone cables shall be black with colored boot or ring on the male connector as a color code to identify length (colors as identified for each length below). Custom

print "PROJECT NAME" and cover with clear heat shrink tubing approximately 6-inches from the male connector or use custom engraving on the male connector. Microphone cable part numbers are custom products.

## **2.22 STANDBY EQUIPMENT**

- A. The following equipment shall be on-hand at the time of system final acceptance and system first-use for possible replacement of defective equipment or for field conditions noted. Maintain ownership of this standby equipment. However, if any item of this standby equipment is used to replace defective equipment, the installed item of standby equipment becomes Owner's property. Assume ownership of the defective equipment:
  - 1. Backup software for programmable devices.
  - 2. Laptop computer for all programmable devices.
- B. Allowances for overnight shipping shall be included and utilized if any component is required for Owner's initial operation, first-use, or as directed by either the Owner's Representative or the HENDERSON ENGINEERS prior to Substantial Completion.

## **PART 3 EXECUTION**

### **3.1 COMMON REQUIREMENTS**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for common requirements.

### **END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 27 41 22 - LARGE FORMAT DISPLAY SYSTEMS****PART 1 GENERAL REQUIREMENTS****1.1 SECTION INCLUDES**

- A. Summary
- B. General Requirements
- C. Common Equipment
- D. Direct View LED Display
- E. Scoring/Timing System

**1.2 RELATED SECTIONS**

- A. Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO
- B. Section 27 41 00 - AUDIO VIDEO SYSTEMS

**1.3 ACRONYMS AND DEFINITIONS**

- A. DVLED: Direct View LED Display – A display type comprised of light-emitting diodes (LEDs) mounted to a panel without the use of a backlight and liquid crystal or polarized glass.
- B. DVLED System: A complete and operational system comprising of the DVLED Display and all components to facilitate the functionality described herein.
- C. Large Format Display System Contractor: Contracting firm that has been retained to do the work noted within these specifications and associated drawings.
- D. Scoreboard: A fixed digit display consisting of permanent caption lettering and controllable digits utilizing monochrome LED digit panels.

**1.4 REFERENCES**

- A. 47 CFR 15 - Radio Frequency Devices; current edition.
- B. UL 48 - Standard for Electric Signs; current edition.

**1.5 SUBMITTALS**

- A. Refer to requirements in Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO
- B. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for submittal requirements, including definitions of submittals. The following submittals are required as a portion of this section:
  - 1. Submittal #1: System Product Data (Pre-Construction)
    - a. Equipment List (1A)
    - b. Manufacturer's cut sheets (1B)
    - c. Product Substitutions (1C)
    - d. Project Implementation Schedule - submit as portion of overall submittal in Section 27 41 00 - AUDIO VIDEO SYSTEMS submittal.
  - 2. Submittal #2: System Shop Drawings (Pre-Construction)
    - a. Pathways, Devices, and Cabling (2A)
    - b. Signal Flow Shop Drawings (2B)
    - c. Control System - submit any applicable requirements as portion of overall submittal in Section 27 41 00 - AUDIO VIDEO SYSTEMS submittal.

3. Submittal #3: System Fabrication Drawings (Pre-Construction)
  - a. Structural Details (3A)
  - b. Equipment Rack Shop Drawings - submit as portion of overall submittal in Section 27 41 00 - AUDIO VIDEO SYSTEMS submittal.
  - c. Panel, Patch Panel, and Plate Shop Drawings - submit as portion of overall submittal in Section 27 41 00 - AUDIO VIDEO SYSTEMS submittal.
  - d. Large Format Display System Shop Drawings (3B) - Dimensioned, detailed drawings including:
    - 1) Physical dimensions of the display, including any required clearances for ventilation or otherwise (as applicable) with front elevation and section (side). Include panel layout and ancillary equipment as applicable.
    - 2) Electrical Detail(s) – indicating all required Electrical and grounding connections, including their locations within the display
      - a) Clearly indicate required electrical circuit quantities with voltage and amperage listed at maximum output brightness
    - 3) Mechanical Detail(s) – indicated all required Mechanical and ventilation requirements
    - 4) Low Voltage Cabling Detail(s) – indicating all required Communications cabling requirements, including their locations within the display
4. Submittal #4: System Test Results (Prior to Substantial Completion)
  - a. Preliminary Testing Documentation Package (4A)
5. Project Closeout

## 1.6 COORDINATION

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for requirements.

## 1.7 QUALITY ASSURANCE

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for requirements.

## 1.8 BASE BID AND ALTERNATES

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for requirements.
- B. The following Alternates are included in this section:
  1. ADD Alternate No. 14 Rectangle Center Hung Score/Video Board
  2. Refer to Direct View LED Schedule for list of physical sizes and resolutions & details on Sheet TB303.
  3. Performance requirements for this alternate must meet specifications outlined below in section 2.4 (B)
  4. Provide cost difference between curved scoreboard in section 2.4 B and this add alternate number 14.

## 1.9 WARRANTY

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for requirements.

## PART 2 PRODUCTS

### 2.1 SUMMARY

- A. These specifications and the associated TA series drawings describe the requirements for the Large Format Display System.

- B. Work includes all such Work indicated in all of the Contract Documents, including, but not limited to: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Communications, Fire Alarm and Electronic Safety and Security Drawings and Specifications; and Addenda.
- C. Work under this section of the specifications includes all labor, equipment, and installation as required to provide a complete Large Format Display System in compliance with the contract documents.
- D. The Large Format Display System Contractor shall employ the services of a qualified structural engineer to review all overhead mounting, suspension, and rigging details of the Large Format Display System equipment, as well as seismic restraints. All mounting and rigging schemes indicated on the drawings are shown for concept only. Submit shop drawings stamped by the Contractor's structural engineer of all details and weights for review by the project's Architect, Structural Engineer, and HENDERSON ENGINEERS.
- E. The work in this section shall be coordinated with other work to determine installation scope for conduit, outlet boxes, junction boxes, pull boxes, terminal cabinets, 120-volt AC power circuits, and insulated ground cables required for the Large Format Display System.

## 2.2 GENERAL REQUIREMENTS

- A. The products listed below represent unique product offerings relative to the basis of design. Due to the unique performance capabilities of these components, selection of alternate product(s) will require design modification to maintain system functionality. When alternate products are desired, Contractor shall:
  - 1. Submit Product Substitution Request(s) per instructions in this section and in accordance with Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.
  - 2. Submit proposed signal flow and equipment rack shop drawings with the required system modifications clouded.
- B. Final acceptance for any Product Substitution Request(s) shall be at the discretion of the HENDERSON ENGINEERS.
- C. Comply with UL 48, 47 CFR 15

## 2.3 COMMON EQUIPMENT

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for equipment and components not listed under this section.

## 2.4 DIRECT VIEW LED DISPLAY

- A. Basis of Design and Alternates
  - 1. The following manufacturer forms the Basis of Design as indicated within the plans and schedules:
    - a. Planar.
  - 2. Pre-approved manufacturers include:
    - a. Daktronics.
  - 3. Alternate manufacturers will only be considered after bid.
    - a. Submit substitution request in accordance with Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.

- B. DVLED Display System - 3.9MM Indoor - Main Curved Center Hung Board
1. Display Requirements
    - a. Refer to Direct View LED Schedule for list of physical sizes and resolutions & Details on Sheet TB302.
    - b. Service access: Front and Rear
    - c. Durability rating: Indoor (No IP rating required)
    - d. Maximum depth from mounting surface: 8"
    - e. Required Manufacturer's services:
      - 1) System engineering
      - 2) Shop Drawings
      - 3) Onsite system adjustment and commissioning (duration and scope per Manufacturer's recommendation)
  2. LED Module Requirements
    - a. Pixel pitch: 3.9mm ( +/- 0.10
    - b. Pixel configuration: 3-in-1 SMD (Surface Mount Device)
    - c. Minimum brightness after calibration: 1000 nits
    - d. Horizontal viewing angle (minimum): 140 degrees
    - e. Vertical viewing angle (minimum): 140 degrees
    - f. Color processing: 10bit
    - g. Grayscale processing: 14bit
    - h. Video frame rate: 60 FPS
    - i. LED lifespan: 100,000 hours
  3. LED Display Controller Requirements
    - a. Controller configuration: Rack mount
    - b. Display LED module interface connections: Single-mode fiber
    - c. Source connections: SDI
    - d. Provide redundant signal (secondary / backup signal transmission)
  4. Spare Parts
    - a. Spare parts shall consist of a minimum of 5% of major components, including but not limited to LED modules, receiving card(s).
- C. DVLED Display System - 3.9MM Indoor - Ribbon Boards
1. Display Requirements
    - a. Refer to Direct View LED Schedule for list of physical sizes and resolutions.
    - b. Service access: Top and Front
    - c. Durability rating: Indoor - Splash Proof
    - d. Maximum depth from mounting surface: 8"
    - e. Required Manufacturer's services:
      - 1) System engineering
      - 2) Shop Drawings
      - 3) Onsite system adjustment and commissioning (duration and scope per Manufacturer's recommendation)
  2. LED Module Requirements
    - a. Pixel pitch: 3.9mm ( +/- 0.10
    - b. Pixel configuration: 3-in-1 SMD (Surface Mount Device)
    - c. Minimum brightness after calibration: 1000 nits

- d. Horizontal viewing angle (minimum): 140 degrees
  - e. Vertical viewing angle (minimum): 140 degrees
  - f. Color processing: 10bit
  - g. Grayscale processing: 14bit
  - h. Video frame rate: 60 FPS
  - i. LED lifespan: 100,000 hours
- 3. LED Display Controller Requirements
    - a. Controller configuration: Rack mount
    - b. Display LED module interface connections: Single-mode fiber
    - c. Source connections: SDI
    - d. Provide redundant signal (secondary / backup signal transmission)
  - 4. Spare Parts
    - a. Spare parts shall consist of a minimum of 5% of major components, including but not limited to LED modules, receiving card(s).

## 2.5 SCORING TIMING SYSTEM

- A. General Requirements
  - 1. All required infrastructure to complete the fully wired scoring configuration is required under this specification section scope.
  - 2. Cabling system shall confirm to scoring Manufacturer's requirements.
  - 3. Termination plates shall be provided at all locations. Outdoor locations shall be within weather resistant enclosures.
  - 4. Additional components not listed herein may be required for a complete solution, and may include:
    - a. Fiber conversion kits due to distance
    - b. Terminal blocks for parallel connections
    - c. Fiber patch panels and other accessories
- B. Interior Clocks
  - 1. General Requirements
    - a. Construction
      - 1) Face, side, and back cabinet color: Black
      - 2) Environmental rating: Interior
    - b. LED Digits
      - 1) LED color: Red
      - 2) Dimming capability
    - c. Control
      - 1) Control signal: Wired
  - 2. Game / Locker Clock - quantity per plans
    - a. Digit size: 4"
    - b. Digit quantity: Four-digit with colon
    - c. Basis of design: OES M1202
  - 3. Shot Clock - quantity four
    - a. Digit size (game): 7"
    - b. Digit size (shot): 14"
    - c. Digit quantity (game): Four-digit with colon

- d. Digit quantity (shot): Two-digit
- e. Integral horn
- f. Basis of design: OES SHOTS-ST
- 4. Hockey Goal Lights - quantity two
  - a. Red and green lights
  - b. Attachment to dasher board glass
- C. Scoring Console
  - 1. User interface tabletop control console capable of controlling multiple scoreboards, clocks, displays, and additional components specified herein.
  - 2. Recall of clock, score, and game information if power is lost.
  - 3. Interface with handheld accessories for timing control.
  - 4. System interface method: Wired
  - 5. Basis of Design: OES ISC EDGE
  - 6. Accessories:
    - a. Inserts/programming for required sports specific labeling.
    - b. All necessary power and control interface cables.
    - c. Hard side carrying / storage case.
    - d. Optional hand switch for accessory / time control: OES ISCRMT-ST
- D. Scoring Character Generator
  - 1. Interface device from scoring system to video system character generator. Provides all game information from scoring system as RS-232 and HDMI output.
  - 2. Basis of Design: OES

## **PART 3 EXECUTION**

### **3.1 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.
- B. Coordinate power requirements with Division 26.
- C. Coordinate structural conditions and reflect on shop drawings. Ensure display is plumb and level.

### **3.2 COMMON REQUIREMENTS**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for common requirements.

### **3.3 TESTING AND ADJUSTMENT**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for additional requirements.
- B. Utilize the technical support services offered by the manufacturer of the display components to ensure optimum performance.
- C. Protect finished display installation until final acceptance of the project.
- D. Verify earth ground does not exceed 15 ohms.

### **3.4 TRAINING**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for additional requirements.
- B. Provide training to Owner's representative on setting, adjusting and configuring control and routine maintenance of system.

**3.5 PROJECT COMPLETION - CLOSE OUT DOCUMENTS**

- A. Provide Project Completion submittal requirements as outlined in Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO and the submittal requirements earlier in this section.
- B. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for additional requirements.
- C. Include all software and preliminary system content.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 27 41 33 - TELEVISION DISTRIBUTION SYSTEM****PART 1 GENERAL REQUIREMENTS****1.1 SECTION INCLUDES**

- A. General Requirements
- B. Antenna Equipment
- C. Broadband Video over Coaxial Distribution
  - 1. Coaxial Distribution Components
- D. Satellite Distribution
  - 1. Satellite Headend Equipment
  - 2. Satellite Amplification
  - 3. Satellite Distribution Equipment
  - 4. Satellite Receivers and Tuners
- E. IPTV Distribution
  - 1. IPTV Headend Equipment
  - 2. IPTV Receivers and Tuners
  - 3. IPTV Network Equipment
  - 4. IPTV Software
  - 5. IPTV Support Services
- F. Digital Signage Programming Requirements
- G. Cable, Connectors, & Faceplates
- H. AC Power

**1.2 RELATED REQUIREMENTS**

- A. Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO
- B. Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO
- C. Section 27 10 00 - STRUCTURED CABLING
- D. Section 27 21 10 - DATA COMMUNICATIONS NETWORK

**1.3 ACRONYMS AND DEFINITIONS**

- A. Agile Receiver – A broadband receiver that can be tuned to any desired channel.
- B. Balun – Balanced/Unbalanced signal converter.
- C. Cable television – Distribution of RF modulated television signals originating from service providers over a physical cable network.
- D. Carrier – A pure-frequency signal that is modulated to carry information. In the process of modulation, it is spread out over a wider band. For purposes of this section, carrier refers to the visual carrier, or the frequency at which the visual carrier of an analog channel would be.
- E. Channel – A 6 MHz frequency range capable of containing a single analog NTSC, ATSC or QAM modulated signal or multiple digital modulated signals. Each channel frequency range receives a numerical value equating to the specific channel.

- F. CATV – Community antenna television; a communication system that simultaneously distributes several different channels of broadcast programs and other information to customers via a coaxial cable.
- G. CEA – Consumer Electronics Association.
- H. dBmV – Decibels relative to 1 mV across 75 ohms. Zero dBmV is defined as 1 mV across 75 ohms.  $\text{dBmV} = 20 \log_{10}(V1/V2)$  where V1 is the measurement of voltage at a point having identical impedance to V2 (0.001 V across 75 ohms).
- I. DBS – Direct Broadcast Satellite; a satellite communication system commonly associated with DirecTV. The term DBS is often interchanged with DSS (Digital Satellite System). Transmission formats deployed via DBS include: DVB-S, DSS, and 4DTV. See SATV.
- J. Forward Path – Direction of the transmission path from the signal source (System Headend) to the output device (Signal Outlet).
- K. Forward Path System Bandwidth – Capable frequency range of the Forward Path portion of the system. For the purposes of any references within this section, the Forward Path System Bandwidth has a lowermost frequency of 54 MHz and an uppermost frequency of the upper limit of the System Bandwidth, as defined below.
- L. Headend – The control center of the master antenna television system, where incoming signals are amplified, converted, processed, and combined into a common cable along with any locally originated television signals, for transmission to user-interface points. It is also called the "Central Retransmission Facility."
- M. IF – Intermediate Frequency; a frequency to which a carrier frequency is shifted as an intermediate step in transmission or reception.
- N. MATV – Master antenna television; a small television antenna distribution system usually restricted to one or two buildings.
- O. OTA – Over-the-Air; See Terrestrial television.
- P. RF – Radio frequency.
- Q. Return Path – Lower band of frequencies with direction of transmission from the output device back to the signal source. Also referred to as sub-band, or "T" channels.
- R. Return Path System Bandwidth – Capable frequency range of the Return Path portion of the system. For the purposes of any references within this section, the Return Path System Bandwidth has a lowermost frequency of 5 MHz and an uppermost frequency of 42 MHz.
- S. SATV – Satellite (SAT) television; A television delivery method with signals broadcasting from multiple satellites in geosynchronous orbit to dish antennas on customer premises.
- T. Structured Cabling System – the physical infrastructure installed to support information technology/transport for voice and data applications, commonly referred to as a Telecommunications System. This includes, but is not limited to: Category 3/5e/6/6A copper cabling, terminations/blocks, modules, faceplates, etc., and optical fiber cabling, terminations, modules, etc.
- U. SWM – Single Wire Multiswitch; A method of DirecTV signal distribution that allows a single cable to be split and fed to multiple tuners.

- V. System Bandwidth – Capable frequency range of the system, measured from the center frequency of the lowermost channel to the center frequency of the uppermost channel. For the purposes of any references within this section, the System Bandwidth is defined as 5 MHz to 1000 MHz.
- W. Terrestrial television – A type of television broadcasting in which the signal is transmitted by radio waves from a terrestrial (Earth based) transmitter.
- X. Wet Location - as defined in the NEC, installations underground or in concrete slabs or masonry in direct contact with the earth; in locations subject to saturation with water or other liquids, such as vehicle washing areas; and in unprotected locations exposed to weather.
- Y. Wideband - A bandwidth that significantly exceeds the channel bandwidth.

#### 1.4 REFERENCE STANDARDS

- A. 47 CFR 15 - Radio Frequency Devices; current edition.
- B. 47 CFR 76 - Multichannel Video and Cable Television Service; current edition.
- C. BICSI ITSIMM - Information Technology Systems Installation Methods Manual (ITSIMM), 8th Edition; 2022.
- D. BICSI TDMM - Telecommunications Distribution Methods Manual, 14th Edition; 2020.
- E. EIA/ECA-310 - Cabinets, Racks, Panels, and Associated Equipment; 2005e.
- F. IEEE 142 - IEEE Recommended Practice for Grounding of Industrial and Commercial Power Systems; 2007, with Errata (2014).
- G. IEEE 1100 - IEEE Recommended Practice for Powering and Grounding Electronic Equipment; 2005.
- H. NECA 1 - Standard for Good Workmanship in Electrical Construction; 2023.
- I. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- J. TIA-568 (SET) - Commercial Building Telecommunications Cabling Standard Set; 2023.
- K. UL (DIR) - Online Certifications Directory; Current Edition.
- L. UL 1449 - Standard for Surge Protective Devices; Current Edition, Including All Revisions.

#### 1.5 SUBMITTALS

- A. Refer to requirements in Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.
- B. Include the following items:
  - 1. Submittal #1: System Product Data (Pre-Construction)
    - a. Equipment List (1A)
    - b. Manufacturer's cut sheets (1B)
    - c. Product Substitutions (1C)
    - d. Project Implementation Schedule
  - 2. Submittal #2: System Shop Drawings (Pre-Construction)
    - a. Pathways, Devices, and Cabling (2A) - Follow requirements of Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO. Indicate locations of all outlets, devices, and equipment.

- b. Signal Flow Shop Drawings (2B) - Any generic diagrams found within the Construction Documents shall be drawn to specific requirements. Alterations from basis of design found within the Construction Documents shall be reflected and identified. Include system labeling scheme.
      - c. Design Calculations (2C) - Calculate signal attenuation budget and show calculated line and equipment losses for the system. Calculate values required for all amplifiers, taps, splitters, and coaxial cable selection.
3. Submittal #3: System Fabrication Drawings (Pre-Construction)
  - a. Equipment Room Shop Drawings (3A) - Equipment room rack/wall elevations indicating equipment, device and panel layouts, and electrical circuiting.
  - b. Equipment Room Wall Elevations (3B) – As applicable for wall mounted equipment, provide Enlarged Plans of Communications Room Wall Elevations. Indicate and dimension the equipment in the location in which it is intended to be installed.
  - c. Panel, Patch Panel, and Plate Shop Drawings (3C) - All panel, patch panel, and plate layouts indicating locations of connectors, engraving, nomenclature, panel material, and finish. Include Structured Cabling Work required by the technical system.
4. Submittal #4: System Test Results (Prior to Substantial Completion)
  - a. Preliminary Testing Documentation Package (4A) - Provide preliminary results of system testing as described in Part 3 of this section for review prior to final acceptance. Include final results with Closeout Documentation.
5. Submittal #5: Digital Signage Custom Programming (Per Milestones)
  - a. The successful deployment of the Digital Signage aspects of this project require significant interactive input from a variety of project stakeholders including the HENDERSON ENGINEERS, Architect, Owner's Representative and others. During development, consistent and timely communication will be required among all the stakeholders to yield a final product capable of meeting the needs of the Owner's Representative.
  - b. No less than four months after award of contract, the Contractor shall, with the assistance of the Contract Administrator, coordinate a custom programming kickoff meeting for the above-mentioned stakeholders.
  - c. Ongoing meetings will be required and may occur as web or phone-based meetings.
  - d. Custom Programming Timeline – Programming development and related submittals shall be delivered per the following milestones:
    - 1) Milestone 1: Narrative of intended system strategy. Preliminary color scheme and system theme for review by HENDERSON ENGINEERS, Architect, and Owner's Representative.
    - 2) Milestone 2: Updated system narrative. Screen shots of preliminary signage concepts.
    - 3) Milestone 3: Live demonstration of all signage elements (static and motion) for review by HENDERSON ENGINEERS, Architect, and Owner's Representative. Provide digital submittal in form as coordinated between all parties.
    - 4) Milestone 4: Screen shots or videos of final concepts. Final system files.
6. Project Closeout
  - a. Refer to Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO and the Record Drawings and Operation and Maintenance Data sub-sections in Part 3 of this section for requirements.

**1.6 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. Comply with NFPA 70, NECA 1, and 47 CFR 15.
- C. Follow BICSI ITSIMM and BICSI TDMM.
- D. Equipment shall be UL (DIR) Listed
- E. Contractor Qualifications and Responsibilities
  - 1. Equipment shall be furnished and installed by a certified technician with proven experience in the design and installation of television distribution systems of this type. Installer shall be certified by the system manufacturer.
  - 2. Provide a list of projects (no less than 2) of similar size, scope and type in which the Bidder has performed in a capacity comparable to the size, scope and type outlined in these Construction Documents. Provide the project name, relevant project information for comparison evaluation, and contact names with telephone numbers of each such project.
  - 3. Periodically inspect portions of the system installed by other Contractors to minimize potential interference problems.
  - 4. Provide and maintain a Project Manager whom is a BICSI Registered Certified Technician Level 2 Installer in good standing on site at all times. This project manager shall attend all scheduled project meetings.
    - a. Project Manager shall be responsible for all aspects of the television distribution system: assuring that all cables, equipment, television signal quality and programming are provided for installation prior to substantial completion.

**1.7 WARRANTY**

- A. Warrant all work executed under this contract, including all in-shop and onsite material, parts, and labor, for a period of twelve months after the date of final acceptance.
  - 1. Existing or any other Owner-furnished equipment shall not be included in this warranty.
  - 2. For equipment that has an advertised manufacturer's warranty longer than twelve months, include end date of warranty period.
- B. The warranty services are limited to normal business hours unless additional agreements are made between the Owner's Representative and the Contractor.
- C. Warranty work relating to technically complex equipment and/or programming shall be performed by a factory authorized technician.
- D. Damage to the system resultant from improper use or adjustment by others, negligence, acts of nature, or other causes which are beyond the Contractor's control shall be excluded from the warranty.
- E. Visit the job six months after substantial completion and two weeks prior to the end of the warranty period to check all equipment for proper system operation. Any defective equipment found shall be replaced or repaired under the terms of the system warranty.
- F. Update Record Drawings and Operation and Maintenance Data to reflect work done during Warranty period and provide the updates to the Owner's Representative and HENDERSON ENGINEERS.

**PART 2 PRODUCTS****2.1 GENERAL REQUIREMENTS**

- A. Provide a complete functioning Television Distribution System that can distribute SATV, terrestrial (OTA) television, internally-generated video, digital signage, menu board content, and IP video throughout the facility across the Communications Network utilizing Structured Cabling Infrastructure. This system shall include, but is not limited to, the following:
  - 1. Cabling and outlets for distributing television signal to interface points.
  - 2. Modulation/Encoding of sources into the distribution system.
  - 3. Acquisition equipment, amplifiers, power supplies, and passive equipment necessary for reception and distribution of coaxial based signals.
  - 4. Reception / tuning of content to display elements.
  - 5. Implementation of centralized management and system control.
  - 6. Implementation of Digital Signage system.
  - 7. Anticipated system channel count: 85 channels
- B. Refer to TA-series drawings for locations of television outlets and headend equipment and for connection diagrams and details.
- C. Service Provider Coordination
  - 1. Satellite Television
    - a. Coordination with the Owner's selected service provider is required. Determine service package for compatibility with the Television Distribution System and coordinate activation of reception equipment. Provide satellite dish installation per service provider's instruction.
    - b. Anticipated service provider: DirecTV
  - 2. Internally Generated Content
    - a. Coordination with the internally generated content is required. Determine source type and protocol to verify compatibility with the Television Distribution System. Obtain signal type and level at the point of departure for system design details and final equipment selection.
    - b. Anticipated sources: 8 in-house broadcast channels
- D. Over-the-Air (OTA)
  - 1. Terrestrial signals shall include local over-the-air (VHF and UHF) and FM (VHF) stations.
- E. Coordination with the network system is required for a complete and working IPTV system. Provide system requirements and coordinate with Section 27 21 10 - DATA COMMUNICATIONS NETWORK network configuration for additional information.
- F. Coordinate with the Owner's Representative and Food Service / PoS vendors, co-develop content for all display types and zones, and configure system management system for up to four event types:
  - 1. Resident Team #1 Game (Basketball)
  - 2. Resident Team #2 Game (Hockey)
  - 3. Music Concert
  - 4. Other Event Type, as decided by the Owner's Representative (to include generic sports event by two auxiliary teams)
- G. Equipment Requirements

1. Hardware Requirements: Use modular, plug-in, solid-state electronic components. Rack mounted equipment shall be installed in standard 19 inches rack complying with EIA/ECA-310.
2. Environmental Limitations: System components shall be equipped and rated for the environments where installed.
3. Cable System Power Supplies: Plug-in modular construction, with surge, short circuit, and overload protection.
4. Components: Modular plug-in, heavy-duty, industrial- or commercial-grade units.
5. Terminating Resistors: Enclosed units rated 0.5 W and matched for coaxial impedance.
6. Impedance: All coaxial cables, connectors, and component ports shall be 75-ohm characteristic impedance.
7. Unused ports: All unused ports shall be terminated with appropriate termination devices.

## 2.2 ANTENNA EQUIPMENT

### A. General

1. Antenna(s) shall be mounted in location to allow for clear reception of signal(s) and clear of all obstructions, including trees, buildings, and overhangs.
2. Avoid overhead power lines. Observe safe mounting distance from all electrical services.
3. Antenna(s) shall be properly grounded. Comply with Manufacturer's requirements.
4. All outdoor connections shall be weather rated.
5. Unused ports shall be terminated with appropriate termination device.
6. Shop drawing stamped by structural engineer required for all antenna mounting conditions.

### B. Satellite Antenna - 5 LNB: Ka/Ku band outdoor satellite antenna, capable of HD and 4K reception from satellites at 99°W, 101°W, 103°W, 110°W, and 119°W longitudes, approx. 22.5" x 32.5" dish, with 5-LNB assembly, LNB arm, and mounting/aiming assembly:

1. DirecTV AU9-SL5-4KLNB; or
2. Approved equal.

### C. Satellite Antenna Power Inserter / Polarity Locker: six inputs/outputs minimum, 20 VDC minimum on each output to power LNB's, provides signals to lock LNB polarities, blocks polarity selection signals from multiswitches:

1. DirecTV DTV6PWRPOL-02; or
2. Approved equal.

### D. Terrestrial Antenna – Multi-Directional: outdoor mount, VHF/UHF band, front-to-back signal ratio $\geq 12$ dB, 180-degree pattern, 75 Ohm output impedance:

1. Televes Ellipse Series with 550104 power supply; or
2. Approved equal.

### E. OTA Amp – W(gain): Wall mount terrestrial television amplifier, VHF/UHF and FM frequencies, suitable for OTA Frequency Range, gain as shown on signal flows:

1. Televes AVANT X; or
2. Approved equal.

### F. Antenna Mast: antenna mast suitable for specified antenna(s) and mounting condition, capable of heavy antenna load and suitable for local wind conditions, allow 4 feet vertical separation between antennas mounted to same mast:

1. Pre-manufactured mast of appropriate diameter and length; or

2. Custom mast of appropriate diameter and length.

### 2.3 BROADBAND VIDEO OVER COAXIAL DISTRIBUTION

#### A. COAXIAL DISTRIBUTION COMPONENTS

1. CATV Amp – (R)(W)(gain): Cable television amplifier, two-way, silicone-based, solid-state, integrated circuit device; with Forward Path Frequency Range equal to full Forward Path System Bandwidth; Return Path Frequency Range equal to full Return Path System Bandwidth; and the following characteristics required as shown on the signal flows:
  - a. Blonder Tongue BIDA series; or Drake DA series; or Pico Digital PIDA series; or Toner Cable TIBA series; or approved equal.
    - 1) W, wall mount
    - 2) Gain, dB minimum amplifier gain value; verify required gain and submit appropriate hardware
  - b. Blonder Tongue RMDA series; or Drake DAR series; or Pico Digital CA- RK series; or Toner Cable HEA series; or approved equal.
    - 1) R, rack mount
    - 2) Gain, dB minimum amplifier gain value; verify required gain and submit appropriate hardware
2. CATV Directional Coupler – (value): cable television directional coupler, frequency range equal to full System Bandwidth, SCTE compliant, soldered cover back sealed, tin plated die cast housing, tap value as shown on signal flows:
  - a. Arris SSP-Q; or
  - b. Blonder Tongue SRT; or
  - c. Approved equal.
3. CATV Splitter – W(port quantity): Wall mount passive cable television splitter, Frequency Range equal to full System Bandwidth, low loss, SCTE compliant, soldered cover back sealed, tin plated die cast housing, refer to signal flows for port quantity:
  - a. Arris; or
  - b. Blonder Tongue SXRS or SDS series; or
  - c. Toner Cable XGHS series; or
  - d. Pico Digital TSB series; or
  - e. Approved equal.
4. CATV Tap – (port quantity)(value): cable television multi-port tap, frequency range equal to full System Bandwidth, SCTE compliant, soldered cover back sealed, tin plated die cast housing, port quantity and tap value as shown on signal flows:
  - a. Arris FFT series; or
  - b. Blonder Tongue DGT series; or
  - c. Approved equal.
5. In-Line Attenuator: F-type connector in-line attenuator with Frequency Range equal to full System Bandwidth, -1 to -20dB fixed values (furnish as required):
  - a. Blonder Tongue; series FAM; or
  - b. Drake; series 100273X; or
  - c. Pico Digital; series FAM; or
  - d. Toner Cable; series FAM; or
  - e. Approved equal.

6. Terminating Resistor: line terminator (one required for all unused ports of splitters, directional couplers, combiners, and taps)
  - a. Blonder Tongue; part number BTF-TP; or
  - b. Pico Digital; part number SGLR-01; or
  - c. Toner Cable; part number F59-T; or
  - d. Approved equal.

## 2.4 SATELLITE DISTRIBUTION

### A. SATELLITE HEADEND EQUIPMENT

1. SATV Tuner Headend: rack mount headend master tuner, eight blade slots, up to 138 channels of HD or SD tuning, integrated EdgeQAM capability, MPEG streaming, on screen program guide, remote management:
  - a. Technicolor COM3000 system, with the following components (configuration as shown on signal flows):
    - 1) COM400 chassis
    - 2) COM51 receiver blade
    - 3) COM20 modulator blade
  - b. Approved equal.

### B. SATELLITE AMPLIFICATION

1. SATV Launch Amp – W-AGC: minimum six inputs/outputs, 250 - 2150 MHz minimum bandwidth, automatic gain control on each output, -48 to -22 dBm minimum input level range, -15 to -24 dBm minimum output level, includes power supply:
  - a. DirecTV STA-R0-09; or
  - b. Sonora (DirecTV) TAMP6-12; or
  - c. Approved equal.

### C. SATELLITE DISTRIBUTION EQUIPMENT

1. SATV SWM Multiswitch: Optimized for DirecTV 5 LNB 4K operation, wideband, 6 Sat IF inputs, 2 SWM outputs to accommodate up to 30 tuners respectively:
  - a. DirecTV SWM30; or
  - b. Approved equal.
2. SATV Tap – (port quantity)(value): 250 - 2150 MHz minimum bandwidth satellite television wideband tap, six Satellite TV signals minimum, values as shown on signal flows:
  - a. DirecTV (AT&T) STTAP (dual); or
  - b. ProBrand DRETAP6DB-02 (single); or
  - c. Approved equal.
3. SATV SWM Expander: 2 – 2150 MHz minimum bandwidth satellite television SWM expander, 4 DSWM-30 module capacity, 6 satellite inputs:
  - a. SolidSignal (AT&T) SWM EXPANDR-A-R0-09; with
    - 1) One PI-29Z power supply for every two modules.
  - b. Approved equal.
4. SATV SWM Splitter – (port quantity): 2 – 2150 MHz minimum bandwidth satellite television SWM splitter:
  - a. DirecTV SPLIT MRV Series; or
  - b. Approved equal.

5. SATV Wideband Splitter – (port quantity): 250 - 2150 MHz minimum bandwidth satellite television wideband splitter, one input, multiple output, values as shown on signal flows:
  - a. Skywalker SKY233##D series; or
  - b. Approved equal.
6. SATV Wideband Directional Coupler: 250 - 2150 MHz minimum bandwidth, six Satellite TV signals minimum, tap values as shown on signal flows:
  - a. Sonora SD MST6 series; or
  - b. Approved equal.
7. SATV Equalizer: 250 – 2150 MHz minimum bandwidth, attenuates signals 11 dB at 250 MHz and 2 dB at 2150 MHz, for equalization of coaxial cable loss over 150 feet of RG-6:
  - a. Sonora SEQ409; or
  - b. Approved equal.
8. In-Line Attenuator: F-type connector in-line attenuator with Frequency Range equal to full System Bandwidth, -1 to -20dB fixed values (furnish as required):
  - a. Blonder Tongue; series FAM; or
  - b. Drake; series 100273X; or
  - c. Pico Digital; series FAM; or
  - d. Toner Cable; series FAM; or
  - e. Approved equal.
9. Terminating Resistor: line terminator (one required for all unused ports of splitters, directional couplers, combiners, and taps):
  - a. Blonder Tongue; part number BTF-TP; or
  - b. Pico Digital; part number SGLR-01; or
  - c. Toner Cable; part number F59-T; or
  - d. Approved equal.

#### D. SATELLITE RECEIVERS AND TUNERS

1. SATV Receiver – DVR: High definition (mpeg-2, mpeg-4) and standard definition (mpeg-2) enabled satellite receiver with DVR; 500gb hard drive capable of recording up to 400 hours of SD programming, up to 100 hours of HD programming; dual tuner unit with HDMI output for access to SD and HD DIRECTV programming; compatible and ready for activation on Owner's account:
  - a. DirecTV HR24-COM (for commercial account); or
  - b. Approved equal.

## 2.5 IPTV DISTRIBUTION

### A. IPTV HEADEND EQUIPMENT

1. IPTV Encoder Chassis - #RU: Rack mount modular chassis and card-based IPTV encoder, capable of HD quality encoding, MPEG-4 format, AES encryption, selectable bit-rate; card configurations including multiple-channel analog, HDMI, HD/SD-SDI, and IP inputs (chassis size and card configuration as shown on signal flows):
  - a. Vitec components as described below:
    - 1) MGW Series Chassis:
      - a) 4RU, 6 card slots: MGW-1100
    - 2) MGES-7000 Series cards:
      - a) (4) HDMI 4K video input card: MGES-7000-H
      - b) (4) 3G/12G-SDI 4K video input card: MGES-7000-D

- c) Processor blade: MGES-7000 Blade
    - 3) Portable Units
      - a) HDMI portable encoder: MGW Diamond-H
    - 4) Card software license
    - 5) Chassis management software license; or
  - b. Approved equal.
  - 2. IPTV Transcryptor: rack mount head end processor, capable of decrypting and re-encrypting content, reflecting unicast to multicast, fifty IP streams per server chassis, required for all 3rd party incoming IPTV streams (provide quantity/licensing of servers to exceed SATV channel count):
    - a. Vitec ChannelLink; or
    - b. Approved equal.
- B. IPTV RECEIVERS AND TUNERS
  - 1. IPTV Tuner – 4K: small form factor set top box capable of outputting 2160p content from the IPTV system, HDMI output, PoE powered, RS-232 control port for display control from system:
    - a. Vitec EZ TV EP5; or
    - b. Approved equal.
  - 2. IPTV Tuner - Signage: small form factor set top box capable of outputting 2160p digital signage content from the IPTV system, HDMI output, PoE powered, RS-232 control port for display control from system:
    - a. Vitec EZ TV EP5 with licensing as required; or
    - b. Approved equal.
  - 3. Local TV Control
    - a. For stand-alone displays in private areas, such as offices, provide an IR remote compatible with the set-top box.
    - b. Program the IR remote to control the display, including display power, volume control, and input selection.
      - 1) For remotes programmed for or compatible only with a unique display, label the rear of the remote with an appropriate identifier.
      - 2) For installation configurations where the set-top box IR receiver is concealed from normal IR remote operation, provide an IR extender.
    - c. For displays in areas served by an AV Control System via local touch screens, program the system to control the associated set-top boxes.
    - d. For displays in public areas requiring no user interaction, such as concourse displays, primary display control will be via the IPTV facility administration platform.
      - 1) Ensure display power, volume control, and input selection is available from the IPTV system.
- C. IPTV NETWORK EQUIPMENT
  - 1. Network Equipment: All network switches associated with the IPTV system shall be provided per Related Documents, with the following features:
    - a. IP Multicast
    - b. QoS
    - c. Network Time Protocol
    - d. Precision Time Protocol

- e. PoE and PoE
  - 2. IPTV Enterprise Management Server: Primary system central management server for all IPTV services; monitoring, control, and configuration of system functionality (one required):
    - a. Vitec EZ TV Enterprise Portal Server license for 3<sup>rd</sup> party install; and
      - 1) IPTV Server Hardware, as specified by manufacturer and compatible with system requirements.
    - b. Approved equal.
- D. IPTV SOFTWARE
- 1. IPTV Digital Signage Software: Development software for digital signage aspects of the IPTV system, for content creation and deployment (three required):
    - a. Vitec EZ TV Sign Creator; or
    - b. Approved equal.
  - 2. IPTV Endpoint Software – Digital Signage Player: Digital signage endpoint software platform to enable all available features (quantity required to match number of digital signage endpoints):
    - a. Supplied as portion of Digital Signage system, licensed for number of endpoints provided, include remote management and serial (RS-232) control modules.
  - 3. IPTV Endpoint Software – Set Top Box Player: Set-top-box software platform to enable all available features:
    - a. Supplied as portion of IPTV system, licensed for unlimited endpoints, include remote management and serial (RS-232) control modules.
  - 4. IPTV Management Software: Remote management of IPTV system from facility operator PC and/or mobile device:
    - a. Local control with 3<sup>rd</sup> Party Device or Web-based Application license.
  - 5. IPTV Electronic Program Guide: Custom configured program guide with facility logo and branding scheme, configured to available channels and channel availability dependent on client access level; connected to program guide information service provider for service-provider channels; configured for ability to recall in-house channel program guide information; coordinate with Owner's television service contract and in-house channel configuration requirements:
    - a. EPG module supplied as portion of IPTV system, licensed for continual program information updates.
  - 6. IPTV Software Client Player: Software based viewing platform, compatible with Windows and Mac, user dependent channel listing, customizable configuration and branding, configure IPTV system for this functionality and turn over software to Owner's Representative for installation on applicable facility computers:
    - a. Vitec EZ TV Player; or
    - b. Approved equal.
- E. IPTV SUPPORT SERVICES
- 1. IPTV Manufacturer Support Service: Annual contract, manufacturer 24x7x365 phone support, software/firmware updates, advance replacement service for faulty hardware:
    - a. Vitec Gold Service Program – 1 Years; or
    - b. Approved equal.
  - 2. IPTV Manufacturer Project Management and Configuration Services: Manufacturer engineering support services inclusive of pre-installation project management and

coordination, system solution support, implementation preparation, on-site at project completion time for configuration and Owner/Operator training:

- a. Vitec – As recommended by manufacturer; or
- b. Approved equal.

## 2.6 DIGITAL SIGNAGE PROGRAMMING REQUIREMENTS

- A. Provide programming and configuration services allowing “edge-based” media sources to provide the functions identified in this section. These services will be limited to general configurations and the development of first-use “templates” to be used by the Owner as a starting point for the ongoing administration of the system by internal staff. The programming scope required herein shall account for all aspects of the facility first-use, which is then intended to be handed off to facility administrators to govern from a daily operation standpoint. Scope shall include a complete and working system.
- B. Coordinate with Owner and Signage Consultant to help develop initial signage templates and configurations including:
  1. Event management:
    - a. Display current and upcoming schedules for meeting spaces.
    - b. Display current and upcoming facility events at exterior signage.
    - c. Integrate the digital signage content management system with the Owner's scheduling database, i.e., Microsoft Exchange Server, Google Online calendar, etc.
  2. Wayfinding:
    - a. Deploy static wayfinding applications to improve patron navigation of the facility.
  3. Social media feeds
  4. Establish monitoring of RSS feeds to include in signage display “ticker” templates. Typical RSS sources will include news, weather, sports, stock market, etc.
  5. Emergency messaging:
    - a. Integrate digital signage assets with facility life safety systems. Coordinate visual messaging to support facility emergency messaging.
    - b. Enable monitoring of RSS feeds and other online information services to notify facility management of weather, civil, and other emergency events which may impact the facility and/or patrons.
  6. Advertising and promotions:
    - a. Create templates into which Owner's promotional content may be loaded/displayed.
  7. Menu boards:
    - a. Facilitate a user-friendly interface (i.e., HTML 2.0) through which menu board and other time critical updates may be implemented.

## 2.7 CABLE CONNECTORS & FACEPLATES

- A. CATEGORY CABLE
  1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.
- B. COAXIAL CABLE
  1. Requirements
    - a. All coaxial cables shall be broadband type and recommended by cable manufacturer specifically for broadband RF distribution applications. Coaxial cable and accessories shall have 75-ohm nominal impedance with a return loss of 20 dB minimum over the

- full System Bandwidth, and shall be listed to comply with NFPA 70, Articles 810 and 820.
- b. Wet-rated coaxial cables are required where any part of cable is routed outside the footprint of the building or in or below slab-on-grade concrete.
  - c. Conduit where wet-rated cables are installed in shall stub up directly into serving Communications Room. If that is not practical, conduit shall stub into a dual-gang junction box installed in accessible ceiling space, and cable shall transition (via coupler) to a plenum-rated indoor cable for distribution back to the serving Communications Room.
  - d. Cables supplied for indoor installations shall be suitable for their environment.
  - e. Cables shall consist of a solid, copper conductor and be suitable for Broadband Video/Video Distribution and MATV/CATV applications.
2. Plenum Rated:
- a. RG-6 Coax Cable: No. 18 AWG solid copper conductor plenum-rated coax Indoor Distribution cable; 0.275 inch maximum outside diameter (Drop cables up to 200 feet):
    - 1) Belden 1695A; or
    - 2) Commscope 2275V; or
    - 3) Gepco VSD2001TS; or
    - 4) West Penn 25Q841; or
    - 5) Approved equal.
  - b. RG-11 Coax Cable: No. 14 AWG solid copper conductor plenum-rated coax cable for In-door Backbone Distribution and drop cables over 200 feet; 0.4 inch maximum outside diameter (up to 300 feet):
    - 1) Belden 7732A; or
    - 2) Commscope 2285K; or
    - 3) Gepco VHD1100TK; or
    - 4) West Penn 25Q821; or
    - 5) Approved equal.
3. Wet Rated:
- a. RG-6 Coax Cable – Wet Rated: No. 18 AWG solid copper conductor wet-rated coax Indoor Distribution cable; 0.275 inch maximum outside diameter (Drop cables up to 200 feet):
    - 1) Commscope; or
    - 2) Gepco VSD2001PEF; or
    - 3) West Penn AQC841; or
    - 4) Approved equal.
  - b. RG-11 Coax Cable – Wet Rated: No. 14 AWG solid copper conductor wet-rated coax cable for Indoor Backbone Distribution and drop cables over 200 feet; 0.4 inch maximum outside diameter (up to 300 feet):
    - 1) Commscope; or
    - 2) Gepco VHD1100PEF; or
    - 3) Approved equal.

### C. CATEGORY CONNECTORS

1. Refer to Section 27 10 00 - STRUCTURED CABLING for product information and additional installation requirements.

**D. COAXIAL CONNECTORS**

1. Requirements
  - a. All connectors shall be 75 ohms.
  - b. Installation type shall be compression connector for drop cables.
  - c. Hex crimp connectors are unacceptable for drop cables (RG-6), but are acceptable for Hard-line Coax.
  - d. Twist-on connectors are unacceptable for all cable types.
  - e. Connector shall be installed using the connector manufacturer's approved tool.
  - f. Size connectors to each type of coaxial cable per Manufacturer recommendations.
2. RG-6 Connector: F-type:
  - a. Belden FS6PL2; or
  - b. Gepco FS6PL2; or
  - c. Thomas and Betts LRC Snap-n-Seal series (RG6); or
  - d. West Penn CN-F6MCV; or
  - e. Approved equal.
3. RG-11 Connector: F-type:
  - a. Belden 716SNS1P11HPLA; or
  - b. Gepco FS11PL; or
  - c. Thomas and Betts LRC Snap-n-Seal series (RG11); or
  - d. West Penn CN-FS11V; or
  - e. Approved equal.

**E. FACEPLATES**

1. Refer to outlet requirements as stated in General Requirements in Part 2 of this section.
2. Outlets may be co-located with data Category outlet. Coordinate faceplate and connectors with Section 27 10 00 - STRUCTURED CABLING.

**F. ENTRANCE PROTECTION**

1. Fully protect each end of all incoming conductors which are considered to have lightning exposure in accordance with NFPA 70 chapter 8.
  - a. Exception – incoming Service Provider cables shall be protected by the Service Provider.
2. Coaxial Surge Protection Wall-mount / Cable Protectors:
  - a. Emerson Edco CATV-145A; or
  - b. Commscope Surge Arrestors; or
  - c. Tii Technologies 212FF75F225-31; or
  - d. Approved equal.
3. Satellite Dish Surge Protection:
  - a. Tii Technologies 231-2; or
  - b. Approved equal.

**2.8 AC POWER**

- A. All active (powered) equipment shall be connected to a surge-protected Power Strip.
- B. Surge-Protected Power Strip: 15- or 20-Amp power rating surge protector, minimum of (4) NEMA 5-15P plugs/outlets, wall-mountable:
  1. Chatsworth 12850-702;

2. Middle Atlantic PDT-615C; or
3. Approved equal.

### **PART 3 EXECUTION**

#### **3.1 INSTALLATION GENERAL**

- A. Install in accordance with manufacturer's instructions.

#### **3.2 GENERAL**

- A. Examine pathway elements intended for cable installation. Check raceways, cables, trays, and other elements for compliance with accessibility for installation and maintenance, and other conditions affecting installation.
- B. Examine walls, floors, roofs, equipment bases, and roof supports for suitable conditions where television equipment is to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.3 WIRING METHOD**

- A. Unless otherwise noted, all cables shall be routed through the building cable tray/conduit/surface-mounted raceway system. Refer to the drawings for layout of cable tray.
  1. All horizontal cables shall be suitable for installation in their environment, either plenum (CMP, MPP, OFNP, or OFCP) or riser (CMR, MPR, OFNR, or OFCR) rated, unless otherwise noted.
  2. Horizontal cables installed in Wet or Damp locations as defined by the NFPA 70 or in these construction documents (such as conduits embedded or routed below a ground floor slab) shall be suitable for installation in such environments and follow the installation requirements for outside plant cables as specified herein.
    - a. Wherever unlisted (outside plant) cables enter the building in a room other than the Headend/Equipment/Communications Room, transition the unlisted cable to indoor rated (CMR / CMP as applicable) cable for continuation.
    - b. Use of J-hooks is allowed above accessible ceilings only; no cable shall be visible in exposed ceilings. Coordinate with Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO Contractor to provide appropriately-sized overhead conduit for Television Distribution cabling above inaccessible ceilings and in exposed ceilings; indicate proposed routing and conduit size on Shop Drawings.
  3. Wiring in Telecommunication Rooms: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
- B. Splices, Taps, and Terminations: For power and control wiring, use numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
- C. Grounding: According to recommendations in IEEE 142 and IEEE 1100.
- D. Existing amplifiers being adjusted by the Contractor shall be re-setup per manufacturer instructions prior to any adjustment.
- E. Cable products shall be sweep tested at the factory before shipping at frequencies from 5 MHz to 1 GHz. Sweep test shall test the frequency response, or attenuation over frequency, of a cable by generating a voltage whose frequency is varied through the specified frequency range and graphing the results.

- F. Provide CATV components to meet the requirements for signal strength at the new and existing work areas.
- G. Protect signal cables and connected components against transient-voltage surges by suppressors and absorbers designed specifically for the purpose.
- H. Provide AC-powered equipment with integral surge suppressors, complying with UL 1449.
- I. RF and Video Impedance Matching: Signal-handling components, including connecting cable, shall have end-to-end impedance-matched signal paths.
- J. Coordinate size and location of raceway system, and provisions for electrical power to equipment of this Section.
- K. Coordinate work of this Section with requirements of service provider.

### **3.4 TELEVISION DISTRIBUTION SYSTEM INSTALLATION**

- A. Terminate all unused ports.
- B. Ensure that the installed system is in accordance with 47 CFR 15 to ensure minimal RF signal leakage.
- C. Final checkout shall be coordinated with the local cable company to ensure system conforms to cumulative leakage index (CLI).
- D. Coordinate selection of modulator channels with selected Channel Elimination Filters (CEF) - verify with Owner's Representative and local cable company. Selected filters and subsequent deleted cable channels shall be provided in written form to the Owner's Representative, construction team, Architect, and HENDERSON ENGINEERS.
- E. Coordinate exact location of each television outlet. This includes coordination of associated AC power receptacle. This coordination shall occur in a timely fashion to not impede the progress of construction. Any additional costs due to the failure of the Contractor to coordinate the location of the receptacles shall be borne by the Contractor.
- F. Provide suitable AC power surge protection device(s) for all active electronic devices in the system.
- G. Provide a fully operating system. The drawings indicate specific products and values. However, verify all values and make adjustments where necessary to provide specified performance at each outlet.

### **3.5 COAXIAL CABLE INSTALLATION**

- A. When routing trunk cable in Communications Room, provide 10 feet (3.05 m) of coiled slack on the wall, U.O.N by Owner. Provide a coupler at trunk cable and transition to an RG-6 cable for supplying CATV signal to telecommunications rack splitters.
- B. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps may not be used for heating.
- C. Cable may not be installed in same raceway with power cable.
- D. Coaxial cable termination locations shall be documented and adhere to drawings.
- E. Do not use cable pulling lubricants.
- F. Do not exceed manufacturer's recommended minimum bending radii.

- G. Pulling Cable: Do not exceed manufacturer's recommended pulling tensions. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
- H. J-hook-supported Cable: Install parallel to building lines, follow surface contours, and support cable according to manufacturer's written instructions.
- I. Cable Support: Install supports (J-hooks) at intervals recommended in writing by cable manufacturer. Install supports within 6 inches (150 mm) of connector so no weight of cable is carried by connector. Use no staples or wire ties, pull tie-wrap snug, and do not over tighten.
- J. Signal Equalization: Where system performance may be degraded in certain operating modes, revise component connections and install distribution amplifiers and attenuators as required, providing a balanced signal across the system.
- K. Label both ends of coax cable.

### 3.6 FIELD QUALITY CONTROL

- A. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
- B. Test Schedule: Schedule tests after pretesting has successfully been completed and system has been in normal functional operation for at least 7 days. Provide a minimum of 3 days' notice of test schedule.
- C. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

### 3.7 DISTRIBUTION SYSTEM ACCEPTANCE TESTS

- A. Minimum acceptable visual carrier signal level at the subscriber terminal/building service entrance based on 47 CFR 76 shall be 0 dBmV (1000 mV). If this situation is not the case, please contact cable provider to correct the issue.
- B. Field-Strength Instrument: Rated for minus 40-dBmV measuring sensitivity and a frequency range of the full Forward Path System Bandwidth, minimum. Provide documentation of recent calibration against recognized standards.
- C. Signal Level and Picture Quality: Use a field-strength meter or spectrum analyzer, and a standard TV receiver to measure signal levels and check picture quality at all User-interface outlets.
  - 1. Analog Channels
    - a. Test visual carrier signal level (peak envelope power) in dBmV over the full Forward Path System Bandwidth at user interface outlets.
    - b. Acceptable visual carrier signal level range at the user interface outlets over the entire frequency range, equal to the full Forward Path System Bandwidth, shall be between 3 and 15 dBmV. Contractor shall amplify or attenuate as required to meet acceptable signal level range at no cost to the Owner.
  - 2. Digital Channels
    - a. Test average power signal level in dBmV over the full Forward Path System Bandwidth at user interface outlets.

- b. Acceptable average power signal level range at the user interface outlets over the entire frequency range, equal to the full Forward Path System Bandwidth, shall be between -3 and 9 dBmV. Contractor shall amplify or attenuate as required to meet acceptable signal level range at no cost to the Owner.
3. Distribution system shall not be source of causing cross-channel intermodulation, ghost images, or beat interference at the television receiver. If these issues occur, the Contractor shall rectify the situation at no cost to the Owner.
- D. Signal-to-Noise-Ratio Test: Use a field-strength meter to make a sequence of measurements at the output of the last distribution amplifier or of another agreed-on location in system. With system operating at normal levels, tune meter to the picture carrier frequency of each of the designated channels in turn and record the level. With signal removed and input to corresponding headend amplifier terminated at 75 ohms, measure the level of noise at same tuning settings. With meter correction factor added to last readings, differences from first set must not be less than 43 dB for analog channels and 35 dB for digital channels.
- E. Record test results in electronic spreadsheet file with column headings representing various tests performed and row labels identifying test location (i.e., outlet location).
- F. Retest: Correct deficiencies identified by tests and observations and retest until requirements specified in Part 1 are met.

### **3.8 DEMONSTRATION**

- A. Conduct a minimum of one hours' training to Owner's employees on how to adjust, operate, and maintain RF Distribution equipment.
  1. Train Owner's maintenance personnel on procedures and schedules for troubleshooting, servicing, and maintaining equipment.
  2. Train Owner's personnel on procedures to operate rebroadcast system.
  3. Train Owner's personnel on installation, setup, and use of software system.

### **3.9 MAINTENANCE SERVICE**

- A. After substantial completion, provide the following:
  1. Approximately 6 months after substantial completion, revisit the site and adjust the system as required for optimum system performance.
  2. Just prior to the end of the 1-year warranty period, revisit the site to check all equipment for proper system operation. Any defective equipment found shall be replaced or repaired under the terms of the system warranty.

- G. Section 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT

**1.3 ACRONYMS AND DEFINITIONS**

- A. Broadcast Cabling System Contractor – Contracting firm that has been retained to do the work noted within these specifications and associated drawings.
- B. Wet Location - as defined in the NFPA 70, installations underground or in concrete slabs or masonry in direct contact with the earth; in locations subject to saturation with water or other liquids, such as outdoor broadcast junction boxes; and in unprotected locations exposed to weather.

**1.4 REFERENCES**

- A. EIA/ECA-310 - Cabinets, Racks, Panels, and Associated Equipment; 2005e.
- B. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- C. SVG-Section A - Mobile Broadcast Unit / Truck Compound Infrastructure and Operations; Current Edition, Including All Revisions.

### **1.5 QUALITY ASSURANCE**

- A. Broadcast Cabling System Contractor Qualifications:
  - 1. Comply with Division 01.
  - 2. Licensed to perform work of this type in the project jurisdiction.
  - 3. At least five (5) years of verifiable direct experience with the devices, equipment and systems of the type and scope specified herein.
  - 4. Manufacturer-certified for the products furnished and installed.
  - 5. Fully staffed and equipped maintenance and repair facility.
- B. Broadcast Cabling System Contractor Personnel Qualifications:
  - 1. Skilled workers thoroughly trained and experienced in the necessary crafts and completely familiar with the specified requirements and the methods needed for proper installation and performance of the work in this section. The workers shall have at least three (3) years direct experience in similar work, evidence of which shall be verified in writing with appropriate references.
  - 2. Supervisor with at least five (5) years direct experience in similar work. The supervisor shall be present for and in responsible charge of all work in the fabrication shop and on the project site during all phases of the installation and testing of the system(s). To assure continuity, this supervisor shall be the same individual throughout the execution of the work unless illness, loss of personnel, or other reasonable circumstances intervene. This person shall act as the Cabling System Project manager, and shall attend all scheduled project meetings.
- C. Provide additional information as required for review by the Owner's Representative, Architect, and HENDERSON ENGINEERS to aid in proving acceptability.

### **1.6 SUBSTITUTIONS**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for Substitution instructions.

### **1.7 SUBMITTALS**

- A. Refer to requirements in Section 27 00 11 - GENERAL COMMUNICATIONS REQUIREMENTS - AUDIO-VIDEO.
- B. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for submittal requirements with the following alterations and additions:

1. Replace qualification requirements with requirements as included in this section per paragraph Quality Assurance.
2. Replace "Technical System" with "Cabling System".
3. Additionally comply to broadcast plate layout examples above and beyond standard plate examples and fabrication requirements.
4. Additionally refer to the Operation and Maintenance Data paragraph in Part 3 of this section for more requirements, including results of broadcast cabling systems testing/certification in O&M Manuals.
5. Preliminary Project Completion submittal requirements for Copper Category and Fiber Optic cabling:
  - a. To be submitted:
    - 1) After all cabling has been installed, terminated, labeled, tested, and corrected so that all cables and strands pass the Testing Requirements.
    - 2) In conjunction with the Substantial Completion Review request.
      - a) HENDERSON ENGINEERS requires a minimum of 1 week notice to schedule the on-site Final Acceptance.
  - b. Submittals shall include:
    - 1) Scanned Work Site Prints that include cable/outlet labels that correspond to the Test Results.
      - a) Test results per Section 27 10 00 - STRUCTURED CABLING.
6. Final Project Completion submittal requirements for Copper Category 3/5e/6 and Fiber Optic cabling:
  - a. Updated, complete Test Results per the requirements above (to include the retesting data of any cables installed or modified after Preliminary Project Completion submittal).
  - b. Per requirements outlined in Section 27 10 00 - STRUCTURED CABLING.

### **1.8 TEMPORARY BROADCAST CABLING SYSTEM**

- A. If the work in this section, as a failure of the Contractor, is incomplete or found not in conformance with the contract documents, provide and operate a temporary Cabling System of reasonably equivalent function as determined by the HENDERSON ENGINEERS. The temporary system shall remain in use until final acceptance of the permanent system.

### **1.9 WARRANTY**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for warranty requirements with the following alterations:
  1. Warrant all work executed under this contract, including all in-shop and onsite material, parts and labor, for a period of fifteen months (or as required to allow the systems to be used for one complete season plus the first two months of the following season) after the date of final acceptance.

## **PART 2 PRODUCTS**

### **2.1 SYSTEM DESCRIPTION**

- A. These specifications and the associated TB series drawings describe the requirements for the Broadcast Systems Pre-wire cabling system (hereafter referred to as the "Cabling System").
- B. System is intended for in-house and remote broadcast trucks to transmit audio and video signals between cameras, production equipment, and broadcast/production spaces. It is

intended to be used for network play-by-play, in-house play-by-play/replay, officials review, electronic news gathering, satellite/landline uplink, and radio broadcast.

- C. Work under this section of the specifications includes all labor, equipment, and installation as required to provide a complete Cabling System in compliance with the contract documents.
- D. The products in this section have been approved for use in the project as necessary to facilitate a complete and working system. Inclusion in this section does not indicate a requirement for use.
- E. Equipment and wiring shown on the drawings represents the basis of design. Ensure similar or better performance is achieved by the use of equipment other than that shown.
- F. All equipment shall be new and of professional quality.
- G. Cable
  - 1. Unless otherwise designated, provide all of one type of product from one manufacturer; for example, category cabling of one type by one manufacturer, fiber of one type by one manufacturer, connectors of one type by one manufacturer.
  - 2. Product must be procured from the original cable manufacturer.
  - 3. All major components of Cabling System equipment shall be provided and installed by a qualified Contractor as outlined in Part 1 of this section.
  - 4. Flooded or direct burial cable shall be used in all underground conduits.
  - 5. AWG wire sizes indicated herein or on the drawings are the minimum size conductors required. Larger size conductors (i.e., smaller AWG number) are permitted assuming no impact on the project will occur (such as the resulting need for larger or additional conduit, cable trays, chases, etc.) to accommodate such cable.
  - 6. Where cable is run exposed (such as in ceiling plenums, cable trays, chases, or below accessible floors):
    - a. Verify which locations do and do not require plenum-rated cable.
    - b. Furnish the appropriate cable type.
    - c. Obtain written authorization from the Contract Administrator (or the Contract Administrator's designated HENDERSON ENGINEERS) in this regard.
- H. Provide stainless steel mounting hardware, such as product manufactured by McMaster-Carr, for all panel mounted and connector mounted devices.
- I. The quantities of each item of portable or mobile equipment (and other portable or loose accessories), as well as those items associated with Alternates, are indicated in parentheses.

## **2.2 COMMON EQUIPMENT**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS and Section 27 41 16 - AUDIO VIDEO SYSTEMS EQUIPMENT for equipment and components not listed under this section.

## **2.3 CABLE & TERMINATIONS – BULK – AUDIO**

- A. Twisted Pair – Shielded: Twisted pair, shielded 22 AWG cable; 2 conductor cable with drain wire suitable for microphone, line, or production intercom level audio circuits:
  - 1. Communications plenum rated cable (CMP) is suitable for use in all indoor environments including environmental air plenums as defined per NFPA 70 Article 800.
    - a. The use of performance equivalent substituted cables of lesser type is permitted at the Contractor's discretion where allowable by NFPA 70 Article 800, local codes, and the connected equipment manufacturer's listed requirements.

- b. Performance equivalence to the below specified products shall be determined by the cable manufacturer's listed product equivalents provided in tables and cut sheets.
  2. Direct Bury cable (indoor/outdoor) is required for all locations considered damp or wet, exterior enclosures, floor boxes, and/or served by underground conduit. Direct Bury cable is additionally required to be tinned copper (TC).
  3. 22 AWG/CMP: 22 AWG Communications Plenum rated bare copper conductor cable:
    - a. Belden 9451P or 6500FC; or
    - b. Clark Wire SPA22GSP; or
    - c. Gepco IP222AL or 61801HS; or
    - d. West Penn 25291B.
  4. 22 AWG/CMR: 22 AWG Communications Riser rated bare copper conductor cable:
    - a. Belden 8451 or 9451 or 5500FE; or
    - b. Clark Wire SPA22GS; or
    - c. Gepco IR222AL or 61801 or 61801EZ; or
    - d. West Penn 291 or 452.
  5. 22 AWG/CMR/DB: 22 AWG Communications Riser Direct Bury rated tinned copper conductor cable; for use as indoor/outdoor cable and required listed above:
    - a. Belden 2451RW.
  6. 22 AWG/CMP/MC: 22 AWG Communications Plenum rated bare copper multi-conductor cable, individually shielded pairs, color coded (not for interconnection within equipment racks):
    - a. Belden 6541PA (2 pair), 1815P (TC) or 6543PA (4 pair), 1816P (TC) or 6545PA (6 pair), 1818P (TC) or 6548PA (12 pair); or
    - b. Clark Wire 706P (TC) (6 pair), 712P (TC) (12 pair); or
    - c. Gepco 6604HS (TC) (4 pair), 6606HS (TC) (6 pair), 6612HS (TC) (12 pair).
  7. 22 AWG/CMR/MC: 22 AWG Communications Riser rated bare copper multi-conductor cable, individually shielded pairs, color coded (not for interconnection within equipment racks):
    - a. Belden 1814R (TC) or 1325R (2 pair), 1815R (TC) (4 pair), 1816R (TC) (6 pair), 1818R (TC) (12 pair), 1819R (TC) (16 pair), 1821R (TC) (24 pair); or
    - b. Clark Wire 704 (TC) (4 pair), 706 (TC) (6 pair), 712 (TC) (12 pair), 716 (TC) (16 pair), 724 (TC) (24 pair); or
    - c. Gepco D61802GFC (TC) (2 pair), GA61804GFC (TC) (4 pair), GA61806GFC (TC) (6 pair), GA61812GFC (TC) (12 pair), GA61816GFC (TC) (16 pair); or
    - d. West Penn 77510 (TC) (2 pair).
  8. 22 AWG/CMR/DB/MC: 22 AWG Communications Riser Direct Bury rated tinned copper multi-conductor cable, individually shielded pairs, color coded; for use as indoor/outdoor cable and required as listed above (not for interconnection within equipment racks):
    - a. Belden 2814RW (2 pair), 2815RW (4 pair), 2816RW (6 pair), 2818RW (12 pair); or
    - b. Clark Wire 702DBR (2 pair), 704DBR (4 pair), 706DBR (6 pair), 712DBR (12 pair).
- B. Audio Connectors
  1. Audio XLR, panel mounted audio connector, gold plated contacts, black plated metal housing, metal shell and body:
    - a. Neutrik DL Series; or
    - b. Approved equal.

2. Audio DT-12, 37-pin, 12 channel audio panel connector, gold plated contacts, metal shell, with dust cap:
    - a. Female, chassis:
      - 1) Canare FK37-31S; or
      - 2) Clark Wire DT12-F-PM; or
      - 3) Gepco G37FP; or
      - 4) Whirlwind DT12CF; or
      - 5) Approved equal.
    - b. Male, chassis:
      - 1) Canare FK37-32S; or
      - 2) Clark Wire DT12-M-PM; or
      - 3) Gepco G37MP; or
      - 4) Whirlwind DT12CM; or
      - 5) Approved equal.
- C. Audio Patch Panels
1. Add any and all additional normal-thru patch panel connections requested by the Owner's Representative or HENDERSON ENGINEERS.
  2. Audio Patch Panel, audio, with 24 positions per row (48 positions per assembly), ELCO connectors on the rear, enclosed assembly for dust/dirt protection, switched grounds:
    - a. With normals "#" (full, half, non) as listed on drawings:
      - 1) Bittree 489-S Series B48DC-#NSST/E3 M2OU12L; or
      - 2) Approved equal.
  3. Patch Hole Plug, audio patch panel hole plugs ¼", for unused jack panel spaces, black:
    - a. ADC PJ29; or
    - b. Audio Accessories PHP-1.
  4. Patch Cable Lacing Bar, for cable management support from the rear (as required):
    - a. Bittree LB-17500; LB-175-3; or
    - b. Canare 1U-AS3; Canare 2U-AS5; Canare 3U-AS7; or
    - c. Middle Atlantic LBP-1A, LBP-2A, LBP-4A, LBP-6A; or
    - d. Approved equal.
  5. Patch Cable Holder, for ¼" audio patch cables, wall-mount in location as later directed (one required):
    - a. ADC PPH; or
    - b. Audio Accessories PCH-X; or
    - c. Bittree PCHA; or
    - d. Middle Atlantic CLAW.
- D. Audio Patch Panel Accessories – Portable
1. Connector Tool Kit – Audio, crimp tool for audio patch panels (one required):
    - a. Bittree E3 (EPIN) Tool Kit SBCTLKT01.
  2. Patch Cord –
    - a. Audio 12", ¼", twelve-inch audio patch panel patch cords, nickel plated plugs, red cable color code indicates length (brass plugs will not be accepted) (quantity per equipment list):
      - 1) ADC R1 (red); or
      - 2) Audio Accessories 621A (red); or

- 3) Bittree LPC 12 02 - 110 (red).
- b. Audio 24", ¼", twenty-four-inch audio patch panel patch cords, nickel plated plugs, green cable color code indicates length (brass plugs will not be accepted) (quantity per equipment list):
  - 1) ADC G2 (green); or
  - 2) Audio Accessories 622D (green); or
  - 3) Bittree LPC 24 05 - 110 (green).
- c. Audio 36", ¼", thirty-six-inch audio patch panel patch cords, nickel plated plugs, blue cable color code indicates length (brass plugs will not be accepted) (quantity per equipment list):
  - 1) ADC B3 (blue); or
  - 2) Audio Accessories 623C (gray); or
  - 3) Bittree LPC 36 06 - 110 (blue).
- d. Audio 48", ¼", forty-eight-inch audio patch panel patch cords, nickel plated plugs, black cable color code indicates length (brass plugs will not be accepted) (quantity per equipment list):
  - 1) ADC BK4 (black); or
  - 2) Audio Accessories 624B (black); or
  - 3) Bittree LPC 48 00 - 110 (black).
- e. Audio 72", ¼", seventy-two-inch audio patch panel patch cords, nickel plated plugs, red cable color code indicates length (brass plugs will not be accepted) (quantity per equipment list):
  - 1) ADC R6 (red); or
  - 2) Audio Accessories 626A (red); or
  - 3) Bittree LPC 72 02 - 110 (red).

## 2.4 CABLE & TERMINATIONS – BULK – VIDEO

- A. Coax - Mini HD-SDI, suitable for digital HD-SDI signal, 23AWG solid conductor:
  - 1. Allowed for equipment rack intraconnect only:
    - a. Belden 1855A; or
    - b. Clark Wire CD7523; or
    - c. Gepco VDM230; or
    - d. Approved equal.
- B. Coax – RG-59 HD-SDI, suitable for digital HD-SDI signal, 20AWG solid conductor:
  - 1. RG-59/CMP: Communications Plenum rated:
    - a. Belden 1506A; or
    - b. Clark Wire CD7559P; or
    - c. Gepco VPM2000TS; or
    - d. Approved equal.
  - 2. RG-59/CMR: Communications Riser rated:
    - a. Belden 1505A and Belden 1505S5 (five conductor); or
    - b. Clark Wire CD7559; or
    - c. Gepco VPM2000; or
    - d. Lake Cable AVBRG59HDTV; or
    - e. Approved equal.

3. RG-59/CMR/DB: Communications Riser Direct Bury rated; for use as indoor/outdoor cable and required at all exterior and floor box locations:
  - a. Approved equal.
- C. Coax – RG-6 HD-SDI, suitable for digital HD-SDI signal, 18AWG solid conductor:
  1. RG-6/CMP: Communications Plenum rated:
    - a. Belden 1695A and Belden 1695S5 (five conductor); or
    - b. Clark Wire CD7506P; or
    - c. Gepco VSD2001TS; or
    - d. Lake Cable AVPRG6HDTV; or
    - e. Approved equal.
  2. RG-6/CMR: Communications Riser rated:
    - a. Belden 1694A and Belden 1694S5 (five conductor); or
    - b. Clark Wire CD7506; or
    - c. Gepco VSD2001; or
    - d. Lake Cable AVBRG6HDTV; or
    - e. Approved equal.
  3. RG-6/CMR/DB: Communications Riser Direct Bury rated; for use as indoor/outdoor cable and required at all exterior and floor box locations:
    - a. Belden 1694WB (not riser rated); or
    - b. Clark Wire CD7506DBR; or
    - c. Gepco VSD2001PEF (not riser rated); or
    - d. Approved equal.
- D. Coax – RG-11 HD-SDI: suitable for digital HD-SDI signal, 14AWG solid conductor:
  1. RG-11/CMP: Communications Plenum rated:
    - a. Belden 7732A; or
    - b. Clark Wire CD7511P; or
    - c. Gepco VHD1100TK; or
    - d. Lake Cable AVPRG11HDTV; or
    - e. Approved equal.
  2. RG-11/CMR: Communications Riser rated:
    - a. Belden 7731A; or
    - b. Clark Wire CD7511; or
    - c. Gepco VHD1100; or
    - d. Lake Cable AVBRG11HDTV; or
    - e. Approved equal.
  3. RG-11/CMR/DB: Communications Riser Direct Bury rated; for use as indoor/outdoor cable and required at all exterior and floor box locations:
    - a. Belden 7731WB (not riser rated); or
    - b. Clark Wire CD7511DBR; or
    - c. Gepco VHD1100SC; or
    - d. Gepco VHD1100PEF (not riser rated); or
    - e. Approved equal.
- E. Video Patch Panels

1. Add any and all additional normal-thru patch panel connections requested by the Owner's Representative or HENDERSON ENGINEERS.
2. Capable of handle high bandwidth performance for 3.0Ghz HD/SDI, 3 Gb/s, and 4K.
3. SMPTE 259M, 292M, and 424M compliant.
4. RoHS compliance, section EU Directive 2011/65/EU, Exemption 6c and 8b.
5. True 75-ohm impedance low loss.
6. Video Patch Panel with 32 positions per row (64 positions per assembly), female BNC connectors on the rear interface, enclosed assembly for dust/dirt protection, and easy access for insert/removal tool. Paint mounting flange and associated mounting screw heads semi-gloss black to match face of panel:
  - a. With normaled midsize terminating jacks; 1 RU
    - 1) AVP AV-D232E1-AMN75; or
    - 2) Bittree B64S-2MWTHTD; or
    - 3) Canare 32MD-ST.
  - b. With normaled midsize terminating jacks; 2 RU
    - 1) AVP AV-D232E2-AMN75; or
    - 2) Bittree B64T-2MWTHTD; or
    - 3) Canare 32MD-ST-2U.
7. Video Patch Cables, WECO standard, flexible, to match patch panel, color-coded for length furnished (quantity per equipment list):
  - 1) AVP MPC series (24": red, green; 36": blue, purple; 48": black, green, yellow); or
  - 2) Bittree VPCM 1200-75 series (12", 18", 24", 36", 48", 60", 72") (each available in black, red, yellow, green, blue, purple); or
  - 3) Canare VPC series (12", 24", and 36" standard, custom lengths available) (each available in black, red, yellow, green, blue, purple, brown, gray, orange, white).
8. Patch Cable Holder, for video patch cables, wall-mount in location as later directed (one required):
  - a. Bittree PCHV; or
  - b. Pomona 4408; or
  - c. Approved equal.
9. Patch Cable Lacing Bar, for cable management support from the back (as required):
  - a. Bittree LB-175-3 (3") or LB-17500 (6"); or
  - b. Middle Atlantic LBP series; or
  - c. Approved equal.

## 2.5 CABLE & TERMINATIONS - CATEGORY ETHERNET

- A. Category cabling utilized for ethernet connections and adhering to structured cabling requirements shall be per Section 27 10 00 - STRUCTURED CABLING. Refer to listed Section for product information and additional installation requirements.
- B. Termination Coordination
  1. Structured cabling shall be provided with a terminated and tested permanent link per the Section listed above. Coordinate termination configuration with the structured cabling Contractor.
  2. All category cabling shall be plated onto Neutrik EtherCON connector panel mounts. EtherCON connector series shall be coordinated with category cable type and data rate.
  3. The following structured cabling termination conditions are approved:

- a. Field terminated RJ45 plug, meeting all warranty requirements per the Section listed above. The use of field terminated crimp connectors is not permitted. Provide pass-thru EtherCON connector for plate.
- b. Biscuit enclosure with keystone punch down connectors and patch cable. Provide pass-thru EtherCON connector for plate.
4. The following environmental considerations shall be maintained:
  - a. For locations in floor boxes: Provide dust cover, Neutrik SCDD or similar.
  - b. For exterior locations: Provide IP65 rated connector and/or cover.

## 2.6 CABLE & TERMINATIONS – BULK – CATEGORY

### A. Category Cable:

1. General Requirements:
  - a. Cable jacket marking: Shall be legible and shall contain the following information:
    - 1) Manufacturer's name
    - 2) Copper Conductor Gauge
    - 3) Pair Count
    - 4) UL and CSA listing
    - 5) Manufacturer's Trademark
    - 6) Category rating
    - 7) Sequential distance markings, in one-foot increments
2. Outside Plant (rated for Wet Location):
  - a. Limited to 50 feet inside of building; for distances greater than 50 feet, transition to riser- or plenum-rated cable.

### B. Multi-pair Category Cable

1. General Requirements
  - a. See drawings for required cable type and pair count.
  - b. Cables shall consist of 24 AWG thermoplastic insulated conductors formed into binder groups of 25 pairs. Grouped and color coded as required by the referenced standards.
  - c. Cable construction specifications
    - 1) Core wrap - Polypropylene Film
2. Category 3 Multi-pair (for installed lengths greater than 300 feet)
  - a. Requirements:
    - 1) At a minimum, the cables shall meet the requirements of TIA-568 (SET) for Category 3 100-Ohm UTP Multi-pair Cable.
  - b. Cables for dry environments
    - 1) Riser-rated (CMR)
      - a) Belden – D-Inside Wire
      - b) General Cable – Category 3 Non-Plenum
      - c) Mohawk Cable – Category 3 Riser
    - 2) Plenum-rated (CMP)
      - a) Belden – D-Inside Wire
      - b) General Cable – Category 3 Plenum
      - c) Mohawk Cable – Category 3 Plenum
  - c. Outside Plant (rated for Wet Location)
    - 1) General Cable – PE-89

- 2) Mohawk Cable – LAN-Trak OSP Category 5
3. Category 5e Multi-pair (for installed lengths less than 300 feet)
  - a. Requirements:
    - 1) At a minimum, the cables shall meet the requirements of TIA-568 (SET) for Category 5e 100-Ohm UTP Multi-pair Cable.
  - b. Cables for dry environments
    - 1) Riser-rated (CMR)
      - a) Belden – IBDN Plus 25-pair Cable Series Category 5E
      - b) General Cable – GenSPEED 5000 Category 5e Backbone 25 Pair Cable
      - c) Mohawk Cable – Power Sum Category 5e Riser
    - 2) Plenum-rated
      - a) Belden – IBDN Plus 25-pair Cable Series Category 5E
      - b) General Cable – GenSPEED 5000 Category 5e Backbone 25 Pair Cable
      - c) Mohawk Cable – Power Sum Category 5e Plenum
  - c. Outside Plant (rated for Wet Location)
    - 1) Superior Essex – 25-Pair Category 5e Indoor/Outdoor
    - 2) Or approved equal.
- C. 4-pair F/UTP (Shielded) Category 6A
  1. Requirements:
    - a. At a minimum, the cables shall meet the requirements of TIA-568 (SET) for Category 6A.
    - b. Aluminum foil shield
  2. Cables for dry environments
    - a. Riser-rated (CMR); Color shall be: blue
      - 1) Belden
      - 2) General Cable
      - 3) Mohawk
      - 4) Superior Essex
    - b. Plenum-rated (CMP); Color shall be: purple
      - 1) Belden
      - 2) General Cable
      - 3) Mohawk
      - 4) Superior Essex
  3. Outside Plant (rated for Wet Location)
    - a. Superior Essex OSP Broadband Category 6A
- D. Category Cable Connectivity:
  1. General Requirements:
    - a. Comply with referenced standards. Cables shall be terminated with connecting hardware of same category or higher.
    - b. Patch panels and rack-mounted blocks shall be provided complete with all mounting hardware, jacks, retainers, wire guides, designation strips, etc.
    - c. Provide enough ports/termination blocks to support the quantity of cables/pairs indicated on the drawings. Provide all connector blocks, including plugs and jacks where required to fill each panel completely. Do not leave any blank openings.

- d. Modular Patch Panels shall be of a metal design with snap in module frames. Modules shall be releasable from the front to provide access to the modules and terminated cable. Patch panels shall be available with labels.
  - e. Ports and panels shall be easy to identify with label holders for machine-printed and color-coded labels. Rack mountable patch panels shall mount to EIA/ECA-310 19 inches racks.
- 2. For Multi-pair Category 3 cabling:
    - a. Multi-pair Category 3 UTP cabling shall be terminated onto 19 inches wide rack-mounted 110-style termination block(s).
    - b. Manufacturer shall be:
      - 1) Leviton 41DBR
      - 2) Panduit P110B100
      - 3) Or approved equal.
  - 3. For Multi-pair Category 5e cabling:
    - a. Multi-pair Category 5e UTP cabling shall be terminated onto a four-pair Category 5e jack module. All jack modules shall be terminated so that all four pairs are utilized. Cable pairs shall be terminated in sequential order. For every 6 ports leave the 25th pair of the cable for future (do not cut off at sheath, provide enough length to terminate on any jack on patch panel.)
    - b. Manufacturer shall be:
      - 1) Coordinate with Owner's Telecommunications System.
      - 2) Belden KeyConnect Modular Patch Panel with KeyConnect jacks
      - 3) Leviton QuickPort Modular Patch Panel with Atlas-X1 jacks
      - 4) Or approved equal.
  - 4. For 4-pair UTP Category 5e/6/6A:
    - a. Cabling shall be terminated with tested permanent link via one of the following conditions:
      - 1) Field terminated RJ45 plug directly into pass-thru connector.
      - 2) Biscuit enclosure with keystone punch down connectors and patch cable to pass thru connector.
      - 3) The use of field terminated crimp connectors is not permitted.
    - b. Cabling shall be plated onto Neutrik EtherCON connector pass-thru panel mounts in custom patch panel or plate. EtherCON connector series shall be coordinated with category cable type and data rate.
    - c. The following environmental considerations shall be maintained:
      - 1) For locations in floor boxes: Provide dust cover, Neutrik SCDD or similar.
      - 2) For exterior locations: Provide IP65 rated connector and/or cover.

## 2.7 CABLE & TERMINATIONS – BULK – FIBER

- A. General Requirements
  - 1. Cable shall meet the transformation performance and physical specifications of TIA-568 (SET).
  - 2. Refer to drawings for cable type, strand counts and locations - minimum strand count of 6 strands and in multiples of 12 strands.
  - 3. Cable jacket marking: Shall be legible and shall contain the following information:
    - a. Manufacturer's name and trademark

- b. Fiber size
  - c. Fiber Grade
  - d. UL listing (Shall be suitable for the application)
  - e. Sequential length markings
  - 4. Cable environmental requirements:
    - a. Dry location:
      - 1) Tight-buffered construction
      - 2) Cable shall have an overall armor of steel or aluminum
    - b. Wet Location:
      - 1) Tight-buffered or loose-tube construction
      - 2) Cable shall have an overall armor of steel or aluminum
      - 3) Cable jacket shall be suitable for installation in standing water
- B. Single-mode Fiber Optic Cable
- 1. Non-Armored
    - a. Non-armored cable is suitable for use in full conduit raceways
    - b. Indoor
      - 1) Riser rated:
        - a) Belden; or
        - b) Mohawk; or
        - c) Superior Essex; or
        - d) Approved equal.
      - 2) Plenum rated:
        - a) Belden; or
        - b) Mohawk; or
        - c) Superior Essex; or
        - d) Approved equal.
    - c. Indoor/Outdoor
      - 1) Riser rated:
        - a) Belden; or
        - b) Clark Wire DR Series; or
        - c) Gepco FSDR Series; or
        - d) Mohawk; or
        - e) Superior Essex; or
        - f) Approved equal.
      - 2) Plenum rated:
        - a) Belden; or
        - b) Clark Wire DP Series; or
        - c) Gepco FSDP Series; or
        - d) Mohawk; or
        - e) Superior Essex; or
        - f) Approved equal.
  - 2. Armored
    - a. Armored cable is suitable for use in full conduit raceways and required for use in all other raceway types (j-hooks, cable tray, etc.)
    - b. Indoor
-

- 1) Riser rated:
  - a) Belden; or
  - b) Clark Wire DRIA Series; or
  - c) Mohawk; or
  - d) Superior Essex; or
  - e) Approved equal.
- 2) Plenum rated:
  - a) Belden; or
  - b) Clark Wire DPIA Series; or
  - c) Mohawk; or
  - d) Superior Essex; or
  - e) Approved equal.
- c. Indoor/outdoor
  - 1) Riser rated:
    - a) Belden; or
    - b) Clark Wire DRIOA Series; or
    - c) Mohawk; or
    - d) Superior Essex; or
    - e) Approved equal.
  - 2) Plenum rated:
    - a) Belden; or
    - b) Clark Wire DPIOA Series; or
    - c) Mohawk; or
    - d) Superior Essex; or
    - e) Approved equal.
- C. Fiber Optic (non-hybrid) Cable Connectivity
  1. General Requirements:
    - a. Comply with referenced standards.
    - b. Connectors and adapters shall match the cable type indicated on the drawings.
    - c. Mid-span splices shall not be allowed, except where specifically identified on the drawings or required by code.
  2. Equipment Room Terminations – where located in a building AV equipment rack or enclosure with sufficient depth.
    - a. Fiber Enclosure with pre-terminated ST connectors to fusion-spliced pigtails:
      - 1) Belden FX UHD Enclosure with Cassettes; or
      - 2) Corning CCH Enclosure with CCH Pigtail Cassettes; or
      - 3) Leviton Opt-X Ultra Enclosure with Opt-X ST Splice Modules; or
      - 4) OCC RTC Enclosures with Splice Cassettes; or
      - 5) Approved equal.
  3. Far End Location Terminations – where rack-mounted in 10-inch-deep box, such as at camera locations, production rooms, truck dock locations, etc. (Identified within Broadcast Prewire Box Schedule.)
    - a. Fiber patch panel with ST pass-through connectors. Patch panel shall include a shallow chassis to protect the rear connectors.
      - 1) Clark Wire FB1-ST-## Series; or

- 2) Gepco FP1-xxST; or
- 3) OCC RC1U Series; or
- 4) Approved equal.
- b. Each location requires unique labeling information; either provide custom fiber patch panel or provide custom blank 1RU immediately above fiber patch panel with required labeling.
- c. Field-terminate all strands onto ST adapters. Acceptable manufacturers include:
  - 1) Belden
  - 2) Corning Unicam
  - 3) Leviton
  - 4) Approved equal.
4. Mid-Span Fiber Splice Case – where specifically identified on the drawings or required by code for transitions from non-CMP/CMR to riser- or plenum-rated cabling:
  - a. Locate splice case in a non-plenum space. All strands are to be fusion-spliced.
  - b. Manufacturer shall be: Preformed Coyote Fiber Optic Closure, with fusion splice trays.

## 2.8 CABLE & TERMINATIONS – BULK – CAMERA – HYBRID FIBER

- A. SMPTE 311M Hybrid Fiber Cable – 9.2
  1. Conforms to SMPTE 311M hybrid cable standard for HD video cameras, 9.2mm nominal outside diameter; two single-mode fiber strands, two 24AWG copper conductors, four 20 AWG copper conductors, one 16 AWG steel strength member:
  2. R; Riser rated:
    - a. Belden 7804R (single channel) or 7824R (three channel); or
    - b. Clark Wire HFCPV (single channel) or HFC3R (three channel); or
    - c. Gepco HDC920R (single channel) or HC3R (three channel); or
    - d. Lake Cable AVBSMPTE311R; or
    - e. Mohawk M96921 (single channel) or M97673 (three channel); or
    - f. OCC C-008HBAA5KR; or
    - g. Approved equal.
  3. P; Plenum rated:
    - a. Belden 7804P (single channel) or 7824P (three channel); or
    - b. Clark Wire HFCPL (single channel) or HFC3P (three channel); or
    - c. Gepco HDC920P; or
    - d. Mohawk M96924 (single channel) or M97767 (three channel); or
    - e. OCC CX008HBAA9KP; or
    - f. Approved equal.
  4. 9.2DB; Direct bury rated, water blocking tape or gel filled, when cable is exposed to moisture:
    - a. Belden 7804WB (single channel) or 7824WB (three channel); or
    - b. Clark Wire HFCDB (single channel) or HFC3DB (three channel); or
    - c. Gepco HDC920PEF; or
    - d. OCC C-008HBAA5KB; or
    - e. Approved equal.
- B. SMPTE 311M Copper Only

1. Conforms to electrical portion of SMPTE 311M hybrid cable standard for HD video cameras, for use with multi-strand single-mode fiber breakout scenarios; two 22 AWG copper conductors, two 16 AWG copper conductors:
  2. Riser rated:
    - a. Belden 7825R; or
    - b. Clark Wire CW-1622; or
    - c. Gepco HDP221; or
    - d. OCC CX005HBAE9KR; or
    - e. Approved equal.
  3. Plenum rated:
    - a. Belden 7825P; or
    - b. Clark Wire CW-1622P; or
    - c. Gepco HDP221P; or
    - d. Lake Cable AVP16/22BRD; or
    - e. OCC CX005HBAE9KP; or
    - f. Approved equal.
- C. SMPTE 304M Hybrid pigtail
1. Prefabricated with 1-meter cables to terminate in splice box, pre-terminated SC fiber connectors, multi-pin electrical breakout connector, with dust cap, with isolation plate, substitute half-meter where applicable (provide where required):
  2. Male (Socket), LEMO EDW connectors (furnish two spare pigtails in addition to those installed):
    - a. Canare FCS015A-MR with IU-FCM-SET and dust cap; or
    - b. Clark Wire X-HFC-EDW-SC-3; or
    - c. Gepco GHFBK-3-SB/SC C with dust cap; or
    - d. LEMO MDT.3K.93C.ZZZC100 (request SC in lieu of LC); or
    - e. OCC OCA-LMFR1SCPP006-3333F; or
    - f. Approved equal.
  3. Female (Plug), LEMO FXW connectors (furnish two spare pigtails in addition to those installed):
    - a. Canare FCS015A-FR with IU-FCF-SET and dust cap; or
    - b. Clark Wire X-HFC-FXW-SC-3; or
    - c. Gepco GHFBK-3-PB/SC C with dust cap; or
    - d. LEMO MXT.3K.93C.ZZZC100 (request SC in lieu of LC); or
    - e. OCC OCA-LFFR1SCPP006-3333F; or
    - f. Approved equal.
- D. SMPTE Hybrid Fiber Optic Splice Enclosure, for housing and protection of fusion splice fiber connections between terminations of permanent link fiber and SMPTE hybrid pigtail:
1. Canare FCE-# series; or
  2. Clark Wire X-HFC-SB-(#); or
  3. Gepco HSB Fusion Splice Box; or
  4. OCC SMPTE RC2U series; or
  5. Approved equal.

## 2.9 TERMINATION PANELS

---

- A. Camera
  - 1. Hybrid Fiber Camera Connector Panel; accepts Hybrid Fiber only, 2RU:
    - a. Canare COPS Series; or
    - b. Clark Wire MPAS Series; or
    - c. Clark Wire ModBox Modular Panels Series; or
    - d. Gepco HBP Series; or
    - e. OCC RC2U Series; or
    - f. Approved equal.

## 2.10 CABLES – FACTORY TERMINATED - PORTABLE

- A. Factory terminated cable assemblies in this section are approved for portable use only.
- B. Portable cable assembly quantities are identified in bold and are required to be furnished in addition to those required for system installation. Portable cable lengths are a minimum not to exceed the maximum acceptable length identified in the cable descriptions below.
- C. All cable assemblies must be factory tested and certified.
- D. Refer to equipment list for quantities and types.

## 2.11 PORTABLE ACCESSORIES

- A. SMPTE 304M Connector Alignment Removal Tool, for plug-end alignment sleeve removal (one required):
  - 1. LEMO DCS.F2.035.PN; or
  - 2. Approved equal.
- B. SMPTE 304M Cleaning Tool, for SMPTE 304M connectors and adapters (one required):
  - 1. Clark Wire FOC-CK-OCS; or
  - 2. Gepco HFCD; or
  - 3. Approved equal.
- C. ST Panel Mount Cleaning Tool, for cleaning fiber contacts (one required):
  - 1. Clark Wire FOC-CK-OC; or
  - 2. Gepco SCK-SC-250; or
  - 3. Approved equal.
- D. Cable Tester, cable tester with ability to test each individual wire in a variety of common cable types. Tests XLR, 1/8", 1/4", speakON, BNC, Ethernet. Furnish batteries for tester (one required):
  - 1. Ebtech 6-in-1 Cable Tester and Greenlee Cable Check – Data Link ID; or
  - 2. Hosa CBT-500; or
  - 3. Whirlwind MCT-9 and SC48RJ.
- E. Cable ties (thirty ties required):
  - 1. Hosa WTI-148G (pkg of 5); or
  - 2. Rip-Tie EconoWrap Slip-on 1" wide; or
  - 3. Toleeto Fasteners International Cord Lox 307-C, 1"x7".

## 2.12 STANDBY EQUIPMENT

- A. The following equipment shall be on-hand at the time of system acceptance and system first-use for possible replacement of defective equipment or for field conditions noted. Maintain

ownership of this standby equipment. However, if any item of this standby equipment is used to replace defective equipment, the installed item of standby equipment becomes Owner's property. Assume ownership of the defective equipment:

1. Panel connector / pigtail of each type (one of each type required).
- B. Allowances for overnight shipping of critical components shall be included for components essential to Owner's operation or first-use requirements.

### **PART 3 EXECUTION**

#### **3.1 GENERAL**

- A. Install in accordance with manufacturer's instructions.
- B. Comply with SVG-Section A and SVG-Section D.
- C. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for common requirements.
- D. Refer to Section 27 00 13 - SUSTAINABLE DESIGN REQUIREMENTS for sustainable requirements.

#### **3.2 INSTALLATION**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS and Section 27 05 01 - COMMON WORK RESULTS FOR COMMUNICATIONS - AUDIO-VIDEO for physical installation requirements.
- B. Blank panels and/or vent panels shall be installed in unused rack spaces and camera connection box spaces. Ensure that air flow within the rack is maintained (i.e., cool air can enter the rack and hot air can exit the rack). Ensure that connection boxes are fully plated (i.e., no gaps to rear of box allowed).

#### **3.3 LABELING**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for labeling requirements.
- B. Refer to broadcast plate details for additional labeling requirements.

#### **3.4 TESTING AND CERTIFICATION**

- A. At the completion of the installation, perform the following tests on the system to ensure proper installation and operation. The Cabling System shall be fully tested with all equipment on site, installed, connected, and fully operational.
- B. The completed Testing and Certification Documentation package shall include:
  1. Results of the tests detailed herein; and
  2. Digital photographs of primary systems, sub-systems and components; and
  3. List of test equipment used; and
  4. Written notice to the HENDERSON ENGINEERS that the systems have been tested and certified, along with a comprehensive report summarizing the results.
- C. All test equipment used for these tests shall be on site during the system final acceptance activities should verification of submitted measurements be required.
- D. Utilize the technical support services offered by the manufacturers of the various Cabling System components to ensure optimum performance.
- E. Tests shall include the following:
  1. Verify each device is properly grounded.

2. Verify each device has proper AC power (including AC power for associated devices such as cameras, trucks, etc.)
3. Cables are properly installed and labeled with an appropriate service loop.
4. Verify the termination for each cable is labeled and wired correctly.
5. Utilize broadcast equipment to verify acceptable performance.
6. Functional tests of all equipment and software. Functional tests include examination for hum, buzz, hiss, ghosts, hum bars, oscillation, unintended reception of other signals such as AM or FM radio, TV, CB, ham radio, cell phones, or any other unwanted signals through the systems.
7. Ensure that all equipment is on the job-site and fully operational. This includes portable (not installed) items and other loose equipment. Remove all devices from shipping or packaging containers, ready for use.
8. Audio cabling:
  - a. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS testing requirements.
9. Video cabling:
  - a. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS testing requirements.
10. SMPTE Hybrid Cable:
  - a. Clark Wire CWT-SMPTE-T
  - b. Gepco SMPTE-304TS
  - c. Use a broadcast camera for final testing.
11. Category Copper cable testing
  - a. Multipair Category 3/5e
    - 1) After terminating and splicing the cables. Test all cable pairs for continuity, ground fault, proper cross-connection, shorts and crossed pairs.
    - 2) Cable test reports: As a minimum, also provide: cable number, cable type, pair or conductor count, individual pair or conductor numbers, number of cross-connects and/or patches in each pair, results of each test for each pair or conductor, total number of serviceable pairs or conductors in cable.
  - b. 4-pair Category 5e/6/6A
    - 1) After terminating both ends of all 4-pair cables, but before any cross-connects are installed, test these cables for the following:
      - a) Wire map
      - b) Length
      - c) Insertion loss
      - d) Near-end crosstalk (NEXT) loss.
      - e) Power sum near-end crosstalk (PSNEXT)
      - f) Equal-level far-end crosstalk (ELFEXT)
      - g) Power sum equal-level far-end crosstalk (PSELFEXT)
      - h) Return loss
      - i) Propagation delay
      - j) Delay skew
    - 2) Submit the following information regarding the cable testing: cable number, cable type, pair or conductor count, individual pair or conductor numbers, results of each test for each pair and total number of serviceable pairs in cable.
      - a) In addition to the tests specified above, provide a minimum of two suitably qualified cabling technicians and copper test equipment to be present on-

site for a period of 8 hours during the Substantial Completion Review. Be prepared to conduct on-the-spot cable tests as requested. Successful equipment performance tests do not relieve the Contractor from the specified testing, repair, and documentation requirements. If more than one of these randomly tested cables do not pass, the Owner and HENDERSON ENGINEERS reserves the right to require a re-testing of 100% of the cable plant, all without additional costs to the project.

- c. Category Copper Cable Test Equipment
  - 1) Category 3/5e Cable Tester
    - a) Available Manufacturers. Contractor may submit other cable testers that meet specification requirements.
    - b) Category 3/5e UTP cable Tester
      - (1) Agilent [www.agilent.com](http://www.agilent.com)
      - (2) Fluke [www.flukenetworks.com](http://www.flukenetworks.com)
      - (3) Greenlee [www.greenlee.com](http://www.greenlee.com)
      - (4) Ideal [www.idealindustries.com](http://www.idealindustries.com)
      - (5) JDSU [www.jdsu.com](http://www.jdsu.com)
    - c) Requirements
      - (1) The field tester shall be a level II-E (Ile) or greater.
      - (2) The field tester shall meet the requirements of TIA-568 (SET).
  - 2) Category 6/6A Cable Tester
    - a) Available Manufacturers. Contractor may submit other cable testers that meet specification requirements.
    - b) Category 6 Cable Tester
      - (1) Agilent [www.agilent.com](http://www.agilent.com)
      - (2) Fluke [www.flukenetworks.com](http://www.flukenetworks.com)
      - (3) Greenlee [www.greenlee.com](http://www.greenlee.com)
      - (4) Ideal [www.idealindustries.com](http://www.idealindustries.com)
      - (5) JDSU [www.jdsu.com](http://www.jdsu.com)
    - c) Requirements
      - (1) The field tester shall be a level III or greater.
      - (2) The field tester shall meet the requirements of TIA-568 (SET).
- 12. Fiber cable testing
  - a. Post-installation testing:
    - 1) After installation of connectors, visually inspect each fiber end-face at 50X magnification. Refinish fibers with visible defects and/or striations in the core area.
    - 2) Perform end-to-end, bi-directional attenuation (loss) test for each multimode fiber strand at 850nm and 1300nm. Conduct tests in accordance with TIA-526-14, Method B and with test instrument manufacturer's printed instructions.
    - 3) Perform end-to-end, bi-directional attenuation (loss) test for each single-mode fiber strand at 1310 and 1550 wavelengths. Conduct tests in accordance with TIA-526-7, Method A.1 and with test instrument manufacturer's printed instructions.

- 4) Demonstrate that measured link loss does not exceed the “worst case” allowable loss which is defined as the sum of: the connector losses (based on the number of mated connector pairs at the TIA-568 (SET) maximum allowable loss of 0.75dB per mated pair) and the optical fiber loss (based on length and the TIA-568 (SET) maximum allowable loss (3.5dB/km @ 850nm and 1.5dB/km @1300nm for multi-mode and 1.0dB/km @1300 and 1550nm for single-mode) by more than 1.0dB.
  - 5) Strands whose measured attenuation fall outside the acceptable range shall be subject to further inspection and testing to determine the nature of the fault. At a minimum, an OTDR shall be used to: determine the true loss for each connector pair, the exact length of the fiber and to identify the presence of any core damage.
  - 6) Faults related to fiber being connectorized shall be corrected, and the fiber re-tested as described above, until acceptable attenuation measurements are recorded.
  - 7) Where defects are found to be inherent in the fiber itself: replace any cable having fewer than the manufacturer’s guaranteed number of serviceable fibers.
  - 8) Provide testing in accordance with manufacturer’s requirements for a fully-warranted cabling system(s) as required by these Contract Documents.
- b. Testing jumpers used shall remain connected at the test equipment for the entire duration of testing. If at any time the jumper becomes loose or removed, for any reason, the jumper shall be reinstalled and re-referenced. This procedure shall be documented each time it is performed to indicate date, time and who performed the procedure. This log shall accompany test reports submitted.
- c. These test results and corrective procedures are to be documented and submitted with Substantial Completion submittal.
- 1) Prior to testing, submit for review and approval copies of test report forms proposed for use.
  - 2) Each test report shall contain the following general information: Date of Preparation, Date of Test, Project Name, Contractor’s Name, Media Type, Make, Model and Serial Number of test equipment used, Date of Last Calibration and Names of Test Crew.
  - 3) Cable number, fiber count, individual fiber numbers, connector types, number of connectors/patches, calculated maximum link loss, length or run, measured link loss for each fiber.
- d. Fiber Optic Test Equipment
- 1) Optical Time Domain Reflectometer (OTDR)
    - a) Available Manufacturers. Contractor may submit other cable testers that meet specification requirements.
    - b) Optical Time Domain Reflectometer (OTDR)
      - (1) [www.agilent.com](http://www.agilent.com)
      - (2) [www.flukenetworks.com](http://www.flukenetworks.com)
      - (3) [www.idealindustries.com](http://www.idealindustries.com)
      - (4) [www.jdsu.com](http://www.jdsu.com)
    - c) Requirements
    - d) An OTDR shall be used to provide Tier Two testing, which shall provide information regarding attenuation, connector location and insertion loss,

- splice location and splice loss, and any other power loss events that may have been created during installation.
- e) The OTDR shall be utilized from both ends of the fiber strand to better isolate any potential problems.
  - f) For unterminated fiber, a "bare fiber adapter" shall be utilized.
- 2) Optical Power Measurement Meter
- a) Available Manufacturers. Contractor may submit other cable testers that meet specification requirements.
  - b) Optical Power Measurement Meter
    - (1) Agilent [www.agilent.com](http://www.agilent.com)
    - (2) Fluke [www.flukenetworks.com](http://www.flukenetworks.com)
    - (3) Ideal [www.idealindustries.com](http://www.idealindustries.com)
    - (4) JDSU [www.jdsu.com](http://www.jdsu.com)
  - c) Requirements
  - d) An Optical Loss Test Set (OLTS) shall be used to provide Tier One testing, which shall provide information regarding link attenuation, continuity, and polarity of the installed fiber optic cable.
  - e) The OLTS shall be used with the appropriate adapters to allow connectivity to the optical fiber link.
  - f) The OLTS shall meet the launch requirements of TIA-455-78.
- 3) Optical Fiber Inspection Scope (or Fiber Viewers)
- a) Available Manufacturers. Contractor may submit other cable testers that meet specification requirements.
  - b) Optical Fiber Inspection Scope
    - (1) Agilent [www.agilent.com](http://www.agilent.com)
    - (2) Fluke [www.flukenetworks.com](http://www.flukenetworks.com)
    - (3) Ideal [www.idealindustries.com](http://www.idealindustries.com)
    - (4) JDSU [www.jdsu.com](http://www.jdsu.com)
  - c) Requirements
  - d) An Optical Fiber Inspection Scope shall be utilized to examine all ends of fiber optic strands prior to splicing or termination.
  - e) The Optical Fiber Inspection Scope shall have a minimum of 400x magnification. If the cable and/or connectivity manufacturer requires greater magnification to meet their installation requirements, the more restrictive standard shall apply.
13. In addition to the tests specified above, provide a minimum of two suitably qualified cabling technicians with all test equipment to be present on-site for a period of 2 hours during the HENDERSON ENGINEERS's final acceptance review. Be prepared to conduct on-the-spot cable tests as requested. Successful equipment performance tests do no relieve the Contractor from the specified testing, repair, and documentation requirements. If more than one of these randomly tested cables do not pass, the Owner and/or HENDERSON ENGINEERS reserve the right to require a re-testing of 100% of the cable plant, all without additional costs to the project.
14. Repair or replace any defects or malfunctions found prior to the commencement of final acceptance activities by the HENDERSON ENGINEERS.

15. Contact the HENDERSON ENGINEERS should problems or concerns arise during the testing activities.
- F. Record all products used, wire numbers, connection numbers, and any changes to the systems accurately mapping the system installation, including the data network components. This information shall be used for inclusion with the system record drawings as described later in the specifications.
- G. Should the HENDERSON ENGINEERS be required to invest time performing some or all of the tests, the Contractor will compensate the HENDERSON ENGINEERS for all associated costs.

### **3.5 FINAL ACCEPTANCE**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for Final Acceptance requirements.

### **3.6 OPERATION & MAINTENANCE (O&M) MANUALS**

- A. Refer to Section 27 41 00 - AUDIO VIDEO SYSTEMS for O&M Manual requirements with the following alterations and additions:
  1. Additionally include broadcast cabling system testing results under a separate section.

**END OF DIVISION 28 TABLE OF CONTENTS**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 28 05 00 - BASIC SECURITY REQUIREMENTS****PART 1 - GENERAL**

1.1 Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 00 and Division 01 Specifications Sections, apply to this Section.

**1.2 SPECIAL NOTE**

- A. All provisions of the Division 00 and Division 01 apply to work specified in this Division.
- B. The Electronic Safety and Security drawings and specifications assign work (labor and/or materials) to be provided by the General, Electrical, Communications, Plumbing, Fire Suppression or HVAC Contractor or their sub-contractors. Understanding that the contractors for mechanical and electrical work are sub-contractors to the (General) Contractor, such assignments are not intended to restrict the Contractor in assignment of work among the sub-contractor to accommodate trade agreements and practices or the normal conduct of the construction work.

**1.3 SCOPE OF WORK – ELECTRONIC SAFETY AND SECURITY (ESS)**

- A. The scope of the Electronic Safety and Security work includes furnishing, installing, testing and warranty of all Electronic Safety and Security work and complete Electronic Safety and Security systems shown on the Electronic Safety and Security drawings and specified herein.

**1.4 ALTERNATES**

- A. Refer to the description of Alternates in Division 01 which affect the Electronic Safety and Security work.

**1.5 PERMITS AND REGULATIONS**

- A. Include payment of all permit and inspection fees applicable to the work in this Division. Furnish for the Owner a certificate of approval from the governing inspection agencies, as a condition for final payment.
- B. Work must conform to the National Electrical Code, National Electrical Safety Code and other applicable local, state and federal laws, ordinances and regulations. Where drawings or specifications exceed code requirements, the drawings and specifications shall govern. Install no work contrary to minimum legal standards.
- C. All electrical work shall be inspected and approved by the local jurisdictional authority.
- D. All electrical work shall be inspected and approved by the Alabama Division of Industrial Compliance who will issue the inspection certificate.
- E. Upon completion of work, the Electronic Safety and Security Contractor shall furnish to the consulting State Architect the certificate of inspection and approval before final payment on contract will be allowed.
- F. Final acceptance of all work will also be subject to the approval of the Owner.

**1.6 DRAWINGS AND SPECIFICATIONS**

- A. The drawings indicate the general arrangement of the work and are to be followed insofar as possible. The word "provide", as used, shall mean "furnish and install". If significant deviations from the layout are necessitated by field conditions, detailed layouts of the proposed departures shall be submitted to the Architect for approval before proceeding with the work.
- B. Make all necessary field measurements to ensure correct fitting. Coordinate work with all other trades in such a manner as to cause a minimum of conflict or delay.

- C. The drawings and specifications shall be carefully studied during the course of bidding and construction. Any errors, omissions or discrepancies encountered shall be referred immediately to the Architect for interpretation or correction, so that misunderstandings at a later date may be avoided. The contract drawings are not intended to show every vertical or horizontal offset which may be necessary to complete the systems. Having wireways and fittings fabricated and delivered in advance of making actual measurements shall not be sufficient cause to avoid making offsets and minor changes as may be necessary to install wireways, fittings and equipment.
- D. The Architect shall reserve the right to make minor adjustment in locations of system runs and components where he considers such adjustments desirable in the interest of protecting and concealing work or presenting a better appearance where exposed. Any such changes shall be anticipated and requested sufficiently in advance as to not cause extra work, or unduly delay the work. Coordinate work in advance with all other trades and report immediately any difficulties which can be anticipated.
- E. Equipment, ductwork, piping and electronic safety and security wiring shall not be installed in the dedicated electrical space above or in the working space required around electrical switchgear, motor control centers or panelboards as identified by NEC 110.26 Spaces About Electrical Equipment – 600 Volts Nominal or Less. For equipment rated over 600 volts nominal – 110.32 Work Space About Equipment – 110.33 Entrance and Access to Work Space – 110.34 Work Space and Guarding. The Electronic Safety and Security Contractor shall caution other trades to comply with this stipulation.
- F. Where any system runs and components are so placed as to cause or contribute to a conflict, it shall be readjusted at the expense of the contractor causing such conflict. The Architect's decision shall be final in regard to the arrangement of conduit, etc., where conflict arises.
- G. Provide offsets **in** system runs, additional fittings, necessary conduit, pull boxes, conductors, switches and devices required to complete the installation, or for the proper operation of the system. Each Contractor shall exercise due and particular caution to determine that all parts of the work are made quickly and easily accessible.
- H. Should overlap of work among the trades become evident, this shall be called to the attention of the Architect. In such event, none of the trades or their suppliers shall assume that he is relieved of the work which is specified under his branch until instructions in writing are received from the Architect.

### 1.7 ASBESTOS MATERIALS

- A. Abatement, removal or encapsulation of existing materials containing asbestos is not included in the Electronic Safety and Security Contract. Necessary work of this nature will be arranged by the Owner to be done outside of this construction and remodeling project by a company regularly engaged in asbestos abatement. Such work will be scheduled and performed in advance of work in the construction and remodeling project.
- B. If, in the performance of the Electronic Safety and Security work, materials are observed which are suspected to contain asbestos, the Electronic Safety and Security Contractor shall immediately inform the Architect/Engineer who in turn will notify the Owner. Work that would expose workers to the inhalation of asbestos particles shall be terminated. Work may be resumed only after a determination has been made and unsafe materials have been removed or encapsulated and the area declared safe.

### 1.8 INSPECTION

- A. All work shall be subject to inspection of Federal, State and local agencies as may be appropriate, and of the Architect and Engineer.
- B. Final inspection certificates shall be obtained by the Contractor and given to the Owner.

**1.9 RECORD DRAWINGS**

- A. The Electronic Safety and Security Contractor shall maintain a separate set of prints of the contract documents and shall show all changes or variations, in a manner to be clearly discernible, which are made during construction. Upon completion of the work, these drawings shall be turned over to the Architect. This shall apply particularly to underground and concealed work, and to other systems where the installation varies to a degree which would justify recording the change.

**1.10 OPERATING AND MAINTENANCE MANUALS**

- A. Two copies each of operating and maintenance manuals shall be assembled for the Electronic Safety and Security work by the Contractor.
- B. All shop drawings and installation, maintenance and operating instruction pamphlets or brochures, wiring diagrams, parts list, and other information, along with warranties, shall be obtained from each manufacturer of the principal items of equipment. In addition, the Contractor shall prepare a chart listing all items of equipment which are furnished under his contract and indicating the nature of maintenance required, the recommended frequency of checking these points and the type of lubricating media or replacement material required.
- C. Standard NEMA publications on the operation and care of equipment may be furnished in lieu of manufacturer's data where the manufacturer's instructions are not available.
- D. These shall be assembled into three-ring loose leaf binders or other appropriate binding. An index and tabbed sheets to separate the sections shall be included. These shall be submitted to the Architect or Engineer for review. Upon approval, manuals shall be turned over to the Owner.
- E. O & M manuals shall contain the following information at a minimum:
  - 1. Copies of all approved shop drawings with the Engineer's stamp.
  - 2. Owner's manuals for every item of equipment when available from the manufacturer. These shall be the technical manuals provided by the manufacturer and shall not consist of generic sales brochures. Technical manuals shall provide complete specifications for the equipment as well as complete operating, maintenance, troubleshooting and product repair/replacement information. Where available only in electronic format, the contractor may provide a CD with electronic versions of Owner's manuals. CDs containing electronic versions of Owner's manuals must contain the proper software viewers for each document type.
  - 3. Electronic Safety and Security drawings updated with final as-built information.
  - 4. This shall be in the form of a complete set of Electronic Safety and Security drawings with as-built information indicated in colored pen based upon actual field conditions.
  - 5. System schematic and block diagrams for every system updated with final as-built information. These drawings shall define the exact arrangement of each system including wiring configuration, device locations and cable types.
  - 6. Rack elevations for all systems with rack mounted equipment.

**1.11 FINAL INSPECTION AND PUNCH LIST**

- A. As the time of work completion approaches, the Contractor shall survey and inspect his work and develop his own punch list to confirm that it is complete and finished. He shall then notify the Architect and request that a final inspection be made. It shall not be considered the Architect's or Engineer's obligation to perform a final inspection until the Contractor has inspected the work and so states at the time of the request for the final inspection.

- B. Requests to the Architect, Engineer or Owner for final inspection may be accompanied by a limited list of known deficiencies in completion, with appropriate explanation and schedule for completing these; this is in the interest of expediting acceptance for beneficial occupancy.
- C. The Architect and/or Engineer will inspect the work and prepare a punch list of items requiring correction, completion or verification. Corrective action shall be taken by the Contractor to the satisfaction of Architect and Engineer within 30 days of receipt of the Architect/Engineer's punch list.

#### **1.12 WARRANTY**

- A. This Contractor shall warrant all workmanship, equipment and material entering into this contract for a period of one (1) year or the period of time as per specific specification section from the date of approval of certificate of contract completion by the Owner. Refer to General Conditions. Any materials or equipment proving to be defective during this warranty period shall be made good by this Contractor without expense to the Owner.
- B. This provision is intended specifically to cover deficiencies in contract completion or performance which are not immediately discovered after systems are placed in operation. These items include, but are not limited to replacement of malfunctioning equipment and adjusting special equipment and communication systems to obtain optimum performance.
- C. This provision shall not be construed to include maintenance items such as making normally anticipated adjustments or correcting adjustment errors on the part of the Owner's personnel.
- D. Provisions of this warranty shall be considered supplementary to warranty provisions under General Conditions.

### **PART 2 - PRODUCTS**

#### **2.1 MATERIALS AND EQUIPMENT**

- A. Materials and equipment furnished under this contract shall be in strict accordance with the specifications and drawings and shall be new and of best grade and quality. When two or more articles of the same material or equipment are required, they shall be of the same manufacturer.
- B. All electrical equipment and wiring shall bear the Underwriters Laboratories, Inc. label where UL labeled items are available, and shall comply with NEC (NFPA-70) and NFPA requirements.

#### **2.2 REFERENCE STANDARDS**

- A. Where standards (NFPA, NEC, ASTM, UL, etc.) are referenced in the specifications or on the drawings, the latest edition is to be used except, however, where the authority having jurisdiction has not yet adopted the latest edition, the edition so recognized shall be used.

#### **2.3 EQUIPMENT SELECTION**

- A. The selection of materials and equipment to be furnished under this contract shall be governed by the following:
  - 1. Where trade names, brands, or manufacturers of equipment or materials are listed in the specification, the exact equipment listed shall be furnished. Where more than one name is used, the Contractor shall have the option of selecting between any one of the several specified. All products shall be first quality line of manufacturers listed.
  - 2. Where the words "or approved equal" appear after a manufacturer's name, specific approval must be obtained from the Architect during the bidding period in sufficient time to be included in an addendum. The same shall apply for equipment and materials not named in the specifications, where approval is sought.

3. Where the words "equal to" appear, followed by a manufacturer's name and sometimes a model or series designation, such designation is intended to establish quality level and standard features. Equal equipment by other manufacturers will be acceptable, subject to the Engineer's approval.
- B. Substitute equipment of equal quality and capacity will be considered when the listing of such is included as a separate item of the bid. State the deduction or addition in cost to that of the specified product.
- C. Before bidding equipment, and again in the preparation of shop drawings, the Contractor and his supplier shall verify that adequate space is available for entry and installation of the item of equipment, including associated accessories. Also verify that adequate space is available for servicing of the equipment and that required NEC clearances are met.
- D. If extensive changes in conduit, equipment layout or electrical wiring and equipment are brought about by the use of equipment which is not compatible with the layout shown on the drawings, necessary changes by all other trades shall be deemed to be included in the contract.

## **2.4 SHOP DRAWINGS**

- A. Six sets of shop drawings and descriptive information shall be assembled by each Contractor of equipment and materials furnished in his contract, and submitted to the Architect and/or Engineer for review as stated in the General Conditions and Supplementary Conditions. These shall be submitted as soon as practicable and before installation and before special equipment is manufactured. Submittal information shall clearly identify the manufacturer, specific model number, approval labels, performance data, electrical characteristics, features, specified options and additional information sufficient to evidence compliance with the contract documents. Shop drawings for equipment, fixtures, devices and materials shall be labeled and identified same as on the Contract Documents. If compliance with the above criteria is not provided shop drawings will be subject to rejection and returned without review.
- B. The review of shop drawings by the Architect or Engineer shall not relieve the Electronic Safety and Security Contractor from responsibility for errors in the shop drawings. Deviations from specifications and drawing requirements shall be called to the Engineer's attention in a separate clearly stated notification at the time of submittal for the Engineer's review.

## **PART 3 - EXECUTION**

### **3.1 TESTING**

- A. As each wiring system is completed, it shall be tested for continuity and freedom from grounds.
- B. As each electrically operated system is energized, it shall be tested for function.
- C. The Contractor shall perform meager and resistance tests and special tests on any circuits or equipment when an authorized inspection agency suspects the system's integrity or when requested by the Architect or Engineer.
- D. All signaling and communications systems shall be inspected and tested by a qualified representative of the manufacturer or equipment vendor. Refer to specific section for required tests of the various systems. Submit four (4) copies of reports indicating results.
- E. Tests shall be witnessed by field representatives of the Architect or Engineer or shall be monitored by a recorder. Furnish a written record of each system test indicating date, system, test conditions, duration and results of tests. Copies of all test reports shall be included in the O&M manuals.
- F. Instruments required for tests shall be furnished by the Contractor.

**3.2 EQUIPMENT CLEANING**

- A. Before placing each system in operation, the equipment shall be thoroughly cleaned; cleaning shall be performed in accordance with equipment manufacturer's recommendations.
- B. Refer to appropriate Sections for cleaning of other equipment and systems for normal operation.

**3.3 OPERATION AND ADJUSTMENT OF EQUIPMENT**

- A. As each system is put into operation, all items of equipment included therein shall be adjusted to proper working order. This shall include balancing and adjusting voltages and currents; verifying phase rotation; setting breakers, ground fault and other relays, controllers, meters and timers; and adjusting all operating equipment.

**3.4 OPERATING DEMONSTRATION AND INSTRUCTIONS**

- A. The Contractor shall set the various systems into operation and demonstrate to the Owner and Architect that the systems function properly and that the requirements of the Contract are fulfilled.
- B. The Contractor shall provide the Owner's representatives with detailed explanations of operation and maintenance of equipment and systems. A thorough review of the operating and maintenance manuals shall be included in these instructional meetings.
- C. O & M Manuals shall be submitted, reviewed and approved prior to scheduling of demonstrations.
- D. A minimum of 24 hours shall be allowed for instructions to personnel selected by the Owner. Instructions shall include not less than the following:
  - 1. Show location of items of equipment and their purpose.
  - 2. Review binder containing instructions and equipment and systems data.
  - 3. Coordinate written and verbal instructions so that each is understood by personnel.
  - 4. Manufacturer's representatives for the various special and communication systems shall give separate instructions.
- E. A minimum of 48 hours continuous trouble-free operating time shall be acceptable to prove that the systems function properly.
- F. Note that additional time for training, operating time, etc. may be required per other specification sections and shall be included. This section only establishes minimum requirements.

**END OF SECTION 28 05 00**

**SECTION 280520 - BASIC SECURITY MATERIALS AND METHODS****PART 1 - GENERAL**

- 1.1 Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 00 and Division 01 Specifications Sections, apply to this Section.
- 1.2 Temporary Electronic Safety and Security Services
- A. The temporary Electronic Safety and Security for construction is provided by the Electronic Safety and Security Contractor. Refer to Division 01 – General Requirements.
  - B. The use of the permanent Electronic Safety and Security system for temporary services during the latter stages of construction shall be allowed. Expedite completion of system as practicable to this end. Maintain the system during this period.
  - C. Warranty periods on equipment, materials and systems shall commence upon Owner acceptance of the building or systems. Temporary use shall not jeopardize or alter warranty requirements.
  - D. The complete temporary service shall comply with Owner Facility, OSHA and all Code requirements.

**1.3 CONTINUITY OF SERVICE**

- A. Work shall be so planned and executed as to provide reasonable continuous service of existing systems throughout the construction period. Where necessary to disrupt services for short periods of time for connection, alteration or switch-over, the Owner shall be notified in advance and outages scheduled at the Owner's reasonable convenience.
- B. Submit, on request, a written step-by-step sequence of operations proposed to accomplish this work. The outline must include tentative dates, times of day for disruption, downtime and restoration of services. Submit the outline sufficiently in advance of the proposed work to allow the Architect or Engineer to review the information with the Owner. Upon approval, final planning and the work shall be done in close coordination with the Owner.
- C. Shutdown of systems and work undertaken during shutdowns shall be bid as being done during normal working hours. If the Owner should require such work be performed outside of normal working hours, reimbursement shall be made for premium time expenses only, without mark-up.

**PART 2 - PRODUCTS****2.1 ACCESS PANELS**

- A. Ceiling and wall access panels shall be provided where indicated on the drawings, or where otherwise required to gain access to concealed junction boxes, pull boxes, devices and equipment requiring service or adjustment.
- B. All proposed access panel sizes and locations shall be approved by the Architect and Design team prior to installation.
- C. Access panels (refer to paragraph C. below for more specialized drywall ceiling access panels) shall be steel construction (except where aluminum or stainless steel is specified) with concealed hinge and door with screwdriver lock. Locks in "secured" areas of the building shall have tamperproof screws. Panels shall be 18" x 18" size unless larger panels are shown or required. Mounting frames shall be compatible with the material in which they are installed. Access panels shall be:
  - 1. Standard flush type with overlapping flange for masonry and tile walls.
  - 2. Recessed type having the door recessed to accept a drywall panel insert, for drywall ceilings and walls.

3. Standard flush type for drywall ceilings and walls.
- D. Access panels in drywall ceilings shall be glass reinforced gypsum drywall lay-in panels with flush mounting frames. Corners of panels shall be rounded. Panels shall be 18" x 18" unless larger panels are shown or required.
- E. Access panels in fire rated shaft walls and in fire rated ceilings shall be "B" label or greater to match the rating of the wall or ceiling.
- F. Materials used in plenums shall be rated for plenum use conforming to the 25/50 smoke development and flame spread restrictions.

### **PART 3 - EXECUTION**

#### **3.1 WORKMANSHIP**

- A. Materials and equipment shall be installed and supported in a first-class and workmanlike manner by mechanics skilled in their particular trades. Workmanship shall be first-class in all respects, and the Architect shall have the right to stop the work if highest quality workmanship is not maintained.
- B. Electrical work shall be performed by a licensed Electrical Contractor in accordance with requirements of the jurisdiction.
- C. Electronic Safety and Security work shall be performed by certified contractor in accordance with the respective specification and system requirements.

#### **3.2 PROTECTION**

- A. Each Contractor shall be entirely responsible for all material and equipment furnished in connection with his work. Special care shall be taken to properly protect all parts thereof from theft, damage or deterioration during the entire construction period in such a manner as may be necessary, or as directed by the Architect.
- B. The Owner's property and the property of other contractors shall be scrupulously respected at all times. Provide drop cloths and visqueen or similar barriers where dust and debris is generated, to protect adjacent areas.

#### **3.3 CUTTING AND PATCHING NEW BUILDINGS**

- A. Refer to Division 01 - General Requirements for information regarding cutting and patching.
- B. Plan the work well ahead of the general construction. Where conduits, wireways and cable trays are to pass thru walls, partitions, floors, roof or ceilings, place sleeves in these elements or arrange with the General Contractor to provide openings where sleeves are not practical. Where sleeves or openings have not been installed, saw-cut or core drill holes and patch as required for the installation of this work, or pay other trades for doing this work when so directed by the Architect. Any damage caused to the building in this work shall be repaired or rectified.
- C. All sleeves and openings not used or partially used shall be closed to prevent passage of smoke and fire.

#### **3.4 PAINTING**

- A. In addition to any painting specified for various individual items of equipment, the following painting shall be included in the Electronic Safety and Security Contract:
  1. Ferrous metal which is not factory or shop painted or galvanized and which remains exposed to view in the building including finished areas, mechanical rooms, storage rooms, and other unfinished areas shall be given a prime coat of paint and two finish coats of paint.
  2. Ferrous metal installed outside the building which is not factory or shop painted or galvanized shall be given a prime coat of paint and two finish coats of paint.

3. Equipment and materials which have been factory or shop coated (prime or finished painted or galvanized), on which the finish has been damaged or has deteriorated, shall be cleaned and refinished equal to its original condition. The entire surface shall be repainted if a uniform appearance cannot be accomplished by touch-up.
  4. Apply Z.R.C. Galviline / 221 cold galvanizing compound, or approved equal, for touch-up and repair of previously galvanized surfaces.
- B. Each backboard shall be painted with a minimum of two coats of flame retardant paint, all sides; gray enamel primer with gray matte enamel finish.
  - C. Paint, surface preparation and application shall conform to applicable portions of the Painting section of Division 01 of the Specifications. All rust must be removed before application of paint.
  - D. Finish painting is included in the General Contract except where otherwise required under remodeling work. Refer to the Cutting and Patching paragraph in this Section for finishing requirements.

### **3.5 ACCESS PANELS**

- A. Access panels shall be turned over to the General Contractor for installation.
- B. Access locations thru HVAC ductwork must be coordinated with the ductwork installer. Location of the hinged access door with latch must be coordinated in advance with the HVAC Contractor.
- C. Location of access panels shall be planned to clear ceiling lights, ceiling support grids and other obstructions so as to allow, wherever possible, full shoulder clearance beside the device to be inspected, adjusted or repaired.
- D. Panels with recessed doors are to be fitted with insert panels of drywall or, those for plaster, infilled with plaster. Caution the Installing Contractor to provide appropriate framing with drywall or plaster beading to ensure a finished appearance. Shim strips may be required to bring the insert panel flush with the plane of the door and wall / ceiling.

### **3.6 BACKBOARDS**

- A. Where shown on the drawings, backboards shall be provided for wall mounting of disconnect switches, devices and Electronic Safety and Security equipment. The Contractor may opt to mount additional groups of disconnect switches on backboards.
- B. General
  1. Backboard shall be 0.75" thick waterproof flame retardant plywood secured to structure.
  2. Each board shall be painted.
  3. Electronic Safety and Security backboards shall be normally 4 ft. x 8 ft. mounted 6" above floor where located on drawings. Where other sizes are required, they will be noted on the drawings.
- C. Each terminal cabinet for Electronic Safety and Security systems, relays, etc., shall be fitted with a full size 0.50" thick backboard for mounting terminal strips, equipment, etc.

END OF SECTION 280520

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 280526 - GROUNDING AND BONDING FOR SECURITY SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 00, and Division 01 Specifications Sections, apply to this Section.

**1.2 TECHNOLOGY GROUNDING DESCRIPTION**

- A. Provide a PRIMARY BONDING BUSBAR (PBB) in TC-01. This ground bar shall be electrically bonded to the Building Main Electrical Service Ground with a minimum insulated, #2/0, copper grounding conductor.
- B. Provide a SECONDARY BONDING BUSBAR (SBB) in each TC and at the telephone and CATV service entrance points.
- C. Provide a Telecommunications Bonding Conductor (TBC) from each SBB to a local electrical panelboard ground bus. This backbone shall consist of a minimum #6, bare copper grounding conductor. The TBC shall be bonded to the ground bars at each end. Provide a warning label attached to each Telecommunications Bonding Conductor Backbone at each end stating "WARNING: Building telecommunications grounding system. Do not remove or disconnect without prior approval from building Telecommunications Department."
- D. Provide bonding between all joints of cable tray and ladder rack. Provide bonding to all conduit sleeves. Provide bonding to all technology equipment racks and cabinets within each wiring closet. Provide bonding from the Technology grounding system to the telephone and CATV demarc equipment and protector panels. Coordinate this grounding prior to installation of telephone and CATV services.
- E. This contract shall be responsible for providing all equipment, cable tray, ladder rack, conduit and sleeve grounding in each TC to the grounding system installed under Division 26.
- F. All work shall be in compliance with NEC, Article 250 and ANSI/TIA-607.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Grounding rods shall be copper clad, molten-welded copper to steel; unless otherwise designated, 0.625" diameter x 10 ft. long.
- B. Clamps and continuity devices shall be non-ferrous material, UL approved. Connections to ground rods and all underground connections shall be "Thermoweld" or "Cadweld".
- C. Ground conductors shall be insulated, identified by green insulation or by painting or taping green at all accessible locations and shall be connected with approved connectors and terminators to boxes, devices, equipment, etc. and to ground bars in panels.

**2.2 PRIMARY BONDING BUSBAR (PBB)**

- A. Ground bar shall be solid copper, 4" high, .25" thick, minimum 36" long with pre-drilled, 1" hole centers for anticipated large (2) hole lug count, pre-drilled, 5/8" hole centers for anticipated small (2) hole lug count and must be UL listed. Provide final length as required to accommodate grounding lug attachments.
- B. Ground bars shall be provided with insulated stand-off brackets for wall mounting providing a minimum of 2" wall clearance. Insulators shall have a minimum voltage rating of 600V and a minimum Short Time Electrical Strength of 55kVv.
- C. Manufactured by StormCopper or equal by B-Line, Andrew, Tessco Technologies, Harger.

**2.3 SECONDARY BONDING BUSBAR (SBB)**

- A. Ground bar shall be solid copper, 4" high, .25" thick, minimum 12" long with pre-drilled, 1" hole centers for anticipated large (2) hole lug count, pre-drilled, 5/8" hole centers for anticipated small (2) hole lug count and must be UL listed. Provide final length as required to accommodate grounding lug attachments.
- B. Ground bars shall be provided with insulated stand-off brackets for wall mounting providing a minimum of 2" wall clearance. Insulators shall have a minimum voltage rating of 600V and a minimum Short Time Electrical Strength of 55kVv.
- C. Bus bar and standoff assembly manufactured by StormCopper or equal by B-Line, Andrew, Tessco Technologies, Hubbell, Harger.

**2.4 TELECOMMUNICATIONS BONDING CONDUCTOR (TBC)**

- A. Insulated Conductors - Soft, annealed bare copper per ASTM B-3. Concentric, compressed stranded (class B or C Alternate ASTM B-787) per ASTM B-8, UL-83 and UL-854. Insulation Jacket: Nylon per UL-83. Insulation: High dielectric polyvinyl chloride per UL-83 and UL-854.
- B. Uninsulated Conductor: Soft, annealed bare copper per ASTM B-3. Stranded as specified herein. Overall Finish: Gray polyvinyl chloride (PVC) per UL-824.
- C. RATINGS - Cables conform to the following standards:
  - 1. UL-83 for THHN-THWN Cdrs.
  - 2. Federal Specification J-C-30B
- D. Cable as manufactured by Superior/Essex, Rome, AIWC.

**2.5 BONDING CONDUCTORS**

- A. Conductor shall be minimum #6AWG and may be either stranded or solid, insulated or bare.
- B. Cable as manufactured by Superior/Essex, Rome, AIWC.

**PART 3 - EXECUTION****3.1 GENERAL**

- A. Wiring devices shall be connected with grounding jumper from ground pole on device to grounding screw in the outlet box.
- B. The complete metal conduit system shall be used for the equipment grounding system. Conduit systems and associated fittings and terminations shall be made mechanically tight to provide a continuous electrical path to ground and shall be safely grounded at all equipment by bonding all metallic conduit to the equipment enclosures with locknuts cutting thru paint or enclosures. Bond all conduits entering primary switchgear, pad-mount transformers, unit substations, emergency generator control panel and main breaker panel, and secondary service entrance switchboard with a ground wire connecting the grounding type bushings to the equipment ground bar. Conductors shall be sized per NEC Tables 250-66 and 250-122. Bond all communications conduit systems to ground.
- C. In addition to using the conduit system for grounding, a complete auxiliary green wire equipment grounding system shall be installed, continuous from main ground, thru distribution and branch circuit panelboards and paralleling all feeders and branch circuit wiring. Grounding conductor sizes shall comply with NEC Table 250-122, minimum size shall be #12 copper except #14 on control circuits. This shall apply to all circuits rated 100 volts or more above ground potential.
- D. Connect ground terminal on wiring devices to auxiliary green wire equipment grounding system.

- E. Ground neutral of all transformers for separately derived systems. Grounds may be to the street side of the main water service, thru a set of interconnected ground rods, or to other NEC approved electrodes.
- F. Cord connected appliance frames shall be grounded to the equipment grounding system thru a green wire in the cord.
- G. A green grounding conductor shall be installed in each non-metallic conduit and all flexible conduits, including exterior underground conduits.
- H. System neutral connections shall be insulated from metal enclosures except at the neutral of the service entrance equipment and on the neutral of a separately derived system. Connections to the main switchgear enclosure shall be made by means of bonding jumpers.
- I. The building neutral shall be identified throughout with white conductors. Where there are neutral conductors from a separately derived system (such as 120/208 volt, 3 phase, 4 wire where the main building service is 277/480 volt, 3 phase, 4 wire) the neutrals of the two systems shall be separately identifiable per NEC Article 200.

### **3.2 GROUNDING/BONDING CONNECTIONS**

- A. Ground all backbone cable sheaths, shield drain wires from all voice/data horizontal cable, equipment racks and equipment to the local PBB/SBB.
- B. All grounding and bonding shall be in conformance with the National Electric Code, article 250 and as recommended by ANSI/TIA-607.
- C. All joints of all cable tray and ladder rack shall be bonded together. When bonding to painted equipment, methods shall be utilized to ensure continuity of grounding connection.
- D. Telephone, CATV Service entrance equipment, and primary protection panels shall be bonded to the technical grounding system. Coordinate with serving utilities regarding configuration of grounding connections.
- E. All connection to ground bars (SBB, PBB) shall be made using listed lugs appropriate for mounting provisions in the supplied ground bar.

### **3.3 TESTING GENERAL**

- A. The Contractor shall be responsible for testing the complete technology grounding system.
- B. No testing shall be executed until the entire system has had the Owner approved labeling scheme applied and accepted.
- C. Test reports shall be provided to indicate.
  - 1. Impedance values across each TBB from the PBB to the SBB.
  - 2. Impedance values across the TBC from the PBB to the main electrical service ground.
  - 3. Impedance values across each GE between SBB on a common floor.
- D. Tests shall be witnessed by Architect / Engineer / Owner and shall be monitored by a recorder.
- E. System testing shall be performed with final test results turned over to the Owner prior to acceptance of the system. Missing or incomplete test results will not be reviewed, and the system will not be commissioned by the Owner / Architect / Engineer.
- F. Instruments and labor required for tests shall be furnished by the Contractor. All system test equipment shall be approved by the Owner/ Architect / Engineer prior to application.
- G. Instruments required for tests shall be furnished by the Contractor.

**3.4 LABELING**

- A. The Contractor shall be responsible for labeling all telecommunications grounding equipment, cable, etc. in accordance with the guidelines as described herein.
- B. Each SECONDARY BONDING BUSBAR shall be provided with a warning label to read:
  - 1. "WARNING: Building telecommunications grounding system. Do not remove or disconnect without prior approval from building Telecommunications Department."
- C. Each Telecommunications Bonding Conductor to be provided with a label indicating source and destination ground bars.

**3.5 AS-BUILT DOCUMENTATION**

- A. Refer to Section 27 05 00 for submittal requirements.
- B. Copies of all approved shop drawings with the Engineer's stamp.
- C. Copy of all test reports.
- D. Technology drawings updated with final as-Built information. This shall be in the form of a complete set of Technology drawings with as-built information indicated in colored pen based upon actual field conditions.
- E. System schematic and block diagrams for technology grounding system updated with final as-built information. These drawings shall define the exact arrangement of each system including wiring configuration, device locations and cable types.

**END OF SECTION 280526**

**SECTION 280528 - SECURITY SYSTEMS PATHWAYS AND SUPPORT EQUIPMENT****PART 1 - GENERAL**

- 1.1 Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
- 1.2 Source Limitations: Obtain cable trays and components from single manufacturer.
- 1.3 Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.
- 1.4 Structural Performance: See articles for individual cable tray types for specific values for the following parameters:
- 1.5 Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
- 1.6 Concentrated Load: A load applied at midpoint of span and centerline of tray.
- 1.7 Load and Safety Factors: Applicable to both side rails and rung capacities.

**PART 2 - PRODUCTS****2.1 CABLE MANAGEMENT SYSTEM**

- A. Provide pre-manufactured cable supports as manufactured by Panduit, Caddy, Mineralac or Rayco. Cable supports shall be secured to building structure through threaded rod, beam clamps or other UL approved supports as required by site conditions. Components shall provide a minimum cable support point spacing of 60".
- B. Cable management devices must be sized to accommodate 100% spare capacity of the final installed cable base.
- C. Cable management system support components shall be designed with wide support surfaces that do not cause cables to be bend, crushed or otherwise deformed when installed within component loading parameters. Cable management system shall meet UL standards and be UL labeled. Utilizing elements of the building's structure such as beams, joists, etc. to hang cable from will not be acceptable.
- D. Bridle rings shall not be acceptable.
- E. Refer to Section 270528 "Pathways for Communications" for back boxes, etc.

**PART 3 - EXECUTION****3.1 GENERAL INSTALLATION**

- A. Refer to "TN" drawings for pathway types, locations and routing.
- B. Cable pathways shall provide the following minimum clearances:
  1. Motors and transformers – 4 ft.
  2. Conduit and cable used for electrical power distribution – 1 ft.
  3. Fluorescent lighting – 5 inches.
  4. Power lines up to 5 kV – 5 inches.
  5. Power lines over 5 kV. – 24 inches.

- C. Backboards and cabinets shall be installed for Electronic Safety and Security in TRs and rooms/spaces to support Electronic Safety and Security equipment and wiring. Coordinate locations of backboards and cabinets with the Owner prior to installation.
- D. Restore fire rating and smoke stoppage integrity where all wireways, raceways and cable trays pierce walls, floors and ceilings by sealing with approved means.
- E. Provide necessary pathways in areas that have exposed structure or plastered ceilings to provide a wiring path for cables from area above suspended ceilings to respective backboards.
- F. No non-metallic or combustible materials shall be installed in ceiling or other plenums used for circulating room air used for heating, ventilation or cooling.

### **3.2 CONDUIT SYSTEMS**

- A. No section of conduit shall be longer than 100 feet between pulling points.
- B. No more than two 90 degree bends in a section of conduit between pulling points.
- C. Each section of conduit shall be labeled for length, destination closet and origination closet.
- D. Refer to EIA/TIA 569-A and Section 270528 "Pathways for Communications" for specific conduit and pull box requirements.
- E. Conduit and wiring above accessible ceilings shall be run as high as possible, above piping and ductwork, so as to not interfere with mechanical trades, access to mechanical and electrical devices and to allow freedom to remove ceiling panels.
- F. Provide a No. 12 gauge pull wire or nylon pull cord in each empty conduit run.

### **3.3 WIREWAYS**

- A. Wireways shall be supported with factory made hangers designed expressly for this purpose and 0.375" diameter solid hanger rods approximately 5 ft. on center or approved strap hangers for surface mounting.

### **3.4 CABLE MANAGEMENT SYSTEM**

- A. The drawings do not indicate specific routes for cables. The Electronic Safety and Security Contractor is responsible for developing all cabling routes utilizing existing cable management pathways and systems or providing supplemental management pathways and systems so that all structured cabling adhere to specific codes and standards specifically developed for the installation of such cables. Where the use of existing cable management systems and pathways would cause the structured cable system to violate specific codes and standards regarding cable lengths, environments, proximity to EMI and RF noise sources, etc., the Electronic Safety and Security Contractor shall be responsible for developing alternative pathways and shall include all labor and material for doing so within the scope of this work.
- B. In areas where there is not an installed raceway system (conduits or cable tray) and a cable support system is required, this contract shall be responsible for providing a cable management system. Where cables are installed open wired through the use of cable management systems, they shall be installed such that there is a minimum sag of 4 inches for every 4 foot of horizontal run. Cable pathways shall provide the following minimum clearances:
  - 1. Motors and transformers – 4'.
  - 2. Conduit and cable use for electrical power distribution – 1'.
  - 3. Fluorescent lighting – 5".
  - 4. Power lines up to 2kVA – 5".
  - 5. Power lines over 5kVA – 24" cable management system shall be secured to building structure utilizing manufactured approved methods and hardware.

- C. Cable management system support components shall be designed with wide support surfaces that do not cause cables to be bent, crushed or otherwise deformed when installed within component loading parameters. Cable management system shall meet UL standards and be UL labeled. Utilizing elements of the building's structure such as beams, joists, etc. to hang cable from will not be acceptable.

### **3.5 IDENTIFICATION / LABELING**

- A. All continuous Electronic Safety and Security pathways such as conduit, cable tray, etc. shall be labeled to indicate origination and destination. Label shall be applied every 50' wherever accessible or subject to administration. Coordinate label information with Owner.
- B. Label shall consist of mechanically printed, permanent adhesive label, applied to cleaned / prepped area of raceway.

### **3.6 AS-BUILT DOCUMENTATION**

- A. Provide a complete set of architectural floor plan drawings indicating final communications pathway systems with accurate "as-built" locations to show the actual route for the communications systems pathways.
- B. Drawings shall indicate each pathway type and provide sizing information such as conduit/innerduct diameter, cable tray width, cable management ring size, etc.
- C. Component Service Manuals: Include information for testing, repair, troubleshooting, assembly, disassembly, and required / recommended maintenance intervals for all types of pathways.

### **3.7 FIRESTOPPING**

- A. Restore fire rating and smoke stoppage integrity where all wireways, raceways and cable trays pierce walls, floors and ceilings by sealing with approved means.
- B. Refer to Division 26/27 for firestopping requirements.
- C. Note: When using cable tray and tray rated cables in industrial establishments, coordinate any specific fire ratings / protection with Owner and Plumbing Designer – Factory Mutual, Industrial Risk Insurers (IRI) and ISO may require added fire rating requirements such as special cable insulation or foaming open cables in cable trays. Also, be aware of spaces above ceilings being used for air plenums.

**END OF SECTION 280528**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 281300 - ACCESS CONTROL SOFTWARE AND DATABASE MANAGEMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Security access central-control station.
  - 2. One or more security access networked workstations.
  - 3. Security access operating system and application software.
  - 4. Security access controllers connected to high-speed electronic-data transmission network.
- B. Related Requirements:
  - 1. Section 281500 "Access Control Hardware Devices" for access control system hardware, such as keypads, card readers, and biometric identity devices.

**1.3 DEFINITIONS**

- A. Credential: Data assigned to an entity and used to identify that entity.
- B. Central Station: Central station shall provide operator interface, interaction, display, control, and dynamic and real-time monitoring. Central station shall control system networks to interconnect all system components, including workstations and field-installed controllers.
- C. DTS: Digital Termination Service. A microwave-based, line-of-sight communication provided directly to the end user.
- D. Identifier: A credential card; keypad personal identification number; or code, biometric characteristic, or other unique identification entered as data into the entry-control database for the purpose of identifying an individual. Where this term is presented with an initial capital letter, this definition applies.
- E. Location: A Location on the network having a workstation-to-controller communications link, with additional controllers at the Location connected to the workstation-to-controller link with a TIA 485-A communications loop. Where this term is presented with an initial capital letter, this definition applies.
- F. Workstation: Personal computer. Applies to the central station, workstations, and file servers.
- G. RAS: Remote access services.
- H. RF: Radio frequency.
- I. ROM: Read-only memory. ROM data are maintained through losses of power.
- J. TCP/IP: Transport control protocol/Internet protocol.

- K. TWAIN: Technology without an Interesting Name. A programming interface that lets a graphics application, such as an image editing program or desktop publishing program, activate a scanner, frame grabber, or other image-capturing device.
- L. WMP: Windows media player.
- M. Wiegand: Patented magnetic principle that uses specially treated wires embedded in the credential card.
- N. WYSIWYG: What You See Is What You Get. Text and graphics appear on the screen the same as they will in print.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Reference each product to a location on Drawings. Test and evaluation data presented in Product Data shall comply with SIA.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Diagrams for cable management system.
  - 2. System labeling schedules, including electronic copy of labeling schedules that are part of the cable and asset identification system of the software specified in both Parts 2 and 3.
  - 3. Wiring Diagrams. For power, signal, and control wiring. Show typical wiring schematics including the following:
    - a. Workstation outlets, jacks, and jack assemblies.
    - b. Patch cords.
    - c. Patch panels.
  - 4. Cable Administration Drawings: As specified in "Identification" Article.
  - 5. Battery and charger calculations for central station, workstations, and controllers.
- C. Product Schedules.

#### 1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For security system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
  - 1. Workstation operating system documentation.
  - 2. Workstation installation and operating documentation, manuals, and software for the workstation and all installed peripherals. Software shall include system restore, emergency boot diskettes, and drivers for all installed hardware. Provide separately for each workstation.
  - 3. Hard copies of manufacturer's specification sheets, operating specifications, design guides, user's guides for software and hardware, and PDF files on USB, cloud media of the hard-copy submittal.
  - 4. System installation and setup guides with data forms to plan and record options and setup decisions.

**1.6 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Laser Printers for Badge Printing: Three toner cassettes and one replacement drum unit.
  - 2. Credential card blanks, ready for printing. Include enough credential cards for all personnel to be enrolled at the site plus an extra 50 percent for future use.
  - 3. Fuses of all kinds, power and electronic, equal to 10 percent of amount installed for each size used, but no fewer than three units.

**1.7 QUALITY ASSURANCE**

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
  - 1. Cable installer must have on staff an RCDD certified by Building Industry Consulting Service International.
  - 2. Installer must be certified by manufacturer.
- B. Source Limitations: Obtain controllers, Identifier readers, and all software through one source from single manufacturer.

**1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Central Station, Workstations, and Controllers:
  - 1. Store in temperature- and humidity-controlled environment in original manufacturer's sealed containers. Maintain ambient temperature between 50 and 85 deg F, and not more than 80 percent relative humidity, noncondensing.
  - 2. Open each container; verify contents against packing list; and file copy of packing list, complete with container identification, for inclusion in operation and maintenance data.
  - 3. Mark packing list with the same designations assigned to materials and equipment for recording in the system labeling schedules that are generated by software specified in "Cable and Asset Management Software" Article.
  - 4. Save original manufacturer's containers and packing materials and deliver as directed under provisions covering extra materials.

**1.9 PROJECT CONDITIONS**

- A. Environmental Conditions: System shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
  - 1. Control Station: Rated for continuous operation in ambient conditions of 60 to 85 deg F and a relative humidity of 20 to 80 percent, noncondensing.
  - 2. Indoor, Controlled Environment: NEMA 250, Type 1 enclosure. System components, except the central-station control unit, installed in temperature-controlled indoor environments shall be rated for continuous operation in ambient conditions of 36 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.
  - 3. Indoor, Uncontrolled Environment: NEMA 250, Type 3R, Type 4 enclosures. System components installed in non-temperature-controlled indoor environments shall be rated for continuous operation in ambient conditions of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.

4. Outdoor Environment: NEMA 250, NEMA 250, Type 3, Type 4 enclosures. System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of minus 30 to plus 122 deg F dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation where exposed to rain as specified in NEMA 250, winds up to 85 mph.
5. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.
6. Corrosive Environment: For system components subjected to corrosive fumes, vapors, and wind-driven salt spray in coastal zones, provide NEMA 250, Type 4X enclosures.

## **PART 2 - PRODUCTS**

### **2.1 ACCESS CONTROL SOFTWARE**

- A. Lenel (Basis of Design)
- B. Genetec
- C. Honeywell
- D. Tyco
- E. Or Equal

### **2.2 DESCRIPTION**

- A. Security Access System: Workstation-based central station, one or more networked workstation-based workstations, and field-installed controllers, connected by a high-speed electronic-data transmission network.
- B. System Software: Based on 64-bit, central-station, workstation operating system, server operating system, and application software. Software shall have the following capabilities:
  1. Multiuser and multitasking to allow for independent activities and monitoring to occur simultaneously at different workstations.
  2. Graphical user interface to show pull-down menus and a menu-tree format that complies with interface guidelines of the operating system.
  3. System license for the entire system including capability for future additions that are within the indicated system size limits specified in this Section.
  4. Open-architecture system that allows importing and exporting of data and interfacing with other systems that are compatible with operating system.
  5. Password-protected operator login and access.
  6. Open-database-connectivity compliant.
- C. Network connecting the central station and workstations shall be a LAN using TCP/IP with a capacity of connecting up to 99 workstations. System shall be portable across multiple communication platforms without changing system software (including web-based, mobile and thick client).
- D. Network(s) connecting workstations and controllers shall consist of one or more of the following:
  1. Local area, IEEE 802.3 Gigabit-Ethernet, star topology network based on TCP/IP.

2. Local area, IEEE 802.11 compatible wireless mesh network, based on TCP/IP.
3. Direct-connected, RS-232 cable from the COM port of the central station to the first controller, then RS-485 cable to interconnect the remaining controllers at that Location.

### 2.3 OPERATION

- A. Security access system shall use a single database for access-control and credential-creation functions.
- B. Distributed Processing: A fully distributed processing system.
  1. Access-control information, including time, date, valid codes, access levels, and similar data, shall be downloaded to controllers so each controller can make access-control decisions.
  2. Intermediate controllers for access control are prohibited.
  3. In the event that communications with the central controller are lost, controllers shall automatically buffer event transactions until communications are restored, at which time buffered events shall be uploaded to the central station.
- C. Number of Locations:
  1. Support at least 32,000 separate Locations using a single workstation with combinations of direct-connect, or TCP/IP LAN connections to each Location.
  2. Each Location shall have its own database and history in the central station.
  3. Locations may be combined to share a common database.
- D. Data Capacity:
  1. 130 different card-reader formats.
  2. 999 comments.
  3. 48 graphic file types for importing maps.
- E. Location Capacity:
  1. 1024 reader-controlled doors.
  2. 50,000 total-access credentials.
  3. 2048 supervised alarm inputs.
  4. 2048 programmable outputs.
  5. 32,000 custom action messages per Location to instruct operator on action required when alarm is received.
- F. System Network Requirements:
  1. System components shall be interconnected and shall provide automatic communication of status changes, commands, field-initiated interrupts, and other communications required for proper system operation.
  2. Communication shall not require operator initiation or response and shall return to normal after partial- or total-network interruption such as power loss or transient upset.
  3. System shall automatically annunciate communication failures to the operator and shall identify the communications link that has experienced a partial or total failure.

4. Communications controller may be used as an interface between the central-station display systems and the field device network. Communications controller shall provide functions required to attain the specified network communications performance.
- G. Central station shall provide operator interface, interaction, display, control, and dynamic and real-time monitoring. Central station shall control system networks to interconnect all system components, including workstations and field-installed controllers.
- H. Field equipment shall include controllers, sensors, and controls.
1. Controllers shall serve as an interface between the central station and sensors and controls.
  2. Data exchange between the central station and the controllers shall include down-line transmission of commands, software, and databases to controllers.
  3. The up-line data exchange from the controller to the central station shall include status data such as intrusion alarms, status reports, and entry-control records.
  4. Controllers are classified as alarm-annunciation or entry-control type.
- I. System Response to Alarms:
1. Field device network shall provide a system end-to-end response time of one second(s) or less for every device connected to the system.
  2. Alarms shall be annunciated at the central station within one second of the alarm occurring at a controller or at a device controlled by a local controller, and within 100 ms if the alarm occurs at the central station.
  3. Alarm and status changes shall be displayed within 100 ms after receipt of data by the central station.
  4. All graphics shall be displayed, including graphics-generated map displays, on the console monitor within five seconds of alarm receipt at the security console.
  5. This response time shall be maintained during system heavy load.
- J. False-Alarm Reduction: The design of the central station and controllers shall contain features to reduce false alarms. Equipment and software shall comply with SIA CP-01.
- K. Error Detection:
1. Use a cyclic code method to detect single- and double-bit errors, burst errors of eight bits or fewer, and at least 99 percent of all other multibit and burst errors between controllers and the central station.
  2. Interactive or product error-detection codes alone will not be acceptable.
  3. A message shall be in error if one bit is received incorrectly.
  4. Retransmit messages with detected errors.
  5. Allow for an operator-assigned two-digit decimal number to each communications link representing the number of retransmission attempts.
  6. Central station shall print a communication failure alarm message when the number of consecutive retransmission attempts equals the assigned quantity.
  7. Monitor the frequency of data transmission failure for display and logging.
- L. Data Line Supervision: System shall initiate an alarm in response to opening, closing, shorting, or grounding of data transmission lines.
- M. Door Hardware Interface:

1. Comply with requirements in Section 087100 "Door Hardware" and Section 087111 "Door Hardware (Descriptive Specification)" for door hardware required to be monitored or controlled by the security access system.
2. Electrical characteristics of controllers shall match the signal and power requirements of door hardware.

## **2.4 PERFORMANCE REQUIREMENTS**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70, "National Electrical Code."
- C. Comply with UL 294.

## **2.5 APPLICATION SOFTWARE**

- A. System Software: Based on 64-bit, Microsoft Windows central-station and workstation operating system and application software.
  1. Multiuser multitasking shall allow independent activities and monitoring to occur simultaneously at different workstations.
  2. Graphical user interface shall show pull-down menus and a menu-tree format.
  3. Capability for future additions within the indicated system size limits.
  4. Open architecture that allows importing and exporting of data and interfacing with other systems that are compatible with operating system.
  5. Password-protected operator login and access.
  6. Accessible through mobile and web browser.
- B. Peer Computer Control Software: Detect a failure of a central computer and cause the other central computer to assume control of all system functions without interruption of operation. Both central computers shall have drivers to support this mode of operation.
- C. Application Software: Interface between the alarm annunciation and entry-control controllers to monitor sensors and DTS links, operate displays, report alarms, generate reports, and help train system operators.
  1. Reside at the central station, workstations, and controllers as required to perform specified functions.
  2. Operate and manage peripheral devices.
  3. Manage files for disk I/O, including creating, deleting, and copying files; and automatically maintain a directory of all files, including size and location of each sequential and random-ordered record.
  4. Import custom icons into graphics to represent alarms and I/O devices.
  5. Globally link I/O so that any I/O can link to any other I/O within the same Location without requiring interaction with the host workstation. This operation shall be at the controller.
  6. Globally code I/O links so that any access-granted event can link to any I/O with the same Location without requiring interaction with the host workstation. This operation shall be at the controller.
  7. Messages from workstation to controllers and controllers to controllers shall be on a polled network that utilizes check summing and acknowledgment of each message.

Communication shall be automatically verified, buffered, and retransmitted if message is not acknowledged.

8. Selectable poll frequency and message time-out settings shall handle bandwidth and latency issues for TCP/IP, RF, and other workstation-to-controller communications methods by changing the polling frequency and the amount of time the system waits for a response.
9. Automatic and encrypted backups for database and history backups shall be automatically stored at the central-control workstation and encrypted with a nine-character alphanumeric password that must be used to restore or read data contained in backup.
10. Operator audit trail for recording and reporting all changes made to database and system software.
11. Support network protocol and topology, TCP/IP, Novel Netware, Digital Path works, Banyan Vines, LAN/WAN, and RAS.

D. Workstation Software:

1. Password levels shall be individually customized at each workstation to allow or disallow operator access to program functions for each Location.
2. Workstation event filtering shall allow user to define events and alarms that will be displayed at each workstation. If an alarm is unacknowledged (not handled by another workstation) for a preset amount of time, the alarm will automatically appear on the filtered workstation.

E. Controller Software:

1. Controllers shall operate as autonomous, intelligent processing units.
  - a. Controllers shall make decisions about access control, alarm monitoring, linking functions, and door-locking schedules for their operation, independent of other system components.
  - b. Controllers shall be part of a fully distributed processing-control network.
  - c. The portion of the database associated with a controller, and consisting of parameters, constraints, and the latest value or status of points connected to that controller, shall be maintained in the controller.
2. The following functions shall be fully implemented and operational within each controller:
  - a. Monitoring inputs.
  - b. Controlling outputs.
  - c. Automatically reporting alarms to the central station.
  - d. Reporting of sensor and output status to the central station on request.
  - e. Maintaining real time, automatically updated by the central station at least once a day.
  - f. Communicating with the central station.
  - g. Executing controller resident programs.
  - h. Diagnosing.
  - i. Downloading and uploading data to and from the central station.

3. Controller Operations at a Location:
  - a. Up to 64 controllers connected to TIA 485-A communications loop. Globally operating I/O linking and anti-passback functions between controllers within the same Location without central-station or workstation intervention. Linking and anti-passback shall remain fully functional within the same Location even when the central station or workstations are off-line.
  - b. In the event of communication failure between the central station and a Location, there shall be no degradation in operations at the controllers at that Location. Controllers at each Location shall be connected to a memory buffer with a capacity to store up to 10,000 events; there shall be no loss of transactions in system history files until the buffer overflows.
  - c. Buffered events shall be handled in a first-in-first-out mode of operation.
4. Individual Controller Operation:
  - a. Controllers shall transmit alarms, status changes, and other data to the central station when communications circuits are operable. If communications are not available, controllers shall function in a stand-alone mode; operational data, including the status and alarm data normally transmitted to the central station, shall be stored for later transmission to the central station. Storage capacity for the latest 1024 events shall be provided at each controller.
  - b. Card-reader ports of a controller shall be custom configurable for at least 120 different card-reader or keypad formats. Multiple reader or keypad formats may be used simultaneously at different controllers or within the same controller.
  - c. Controllers shall provide a response to card readers or keypad entries in less than 0.25 seconds, regardless of system size.
  - d. Controllers that are reset, or powered up from a nonpowered state, shall automatically request a parameter download and reboot to their proper working state. This shall happen without any operator intervention.
  - e. Initial Startup: When controllers are brought on-line, database parameters shall be automatically downloaded to them. After initial download is completed, only database changes shall be downloaded to each controller.
  - f. On failure for any reason, controllers shall perform an orderly shutdown and force controller outputs to a predetermined failure-mode state, consistent with the failure modes shown and the associated control device.
  - g. After power is restored, following a power failure, startup software shall initiate self-test diagnostic routines, after which controllers shall resume normal operation.
  - h. After controller failure, if the database and application software are no longer resident, controllers shall not restart but shall remain in the failure mode until repaired. If database and application programs are resident, controllers shall immediately resume operation. If not, software shall be restored automatically from the central station.
5. Communications Monitoring:
  - a. System shall monitor and report status of TIA 485-A communications loop of each Location.

- b. Communication status window shall display which controllers are currently communicating, a total count of missed polls since midnight, and which controller last missed a poll.
    - c. Communication status window shall show the type of CPU, the type of I/O board, and the amount of RAM for each controller.
  6. Operating systems shall include a real-time clock function that maintains seconds, minutes, hours, day, date, and month. The real-time clock shall be automatically synchronized with the central station at least once a day to plus or minus 10 seconds. The time synchronization shall be automatic, without operator action and without requiring system shutdown.
- F. Workstation-to-Controller Communications:
  1. Central-station or workstation communications shall use the following:
    - a. Direct connection using data ports of the workstation.
    - b. TCP/IP LAN interface cards.
  2. Each data port used for communications shall be individually configurable for "direct communications," "modem communications incoming and outgoing," or "modem communications incoming only," or as an ASCII output port. Serial ports shall have adjustable data transmission rates and shall be selectable under program control.
  3. TCP/IP network interface card (NIC) shall have an option to set the poll-frequency and message-response time-out settings.
  4. Workstation-to-controller and controller-to-controller communications (direct, or TCP/IP) shall use a polled-communication protocol that checks sum and acknowledges each message. All communications in this subparagraph shall be verified and buffered, and retransmitted if not acknowledged.
- G. Direct TCP/IP Workstation-to-Controller Communications:
  1. Communication software on the workstation shall supervise the workstation-to-controller communications link.
  2. Loss of communications to any controller shall result in an alarm at all workstations running the communication software.
  3. When communications are restored, all buffered events shall automatically upload to the workstation, and any database changes shall be automatically sent to the controller.
- H. Broadband Workstation-to-Controller Communications:
  1. Communication software on the workstation shall supervise the workstation-to-controller communications link during dial-up modem connect times.
  2. Communication software shall be programmable to routinely poll each of the remote dial-up or cable modem Locations, collecting event logs and verifying phone lines at operator-selectable time intervals for each Location.
  3. System shall be programmable for dialing and connecting to all dial-up or cable modem Locations and for retrieving the accrued history transactions on an automatic basis as often as once every 10 minutes and up to once every 60 minutes.
  4. Failure to communicate to a dial-up Location three times in a row shall result in an alarm at the workstation.

5. Time offset capabilities shall be present so that Locations in a different geographical time zone than the host workstation will be set to, and maintained at, the proper local time. This feature shall allow for geographical time zones that are ahead of or behind the host workstation.
  6. The controller connected to a dial-up or cable modem shall automatically buffer all normal transactions until its buffer reaches 80 percent of capacity. When the transaction buffer reaches 80 percent, the controller shall automatically initiate a call to the central station and upload all transactions.
  7. Alarms shall be reported immediately.
  8. Dial-up or cable modems shall be provided by manufacturer of the system. Modems used at the controller shall be powered by the controller. Power to the modem shall include battery backup if the controller is so equipped.
- I. Controller-to-Controller Communications:
1. TIA 485-A, four-wire, point-to-point, regenerative (repeater) communications network methodology.
  2. TIA 485-A communications signal shall be regenerated at each controller.
- J. Database Downloads:
1. All data transmissions from workstations to a Location, and between controllers at a Location, shall include a complete database checksum to check the integrity of the transmission. If the data checksum does not match, a full data download shall be automatically retransmitted.
  2. If a controller is reset for any reason, it shall automatically request and receive a database download from the workstation. The download shall restore data stored at the controller to their normal working state and shall take place with no operator intervention.
- K. Operator Interface:
1. Inputs in system shall have two icon representations, one for the normal state and one for the abnormal state.
  2. When viewing and controlling inputs, displayed icons shall automatically change to the proper icon to display the current system state in real time. Icons shall also display the input's state, whether armed or bypassed, and if the input is in the armed or bypassed state due to a time zone or a manual command.
  3. Outputs in system shall have two icon representations, one for the secure (locked) state and one for the open (unlocked) state.
  4. Icons displaying status of the I/O points shall be constantly updated to show their current real-time condition without prompting by the operator.
  5. The operator shall be able to scroll the list of I/Os and press the appropriate toolbar button, or right click, to command the system to perform the desired function.
  6. Graphic maps or drawings containing inputs, outputs, and override groups shall include the following:
    - a. Database to import and store full-color maps or drawings and allow for input, output, and override group icons to be placed on maps.
    - b. Maps to provide real-time display animation and allow for control of points assigned to them.

- c. System to allow inputs, outputs, and override groups to be placed on different maps.
  - d. Software to allow changing the order or priority in which maps will be displayed.
- 7. Override Groups Containing I/Os:
  - a. System shall incorporate override groups that provide the operator with the status and control over user-defined "sets" of I/Os with a single icon.
  - b. Icon shall change automatically to show the live summary status of points in that group.
  - c. Override group icon shall provide a method to manually control or set to time-zone points in the group.
  - d. Override group icon shall allow the expanding of the group to show icons representing the live status for each point in the group, individual control over each point, and the ability to compress the individual icons back into one summary icon.
- 8. Schedule Overrides of I/Os and Override Groups:
  - a. To accommodate temporary schedule changes that do not fall within the holiday parameters, the operator shall have the ability to override schedules individually for each input, output, or override group.
  - b. Each schedule shall be composed of a minimum of two dates with separate times for each date.
  - c. The first time and date shall be assigned the override state that the point shall advance to when the time and date become current.
  - d. The second time and date shall be assigned the state that the point shall return to when the time and date become current.
- 9. Copy command in database shall allow for like data to be copied and then edited for specific requirements, to reduce redundant data entry.
- L. Operator Access Control:
  - 1. Control operator access to system controls through three password-protected operator levels. System operators and managers with appropriate password clearances shall be able to change operator levels for operators.
  - 2. Three successive attempts by an operator to execute functions beyond their defined level during a 24-hour period shall initiate a software tamper alarm.
  - 3. A minimum of 1024 unique user accounts shall be available with the system software. System shall display the operator's name or initials in the console's first field. System shall print the operator's name or initials, action, date, and time on the system printer at login and logoff.
  - 4. The password shall not be displayed or printed.
  - 5. Each password shall be definable and assignable for the following:
    - a. Selected commands to be usable.
    - b. Access to system software.
    - c. Access to application software.
    - d. Individual zones that are to be accessed.

- e. Access to database.

M. Operator Commands:

1. Command Input: Plain-language words and acronyms shall allow operators to use the system without extensive training or data-processing backgrounds. System prompts shall be a word, a phrase, or an acronym.
2. Command inputs shall be acknowledged and processing shall start in not less than one second.
3. Tasks that are executed by operator's commands shall include the following:
  - a. Acknowledge Alarms: Used to acknowledge that the operator has observed the alarm message.
  - b. Place Zone in Access: Used to remotely disable intrusion-alarm circuits emanating from a specific zone. System shall be structured so that console operator cannot disable tamper circuits.
  - c. Place Zone in Secure: Used to remotely activate intrusion-alarm circuits emanating from a specific zone.
  - d. System Test: Allows the operator to initiate a system-wide operational test.
  - e. Zone Test: Allows the operator to initiate an operational test for a specific zone.
  - f. Print reports.
  - g. Change Operator: Used for changing operators.
  - h. Security Lighting Controls: Allows the operator to remotely turn on or turn off security lights.
  - i. Display Graphics: Used to show any graphic displays implemented in the system. Graphic displays shall be completed within 20 seconds from time of operator command.
  - j. Run system tests.
  - k. Generate and format reports.
  - l. Request help with the system operation.
    - 1) Include in main menus.
    - 2) Provide unique, descriptive, context-sensitive help for selections and functions with the press of one function key.
    - 3) Provide navigation to specific topic from within the first help window.
    - 4) Help shall be accessible outside the application program.
  - m. Entry-Control Commands:
    - 1) Lock (secure) or unlock (open) each controlled entry and exit up to four times a day through time-zone programming.
    - 2) Arm or disarm each monitored input up to four times a day through time-zone programming.
    - 3) Enable or disable readers or keypads up to two times a day through time-zone programming.

- 4) Enable or disable cards or codes up to four times a day per entry point through access-level programming.
4. Command Input Errors: Show operator input assistance when a command cannot be executed because of operator input errors. Assistance screen shall use plain-language words and phrases to explain why the command cannot be executed. Error responses that require an operator to look up a code in a manual or other document are not acceptable. Conditions causing operator assistance messages include the following:
    - a. Command entered is incorrect or incomplete.
    - b. Operator is restricted from using that command.
    - c. Command addresses a point that is disabled or out of service.
    - d. Command addresses a point that does not exist.
    - e. Command is outside the system's capacity.
- N. Alarms:
1. System Setup:
    - a. Assign manual and automatic responses to incoming-point status change or alarms.
    - b. Automatically respond to input with a link to other inputs, outputs, or operator-response plans; unique sound with use of WAV files; and maps or images that graphically represent the point location.
    - c. Sixty-character message field for each alarm.
    - d. Operator-response-action messages shall allow message length of at least 65,000 characters, with database storage capacity of up to 32,000 messages. Setup shall assign messages to access point other alarm originating device.
    - e. Secondary messages shall be assignable by the operator for printing to provide further information and shall be editable by the operator.
    - f. Allow 25 secondary messages with a field of four lines of 60 characters each.
    - g. Store the most recent 1000 alarms for recall by the operator using the report generator.
  2. Software Tamper:
    - a. Annunciate a tamper alarm when unauthorized changes to system database files are attempted. Three consecutive unsuccessful attempts to log onto system shall generate a software tamper alarm.
    - b. Annunciate a software tamper alarm when an operator or other individual makes three consecutive unsuccessful attempts to invoke functions beyond the authorization level.
    - c. Maintain a transcript file of the last 5000 commands entered at each central station to serve as an audit trail. System shall not allow write access to system transcript files by any person, regardless of their authorization level.
    - d. Allow only acknowledgment of software tamper alarms.
  3. Read access to system transcript files shall be reserved for operators with the highest password authorization level available in system.

4. Animated Response Graphics: Highlight alarms with flashing icons on graphic maps; display and constantly update the current status of alarm inputs and outputs in real time through animated icons.
  5. Multimedia Alarm Annunciation: WAV files to be associated with alarm events for audio annunciation or instructions.
  6. Alarm Handling: Each input may be configured so that an alarm cannot be cleared unless it has returned to normal, with options of requiring the operator to enter a comment about disposition of alarm. Allow operator to silence alarm sound when alarm is acknowledged.
  7. Alarm Automation Interface: High-level interface to central-station alarm automation software systems. Allows input alarms to be passed to and handled by automation systems in the same manner as burglar alarms, using a TIA 232-F ASCII interface.
  8. CCTV Alarm Interface: Allow commands to be sent to CCTV systems during alarms (or input change of state) through serial ports.
  9. Camera Control: Provides operator ability to select and control cameras from graphic maps.
- O. Alarm Monitoring: Monitor sensors, controllers, and DTS circuits and notify operators of an alarm condition. Display higher-priority alarms first and, within alarm priorities, display the oldest unacknowledged alarm first. Operator acknowledgment of one alarm shall not be considered acknowledgment of other alarms nor shall it inhibit reporting of subsequent alarms.
1. Displayed alarm data shall include type of alarm, location of alarm, and secondary alarm messages.
  2. Printed alarm data shall include type of alarm, location of alarm, date and time (to nearest second) of occurrence, and operator responses.
  3. Maps shall automatically display the alarm condition for each input assigned to that map if that option is selected for that input location.
  4. Alarms initiate a status of "pending" and require the following two handling steps by operators:
    - a. First Operator Step: "Acknowledged." This action shall silence sounds associated with the alarm. The alarm remains in the system "Acknowledged" but "Un-Resolved."
    - b. Second Operator Step: Operators enter the resolution or operator comment, giving the disposition of the alarm event. The alarm shall then clear.
  5. Each workstation shall display the total pending alarms and total unresolved alarms.
  6. Each alarm point shall be programmable to disallow the resolution of alarms until the alarm point has returned to its normal state.
  7. Alarms shall transmit to the central station in real time except for allowing connection time for dial-up locations.
  8. Alarms shall be displayed and managed from a minimum of four different windows.
    - a. Input Status Window: Overlay status icon with a large red blinking icon. Selecting the icon will acknowledge the alarm.
    - b. History Log Transaction Window: Display name, time, and date in red text. Selecting red text will acknowledge the alarm.
    - c. Alarm Log Transaction Window: Display name, time, and date in red. Selecting red text will acknowledge the alarm.

- d. Graphic Map Display: Display a steady colored icon representing each alarm input location. Change icon to flashing red when the alarm occurs. Change icon from flashing red to steady red when the alarm is acknowledged.
9. Once an alarm is acknowledged, the operator shall be prompted to enter comments about the nature of the alarm and actions taken. Operator's comments may be manually entered or selected from a programmed predefined list, or a combination of both.
  10. For locations where there are regular alarm occurrences, provide programmed comments. Selecting that comment shall clear the alarm.
  11. The time and name of the operator who acknowledged and resolved the alarm shall be recorded in the database.
  12. Identical alarms from the same alarm point shall be acknowledged at the same time the operator acknowledges the first alarm. Identical alarms shall be resolved when the first alarm is resolved.
  13. Alarm functions shall have priority over downloading, retrieving, and updating database from workstations and controllers.
  14. When a reader-controlled output (relay) is opened, the corresponding alarm point shall be automatically bypassed.
- P. Monitor Display: Display text and graphic maps that include zone status integrated into the display. Colors are used for the various components and current data. Colors shall be uniform throughout the system.
1. Color Code:
    - a. FLASHING RED: Alerts operator that a zone has gone into an alarm or that primary power has failed.
    - b. STEADY RED: Alerts operator that a zone is in alarm and alarm has been acknowledged.
    - c. YELLOW: Advises operator that a zone is in access.
    - d. GREEN: Indicates that a zone is secure and that power is on.
  2. Graphics:
    - a. Support 32,000 graphic display maps and allow import of maps from a minimum of 16 standard formats from another drawing or graphics program.
    - b. Allow I/O to be placed on graphic maps by the drag-and-drop method.
    - c. Operators shall be able to view the inputs, outputs, and the point's name by moving the mouse cursor over the point on the graphic map.
    - d. Inputs or outputs may be placed on multiple graphic maps. The operator shall be able to toggle to view graphic maps associated with I/Os.
    - e. Each graphic map shall have a display-order sequence number associated with it to provide a predetermined order when toggled to different views.
    - f. Camera icons shall have the ability to be placed on graphic maps that, when selected by an operator, will open a video window, display the camera associated with that icon, and provide pan-tilt-zoom control.
    - g. Input, output, or camera placed on a map shall allow the ability to arm or bypass an input, open or secure an output, or control the pan-tilt-zoom function of the selected camera.

- Q. System test software enables operators to initiate a test of the entire system or of a particular portion of the system.
1. Test Report: The results of each test shall be stored for future display or printout. The report shall document the operational status of system components.
- R. Report-Generator Software: Include commands to generate reports for displaying, printing, and storing on disk and tape. Reports shall be stored by type, date, and time. Report printing shall be the lowest-priority activity. Report-generation mode shall be operator selectable but set up initially as periodic, automatic, or on request. Include time and date printed and the name of operator generating the report. Report formats may be configured by operators.
1. Automatic Printing: Setup shall specify, modify, or inhibit the report to be generated; the time the initial report is to be generated; the time interval between reports; the end of the period; and the default printer.
  2. Printing on Request: An operator may request a printout of any report.
  3. Alarm Reports: Reporting shall be automatic as initially set up. Include alarms recorded by system over the selected time and information about the type of alarm (such as door alarm, intrusion alarm, tamper alarm, etc.), the type of sensor, the location, the time, and the action taken.
  4. Access and Secure Reports: Document zones placed in access, the time placed in access, and the time placed in secure mode.
  5. Custom Reports: Reports tailored to exact requirements of who, what, when, and where. As an option, custom report formats may be stored for future printing.
  6. Automatic History Reports: Named, saved, and scheduled for automatic generation.
  7. Cardholder Reports: Include data, or selected parts of the data, as well as the ability to be sorted by name, card number, imprinted number, or by any of the user-defined fields.
  8. Cardholder by Reader Reports: Based on who has access to a specific reader or group of readers by selecting the readers from a list.
  9. Cardholder by Access-Level Reports: Display everyone that has been assigned to the specified access level.
  10. Who Is "In" (Muster) Report:
    - a. Emergency Muster Report: One-click operation on toolbar launches report.
    - b. Cardholder Report. Contain a count of persons who are "In" at a selected Location and a detailed listing of name, date, and time of last use, sorted by the last reader used or by the group assignment.
  11. Panel Labels Reports: Printout of control-panel field documentation including the actual location of equipment, programming parameters, and wiring identification. Maintain system installation data within system database so that data are available on-site at all times.
  12. Activity and Alarm On-Line Printing: Activity printers for use at workstations; prints all events, or alarms only.
  13. History Reports: Custom reports that allow the operator to select any date, time, event type, device, output, input, operator, Location, name, or cardholder to be included or excluded from the report.
    - a. Initially store history on the hard disk of the host workstation.

- b. Permit viewing of the history on workstations or print history to any system printer.
  - c. The report shall be definable by a range of dates and times with the ability to have a daily start and stop time over a given date range.
  - d. Each report shall depict the date, time, event type, event description, and device; or I/O name, cardholder group assignment, and cardholder name or code number.
  - e. Each line of a printed report shall be numbered to ensure that the integrity of the report has not been compromised.
  - f. Total number of lines of the report shall be given at the end of the report. If the report is run for a single event such as "Alarms," the total shall reflect how many alarms occurred during that period.
14. Reports shall have the following four options:
- a. View on screen.
  - b. Print to system printer. Include automatic print spooling and "Print To" options if more than one printer is connected to the system.
  - c. "Save to File" with full path statement.
  - d. System shall have the ability to produce a report indicating status of system inputs and outputs or of inputs and outputs that are abnormal, out of time zone, manually overridden, not reporting, or in alarm.
15. Custom Code List Subroutine: Allow the access codes of system to be sorted and printed according to the following criteria:
- a. Active, inactive, or future activate or deactivate.
  - b. Code number, name, or imprinted card number.
  - c. Group, Location access levels.
  - d. Start and stop code range.
  - e. Codes that have not been used since a selectable number of days.
  - f. In, out, or either status.
  - g. Codes with trace designation.
16. The reports of system database shall allow options so that every data field may be printed.
17. The reports of system database shall be constructed so that the actual position of the printed data shall closely match the position of the data on the data-entry windows.
- S. Anti-Passback:
- 1. System shall have global and local anti-passback features, selectable by Location. System shall support hard and soft anti-passback.
  - 2. Hard Anti-Passback: Once a credential holder is granted access through a reader with one type of designation (IN or OUT), the credential holder may not pass through that type of reader designation until the credential holder passes through a reader of opposite designation.
  - 3. Soft Anti-Passback: Should a violation of the proper IN or OUT sequence occur, access shall be granted, but a unique alarm shall be transmitted to the control station, reporting

the credential holder and the door involved in the violation. A separate report may be run on this event.

4. Timed Anti-Passback: A controller capability that prevents an access code from being used twice at the same device (door) within a user-defined amount of time.
5. Provide four separate zones per Location that can operate without requiring interaction with the host workstation (done at controller). Each reader shall be assignable to one or all four anti-passback zones. In addition, each anti-passback reader can be further designated as "Hard," "Soft," or "Timed" in each of the four anti-passback zones. The four anti-passback zones shall operate independently.
6. The anti-passback schemes shall be definable for each individual door.
7. The Master Access Level shall override anti-passback.
8. System shall have the ability to forgive (or reset) an individual credential holder or the entire credential-holder population anti-passback status to a neutral status.

T. Visitor Assignment:

1. Provide for and allow an operator to be restricted to only working with visitors. The visitor badging subsystem shall assign credentials and enroll visitors. Allow only those access levels that have been designated as approved for visitors.
2. Provide an automated log of visitor name, time and doors accessed, and name of person contacted.
3. Allow a visitor designation to be assigned to a credential holder.
4. Security access system shall be able to restrict the access levels that may be assigned to credentials issued to visitors.
5. Allow operator to recall visitors' credential-holder file once a visitor is enrolled in the system.
6. The operator may designate any reader as one that deactivates the credential after use at that reader. The history log shall show the return of the credential.
7. System shall have the ability to use the visitor designation in searches and reports. Reports shall be able to print all or any visitor activity.

U. Time and Attendance:

1. Time and attendance reporting shall be provided to match IN and OUT reads and display cumulative time in for each day and cumulative time in for length designated in the report.
2. Shall be provided to match IN and OUT reads and display cumulative time in for each day and cumulative time in for length designated in the report.
3. System software setup shall allow designation of selected access-control readers as time and attendance hardware to gather the clock-in and clock-out times of the users at these readers.
  - a. Reports shall show in and out times for each day, total time in for each day, and a total time in for period specified by the user.
  - b. Allow the operator to view and print the reports, or save the reports to a file.
  - c. Alphabetically sort reports on the person's last name, by Location or location group. Include all credential holders or optionally select individual credential holders for the report.

- V. Training Software: Enables operators to practice system operation, including alarm acknowledgment, alarm assessment, response force deployment, and response force communications. System shall continue normal operation during training exercises and shall terminate exercises when an alarm signal is received at the console.
- W. Entry-Control Enrollment Software: Database management functions that allow operators to add, delete, and modify access data as needed.
1. The enrollment station shall not have alarm response or acknowledgment functions.
  2. Provide multiple, password-protected access levels. Database management and modification functions shall require a higher operator access level than personnel enrollment functions.
  3. The program shall provide means to disable the enrollment station when it is unattended, to prevent unauthorized use.
  4. The program shall provide a method to enter personnel identifying information into the entry-control database files through enrollment stations. In the case of personnel identity-verification subsystems, this shall include biometric data. Allow entry of personnel identifying information into the system database using menu selections and data fields. The data field names shall be customized during setup to suit user and site needs. Personnel identity-verification subsystems selected for use with the system shall fully support the enrollment function and shall be compatible with the entry-control database files.
  5. Cardholder Data: Provide 99 user-defined fields. System shall have the ability to run searches and reports using any combination of these fields. Each user-defined field shall be configurable, using any combination of the following features:
    - a. MASK: Determines a specific format with which data must comply.
    - b. REQUIRED: Operator is required to enter data into field before saving.
    - c. UNIQUE: Data entered must be unique.
    - d. DEACTIVATE DATE: Data entered will be evaluated as an additional deactivate date for all cards assigned to this cardholder.
    - e. NAME ID: Data entered will be considered a unique ID for the cardholder.
  6. Personnel Search Engine: A report generator with capabilities such as search by last name, first name, group, or any predetermined user-defined data field; by codes not used in definable number of days; by skills; or by seven other methods.
  7. Multiple Deactivate Dates for Cards: User-defined fields to be configured as additional stop dates to deactivate any cards assigned to the cardholder.
  8. Batch card printing.
  9. Default card data can be programmed to speed data entry for sites where most card data are similar.
  10. Enhanced ASCII File Import Utility: Allows the importing of cardholder data and images.
  11. Card Expire Function: Allows readers to be configured to deactivate cards when a card is used at selected devices.

**2.6 SYSTEM DATABASE**

- A. Database and database management software shall define and modify each point in database using operator commands. Definition shall include parameters and constraints associated with each system device.
- B. Database Operations:
  - 1. System data management shall be in a hierarchical menu-tree format, with navigation through expandable menu branches and manipulated with use of menus and icons in a main menu and system toolbar.
  - 2. Navigational Aids:
    - a. Toolbar icons for add, delete, copy, print, capture image, activate, deactivate, and muster report.
    - b. Point and click feature to facilitate data manipulation.
    - c. Next and previous command buttons visible when editing database fields to facilitate navigation from one record to the next.
    - d. Copy command and copy tool in the toolbar to copy data from one record to create a new similar record.
  - 3. Data entry shall be automatically checked for duplicate and illegal data and shall be verified for valid format.
  - 4. System shall generate a memo or note field for each item that is stored in database, allowing the storing of information about any defining characteristics of the item. Memo field is used for noting the purpose for which the item was entered, reasons for changes that were made, and the like.
- C. File Management:
  - 1. File management shall include database backup and restoration system, allowing selection of storage media.
  - 2. Operations shall be both manual and automatic modes. The number of automatic sequential backups before the oldest backup will be overwritten; FIFO mode shall be operator selectable.
  - 3. Backup program shall provide manual operation from any workstation on the LAN and shall operate while system remains operational.
- D. Operator Passwords:
  - 1. Support up to 32,000 individual system operators, each with a unique password.
  - 2. One to eight alphanumeric characters.
  - 3. Allow passwords to be case sensitive.
  - 4. Passwords shall not be displayed when entered.
  - 5. Passwords shall have unique and customizable password profile, and allow several operators to share a password profile. Include the following features in the password profile:
    - a. Predetermine the highest-level password profile for access to all functions and areas of program.

- b. Allow or disallow operator access to any program operation, including the functions of View, Add, Edit, and Delete.
    - c. Restrict doors to which an operator can assign access.
  6. Operators shall use a user name and password to log on to system. This user name and password shall be used to access database areas and programs as determined by the associated profile.
  7. Make provision to allow the operator to log off without fully exiting program. User may be logged off but program will remain running while displaying the login window for the next operator.
- E. Access Card/Code Operation and Management: Access authorization shall be by card, by a manually entered code (PIN), or by a combination of both (card plus PIN).
  1. Access authorization shall verify the facility code first, the card or card-and-PIN validation second, and the access level (time of day, day of week, date), anti-passback status, and number of uses last.
  2. Use data-entry windows to view, edit, and issue access levels. Access-authorization entry-management system shall maintain and coordinate all access levels to prevent duplication or the incorrect creation of levels.
  3. Allow assignment of multiple cards/codes to a cardholder.
  4. Allow assignment of up to four access levels for each Location to a cardholder. Each access level may contain any combination of doors.
  5. Each door may be assigned four time zones.
  6. Access codes may be up to 11 digits in length.
  7. Software shall allow the grouping of locations so cardholder data can be shared by all locations in the group.
  8. Visitor Access: Issue a visitor badge for data tracking or photo ID purposes without assigning that person a card or code.
  9. Cardholder Tracing: Allow for selection of cardholder for tracing. Make a special audible and visible annunciation at control station when a selected card or code is used at a designated code reader. Annunciation shall include an automatic display of the cardholder image.
  10. Allow each cardholder to be given either an unlimited number of uses or a number from one to 9999 that regulates the number of times the card can be used before it is automatically deactivated.
  11. Provide for cards and codes to be activated and deactivated manually or automatically by date. Provide for multiple deactivate dates to be preprogrammed.
- F. Security Access Integration:
  1. Photo ID badging and photo verification shall use the same database as the security access and may query data from cardholder, group, and other personal information to build a custom ID badge.
  2. Automatic or manual image recall and manual access based on photo verification shall also be a means of access verification and entry.
  3. System shall allow sorting of cardholders together by group or other characteristic for a fast and efficient method of reporting on, and enabling or disabling, cards or codes.
- G. Key control and tracking shall be an integrated function of cardholder data.

1. Provide the ability to store information about which conventional metal keys are issued and to whom, along with key construction information.
  2. Reports shall be designed to list everyone who possesses a specified key.
- H. Facility Codes: System shall accommodate up to 2048 facility codes per Location, with the option of allowing facility codes to work at all doors or only at particular doors.
- I. Operator Comments:
1. With the press of one appropriate button on the toolbar, the user shall be permitted to enter operator comments into the history at any time.
  2. Automatic prompting of operator comment shall occur before the resolution of each alarm.
  3. Operator comments shall be recorded by time, date, and operator number.
  4. Comments shall be sorted and viewed through reports and history.
  5. The operator may enter comments in two ways; either or both may be used:
    - a. Manually entered through keyboard data entry (typed), up to 65,000 characters per each alarm.
    - b. Predefined and stored in database for retrieval on request.
  6. System shall have a minimum of 999 predefined operator comments with up to 30 characters per comment.
- J. Group:
1. Group names may be used to sort cardholders into groups that allow the operator to determine the tenant, vendor, contractor, department, division, or any other designation of a group to which the person belongs.
  2. System software shall have the capacity to assign one of 32,000 group names to an access authorization.
  3. Make provision in software to deactivate and reactivate all access authorizations assigned to a particular group.
  4. Allow sorting of history reports and code list printouts by group name.
- K. Time Zones:
1. Each zone consists of a start and stop time for seven days of the week and three holiday schedules. A time zone is assigned to inputs, outputs, or access levels to determine when an input shall automatically arm or disarm, when an output automatically opens or secures, or when access authorization assigned to an access level will be denied or granted.
  2. Up to four time zones may be assigned to inputs and outputs to allow up to four arm or disarm periods per day or four lock or unlock periods per day; up to three holiday override schedules may be assigned to a time zone.
  3. Data-entry window shall display a dynamically linked bar graph showing active and inactive times for each day and holiday, as start and stop times are entered or edited.
  4. System shall have the capacity for multiple time zones for each Location.
- L. Holidays:

1. Three different holiday schedules may be assigned to a time zone. Holiday schedule consists of date in format MM/DD/YYYY and a description. When the holiday date matches the current date of the time zone, the holiday schedule replaces the time-zone schedule for that 24-hour period.
2. System shall have the capacity for 32,000 holidays.
3. Three separate holiday schedules may be applied to a time zone.
4. Holidays have an option to be designated as occurring on the designated date each year. These holidays remain in the system and will not be purged.
5. Holidays not designated to occur each year shall be automatically purged from the database after the date expires.

M. Access Levels:

1. System shall allow for the creation of up to 32,000 access levels.
2. One level shall be predefined as the Master Access Level. The Master Access Level shall work at all doors at all times and override any anti-passback.
3. System shall allow for access to be restricted to any area by reader and by time. Access levels shall determine when and where an Identifier is authorized.
4. System shall be able to create multiple door and time-zone combinations under the same access level so that an Identifier may be valid during different time periods at different readers even if the readers are on the same controller.

N. User-Defined Fields:

1. System shall provide a minimum of 99 user-defined fields, each with up to 50 characters, for specific information about each credential holder.
2. System shall accommodate a title for each field; field length shall be 20 characters.
3. A "Required" option may be applied to each user-defined field that, when selected, forces the operator to enter data in the user-defined field before the credential can be saved.
4. A "Unique" option may be applied to each user-defined field that, when selected, will not allow duplicate data from different credential holders to be entered.
5. Data format option may be assigned to each user-defined field that will require the data to be entered with certain character types in specific spots in the field entry window.
6. A user-defined field, if selected, will define the field as a deactivate date. The selection shall automatically cause the data to be formatted with the windows MM/DD/YYYY date format. The credential of the holder will be deactivated on that date.
7. A search function shall allow any one user-defined field or combination of user-defined fields to be searched to find the appropriate cardholder. The search function shall include a search for a character string.
8. System shall have the ability to print cardholders based on and organized by the user-defined fields.

O. Code Tracing:

1. System shall perform code tracing selectable by cardholder and by reader.
2. Any code may be designated as a "traced code" with no limit to how many codes can be traced.
3. Any reader may be designated as a "trace reader" with no limit to which or how many readers can be used for code tracing.

4. When a traced code is used at a trace reader, the access-granted message that usually appears on the monitor window of the central station shall be highlighted with a different color than regular messages. A short singular beep shall occur at the same time the highlighted message is displayed on the window.
5. The traced cardholder image (if image exists) shall appear on workstations when used at a trace reader.

## 2.7 SURGE AND TAMPER PROTECTION

- A. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor-entry connection to components.
  1. Minimum Protection for Power Connections 120 V and More: Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
  2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Connections: Comply with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits" as recommended by manufacturer for type of line being protected.
- B. Tamper Protection: Tamper switches on enclosures, control units, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled. Control-station control-unit alarm display shall identify tamper alarms and indicate locations.

## 2.8 CENTRAL-STATION HARDWARE

- A. Central-Station Computer: Standard workstation of modular design.
- B. Redundant Central Computer: One identical redundant central computer, connected in a hot standby, peer configuration. This computer shall automatically maintain its own copies of system software, application software, and data files. System transactions and other activities that alter system data files shall be updated to system files of redundant computer in near real time. If central computer fails, redundant computer shall assume control immediately and automatically.
- C. Desktop Workstations:
  1. Performance Requirements:
    - a. Performance requirements may dictate equipment exceeding minimum requirements indicated.
    - b. Capable of running Microsoft Windows.
    - c. Energy Star compliant.
    - d. Processor:
      - 1) Minimum Speed: 5.3GHz.
      - 2) Cores: Quad.
      - 3) Series: Core i7.
    - e. RAM:
      - 1) Capacity: 8 GB.

- 2) Speed and Type: 1333 MHz.
- f. Primary Hard Drive:
- 1) Media: Solid state.
  - 2) Number of Hard Drives: One.
  - 3) Capacity: 1TB.
  - 4) Minimum Average Seek Time: 3700/s
  - 5) Cache Buffer Size: 4GB.
- g. Expansion slots: Minimum of 4, 64 bit.
- h. Video Card:
- 1) Capable of supporting four monitors.
  - 2) Resolution: 8K(4320p) pixels minimum for each monitor.
  - 3) RAM: 8 GB.
  - 4) On-Board Memory Speed: 16GHz.
  - 5) On-Board Memory Data Width: 16 gigabytes bit.
- i. Sound Card:
- 1) At least 128 voice wavetable synthesis.
  - 2) Capable of delivering three-dimensional sound effects.
  - 3) High-resolution 16-bit stereo digital audio recording and playback with user-selectable sample rates up to 48,000 Hz.
- j. Network Interface Card: Include card with connection, as applicable.
- 1) 10-100-1000 base TX Ethernet with RJ45 connector port.
  - 2) 100 base FX Ethernet with SC or ST port.
- k. Wireless Ethernet, 802.11 a/b/g/n.
- l. Optical Modem: Full duplex link for connection to optical fiber cable provided.
- m. I/O Ports:
- 1) Two USB 3.0 ports on front panel, six on back panel, and three internal on motherboard.
  - 2) One serial port.
  - 3) One parallel port.
  - 4) Two PS/2 ports.
  - 5) One RJ-45.
  - 6) One stereo line-in and line-out on back panel.
  - 7) One microphone and headphone connector on front panel.
  - 8) One IEEE 1394 on front and back panel with workstation I-e card.

- 9) One ESATA port on back panel.
- n. Battery: Life of at least three years to maintain system clock/calendar and ROM, as a minimum.
2. Keyboard:
  - a. 101 key enhanced keyboard.
  - b. Full upper- and lowercase ASCII keyset, numeric keypad, dedicated cursor control keypad, and 12 programmable function keys.
  - c. Wireless operation within up to 72 inches in front of workstation.
3. Pointing Device:
  - a. Either a two- or three-button mouse.
  - b. Wireless operation within up to 72 inches in front of workstation.
4. PTZ Joystick Controller
5. Flat Panel Display Monitor:
  - a. Number of Displays: Eight.
  - b. Display Support: Desk mounted, adjustable bracket capable of supporting number of monitors specified above with integral power and display cable organization.
  - c. Color display with 43" diagonal viewable area.
  - d. Aspect Ratio: 16 to 9.
  - e. Resolution: 1920 by 4K pixels at 60 Hz with pixel size of 0.277 mm or smaller.
  - f. Digital input signal.
  - g. Response Time: 5 ms.
  - h. Dynamic Contrast Ratio: 50000 to 1.
  - i. Brightness: 250 cd/sq.
  - j. Energy Star compliant.
  - k. Antiglare display.
6. Speakers:
  - a. Two, with individual controls for volume, bass and treble.
  - b. Signal to Noise Ratio: At least 65 dB.
  - c. Power: At least 4 W per speaker/channel.
  - d. Magnetic shielding to prevent distortion on the video monitor.
7. I/O Cabling: Include applicable cabling to connect I/O devices.
8. Software:
  - a. Factory installed operating system.
- D. Servers:

1. Description: x86 based computer used for client-server computing.
  2. Mounting: Rack, blade.
  3. Power: dual power supply, minimum 300 W.
  4. Performance Requirements:
    - a. Performance requirements may dictate equipment exceeding minimum requirements indicated.
    - b. Energy Star compliant.
  5. Processor:
    - a. Minimum Speed: 5.3GHz,
    - b. Cores: Quad.
    - c. Series: Core i7.
  6. RAM:
    - a. Capacity: 1TB.
    - b. Speed and Type: 1333 MGz.
  7. Drive Bays: Eight at 2.5 inches (65 mm) or eight at 3.5 inches (90 mm).
  8. Network Interface: Dual port Gigabit Ethernet
  9. Color, flat-screen display with 23" diagonal viewable area.
  10. KVM.
  11. Next-day on-site warranty for two year period following Substantial Completion.
  12. Servers shall include the following:
    - a. Full-feature backup server (server and backup minimum requirement).
    - b. Software licenses.
    - c. Cable installation between server(s) and network.
  13. Web Server:
    - a. If required to be separate, include Web server hardware and software to match, except backup server is not required.
    - b. Firewalls between server Web and networks.
    - c. Password protection for access to server from Web server.
    - d. Cable installation between the server(s) and building Ethernet network.
  14. Power each server through a dedicated UPS unit.
- E. Printers:
1. Color Laser Printer:
    - a. 1200 by 1200 dots per inch resolution black and white, 1200 by 1200 dots per inch resolution black and white and color.

- b. First sheet printed within 10 seconds.
  - c. 5-20 page per minute rated print speed at best quality mode.
  - d. Print buffer with at least 512 MB of RAM, expandable to at least one GB.
  - e. Complies with Energy Star requirements.
  - f. Capable of handling letter- and legal-size paper and overhead transparencies.
  - g. Two paper trays; one tray with 500 sheet capacity, and one tray with 250 sheet capacity.
  - h. Two-sided printing.
  - i. At least 500 page toner/cartridge capacity.
2. Color Inkjet Printer:
- a. Inkjet technology with true four-color printing (black, cyan, magenta, and yellow).
  - b. Print quality of 1200 by 600 dots per inch with black on inkjet paper and 4800 by 1200 dots per inch color printing on premium photo paper.
  - c. Rated speed of 5-20 pages per minute printing black and white in normal mode and 5-20 pages per minute printing color in normal mode.
  - d. Two paper trays; one tray with 500 sheet capacity, and one tray with 250 sheet capacity.
  - e. Capable of handling letter- and legal-size paper and overhead transparencies.
  - f. Duplex printing (printing on both sides of paper).

## 2.9 FIXED MAP DISPLAY

- A. A fixed map display shall show layout of the protected facilities. Zones corresponding to those monitored by the system shall be highlighted on the display. Status of each zone shall be displayed using digital displays as required within each designated zone. A digital display test switch shall be provided on the map display.

## 2.10 CONTROLLERS

- A. Controllers: Intelligent peripheral control unit, complying with UL 294, that stores time, date, valid codes, access levels, and similar data downloaded from the central station or workstation for controlling its operation.
- B. Subject to compliance with requirements in this article, manufacturers may use multipurpose controllers.
- C. Battery Backup: Sealed, lead acid; sized to provide run time during a power outage of 90 minutes, complying with UL 924.
- D. Alarm Annunciation Controller:
  - 1. The controller shall automatically restore communication within 10 seconds after an interruption with the field device network.
    - a. Inputs: Monitor dry contacts for changes of state that reflect alarm conditions. Provides at least eight alarm inputs, which are suitable for wiring as normally open or normally closed contacts for alarm conditions.
    - b. Alarm-Line Supervision:

- 1) Supervise the alarm lines by monitoring each circuit for changes or disturbances in the signal by monitoring for abnormal open, grounded, or shorted conditions using dc change measurements. System shall initiate an alarm in response to an abnormal current, which is a dc change of 10 percent or more for longer than 500 ms.
      - 2) Transmit alarm-line-supervision alarm to the central station during the next interrogation cycle after the abnormal current condition.
    - c. Outputs: Managed by central-station software.
  2. Auxiliary Equipment Power: A GFI service outlet inside the controller enclosure and all power shall be hard-wired.
- E. Entry-Control Controller:
  1. Function: Provide local entry-control functions including one- and two-way communications with access-control devices such as card readers, keypads, biometric personnel identity-verification devices, door strikes, magnetic latches, gate and door operators, and exit push buttons.
    - a. Operate as a stand-alone portal controller using the downloaded database during periods of communication loss between the controller and the field-device network.
    - b. Accept information generated by the entry-control devices; automatically process this information to determine valid identification of the individual present at the portal:
      - 1) On authentication of the credentials or information presented, check privileges of the identified individual, allowing only those actions granted as privileges.
      - 2) Privileges shall include, but are not limited to, time of day control, day of week control, group control, and visitor escort control.
    - c. Maintain a date-, time-, and Location-stamped record of each transaction. A transaction is defined as any successful or unsuccessful attempt to gain access through a controlled portal by the presentation of credentials or other identifying information.
  2. Inputs:
    - a. Data from entry-control devices; use this input to change modes between access and secure.
    - b. Database downloads and updates from the central station that include enrollment and privilege information.
  3. Outputs:
    - a. Indicate success or failure of attempts to use entry-control devices and make comparisons of presented information with stored identification information.
    - b. Grant or deny entry by sending control signals to portal-control devices.
    - c. Maintain a date-, time-, and Location-stamped record of each transaction and transmit transaction records to the central station.

- d. Door Prop Alarm: If a portal is held open for longer than time listed in a schedule] alarm sounds.
- 4. With power supplies sufficient to power at voltage and frequency required for field devices and portal-control devices.
- 5. Data Line Problems: For periods of loss of communication with the central station, or when data transmission is degraded and generating continuous checksum errors, the controller shall continue to control entry by accepting identifying information, making authentication decisions, checking privileges, and controlling portal-control devices.
  - a. Store up to 1000 transactions during periods of communication loss between the controller and access-control devices for subsequent upload to the central station on restoration of communication.
- 6. Controller Power: NFPA 70, Class II power-supply transformer, with 12- or 24-V ac secondary, backup battery and charger.
  - a. Backup Battery: Valve-regulated, recombinant-sealed, lead-acid battery; spill proof. With single-stage, constant-voltage-current, limited battery charger, comply with battery manufacturer's written instructions for battery terminal voltage and charging current recommendations for maximum battery life.
  - b. Backup Power-Supply Capacity: Five minutes of battery supply. Submit battery and charger calculations.
  - c. Power Monitoring: Provide manual, dynamic battery-load test, initiated and monitored at the control center; with automatic disconnection of the controller when battery voltage drops below controller limits. Report by using local controller-mounted digital displays and by communicating status to central station. Indicate normal power on and battery charger on trickle charge. Indicate and report the following:
    - 1) Trouble Alarm: Normal power-off load assumed by battery.
    - 2) Trouble Alarm: Low battery.
    - 3) Alarm: Power off.

## 2.11 SECONDARY ALARM ANNUNCIATOR

- A. Secondary Alarm Annunciation Site: A workstation with limited I/O capacity, consisting of a secondary alarm annunciation workstation to allow the operator to duplicate functions of the main operator interface and to show system status changes.

## 2.12 ENROLLMENT CENTER

- A. Equipment for enrolling personnel into, and removing personnel from, system database, using a dedicated desktop workstation
  - 1. Include equipment to enroll selected biometric credentials.
- B. Enrollment equipment shall support encoding of credential cards including cryptographic and other internal security checks as required for system.
  - 1. Allow only authorized entry-control enrollment personnel to access the enrollment equipment using passwords.

2. Include enrollment-subsystem configuration controls and electronic diagnostic aids for subsystem setup and troubleshooting with the central station.
  3. Enrollment-station records printer shall meet requirements of the report printer.
- C. Entry-Control Enrollment Software:
1. Shall include database management functions for the system, and shall allow an operator to change and modify the data entered in the system as needed.
  2. Software shall not have alarm response or acknowledgment functions as a programmable function.
  3. Multiple, password-protected access levels shall be provided at the enrollment station.
  4. Database management and modification functions shall require a higher operator-access level than personnel enrollment functions.
  5. Software shall provide a means for disabling the enrollment station when it is unattended, to prevent unauthorized use.
  6. Software shall provide a method to enter personnel identifying information into the entry-control database files through enrollment stations to include a credential unit in use at the installation.
  7. In the case of personnel identity-verification subsystems, this data shall include biometric data.
  8. Software shall allow entry of this data into the system database files through the use of simple menu selections and data fields. The data field names shall be customized to suit user and site needs.
  9. Personnel identity-verification subsystems selected for use with the system shall fully support the enrollment function and shall be compatible with the entry-control database files.
- D. System Capacity: Number of badges shall be limited only by hard disk space. Badge templates and images shall be in color, supporting the maximum color capability of workstation operating system.
- E. Badge Configuration:
1. Software for badge template creation shall include a template consisting of background and predetermined locations of photographs, text objects and data fields for text, and bar-code and biometric information. Include automatic sizing of data fields placed on a badge to compensate for names, which may otherwise be too large to fit in the area designated.
  2. Allow different badge templates to be used for each department, tenant, or visitor.
  3. As a setup option, templates shall be automatically selected for the badge, based on the group to which the credential holder is assigned. Allow the operator to override the automatic template selection and use a template chosen by the operator for creating a badge.
  4. Setup shall determine which graphics and credential-holder information will be displayed and where on the card it will be placed. All data in the security access system, such as name, code, group, access level, and any of the 99 user-defined fields, shall be selectable, with the ability to place them anywhere on the card.
  5. System shall include an importing, filing, and recall system of stored images and shapes that can be placed on the badge.
  6. Allow multiple images on the same badge, including, but not limited to, bar codes, digital photos, and signatures.

7. Support transparent backgrounds so that image is only surrounded by the intended background and not by its immediate background.
- F. Photo Imaging: Integral to security access.
1. Import images from bitmap file formats, digital cameras, TWAIN cameras, or scanners. Allow image cropping and editing, WYSIWYG badge-building application, and badge print-preview and printing capabilities.
  2. System shall support multiple images stored for each credential holder, including signatures, portrait views, and profile views.
- G. Text Objects: Badge configuration shall provide for creation of custom text as an object, allowing font selection, typing, scaling, and formatting of the text object. Formatting options shall include changing font, font size, text flow, and text alignment; bending or curving the text object into a circle or semicircle; applying 3-D effects; and applying predefined effects such as tilt, extrusion, or beveling. Text shall be placed and optionally automatically centered within any region of the badge layout.
- H. Badges and Credential Cards:
1. Badges are credential cards that do not contain data to be read by card readers.
  2. Credential cards shall store uniquely coded data used by card readers as an Identifier.
    - a. Proximity Cards: Use proximity detection without physical contact with the reader for proper operation.
  3. Allow entry-control card to be modified by lamination or direct print process during the enrollment process for use as a picture and identification badge without reduction of readability. The design shall allow for the addition of at least one slot or hole to accommodate the attachment of a clip for affixing the credential card to the type of badge holder used at the site.
    - a. Card Size and Dimensional Stability: Standard size, 2-1/8 by 3-3/8 inches; dimensionally stable so that an undamaged card with deformations resulting from normal use shall be readable by the card reader.
    - b. Card Material: Abrasion resistant, nonflammable, and nontoxic; and impervious to solar radiation and effects of ultraviolet light.
    - c. Card Construction: Core and laminate or monolithic construction. Lettering, logos, and other markings shall be hot stamped into the credential material or direct printed.
      - 1) Incorporate phosphorous ink]as a security enhancement.
      - 2) Furnish equipment for on-site assembly and lamination of credential cards.
    - d. Card Durability and Maintainability: Designed and constructed to yield a useful lifetime of at least five years or 5000 insertions or swipes, whichever results in a longer period of time. Allow credential cards to be cleaned by wiping with a sponge or cloth wetted with soap and water.
- I. Card-Making Equipment: Consisting of a workstation, video camera, video-imaging equipment, and a printer.
1. Camera: NTSC color standard, RGB video output, 470 lines minimum horizontal resolution, and automatic white balance with full rated output under illumination of 0.5 fc (5 lx).

2. Video Imaging: Live-image capture software and hardware and a digital signature capture pad.
3. Standard workstation, modified as follows:
  - a. Redundant workstation is not required.
  - b. Printer is not required.
  - c. UPS is not required.
  - d. Sound card is not required.
4. Printer: Dye-sublimation resin thermal transfer, 300 dpi resolution, 16.7 million colors, accepting cards ranging in size from 2.1 by 3 inches to 2.6 by 3.7 inches and having card thickness ranging from 0.020 to 0.060 inch. Printer shall have options for encoding magnetic stripe using tracks 1, 2, and 3. Throughput shall be not less than 60 seconds per card.

### **2.13 DOOR AND GATE HARDWARE INTERFACE**

- A. Exit Device with Alarm: Operation of the exit device shall generate an alarm and annunciate a local alarm. Exit device and alarm contacts are specified in Section 087100 "Door Hardware."
- B. Exit Alarm: Operation of a monitored door shall generate an alarm. Exit devices and alarm contacts are specified in Section 087100 "Door Hardware."
- C. Electric Door Strikes: Use end-of-line resistors to provide power-line supervision. Signal switches shall transmit data to controller to indicate when the bolt is not engaged and the strike mechanism is unlocked, and they shall report a forced entry. Power and signal shall be from the controller. Electric strikes are specified in Section 087100 "Door Hardware."
- D. Electromagnetic Locks: End-of-line resistors shall provide power-line supervision. Lock status sensing signal shall positively indicate door is secure. Power and signal shall be from the controller. Electromagnetic locks are specified in Section 087100 "Door Hardware."
- E. Vehicle Gate Operator: Interface electrical operation of gate with controls in this Section. Vehicle gate operators shall be connected, monitored, and controlled by the security access controllers. Vehicle gate and accessories are specified in Section 323113 "Chain Link Fences and Gates."

### **2.14 FIELD-PROCESSING SOFTWARE**

- A. Operating System:
  1. Local processors shall contain an operating system that controls and schedules that local processor's activities in real time.
  2. Local processor shall maintain a point database in its memory that includes parameters, constraints, and the latest value or status of all points connected to that local processor.
  3. Execution of local processor application programs shall utilize the data in memory resident files.
  4. Operating system shall include a real-time clock function that maintains the seconds, minutes, hours, date, and month, including day of the week.
  5. Local processor real-time clock shall be automatically synchronized with the central station at least once per day to plus or minus 10 seconds (the time synchronization shall be accomplished automatically, without operator action and without requiring system shutdown).

**B. Startup Software:**

1. Causes automatic commencement of operation without human intervention, including startup of all connected I/O functions.
2. Local processor restart program based on detection of power failure at the local processor shall be included in the local processor software.
3. Initiates operation of self-test diagnostic routines.
4. Upon failure of the local processor, if the database and application software are no longer resident, the local processor shall not restart and systems shall remain in the failure mode indicated until the necessary repairs are made.
5. If the database and application programs are resident, the local processor shall immediately resume operation.

**C. Operating Mode:**

1. Local processors shall control and monitor inputs and outputs as specified, independent of communications with the central station or designated workstations.
2. Alarms, status changes, and other data shall be transmitted to the central station or designated workstations when communications circuits are operable.
3. If communications are not available, each local processor shall function in a stand-alone mode and operational data, including the status and alarm data normally transmitted to the central station or designated workstations, shall be stored for later transmission to the central station or designated workstations.
4. Storage for the latest 4000 events shall be provided at local processors, as a minimum.
5. Local processors shall accept software downloaded from the central station.
6. Panel shall support flash ROM technology to accomplish firmware downloads from a central location.

**D. Failure Mode:** Upon failure for any reason, each local processor shall perform an orderly shutdown and force all local processor outputs to a predetermined (failure-mode) state, consistent with the failure modes shown and the associated control device.**E. Functions:**

1. Monitoring of inputs.
2. Control of outputs.
3. Reporting of alarms automatically to the central station.
4. Reporting of sensor and output status to central station upon request.
5. Maintenance of real time, automatically updated by the central station at least once a day.
6. Communication with the central station.
7. Execution of local processor resident programs.
8. Diagnostics.
9. Download and upload data to and from the central station.

**2.15 FIELD-PROCESSING HARDWARE****A. Alarm Annunciation Local Processor:**

1. Respond to interrogations from the field device network, recognize and store alarm status inputs until they are transmitted to the central station, and change outputs based on commands received from the central station.
  2. Local processor shall also automatically restore communication within 10 seconds after an interruption with the field device network and provide dc line supervision on each of its alarm inputs.
  3. Local processor inputs shall monitor dry contacts for changes of state that reflect alarm conditions.
  4. Local processor shall have at least eight alarm inputs which allow wiring contacts as normally open or normally closed for alarm conditions; and shall provide line supervision for each input by monitoring each input for abnormal open, grounded, or shorted conditions using dc current change measurements.
  5. Local processor shall report line supervision alarms to the central station.
  6. Alarms shall be reported for any condition that remains abnormal at an input for longer than 500 milliseconds.
  7. Alarm condition shall be transmitted to the central computer during the next interrogation cycle.
  8. Local processor outputs shall reflect the state of commands issued by the central station.
  9. Outputs shall be a form C contact and shall include normally open and normally closed contacts.
  10. Local processor shall have at least four command outputs.
  11. Local processor shall be able to communicate with the central station via RS-485 or TCP/IP as a minimum.
- B. Processor Power Supply:
1. Local processor and sensors shall be powered from an uninterruptible power source.
  2. Uninterruptible power source shall provide eight hours of battery back-up power in the event of primary power failure and shall automatically fully recharge the batteries within 12 hours after primary power is restored.
  3. If the facility is without an emergency generator, the uninterruptible power source shall provide 24 hours of battery backup power.
  4. There shall be no equipment malfunctions or perturbations or loss of data during the switch from primary to battery power and vice versa.
  5. Batteries shall be sealed, non-outgassing type.
  6. Power supply shall be equipped with an indicator for ac input power and an indicator for dc output power.
  7. Loss of primary power shall be reported to the central station as an alarm.
- C. Auxiliary Equipment Power: A GFI service outlet shall be furnished inside the local processor's enclosure.
- D. Entry-Control Local Processor:
1. Entry-control local processor shall respond to interrogations from the field device network, recognize and store alarm status inputs until they are transmitted to the central station, and change outputs based on commands received from the central station.

2. Local processor shall also automatically restore communication within 10 seconds after an interruption with the field device network and provide dc line supervision on each of its alarm inputs.
3. Entry-control local processor shall provide local entry-control functions including communicating with field devices such as card readers, keypads, biometric personnel identity-verification devices, door strikes, magnetic latches, gate and door operators, and exit push buttons.
4. Processor shall also accept data from entry-control field devices as well as database downloads and updates from the central station that include enrollment and privilege information.
5. Processor shall send indications of successful or failed attempts to use entry-control field devices and shall make comparisons of presented information with stored identification information.
6. Processor shall grant or deny entry by sending control signals to portal-control devices and mask intrusion-alarm annunciation from sensors stimulated by authorized entries.
7. Entry-control local processor shall use inputs from entry-control devices to change modes between access and secure.
8. Local processor shall maintain a date-time- and location-stamped record of each transaction and transmit transaction records to the central station.
9. Processor shall operate as a stand-alone portal controller using the downloaded database during periods of communication loss between the local processor and the central station.
10. Processor shall store a minimum of 4000 transactions during periods of communication loss between the local processor and the central station for subsequent upload to the central station upon restoration of communication.
11. Local processor inputs shall monitor dry contacts for changes of state that reflect alarm conditions.
12. Local processor shall have at least eight alarm inputs which allow wiring contacts as normally open or normally closed for alarm conditions; and shall also provide line supervision for each input by monitoring each input for abnormal open, grounded, or shorted conditions using dc current change measurements.
13. Local processor shall report line supervision alarms to the central station.
14. Alarms shall be reported for any condition that remains abnormal at an input for longer than 500 ms.
15. Alarm condition shall be transmitted to the central station during the next interrogation cycle.
16. Entry-control local processor shall include the necessary software drivers to communicate with entry-control field devices. Information generated by the entry-control field devices shall be accepted by the local processor and automatically processed to determine valid identification of the individual present at the portal.
17. Upon authentication of the credentials or information presented, the local processor shall automatically check privileges of the identified individual, allowing only those actions granted as privileges.
18. Privileges shall include, but are not limited to, time of day control, day of week control, group control, and visitor escort control. The local processor shall maintain a date-time- and location-stamped record of each transaction.

19. Transaction is defined as any successful or unsuccessful attempt to gain access through a controlled portal by the presentation of credentials or other identifying information.
20. Local processor outputs shall reflect the state of commands issued by the central station.
21. Outputs shall be a form C contact and shall include normally open and normally closed contacts.
22. Local processor shall have at least four addressable outputs.
23. The entry-control local processor shall also provide control outputs to portal-control devices.
24. Local processor shall be able to communicate with the central station via RS-485 or TCP/IP as a minimum.
25. The system manufacturer shall provide strategies for downloading database information for panel configurations and cardholder data to minimize the required download time when using IP connectivity.

## **2.16 FLOOR-SELECT ELEVATOR CONTROL**

- A. Elevator access control shall be integral to security access.
  1. System shall be capable of providing full elevator security and control through dedicated controllers without relying on the control-station host workstation for elevator control decisions.
  2. Access-control system shall enable and disable car calls on each floor and floor-select buttons in each elevator car, restricting passengers' access to the floors where they have been given access.
  3. System setup shall, through programming, automatically and individually secure and unsecure each floor-select button of a car by time and day. Each floor-select button within a car shall be separately controlled so that some floors may be secure while others remain unsecure.
  4. When a floor-select button is secure, it shall require the passenger to use his or her access code and gain access to that floor before the floor-select button will operate. The passenger's credential shall determine which car call and floor-select buttons are to be enabled, restricting access to floors unless authorized by the system's access code database. Floor-select button shall be enabled only in the car where the credential holder is the passenger.
- B. Security access system shall record which call button is pressed, along with credential and time information.
  1. System controller shall record elevator access data.
  2. The controller shall reset all additional call buttons that may have been enabled by the user's credential.
  3. The floor-select elevator control shall allow for manual override from a workstation workstation either by individual floor or by cab.

## **2.17 REAL-TIME GUARD TOUR**

- A. Guard tour module shall provide the ability to plan, track, and route tours. Module shall input an alarm during tour if guard fails to make a station. Tours can be programmed for sequential or random tour-station order.

1. Guard tour setup shall define specific routes or tours for the guard to take, with time restrictions in which to reach every predefined tour station.
  2. Guard tour activity shall be automatically logged to the central-station workstation's hard drive.
  3. If the guard is early or late to a tour station, a unique alarm per station shall appear at the central station to indicate the time and station.
  4. Guard tour setup shall allow the tours to be executed sequentially or in a random order with an overall time limit set for the entire tour instead of individual times for each tour station.
  5. Setup shall allow recording of predefined responses that will display for the operator at the control station should a "Failed to Check In" alarm occur.
- B. Guard tour module shall allow proprietary direct-connected systems to use security access-control hardware to perform guard tour management in real time.
- C. A tour station is a physical location where a guard shall go and perform an action indicating that he or she has arrived. This action, performed at the tour station, shall be one of 13 different events with any combination of station types within the same tour. An event at a tour station shall be one of the following types:
1. Access Granted.
  2. Access Denied Code.
  3. Access Denied Card plus PIN.
  4. Access Denied Time Zone.
  5. Access Denied Level.
  6. Access Denied Facility.
  7. Access Denied Code Timer.
  8. Access Denied Anti-Passback.
  9. Access Granted Passback Violation.
  10. Alarm.
  11. Restored.
  12. Input Normal.
  13. Input Abnormal.
- D. Guard tour and other system features shall operate simultaneously with no interference.
- E. Guard Tour Module Capacity: 999 possible guard tour definitions with each tour having up to 99 tour stations. System shall allow all 999 tours to be running at the same time.

## **2.18 VIDEO AND CAMERA CONTROL**

- A. Control station or designated workstation displays live video from a CCTV source.
1. Control Buttons: On the display window, with separate control buttons to represent Left, Right, Up, Down, Zoom In, Zoom Out, Scan, and a minimum of two custom-command auxiliary controls.
  2. Provide at least seven icons to represent different types of cameras, with ability to import custom icons. Provide option for display of icons on graphic maps to represent their physical location.

3. Provide the alarm-handling window with a command button that will display the camera associated with the alarm point.
- B. Display mouse-selectable icons representing each camera source, to select source to be displayed. For CCTV sources that are connected to a video switcher, control station shall automatically send control commands through a COM port to display the requested camera when the camera icon is selected.
- C. Allow cameras with preset positioning to be defined by displaying a different icon for each of the presets. Provide control with Next and Previous buttons to allow operator to cycle quickly through the preset positions.

## **2.19 TRANSFORMERS**

- A. NFPA 70, Class II control transformers, NRTL listed. Transformers for security access-control system shall not be shared with any other system.

## **2.20 CABLE AND ASSET MANAGEMENT SOFTWARE**

- A. Computer-based cable and asset management system, with fully integrated database and graphic capabilities, complying with requirements in TIA 606-B.
  1. Document physical characteristics by recording the network, asset, user, TIA details, device configurations, and exact connections between equipment and cabling.
    - a. Manage the physical layer of security system.
    - b. List device configurations.
    - c. List and display circuit connections.
    - d. Record firestopping data.
    - e. Record grounding and bonding connections and test data.
  2. Information shall be presented in database view, schematic plans, or technical drawings.
    - a. Microsoft Visio Technical Drawing shall be used as drawing and schematic plans software. Drawing symbols, system layout, and design shall comply with SIA/IAPSC AG-01.
  3. System shall interface with the following testing and recording devices:
    - a. Direct-upload tests from circuit testing instrument into the workstation.
    - b. Direct-download circuit labeling into labeling printer.
- B. Software shall be designed for the same version as security access system's central station and workstations and shall be installed on the designated workstation, using a hard drive dedicated only to this management function.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.

- B. Examine roughing-in for LAN and control cable conduit systems to workstations, controllers, card readers, and other cable-connected devices to verify actual locations of conduit and back boxes before device installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Comply with recommendations in SIA CP-01.
- B. Comply with TIA 606-B, "Administration Standard for Commercial Telecommunications Infrastructure."
- C. Product Schedules: Obtain detailed product schedules from manufacturer of access-control system or develop product schedules to suit Project. Fill in all data available from Project plans and specifications and publish as Product Schedules for review and approval.
  - 1. Record setup data for control station and workstations.
  - 2. For each Location, record setup of controller features and access requirements.
  - 3. Propose start and stop times for time zones and holidays, and match up access levels for doors.
  - 4. Set up groups, facility codes, linking, and list inputs and outputs for each controller.
  - 5. Assign action message names and compose messages.
  - 6. Set up alarms. Establish interlocks between alarms, intruder detection, and video surveillance features.
  - 7. Prepare and install alarm graphic maps.
  - 8. Develop user-defined fields.
  - 9. Develop screen layout formats.
  - 10. Propose setups for guard tours and key control.
  - 11. Discuss badge layout options; design badges.
  - 12. Complete system diagnostics and operation verification.
  - 13. Prepare a specific plan for system testing, startup, and demonstration.
  - 14. Develop acceptance test concept and, on approval, develop specifics of the test.
  - 15. Develop cable and asset-management system details; input data from construction documents. Include system schematics and Visio Technical Drawings in electronic format.
- D. In meetings with Architect and Owner, present Product Schedules and review, adjust, and prepare final setup documents. Use approved, final Product Schedules to set up system software.

### **3.3 IDENTIFICATION**

- A. In addition to requirements in this article, comply with applicable requirements in Section 270553 "Identification for Communications Systems" and with TIA 606-B.
- B. Using software specified in "Cable and Asset Management Software" Article, develop cable administration drawings for system identification, testing, and management. Use unique, alphanumeric designation for each cable, and label cable and jacks, connectors, and terminals to which it connects with the same designation. Use logical and systematic designations for facility's architectural arrangement.

- C. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
  - 1. All wiring conductors connected to terminal strips shall be individually numbered, and each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with the name and number of the particular device as shown.
  - 2. Each wire connected to building-mounted devices is not required to be numbered at the device if the color of the wire is consistent with the associated wire connected and numbered within the panel or cabinet.
- D. At completion, cable and asset management software shall reflect as-built conditions.

### **3.4 SYSTEM SOFTWARE AND HARDWARE**

- A. Develop, install, and test software and hardware, and perform database tests for the complete and proper operation of systems involved. Assign software license to Owner.

### **3.5 STARTUP SERVICE**

- A. Engage a factory-authorized service representative to supervise and assist with startup service.
  - 1. Complete installation and startup checks according to approved procedures that were developed in "Preparation" Article and with manufacturer's written instructions.
  - 2. Enroll and prepare badges and access cards for Owner's operators, management, and security personnel.

### **3.6 PROTECTION**

- A. Maintain strict security during the installation of equipment and software. Rooms housing the control station, and workstations that have been powered up shall be locked and secured with an activated burglar alarm and access-control system reporting to a central station complying with UL 1610, "Central-Station Burglar-Alarm Units," during periods when a qualified operator in the employ of Contractor is not present.

### **3.7 DEMONSTRATION**

- A. Train Owner's maintenance personnel to adjust, operate, and maintain security access system. See Section 017900 "Demonstration and Training."
- B. Develop separate training modules for the following:
  - 1. Computer system administration personnel to manage and repair the LAN and databases and to update and maintain software.
  - 2. Operators who prepare and input credentials to man the control station and workstations and to enroll personnel.
  - 3. Security personnel.
  - 4. Hardware maintenance personnel.
  - 5. Corporate management.

**END OF SECTION 281300**

**SECTION 281500 - ACCESS CONTROL HARDWARE DEVICES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Card readers, credential cards, and keypads
  - 2. Cables
  - 3. Transformers
- B. Related Requirements:
  - 1. Section 281300 "Access Control System Software and Database Management" for control and monitoring applications, workstations, and interfaces.

**1.3 DEFINITIONS**

- A. Credential: Data assigned to an entity and used to identify that entity.
- B. DTS: Digital Termination Service. A microwave-based, line-of-sight communication provided directly to the end user.
- C. Identifier: A credential card; keypad personal identification number; or code, biometric characteristic, or other unique identification entered as data into the entry-control database for the purpose of identifying an individual. Where this term is presented with an initial capital letter, this definition applies.
- D. Location: A Location on the network having a PC-to-controller communications link, with additional controllers at the Location connected to the PC-to-controller link with a TIA 485-A communications loop. Where this term is presented with an initial capital letter, this definition applies.
- E. PC: Personal computer. Applies to the central station, workstations, and file servers.
- F. RAS: Remote access services.
- G. RF: Radio frequency.
- H. ROM: Read-only memory. ROM data is maintained through losses of power.
- I. TCP/IP: Transport control protocol/Internet protocol.
- J. TWAIN: Technology without an Interesting Name. A programming interface that lets a graphics application, such as an image editing program or desktop publishing program, activate a scanner, frame grabber, or other image-capturing device.
- K. WMP: Windows media player.
- L. Wiegand: Patented magnetic principle that uses specially treated wires embedded in the credential card.

- M. WYSIWYG: What You See Is What You Get. Text and graphics appear on the screen the same as they will in print.

#### 1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Reference each product to a location on Drawings. Test and evaluation data presented in Product Data shall comply with SIA BIO-01.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Diagrams for cable management system.
  - 2. System labeling schedules, including electronic copy of labeling schedules that are part of the cable and asset identification system of the software specified in Parts 2 and 3.
  - 3. Wiring Diagrams. For power, signal, and control wiring. Show typical wiring schematics including the following:
    - a. Workstation outlets, jacks, and jack assemblies.
    - b. Patch cords.
    - c. Patch panels.
  - 4. Cable Administration Drawings: As specified in "Identification" Article.
  - 5. Battery and charger calculations for central station, workstations, and controllers.
- C. Product Schedules.
- D. Samples: For workstation outlets, jacks, jack assemblies, and faceplates. For each exposed product and for each color and texture specified.

#### 1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

#### 1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For security system to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:
  - 1. Hard copies of manufacturer's specification sheets, operating specifications, design guides, user's guides for software and hardware, and PDF files on USB media of the hard-copy submittal.
  - 2. System installation and setup guides with data forms to plan and record options and setup decisions.

#### 1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Credential card blanks, ready for printing. Include enough credential cards for all personnel to be enrolled at the site plus an extra 50 percent for future use.

2. Fuses of all kinds, power and electronic, equal to 10 percent of amount installed for each size used, but no fewer than three units.

## 1.8 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
  1. Cable installer must have on staff an RCDD certified by Building Industry Consulting Service International.
  2. Contractor to be certified by manufacturer
- B. Source Limitations: Obtain central station, workstations, controllers, Identifier readers, and all software through one source from single manufacturer.

## 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store in temperature- and humidity-controlled environment in original manufacturer's sealed containers. Maintain ambient temperature between 50 and 85 deg F and not more than 80 percent relative humidity, noncondensing.
- B. Open each container; verify contents against packing list; and file copy of packing list, complete with container identification, for inclusion in operation and maintenance data.
- C. Mark packing list with the same designations assigned to materials and equipment for recording in the system labeling schedules that are generated by software specified in "Cable and Asset Management Software" Article.
- D. Save original manufacturer's containers and packing materials and deliver as directed under provisions covering extra materials.

## 1.10 PROJECT CONDITIONS

- A. Environmental Conditions: System shall be capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
  1. Control Station: Rated for continuous operation in ambient conditions of 60 to 85 deg F and a relative humidity of 20 to 80 percent, noncondensing.
  2. Indoor, Controlled Environment: NEMA 250, Type 1 enclosure. System components, except the central-station control unit, installed in temperature-controlled indoor environments shall be rated for continuous operation in ambient conditions of 36 to 85 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.
  3. Indoor, Uncontrolled Environment: NEMA 250, Type 3R, Type 4 enclosures. System components installed in non-temperature-controlled indoor environments shall be rated for continuous operation in ambient conditions of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.
  4. Outdoor Environment: NEMA 250, NEMA 250, Type 3R, Type 4 enclosures. System components installed in locations exposed to weather shall be rated for continuous operation in ambient conditions of minus 30 to plus 122 deg F dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation where exposed to rain as specified in NEMA 250, winds up to 85 mph.
  5. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.

6. Corrosive Environment: For system components subjected to corrosive fumes, vapors, and wind-driven salt spray in coastal zones, provide NEMA 250, Type 4X enclosures.

## **PART 2 - PRODUCTS**

### **2.1 OPERATION**

- A. Security access system hardware shall use a single database for access-control and credential-creation functions.

### **2.2 PERFORMANCE REQUIREMENTS**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NFPA 70, "National Electrical Code."
- C. Comply with SIA DC-03.

### **2.3 CARD READERS, CREDENTIAL CARDS, AND KEYPADS**

- A. Card-Reader Power: Powered from its associated controller, including its standby power source, and shall not dissipate more than 5 W.
- B. Response Time: Card reader shall respond to passage requests by generating a signal that is sent to the controller. Response time shall be 800 ms or less, from the time the card reader finishes reading the credential card until a response signal is generated.
- C. Enclosure: Suitable for surface, semi-flush, pedestal, or weatherproof mounting. Mounting types shall additionally be suitable for installation in the following locations:
  1. Indoors, controlled environment.
  2. Indoors, uncontrolled environment.
  3. Outdoors, with built-in heaters or other cold-weather equipment to extend the operating temperature range as needed for operation at the site.
- D. Display: Digital visual indicator shall provide visible and audible status indications and user prompts. Indicate power on or off, whether user passage requests have been accepted or rejected, and whether the door is locked or unlocked.
- E. Touch-Plate and Proximity Readers:
  1. Active-detection proximity card readers shall provide power to compatible credential cards through magnetic induction and shall receive and decode a unique identification code number transmitted from the credential card.
  2. Passive-detection proximity card readers shall use a swept-frequency, RF field generator to read the resonant frequencies of tuned circuits laminated into compatible credential cards. The resonant frequencies read shall constitute a unique identification code number.
  3. The card reader shall read proximity cards in a range from direct contact to at least 6 inches from the reader.
- F. Keypads:
  1. Entry-control keypads shall use a unique combination of alphanumeric and other symbols as an Identifier.
  2. Keypads shall contain an integral alphanumeric/special symbols keyboard with symbols arranged in ascending ASCII-code ordinal sequence.
  3. Communication protocol shall be compatible with the local processor.

- G. Keypad Display:
1. Keypads shall include a digital visual indicator and shall provide visible and audible status indications and user prompts.
  2. Display shall indicate power on or off and whether user passage requests have been accepted or rejected.
  3. Design of the keypad display or keypad enclosure shall limit viewing angles of the keypad as follows:
    - a. Maximum Horizontal Viewing Angle: Plus or minus 5 degrees or less off a vertical plane perpendicular to the plane of the face of the keypad display.
    - b. Maximum Vertical Viewing Angle: Plus or minus 15 degrees or less off a horizontal plane perpendicular to the plane of the face of the keypad display.
- H. Keypad Response Time:
1. The keypad shall respond to passage requests by generating a signal to the local processor. The response time shall be 800 ms or less from the time the last alphanumeric symbol is entered until a response signal is generated.
- I. Keypad Power:
1. The keypad shall be powered from the source as shown and shall not dissipate more than 150 W.
- J. Keypad Mounting Method:
1. Keypads shall be suitable for surface, semi-flush, pedestal, or weatherproof mounting as required.
- K. Keypad Duress Codes:
1. Keypads shall provide a means for users to indicate a duress situation by entering a special code.
- L. Keypad and Wiegand-Swipe-Reader Combination: Designed to require an entry on the keypad before presenting the credential card.
1. Keypad: Allow the entry of four alphanumeric characters that are associated with a specific credential. Keypads shall contain an integral alphanumeric/special symbol keyboard with symbols arranged in ascending ASCII-code ordinal sequence. Keypad display or enclosure shall limit viewing angles of the keypad as follows:
    - a. Maximum Horizontal Viewing Angle: Plus or minus 5 degrees or less off a vertical plane perpendicular to the plane of the face of the keypad display.
    - b. Maximum Vertical Viewing Angle: Plus or minus 15 degrees or less off a horizontal plane perpendicular to the plane of the face of the keypad display.
  2. Wiegand Swipe Reader: Set up for 26-bit data cards to generate a unique card identification code. Comply with SIA AC-01.
- M. Communication Protocol: Compatible with local processor.
- N. Touch-Plate and Contactless Card Reader: The reader shall have "flash" download capability to accommodate card format changes. The card reader shall have capability of transmitting data to security control panel and shall comply with ISO/IEC 7816.
- O. Credential Card Modification: Entry-control cards shall be able to be modified by lamination direct print process during the enrollment process without reduction of readability. The design of

the credential cards shall allow for the addition of at least one slot or hole to accommodate the attachment of a clip for affixing the credential card to the badge holder used at the site.

- P. Card Size and Dimensional Stability: Credential cards shall be 2-1/8 by 3-3/8 inches. The credential card material shall be dimensionally stable so that an undamaged card with deformations resulting from normal use shall be readable by the card reader.
- Q. Card Material: Abrasion resistant, nonflammable, nontoxic, and impervious to solar radiation and effects of ultraviolet light.
- R. Card Construction:
  - 1. Core and laminate or monolithic construction.
  - 2. Lettering, logos, and other markings shall be hot stamped into the credential material or direct printed.
  - 3. Incorporate phosphorous ink as a security enhancement.
  - 4. Furnish equipment for on-site assembly and lamination of credential cards.

## 2.4 BIOMETRIC IDENTITY-VERIFICATION EQUIPMENT

- A. Biometric identity-verification templates shall be stored as part of system database files and used as a comparative base by the identity-verification equipment to generate an appropriate signal to the associated controller.
- B. Eye Retina Scanner: Designed to incorporate positive measures to establish that the eye retina being scanned by the device belongs to a living human being.
  - 1. Retina scan device shall provide a means that does not require facial contact with the device for enrollees to align their eye for identification. A manual push button shall be provided to initiate the scan process when the enrollee's eye is aligned in front of the device.
  - 2. The efficiency and accuracy of scanner shall not be affected by contact lenses.
  - 3. Storage space for each eye template shall not exceed 512 8-bit bytes.
  - 4. Light-emitting source used for retina scans may not use light levels exceeding 20 percent of the maximum safe level established in the American Conference of Governmental Industrial Hygienists limit values.
  - 5. Template Update: Eye scanner shall not automatically update an enrollee's template. Significant changes in an individual's eye shall require re-enrollment.
  - 6. Scan acceptance tolerance or template match criteria shall be under system manager/operator control. Eye scanner shall determine when multiple attempts are needed for retina verification and shall automatically prompt the enrollee for additional attempts up to a maximum of three. Three failed attempts shall generate an entry-control alarm.
  - 7. Average Verification Time: Eye scanner shall respond to passage requests by generating an entry request signal to the controller. The verification time shall be 1.5 seconds or less from the moment eye scanner initiates the scan process until eye scanner generates a response signal.
  - 8. Modes: Eye scanner shall provide an enrollment mode, a recognition mode, and a code/credential verification mode.
    - a. In the enrollment mode, eye scanner shall create an eye template for new personnel and enter the template into the system database file created for that person. Template information shall be compatible with system application software.

- b. In the recognition mode, eye scanner shall allow passage when the eye scan data from the verification attempt match an eye template stored in database files.
    - c. In the code/credential verification mode, eye scanner shall allow passage when the eye scan data from the verification attempt match the eye scan template associated with the identification code entered into a keypad, or they match the eye scan template associated with credential card data read by a card reader.
  9. Reports: Eye scanner shall create and store template match scores for all transactions involving eye retinal scans. Template match scores shall be stored in the matching personnel data file used for report generation.
  10. Power: Scanner shall be powered from its associated controller, requiring not more than 45W.
  11. Enclosure: Eye scanners shall be available with enclosures that are suitable for surface, semiflush, or pedestal mounting. Mounting types shall additionally be suitable for installation in the following locations:
    - a. Indoors, controlled environment.
  12. Display: Digital visual indicator shall provide visible and audible status indications and user prompts. Indicate power on or off and whether user passage requests have been accepted or rejected.
- C. Hand Geometry: Use unique human hand measurements to identify authorized, enrolled personnel. The design of this device shall incorporate positive measures to establish that the hand being measured by the device belongs to a living human being.
  1. The user's hand shall remain in full view of the user at all times. The scan process of the hand geometry device shall make three-dimensional measurements of the size and shape of the subject's hand. Scanning shall start automatically once the user's hand is properly positioned by the alignment system.
  2. Hand geometry device shall be able to use either left or right hand for enrollment and verification.
  3. Storage space for each hand template shall not exceed 50 8-bit bytes.
  4. Template Update and Acceptance Tolerances: Hand geometry devices shall not automatically update a user's profile. Significant changes in an individual's hand geometry shall require re-enrollment. Hand geometry devices shall provide an adjustable acceptance tolerance or template match criteria under system manager/operator control. Hand geometry device shall determine when multiple attempts are needed for hand geometry verification and shall automatically prompt the user for additional attempts up to a maximum of three. Three failed attempts shall generate an entry-control alarm.
  5. Average Verification Time: Hand geometry device shall respond to passage requests by generating an entry request signal to the controller. The verification time shall be 1.5 seconds or less from the moment hand geometry device initiates the scan process until hand geometry device generates a response signal.
  6. Modes: Hand geometry device shall provide an enrollment mode, a recognition mode, and a code/credential verification mode.
    - a. In the enrollment mode, hand geometry device shall create a hand template for new personnel and enter the template into the system database file created for that person. Template information shall be compatible with system application software.

- b. In the recognition mode, fingerprint analysis scanner shall allow passage when the fingerprint data from the verification attempt match a fingerprint template stored in database files.
    - c. In the code/credential verification mode, fingerprint analysis scanner shall allow passage when the fingerprint data from the verification attempt match the fingerprint template associated with the identification code entered into a keypad, or they match the fingerprint template associated with credential card data read by a card reader.
  6. Reports: Fingerprint analysis device shall create and store pattern match scores for all transactions involving fingerprint scans. Template match scores shall be stored in the matching personnel data file used for report generation.
  7. Power: Fingerprint analysis scanner shall be powered from its associated controller, requiring not more than 45W.
  8. Enclosure: Scanners shall be available with enclosures that are suitable for surface, semiflush, or pedestal mounting. Mounting types shall additionally be suitable for installation in the following locations:
    - a. Indoors, controlled environment.
  9. Display: Digital visual indicator shall provide visible and audible status indications and user prompts. Indicate power on or off and whether user passage requests have been accepted or rejected.
- E. Iris Scan Device: Use the unique patterns found in the iris of the human eye to identify authorized, enrolled personnel. The device shall use ambient light to capture an image of the iris of a person for identification. The resulting video image shall be compared against a stored template that was captured during the enrollment process. When the presented image is sufficiently similar to the stored image template, then the device shall authenticate the presenting individual as identified. The threshold of similarity shall be adjustable.
  1. The efficiency and accuracy of the device shall not be affected by contact lenses or eyeglasses.
  2. Iris scan device shall provide a means that does not require facial contact with the device for enrollees to align their eye for identification. A manual push button shall be provided to initiate the scan process when the user's eye is aligned in front of the device.
  3. The device shall include adjustments to accommodate differences in enrollee height.
  4. Template Update: Iris scanners shall not automatically update an enrollee's template. Significant changes in an individual's eye shall require re-enrollment.
  5. Scan acceptance tolerance or template match criteria shall be under system manager/operator control. Iris scanner shall determine when multiple attempts are needed for iris verification and shall automatically prompt the user for additional attempts up to a maximum of three. Three failed attempts shall generate an entry-control alarm.
  6. Average Verification Time: Iris scanner shall respond to passage requests by generating an entry request signal to the controller. The verification time shall be 1.5 seconds or less from the moment iris scanner initiates the scan process until iris scanner generates a response signal.
  7. Modes: Iris scanner shall provide an enrollment mode, a recognition mode, and a code/credential verification mode.

- a. In the enrollment mode, iris scanner shall create an iris template for new personnel and enter the template into the system database file created for that person. Template information shall be compatible with system application software.
  - b. In the recognition mode, iris scanner shall allow passage when the iris scan data from the verification attempt match an iris template stored in database files.
  - c. In the code/credential verification mode, iris scanner shall allow passage when the iris scan data from the verification attempt match the iris scan template associated with the identification code entered into a keypad, or they match the iris scan template associated with credential card data read by a card reader.
8. Reports: Iris imaging shall create and store template match scores for all transactions involving iris scans. Template match scores shall be stored in the matching personnel data file used for report generation.
  9. Power: Iris scanner shall be powered from its associated controller, requiring not more than 45W.
  10. Enclosure: Eye scanners shall be available with enclosures that are suitable for surface, semiflush, or pedestal mounting. Mounting types shall additionally be suitable for installation in the following locations:
    - a. Indoors, controlled environment.
  11. Display: Digital visual indicator shall provide visible and audible status indications and user prompts. Indicate power on or off and whether user passage requests have been accepted or rejected.

## **2.5 PUSH-BUTTON SWITCHES**

- A. Push-Button Switches: Momentary-contact back-lighted push buttons with stainless steel switch enclosures.
- B. Electrical Ratings:
  1. Minimum continuous current rating of 10-A at 120-V ac or 5-A at 240-V ac.
  2. Contacts that will make 720 VA at 60-A and that will break at 720 VA at 10-A.
- C. Enclosures: Flush or surface mounting. Push buttons shall be suitable for flush mounting in the switch enclosures.
- D. Enclosures shall additionally be suitable for installation in the following locations:
  1. Indoors, controlled environment.
- E. Power: Push-button switches shall be powered from their associated controller, using dc control.

## **2.6 CABLES**

- A. General Cable Requirements: Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and as recommended by system manufacturer for integration requirement.
- B. PVC-Jacketed, TIA 485-A Cables:
  1. Paired, two pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors.
  2. PVC insulation.

3. Unshielded.
  4. PVC jacket.
  5. NFPA 70 Type: Type CM.
  6. Flame Resistance: Comply with UL 1581.
- C. Plenum-Rated TIA 485-A Cables:
1. Paired, two pairs, No. 22 AWG, stranded (7x30) tinned copper conductors.
  2. Fluorinated ethylene propylene insulation.
  3. Unshielded.
  4. Fluorinated ethylene propylene jacket.
  5. NFPA 70 Type: Type CMP
  6. Flame Resistance: NFPA 262, Flame Test.
- D. Multiconductor, PVC, Reader and Wiegand Keypad Cables:
- E. Paired, PVC, Reader and Wiegand Keypad Cables:
1. Three pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, individual aluminum-foil/polyester-tape shielded pairs each with No. 22 AWG, stranded tinned copper drain wire, 100 percent shield coverage, and PVC jacket.
  2. NFPA 70, Type CM.
  3. Flame Resistance: UL 1581 vertical tray.
- F. Paired, PVC, Reader and Wiegand Keypad Cables:
1. Three pairs, twisted, No. 20 AWG, stranded (7x28) tinned copper conductors, polyethylene (polyolefin) insulation, individual aluminum-foil/polyester-tape shielded pairs each with No. 22 AWG, stranded (19x34) tinned copper drain wire, 100 percent shield coverage, and PVC jacket.
  2. NFPA 70, Type CM.
  3. Flame Resistance: UL 1581 vertical tray.
- G. Paired, Plenum-Type, Reader and Wiegand Keypad Cables:
1. Three pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, individual aluminum-foil/polypropylene-tape shielded pairs each with No. 22 AWG, stranded tinned copper drain wire, 100 percent shield coverage, and fluorinated-ethylene-propylene jacket.
  2. NFPA 70, Type CMP.
  3. Flame Resistance: NFPA 262 flame test.
- H. Multiconductor, Plenum-Type, Reader and Wiegand Keypad Cables:
1. Six conductors, No. 20 AWG, stranded (7x28) tinned copper conductors, fluorinated-ethylene-propylene insulation, overall aluminum-foil/polyester-tape shield with 100 percent shield coverage plus tinned copper braid shield with 85 percent shield coverage, and fluorinated-ethylene-propylene jacket.
  2. NFPA 70, Type CMP.

3. Flame Resistance: NFPA 262 flame test.
- I. LAN Cabling:
  1. Comply with requirements in Section 271513 "Communications Copper Horizontal Cabling."

## 2.7 TRANSFORMERS

- A. NFPA 70, Class II control transformers, NRTL listed. Transformers for security access-control system shall not be shared with any other system.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting installation.
- B. Examine roughing-in for LAN and control cable conduit systems to PCs, controllers, card readers, and other cable-connected devices to verify actual locations of conduit and back boxes before device installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Comply with recommendations in SIA CP-01.
- B. Comply with TIA 606-B, "Administration Standard for Commercial Telecommunications Infrastructure."
- C. Product Schedules: Obtain detailed product schedules from manufacturer of access-control system or develop product schedules to suit Project. Fill in all data available from Project plans and specifications and publish as Product Schedules for review and approval.
- D. In meetings with Architect and Owner, present Product Schedules and review, adjust, and prepare final setup documents. Use approved, final Product Schedules to set up system software.

### 3.3 CABLING

- A. Comply with NECA 1, "Good Workmanship in Electrical Construction."
- B. Install cables and wiring according to requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Install wiring in raceway and cable tray except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Use NRTL-listed plenum cable in environmental airspaces, including plenum ceilings. Conceal raceway and cables except in unfinished spaces.
- D. Install LAN cables using techniques, practices, and methods that are consistent with Category 5e rating of components and optical fiber rating of components, and that ensure Category 6 and optical fiber performance of completed and linked signal paths, end to end.
- E. Boxes and enclosures containing security-system components or cabling, and which are easily accessible to employees or to the public, shall be provided with a lock. Boxes above ceiling level in occupied areas of the building shall not be considered accessible. Junction boxes and

small device enclosures below ceiling level and easily accessible to employees or the public shall be covered with a suitable cover plate and secured with tamperproof screws.

- F. Install end-of-line resistors at the field device location and not at the controller or panel location.

### **3.4 CABLE APPLICATION**

- A. Comply with TIA 569-D, "Commercial Building Standard for Telecommunications Pathways and Spaces."
- B. Cable application requirements are minimum requirements and shall be exceeded if recommended or required by manufacturer of system hardware.
- C. TIA 232-F Cabling: Install at a maximum distance of 50 ft. between terminations.
- D. TIA 485-A Cabling: Install at a maximum distance of 4000 ft. between terminations.
- E. Card Readers and Keypads:
  - 1. Install number of conductor pairs recommended by manufacturer for the functions specified.
  - 2. Unless manufacturer recommends larger conductors, install No. 22 AWG wire if maximum distance from controller to the reader is 250 ft., and install No. 20 AWG wire if maximum distance is 500 ft..
  - 3. For greater distances, install "extender" or "repeater" modules recommended by manufacturer of the controller.
  - 4. Install minimum No. 18 AWG shielded cable to readers and keypads that draw 50 mA or more.
- F. Install minimum No. 16 AWG cable from controller to electrically powered locks. Do not exceed 500 ft. between terminations.
- G. Install minimum No. 18 AWG ac power wire from transformer to controller, with a maximum distance of 25 ft. between terminations.

### **3.5 GROUNDING**

- A. Comply with Section 270526 "Grounding and Bonding for Communications Systems."
- B. Comply with IEEE 1100, "Recommended Practice for Power and Grounding Electronic Equipment."
- C. Ground cable shields, drain conductors, and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
- D. Bond shields and drain conductors to ground at only one point in each circuit.
- E. Signal Ground:
  - 1. Terminal: Locate in each equipment room and wiring closet; isolate from power system and equipment grounding.
  - 2. Bus: Mount on wall of main equipment room with standoff insulators.
  - 3. Backbone Cable: Extend from signal ground bus to signal ground terminal in each equipment room and wiring closet.

### **3.6 INSTALLATION**

- A. Install card readers, keypads, push buttons, and biometric readers.

**3.7 IDENTIFICATION**

- A. In addition to requirements in this article, comply with applicable requirements in Section 270553 "Identification for Communications Systems" and with TIA 606-B.
- B. Using software specified in "Cable and Asset Management Software" Article, develop cable administration drawings for system identification, testing, and management. Use unique, alphanumeric designation for each cable, and label cable and jacks, connectors, and terminals to which it connects with the same designation. Use logical and systematic designations for facility's architectural arrangement.
- C. Label each terminal strip and screw terminal in each cabinet, rack, or panel.
  - 1. All wiring conductors connected to terminal strips shall be individually numbered, and each cable or wiring group being extended from a panel or cabinet to a building-mounted device shall be identified with the name and number of the particular device as shown.
  - 2. Each wire connected to building-mounted devices is not required to be numbered at the device if the color of the wire is consistent with the associated wire connected and numbered within the panel or cabinet.
- D. At completion, cable and asset management software shall reflect as-built conditions.

**3.8 SYSTEM SOFTWARE AND HARDWARE**

- A. Develop, install, and test software and hardware, and perform database tests for the complete and proper operation of systems involved. Assign software license to Owner.

**3.9 FIELD QUALITY CONTROL**

- A. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
  - 1. LAN Cable Procedures: Inspect for physical damage and test each conductor signal path for continuity and shorts. Use tester approved for type and kind of installed cable. Test for faulty connectors, splices, and terminations. Test according to TIA 568-C.1, "Commercial Building Telecommunications Cabling Standards - Part 1: General Requirements." Link performance for balanced twisted-pair cables must comply with minimum criteria in TIA 568-C.1.
  - 2. Test each circuit and component of each system. Tests shall include, but are not limited to, measurements of power-supply output under maximum load, signal loop resistance, and leakage to ground where applicable. System components with battery backup shall be operated on battery power for a period of not less than 10 percent of the calculated battery operating time. Provide special equipment and software if testing requires special or dedicated equipment.
  - 3. Operational Test: After installation of cables and connectors, demonstrate product capability and compliance with requirements. Test each signal path for end-to-end performance from each end of all pairs installed. Remove temporary connections when tests have been satisfactorily completed.
- C. Devices and circuits will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

**3.10 STARTUP SERVICE**

- A. Engage a factory-authorized service representative to supervise and assist with startup service.
  - 1. Complete installation and startup checks according to approved procedures that were developed in "Preparation" Article and with manufacturer's written instructions.
  - 2. Enroll and prepare badges and access cards for Owner's operators, management, and security personnel.

**3.11 DEMONSTRATION**

- A. Train Owner's representative to adjust, operate, and maintain security access system. See Section 017900 "Demonstration and Training."
- B. Develop separate training modules for the following:
  - 1. Computer system administration personnel to manage and repair the LAN and databases and to update and maintain software.
  - 2. Operators who prepare and input credentials to man the control station and workstations and to enroll personnel.
  - 3. Security personnel.
  - 4. Hardware maintenance personnel.
  - 5. Corporate management.

**END OF SECTION 281500**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 281523 - INTERCOM ENTRY SYSTEMS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Digital audio intercom entry systems.
  - 2. Digital audio-video intercom entry systems.
- B. Related Requirements:
  - 1. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

**1.2 PREINSTALLATION MEETINGS**

- A. Preinstallation Coordination Meeting(s): For intercom entry system. Conduct meeting(s) before start of installation.
  - 1. Attendees: Installers, fabricators, representatives of manufacturers, representatives from telecommunications, owner's security representatives, IT representatives, and administrators for field tests and inspections. Notify Architect, construction Manager, and Owner's Commissioning Authority of scheduled meeting dates.

**1.3 ACTION SUBMITTALS**

- A. Product Data:
  - 1. Digital audio intercom entry systems.
  - 2. Digital audio-video intercom entry systems.
- B. Shop Drawings:
  - 1. Project general notes.
  - 2. Device layout.
  - 3. Block diagram and cable/conduit routing.
  - 4. System communications details.
  - 5. System mounting details.
  - 6. Secondary power calculations.
- C. Certificates:
  - 1. Manufacturers certification.
- D. Field Quality-Control Submittals:
  - 1. Field quality-control reports.

**1.4 INFORMATIONAL SUBMITTALS**

- A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation and startup instructions for intercom entry systems.
  2. Manufacturer's recommended tests and inspections for intercom entry systems.
- B. Sample warranties.
- 1.5 CLOSEOUT SUBMITTALS**
- A. Maintenance Contracts:
1. Software and firmware service agreement.
- B. Warranty documentation.
- 1.6 MAINTENANCE MATERIAL SUBMITTALS**
- A. Special Tools: Furnish to Owner proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to intercom entry system, that are packaged with protective covering for storage on-site and identified with labels describing contents.
- 1.7 WARRANTY**
- A. Special Installer Extended Warranty: Installer warrants that fabricated and installed intercom entry system perform in accordance with specified requirements and agrees to repair or replace components or products that fail to perform as specified within extended-warranty period.
1. Extended-Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.
- B. Special Manufacturer Extended Warranty: Manufacturer warrants that intercom entry system perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within extended-warranty period.
1. Extended-Warranty Period: Three years from date of Substantial Completion; coverage for labor, materials, and equipment.

## **PART 2 - PRODUCTS**

### **2.1 DIGITAL AUDIO INTERCOM ENTRY SYSTEMS**

- A. Description: This category covers digital audio intercom entry systems, together with controls and accessories for use with such operators, and similar devices.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aiphone Corporation IX.
  2. Stentofon; a brand of Zenitel USA.
- C. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
  2. Listing Criteria: UL CCN ALVY; including UL 294.
- D. Options:
1. Operating Temperature: Minus 29 to plus 150 deg F .

2. Input Power: 12 or 24 V(dc) or POE
  3. Connectivity: Hardwired.
  4. Minimum Ring Voltage: 25 V(ac rms).
  5. Maximum Ring Voltage: 90 V(ac rms).
  6. Speaker Volume: Approximately 62 dB maximum at 1 m.
  7. Materials: Stainless steel.
  8. Finishes: Brushed stainless steel.
  9. Climate: outdoor.
  10. Mounting: Devices must be wall flush mounted.
  11. Push-to-talk button.
- E. Accessories:
1. Recessed back box.
  2. External keypad.
  3. Mounting adaptor plate.
  4. Mullion mounting bracket.
  5. Desk stand.

## 2.2 DIGITAL AUDIO-VIDEO INTERCOM ENTRY SYSTEMS

- A. Description: This category covers digital audio-video intercom entry systems, together with controls and accessories for use with such operators, and similar devices.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aiphone Corporation IX.
  2. Stentofon; a brand of Zenitel USA.
- C. Performance Criteria:
1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory recognized by authorities having jurisdiction and marked for intended location and application.
  2. Listing Criteria: UL CCN ALVY; including UL 294.
- D. Options:
1. Operating Temperature: Minus 29 to plus 150 deg F.
  2. Input Power: 12 to 24 V(dc) or POE.
  3. Connectivity: Hardwired.
  4. Minimum Ring Voltage: 25 V(ac rms).
  5. Maximum Ring Voltage: 90 V(ac rms).
  6. Speaker Volume: Approximately 62 dB maximum at 1 m.
  7. Materials: Stainless steel.

8. Finishes: Brushed stainless steel.
9. Climate: outdoor.
10. Mounting: Devices must be wall flush mounted.
11. Video Camera:
  - a. Display: 7 inch full-color touchscreen.
  - b. Camera Input Power: 12 V(dc) adapter.
  - c. Camera Field of View: 80 degrees horizontal, 60 degrees vertical, and 100 degrees diagonal.
  - d. Camera Tilt/Swivel Adjustment: Vertical plus-or-minus 20 degrees; horizontal plus-or-minus 30 degrees.

E. Accessories:

1. Recessed back box.
2. External keypad.
3. Mounting adaptor plate.
4. Mullion mounting bracket.
5. Desk stand.

### 2.3 INTERCOM CLIENT FOR COMMAND STATION

- A. Provide a client for the intercom end stations in the Command station. Client shall be capable of both audio and video. 3<sup>rd</sup> party clients are acceptable and may be necessary.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Special Techniques:
1. Hardwired System:
    - a. Cable Type: Unshielded Cat.6.
    - b. Maximum Power-over-Ethernet Cable Length: 300 ft.

### 3.2 FIELD QUALITY CONTROL

- A. Testing Preparation:
1. Schedule installation date with owner representative.
- B. Field tests and inspections must be witnessed by the owner's representative.
- C. Tests and Inspections:
1. Perform manufacturer's recommended tests and inspections.
- D. Nonconforming Work:
1. The system will be considered defective if it does not pass tests and inspections.
  2. Remove and replace defective units and retest.

- E. Collect, assemble, and submit test and inspection reports.
- F. Manufacturer Services:
  - 1. Engage factory-authorized service representative to support field tests and inspections.

### **3.3 SYSTEM STARTUP**

- A. Factory-authorized trained representative to perform to perform startup service.
  - 1. Complete installation and startup check in accordance with manufacturer's published instructions.

### **3.4 PROTECTION**

- A. After installation, protect intercom entry system from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Owner.

### **3.5 MAINTENANCE**

- A. Software and Firmware Service Agreement:
  - 1. Technical Support: Beginning at Substantial Completion, verify that the software and firmware service agreement include software and firmware support for one years.
  - 2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within one year from the date of Substantial Completion.
    - a. Upgrade Notice: No fewer than 30 days to allow Owner to schedule and access the system and to upgrade computer equipment if necessary.
  - 3. Upgrade Reports: Prepare a report after each update, documenting upgrades installed.

**END OF SECTION 281523**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 282300 - VIDEO SURVEILLANCE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. These specifications outline the acceptable characteristics for materials and equipment and define, in general terms, the configuration of the security system technologies to be installed and made fully operational by the selected Security System Contractor (Contractor) of the Video Management System.
- B. Contractor shall have total "turn-key" responsibility (except where noted) for ensuring the system is installed complete and functional, consistent with the manufacturer's specifications and that all applicable fire, electrical, and building codes and standards are met. Where required by the various codes, the vendor is responsible to obtain the necessary approval(s) of the Authority Having Jurisdiction (AHJ).
- C. Section includes a video surveillance system consisting of cameras and mounts, connected to a Hanwha Vision WAVE Video Management System video servers, software, monitors, and workstations.
- D. Contractor shall provide all necessary camera infrastructure needs to include conduit, network, data drops, pathways and other supporting system infrastructure.
- E. Reference project drawings for camera type locations to include "edge" specific recording cameras.
- F. Reference project drawings for all server recording device locations.
- G. Any aspect of these specifications, or future addendum, which appears to the Contractor to fall outside applicable codes or standards, shall immediately be brought to the attention of the Owner.

**1.3 GENERAL REQUIREMENTS**

- A. The specified camera product shall be an open video platform designed for use in any video application.
- B. Contractors shall provide all necessary channel licensing, related plugins, third-party applications and other project required integrations for the for the VMS.
- C. Contractor shall provide all necessary network drops and conduit pathways to each camera location. Camera locations located on the exterior of the facility shall have appropriate surge protection in place for each device.
- D. System cameras shall be minimally ONVIF profile S and/or T compliant, have a 5-year manufacturer guarantee, utilize both H.265 and H.264 compression and be appropriately IP (ingress protection) and IK (vandal resistance) rated for the environment.

**1.4 QUALITY ASSURANCE**

- A. Manufacturer Qualifications: Minimum of ten (10) years experience manufacturing similar products. Basis of Design for all video camera products is Hanwha Vision America.
- B. System Integrator and Installer Qualifications: Minimum three (3) year experience installing similar products. Installers shall be trained and certified as an authorized dealer by the Manufacturer to install, integrate, test, and commission the system.

1. Installer working on this project must possess a valid Professional certificate from the equipment manufacturer verifying completion of Installation and Service Training.
  2. Installer must provide the resume and copy of the certification of the technician assigned to the project.
- C. Installing contractor shall provide at least three (3) examples of projects of similar size and scope to include:
1. Project name
  2. Project locations
  3. Project description
  4. Contact name, email address and phone number
- D. Complete product and technical data specification sheets that include all material and equipment shall be provided by the System Integrator and be available freely online.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### **1.5 CLOSEOUT SUBMITTALS**

- A. After project completion, the contractor shall provide additional project close out submittals required.
- B. Operation and Maintenance Data: For cameras, power supplies, network recorders (server/storage), to include in emergency, operation, and maintenance manuals.
- C. Lists of spare parts and replacement components recommended to be stored at the site for ready access (if applicable).
- D. Complete hardcopy printout and electronic copy from the system cameras manufacturer Device Manager which outlines system and camera configuration, includes camera model number, IP address, and MAC address, static camera image FOV at the time of installation and other system settings.
- E. As-built drawings on facility floor plans showing camera installed location, wiring and cable routes, termination points, riser and connection diagrams, schematics and other system drawings.

### **1.6 DISCLOSURE OF NON-CONFORMING EQUIPMENT**

- A. Project owner desires to make an informed decision regarding the Contractor's proposed project approach, mobilization, staging and overall implementation schedule of tasks.
- B. Contractor is required to disclose, separate from any cut or advertising sheets, any functional, operational or electrical requirements of these specifications that they are not able to perform, and/or which fall outside the scope of their quotation.
- C. The form of this disclosure shall be by letter clearly identifying these noncompliant items and describing how the Contractor intends to address these issues.
- D. Absent such disclosure, Contractors shall be responsible for ensuring that their systems will fully operate as outlined in these specifications without additional cost to the owner or other parties.
- E. Contractor may elect to provide an alternate design approach if cost savings could be realized. This approach shall be clearly outlined within their submittal and should not consider any sacrifice of system functionality or capacity.

**1.7 ONGOING SUPPORT AND WARRANTY**

- A. The Contractor shall warrant all components and installation for a period of one (1) year after the date of final acceptance by the Owner. The contractor warranty shall cover the replacement of all components, including labor.
  - 1. Alternately, the contractor shall provide for an additional two (2) years of warranty, for a total of three (3) total years that shall cover the replacement of all components to include labor.
- B. The product manufacturer shall provide a limited one five (5) year warranty with a one (1) year advanced replacement for the video products such as cameras, to be free of defects in material and workmanship, at no additional cost to the owner.
- C. Response time shall be four (4) hours for major failures and 8 hours or next business day for minor failures. A major failure shall be defined as a malfunction resulting in the loss of two or more video outlets and/or system server/storage failure or errors.
- D. The Contractor shall employ and respond with factory trained technical service personnel for service and maintenance of the system should service be required. The Contractor shall instruct the Owner's technical personnel in the operation, care and maintenance of the system.

**1.8 DEFINITIONS**

- A. AGC Auto Gain Control
- B. AI Artificial Intelligence
- C. AES Advanced Encryption Standard
- D. API Application Programming Interface
- E. ARP Address Resolution Protocol
- F. AWB Auto White Balance
- G. BLC Back light compensation
- H. CBR Constant Bit Rate
- I. COTS Commercial Off The Shelf
- J. CVBS Composite Video Blanking and Sync
- K. DHCP Dynamic Host Configuration Protocol
- L. DNR Digital Noise Reduction
- M. DNS Domain Name Server
- N. DDNS Dynamic Domain Name Server
- O. DSCP Differentiated Services Code Point
- P. FOV Field of View (of the camera)
- Q. fps frames per second
- R. FTP File Transfer Protocol
- S. GOV Group of Video
- T. GUI Graphical User Interface
- U. HD High Definition
- V. HTTP Hypertext Transfer Protocol
- W. HTTPS Secure HTTP
- X. ICMP Internet Control Message Protocol

Y.	IGMP	Internet Group Management Protocol
Z.	IP	Internet Protocol
AA.	IR	Infrared
BB.	JPEG	Joint Photographic Experts Group
CC.	LAN	Local Area Network
DD.	LED	Light Emitting Diode
EE.	LDC	Lens Distortion Correction
FF.	LLDP	Link Layer Discovery Protocol
GG.	LPR	License Plate Recognition
HH.	MJPEG	Motion JPEG
II.	MP	Megapixel
JJ.	MPEG	Moving Pictures Experts Group
KK.	NAS	Network Attached Storage
LL.	NTP	Network Time Protocol
MM.	NVR	Network Video Recorder
NN.	PIM-SM	Protocol Independent Multicast-Sparse Mode
OO.	PoE	Power over Ethernet
PP.	PPPoE	Point to Point Protocol over Ethernet
QQ.	QoS	Quality of Service
RR.	RTP	Real-Time Transport Protocol
SS.	RTCP	Real-Time Control Protocol
TT.	RTSP	Real-Time Streaming Protocol
UU.	SDK	Software Development Kit
VV.	SFP	Small Form Factor Pluggable
WW.	SMTP	Simple Mail Transfer Protocol
XX.	SNMP	Simple Network Management Protocol
YY.	SSDR	Super Smart Dynamic Range
ZZ.	SSNR	Super Smart Noise Reduction
AAA.	SSL	Secure Sockets Layer
BBB.	TCP	Transmission Control Protocol
CCC.	UDP	User Datagram Protocol
DDD.	UPnP	Universal Plug and Play
EEE.	VBR	Variable Bit Rate
FFF.	VMS	Video Management System
GGG.	WDR	Wide Dynamic Range

## 1.9 REFERENCE STANDARDS

- A. Abbreviations

1. Network - IEEE
    - a) 802.3 Ethernet Standards
    - b) 802.1x Port-based Network Access Control
    - c) IPv4 IP addressing version 4
    - d) IPv6 IP addressing version 6
    - e) QoS Quality of Service
  2. Video
    - a) ISO / IEC 23008-2:2013, MPEG-H Part2 (ITU H.265, HEVC)
    - b) ISO / IEC 14496-10, MPEG-4 Part 10 (ITU H.264)
    - c) ISO / IEC 10918 – JPEG
    - d) ONVIF – Profiles S, G, T
  3. EMC & Safety
    - a) FCC 47 CFR Part 15 Subpart B
    - b) ANSI C63.4-2014 Class A
    - c) IC Regulation ICES-003:2016
    - d) ANSI C63.4-2014 Class A
    - e) CE EMC-Directive 2014/30/EU
    - f) EN 55032:2015 Class A
    - g) EN 50130-4:2011+A1:2014
    - h) VCCI-CISPR 32: Class A
    - i) AS/NZS CISPR32:2015 Class A
    - j) UL listed
    - k) CE EN 50581:2012 (hazardous substances)
  4. Safety
    - a) UL listed
    - b) CE EN 50581:2012 (hazardous substances)
  5. Ingress Protection and Vandal Resistance
    - a) ANSI / IEC60529 – Degrees of Protection Provided by Enclosures – IP52
    - b) IEC EN 62262 - Degrees of protection provided by enclosures for electrical equipment against external mechanical impacts: IK10
    - c) IEC 60068-2-75: IK10
- B. Definitions
1. GOV (Group of Video object planes) - A set of video frames for H.264 and H.265 compression, indicating a collection of frames from the initial I-Frame (key frame) to the next I-Frame. GOV consists of 2 kinds of frames: I-Frame and P-Frame.
  2. Dynamic GOV – Dynamic assignment of GOV length based on the complexity of the scene to efficiently manage bitrate of the video stream and reduce the storage required.

3. Multi-exposure wide dynamic range - Operation which automatically adjusts shutter speed to provide a wide range between dark and light areas visible at the same time, preventing backlighting issues. Long exposure is used for dark areas and a short exposure is used in light areas.
4. Dynamic fps – Dynamic assignment of fps (frames per seconds) based on the movement of object(s) in the scene to efficiently manage bitrate of the video stream and reduce the storage required.
5. Smart Codec – Smart Codec that controls quantization parameter and dynamic fps in H.265 and H.264 to efficiently manage bitrate of the video stream and reduce the storage required.
6. WiseStream II – Technology that controls quantization parameter, fps, and GOV length in H.265 and H.264 to efficiently manage bitrate of the video stream and reduce the storage required.
7. WiseStream III - Technology that controls quantization parameter, fps, and GOV length to manage bitrate of the video stream and reduce the storage required based on AI analytic events.

## **PART 2 - PRODUCTS**

### **2.1 GENERAL**

- A. All equipment and materials used shall be standard components that are regularly manufactured and used in the manufacturer's system.
- B. All systems and components shall have been thoroughly tested and proven in actual use.
- C. Basis of design for camera products are from Hanwha Vision America or approved equal.
- D. Multi-sensor camera devices shall have only one network drop and one camera license on the VMS platform.
- E. All camera system firmware shall be of the latest version and have the selected camera(s) driver installed.
- F. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor's entry connection to components.
- G. Provide a letter from the product manufacturer stating that all products provided shall meet the National Defense Authorization Act (NDAA) compliancy requirements which addresses the prohibited use of certain video surveillance telecommunications services, equipment and components manufactured by specific vendors.

### **2.2 STANDARD CAMERAS**

- A. See the Camera Schedule in the Evaluations. If cameras are scheduled on Drawings, revise camera characteristics accordingly.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Hanwha (Basis of Design)
  2. Avigilon
  3. Axis
  4. Bosch

### **2.3 NETWORK VIDEO RECORDING AND MANAGEMENT SYSTEM (NVRMS) – OPERATING**

**SYSTEM (SOFTWARE)**

- A. Manufacturers
  - 1. Hanwha – Basis of Design
  - 2. Avigilon
  - 3. Genetec
  - 4. Milestone

**2.4 CAMERA DEVICE MANAGER**

- A. Provide and install the selected camera system Device Manager to manage the video surveillance devices in network including IP cameras, encoders, decoders, NVRs and DVRs by enabling users to remotely configure multiple devices simultaneously.
- B. The software shall support backing up and restoring configuration data from multiple cameras. Backup file name shall include model number, IP address, and MAC address, and shall be user editable. Backup and restore shall be performed in parallel or sequential mode, and at a user desired relative or absolute time. The software shall support restoring a single configuration to multiple devices.
- C. The software shall support setting camera image menu adjustments including SDR, white balance, backlight compensation, exposure, day/night, special, & OSD. Image adjustments shall be performed and displayed on a selected camera immediately, and to other selected cameras per model upon selection.

**2.5 CAMERA INTELLIGENCE AND ANALYTICS**

- A. Cameras shall have a suite of integral intelligent operations and analytic functions at no additional cost to the end-user using the integrated edge-analytics built into each camera models as outlined in product specifications noted.
- B. Contractor shall provide necessary software updates to the VMS and any necessary software plugins for the selected manufacturers cameras and/or VMS.
- C. Camera analytic configuration shall be based on the owner and project requirements outlined in Section 3.
- D. The Contractor shall verify that the use of third-party analytics (if applicable) follows all manufacturer recommendations for pixel-density, camera angle and position.
- E. The Contractor shall follow all manufacturer recommendations for License Plate Recognition relative to pixel-density, camera angle and position.

**2.6 CAMERA SOFTWARE**

- A. The camera shall have a built in web server which supports browser-based configuration using Internet Explorer, Google Chrome, Mozilla Firefox, and Apple Safari from a PC or Mac.
- B. The web viewer shall provide a monitoring screen which displays live camera video and simultaneously provides same-screen access to the following functions:
  - 1. Live view window size
  - 2. Resolution setting
  - 3. Image (snapshot) capture
  - 4. Manual recording to SD or NAS
  - 5. Audio/microphone control

6. Access recorded data playback and camera configuration menus
7. Digital PTZ
- C. The web viewer shall provide a playback screen which provides access to the following functions:
  1. Recorded data search using date and time range
  2. Recorded data search using event type
  3. Play a recorded video by event triggering
  4. Set resolution
  5. Play audio if present
  6. Generate a backup copy of saved video data
- D. The web viewer shall provide a setup screen which provides access to the following configuration settings and functions in the camera:
  1. Digital video profile to include compression type, maximum or target bit rate, frame rate, multicast parameters, crop encoding area
  2. User profile to include password, access level, authentication
  3. Date and time
  4. Network settings and IP version
    - a) DDNS
    - b) SSL/TLS, including certificate management
    - c) 802.1x authentication
    - d) Quality of Service settings
    - e) SNMP to include version selection and settings
    - f) Auto configuration
  5. Video setup
    - a) Flip / mirror mode
    - b) Video output type
    - c) Privacy zone
  6. Audio setup to include source, audio codec type, gain, and bit rate
  7. Camera settings to include image preset, sensor frame capture, dynamic range, white balance, back light, exposure, day/night operation, on-screen display, IR illumination, sharpness, contrast, color level, lens distortion correction.
  8. Event detection setup to include notification parameters, recording rules, time schedule, tamper protection, motion detection, event triggers
  9. System function to include reboot, upgrade, check system and event logs, application (SDK) management
  10. View profile information
- E. Client requirements
  1. Recommend Browser: Chrome
  2. Acceptable Browser: Chrome, Safari, Firefox, MS Edge (chromium based)
  3. Acceptable Operating Systems: Windows, MAC, Android, iOS, Chrome

4. Verified Environment:
  - a) Windows 10 : Google chrome version 80 above, Firefox version 72 above, MS Edge version 83 above
  - b) Mac 10.13/14: Safari version 11.0.1 above

F. Decoding performance in web viewer depends on CPU/GPU performance of user

## 2.7 ACCESSORIES

- A. Provide and install all necessary mounting accessories to include caps, housings, mounts, brackets, pendants, etc. as necessary for the environment to accommodate field of views required by the owner.
- B. Install power supplies and other auxiliary components at control stations unless otherwise indicated.

## 2.8 CAMERA TYPES

- A. Camera Type 1
  1. 4MP x 4 AI IR Multi-directional Dome (indoor/outdoor)
- B. Camera Type 2
  1. 6MP x 2 AI IR Multi-directional Dome
- C. Camera Type 3
  1. 4K AI IR Vandal Dome
- D. Camera Type 4
  1. 4K x 4 AI IR PTRZ + 2MP 40x PTZ
- E. Camera Type 5
  1. 10MP High Resolution Bullet

## 2.9 CAMERA TYPE 1 – 4MP x 4 AI IR Multi-directional Dome

- A. Must meet or exceed the operating characteristics of the Hanwha Vision America PNM-C16083RVQ.
  1. Provide necessary mounts, pendant caps and and other appurtenances based on the individual camera mounting location referenced in project drawings and camera equipment matrix.
- B. GENERAL DESCRIPTION
  1. Video Compression and Transmission – The camera shall have the following properties relating to the video signals it produces.
    - a) H.265, H.264 and MJPEG compression, each derived from a dedicated encoder and capable of being streamed independently and simultaneously
    - b) H.265 and H.264 – frame rates to 30/25 fps (60Hz/50Hz)
    - c) MJPEG – frame rates to 30/25 fps (60Hz/50Hz) @4MP Max. 5fps
  2. The camera shall be able to configure up to 10 independent video stream profiles with differing encoding, quality, frame rate, resolution, and bit rate settings.
  3. Resolution selections
    - a) 2592x1520, 1920x1080, 1280x1024, 1280x960, 1280x720, 1024x768, 800x600, 800x448, 720x576, 720x480, 640x480, 640x360, 320x240

4. Simultaneous unicast access by up to 10 users
  5. Multicast or unicast capable
  6. Dynamic DNS (DDNS) support.
  7. WiseStream and Dynamic GOV to efficiently manage bitrate of the video stream.
- C. Camera – The camera device shall have the following physical and performance properties:
1. The camera shall be able to produce clear images in highly contrast scenes with multi-exposure wide dynamic range.
  2. IP66, IK10, NEMA4X, NEMA-TS 2(2.2.8, 2.2.9) rated for protection against impacts.
  3. Auto day/night operation with removable IR cut filter
    - a) Low light level operation to 0.075 lux (color) and 0 lux (black and white)
  4. 2D and 3D digital noise reduction
  5. Integral IR illumination, providing effective visibility of up to 20m(with HPoE) at 0 Lux when activated in Black & White mode.
  6. 6 privacy masking regions with polygonal.
  7. The camera shall provide video display on smart phone (iPhone, Android) to adjust viewing angle, rotation and focus.
- D. Intelligence and Analytics – The camera shall have a suite of integral intelligent operations and analytic functions to include:
1. Motion detection with 8 definable detection areas with 8 point polygonal zones, and minimum/maximum object size.
  2. Detection of logical events of specified conditions from the camera's video
    - a) Classified object type:
      2. Person
      3. Vehicle
    - a) Attributes
      4. Vehicle Type: car/bus/truck/motorcycle/bicycle
    - a) Support BestShot
    - b) Analytics events based on AI engine
      1. Object detection
      2. Virtual line(Crossing/Direction)
      3. Virtual area(Loitering/Intrusion/Enter/Exit)
    - a) Analytics events
      1. Defocus detection
      2. Motion detection
      3. Tampering
      4. Audio detection
      5. Sound classification
      6. Virtual area(Appear/Disappear)

- E. Interoperability – The camera shall be ONVIF Profile S and T compliant.
- F. The camera shall possess the following further characteristics:
  - 1. Built-in web server, accessed via standard browsers including Internet Explorer, Firefox, Chrome & Safari
  - 2. Micro SD/SDHC/SDXC memory card and NAS recording options, with configurable pre-alarm and post-alarm recording intervals
  - 3. Bi-directional audio
  - 4. Alarms and notifications
    - a) alarm notification triggers:
      - 1. Analytics
      - 2. Network disconnect
      - 3. Alarm input with NW I/O Box
      - 4. App event
      - 5. Time schedule
      - 6. MQTT subscription
    - b) available notification means upon trigger:
      - 1. File upload(image): e-mail/FTP
      - 2. Notification: e-mail
      - 3. Recording: SD/SDHC/SDXC or NAS recording at event triggers
      - 4. Alarm output
      - 5. Handover: PTZ preset, send message by HTTP/HTTPS/TCP
      - 6. Audio clip playback
      - 7. MQTT: publication
- G. Pixel Counter available in the plug-in web viewer.
- H. HPoE capable
- I. IP66, NEMA4X, IK10
- J. This device has been verified using STP cable. The use of appropriate GND grounding and STP cable is recommended to effectively protect your product and property from transient voltage, thunder stroke, communication interruption.

## 2.10 CAMERA TYPE 2 – 6MP x 2 AI IR Multi-directional Dome

- A. Must meet or exceed the operating characteristics of the Hanwha Vision America PNM-C12083RVD.
  - 1. Provide necessary mounts, pendant caps and and other appurtenances based on the individual camera mounting location referenced in project drawings and camera equipment matrix.
- B. GENERAL DESCRIPTION
  - 1. Video Compression and Transmission – The camera shall have the following properties relating to the video signals it produces.
    - a) H.265, H.264 and MJPEG compression, each derived from a dedicated encoder and capable of being streamed independently and simultaneously

- b) H.265 and H.264 – frame rates to 15fps
- c) MJPEG – frame rates to 15fps
- 2. The camera shall be able to configure up to 5 independent video stream per channel with differing encoding, quality, frame rate, resolution, and bit rate settings.
- 3. Resolution selections
  - a) 3328 x 1872, 3072 x 1728, 2592 x 1944, 2688 x 1520, 1920x1080, 1600 x 1200, 1280x1024, 1280x960, 1280x720, 1024x768, 800x600, 800x448, 720x576, 720x480, 640x480, 640x360, 320x240
- 4. Simultaneous unicast access by up to 10 users
- 5. Multicast or unicast capable
- 6. Dynamic DNS (DDNS) support.
- 7. WiseStream and Dynamic GOV to efficiently manage bitrate of the video stream.
- C. Camera – The camera device shall have the following physical and performance properties:
  - 1. IP66, IK10, NEMA4X rated for protection against impacts
  - 2. Auto day/night operation with removable IR cut filter
  - 3. 2D and 3D digital noise reduction
  - 4. Integral IR illumination, providing effective visibility of 25m(65.62ft) based on scene at 0 Lux when activated in Black & White mode
  - 5. 6 privacy masking regions utilizing quadrangle
- D. Intelligence and Analytics – The camera shall have a suite of integral intelligent operations and analytic functions to include:
  - 1. Motion detection with eight definable detection areas, minimum / maximum object size definition and a learning algorithm that ignores false alarms such as trees and waves on water.
  - 2. Detection of logical events of specified conditions from the camera's video input
    - a) Classified object type : Person / Face / Vehicle / License plate
    - b) Attributes: Vehicle (Type: car / bus / truck / motorcycle / bicycle)
    - c) Analytics events based on AI engine: Object detection, Virtual line (Crossing / Direction), Virtual area (Loitering / Intrusion / Enter / Exit)
    - d) Analytics events: Defocus detection, Motion detection, Tampering, Fog detection, Shock detection, Virtual area (Appear / Disappear) \*Support Audio detection, Sound classification via optional SPM-4210 I/O box
- E. Interoperability – The camera shall be ONVIF Profile S / T compliant.
- F. The camera shall possess the following further characteristics:
  - 1. Built-in web server, accessed via standard browsers including MS Edge, Firefox, Chrome and Safari
  - 2. Micro SD/SDHC/SDXC memory card and NAS recording options, with configurable pre-alarm and post-alarm recording intervals
  - 3. Alarms and notifications
    - a) alarm notification triggers:
      - 1. alarm input via optional SPM-4210 I/O box

2. video analytics
3. network disconnect
- b) available notification means upon trigger:
  1. file upload via FTP and e-mail
  2. notification via e-mail
  3. record to local storage (SD/SDHC/SDXC card)
  4. Handover(PTZ Preset, Send message by HTTP/HTTPS/TCP)
  5. Alarm output via optional SPM-4210 I/O box

G. Pixel Counter available in the plug-in web viewer.

H. POE+ capable

## 2.11 CAMERA TYPE 3 – 4K AI IR Vandal Dome

A. Must meet or exceed the operating characteristics of the Hanwha Vision America – QNV-C9083R.

1. Provide necessary mounts, pendant caps and and other appurtenances based on the individual camera mounting location referenced in project drawings and camera equipment matrix.

### B. GENERAL DESCRIPTION

1. Video Compression and Transmission – The camera shall have the following properties relating to the video signals it produces.
  - a) H.265, H.264 and MJPEG compression, each derived from a dedicated encoder and capable of being streamed independently and simultaneously.
  - b) H.265 and H.264 – Max. 30/25fps (60Hz/50Hz) at all resolution
  - c) MJPEG – Max. 30fps(@8MP Max. 5fps)
2. The camera shall be able to configure up to 10 independent video stream profiles with differing encoding, quality, frame rate, resolution, and bit rate settings.
3. The camera shall be able to configure various resolution selections.
  - a) 16:9 aspect ratio: 3840x2160, 3328x1872, 3072x1728, 2688x1520, 1920x1080, 1280x720, 800x448, 640x360
  - b) 4:3 aspect ratio: 2592x1944, 1600x1200, 1280x960, 1024x768, 800x600, 640x480, 320x240
  - c) 5:4 aspect ratio: 1280x1024, 720x576
  - d) 3:2 aspect ratio: 720x480
4. The camera shall support unicast video streaming up to 20 users.
5. The camera shall support multicast video streaming.
6. The camera shall be able to configure Dynamic DNS (DDNS). DDNS shall be provided with no additional cost by the manufacturer.
7. The camera shall provide WiseStream II, Dynamic GOV and Dynamic fps to efficiently manage bit rate of the video stream and reduce storage.
8. The camera shall provide WiseNR II that working based on AI engine for reduce noise and blur on image.

- C. Camera – The camera device shall have the following physical and performance properties:
1. IP66, IK10 rated for protection against impacts
  2. True day/night operation with removable IR cut filter
  3. The camera shall be able to produce clear images in highly contrast scenes with multi-exposure wide dynamic range up to 120dB.
  4. The camera shall support digital noise reduction using both 2D and 3D noise reduction technology.
  5. The camera shall be able to configure 32 privacy masking areas with 4 points quadrangle zones.
  6. The camera shall provide video display on smart phone (iPhone, Android) to adjust viewing angle, rotation and focus.
- D. Intelligence and Analytics – The camera shall have a suite of intelligent analytic functions.
1. Analytics
    - a) Analytics events based on AI engine(Person, Vehicle)
    - b) Motion detection
    - c) Object detection: Person/Vehicle(Car/Bus/Truck/Motorcycle/Bicycle)
    - d) Virtual line(Crossing/Direction)
    - e) Virtual area(Loitering/Intrusion/Enter/Exit)
  2. Analytics events
    - a) Defocus detection
    - b) Tampering
    - c) Virtual area(Appear/Disappear)
  3. Motion detection with 8 definable detection areas with 8 point polygonal zones, and minimum/maximum object size
  4. Defocus detection that event can be created when defocus of the camera lens is detected
  5. Tampering detection that event can be created when the screen is blocked or the camera position is changed
  6. Classified object types are Person and Vehicle.
    - a) Attribute support Vehicle Type(car/bus/truck/motorcycle/bicycle)
    - b) Camera supports DetectionShot
- E. Interoperability – The camera shall be ONVIF Profile S, G, T and M compliant.
- F. The camera shall possess the following further characteristics:
1. Built-in web server, accessed via non-plugin browsers including Google Chrome, IE11, MS Edge, Mozilla Firefox and Apple Safari.
  2. Micro SD/SDHC/SDXC memory card with configurable pre-alarm and post-alarm recording intervals
  3. NAS recording option with configurable pre-alarm and post-alarm recording intervals
  4. Alarms and notifications
    - a) alarm notification triggers:

1. Alarm input
  2. Motion detection
  3. Video analytics
  4. Network disconnect
- b) available notification means upon trigger:
1. File Upload via FTP and E-mail
  2. Notification via E-mail
  3. Local storage (SD / SDHC / SDXC) or NAS recording at event triggers
  4. Alarm output
  5. Handover(PTZ preset, Send message by HTTP/HTTPS/TCP)
  6. Audio clip playback

G. Pixel Counter available in the web viewer.

H. PoE capable including heater by PoE

I. IP66, IK10 capable

## 2.12 CAMERA TYPE 4 – 4K x 4 AI IR PTRZ + 2MP 40x PTZ Multi-directional Dome

A. Must meet or exceed the operating characteristics of the Hanwha Vision America PNM-C34404RQPZ.

1. Provide necessary mounts, pendant caps and and other appurtenances based on the individual camera mounting location referenced in project drawings and camera equipment matrix.

B. GENERAL DESCRIPTION

1. 120dB WDR
2. 4.25~170mm (Optical 40x) lens
3. PTZ Auto Tracking, SmartZoom to Preset / IVA Trigger
4. 4-Channels @ 4K/8MP with motorized PTRZ for easy installation and remote adjustment of the entire FoV, 3.3~5.7mm (FoV H: 109°~56°, V: 55°~31°)
5. 15FPS AI ON, 20FPS AI OFF
6. 2MP @ 60FPS PTZ with 40x zoom
7. IR viewable [4CH] length 20m (65ft) / [PTZ] WiseIR 200m (656ft)
8. H.265, H.264, MJPEG triple codec
9. Analytics events based on AI engine: Object detection [Person/Vehicle (Car/Bus/Truck/Motorcycle/Bicycle)], IVA (Virtual line/Area, Enter/Exit, Loitering, direction, intrusion), Appear/Disappear
10. I/O Box compatibility
11. TPM with FIPS 140-2 level 2
12. Micro SD card 512GB x2
13. IP66, IK10, NEMA4X
14. Operating Temperature: -40°C~+50°C(-40°F~+122°F)
15. HPoE (injector included)

16. Hard-coated dome bubble

### **2.13 CAMERA TYPE 5 –10MP High Resolution Bullet**

- A. Must meet or exceed the operating characteristics of the Axis Q1808-LE.
  1. Provide necessary housing, mounts, pendant caps and and other appurtenances based on the individual camera mounting location referenced in project drawings and camera equipment matrix.
  2. This camera is an “edge” recording camera. Reference locations on project drawings.
- B. GENERAL DESCRIPTION
  1. Video Compression and Transmission – The camera shall have the following properties relating to the video signals it produces.
  2. 4/3” progressive scan RGB CMOS
  3. Pixel size 4.63 µm
  4. Varifocal, 12-48 mm, F1.7-4.0
  5. Horizontal field of view: 90°–21°
  6. Vertical field of view: 49°–12°
  7. Minimum focus distance: 1.5 m (4.9 ft)
  8. Remote zoom and focus, P-Iris control
  9. Day and night Automatically removable IR-cut filter in day mode and IR-pass filter 800–900 nm in night mode
  10. Minimum illumination: Q1808–LE: Color: 0.02 lux at 50 IRE, F1.7; B/W: 0.004 lux at 50 IRE, F1.7; 0 lux with IR illumination on
  11. Shutter speed With WDR: 1/22000 s to 2 s in 4K; With WDR: 1/25500 s to 2 s in 3712x2784; Without WDR: 1/45500 s to 2 s
  12. Camera angle adjustment: Pan ±180°, tilt 0 to -90°, roll -90 to 270

### **2.14 VIDEO MANAGEMENT SYSTEM**

- A. Video Management System shall meet or exceed the operating characteristics of Hanwha WAVE, utilizing the most current version of software.
- B. VMS shall consist of a standard COTS server/storage solution for the recording and retention of security video for use in both real-time and forensically for investigative purposes.
- C. The specified product shall be an open video platform designed for use in any video application.
- D. The specified software shall be a one-time license cost per channel and include, free of charge, any and all software updates, API or SDKs necessary to integrate 3rd party devices and systems.
- E. Lifetime software upgrades shall be provided by the Manufacturer without cost and without the need for an annual maintenance agreement or ongoing licensing costs.
- F. The specified Video Management solution's architecture should include Desktop, Server, Mobile, and Cloud applications.

### **2.15 VIDEO SERVERS (reference locations based on project drawings)**

- A. Servers shall minimally have the following characteristics:
  1. 2U rack-mountable.
  2. Professional licenses for all camera channels.

3. JBOD Configuration.
4. 470 Mbps recording B/W, 14 HDD Bay (3.5").
5. Intel Xeon Silver 4210, 16GB RAM.
6. Dual 240GB SSD OS drives (RAID 1).
7. Windows 10 Pro.
8. Nvidia GPU,
9. MiniDP output,
10. VGA output,
11. Quad GbE NICs,
12. IPMI, Redundant 1100W power supplies,
13. Keyboard and mouse included,
14. Rail kit included

#### B. STORAGE SIZING

1. Contractor shall appropriately size the servers and storage to minimally meet the following requirements:
  - a. Configured JBOD
  - b. Thirty (30) days immediately accessible on-board recording to review recorded events.
  - c. Storage shall be configured at minimally **50%** motion, recorded at the cameras highest resolution. Low Resolution continuous, but recording at a minimum of Eight (8) frames per second upon motion or analytic based event.
  - d. Recording resolution at H.265 with smart codec and WiseStream III compression enabled.
  - e. Calculations shall take into consideration multi-sensor camera channels.
  - f. Provide Hanwha WRR-P-S204S-96TB quantity four (4) at a minimum.

#### C. VIDEO MANAGEMENT SYSTEM (VMS) OVERVIEW

1. VMS: For remote devices and sensors Software Components shall be of the most current commercially available version at the time of system turnover.
2. System shall be an open platform solution specifically designed for use in a security video application.
3. The System shall be comprised of four (4) applications which work together seamlessly and at no addition cost or licensing to the end-user.
  - a. Cloud - a cloud application that enables simple remote connectivity, viewing, and management of an unlimited number of systems and users.
  - b. Server - a media server responsible for discovering, connecting to, and managing system users, devices, and associated data.
  - c. Desktop - a desktop application capable of acting as a stand-alone media player or as a client application for connecting to and managing systems.
  - d. Mobile - a mobile application for iOS and Android devices that allows users to connect to, view, search, and control IP cameras over Wi-Fi or Data networks.

#### D. VMS DEVELOPER & INTEGRATION TOOLS

1. The VMS shall have built-in developer tools which are accessible from any System Server's Web Admin Interface (compatible with all major browsers) and should include, at a minimum:
  2. Generic Events Generator - a tool which helps build HTTP Generic Event calls, a method of sending events from 3rd party systems to the VMS, which can be used to trigger system actions in the VMS.
  3. Server API implementation that gives developers the ability to access every system feature available.
  4. API Change Log - list of breaking changes in API from version to version Video Source Integration SDK - provides the ability to integrate virtually any live or recorded video source (IP Cameras, NVRs, DVRs, etc.) into the VMS with methods for discovering, displaying, analyzing and recording video, as well as integrating device I/O ports and related motion detection information.
  5. Storage SDK - provides the ability to integrate potential storage into System. It allows developers to read from or write to any storage location: local, remote, and even cloud one. Creating a storage plugin requires implementing standard functions such as: I/O stream, if file exist, delete file, list of files in the folder, etc. Storage SDK also contains an example for using an FTP server as a storage location.
- E. VMS SYSTEM ARCHITECTURE:
1. The VMS shall have a Architecture wherein:
  2. All servers in a system are equal and synchronize system databases in real-time.
  3. A user can connect to any system server to see and manage the entire system.
  4. Servers support automatic camera failover to ensure limited loss of video recording in the event of hardware or network failure at no additional cost to the end-user.
  5. Servers will use a SQLite - a free database technology - included in the installation package The VMS shall support one-click system wide updates.
- F. The VMS will not require any licenses to increase the number of supported devices, users, or servers.
- G. The system shall support scaling to support the maximum recommended system sizes shown below. The system shall support exceeding these recommended maximums by consulting with engineering support.
1. The system shall support a maximum of 100 Servers in a system.
  2. The system shall support a maximum of 10,000 resources in a system.
  3. The system shall support a maximum of 1,000 concurrent users in a system.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.
- B. Examine roughing-in for LAN, WAN, and IP network before device installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 WIRING**

- A. Wiring Method: Install cables in raceways unless otherwise indicated.

- B. Wiring in publicly accessible areas or areas that can be exposed to the exterior elements shall be concealed in a proper conduit enclosure to the extent necessary to fully protect the wire from weather or vandalism. Exceptions may include raceways are not required in accessible indoor ceiling spaces and attics.
  - 1. Except raceways are not required in hollow gypsum board partitions.
  - 2. Conceal raceways and wiring except in unfinished spaces.
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.
- D. Label wiring at each end with machine generated labeling tape. No hand written labels shall be permitted.
- E. Splices, Taps, and Terminations: For power and control wiring, use numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- F. For LAN connection and fiber-optic and copper communication wiring, comply with TAA requirements for Telecommunications Systems Infrastructure
- G. Grounding: Provide independent-signal circuit grounding recommended in writing by manufacturer.

### **3.3 VIDEO SURVEILLANCE SYSTEM INSTALLATION AND PROGRAMMING**

- A. Provide and install all equipment, software, materials, and labor to include system programming for a completely operational video management system described herein and included on the Project Drawings. These specifications and project drawings are complementary in describing the design intent of the security video management system.
- B. Meet with the owner in advance of installation to review special analytics requirements to include License Plate Recognition and advanced analytics.
- C. Before programming, meet with the project owner to determine system programming parameters, camera mounting location, desired field of view, analytics configuration and other system settings required to meet owner's needs.
- D. Install cameras and other appurtenances level and plumb for a high quality, workman-like installation.
- E. If applicable, set PTZ/PTRZ pan unit and pan-and-tilt unit stops to suit final camera position and to obtain the field of view required for camera. Connect all controls and alarms, and adjust.
- F. Configure camera "Edge" recording devices and cameras connected at smaller remote sites.
- G. Aim cameras as directed by engineer and/or owner. Optimize system settings both day and night for exact field of view, WDR, Day/Night, analytics, etc.
- H. Program camera system head end. Provide unique on-screen camera identification for all cameras with the following nomenclature:
  - 1. Camera title, date, and time
  - 2. Tours and Salvos (if required)
  - 3. On screen display feature tiles
  - 4. Individual user settings and rights.
- I. Program all system analytics and AI system parameters as directed by the engineer and/or owner.
- J. Unique individual user login settings and/or Active Directory integration as required.

**3.4 CYBER SECURITY PROTECTION**

- A. All equipment requiring users to log on using a password to be configured with user/site-specific password/passwords. No system/product default passwords shall be allowed. Contractor shall implement all camera manufacturer's cyber security recommendations and configurations, following industry best practices per the camera manufacturer Cyber Hardening Guide.
- B. Document that all cameras do not have a default password.
- C. Document that all cameras have the latest firmware installed.
- D. Back up all camera settings utilizing manufacturer camera Device Manager and provide file to owner.
- E. Document that all servers and work stations have current version or Operating System (OS).
- F. Document that latest VMS version that is installed on all servers and work stations.
- G. Set user permissions and rules in VMS.

**3.5 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections and forward results to the engineer and/or owner.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Tests and Inspections:
  - 1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
  - 2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Conduct tests at varying lighting levels, including day and night scenes as applicable. Prepare video-surveillance equipment for acceptance and operational testing as follows:
    - a. Verify proper fields of view, operation of auto-iris lenses, maximize WDR and day/night settings for the environment.
    - b. Set back-focus of fixed focal length lenses if necessary.
    - c. Set and name all preset positions; consult Owner's personnel.
    - d. Set sensitivity of motion detection and other analytics.
    - e. Set, test and correct as needed, all analytical and/or AI parameters per the owner and/or engineer.
    - f. Connect and verify responses to alarms.
    - g. Verify operation of control-station equipment.
    - h. Validate all Cyber requirements.
    - i. Third Party Integrations (if required): Test each individual alarm point and validate camera call-up, camera pre-position and other settings required for a fully integrated system.
- E. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least thirty (30) days. Provide a minimum of five (5) days' notice of test schedule.

1. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.
- F. Video surveillance system will be considered defective if it does not pass tests and inspections. Warranty will only begin after official system acceptance.
- G. Prepare test and inspection reports.

### **3.6 ADJUSTING**

- A. Occupancy Adjustments: When requested within six (6) months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
- B. Check cable connections.
1. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.
  2. Adjust all preset positions; consult Owner's personnel.
  3. Clean lenses or housings.
  4. Recommend changes to cameras, lenses, FOV, and associated equipment to improve Owner's use of video surveillance system.
  5. Make system changes to recording parameters, camera settings, FOV's that can be made without the need to purchase additional equipment and/or software.
  6. Provide additional and/or refresher system training to the owner (max four (4) hours) on system operations, functionality and administrations.
  7. Adjust any analytics.
  8. Provide a written report of adjustments and recommendations.

### **3.7 CLEANING**

- A. Clean installed items using methods and materials recommended in writing by manufacturer.
- B. Clean video-surveillance-system components, including camera-housing windows, lenses, and monitor screens.

### **3.8 TRAINING**

- A. Contractor shall provide minimally eight (8) hours of system administrator training and up to four (4) hour sessions of user training to the owner and designated personnel in the full operations and maintenance of the video management system.
- B. The training shall assure the owner has a comprehensive understanding and basic level of competence of the system.
- C. As a follow up, the contractor shall provide up to four (4) additional hours of training in the following weeks to assure owner competence to any questions or issues that have been experienced once turned over to the owner.

**END OF SECTION 282300**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 284110****SECURITY CONTROL ROOM EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

**1.2 SUMMARY OF WORK**

- A. This Section includes video equipment, audio equipment, computer equipment and software, lighting instruments, and associated peripherals, installation, and training, including, but not limited to the following:
  - 1. Command Console:
    - a. Console and Accessories
    - b. Displays
    - c. Uninterruptible Power Supply
  - 2. Miscellaneous:
    - a. Installation
    - b. Setup

**1.3 SYSTEM DESCRIPTION**

- A. Provide the services necessary to engineer, furnish, and install Security Control Room Equipment. All work shall be in accordance with the true intent of these Specifications, and as required to leave the Control Room in satisfactory operating condition.
  - 1. The Owner reserves the right to reject any or all alternate equipment bids and to select the bid that is considered to serve "THE BEST INTEREST OF THE OWNER."
- B. The work shall consist of:
  - 1. Supplying and installing Security Control Room Equipment
  - 2. Developing and engineering all wiring drawings for the project, in conjunction with the Project Consultant.
- C. Where devices and material are mentioned by name and/or model number, it shall be interpreted as referring to that item as completely specified in that manufacturer's published data as though that data and literature were printed herein in their entirety.
- D. The systems shall be complete, functioning control room, necessary for the operational functions specified, whether each separate device is specifically mentioned.

**1.4 PROPOSED OPERATING PHILOSOPHY AND WORKFLOW DESCRIPTION**

- A. A major goal of the security control room is the streamlining and improvement of efficiency with respect to workflow.
- B. The security control room will be a central workspace for up to 2 people working simultaneously at computer workstations on various aspects of security operations.
- C. Camera feeds will be monitored.
- D. Intercom functions will be managed.
- E. Access control remote locking/unlocking will be managed.
- F. Security forces personnel will be managed via radio.

**1.5 CONFLICT BETWEEN DRAWINGS AND SPECIFICATIONS**

- A. It is intended that any contractor furnishing materials or labor necessary for the completion of this specification shall furnish it in compliance with this specification. Where conflict exists with other specifications concerning such materials and labor, this specification takes precedence unless otherwise approved in writing by the Engineer.
- B. Drawings pertaining to this specification shall be considered as a part of said specification and shall be a part of the bid documents.

**1.6 RELATED WORK PROVIDED BY OTHERS**

- A. The 120 volt and higher power systems will be provided by others.
- B. Cable tray will be provided and installed by others.

**1.7 QUALITY ASSURANCE**

- A. Parts listed shall be complete, type numbers accurate and equipment furnished shall conform to manufacturer's specifications.
- B. All materials shall be new and shall conform to applicable provisions of Underwriters Laboratories and the American Standards Association.
- C. Procure and pay for all necessary permits, licenses and inspections and observe any requirements stipulated therein. Conform in all trades with all local regulations and codes.
- D. Comply with federal, state and local labor regulations and applicable union regulations.

**1.8 WARRANTY**

- A. All equipment and components shall be guaranteed free of defects in materials and workmanship for a period of one (1) year from the date of acceptance, except where specified otherwise. The date of

acceptance shall be defined as the date the Certificate of Substantial Completion is signed by the Architect/Engineer and the Owner.

### **1.9 DELIVERY, STORAGE AND HANDLING**

- A. Package for delivery to best protect finish surfaces while using the least amount of single-use packaging as possible. If possible, package and ship product using reusable blankets and fabrics or reusable cardboard and crate systems.
- B. Protect materials against weather and contact with damp or wet surfaces from time of delivery through time of installation. Store materials inside under cover and keep them dry and protected against damage from weather, condensation, direct sunlight, construction traffic, and other causes.
- C. When storing prior to installation, raise off floor on pallets, stack flat with protective material between to eliminate chance of creating nicks, scratches, and other imperfections and damage to finish surfaces, wrap weather-tight, and provide for air circulation within and around stacks and under temporary coverings.
- D. Do not allow materials to become damp. Maintain temperatures at 60°F or higher, and humidity between 20% and 60% prior to, during and after installation.

## **PART 2 - PRODUCTS**

### **2.1 GENERAL**

- A. The following sections specifically list the acceptable equipment types and items for this project. Where quantities are not noted, they may be obtained from the Drawings. In the event of a discrepancy between the Specifications and the Drawings, the greater quantity or better quality shall be furnished.
- B. During the installation, make provisions for all equipment included in the base bid and any alternates, whether taken or not, so that items which are to be provided as alternates may be added to the system without rewiring or additional construction.
- C. All miscellaneous equipment required for a complete, professional installation shall be included in the base bid. No allowances for any additional equipment, hardware, cabling, or miscellaneous will be considered unless specifically excluded from the base bid.

### **2.2 MANUFACTURERS**

- A. The following manufacturers, quantities, and model numbers shall form the basis of the system. These are minimum requirements. Alternate manufacturers using different part numbers is authorized as long as the solution is functionally equivalent. Contractor is responsible to verify all quantities prior to ordering and installation. Quantities are provided for reference only.

### **2.3 CONSOLE AND ACCESSORIES**

- A. Provide TBC Consoles monitor walls and OPS consoles for the project.

Part #	Description	Quantity
<b>SECURITY COMMAND RM.</b>		
<u><b>Monitor Walls</b></u>		
TW-EL0509	End leg, 5'-9" (1524-2743mm) ht, features an integral cable channel with snap-in cover	4.0
TW-IL0509	Intermediate leg w/ foot, 5-9' height	2.0
TW-V2-4T	4 Trac horizontal Per linear ft.	14.0
AM95	Articulating mount for frame/wall, 95 lbs. weight capacity, 12 degree tilt	8.0
SC1-L	SmartCart with heavy duty locking caster Finish: Laminate or Linoleum	1.0
PS-0820-ET	8 outlets/20 amp, 120 volts power strip; Edison Terminal, Type B plug, 17" overall length	3.0
<u><b>Ops Workstations</b></u>		
ST3-WS-LT-L	Fixed height workstation, integrated mini cable core, extruded aluminum legs and mounting trac, laminate or linoleum finish	2.0
CTR-L	Laminate/linoleum ctop w/ bumper edge (per ft.)	14.0
FP-3500	Articulating compact gas assist arm, extends out to 19 -3/4", silver	4.0
SM-TSS-964	Modular TSS pole with FALL speaker arm (accomodates up to 22 lbs.), 17.5" standard	2.0
PS-0820-ET	8 outlets/20 amp, 120 volts power strip; Edison Terminal, Type B plug, 17" overall length	2.0

**2.4 UNINTERRUPTIBLE POWER SUPPLY**

- A. Provide Uninterruptible Power Supply for the project.
- B. The Uninterruptible Power Supply shall meet the following requirements:
  - 1. Output: Output Power Capacity 3000VA Max Configurable
  - 2. Input: Nominal Input Voltage 120v Input Frequency 50/60 Hz +/- 3 Hz (auto sensing) Input Connections NEMA 5-20P
  - 3. Cord Length 8 feet (2.44 meters)
- C. 

<u>Manufacturer</u>	<u>Model</u>
APC	SMTL3000RM2UC (OR EQUAL)

## 2.5 LCD TV'S

- A. All LCD TV's shall be located as indicated on the Drawings. All interface cables for audio/video shall originate from their locations.
- B. The following are the minimum requirement for the LCD TV's for the media communications systems:
  - 1. Diagonal Measurement: 48"
  - 2. Pixel Resolution: 4K
  - 3. Tuning System ATSC / QAM
  - 4. Aspect Ratio 16:9
  - 5. Response Time 4ms
  - 6. HDMI™ Inputs
  - 7. HD Component Inputs
  - 8. PC Input 15-pin RGB x 1
  - 9. RS-232C Input 9-pin x 1
- C. Install universal wall mount brackets unless otherwise noted. The Contractor will also be responsible for the installation of any required VESA adapter plates necessary for a finished installation.
- D. LCD's will be installed in mounting brackets and secured with tamperproof hardware. A set of removal tools shall be furnished.

## 2.6 MONITOR SPEAKERS

- A. Provide monitor Speakers for the project.
- B. The Speakers shall meet the following requirements:
  - 1. High resolution Active studio reference monitor
  - 2. Ultra-linear frequency response for accurate mix translation
  - 3. 6.7-inch high-precision, low-distortion LF transducer
- C. 

<u>Manufacturer</u>	<u>Model</u>
JBL	305P (OR EQUIVLENT)

## 2.7 PTZ CONTROLLER

- A. Provide a PTZ joystick controller that is interoperable with the video management system.

## PART 3 - EXECUTION

### 3.1 GENERAL

- A. This Contractor shall furnish and install all wiring as indicated on the Drawings. All wiring and terminations shall be in full conformance with all of the current editions or revisions of all applicable codes and standards as previously listed under "Regulatory Agencies" of this Section of the Specifications for their intended use on this Project.

- B. No exposed cabling shall be permitted in the wiring of any functions of the provided system. All cable shall be housed in appropriate raceways suitable and designed for such purposes.
- C. All work materials shall be removed at the end of the work day and the work area left in the same condition as found.
- D. This Contractor shall have a minimum of five years of experience in the specific application of the equipment proposed of these systems.
- E. Adherence to a schedule of working hours which is agreeable with the Owner will be required.
- F. All cables must be routed and managed for a neat and aesthetically pleasing appearance. All work must be installed in a neat and workman like manner.
- G. The contractor shall work carefully with all ceilings and return ceilings to original conditions. Any damages or expenses are the responsibility of the contractor. Every effort will be made to schedule the requirements under this Contract in such a manner so as to complete all above ceiling work prior to ceiling tile installation.
- H. The Drawings and specification indicate cable type to be used. Further, the Drawings and specifications indicate a manufacturer's catalog number for reference of quality and functionality.
- I. Communication bonding and grounding shall be in accordance with the NEC and NFPA. Horizontal cables shall be grounded in compliance with ANSI/NFPA 70 and local requirements and practices. Horizontal equipment includes cross connect frames, patch panels and racks, active telecommunication equipment and test apparatus and equipment.
- J. The contractor shall not place any distribution cabling alongside power lines, or share the same conduit, channel or sleeve with electrical apparatus.
- K. The contractor shall provide any necessary screws, anchors, clamps, tie wraps, distribution rings, miscellaneous grounding and support hardware, etc., necessary to facilitate the installation of the system.
- L. It shall be the responsibility of the contractor to furnish any special installation equipment or tools necessary to properly complete the system. This may include, but is not limited to, tools for terminating cables, testing and splicing equipment for copper/fiber cables, communication devices, jack stands for cable reels, or cable wenchers.

### **3.2 MATERIAL AND WORKMANSHIP**

- A. Non-compliance with any of the following as deemed by the Owner, Architect, or Consultant shall be cause for rejection of work and replacement by the Installing Contractor at no added cost to the Owner.
- B. Material, workmanship, wire, and wiring methods shall be performed as specified.
- C. If, in the opinion of the Installing Contractor, an installation practice is desired or required, which is contrary to these specifications or drawings, a written request for modification shall be made to the Architect and Consultant. Modifications shall not be implemented without the written approval from the Architect and Consultant.

- D. All materials and labor shall be furnished whether mentioned or not to form a complete system operational as per the intentions and description set forth in Part 1. Include delivery, unloading, placement, fastening to walls, floors, ceiling, counters, or other structures where required, interconnecting wiring of the system components, and all other work and materials necessary to form a complete operational system.
- E. It shall be the responsibility of the contractor to cooperate at all times, and to the fullest extent, with all trades and contractors doing work in the building, to the end that lost time, work stoppages, interference, and inefficiencies do not occur. Communicate installation scheduling with the Electrical Contractor, and coordinate with other trades.

### **3.3 PHYSICAL INSTALLATION**

- A. All equipment not specifically portable shall be held firmly in place and supported by fastenings, brackets, etc., capable of supporting the load with a minimum safety factor of 5 or as approved by the Architect.
- B. Boxes, equipment, cabling, rack, etc. shall be installed and secured plumb and square with building lines.
- C. At all times during the installation the Installing Contractor shall consider not only the operational efficiency of equipment but also the aesthetics of the space. Questions or conflicts between operation and aesthetics should be directed to the Architect and Owner's Representative.

### **3.4 INSTALLATION - GENERAL**

- A. Mount all equipment into Rack Console according to Elevation drawing.
- B. Furnish and install additional AC power strips in each rack, as necessary.
- C. Any miscellaneous items not specifically mentioned but required for proper operation of the system shall be supplied as though specifically mentioned.

### **3.5 CABLE INSTALLATION**

- A. All inter-rack cabling shall be neatly strapped, dressed, and supported as approved by the Owner or Consultant.
- B. Terminal block, boards, strips, or connectors shall be furnished for all cables, which interface with racks, cabinets, consoles, or equipment modules.
- C. Cabling within racks shall be contained in Panduit finger tray or wire-tied to the side of the rack in a neat and orderly fashion. Such cables shall remain separated as indicated in section D of this specification.
- D. All cables routed outside of racks and conduit shall be contained in a suitable harness or wireway to maintain a neat, clean, and finished product.
- E. All cable to be pulled in plenums to be approved for use in environmental A1 application.

**3.6 LABELING**

- A. All cable designations and color-coding shall be in full compliance with EIA/TIA 606.
- B. Clearly label cables at both ends with permanently applied, mechanically printed labels. Hand written labels will not be acceptable. Use standardized colors and alphanumeric codes. Engineer will approve labeling system and method.
- C. In work areas, place cable ID labels around each cable in outlet box, on front of faceplate and on front of jack.

**3.7 GROUNDING PROCEDURES**

- A. In order to minimize problems resulting from improper grounding, and to achieve maximum signal-to-noise ratios, the following grounding procedures shall be adhered to:
  - 1. Under no circumstances shall the racks contact the conduit raceway system, the steel structure of the building, or ventilation ducts.
  - 2. Under no conditions shall the AC neutral conductor, at any location, be used for a system ground.
- B. There shall be no deviations from the above unless specifically required by the manufacturer of the equipment or when necessary to minimize crosstalk and to maximize signal-to-noise ratios in the audio, video, and control systems.
- C. If a different installation practice is desired by the Installing Contractor in regards to the signal grounding, the Installing Contractor may submit alternate grounding methods to the Consultant for approval. Installing contractor shall bear all responsibility for any deviations from the above stated grounding procedure, even if allowed by the Consultant, Owner, or Architect.
- D. Prior to the testing, the installer shall insure that the system is free of short circuits, ground loops, parasitic oscillations, and excessive system noise beyond published specifications of the equipment.
- E. The Installing Contractor, at the Installing Contractor's expense, shall rectify any components not found to function in a satisfactory manner as defined by this specification.
- F. The Final Testing shall be made in the presence of the Owner or Owner's Authorized Representative.

**3.8 FINAL INSPECTION**

- A. At the final inspection, a factory-trained representative of the manufacturer of the major equipment shall demonstrate that the systems function properly in every respect. The demonstration shall be made in the presence of the Owner or Owner's Authorized Representative.
- B. The Installing Contractor, at the Installing Contractor's expense, shall rectify any components not found to function in a satisfactory manner as defined by this specification.

**3.9 WASTE MANAGEMENT**

- A. Separate clean waste mineral and cellulose products from contaminants for recycling in accordance with the Waste Management Plan. Place in designated area and protect from moisture and contamination.
- B. Separate metal waste, packaging, and all other materials in accordance with the Waste Management Plan and place in designated areas for recycling or reuse.
- C. Close and tightly seal all partly used adhesive containers and store protected in well-ventilated, fire-safe area at moderate temperature. Set aside for reuse by Owner.
- D. Check with manufacturer for recycling options. Most manufacturers take back scrap and unused portions for resale or manufacturing into new product.

**END OF 284110**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**TABLE OF CONTENTS**

**DIVISION 28 - ELECTRONIC SAFETY & SECURITY SPECIFICATION**

**Fire Alarm:**

284600 FIRE DETECTION AND ALARM

END OF DIVISION 28 TABLE OF CONTENTS

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 28 46 00 - FIRE DETECTION AND ALARM****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- B. Related Sections: The following sections contain requirements that relate to this Section:
  - 1. Division 7 Section "Penetration Firestopping" for material and methods for firestopping systems.

**1.2 DESCRIPTION OF WORK**

- A. This Section requires the Contractor to furnish all materials required to install the fire alarm system. The Contractor shall be responsible for installing, testing, and start-up of a complete functioning fire alarm system, and each element thereof, as specified or indicated on the Drawings or reasonably inferred, including every article, device or accessory (whether or not specifically called for by item) necessary to facilitate each system's function as indicated by the design and the equipment specified. Elements of the work include materials, labor, supervision, supplies, equipment, transportation and utilities.
- B. Division 28 of the Specifications and Drawings numbered with prefixes Fgenerally describe these systems, but the scope of the Fire Alarm work includes all such work indicated in the Contract Documents: Instructions to Bidders; Proposal Form; General Conditions; Supplementary General Conditions; Architectural, Structural, Fire Suppression, Mechanical, Plumbing, Fire Alarm and Electrical Drawings and Specifications; and Addenda.
- C. The Drawings have been prepared diagrammatically and are intended to convey the scope of work, indicating the general location and arrangement of the major equipment, devices, appliances, etc. without showing all the exact details as to elevations, circuits, routing, and other installation requirements. Use the Drawings as a guide when laying out the system and verify that materials and equipment will fit into the designated spaces, and which, when installed per manufacturers' requirements, will ensure a complete, coordinated, satisfactory and properly operating system.
- D. The scope of work in this section includes:
  - 1. Fire alarm control unit
  - 2. Remote annunciator
  - 3. Manual fire alarm pull stations
  - 4. System smoke detectors
  - 5. Heat detectors
  - 6. Notification appliances
  - 7. Sprinkler system waterflow and valve tamper alarms
  - 8. Elevator recall
  - 9. Air handling unit shutdown
  - 10. Battery stand-by power
  - 11. Fire Command Center
  - 12. Multi-channel one-way voice notification system
  - 13. Fire pump status monitoring
  - 14. Firefighter's smoke control panel
  - 15. Digital alarm communicator transmitter (DACT)
  - 16. Air sampling smoke detection

**1.3 QUALITY ASSURANCE**

- A. All work under this division shall be executed in a thorough professional manner by competent and experienced workmen licensed to perform the Work specified.
- B. All work shall be installed in strict conformance with manufacturer's requirements and recommendations. Equipment and materials shall be installed in a neat and professional manner and shall be aligned, leveled, and adjusted for satisfactory operation.
- C. Material and equipment shall be new, shall be of the best quality and design, shall be current model of the manufacturer, shall be free from defects and imperfections and shall have markings or a nameplate identifying the manufacturer and providing sufficient reference to establish quality, size and capacity. Material and equipment of the same type shall be made by the same manufacturer whenever practicable.
- D. Installation of devices shall be performed or supervised by a National Institute for Certification of Engineering Technologies (NICET) Level 2 or higher Fire Alarm Technician. Submit copies of the certification for employees through shop drawing submittals.

**1.4 APPLICABLE CODES AND STANDARDS**

- A. Execute Work in accordance with the National Fire Protection Association Standards and all Local, State, and National codes, ordinances and regulations in force governing the particular class of Work involved. Obtain timely inspections by the constituted authorities. Upon final completion of the Work obtain and deliver to the Owner executed final certificates of acceptance from the Authority Having Jurisdiction.
- B. Any conflict between these Specifications and accompanying Drawings and the applicable Local, State and Federal codes, ordinances and regulations shall be reported to the Architect in sufficient time, prior to the opening of Bids, to prepare the Supplementary Drawings and Specification Addenda required to resolve the conflict.
- C. The governing codes are minimum requirements. Where these Drawings and Specifications exceed the code requirements, these Drawings and Specification shall prevail.
- D. All material, manufacturing methods, handling, dimensions, method or installation and test procedure shall conform to but not be limited to the following industry standards and codes.
  - 1. NFPA 70, "National Electrical Code", 2020 Edition.
  - 2. NFPA 72, "National Fire Alarm and Signaling Code", 2019 Edition.
  - 3. NFPA 20, "Installation of Stationary Pumps for Fire Protection", 2019 Edition.
  - 4. Underwriters Laboratories, "Fire Protection Equipment Directory", Latest Edition.
  - 5. Alabama Building Code (IBC) 2021 Edition with local amendments.
  - 6. Alabama Fire Code (IFC) 2021 Edition with local amendments.
  - 7. ICC/ANSI A117.1, "Accessible and Useable Buildings and Facilities", 2017 Edition.
  - 8. ASME A17.1, "Safety Code for Elevators and Escalators", Current Edition.
- E. Contractor shall comply with rules and regulations of public utilities and municipal departments affected by connections of services.

**1.5 DEFINITIONS**

- A. General:
  - 1. Furnish: The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation and similar operations."
  - 2. Install: The term "install" is used to describe operations at the project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations."
  - 3. Provide: The term "provide" means "to furnish and install, complete and ready for the intended use."

4. Furnished by Owner or Furnished by Others: The item will be furnished by the Owner or Others. It is to be installed and connected under the requirements of this Division, complete and ready for operation, including items incidental to the Work, including services necessary for proper installation and operation. The installation shall be included under the guarantee required by this Division.
  5. AHJ: The local code and/or inspection agency (Authority) Having Jurisdiction over the Work.
  6. NRTL: Nationally Recognized Testing Laboratory, as defined and listed by OSHA in 29 CFR 1910.7 (e.g., UL, ETL, CSA, etc.), and acceptable to the AHJ over this project. Nationally Recognized Testing Laboratories and standards listed are used only to represent the characteristics required and are not intended to restrict the use of other listed Manufacturers and models that meet the specified criteria.
  7. FACP: Fire Alarm Control Panel.
  8. NICET: National Institute for Certification in Engineering Technologies.
  9. Air sampling smoke detection system: Very early smoke-detection system.
- B. The terms "approved equal", "equivalent", or "equal" are used synonymously and shall mean "accepted by or acceptable to the Engineer as equivalent to the item or manufacturer specified". The term "approved" shall mean labeled, listed, or both, by an NRTL, and acceptable to the AHJ over this project.

## 1.6 COORDINATION

- A. The Contractor shall visit the site and ascertain the conditions to be encountered while installing the Work under this Division, verify all dimensions and locations before purchasing equipment or commencing work, and make due provision for same in the bid. Failure to comply with this requirement shall not be considered justification for omission, alteration, incorrect or faulty installation of Work under this Division or for additional compensation for Work covered by this Division.
- B. The Contractor shall refer to Drawings of the other disciplines and to relevant equipment drawings and shop drawings to determine the extent of clear spaces. The Contractor shall make offsets required to clear equipment, beams and other structural members; and to facilitate concealing piping in the manner anticipated in the design.
- C. The Contractor shall maintain a foreman on the jobsite at all times to coordinate their work with other contractors and subcontractors so that various components of the Fire Alarm systems will be installed at the proper time, will fit the available space, and will allow proper service access to the equipment. Carry on the work in such a manner that the work of the other contractors and trades will not be handicapped, hindered, or delayed at any time.
- D. Work of this Division shall progress according to the "Construction Schedule" as established by the Prime Contractor and their subcontractors and as approved by the Architect. Cooperate in establishing these schedules and perform the Work under this Division, in a timely manner in conformance with the construction schedule so as to ensure successful achievement of schedule dates.
- E. Where coordination and interfacing with other systems or equipment is required, it shall be the responsibility of the fire alarm system installer (contractor) to either provide the relays, contacts, power supplies and other necessary hardware or see to it that such hardware is provided with the other systems or equipment.
- F. The contractor shall coordinate work in this section with all related trades. Work and/or equipment provided in other sections and related to the fire alarm system shall include, but not be limited to:
  1. Sprinkler waterflow and valve tamper switches shall be provided by the fire sprinkler installer, but wired and connected by the fire alarm installer.
  2. Duct smoke detectors shall be furnished, wired and connected by the fire alarm system installer. The HVAC installer shall furnish necessary duct opening to install the duct smoke detector's housing.

3. Air handling fan control circuits and contacts to be furnished by the HVAC control equipment.
  4. Conduit shall be by Division 26 "Common Work Results for Electrical".
- G. System shall be complete and operational with power and control wiring provided to meet the design intent shown on the drawings and specified within the specification sections.

### 1.7 MEASUREMENTS AND LAYOUTS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Figured dimensions shall be taken in preference to scale dimensions. Determine exact locations by job measurements, by checking the requirements of other trades, and by reviewing the Contract Documents. The Contractor will be held responsible for errors which could have been avoided by proper checking and inspection.

### 1.8 SUBMITTALS

- A. Refer to Division 1 and General Conditions for submittal requirements, in addition to requirements specified herein. Submittals not complying fully with the submittal requirements will be rejected.
- B. Contractor shall prepare installation drawings (working shop drawings) based upon this design. Requests for deviations from the approved design shall be submitted in writing to the Engineer of Record for approval.
- C. Shop drawings shall be of sufficient clarity to indicate the location, nature and extent of the work proposed and show in detail that it will conform to the provisions of this code and relevant laws, ordinances, rules and regulations. Drawings that are not legible, or that do not contain sufficient detail to verify compliance with applicable codes and standards, will be rejected without further review.
- D. Submittals and shop drawings shall not contain HEI's firm name or logo, nor shall it contain the HEI's engineers' seal and signature. They shall not be copies of HEI's work product. If the contractor desires to use elements of such product, the license agreement for transfer of information at the end of this section must be used.
- E. Submit Shop Drawings as early as required to support the project schedule. Allow for two weeks Engineer review time plus mailing time plus a duplication of this time for resubmittal if required. Submit Shop Drawings as soon as possible before construction starts.
- F. Before submitting Shop Drawings and material lists, the Contractor shall verify that the equipment submitted is mutually compatible and suitable for the intended use. Contractor shall verify that the equipment will fit the available space and allow ample room for maintenance. If the size of equipment furnished makes necessary any change in location, or configuration, submit a shop drawing showing the proposed layout.
- G. Refer to Division 1 for acceptance of electronic submittals for this project. For electronic submittals, Contractor shall submit the documents in accordance with the procedures specified in Division 1. Contractor shall notify the Architect and Engineer that the shop drawings have been posted. If electronic submittal procedures are not defined in Division 1, Contractor shall include the website, user name and password information needed to access the submittals. For submittals sent by e-mail, Contractor shall copy the Architect and Engineer's designated representatives. Contractor shall allow the Engineer review time as specified above in the construction schedule. Contractor shall submit only the documents required to purchase the materials and/or equipment in the electronic submittal and shall clearly indicate the materials, performance criteria and accessories being proposed. General product catalog data not specifically noted to be part of the specified product will be rejected and returned without review.

- H. The Engineer's checking and subsequent acceptance of such submittals shall not relieve the Contractor from responsibility for deviations from Drawings or Specifications unless the Contractor has, in writing, called the Engineer's and Architect's attention to such deviations at the time of submission, and secured written acceptance; nor shall it relieve the Contractor from responsibility for errors in dimensions, details, sizes of members, or quantities; or for omissions of components or fittings; or for not coordinating items with actual building conditions and adjacent work.
- I. Product Data: Provide a bill of materials and product cutsheets showing material specifications, electrical characteristics and connection requirements. Highlight or indicate specific product options and accessories as applicable to the project.
- J. Shop Drawings:
  - 1. Comply with recommendations and requirements in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
  - 2. Shop drawings shall be prepared by a NICET Level 3 or higher certified technician. Submit copies of the certification for the designer with submittal.
  - 3. The fire alarm system equipment vendor shall provide shop drawings showing fire alarm floor plans and a full building riser diagram. Fire alarm floor plans and riser diagram shall show fire alarm control panel, annunciator, all fire alarm initiating devices and notification appliances. Show typical wiring diagrams of control panel/s, annunciator and each device and wiring connections required. Show all interfaces to other systems, such as temperature control systems, and security systems.
  - 4. The fire alarm floor plans and riser diagram shall show wiring to all fire alarm devices/appliances, indicating wire sizes and quantities as well as conduit/raceway sizes and locations of end-of-line (EOL) resistors. The fire alarm floor plans and riser diagram shall clearly show the routing of all fire alarm system wiring, including all horizontal routing and vertical routing (in chases).
  - 5. Routing of all fire alarm wiring shall comply with the "Survivability" requirements of NFPA 72.
  - 6. Provide a Sequence of Operations Matrix that explains how the submitted fire alarm system functions.
  - 7. Include voltage drop calculations for notification-appliance circuits.
  - 8. Include battery-size calculations.
  - 9. Shop drawing scale shall match the Engineer's drawings where possible. Scale shall not be less than  $3/32" = 1'-0"$ .
  - 10. Shop drawings shall be produced using computer-aided design. Hand drawn documents will not be reviewed or approved.
- K. Indicate within the submittal all applicable UL listings and all applicable approvals or certifications.
- L. Fire Fighter Control Panel: Submit the mechanical smoke control system panel and graphic display with color chart.
- M. Qualification Data: Submit copies of the certification for the Installer.
- N. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of products.

## 1.9 ELECTRONIC DRAWING FILES

- A. In preparation of shop or record drawings, Contractor may, at their option, obtain electronic drawing files in AutoCAD or DXF format from the Engineer for a shipping and handling fee of 200 for a drawing set up to 12 sheets and 15 per sheet for each additional sheet. Contact the Architect for Architect's written authorization. Contractor shall complete and send the form attached at the end of this section along with a check made payable to Henderson Engineers, Inc. Contractor shall indicate the desired shipping method and drawing format on the attached

form. In addition to payment, Architect's written authorization and Engineer's release agreement form must be received before electronic drawing files will be sent.

### 1.10 SUBSTITUTIONS

- A. Refer to Division 1 and General Conditions for Substitutions.
- B. Materials, products and equipment described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by the proposed substitution.
- C. No substitution will be considered prior to receipt of Bids unless written request for approval to bid has been received by the Engineer at least ten calendar days prior to the date for receipt of Bids. Each such request shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitute including drawings, cuts, performance and test data and other information necessary for an evaluation. A statement setting forth changes in other materials, equipment or other Work that incorporation of the substitute would require shall be included. The burden of proof of the merit of the proposed substitute is upon the proposer. The Engineer's decision of approval or disapproval to bid of a proposed substitution shall be final.
- D. If the proposed substitution is approved prior to receipt of Bids, such approval will be stated in an Addendum. Bidders shall not rely upon approvals made in any other manner. Verbal approval will not be given.
- E. No substitutions will be considered after the Contract is awarded unless specifically provided in the Contract Documents.

### 1.11 OPERATION AND MAINTENANCE DATA

- A. Refer to Division 1 and General Conditions for Operational and Maintenance Manuals.
- B. Instruct the Owner's permanent personnel in the proper operation of, startup and shutdown procedures and maintenance of the equipment and components of the systems installed under this Division.
- C. The O&M Manuals shall be provided in labeled 3-ring binder with cover, binding label, tabbed fly sheets and plastic insert folders for Record Drawings. Include the following sections with the appropriate information for each section:
  - 1. Typewritten Index.
  - 2. Qualifications. Provide designer and installer qualification.
  - 3. Bill of Materials. Provide complete nomenclature, model number and vendor information for all parts.
  - 4. Operating Instructions. Complete instructions detailing operation and maintenance of all equipment installed.
  - 5. Product Data: Provide product cutsheets for all equipment utilized and installed.
  - 6. Riser diagram.
  - 7. Device addresses.
  - 8. Record copy of site-specific software.
  - 9. Provide "Inspection and Testing Form" according to the "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:
    - a. Equipment tested.
    - b. Frequency of testing of installed components.
    - c. Frequency of inspection of installed components.
    - d. Requirements and recommendations related to results of maintenance.
    - e. Manufacturer's user training manuals.
  - 10. Manufacturer's required maintenance related to system warranty requirements.
  - 11. Abbreviated operating instructions for mounting at fire alarm control unit and each annunciator unit.

12. Guarantee. Copy of all guarantees and warranties issued.
13. Contact list with minimum three service representative phone numbers.

#### **1.12 RECORD DRAWINGS**

- A. A set of prints shall be kept on the jobsite during construction for the purpose of noting changes to location of all fire alarm equipment, devices, appliances and circuits as finally installed. During the course of construction, the Contractor shall indicate on these drawings, changes made from the Contract Drawings. Particular attention shall be made to those items which need to be located for servicing.
- B. The record drawings shall show actual locations of initiating devices, notification appliances, and end-of-line devices. Show the approximate location, size and type of all wiring and routing of wiring. Drawings should also include one-line riser diagrams showing all devices.
- C. The Contractor shall sign-off on the Record Drawings as being an accurate representation of the completed installation.
- D. Refer to Division 1 and General Conditions for Record Drawings
- E. At the completion of the project, the Contractor shall obtain at their expense, reproducible copies of the drawings and incorporate changes noted on the jobsite work prints onto these sheets. These changes shall be done by a skilled drafter. Each sheet shall be marked "Record Drawing", with date. The drawings and associated system calculations shall be delivered to the Architect.

#### **1.13 SPARE PARTS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. Provide 10% of the total or a minimum of one (1) manual pull station.
  2. Provide 10% of the total or a minimum of two (2) of each type of automatic smoke detector.
  3. Provide 5% of the total or a minimum of one (1) of each type of automatic heat detector.
  4. Provide 5% of the total or a minimum of two (2) of each strobe type and candela rating.
  5. Provide 5% of the total or a minimum of two (2) of each speaker type. Combination speaker/strobe units matching the units installed are acceptable.
  6. Keys and Tools: One extra set for access to locked or tamper proofed components.

#### **1.14 QUALIFICATIONS**

- A. Manufacturer: Company specializing in manufacturing the products indicated in this section with minimum three years documented experience.
- B. Installer: Company specializing in installing the products indicated in this section with minimum three years documented experience. Shall be bondable and licensed Contractor and employ full-time factory-trained and certified installers and technicians. Installers shall provide with the fire alarm submittal proof of factory training for each installer.
- C. Final checkout and verification: Shall be conducted by a technician certified by the National Institute for Certification in Engineering Technologies (NICET) registered as level 2 or higher in the fire protection technology certification program. Provide certification information with fire alarm submittal.
- D. The equipment manufacturer's service department shall be fully stocked in standard parts and components and engaged in the maintenance of fire alarm systems. On-the-premises service shall be available within 4 hours of notification, 7 days a week, 24 hours a day.

#### **1.15 GUARANTEES AND WARRANTIES**

- A. Refer to Division 1 and General Conditions for Guarantees and Warranties.

- B. Furnish service and maintenance of fire alarm system including wiring and raceways for one year from date of substantial completion.
- C. All components, system software, parts and assemblies shall be guaranteed against defects in materials and workmanship for the one-year period stated above, unless specific items are noted to carry a longer warranty in the Construction Documents or manufacturer's standard warranty.
- D. Labor (including travel expenses) to trouble-shoot, repair, reprogram, or replace components shall be furnished by this contractor at no charge during the warranty period.
- E. All corrective software modifications made during warranty periods shall be updated on all user documentation and on user and manufacturer archived software.

#### **1.16 PROJECT CONDITIONS**

- A. Use of Devices during Construction: Protect devices during construction unless devices are placed in service to protect the facility during construction.

### **PART 2 - PRODUCTS AND MATERIALS**

#### **2.1 SYSTEM DESCRIPTION**

- A. Noncoded, UL-listed addressable system, with multiplexed signal transmission and voice/strobe evacuation.
- B. All components provided shall be listed for use with the selected system.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Source Limitations for Fire alarm System and Components: Components shall be compatible with, and operate as an extension of, existing system. Provide system manufacturer's certification that all components provided have been tested, and will operate, as a system.

#### **2.2 MANUFACTURER**

- A. Subject to compliance with requirements, provide products manufactured by the following manufacturers as indicated on the Drawings:
  - 1. Notifier
  - 2. Johnson Controls, Inc. (Simplex)
  - 3. Siemens-Cerberus Division
  - 4. Kidde/Edwards
  - 5. Gamewell-FCI
  - 6. Fike
  - 7. Silent Knight
  - 8. Approved Equal
    - a. Approved equals will not be considered unless formally submitted during the bidding process as an RFI.

#### **2.3 SYSTEMS OPERATIONAL DESCRIPTION**

- A. Fire alarm signal initiation shall be by one or more of the following devices and systems:
  - 1. Manual pull stations.
  - 2. Heat detectors.
  - 3. Smoke detectors.
  - 4. Air-sampling smoke-detection system.
  - 5. Automatic sprinkler system water flow.
  - 6. Fire extinguishing system operation.

- B. Fire alarm signal shall initiate the following actions:
1. Identify alarm and specific initiating device at fire alarm control unit and remote annunciators (if provided).
    - a. A pulsing alarm tone shall occur within the control panel until acknowledged.
    - b. The alarm LED shall flash on the control panel and remote annunciator panel until the alarm has been acknowledged at the control panel/remote annunciator panel. Once acknowledged, this same LED shall latch on and the custom label for the address in alarm shall be displayed on the alphanumeric LCD readout. A subsequent alarm received from another address after acknowledged shall flash the alarm LED on the control panel showing the new alarm information.
  2. Transmit an alarm signal to the alarm supervising station.
  3. The audible and visible alarm signal shall operate until it is manually silenced or acknowledged.
  4. Record events in the system memory.
  5. Activate voice/alarm communication system.
  6. All fan-powered air-handling equipment shall shutdown and remain down until the fire alarm control panel is reset.
  7. Close smoke dampers in air ducts of designated air-conditioning duct systems.
  8. Activate smoke-control system (smoke management).
  9. Activate stairwell and elevator-shaft pressurization systems.
  10. Shutdown audio system.
  11. Transmit signal to scoreboard and ribbon board control panel to display visual evacuation message when activated.
- C. Supervisory signal initiation shall be by one or more of the following devices and actions:
1. Valve supervisory switch.
  2. Duct-smoke detectors
  3. High- or low-air-pressure switch of a dry-pipe system.
  4. Alert and Action signals of air-sampling detector system.
  5. Fire pump running.
  6. Fire pump loss of power.
  7. Fire pump power phase reversal.
  8. Independent fire detection and suppression systems.
  9. User disabling of zones or individual devices.
  10. Loss of communication with any panel on the network.
- D. System Supervisory Signal Actions:
1. Identify specific device causing supervisory signal fire alarm control unit and remote annunciators (if provided).
    - a. Visible and audible supervisory alarm indicated by address at fire alarm control panel.
    - b. Manual acknowledge function at fire alarm control panel and remote annunciator panel silences audible supervisory alarm; visible alarm is displayed until device is returned to its normal position/supervisory condition is cleared.
  2. Record events in the system memory.
  3. After a time delay of 90 seconds transmit a supervisory signal to the alarm supervising station.
  4. Duct-mounted smoke detectors shall shutdown their respective unit upon detection of smoke and remain down until manually reset.
  5. Individual fan-powered air distribution equipment less than 2,000 cfm that is not provided with duct detection shall shutdown when the respective air handling unit is shutdown.
- E. System trouble signal initiation shall be by one or more of the following devices and actions:
1. Open circuits, shorts, and grounds in designated circuits.
  2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.

3. Loss of communication with any addressable sensor, input module, relay, control module, remote annunciator, printer interface, or Ethernet module.
  4. Loss of primary power at fire alarm control unit.
  5. Ground or a single break in internal circuits of fire alarm control unit.
  6. Abnormal ac voltage at fire alarm control unit.
  7. Break in standby battery circuitry.
  8. Failure of battery charging.
  9. Abnormal position of any switch at fire alarm control unit or annunciator.
  10. Voice signal amplifier failure.
- F. System Trouble Signal Actions:
1. Identify specific device causing trouble signal fire alarm control unit and remote annunciators (if provided).
    - a. Visible and audible trouble alarm indicated by address at fire alarm control panel.
    - b. Manual acknowledge function at fire alarm control panel and remote annunciator panel silences audible trouble alarm; visible alarm is displayed until device is returned to its normal position/trouble condition is cleared.
  2. Record events in the system memory.
  3. After a time delay of 90 seconds, transmit a trouble signal to the alarm supervising station.
- G. Positive Alarm Sequence
1. Alarm Sequence of Operation: Actuation of an alarm initiating device places circuit in alarm mode, which causes the following system operations. Refer to Section 2.3.A for a listing of all alarm initiating devices.
    - a. Audible and visual notification appears locally at the fire alarm control panel.
    - b. Audible and visual notification throughout the building is delayed 15 seconds.
      - 1) Trained personnel shall acknowledge the alarm within the 15 seconds.
      - 2) If the alarm is not acknowledged within 15 seconds, the notification appliances shall immediately activate throughout the building.
    - c. If the 15 second delay is acknowledged, audible and visual notification throughout the facility is delayed and a 180 second investigation stage is initiated while the alarm is verified.
      - 1) If the system is not reset during the investigation phase, audible and visual notification devices immediately activate throughout the building at the end of the 180 second investigation phase.
    - d. The 180 second investigation phase:
      - 1) If a false alarm is verified, the fire alarm is to be cancelled at the panel by pushing a separate switch or button at the fire alarm control panel that overrides the 180 second countdown and cancels the alarm.
      - 2) If an additional initiating devices goes into alarm during the 180 second investigation phase, the system shall be placed into alarm.
      - 3) If an alarm is verified during the 180 second investigation phase, the fire watch attendant will set the facility into alarm by pulling a designated manual pull station located adjacent to the fire alarm control panel. The manual pull station shall activate an instant alarm when the system is in Positive alarm Sequence.
    - e. Once the system is in alarm:
      - 1) Identify alarm and specific initiating device at fire alarm control unit and remote annunciators (if provided).
        - a) A pulsing alarm tone shall occur within the control panel until acknowledged.
        - b) The alarm LED shall flash on the control panel and remote annunciator panel until the alarm has been acknowledged at the control panel/remote annunciator panel. Once acknowledged, this same LED shall latch on and the custom label for the address in alarm shall be displayed on the alphanumeric LCD readout. A subsequent alarm received from another address after acknowledged shall flash the alarm LED on the control panel showing the new alarm information.

- 2) Transmit an alarm signal to the alarm supervising station.
  - 3) The audible and visible alarm signal shall operate until it is manually silenced or acknowledged.
  - 4) Record events in the system memory.
  - 5) Activate voice/alarm communication system.
  - 6) All fan-powered air-handling equipment shall shutdown and remain down until the fire alarm control panel is reset.
  - 7) Close smoke dampers in air ducts of designated air-conditioning duct systems.
  - 8) Shutdown audio system.
  - 9) Transmit signal to scoreboard and ribbon board control panel to display visual evacuation message when activated.
  - 10) Transmit signal to override bowl public address system to activate audible evacuation message when activated.
2. Supervisory Sequence of Operation: The activation of any supervisory initiating device places system in supervisory mode, which causes the following system operations. Refer to Section 2.3.C for a listing of all supervisory initiating devices and sequence of operations.
  3. Trouble Sequence of Operation: System or circuit trouble places system in trouble mode, which causes the following system operations. Refer to Section 2.3E for a listing of trouble sequence of operations.

## 2.4 FIRE ALARM SYSTEM CONTROL UNIT

- A. General Requirements for Fire alarm Control Unit:
  1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864.
    - a. System software and programs shall be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining the information through failure of primary and secondary power supplies.
    - b. Include a real-time clock for time annotation of events on the event recorder and printer.
    - c. Provide communication between the FACP and remote circuit interface panels, annunciators, and displays.
    - d. The FACP shall be listed for connection to a central-station signaling system service.
    - e. Provide nonvolatile memory for system database, logic, and operating system and event history. The system shall require no manual input to initialize in the event of a complete power down condition. The FACP shall provide a minimum 500-event history log.
    - f. The control unit shall have dedicated alarm, supervisory and trouble LED's and dedicated alarm, supervisory and trouble acknowledge, and alarm silence switches.
    - g. Lamp Test: Manual lamp test function causes each LED to function at fire alarm control panel.
    - h. Drill Sequence of Operation: Manual drill function causes alarm mode operation as described above.
    - i. The FACP shall be provided with surge protection.
    - j. Install in a surfacemounted enclosure.
    - k. The fire alarm system control unit shall be UL listed for releasing service.
      - a. The fire alarm system control unit shall be UL listed for smoke control service.
- B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
  1. Annunciator and Display: Liquid-crystal type, 80 characters, minimum.

2. Keypad: Arranged to permit entry and execution of programming, display, and control commands. and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.
- C. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals and digital alarm communicator transmitters shall be powered by 24-V dc source.
  1. The location of the dedicated branch circuit disconnecting means shall be permanently identified at the control unit.
  2. The circuit disconnecting means shall have a red marking and be provided with a breaker lock or other approved method to avoid accidental operation.
  3. Alarm current draw of entire fire alarm system shall not exceed 80 percent of the power-supply module rating.
- D. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
  1. Batteries: Sealed lead acid.
  2. The secondary power system shall operate system in standby mode for 24 hours followed by alarm mode for 15 minutes.
- E. System Supervision: Automatically detects and reports open circuits, shorts, and grounds of wiring for initiating device, signaling line, and notification appliance circuits. Alarm, supervisory and trouble signals shall be monitored by the supervising station over a Digital Alarm Communicator Transmitter (DACT), or other approved method.
- F. Fire Pump Control and Status: Provide supervised START (no STOP control shall be installed) controls and visible alarm status indication at the Fire Command Center and at the Remote Annunciator for the fire pump in accordance with NFPA 20. Coordinate with the fire pump controller supplier and provide the necessary conduit and wiring for the control and status indication. Refer to Division 21.
- G. Smoke Control Systems:
  1. Provide output signals using addressable relays to start the smoke control system(s). Signal shall remain on until alarm conditions are cleared and fire alarm system is reset. Signal shall not stop in response to alarm acknowledge or signal silence commands.
  2. Modify section(s) accordingly for sequence of operations for the smoke control interface on the project.
  3. Smoke Control starts when any designated alarm is received at fire alarm control unit. Refer to smoke control sequence of operation for additional information.
  4. First fire alarm system initiating device to go into alarm condition shall activate the smoke control functions. Subsequent devices going into alarm condition shall have no effect on the smoke control mode.
  5. Fire Fighter Smoke Control Panel
    - a. General
      - 1) Comply with local building code.
      - 2) Include manual control and override of automatic control of mechanical smoke control systems.
      - 3) Include a graphic display with switches for control and indicator lights for monitoring status and override of automatic control of smoke control equipment as specified herein and described on the drawings.
      - 4) UL864 – UUKL listed as a Firefighters Smoke Control Station.
    - b. Construction:
      - 1) Unitized cabinet, primed and painted with a baked enamel, textured finish. Provide a security door with viewing window.
      - 2) Include an aluminum substrate for mounting of graphics, indicating lights, switches, control devices and test stations.
      - 3) Front panel shall have a polyester film overlay protected by a non-glare textured coating which is non-yellowing, durable and scratch resistant. The

- overlay shall be bonded to the front panel with an adhesive that does not delaminate and provides 100 percent bonding.
- 4) Graphics: The front panel overlay shall be a multi-color graphic display showing the mechanical smoke control system as shown on the drawings. Smoke control fans within the building shall be shown on the fire-fighter's control panel. Display a clear indication of the direction of airflow and the relationship of components.
  - 5) Switches: Rotary or flip type for ON-OFF-AUTO, OPEN-AUTO-CLOSE, ON-OFF or OPEN-CLOSE operation as required per code for the operated equipment. Include a keyed switch for panel enable and a momentary test button for sample testing of all indicating lights.
  - 6) Indicating Lights: High intensity LED or pilot-lamp type lights of colors as required by code. Indicate the following:
    - 7) Normal, Off, On, or Fault status of equipment.
    - 8) Positive confirmation of actuation, testing, manual override, and the presence of power downstream of all disconnects.
    - 9) Panel power.
    - 10) Panel communication fault.
  - 11) Audible Signal: Provide audible signal to indicate failure of smoke control equipment.
- c. Operating Features:
- 1) Full monitoring and manual control capability over smoke control systems or equipment.
  - 2) Capability to override any operation in progress or other control signal associated with the smoke control equipment except electrical overload or personnel safety devices.
  - 3) Act as highest priority over the smoke control systems or equipment.
  - 4) Indicate actual status of systems and equipment used for smoke control.
  - 5) Ability to activate an audible signal if the operational proof sensor failed to provide positive feedback that the equipment operated as commanded.
  - 6) Alarm a failure of smoke control systems or equipment.
  - 7) Provisions for verification of system operation.
  - 8) Conduct a pre-programmed weekly test sequence to report abnormal conditions audibly, visually, and by printed report. The pre-programmed weekly test shall operate all devices, equipment, and components used for smoke control.
- H. Activation of a smoke detector or waterflow alarm switch serving a smoke control zone shall activate the smoke control system for that zone.
- I. Elevator Recall and Shutdown: Provide output signals to the elevator controller(s) using addressable relays to initiate elevator recall and shutdown functions per ASME A17.1. Provide equipment, output signals and logic as required by code and by the elevator system supplier and installer.
1. Elevator recall shall be initiated by any one of the following alarm-initiating devices:
    - a. Elevator lobby detector(s).
    - b. Smoke detector in elevator machine room.
    - c. Smoke detector(s) in elevator hoistway.
    - d. Heat detector(s) in elevator pit.
  2. Elevator controller shall be programmed to move the cars to the alternate recall floor if lobby detectors located on the designated recall floors are activated.
  3. Elevator shutdown shall be initiated by any one of the following alarm-initiating devices:
    - a. Heat detector in elevator machine room.
    - b. Heat detector(s) at top of elevator hoistway.

**2.5 EMERGENCY VOICE ALARM COMMUNICATIONS SYSTEMS (EVACS)**

- A. The system shall incorporate one-way emergency voice communication via specified speakers. A central audible module shall provide for the necessary alarm message/tone generation, main and remote microphone connections and mixers/pre-amplifier circuits. Continuous supervision shall be provided along with specific information as to the type of failure (main microphone trouble, tone trouble, etc.)
1. Indicate number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711.
    - a. Allow the application of, and evacuation signal to, indicated number of zones and, at the same time, allow voice paging to the other zones selectively or in any combination.
    - b. Programmable tone and message sequence selection.
    - c. Standard digitally recorded messages for "Evacuation" and "All Clear."
    - d. Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire alarm control unit.
  2. Hand held push to talk, noise canceling microphone in recessed protective panel mounted enclosure; 5 feet coiled cable; and LED to indicate the microphone push to talk has been pressed.
  3. Audible power amplifiers shall be self filtered; contain 24 volt power supply, transformer and amplifier monitor circuits; Amplifier shall operate all system speakers plus twenty-five (25) percent spare capacity.
  4. Digitized voice messages are required to notify building occupants during alarm conditions. Message player shall not rely on tape or mechanical means of transmitting the voice message. A standard evacuation message shall be provided; however, the system shall be capable of transmitting a custom message of up to five (5) minutes long.
  5. Alarm sequence shall consist of a temporal (3) alarm tone for a maximum of 15 seconds followed by an automatic pre-selected message. At the end of the message the tone shall resume. This sequence shall continue until the fire alarm control panel has been silenced. Manual voice paging shall be available via panel switches to page individual floors or groups of floors. Each floor shall be an individual audible zone and have a corresponding audible switch.

**2.6 DIGITAL ALARM COMMUNICATOR TRANSMITTER**

- A. Digital alarm communicator transmitter (DACT) shall be acceptable to the central station and shall comply with UL 864.
- B. The installing contractor shall select the appropriate DACT equipment based on the available communication methods.
- C. Coordinate with General Contractor to ensure proper connections are provided for communication to and from the DACT. Two (2) separate communication methods are required and shall not be subject to a common failure within the scope of work identified within these contract documents. Unless noted otherwise, the installing contractor shall utilize two (2) of the following communication methods:
1. Copper wire (POTS) telephone line for fire alarm use as required by NFPA 72.
    - a. If two (2) POTS telephone lines are utilized per NFPA 72, additional communication methods are not required.
  2. Building 10/100 Base network (LAN), DSL modem, or cable modem.
  3. GSM cellular networks in the area including 2G, 3G and 4G.
    - a. The transmitter shall automatically detect and choose the best network in the area based on signal strength and immediately self-adjust for operation as necessary.

4. Other alternative method complying with the performance requirements of NFPA 72 for 'Communication Methods for Supervising Station Alarm Systems that is acceptable to the Authority Having Jurisdiction and the Engineer of Record. Approval of any alternative methods must be obtained from the Engineer of Record via an RFI prior to submitting bids for the scope of work.
- D. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire alarm control unit and automatically transmit across the primary communication method. If service on the primary communication method is interrupted for longer than 45 seconds, the transmitter shall initiate a local trouble signal and transmit a signal indicating loss of primary communication to the supervising station over the secondary communication method. Transmitter shall automatically report communication restoration to the supervising station. If service is lost on both communication methods, transmitter shall initiate a local trouble signal.
- E. Digital data transmission shall include the following:
  1. Address of the alarm initiating device.
  2. Address of the supervisory signal.
  3. Address of the trouble signal.
  4. Loss of ac supply.
  5. Loss of power.
  6. Low battery.
  7. Abnormal test signal.
  8. Communication bus failure.
- F. Secondary Power: Integral rechargeable battery and automatic charger.
- G. Self-Test: Conducted automatically every 24 hours with report transmitted to supervising station.

## 2.7 REMOTE ANNUNCIATOR

- A. Description: Alphanumeric display and LED indicating lights shall match those of fire alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.
  1. Mounting: Surface.
  2. Provide remote microphone and emergency/voice alarm system controls.

## 2.8 INITIATING DEVICES

- A. Manual Fire Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
  1. Double action mechanism requiring two actions to initiate an alarm, pull lever type; with integral addressable module arranged to communicate manual station status (normal, alarm, or trouble) to fire alarm control unit.
  2. Station Reset: Key or wrench operated switch.
  3. Indoor Protective Shield: Factory fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
- B. System Smoke Detectors: Photoelectric type complying with UL 268 operating at 24-V dc, nominal with integral addressable module arranged to communicate detector status (normal, alarm, or trouble) to fire alarm control unit.
  1. Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base.
  2. Device shall have an integral visual-indicating light, LED type, indicating detector has operated and power-on status.

3. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
  4. Photoelectric detectors shall have sensitivity between 0.5 and 3.5 percent/foot smoke obscuration.
- C. Duct Smoke Detectors: Photoelectric type complying with UL 268A with a standard, relay or isolator detector mounting base. Provide manufacturer's standard housing to protect the measuring chamber from damage and insects. Provide drilling templates and gaskets to facilitate locating and mounting the housing.
1. Provide for variations in duct air velocity between 100 and 4,000 feet per minute.
  2. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied. Provide an air exhaust tube and an air sampling inlet tube that extends into the duct air stream up to ten feet.
  3. Self-Restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
  4. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor control circuit.
  5. Provide remote alarm LEDs and remote test stations as shown on the plans.
  6. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector for smoke detection in HVAC system ducts.
- D. Air-Sampling Smoke Detectors: Laser based smoke detection using a piping system and fan to transport particles of combustion to the detector. Provide two levels of alarm from each zone covered by the detector and two supervisory levels of alarm from each detector.
1. Air being sampled must pass through filters to remove dust particles greater than 20 microns before entering detection chamber.
  2. Detectors must communicate with FACP via addressable, monitored dry contact closures and interface modules.
  3. Pipe airflow balancing calculations must be performed using approved calculation software.
  4. Obscuration Sensitivity Range: 0.005 to 6 percent obs/ft.
  5. Include display module within each detector.
  6. Pipe material shall be CPVC and complying with UL 1887.
  7. Sampling holes of 5/64 inch (2mm), or other sized holes per manufacturers written instructions, must be separated by not more than maximum distance allowable for conventional smoke detectors. Intervals may vary in accordance with calculations.
  8. conventional smoke detectors. Intervals may vary in accordance with calculations.
- E. Heat Detectors – Comply with UL 521. Detector shall have twist lock base interchangeable with smoke detectors bases and be equipped with an integral addressable module arranged to communicate detector status (normal, alarm, or trouble) to fire alarm control unit.
1. Combination Type: Actuated by either a fixed temperature of 135 deg F (57 deg C) or a rate of rise that exceeds 15 deg F (8 deg C) per minute unless otherwise indicated.
  2. Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 135 deg F (88 deg C).

## 2.9 NOTIFICATION APPLIANCES

- A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated, and with screw terminals for system connections.
1. Combination Devices: Factory integrated audible and visible devices in a single mounting assembly, equipped for mounting as indicated, and with screw terminals for system connections. Minimum audible level and strobe intensity shall meet all requirements for separate appliances.
  2. Provide strobe synchronization as required per NFPA 72.
  3. Wall mounted notification appliances shall be manufacturer standard white finish.
  4. Ceiling mounted notification appliances shall be manufacturer standard white finish.

- B. Alarm Horns: Comply with UL 464. Electric vibrating polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet (3 m) from the horn, using the coded signal prescribed in UL 464 test protocol.
- C. Alarm Speakers: Comply with UL 1480. High quality tone and voice reproduction; capacitor connected for connection to supervised notification appliance circuit; semi-flush mounting; four inch cone; high impact, flame retardant PC/ABS thermoplastic; 25 or 70 VRMS; multi-tapped output power rated □ to 2 watts and produce 79 to 88 dB at 10 feet.
- D. Special Application Speakers (Ceiling Mounted):
  - 1. Quam UL22/25 or UL22/70 – Lay-in Speaker: UL Listed, shallow depth, lightweight, tile replacement, fire-protective signaling device with an 8C10PAFR - 8" O.D. loudspeaker, 10 oz. magnet, fire retardant components and a 4W-70V rotary select transformer. Integral enclosure is 1,412 CID molded fiber. Grille is perforated steel with four (4) seismic tie-off points in a white powder coat finish. Line supervision capacitor is included. No assembly required.
  - 2. Atlas/Soundolier, model number #UHT, UL listed to Standard 1480, 8-inch cone, multi-tapped design with output power of 1/2, 1, 2, 5 watt and 10 watt with either 25 or 70.7 VRMS input. Semi-flush ceiling mounted; #U51-8 standard round grille with #U95-8 enclosure (required for UL listing). Speaker output shall exceed 80 dBa at 10 feet and not exceed 120 dBa at the minimum hearing distance from the device. The speakers shall have multiple taps and shall utilize the 2-watt tap on the Atlas/Soundolier 10 watt speaker.
- E. Visible Alarm Notification Appliances (Strobes): Xenon strobe lights complying with UL 1971, unfiltered or clear filtered white light, with candela ratings as indicated on drawings. Strobes shall meet all requirements of the Americans with Disabilities Act.

## 2.10 AUXILIARY DEVICES

- A. Waterflow Alarm Switches: Shall be provided by the Fire Sprinkler Installer and shall be wired complete and ready for use by the Fire Alarm System Installer. Switch shall have an adjustable delay to minimize false alarms due to fluctuations in water pressure.
- B. Valve (Tamper) Switches: Shall be provided by the Fire Sprinkler Installer and shall be wired complete and ready for use by the Fire Alarm System Installer.
- C. Monitor Module: Addressable microelectronic module providing a system address for alarm initiating devices for wired applications with normally open contacts. Include address setting means on the module.
- D. Control/Relay Module: Provide intelligent control relay modules. The Control Relay Module shall provide one form "C" dry relay contact rated at 2 amps @ 24 VDC to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware.
- E. Fire Department Key Box: Shall be by Knox Company or as otherwise specified by the authority having jurisdiction. Provide internal switch(es), as required by the Authority Having Jurisdiction, to indicate supervisory condition(s) at the fire alarm control and annunciator panels.
  - 1. .

## 2.11 FIRE ALARM WIRE AND CABLE

- A. Fire Alarm Power Branch Circuits: Building wire as specified in Division 26.
- B. Fire alarm Wire and Cable: NRTL listed and labeled as complying with NFPA 70 (NEC) Article 760. All wiring, including wiring to existing modified devices and appliances shall be new.

- C. Signaling Line, Initiating Device and Notification Appliance Circuits: Power limited fire protective signaling cable, solid copper conductor, 300 volts insulation, suitable for temperature, conditions and location installed. Minimum wire size for initiating device circuits, control circuits and notification appliance circuits shall be determined by calculations and manufacturer's requirements or recommendations. Wire and cable shall be twisted and shielded if recommended by the system manufacturer.
- D. The type of cable chosen should be based on fire alarm system requirements, specification requirements and applicable code requirements. Consideration should also be given to the length of cable runs and potential interference.
- E. Initiating, notification, and control circuits shall be sized based on 20% additional power consuming devices.
- F. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems.
- G. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket and red identifier stripe, NTRL listed for fire alarm and cable tray installation, plenum rated.
- H. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits: Provide circuitry, which meets the performance requirements during abnormal conditions, based upon the class of the circuitry selected.
  - 1. Initiating Device Circuits: Class B
    - a. Pathway Survivability: Level 0.
  - 2. Notification Appliance Circuits: Class B.
    - b. Pathway Survivability: Level 0.
  - 3. Signaling Line Circuits: Class B.
    - c. Pathway Survivability: Level 0.
  - 4. Any circuits interconnecting fire alarm control panels between separate buildings shall be provided with surge protection.

## 2.12 ACCESS TO EQUIPMENT

- A. All detectors, modules, equipment, etc. shall be located so as to provide easy access for operation, service inspection and maintenance.
- B. Access Doors:
  - 1. Provide access doors for all concealed equipment, except where above lay-in ceilings.
  - 2. Access doors shall be adequately sized for the devices served with a minimum size of 18" x 18", furnished by the respective Contractor or Subcontractor and installed by the General Contractor.
  - 3. Access doors must be of the proper materials for type of construction where installed.
  - 4. The exact location of all access doors shall be verified with the Architect prior to installation.
  - 5. Steel Access Doors and Frames: Factory-fabricated and assembled units, complete with attachment devices and fasteners ready for installation. Joints and seams shall be continuously welded steel, with welds ground smooth and flush with adjacent surfaces.
  - 6. Frames: 16-gauge steel, with a 1-inch-wide exposed perimeter flange for units installed in unit masonry, pre-cast, or cast-in-place concrete, ceramic tile, or wood paneling.
    - a. For installation in masonry, concrete, ceramic tile, or wood paneling: 1 inch-wide-exposed perimeter flange and adjustable metal masonry anchors.
    - b. For gypsum wallboard or plaster: perforated flanges with wallboard bead.
  - 7. Flush Panel Doors: 14-gauge sheet steel, with concealed spring hinges or concealed continuous piano hinge set to open 175 degrees; factory-applied prime paint.
    - a. Fire-Rated Units: Insulated flush panel doors, with continuous piano hinge and self-closing mechanism.
  - 8. Locking Devices: Flush, screwdriver-operated cam locks.

9. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the work include, but are not limited to, the following:
  - a. Arrow United Industries.
  - b. Bar-Co., Inc.
  - c. J.L Industries.
  - d. Karp Associates, Inc.
  - e. Milcor Div. Inryco, Inc.
  - f. Nystrom Building Products
  - g. Wade
  - h. Zurn

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. The Contractor shall install, program and test all new equipment identified in this contract in accordance with the applicable codes, standards, and manufacturer's instructions.
- B. The installation supervisor shall be on the job site during the entire installation. The installation supervisor shall maintain marked up copies of the drawings at the job site showing as-built conditions. These drawings shall be updated daily and available for Owner review.
- C. The Contractor shall provide all required conduit and all associated hardware, and shall install (pull), connect, and test all cable for a complete fire alarm system. All wiring shall be installed in accordance with the guidelines of these specifications and documents as well as the NFPA codes and standards listed in these specifications.

#### **3.2 EXAMINATION**

- A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.
  1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.
- B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.3 EQUIPMENT INSTALLATION**

- A. Comply with NFPA 72 and requirements of authorities having jurisdiction for installation and testing of fire alarm equipment. Install all electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."
  1. Devices placed in service before all other trades have completed cleanup shall be replaced.
  2. Devices installed but not yet placed in service shall be protected from construction dust, debris, dirt, moisture, and damage according to manufacturer's written storage instructions.
- B. Install wall-mounted equipment, with tops of cabinets not more than 72 inches above the finished floor.
- C. Manual Fire alarm Boxes: Provide manual fire alarm boxes as shown on drawings. Mount manual fire alarm box on a background of a contrasting color. The operable part of manual fire alarm box shall be at 48 inches above floor level unless noted otherwise.
- D. Smoke and Heat Detectors: Provide detectors as shown on drawings.

1. Comply with the "Smoke-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for smoke detector spacing.
  2. Comply with the "Heat-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for heat detector spacing.
  3. HVAC: Locate detectors not closer than 36 inches from air-supply diffuser or return-air opening.
  4. Lighting Fixtures: Locate detectors not closer than 12 inches from any part of a lighting fixture and not directly above pendant mounted or indirect lighting.
  5. Install a cover on each smoke detector that is not placed in service during construction. Cover shall remain in place except during system testing. Remove cover prior to system turnover.
  6. Install ceiling mounted detectors in areas with exposed structure tight to underside of floor/roof deck unless noted otherwise on drawings.
- E. Duct Smoke Detectors: Comply with NFPA 72. Install sampling tubes so they extend the full width of the duct. Tubes more than 36 inches long shall be supported at both ends.
1. Do not install smoke detector in duct smoke detector housing during construction. Install detector only during system testing and prior to system turnover.
  2. Provide duct detection and shutdown for fan powered air distribution equipment exceeding 2,000 cfm.
  3. Provide equipment and connections to shutdown fan powered air distribution equipment with a capacity less than 2,000 cfm that are part of an air distribution system with a capacity greater than 2,000 cfm.
- F. .
- G. Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location. Do not install smoke detectors in unsprinklered elevator shafts.
- H. Remote Status and Alarm Indicators: Install in a visible location near each smoke detector, sprinkler water-flow switch, or valve-tamper switch that is not readily visible from normal viewing position.
- I. Install ceiling mounted visible and audible/visible notification appliances in areas with exposed structure to bottom of floor/roof structure or at 30 ft AFF, whichever is lower.
- J. Install ceiling mounted visible and audible/visible notification appliances in areas with finished ceilings flush with bottom of ceiling or at 30 ft AFF, whichever is lower.
- K. Install wall mounted visible and audible/visible notification appliances with visible element (strobe) between 80 inches and 96 inches above finished floor unless noted otherwise on drawings.
- L. Install wall mounted audible devices with the top of the device at least 90 inches above finished floor or 6 inches below the ceiling, whichever is lower, unless noted otherwise on Drawings. If combination devices are installed, they shall be installed per the visible signal device requirements.
- M. All notification appliance speakers shall be tapped at  $\square$  watt unless noted otherwise on drawings. In rooms less than 100 sq ft, speakers are permitted to be tapped at  $\square$  watt.

### 3.4 PATHWAYS

- A. Pathways shall be installed in conduit.
- B. All detection and control circuits associated with smoke control systems shall be fully enclosed within continuous raceways.
- C. Minimum allowable conduit size shall be  $\square$  inch. The conduit shall be sized so that conduit fill does not exceed 75% of NFPA 70 maximum fill requirements. Cables in vertical risers shall not exceed 50% of NFPA 70 maximum fill requirements. Conduit installation shall be as required by the Contractor's layout and as described in these specifications. All conduit field routing shall be

acceptable to the Owner. Routing not acceptable shall be rerouted and replaced without expense to the Owner.

- D. All wire, cable, conduit and raceways shall be concealed in walls, ceiling spaces, electrical shafts or closets in finished areas except as specifically noted otherwise. Conduit and raceways may be exposed in unfinished areas or where specifically approved by the Owner.
- E. Except as otherwise specified or indicated on the drawings, all conduit shall be installed parallel or perpendicular to dominant surfaces with right angle turns made of symmetrical bends or fittings. Except where prevented by the location of other work, a single conduit or a conduit group shall be centered on structural members.
- F. Conduit shall be located at least six inches from hot water or steam pipes, and from other hot surfaces. Conduit shall not block access to any existing equipment or fixtures.
- G. Mount end-of-line device in box with last device or separate box adjacent to last device in circuit for conventional hardwired class B initiating and notification appliance circuits.
- H. Conduit shall be securely fastened to all boxes and cabinets. Threads on metallic conduit shall project through the wall of the box to allow the bushing to butt against the end of the conduit. The locknuts both inside and outside shall then be tightened sufficiently to bond the conduit securely to the box. Conduit shall enter cabinets from the bottom and sides only.

### 3.5 CONNECTIONS

- A. All wiring shall be terminated at devices or panels using terminal connectors for screw type terminals. All terminal connectors for conductors shall be pre-insulated ring type or pre-insulated spade type. Pre-insulated terminal connectors shall include a vinyl sleeve, color coded to indicate conductor size. Pre-insulated terminal connectors shall include a metallic support sleeve bonded to the vinyl-insulating sleeve and designed to grip the conductor insulation.
- B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 36 inches (910 mm) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
  - 1. Alarm initiating connection to smoke control system (smoke management) at firefighters' smoke control system panel.
  - 2. Alarm initiating connection to stairwell and/or elevator shaft pressurization systems.
  - 3. Smoke dampers in air ducts of designated HVAC systems.
  - 4. Provide equipment and connections to shutdown fan powered air distribution equipment with an individual capacity less than or equal to 2,000 cfm that are part of an air distribution system with a design capacity greater than 2,000 cfm.
  - 5. Alarm initiating connection to elevator recall system and components.
  - 6. Alarm initiating connection to activate emergency lighting control.
  - 7. Connection to disable sound systems upon alarm activation.
  - 8. Supervisory connections at valve supervisory switches.
  - 9. Supervisory connections at low-air pressure switch of each dry-pipe sprinkler system.
  - 10. Supervisory connections at elevator shunt-trip breaker.
  - 11. Data communication circuits for connection to smoke control equipment.
  - 12. Supervisory connections at fire pump power failure including a dead-phase or phase-reversal condition.

### 3.6 INSTALLATION OF ACCESS DOORS

- A. Set frames accurately in position and securely attached to supports, with face panels plumb and level in relation to adjacent finish surfaces.
- B. Adjust hardware and panels after installation for proper operation.

**3.7 IDENTIFICATION**

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. All conduits and junction boxes shall be labeled as specified in Division 26 (red).
- C. The location of end-of-line resistors shall be identified with a label indicating "EOL."
- D. Provide label at each initiating device indicating the device address. Label shall be visible from the floor below or immediately adjacent to the device.

**3.8 GROUNDING**

- A. Ground fire alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire alarm control unit.
- B. Ground shielded cables at the control panel location only. Insulate shield at device location.

**3.9 FIELD QUALITY CONTROL**

- A. Systems shall be checked and tested in accordance with the instructions provided by the manufacturer to insure that the system functions as required and is free of grounds, opens, and shorts. Each device shall be tested.
  - 1. Smoke detectors shall be tested with products of combustion.
- B. Upon completion of the system installation and before the Date of Final Acceptance, a factory-trained technician shall perform all necessary tests and adjustments and shall then file a Letter of Certification and a Certificate of Completion (NFPA 72) with the Owner indicating that the system functions and conforms to the Fire Alarm System Specifications.
- C. Upon completion of the system installation, a factory-trained technician shall perform all necessary tests and adjustments in the presence of the Owner's designated personnel. Test in accordance with NFPA 72 and requirements of the authority having jurisdiction. Perform the following tests at a minimum:
  - 1. Visual Inspection: Conduct visual inspection prior to testing. Inspection shall be based on completed record Drawings and system documentation that is required by the "Completion Documents, Preparation" table in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.
  - 2. System Testing: Comply with the "Test Methods" table in the "Testing" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.
    - a. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
    - b. Test visible appliances for the public operating mode according to manufacturer's written instructions.
- D. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
- E. Fire alarm system will be considered defective if it does not pass tests and inspections.
- F. Include services of factory trained and certified technician to supervise installation, adjustments, final connections, and system testing as performed by the fire alarm contractor's factory-trained technicians.

**3.10 DEMONSTRATION**

- A. The equipment supplier's factory trained technician shall train the Owner's personnel in the proper use and maintenance of the system. Training sessions shall be conducted as needed, not to exceed a total of 2 sessions, with each session lasting a maximum of 4 hours each.
- B. Demonstrate normal and abnormal modes of operation, and required responses to each.

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 020613 - GEOTECHNICAL REPORT**

**PART 1 REPORT**

- A. See attached pages from Geotechnical Engineering Testing, INC.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 02200 - EARTHWORK****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, materials, equipment necessary to complete all earthwork beneath the building and to a point 5 feet beyond the building and utility trenching at all locations on the site as follows:
  - 1. Earth moving and excavation.
  - 2. Grading.
  - 3. Backfilling.
  - 4. Filling
  - 5. Compacting.
  - 6. Utilities trenching.
- B. Related Documents:
  - 1. Geotechnical data prepared by Christian Testing Laboratories, Inc. entitled: "Report of Geotechnical Exploration, Proposed New Four-Story Dormitory, USA Student Housing Phase II – Delta I Dorm, University of South Alabama, Mobile, Alabama, CTL Project No. CS-8702-11" dated January 6, 2012. A copy of this document can be found in SECTION 02010 - Geotechnical Report.
  - 2. Work must be performed in accordance with and meet the recommendations included in the above referenced geotechnical data, except where the Civil Drawings indicate more stringent requirements. In such cases, the Civil Drawings will control.
- C. Related Work Specified Elsewhere:
  - 1. Clearing, Grubbing, and Demolition – SECTION 311100.
  - 2. Asphalt Paving – SECTION 321216.
  - 3. Planting – SECTION 329000.
  - 4. Concrete – SECTION 321313.
  - 5. Site Grading – SECTION 312200.
  - 6. Soil Compaction Control – SECTION 31232323.

**1.02 SUBMITTALS**

- A. Test Reports: The testing laboratory will submit the following reports directly to the Engineer and shall copy the contractor:
  - 1. Analysis of soil materials including fill, backfill, borrow, soil surcharge, and topsoil.
  - 2. Verification of each footing subgrade.
  - 3. Compressive strength or bearing test reports.
  - 4. Coordinate all test reports with SECTION 31232323 – Soil Compaction Control

**1.03 QUALITY ASSURANCE**

- A. Testing Laboratory Services: See SECTION 31232323 – Soil Compaction Control.

#### 1.04 SITE CONDITIONS

##### A. Site Utilities:

1. Advise utility companies of excavation activities before starting excavations. Locate and identify underground utilities passing through work area before starting work.
2. If underground utilities are encountered in locations other than indicated, immediately advise utility owners before proceeding. Amend project record documents to show actual locations.
3. Protect existing utilities not indicated to be removed.
4. Do not interrupt existing utilities without advance notice to and written approval from the owner.

#### PART 2 PRODUCTS

##### 2.01 MATERIALS

- A. Sufficient approved materials are not available from required excavations on site. Additional materials must be provided beyond the limits of excavation shown at no additional cost to the owner.
- B. For each soil material proposed for use as fill or backfill, the testing laboratory shall classify soil material, develop Proctor curve, and perform other tests required.
- C. Obtain approval of the Architect/Engineer/Testing Laboratory for each soil material.
- D. Topsoil: Friable clay loam surface soil.
- E. Satisfactory Topsoil: Fertile agricultural soil, typical for locality, capable of sustaining vigorous plant growth; free of subsoil, rocks larger than 2 inches in diameter, clay, toxic matter, plants, weeds, and roots.
- F. Backfill and Fill Materials: Materials classified as satisfactory.
- G. Satisfactory Soil Material (ASTM D 2487): Free of stones larger than 2 inches in any dimension, trash, debris, organic material, other objectionable material and classified as follows:
  1. SW (well-graded sand).
  2. SP (poorly graded sand).
  3. SM (silty sand).
  4. SC (clayey sand).
- H. Unsatisfactory Soil Material (ASTM D 2487):
  1. GW (well-graded gravel).
  2. GP (Poorly graded gravel).
  3. GM (silty gravel).
  4. GC (clayey gravel).
  5. CL (lean clay).
  6. ML (silt).
  7. OL (organic clay).
  8. OL (organic silt).
  9. CH (fat clay).
  10. MH (elastic silt).

11. OH (organic clay).
12. OH (organic silt).
13. PT (peat).
- I. Structural Fill: Satisfactory silty sand (SM) or clayey sand (SC) containing less than 95 percent passing the No. 40 sieve and between 10 and 20 percent passing the No. 200 sieve.
- J. Utility Trench Backfill: Satisfactory clean sand, (SW) or (SP), containing between 10 and 20 percent passing the No. 200 sieve.
- K. Plastic Warning Tape: Acid and alkali-resistant polyethylene film specifically manufactured for marking and identifying underground utilities.
  1. Minimum width, 6 inches; minimum thickness, 4 mils.
  2. Metallic core encased in protective jacket against corrosion and detectable by metal detector when tape is buried 3 feet deep.
  3. Continuous printed inscription shall describe utility. Tape colors shall be as follows:
    - a. Electric: Red.
    - b. Gas: Yellow.
    - c. Pipeline: Yellow.
    - d. Telephone: Orange.
    - e. CATV: Orange.
    - f. Water System: Blue.
    - g. Sewer: Green.

### **PART 3 EXECUTION**

#### **3.01 CONSTRUCTION REQUIREMENTS**

- A. Preparation:
  1. Protections: Provide markers indicating limits of work and clear identification of items and areas requiring protection.
  2. Provide barricades, warning signs, and warning lights around open excavations as necessary to prevent injury to persons.
  3. The contractor is solely responsible for determining the potential for injury to persons and damage to property.
    - a. Where such potential is present, take appropriate protective measures.
    - b. Protect persons from injury and protect existing and new improvements from damage caused directly or indirectly by construction operations.
  4. Do not allow excavation of subgrades and soil at foundations to be subjected to freezing temperatures or frost. Provide protective insulating materials as necessary. Should prepared, compacted subgrades be damaged by freezing, remove soil materials to the depth required by the architect and replace and recompact in conformance with specified requirements.

## B. Dewatering:

1. Do not allow surface or ground water to flow into or accumulate in excavations. Do not allow water to flow in an uncontrolled fashion across the project site or to erode slopes or to undermine foundations. Do not allow water to be diverted onto adjacent properties. Arrange excavation operations so as to provide continual and effective drainage of excavations.
2. Provide and maintain temporary diversion ditches, dikes, and grading as necessary; do not use trench excavations for this purpose. When required by surface or subsurface water conditions, provide sumps, well points, French drains, pumps, and other control measures necessary to keep excavations free of water. When existence of ground water near or above final excavation level is indicated or suspected, provide control measures prior to excavating to water level and maintain water level continuously below working level.

## C. Excavation:

1. General: Excavation includes the removal of any materials necessary to achieve the required subgrade elevations and includes reuse or disposal of such materials.
2. Unnecessary Excavation: The expense of excavation of materials outside of limits indicated or ordered in writing by the architect and the correction thereof to the satisfaction of the architect shall be borne by the contractor.
  - a. Unnecessary excavation under footings: Either deepen footings to bear on actual subgrade elevation without changing top elevations or place concrete fill up to required elevation, as required by the architect.
  - b. Unnecessary excavation other than under footings: Either place compacted fill or otherwise correct conditions, as required by the architect.
3. Approval of Subgrade: Notify the architect when regulation elevations have been reached.
  - a. When required by the architect due to the presence of unsatisfactory materials, perform additional excavation and replace with approved compacted fill material in accordance with the architect's instructions.
4. Excavation Stabilization: Wherever it is possible to slope faces of excavations to achieve stabilization, do so in compliance with requirements of governing authorities. Otherwise, provide shoring and bracing.
  - a. Design, provide, maintain, and remove shoring and bracing in compliance with requirements of governing authorities. Remove temporary shoring and bracing when stabilization is no longer required.
5. Excavation for Structures:
  - a. Excavate beyond footings and foundations so as to allow proper construction and inspection of concrete formwork and other materials. Excavate to the required elevation within the following tolerance:
    - i. Plus 1/2 inch or minus 1/2 inch.
6. Excavation for Footings and Foundations:
  - a. Delay excavation to final grade and final compaction until just before concrete will be placed.
  - b. Remove any loose or sloughed material and adjust excavations to conform to required lines, grades, and tolerances and to form a suitable bearing surface. Do not disturb bottom of completed excavations.

7. Excavation for Trenches:
  - a. Unless otherwise required, begin trenching, utility installation, and backfilling at lowest portion of utility line, working toward highest portion of line.
  - b. Required trench width: Excavate accurately to provide not less than 6 nor more than 9 inches of clearance on each side of pipes and conduits, unless otherwise indicated.
    - i. Where indicated trench widths are exceeded, redesign, stronger pipe, or special installation procedures may be required by the architect at no additional cost to the owner.
  - c. Unless otherwise indicated, trench walls for piping shall be vertical from trench bottom to one foot above top of pipe or to top elevation of initial backfill, whichever is higher.
  - d. Excavate trenches to the depths necessary to achieve required flow lines and invert elevations and to prevent freezing of liquids or frost heave during winter.
  - e. Dig trenches so as to provide not less than the following minimum cover:
    - i. Water lines, gas distribution lines, electrical lines, etc.: 30 inches minimum unless indicated otherwise.
  - f. Trench bottoms: Unless otherwise indicated, excavate and shape trench bottoms as follows:
    - i. Support pipes and conduit on smooth, accurately graded subgrade, shape surface by hand to provide continuous support on undisturbed soil for bell and body of pipe and joints, fittings, and body of conduit.
- D. Storage:
  1. Stockpile materials to be used for filling and backfilling, including excavated materials classified as satisfactory soil materials, at locations indicated or as directed. Stockpile in a manner to freely drain surface water; cover if necessary to prevent wind-blown dust.
    - a. Store soil materials without intermixing. Protect from contamination with other soils or debris.
- E. Plastic Warning Tape:
  1. Install tape 12 inches above utility line, approximately 18 inches below finished grade.
- F. Backfilling:
  1. Preparation: Backfill excavations as soon as practicable. Complete the following operations before backfilling:
    - a. Inspection and acceptance of below-grade construction.
    - b. Inspection, testing, and approval of underground utilities.
    - c. Surveying of underground utilities for record documents.
    - d. Concrete formwork removal.
    - e. Removal of loose material, muck, debris, and trash from excavation.
    - f. Installation of temporary or permanent horizontal bracing for structures to receive backfill.
  2. Remove temporary shoring and bracing as the work progresses and when its use is no longer necessary.
  3. Backfill for Utility Trenches:
    - a. Backfill with clean sand material with between 10 percent and 20 percent passing the No. 200 sieve. Place and compact in 8-inch maximum layers as required herein.

4. Testing of Piping:
  - a. Before performing testing of utilities (specified elsewhere), backfill and compact trenches to a level 1 foot above top of pipe, except at joint and couplings.
  - b. After successful testing, complete backfilling as soon as practicable.
  - c. Backfilling near footings, general: Where trenches occur underneath of footings, or where trench bottoms occur below and within 18 inches horizontally of footing bottoms, backfill trench with concrete to top of footing and up to 4 feet perpendicularly from each face of footing.
  - d. Do not place material on muddy or frozen surfaces or on surfaces containing frost.
- G. Filling:
  1. Preparation: Verify that area has been stripped of vegetation including roots below grade. Remove and dispose of any unsatisfactory soils.
    - a. When filling slopes steeper than 1 in 4 rise, plow, step, or break up surfaces to promote bond of new to existing material.
    - b. Should density of subgrade to receive fill be less than specified for fill, break up and pulverize subgrade to a depth of at least 6 inches, moisture condition if necessary, and recompact to required density at optimum moisture content.
  2. Installation: Place fill materials to required elevations in lifts of required depth. Provide fill materials beneath each area as indicated.
    - a. Exterior steps/ramps: Satisfactory soil materials.
    - b. Building slabs: Select fill material.
    - c. Soil Surcharge: Structural fill material.
- H. Building Slab Areas:
  1. Place fill or backfill lifts such that compaction true to grade and level is accomplished with a minimum of surface disturbance and segregation or degradation of materials. Maintain grade control and cross section by means of line and grade stakes. Maintain moisture content within prescribed limits during placing and compacting.
  2. When the total thickness of materials to be placed is less than the maximum lift thickness permitted, place material in a single lift. When the total thickness of materials to be placed is greater than the maximum lift thickness permitted, place materials in two or more lifts of uniform thickness with no lift less than 3 inches in thickness.
  3. For modular concrete block retaining walls, see SECTION 020613 - Geotechnical Report, SECTION 31232323 – Soil Compaction Control, and drawings for additional requirements.
- I. Compaction:
  1. Place materials used in backfilling and filling in layers not exceeding loose depths as follows:
    - a. Heavy equipment compaction: 8 inches.
    - b. Hand-operated tampers: 4 inches.

2. Place material simultaneously on opposite sides of walls, small structures, utility lines, etc. to avoid displacement or overstressing.
  3. Compact fills and backfills to the following minimum densities indicated by SECTION 31232323 – Soil Compaction Control.
  4. Moisture Control: During compaction, control moisture of subgrades and subsequent lifts to within tolerances from optimum moisture content as recommended by testing laboratory. Wet surface with water when additional moisture is required. Aerate soil to aid in drying or replace soil when excessive moisture is present.
- J. Grading:
1. General: Smooth grade to a uniform surface that complies with compaction requirements and required lines, grades, and cross sections and is free from irregular surface changes. Provide smooth transition between existing adjacent grades and changed grades. Cut out soft spots, fill low spots, and cut down high spots to conform to required surfaces tolerances.
  2. Slope grades to direct water away from structures and to prevent ponding. Finish subgrade to required elevations within the following tolerance:
    - a. Exterior steps and ramps: Plus or minus 2 inch.
    - b. Inside building lines, as measured within a 10-foot straightedge: 1/4 inch.
- K. Proof-rolling:
1. After completion of required compaction, but prior to obtaining field density test, and immediately prior to proceeding with subsequent construction, proof-roll in the presence of Engineer and testing laboratory representative.
  2. Proof-roll using a heavy pneumatic-tired vehicle having four tires abreast, each tire loaded to 30,000 pounds and tire inflated to 150 psi. In areas which show pumping or which are otherwise unsatisfactory, undercut fill material and replace with compacted fill, or stabilize in place, as required by the Architect/Engineer.
  3. Proof-roll Areas to Receive: Building slabs on grade.
- L. Field Quality Control:
1. Testing Laboratory Services: Provide timely notice to testing laboratory. Do not proceed with construction until testing of each subgrade and lift of fill or backfill has been performed and required inspections and approvals have been obtained.
  2. Maximum Density at Optimum Moisture Content: Determine in accordance with ASTM D 698, Method D.
  3. In-Place Density Tests: ASTM D 1556 (sand cone method), ASTM D 2167 (rubber balloon method), or ASTM D 2922 (nuclear method), as applicable.
  4. If testing service reports indicate that subgrade or fills are below specified density, scarify or remove and replace to the required depth, recompact, and retest at no cost to the owner.
  5. See SECTION 31232323 – Soil Compaction Control for additional requirements.

M. Maintenance:

1. Completed Areas: Protect from damage by pedestrian or vehicular traffic, freezing, erosion, and contamination with foreign materials.
2. Damaged Areas: Where completed or partially completed surfaces become eroded, rutted, settled, or lose compaction and whether due to subsequent construction operations or weather conditions, restore materials to required conditions: Scarify or remove and replace to the required depth, return to optimum moisture content, and compact materials to the required density before continuing construction.
3. Correction: Should settling occur within the project correction period, remove finished surfacing, add additional approved material, compact material, and reconstruct surfacing. Construct surfacing to match and blend in with adjacent surfacing as nearly as practicable.

N. Disposal of Excess and Waste Materials:

1. Remove any material not required for use on the project (including unsatisfactory soil, excess satisfactory soil, trash, and debris) and legally dispose of it off the owner's property.

**END OF SECTION**

**SECTION 311100 - CLEARING, GRUBBING, AND DEMOLITION****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material, and equipment necessary to complete all clearing, grubbing, and demolition of the site as indicated on the Drawings and as required to complete new construction under this Contract, and as specified herein.
- B. The removal, demolition, and lawful disposal of all items indicated by the drawings to be removed or which conflict with the work in this contract are required by this specification.
- C. The items of work to be performed include, but are not limited to:
  - 1. Protecting areas indicated not to be disturbed with suitable barriers.
  - 2. Removal from the site and disposing of all trees, stumps, roots, and debris not indicated to remain.
  - 3. Grubbing of all areas within the limits of clearing.
  - 4. Field verify location of existing utilities.
  - 5. Prepare Traffic Control Plan; furnish, install, and maintain required Traffic Control Devices.
  - 6. Comply with the ADEM Stormwater Permit.
  - 7. Install and maintain throughout project duration Temporary Erosion Control items as noted by the plans and by the CBMPP for the project.
- D. Related work specified elsewhere:
  - 1. Earthwork – SECTION 310000.
  - 2. Site Grading – SECTION 321200.
  - 3. Asphalt Paving – SECTION 321216.
  - 4. Concrete Paving, Curbs, and Walks – SECTION 321313.

**1.02 SUBMITTALS**

- A. Traffic control plan including contractor representative.
- B. Certification of existing utility locations.
- C. Certification of Disposal of Materials from Demolition.

**PART 2 PRODUCTS**

(Not applicable.)

**PART 3 EXECUTION****3.01 TRAFFIC CONTROL**

- A. Prior to starting clearing operations, provide and install hazard markings as required to protect the work. The contractor shall provide a written traffic control plan and certification indicating the items installed meet the requirements of Part VI of the FHWA Manual on Uniform Traffic Control Devices, latest edition.
- B. Provide the name, address, and telephone numbers for the person responsible for the daily inspection and maintenance of the traffic control devices.

**3.02 LOCATION OF EXISTING UTILITIES**

- A. Prior to starting construction, locate and verify existing utility information. Provide written information detailing discrepancies or conflicts of existing utilities. Verify and field locate (uncover) the existing utilities at service connection points for potable water, fire protection water, sewer service, and gas service, and locations where other construction which is part of this project must occur over or in close proximity to an existing utility. Provide written certification to the Architect/Engineer of completion of this work prior to starting work under this section.

**3.03 EXECUTION**

- A. Grub and clear required areas with any equipment or methods at the Contractor's option. The following results shall be obtained:
1. Grub and clear all areas from which topsoil is indicated to be stripped or as required to complete new construction called for by the drawings.
  2. Beneath building or paved areas to a depth of two (2) feet below the lowest limits of excavation at each point of work, all stumps and other wood and debris shall be removed, except roots less than 1/2 inch in diameter may remain or be removed.
  3. Beneath lawn, or planted area as from a depth of two (2) feet below new subgrade to stripped original grade, all wood and debris shall be removed except stumps and related roots of trees over 12 inches in diameter with trunks not more than 15 inches long may remain if in original location and if no part of stump is less than three (3) feet from new subgrade.
  4. Remove all asphalt and concrete pavement (including sidewalk, ditches, etc.) as indicated by the drawings, provide neat, straight, saw-cut lines of removal at the locations indicated. Complete the removal of pavement at the time specified.

**3.04 TEMPORARY EROSION CONTROL**

- A. Prepare and obtain the ADEM Stormwater Permit, including fees; comply with permit requirements, including providing Construction Best Management Practices Plan (CBMPP), inspections, and termination of the permit once the site is stabilized.
- B. Install and maintain all erosion control items called for by the drawings or the ADEM permit. Take all necessary precautions to prevent silt, soil, eroded materials or debris, or other effects of erosion from damaging new construction or moving off-site onto adjacent property.
- C. Maintenance of the devices shall be required throughout the duration of the overall project (not just site work, etc.).
- D. Provide the name, address, and telephone numbers for the person responsible for the required ADEM site inspections, site erosion control, and maintenance of the erosion control devices.

**3.05 DISPOSAL**

- A. Dispose of all debris, asphalt and concrete pavement, trees, brush and other rubble from clearing, grubbing and demolition operations at an approved disposal area provided by the Contractor off the project site.
1. Comply with all local regulations. Obtain necessary permits.
  2. No burning or burial of debris on-site will be permitted.

3. Provide certification to Owner that all debris removed from the site was lawfully disposed of in an ADEM approved landfill.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 312200 - SITE GRADING****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material, and equipment necessary to complete all site grading, exclusive of preparation of areas beneath or adjacent to new buildings, as indicated on the drawings and specified herein.
- B. The items of work to be performed include, but are not limited to:
  - 1. Stripping and storing topsoil.
  - 2. Rough grading.
  - 3. Removing from the site and disposing of all debris and excess materials.
  - 4. Fine grading and excavation for all construction including spreading and topsoil.
  - 5. Restoring to original grades and conditions all properties damaged by any activity related to the work and taking adequate precautions to avoid settlements or cave-in of properties higher than site; silting, eroding or other damage to properties lower than site.
- C. Related Documents:
  - 1. Geotechnical Engineering Testing, Inc. has prepared a Report of Geotechnical Exploration for this project.
  - 2. Work must be performed in accordance and meet the recommendations included in the above referenced geotechnical data except where the Civil Drawings indicate more stringent requirements. In such cases, the Civil Drawings will control.
- D. Related work specified elsewhere:
  - 1. Clearing, Grubbing and Demolition – SECTION 311100.
  - 2. Earthwork – SECTION 310000.
  - 3. Soil Compaction Control – SECTION 31232323.
  - 4. Asphalt Paving – SECTION 321216.
  - 5. Concrete Paving, Curbs and Walks – SECTION 321313.
  - 6. Topsoil, Ground Preparation and Turfing – SECTION 329000.

**1.02 SUBMITTALS**

- A. Test Reports: The testing laboratory will submit the following reports directly to the Engineer and shall copy the contractor:
  - 1. Analysis of soil materials including fill, backfill, and borrow materials.
  - 2. Verification of each pavement structure layer density.
  - 3. Verification of soil density over completed site.
  - 4. Coordinate all test reports with SECTION 31232323 – Soil Compaction Control.

**1.03 QUALITY ASSURANCE**

- A. Testing Laboratory Services: See SECTION 31232323 – Soil Compaction Control.

**1.04 SITE CONDITIONS**

- A. Traffic: Do not interfere with or close driveways without permission of governing authorities. Do not interfere with adjacent private facilities.
- B. Site Utilities:
1. Advise utility companies of excavation activities before starting excavations. Locate and identify underground utilities passing through work area before starting work.
  2. If underground utilities are encountered in locations other than indicated, immediately advise utility owners before proceeding. Amend project record documents to show actual locations.
  3. Protect existing utilities indicated to remain.
  4. Do not interrupt existing utilities without advance notice to and written approval from the owner.

**PART 2 PRODUCTS****2.01 MATERIALS**

- A. Suitable Subgrade Soils - any in-place soil material which can be compacted to the density requirements specified.
- B. Fill materials shall be approved and conform to the following except as specifically indicated otherwise on the drawings or in the specifications:
1. Fill material shall be any stable soil material which can be compacted to the required density and is suitable for the specific use intended. Material shall be obtained from on-site excavation.
  2. Fill, except as otherwise specified, shall be earth, free of debris, cinders, combustibles, frost, ice, roots, sod, wood, cellulose and organic materials.
  3. Fill under topsoil of lawn and planted areas shall be earth, free of debris, cinders, frost, ice, sod, wood, and roots over 1/4" in diameter.
  4. Beneath paved areas, structural fill or backfill material for undercut areas shall be a satisfactory sand (SW or SP) material with between 10% and 20% passing the #200 sieve. This material shall also be required for backfill of all utility and storm drainage trenches excavated beneath paved areas.
- C. Topsoil shall be as follows:
1. Topsoil: Friable clay loam surface soil.
  2. Satisfactory Topsoil: Fertile agricultural soil, typical for locality, capable of sustaining vigorous plant growth; free of subsoil, rocks larger than 2 inches in diameter, clay, toxic matter, plants, weeds, and roots.

**PART 3 EXECUTION****3.01 CONSTRUCTION REQUIREMENTS**

- A. Strip topsoil, where available, over the entire site area as indicated by the drawings. Contractor may select any method, but shall comply with the following:
1. Do not strip topsoil in a muddy condition.
  2. Avoid including topsoil, debris, stones over 2", and other extraneous matter in topsoil.

3. Leave areas free of trash, debris and foreign materials.
  4. Remove all topsoil from indicated areas to minimum depth of 6" or as required by site conditions.
  5. Store topsoil in an approved location and protect it against loss and from admixture of debris.
- B. Excavate to lines and elevations, as necessary for the proper construction of the work, including undercut beneath paved areas. Compact subgrade as required. Equipment and methods shall be suitable for the work at hand. Work shall conform to the following, unless indicated otherwise by the drawings:
1. Excavation material suitable for fill material shall be separated from unsuitable materials.
  2. Excavated material unsuitable for fill shall be removed from the site promptly, and disposed of by the contractor off the project site.
  3. Excavation in areas at which excavation, filling, or backfilling will be performed under other sections of work shall be coordinated with said sections.
  4. Existing suitable subgrade materials beneath concrete or asphalt paving or scarified to a depth of 6" below the top of subgrade and compacted as specified.
- C. Undercut unsuitable existing soils beneath asphalt or concrete pavement areas as directed by the Engineer. Undercut and backfill required for unsuitable materials must be authorized by the Engineer prior to performing the work and shall be paid for in accordance with the CHANGE clauses of the contract. Prior to performing undercut and backfill, every attempt to compact and utilize existing subgrade materials will be required of the Contractor at no cost to the Owner. This will include disking, scarifying, or other operations as directed by the Engineer.
- D. Backfill for areas of undercut beneath paving shall be placed in 8" maximum thickness loose lifts and compacted to 100% standard density. Payment shall be as specified for "Undercut".
- E. Fill to line and grade, then compact as required for proper construction of the work and as required by the drawings and specifications. Equipment and method shall be suitable for the work at hand. Work shall conform to the following, unless otherwise indicated on the drawings:
1. Loosen existing soil for depth of 6" just before filling.
  2. Do not place fill in water, on muddy, frozen or frosty areas, or over debris, wood or foreign material.
  3. Fill in areas at which excavation, filling, or backfilling will be performed under other sections of these specifications shall be coordinated with said section.
  4. Schedule and review inspection of new subgrade surfaces with Architect/Engineer.
  5. Surfaces of new subgrades shall be left clean prior to constructing overlying layer of topsoil, etc.
  6. Complete fine grading to the elevations and Finish grade Contours indicated by the drawings. Ensure proper elevations after placement of topsoil, solid sod, or other overlying layers.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 31232323 - SOIL COMPACTION CONTROL****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material and equipment necessary to coordinate construction of the project with the geotechnical report requirements and that all work meets the minimum specified soil test requirements detailed herein.
- B. The actual cost of material testing including compaction shall be paid for by the Owner.
- C. Soil testing shall be performed by Geotechnical Engineering Testing, Inc. of Mobile, Alabama.
- D. The items of work to be performed include, but are not limited to:
  - 1. Control of grading, filling, preparation of subgrade beneath building areas and utility trenches – SECTION 310000.
  - 2. Control of site grading, filling, preparation of subgrade under paving – SECTION 312200.
  - 3. Control of subgrade and base layers under paving – SECTION 321216.

**1.02 MINIMUM DENSITIES**

- A. Compact fills and backfills to the following minimum densities expressed as percentages of maximum densities as follows:
  - 1. Fill under lawn and planted areas, 90 percent Standard Density as per ASTM D-698.
  - 2. Fill under stoops and where not otherwise specified, 98 percent Standard Density as per ASTM D-698.
  - 3. Subgrade or fill for slabs on grade, behind walls, steps, and other places where settlements will be objectionable, 100 percent Standard Density as per ASTM D-698.
  - 4. In place processed subgrade, fill and backfill under paving, 100 percent Standard Density as per ASTM D-698 (See SECTION 312200).
  - 5. Base under paving (See SECTION 321216 for required density).
  - 6. Backfill for pipe trenches, within paved areas, 100 percent Standard Density as per ASTM D-698.
- B. For pavement structure layers, materials shall be within 2 percent of optimum moisture for test results to be considered valid. Under building areas, the materials shall be within range deemed acceptable by the testing laboratory.

**1.03 SUBMITTALS**

- A. Test Reports.
- B. Final Certification of all project tests including a copy of all test reports bound along with a letter from testing laboratory stating all test results meet the minimum requirements of the specifications and/or changes approved by the Architect/Engineer (any such changes shall be individually itemized in the letter). The letter shall be signed and stamped by a Professional Engineer in the State of Alabama.

**PART 2 PRODUCTS**

(Not applicable.)

**PART 3 EXECUTION****3.01 FIELD TEST**

- A. Field density, gradation, moisture contents, tests to check compaction compliance shall be conducted in all fill areas at a minimum frequency as follows to assure that material is being compacted to the required density:
1. Fill and backfill materials gradations (including borrow materials: One test per 250 cubic yards stockpiled or in-place source material.
  2. In-place densities:
    - a. One test per 1,000 square feet, or fraction thereof, of existing subgrade under buildings (including footings) or paving compacted by other than hand operated machines, not less than three tests (see d. also).
    - b. One test per 1,000 square feet, or fraction thereof, of each lift of base, fill, or backfill beneath building (including footings) or paving compacted by other than hand operated machines, not less than three tests.
    - c. One test per 500 square feet, or fraction thereof, of each lift of existing subgrade, base, fill or backfill in areas compacted by hand-operated machines, not less than three tests.
    - d. For isolated footings for columns or strip footings for walls, one test for each isolated column footing or 100 linear feet of strip footing or fraction thereof of existing subgrade, or each lift of fill or backfill.
    - e. One test per 200 L.F. of trench per lift, not less than (2) tests per lift per pipe run (last two lifts only require testing - underlying layers shall be reviewed by visual inspection of the Architect/Engineer).
  3. Moisture Contents: In the stockpile, excavation or borrow areas, a minimum of two tests per day per type of material or source of material being placed during stable weather conditions. During unstable weather, tests shall be made as dictated by local conditions and approved by the Engineer.
  4. Optimum moisture and maximum density: Tests shall be made for each type material or source of material including borrow materials to determine the optimum moisture and maximum density values. One representative test shall be performed per 500 cubic yards of fill and backfill, or when any change in material occurs which may affect the optimum moisture content or maximum density.

**3.02 TEST REPORTS**

- A. All tests will be promptly reported to the Architect/Engineer. The results of each test will be clearly stated on the test report as passing or failing the requirements of the specifications. Each test will be certified as correct, stamped and signed by a Registered Civil Engineer in the State of Alabama. Failing tests shall be faxed to the Architect/Engineer no later than one (1) working day after the test is made.
- B. It is the Contractor's responsibility to insure that work on overlying fill and base layers is not commenced until subgrade is visually inspected and approved by the Architect/Engineer.
- C. Any area with failing test results shall be reworked as necessary and re-tested in accordance to the Specifications. The retest shall be noted and referenced to the appropriate failing test.

**3.03 CONDITIONS OF APPROVAL**

- A. For surfaces beneath paving, the layer being tested shall not be considered approved until compaction has been completed within the required moisture limitations, field density test reflect "passing" density, surfaces have been fine

graded to required surface tolerances, and the required proof-rolling has been completed, and any defective areas repaired.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION: 31400 - SHORING AND UNDERPINNING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.
- B. Related work specified elsewhere includes:
  - .. Section 311100 - "Site Clearing"
  - .. Section 310000 - "Earthwork"

**1.2 DESCRIPTION OF WORK**

- A. If necessary or otherwise required, the extent of shoring and underpinning work includes, but is not limited to, the following:
  - 1. Shoring and underpinning necessary to protect existing buildings, streets, walkways, utilities, and other improvements and excavation against loss of ground, caving embankments, or any other damage.
  - 2. Maintenance of shoring and underpinning.
  - 3. Removal of underpinning, as required.
- B. Type of shoring and underpinning system, if any, includes, but is not limited to the following, as designed, and provided by the Contractor:
  - 1. Soldier piles.
  - 2. Lagging.
  - 3. Other types, as required by project conditions.
- C. Restrictions:
  - 1. No driven piles will be allowed. H-piles, if any must be set in augered holes, in concrete.
  - 2. No internal underpinning will be allowed, unless pre-approved by the Owner and Architect.

**1.3 SUBMITTALS**

- A. Layout Drawings: Provide layout drawings for shoring and underpinning system and other data prepared and sealed by a registered Professional Engineer licensed in the State where the project is located. System design and calculations must be acceptable to local authorities having jurisdiction and are subject to review and acceptance by this project's design consultants.
- B. Certification: Provide a survey of completed shoring and sheeting work, if any, certifying locations, elevations, conditions, etc.

**1.4 QUALITY ASSURANCE**

- A. Provide design by a Structural Engineer currently licensed to practice in the project's jurisdiction. Design shall include, in

part, installation and removals of shoring and underpinning systems and components.

- B. Regulations: Comply with local codes and ordinances of governing authorities having jurisdiction, and adjacent surrounding or anticipated traffic and bearing loads, etc.
- C. Protection: Protect all persons, adjoining properties and utilities. Should any property damage occur repair and restore to original condition, subject to approval of the Architect, and that of its Owner.

## 1.5 JOB CONDITIONS

- A. Before starting any demolition or other work, check and verify governing dimensions and elevations. Survey condition of adjoining properties. Take photographs to record any prior settlement or cracking of structures, pavements, and other improvements. Prepare a list of such damages, verified by dated photographs, and signed by Contractor and others conducting the investigation.
- B. Survey adjacent structures and improvements, establishing exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations. Locate datum level used to establish benchmark elevations sufficiently distant so as not to be affected by movement resulting from excavation operations.
  - 1. Provide any stress and strain gauges on existing buildings to remain as necessary to detect and record any movement or no movement in Project log.

## 1.6 EXISTING UTILITIES

- A. Protect existing active sewer, water, gas, electricity and other utility services and structures identified to remain.
- B. Notify municipal agencies and service utility companies having jurisdiction. Comply with requirements of governing authorities and agencies for protection, relocation, removal and discontinuing of services, as affected by this work.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. General: Provide suitable shoring and underpinning materials which will support loads imposed. Materials need not be new but should be in serviceable condition.
  - 1. If wood is part of shoring system near existing structures, use pressure preservative treated materials or remove before placement of backfill.
- B. Do not use excavation or borings spoils in work to remain, unless acceptable to the accepted project Geotechnical Consultant.

## PART 3 - EXECUTION

### 3.1 SHORING

- A. Wherever shoring is required, locate the system to clear permanent construction and to permit forming and finishing of concrete surfaces. Provide shoring system adequately anchored and braced to resist earth and hydrostatic pressures.
- B. Shoring systems retaining earth on which the support or stability of existing structures is dependent must be left in place at completion of work.

- C. Protect tops of walls as necessary (and forms, sheeting, etc.) as required to prevent water penetration, wash-out, etc.

**3.2 UNDERPINNING**

- A. Locate underpinning to clear columns, floor framing construction, and other permanent work. If necessary to move a brace, install new underpinning prior to removal of original brace.
- B. Do not place underpinning where it will be cast into or included in permanent concrete work, except as otherwise acceptable to Architect.
- C. Install internal underpinning, if required, to prevent spreading or distortion to braced frames.
- D. Maintain underpinning until structural elements are rebraced by other underpinning or until permanent construction is able to withstand lateral earth and hydrostatic pressures.
- E. Remove sheeting, shoring and underpinning in stages to avoid disturbance to underlying soils and damage to structures, pavements, facilities, and utilities.
- F. Repair or replace, as acceptable by Architect, adjacent work damaged or displaced through the installation or removal of shoring and underpinning work.

**END OF SHORING AND UNDERPINNING**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 31 63 29 – DRILL DISPLACEMENT CAST-IN-PLACE PILES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. All piles shall be a full displacement pile. No partial or intermediate displacement type piles may be utilized.
- B. All piles shall be designed for two times the minimum working compressive capacity of 200 kips and a minimum working tension capacity of 40 kips.
- C. The pile caps are designed for 18-inch diameter piles. Any cost associated with checking and/or modifying pile caps due to change in pile size will be the responsibility of the contractor.
- D. Preconstruction testing will include a minimum of 6 static load tests or a combination of 4 static load tests and 3 High Strain Dynamic Load Tests (Drop Hammer) at locations designated by the geotechnical engineer of record. One tension load test shall be performed on a pre-production pile.
- E. The contractor is responsible for High Strain Dynamic Load Tests and retaining a third-party engineer to perform and evaluate these tests in accordance with ASTM D4945. The third-party engineer shall not be an employee of the contractor or pile designer. All High Strain Dynamic Load Tests shall be monitored by representatives of the geotechnical engineer of record.
- F. The apparatus for applying the static load shall be subject to the approval of the Engineer and have a capacity of 325 percent of the design load.
- G. All pre-production load tests shall be performed to geotechnical failure, which is defined as excessive pile movement or plunge.
- H. The static test pile shall be loaded to a minimum of 300 percent of the design load or failure, whichever occurs first in accordance with ASTM D 1143 (compression) or ASTM D3689 (tension). All static load tests shall be performed or monitored by representatives of the geotechnical engineer of record.
- I. Ultimate capacity of the pile will be determined by any of the following methods: Davisson Offset Limit, Brinc-Hansen 90-percent Criterion or Butler-Hoy Criterion but will be limited to the load that produces a maximum of 1.0 inch of pile head deflection.
- J. Should a test pile fail to meet two times the design load, an additional test pile shall be installed and tested at the expense of the contractor.
- K. Production piles may not be installed until all Preconstruction testing has been completed and evaluated, and the pile design is approved by the project design team.
- L. All project production piles should be installed in the same manner, to the same minimum depth and with the same equipment utilized for the test pile installation on the project.
  - 1. Target drilling and grouting parameters of production piles may not be reduced from the parameters achieved during pre-production test pile installation regardless of ultimate capacity of test piles.
  - 2. The concrete or grout mix design utilized for the production piles must be the same as the mix design for the pre-production test piles.

- M. The drilled displacement (DD) pile shall not be installed closer than seven feet, center to center, until initial cement grout set has occurred in the adjacent pile shaft, which typically occurs approximately 24 hours after pile construction.
- N. Verification testing (proof testing) shall be performed on a minimum of 8 production piles. Piles to be selected by the geotechnical engineer of record.
- O. Verification tests can be performed using static load tests or High Strain Dynamic Load Tests in accordance with ASTM D1143 or ASTM D4945. If High Strain Dynamic Load Tests are utilized for verification tests, the same type test must be utilized in pre-production load testing.
- P. Should a production pile fail to meet 1.75 times the design load based upon verification testing:
  - 1. an additional 1 percent of production piles shall be tested at the contractor's expense.
  - 2. any required additional piles and/or modifications to pile caps will be at the contractor's expense.
- Q. Pile Integrity Testing (PIT) will be required on all preproduction test piles, verification test piles and a minimum of 20 percent of production piles. Piles to be selected by the geotechnical engineer of record. Additional piles may be selected by the geotechnical engineer if circumstances either during or after pile installation should make a piles' integrity suspect or if the initial tests reveal major defects.
- R. A third-party engineer retained by the geotechnical engineer of record will perform and evaluate integrity tests. The Low Strain Integrity Testing (PIT) will be performed in accordance with ASTM D5882. The contractor will be responsible for providing access to the pile, providing a level pile head and ensuring that the pile top is relatively smooth and free from water, dirt or other debris. Integrity testing shall not be performed until the concrete has cured for a minimum of seven (7) days.
- S. Piles shall be reinforced with a minimum of 4 vertical bars enclosed by ties in the upper 20'-0" of the pile and 1 additional vertical bar centered in the full depth of the pile. Reinforcing calculations shall be provided for review.

### 1.3 SITE INFORMATION

- A. Data on subsurface conditions are not intended as representations or warranties of continuity of such conditions. It is expressly understood that Owner and/or members of the design team will not be responsible for interpretations or conclusions drawn by the Contractor. Data is made available for the convenience of the Contractor and is not guaranteed to represent conditions that may be encountered.
- B. Available soil borings and other geotechnical information have been presented in the geotechnical report dated August 16, 2024, prepared by Geotechnical Engineering-Testing, Inc.
- C. Additional test borings and other exploratory operations may be made at the Contractor's option at no additional cost to the Owner.

### 1.4 CONTRACTOR EXPERIENCE

- A. The quality of DD piles is highly dependent upon the skill of the contractor and the specific crew that is assigned to the project. It is essential that the contractor demonstrate competence to perform the work by providing documentation of successful completion of prior projects of a similar nature to the project being bid.
- B. The following experience requirements for contractors and their personnel are as follows:
  - 1. The contractor should have completed a minimum of three projects in the two-year period preceding the bid date in which DD piles were installed successfully under subsurface and project conditions similar to those of the current project.

2. The designated job site supervisor (foreman or crew chief) should have a minimum of three years of experience in the supervision of the installation of DD piles.
  3. Drill rig operators should have a minimum of three years of experience installing DD piles.
  4. The designated project manager should have a minimum of three years' experience with DD projects of similar size and scope.
- C. The contractor shall submit a list of personnel to be used on the project and provide documentation of experience.

### **1.5 DESIGN SUBMITTALS**

- A. The DD piles shall be designed by a licensed Professional Engineer (Design Engineer) that is licensed in the state of Alabama. The Design Engineer should have experience in the design of at least five successfully completed DD pile projects over the past five years with DD piles of similar capacity to those required for the project and similar soil conditions. The contractor shall provide documentation of design engineer's experience.
- B. Revisions to the design due to field conditions will need to be documented through submittals of revised calculations and/or working drawings in the affected portion of the project. The contractor shall submit as-built drawings upon completion of the pile installation.

### **1.6 DESIGN CALCULATIONS**

- A. Design calculations should include, but not be limited to, the following items:
1. A written summary report that describes the overall DD pile design
  2. DD pile structure critical design cross-section(s) including soil/rock strata, piezometric levels, and location, magnitude and direction of applied loads.
  3. Design criteria, including soil/rock shear strengths (friction angle and cohesion), unit weights, unit skin friction values, and unit end-bearing values. Any additional subsurface borings, laboratory work, or other subsurface data collected for the design beyond what was provided by the owner.
  4. Safety factors used in the design.
  5. Design calculation sheets (both static and seismic) with the project number, DD pile structure location, designation, date of preparation, initials of designer and checker, and page number at the top of each page. An index page should be provided with the design calculations.
  6. Design notes including an explanation of any symbols and computer programs used in the design.
  7. Pile to cap/footing calculations.

### **1.7 PILE INSTALLATION PLAN**

- A. The Pile Installation Plan is used by the contractor to demonstrate the acceptability of the equipment, techniques, and source of materials to be used on the project. This plan should include, but not be limited to, the following items:
1. List and sizes of proposed equipment, including drilling rigs, augers and other drilling tools, pumps for grout or concrete, mixing equipment, automated monitoring equipment, and similar equipment to be used in construction, including details of procedures for calibrating equipment as required. Note: grout pump must be calibrated a minimum of one time for every 100 piles installed.
  2. Step-by-step description of pile installation procedures.
  3. A plan of the sequence of pile installation.
  4. Target drilling and grouting parameters (along with acceptable ranges) for pile installation, including auger rotation speed, drilling penetration rates, torque, applied crowd pressures, grout pressures, and grout volume factors.
  5. Details of methods of reinforcement placement, including support for reinforcing cages at the top of the pile and methods for centering the cages within the grout or concrete column.

6. Mix designs for all grout or concrete to be used on the project, including slump loss vs. time curves and strength development vs. time curves for mixes with fly ash and/or slag.
  7. Equipment and procedures for monitoring and recording auger rotation speed, auger penetration rates, auger depths, and crowd pressures during installation.
  8. Equipment and procedures for monitoring and recording grout or concrete pressures and volumes placed during installation.
  9. Contingency plans for equipment failures during drilling or grouting operations (grout pump, monitoring equipment, etc.)
  10. Procedures for protecting adjacent structures, on or off the right-of-way, that may be adversely affected by foundation construction operations.
  11. Other required submittals shown on the plans or requested by the engineer.
- B. The plan should also include the following items for the equipment proposed:
1. The rated capacity and boom lengths of the drill rig
  2. The torque, rotational speed and down crowd capacity of the drilling machine
  3. The horsepower of the hydraulic power unit used to turn the auger.
  4. The positive displacement piston-ball valve pump, pump stroke displacements, engine horsepower and pump pressures of the grout pump to be used.
  5. Automated monitoring equipment utilized to provide rate of penetration of tool, torque and down pressure from the rig, concrete (or grout) volume during extraction of tool and concrete pressure during pumping. The data from the automated data monitoring equipment shall be provided to a representative of the geotechnical engineer within 2 days of the production day.
- C. With respect to the above parameters, the installation plan should include documentation that the proposed drilling equipment has been demonstrated effective on similar size piles in similar soil conditions.

## 1.8 TESTING PLAN

- A. The DD pile contractor should include a plan for constructing and performing the required tests to meet the requirements of the testing plan along with the Pile Installation Plan in accordance with the Minimum Project Requirements Established by the Design Team. The testing program should consist of pre-production static load tests or a combination of static load tests and high strain dynamic load tests, production static and/or high strain dynamic load tests, and post-installation integrity tests in sufficient quantities to provide the data necessary to demonstrate that the installed piles meet the load and deflection criteria established in the project plans with an appropriate factor of safety.
- B. Pre-production load test program will meet requirements outlined in the Minimum Project Requirements Established by Design Team. Piles installed for pre-production testing (including any reaction piles required for static load testing) should include all construction, monitoring, testing, and inspection requirements of production piles. The results of the installation and testing will be used to:
1. Establish target drilling penetration rate(s) for the various subsurface conditions on the site.
  2. Establish pressure/volume relations for placement of grout/concrete. The grout factor (i.e., ratio of used volume of grout/concrete to theoretical volume for the specified pile size)  $\pm 7.5\%$  that is calculated on the test pile(s) should be used for the installation of the production piles.
  3. Establish target values for torque and downward thrust or crowd for displacement or partial displacement piles.
  4. Establish mix design parameters such as grout flow, necessary admixtures, etc.
  5. Evaluate design correlations of side and base resistance with the site-specific soil parameters.
- C. All pile installation and testing will be witnessed by a representative of the geotechnical engineer of record.

- D. Conformance monitoring includes the use of automated measuring and recording equipment to confirm the pile installation criteria, integrity testing, and verification tests on production piles to demonstrate that the installed production piles meet the established load-deflection criteria. This shall include at a minimum automated monitoring equipment to provide “real time” evaluation of each pile on a project. The installation plan should include type of monitoring equipment, manufacturer, data to be collected, current calibration records, and sample data records. As a minimum, the monitoring equipment should have the capability to monitor and record the following:
1. Auger rotation.
  2. Depth of the auger injection point.
  3. Torque delivered to the auger.
  4. Crowd force (downward thrust on auger).
- E. All measurements should be referenced to (or plotted against) the depth of the auger injection point. This can be accomplished with a rotational position indicator on the auger head system and an electronic position indicator on the crane line or boom holding the auger. Torque and thrust load cells should be positioned on the auger head system.
- F. As a minimum, the following automatic measurements should be recorded during the grouting or concreting operation:
1. Volume of grout or concrete
  2. Maximum and minimum grout or concrete pressure
  3. Auger rotation (if rotated)
  4. Depth of the injection point.
- G. All measurements should be referenced to (or plotted against) the depth of the auger injection point. This can be accomplished with electronic flowmeters and electronic pressure transducers placed in the grout or concrete pressure line, an electronic position indicator on the crane line or boom holding the auger, and a rotational position indicator on the auger system.
- H. Calibration should be made on all monitoring equipment at the beginning of the project in accordance with the equipment manufacturer’s specifications. The values indicated by the monitoring equipment should be within three percent of the manufacturer recommendations.
- I. A data sheet from the automated equipment shall be provided for each pile.
- J. Verification testing will be performed on production piles as outlined in Minimum Project Requirements Established by Design Team. The contractor shall propose the type of verification testing to be performed. The same load testing equipment and engineer utilized during the Pre-Production testing shall be utilized for the verification testing.
- K. Integrity testing will be performed on production piles as outlined in Minimum Project Requirements Established by Design Team.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 321216 - ASPHALT PAVING****PART 1 GENERAL****1.01 SCOPE**

- A. Furnish all labor, material and equipment necessary to complete all asphalt paving as indicated on the drawings and specified herein.
- B. Detail material and construction requirements for this work shall be in accordance with the Alabama Department of Transportation “Standard Specifications for Highway Construction”, 2022 edition, hereinafter referred to as Standard Specifications.
- C. The items of work to be performed shall include, but are not limited to:
  - 1. Constructing, shaping, and compaction of subgrade surface adjacent to base course.
  - 2. Constructing base course.
  - 3. Construction of asphalt.
  - 4. Painting parking stripes, symbols, and legends.
  - 5. Furnishing and installing signs and posts.
- D. Related work specified elsewhere:
  - 1. Site Grading – SECTION 312200.
  - 2. Soil Compaction Control – SECTION 31232323.

**1.02 SPECIAL REQUIREMENTS**

- A. Prior to starting construction of each overlying layer of the pavement structure, the preceding layer shall be compacted and fine graded in accordance with the Specifications. The surface shall then be proof-rolled in the presence of the Engineer and any yielding or “pumping” areas removed and replaced.
- B. Asphalt paving shall be placed with equipment in good operating condition. All equipment shall be subject to the rejection by the Engineer if not in satisfactory operating condition.
- C. Asphalt will be supplied to the project with a sufficient number of trucks to prevent the formation of cold joints. Asphalt temperature will be strictly enforced in accordance with the job mix formula.
- D. If different subcontractors exist for completion of the paving work, both the General Contractor and Material Supplier shall maintain a supervisor on the site while paving is in progress. No paving work shall be undertaken unless the supervisors are present on the site.
- E. Any areas of ponded or trapped water in the asphalt wearing surface shall be cut out and replaced as required to correct the area. The cut-out area shall be square or rectangular and not less than 200 square feet. Should cut-out areas, patches, or areas otherwise deemed unsatisfactory exceed 10 percent of the pavement area, the entire new pavement area shall be re-surfaced at no cost to the Owner. Tack Coat and 200 pounds per square yard of Bituminous Concrete Wearing Surface shall be required.

**PART 2 PRODUCTS**

(Not applicable.)

**PART 3 EXECUTION****3.01 MATERIALS AND METHODS**

- A. Subgrade
  - 1. Immediately before base material is placed, the underlying 6" of backfill material shall be scarified and compacted to 100 percent ASTM D-698 density, then shaped and compacted to the final required grade. Soft, spongy or otherwise unsuitable material shall be replaced. Every precaution shall be taken to obtain a subgrade of uniform bearing. Fill and tamp traces of utility trenches. Compaction shall be a minimum of 100% Standard Density.
- B. Base Course
  - 1. Base course shall be a Crushed Aggregate Base Course, Type "B", Yard Mixed, and placed to the thickness indicated by the drawings. Base thickness greater than 6" must be placed in two (2) equal layers. Material and workmanship shall meet requirements set forth in Section 301 of the Standard Specifications.
- C. Bituminous Treatment
  - 1. Bituminous treatment shall meet the requirements of Section 401 of the Standard Specifications and as indicated by the drawings.
- D. Bituminous Concrete Binder Layer
  - 1. Binder layer shall consist of an Superpave Bituminous Concrete Binder Layer mix applied at the spread rate indicated by the drawings and in accordance with Section 424 of the Standard Specifications.
- E. Tack Coat
  - 1. Tack coat shall meet the requirements of Section 405 of the Standard Specifications and as indicated by the drawings.
- F. Bituminous Concrete Wearing Surface
  - 1. Wearing surface shall consist of a Superpave Bituminous Concrete Wearing Surface mix applied at the spread rate indicated by the drawings and in accordance with Section 424 of the Standard Specifications.
- G. Traffic Stripe and Markings
  - 1. Material and construction requirements for traffic stripe and markings shall be in accordance with applicable portions of Section 701 and 703 of the Standard Specifications.
  - 2. Stripe and markings shall be reflective (Type A) paint (Class 1) and thermoplastic (Class 2) materials as indicated by the drawings. The required dry film thickness on the finish pavement surface for all paint stripe and markings will be 0.090 inches; for thermoplastic materials the minimum thickness shall be 0.125 inches.
  - 3. Color of stripe and markings shall be as indicated by the drawings.
- H. Signs and Posts
  - 1. Signs and posts shall be as indicated by the drawings and Section 710 of the Standard Specifications. The sign material shall be Type B sheeting Class 2 or 2A face.
  - 2. Post shall be #2 "U" post mounted in accord with D.O.T. Std. Dwg. IHS 710-12 and IHS 710-21.

**END OF SECTION**

**SECTION 321313 - CONCRETE PAVING, CURBS, AND WALKS****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material and equipment necessary to complete all concrete paving, curbs, gutters, and walks as indicated on the drawings and specified herein.
- B. The items of work to be performed shall include, but are not limited to:
  - 1. Constructing, shaping, and compacting of subgrade.
  - 2. Concrete sidewalk paving, and driveway turnouts.
  - 3. Concrete curbs and gutters.
  - 4. Concrete drives for emergency vehicle access.
- C. Related work specified elsewhere:
  - 1. Earthwork – SECTION 310000.
  - 2. Site Grading – SECTION 312200.
  - 3. Soil Compaction Control – SECTION 31232323.
  - 4. Cast-In-Place Concrete – SECTION 033000.
- D. Detail material and construction requirements for this work shall be in accordance with the Alabama Department of Transportation “Standard Specifications for Highway Construction, latest Edition”, hereinafter referred to as “Standard Specifications”.

**1.02 LABORATORY CONTROL AND TEST**

- A. Shall be same as required under SECTION 033000 – Cast-In-Place Concrete.

**PART 2 PRODUCTS****2.01 MATERIALS**

- A. Portland Cement shall conform to ASTM Specification C-150, Type I or III.
- B. Aggregates for concrete shall conform to ASTM Specifications C-33. Fine Aggregates shall be natural sand, or subject to approval, sand prepared from stone, gravel or other inert materials having similar characteristics. Coarse Aggregates shall be crushed rock or gravel or, subject to approval, a combination of these materials. Maximum size of aggregate shall be 1-1/2 inch.
- C. Fiber mesh reinforcing shall be as approved by the Engineer for all site concrete, including curb and gutter.
- D. Water shall be clear, and free from injurious amount of oils, acids, alkalis, organic materials, or other deleterious substances.
- E. Reinforcing bars shall be deformed steel bars per ASTM A-615, Grade 40.
- F. Welded steel wire fabric for concrete reinforcement shall conform to ASTM Specification A-185.
- G. Pre-molded joint filler: See notes on the drawings. Joint Sealant shall be Type 3 – Low Modulus Silicone Cold Poured Joint Sealant meeting the requirements of Section 832 of the Standard Specifications.
- H. Base course beneath concrete sidewalk and paving shall be as indicated on the drawings.

**2.02 STORAGE OF CONCRETE MATERIALS**

- A. Cement - Provide suitable means for storing and protecting the cement against dampness. Bags of cement which have become partially set or which contain lumps of caked cement shall be rejected.
- B. Aggregates - Shall be stockpiled as to prevent segregation of component sizes and intrusion of foreign matter. Aggregates of different gradings shall be stored separately.

**2.03 PROPORTIONING AND MIXING CONCRETE**

- A. Concrete shall be a mix of proportioned fine and coarse aggregates with Portland Cement. Minimum cement content shall be 6.5 sacks per cubic yard of concrete and maximum water content shall be six U.S. gallons per sack of cement, including moisture in aggregates.
- B. Proportioning Aggregates
  - 1. The ratio of fine to total aggregate shall be such as will produce a dense, homogeneous, and workable mixture, which can be placed without segregation of materials and which will attain at 28 days a minimum compressive strength of 3000 psi (unless otherwise specified) and flexural strength of 600 psi as established by laboratory tests.
- C. Measurement of Materials
  - 1. Measure concrete materials by such weighing methods as will permit accurate control of proportions and easy check thereof at all times.
- D. Mixing Concrete
  - 1. Mix all concrete in an approved power batch mixer. Mix for a period of not less than 1-1/4 minutes after all materials are in the drum.
- E. Ready-Mixed Concrete
  - 1. Certificates shall be furnished from the mixing plant that concrete has a 28 day compressive strength of at least 3000 psi (unless otherwise specified) and a flexural strength shall be 600 psi, when tested in accordance with methods described in ASTM Standard C-34-49. No change shall be made in materials or the established mix without prior approval. Ready-mixed concrete shall be transported to the site in transit-mix or agitator trucks paving watertight drums loaded within the limits of rated capacities. The concrete shall be delivered and discharged within one hour after the cement is in the mixer. Concrete which, when delivered, is not plastic and workable shall be rejected.
- F. Ready Dry-Batched Mixes
  - 1. Certificates shall be furnished for concrete strength and prior testing similar to those above specified for ready-mixed concrete. Ready dry-batched mixes shall be transported to the site in trucks having batch compartments of adequate size for the rated tarpaulin while in transit. Add water to batch after discharge into the mixer, which must be within two hours after the cement was added to the batch.
- G. Retempering of concrete that has partially hardened, that is, re-mixing with or without additional cement, aggregate or water, will not be permitted.

**PART 3 EXECUTION****3.01 SUBGRADE AND BASE**

- A. The Contractor shall verify all grades shown on the plans before proceeding with the work. The Engineer reserves the right to improve the gradients by reasonable field adjustments prior to the completion of the subgrade work.
- B. Paving shall not be placed until all underground work, such as sewers, water pipes, storm drain pipe, underground electric work, etc. are all in place, backfilled, and trench work compacted.
- C. Shape, compact and bring subgrade to required grade.
- D. For concrete paving (not including sidewalk) construct a 4-inch thick crushed stone base course in accord with Section 301 of the Standard Specifications. For concrete sidewalk, base shall be a 4" granular soil base placed in accord with Section 301 of the Standard Specifications. Compaction shall be 95 percent modified proctor density as per AASHTO T-180.
- E. Loosen exceptionally hard spots and re-compact. Replace spongy and otherwise unsuitable material. Fill and tamp traces of utility trenches.
- F. Place concrete only on a moist compacted subgrade or base, free from loose material. Place no concrete on a muddy or frozen subgrade.

**3.02 FORMS**

- A. All forms shall be free from warp, tight enough to prevent leakage of mortar, and substantial enough to maintain their shape and position, without springing or settlement, when concrete is placed or vibrated. Forms shall be staked, braced and/or tied together securely. Forms shall be clean and those for surfaces to be exposed shall produce a smooth, even finish without fins or board marks.
  - 1. Set forms for slabs on ground at exact finished grade. Check for line and grade and correct as necessary immediately before concreting. Provide uniform bearing for such forms. Use flexible or curved forms when edge of surface is to be curved to a radius of 100 feet or less. Where adjacent to curbs, joints in sidewalks and curbs shall coincide.
  - 2. Expansion joints at pavement: provide expansion joints, with pre-molded filler at walk junctions and intersections, at building, platforms or other fixed structures, or termination at curbs. Locate expansion joints as indicated on the plans.
  - 3. Control joints in pavements shall be hand formed with proper tools so as to provide radius edged joints as shown on the drawings. Saw cut control joints in exposed aggregate concrete will not be allowed.
  - 4. Where adjacent to curb and gutter or other, concrete joints shall coincide.

**3.03 DIMENSIONS**

- A. Concrete paving shall be of one course construction, thickness and layout shown on the drawings.

**3.04 REINFORCING**

- A. Reinforcing shall be accurately placed, and securely supported and fastened to prevent movement during placement of concrete.

### 3.05 CONCRETE PLACEMENT AND FINISHING

A. Paving or Sidewalk Concrete: Concrete shall be placed in the forms in one layer of such thickness that when compacted and finished, the sidewalk will be of the thickness indicated. After concrete has been placed in the forms, a strike-off guided by side forms shall be used to bring the surface to proper section to be compacted. The concrete shall be tamped and consolidated with a suitable wood or metal tamping bar, and the surface shall be finished to grade with a wood float. Finished surface of the walk shall not vary more than 3/16 inch from the testing edge of a 10-foot straightedge. Irregularities exceeding the above shall be satisfactorily corrected. The surface shall be divided into rectangular areas by means of contraction joints spaced at not more than 5 feet on centers unless so indicated by the drawings.

1. Concrete finishing: After straight-edging, when most of the water sheen has disappeared, and just before the concrete hardens, the surface shall be finished to a smooth and uniformly fine granular or sandy texture free of waves, irregularities, or tool marks. A scored surface shall be produced by brooming with a fiber-bristle brush in a direction transverse to that of the traffic.
2. Finishing for exposed aggregate surfaced sidewalk shall be coordinated with the Architect/Engineer to achieve the desired finish. Three (3) 4 foot x 4 foot sample pours shall be constructed to allow the Architect to review the work to be produced by the Contractor and to set the finish requirements. The sample pours shall be repeated until a finish acceptable to the Architect is produced.
3. Edge and joint finishing: All slab edges, including those at formed joints, shall be finished carefully with an edger having a radius of 1/8 inch. Transverse joints shall be edged before brooming, and the brooming shall eliminate the flat surface left by the surface face of the edger. Corner and edges which have crumbled and areas which lack sufficient mortar for proper finishing shall be cleaned and filled solidly with a properly proportioned mortar mixture and then finished.
4. Contraction joints: The contraction joints shall be formed in the fresh concrete by cutting a groove in the top portion of the slab to a depth of at least one-fourth of the sidewalk slab thickness, using a jointer to cut the groove, or by sawing a groove in the hardened concrete with a power-driven saw, unless otherwise approved. Sawed joints shall be constructed by sawing a groove in the concrete with a 1/8 inch blade to a depth indicated. The time of sawing shall be varied, depending on existing and anticipated weather conditions, and such sawing shall be at the required rate. An ample supply of saw blades shall be available on the job before concrete placement is started, and at least one standby sawing unit that is in good working order shall be available at the job site at all times during the sawing operations.
5. Expansion joints: Transverse expansion joints shall be installed at sidewalk returns and opposite expansion joints in adjoining curbs. Where the sidewalk is not in contact with the curb, transverse expansion joints shall be installed as indicated. Transverse expansion joints shall be filled with 3/4 inch joint filler strips. Joint filler shall be placed with top edge 1 inch below the surface and shall be held in place with steel pins or other devices to prevent warping of the filler during floating and finishing. Immediately after finishing operations are completed, joint edges shall be rounded with an edging tool having a radius of 1/8 inch, and concrete over the joint filler

shall be removed. Expansion joints shall be formed about structures and features that project through or into the sidewalk pavement, using joint filler of the type, thickness, and width indicated. The filler shall be installed in such manner as to form a complete, uniform separation between the structure and sidewalk pavement. All joints shall receive sealer as indicated by the drawings. Surface uniformity: The completed surface shall be uniform in color and free of surface blemishes and tool marks.

B. Curb and gutter concrete: Concrete shall be placed in layers not to exceed 6 inches. Concrete shall be thoroughly consolidated by tamping and spading or with approved mechanical vibrators.

1. Concrete finishing: The edges of the gutter and top of the curb shall be rounded with an edging tool to a radius of 1/2 inch and the surfaces shall be floated and finished with a smooth wood float until true to grade and section and uniform in texture. Floated surfaces shall then be brushed with a fine-hair brush with longitudinal strokes. Immediately after removing the front curb form, the face of the curb shall be rubbed with a wood or concrete rubbing block and water until blemishes from marks, and tool marks have been removed. The surface, while still wet, shall be brushed in the same manner as the gutter and curb top. The top surface of gutter and entrance shall be finished to grade with a wood float. Except at grade changes or curves, finished surfaces shall not vary, from the testing edge of a 10-foot straightedge, more than 1/8 inch for gutter and entrance and 1/4 inch for top and face of curb. Irregularities exceeding the above shall be satisfactorily corrected. Visible surfaces and edges of finished curb and gutter shall be free of blemishes and from tool marks, and shall be uniform in color, shape, and appearance.

2. Joints: Expansion joints and contraction joints shall be constructed at right angles to the line of curb and gutter.

a. Contraction joints: Contraction joints shall be constructed by means of 1/8 inch thick separators, of a section conforming to the cross section of the curb and gutter. Contraction joints shall be constructed directly opposite contraction joints in abutting Portland Cement concrete pavement or sidewalk. Where curb and gutter do not abut, contraction joints shall be so placed that monolithic sections between curb returns will not be less than 5 feet nor greater than 15 feet in length. Separators shall be removed as soon as practicable after concrete has set sufficiently to preserve the width and shape of the joint. Separators shall be removed prior to finishing.

b. Expansion joints: Expansion joints shall be formed by means of preformed expansion-joint filler material cut and shaped to the cross section of curb and gutter. Expansion joints shall be provided in curb and gutter directly opposite expansion joints of abutting Portland Cement concrete pavement and shall be the same type of thickness as joints in the pavement. Where curb and gutter do not abut Portland Cement concrete pavement, expansion joints at least 3/4 inch in width shall be provided at intervals not exceeding 25 feet. Expansion joints shall be provided in non-reinforced concrete gutter at locations indicated. All expansion joints shall receive sealer, as indicated by the drawings.

C. Curb-forming machines:

1. Curb-forming machines for constructing curb and gutter will be approved based on trial use on the job. Use of the equipment shall be discontinued at any time during construction if the equipment produces unsatisfactory

results, and the work shall be accomplished as specified above. Unsatisfactory work shall be removed and reconstructed for the full length between regularly scheduled joints. Removed portions shall be disposed of as directed.

### **3.06 PROTECTION**

- A. Remove no forms (except face forms) for 24 hours after placing concrete. Barricade against vehicular traffic for 14 days. Compact thoroughly the backfill at all edges.

### **3.07 COLD WEATHER PROTECTION**

- A. Whenever the air temperature may be expected to reach the freezing point, spread straw or other blanketing material to sufficient depth to keep concrete from freezing. Provide enclosure and heating device capable of maintaining concrete temperature of at least 50°F. Maintain such protection for at least five days. The Contractor shall be responsible for removing and replacing any concrete injured by frost action.

### **3.08 CURING**

- A. Except as otherwise specified, cure all concrete by covering surface with burlap or cotton mats, straw, sand or other approved material. Keep such coverings wet for at least seven days after concrete is placed. Wiping of concrete surfaces with grout or other coatings shall not be performed unless specifically authorized by the Engineer. This process shall not be used as a substitute for cleaning or repair of curb or curb and gutter.

### **3.09 REPAIR OF CRACKS AND BREAKS**

- A. Hairline cracks may be repaired with epoxy grout. Sections containing breaks which penetrate the full concrete depth shall be removed from joint to joint unless specifically approved by Architect/Engineer.

### **3.10 FINAL CLEANING**

- A. All concrete work, including sidewalks, steps, curbs, driveway turnouts, and curb and gutter, shall be sand or water blasted free of all stains or discolorations present on the exposed surfaces and to a uniform finish and color. This work shall not be commenced until all other construction, including paving, is completed.

**END OF SECTION**

**SECTION 329000 - PLANTING****PART 1 GENERAL****1.01 SUMMARY**

- A. This section shall include requirements for all materials and labor as required to establish an acceptable stand of seeded grass with mulch and solid sod over the entire project limits indicated by the drawings.
- B. Solid sod shall be placed in area indicated on the landscape drawings. All other unsurfaced areas shall receive seeded grass, mulch, and erosion control netting.
- C. The items of work to be performed include, but are not limited to:
  - 1. Preparation of sub-soil, re-spreading/spreading topsoil.
  - 2. Preparation of topsoil for planting.
  - 3. Fine grading areas to receive topsoil.
  - 4. Planting seeded grass, mulching, and solid sodding.
- D. Related work specified elsewhere:
  - 1. Site Grading – SECTION 312200.

**1.02 SUBMITTALS**

- A. Provide required warranty (grass bond).

**PART 2 PRODUCTS****2.01 MATERIALS**

- A. Seed
  - 1. Seed shall be state-certified seed of the latest season's crop and shall be delivered in original sealed packages bearing the producer's guaranteed analysis for percentages of mixtures, purity, germination, weed-seed content, and inert material.
  - 2. Seed shall be labeled in conformance with U.S. Department of Agriculture rules and regulations under the Federal Seed Act and applicable state seed laws.
  - 3. Seed that has become wet, moldy, or otherwise damaged will not be acceptable.
- B. Topsoil
  - 1. Topsoil shall be the existing surface soil.
  - 2. Additional topsoil, if required beyond that available, shall be a natural, friable soil representative of productive soils in the vicinity. It shall be obtained from well drained borrow areas provided by the Contractor and shall be free of any admixture of subsoil, foreign matter, objects larger than one inch in any dimension, toxic substances, and any material or substance that maybe harmful to plant growth. The pH range shall be 5.3 to 6.0. Topsoil that does not meet the lower pH limit shall be amended by the addition of lime, at a rate recommended based on soil tests.
- C. Liming Material
  - 1. The Contractor shall use either agricultural limestone.
    - a. Agricultural limestone shall have a minimum calcium carbonate equivalent of 90% and shall be ground to such fineness that at least 90% will pass a 10-mesh sieve and at least 50% will pass a 60-mesh sieve.

**D. Fertilizer**

1. Fertilizer shall be commercial grade, free flowing, uniform in composition and shall conform to applicable state and Federal regulations. Fertilizer shall conform to Fed. spec. 0-F-241, Type I, Class (1), (2) or Type II, Class (1), (2), or (3) and shall bear the manufacturer's guaranteed statement of analysis. When slow release nitrogen forms are used in the fertilizer mixture, they shall be derived from sulfur coated area (SCU), urea formaldehyde (UF), plastic or polymer coated prills, or isobutylenediurea (IBDU). Fertilizer for use prior to tilling and for use during the establishment period shall be selected by the Contractor.

**E. Mulch**

1. Mulch shall be straw or hay mulch fixed in place with disk land packers or disk harrows.
  - a. Straw shall be stalks from oats, wheat, rye, barley, or rice that are free from noxious weeds, mold, or other objectionable material. Straw shall be in an air-dry condition and suitable for placing with blower equipment.
  - b. Hay shall be native hay, or other herbaceous mowings, free from noxious weeds, mold, or other objectionable material. Hay shall be in an air-dry condition and suitable for placing with blower equipment.

**F. Solid Sod**

1. Sod shall be live centipede sod with a minimum 2" thickness of root mat and soil attached. Sod strips shall be furnished with a minimum 12" width.

**G. Water**

1. Water shall not contain elements toxic to plant life.

**PART 3 EXECUTION****3.01 SITE PREPARATION****A. Preparation of Seed Beds**

1. Placing topsoil: Topsoil shall be distributed evenly over the disturbed area to a minimum compacted thickness of 6 inches. Topsoil shall be spread so that planting can proceed with little additional soil preparation or additional tillage. Surface irregularities resulting from topsoiling or other operations shall be leveled to prevent depressions. Topsoil shall not be placed when the subgrade is frozen, excessively wet, extremely dry, excessively compacted, or in a condition detrimental to the proposed planting or grading. Soil compacted by construction equipment shall be pulverized to a minimum depth of 4" by disking before spreading topsoil.
2. Tillage: Prior to seeding or sodding, the soil shall be tilled to a depth of at least 6". Tillage shall be accomplished by plowing, disking, harrowing, by the use of rototillage machinery or other approved operations until the condition of the soil is acceptable. The work shall be performed only during periods when beneficial moisture, or other unsatisfactory conditions prevail, the work shall be stopped when directed. Undulations or irregularities in the surface shall be leveled before the next specified operation. Care shall be taken to correctly grade areas to receive solid sod (top of sod at new finish grade) and to provide the required minimum topsoil thickness below sodded areas.
3. Hand Raking: Prior to seeding, the seeded area shall be hand raked and all roots, limbs, debris, and other objectionable matter removed from the topsoil.

B. Application of Fertilizer and Lime

1. At a minimum, 8-8-8 fertilizer shall be applied at the rate of 1,500 pounds per acre. Other fertilizer and application rates may be used upon approval.
2. Lime: Ground agricultural limestone shall be applied at the rate of 4,000 pounds per acre.
3. All fertilizers and ground limestone shall be incorporated into the soil to a depth of at least 4” and may be incorporated in part of the tillage operation hereinbefore specified. Immediately before seeding, sodding, sprigging, the soil shall be restored to an even condition.

3.02 APPLICATION

A. Seeding

1. Broadcast seeding: Seed shall be broadcast either by hand crank seeders or with approved hydraulic seeding equipment, as specified hereinbefore, in combination with fertilizer, or with the approved hydraulic equipment in combination with fiber mulch and fertilizer as specified hereinbefore, or with other approved sowing equipment. Seed shall be distributed uniformly over designated areas. Half of seed shall be sown with sower moving in one direction, and the remainder with sower moving at right angles to first sowing. Seed shall be covered to an average depth of 1/4 inches by brush harrow, spike-tooth harrow, chain harrow, cultipacker, hand rake with wood tines, or other approved device. Seed shall not be broadcast during windy weather.

2. Seeding rates

Special Urban Seed Mixes

March thru June

Bermudagrass (Hulled)	30 lbs. per acre
Kobe Lespedeza	60 lbs. per acre

July and August

Bermudagrass (Hulled)	30 lbs. per acre
Reseeding Crimson Clover	80 lbs. per acre

September thru December

Bermudagrass (Unhulled)	30 lbs. per acre
Reseeding Crimson Clover	80 lbs. per acre

January and February

Bermudagrass (Unhulled)	30 lbs. per acre
Reseeding Crimson Clover	60 lbs. per acre
Kobe Lespedeza	60 lbs. per acre

3. Mulch shall be spread uniformly in a continuous blanket, using 2 tons per acre. Mulch shall be spread by hand or by a manure spreader, a modified grain combine with straw-spreader attachment, or a blower-type mulch spreader. Mulching shall be started at the windward side and continued uniformly until the area is covered. The mulch shall not be bunched. Immediately following spreading, the mulch shall be anchored to the soil by a V-type-wheel land packer, a scalloped-disk land packer designed to force mulch into the soil surface, or other suitable equipment.

B. Sodding

1. Solid sod shall be live, active hybrid Bermuda grass sod.
  2. Sod shall be placed in designated areas. Voids between sod strips shall be carefully filled with topsoil. Sod shall be placed with no edges exposed. Where necessary, strips shall be turned down. In areas exposed to concentrated flows of water or where on a slope steeper than 3:1, the sod shall be staked in place. All areas shall be rolled by a small hand-propelled steel wheel roller. Roll sod a minimum of (2) times each in a parallel and at a right angle to the sod strips and as required additionally to level surface defects.
  3. Sod shall be placed below the top surface of sidewalks, curbs, or other finished surfaces.
- C. Watering
1. Watering shall be required as necessary to obtain a suitable stand of seeded or sodded grass.
- D. Restoration and Clean-Up
1. Excess and waste material shall be removed daily. When turfing in an area that has been completed, the area shall be cleaned of all debris and excess material. Where existing turf areas have been damaged during turfing operations, the contractor shall restore the areas to their original condition at his expense.

### **3.03 PROTECTION OF GRASSED AREAS**

- A. Immediately after seeding or sodding, the area shall be protected against traffic or other use by erecting barricades, as required, and approved signs shall be placed at appropriate intervals until final acceptance.

### **3.04 WARRANTY**

- A. The Contractor shall rework, re-seed and mulch areas seeded under the Contract where a satisfactory stand of grass is not present, or remove and replace areas of dead or damaged solid sod placed under the Contract in the eleventh (11th) month following acceptance of the project by the Owner. A bond of not less than \$10,000.00 shall be provided to the Owner to guarantee the performance of this work.

**END OF SECTION**

**SECTION 331411 - WATER SERVICE PIPING****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material ,equipment and incidentals necessary to complete all water service piping as indicated on the drawings and specified herein.
- B. Detail material and construction requirements for this work shall be in accordance with the Standard Plumbing Code, latest edition as interpreted by the City of Mobile Inspection Services Department and the latest version of the “Standard Specifications for Water Mains, Sanitary Sewers, and Sewage Pumping Station” of the Board of Water and Sewer Commissioners of the City of Mobile, Alabama, hereinafter called MAWSS Specifications and all addenda issued through the bid date of the project.
- C. The items of work to be performed include, but are not limited to:
  - 1. Site piping, domestic and fire water.
  - 2. Control valves, including backflow preventer valve, pit and piping.
  - 3. Water meter, pit, and piping.
- D. Related work specified elsewhere:
  - 1. MAWSS Standard Specification Section 11.
  - 2. MAWSS Standard Specification Appendix A.
  - 3. MAWSS Standard Specifications Section 15 Backfilling
  - 4. MAWSS Standard Specifications Section 17 Encasement Pipe
  - 5. MAWSS Standard Specification Section 20 Horizontal Directional Drilling (HDD)/HDPE Pipe
  - 6. All MAWSS Standard Specifications and be found at the following location:  
<https://www.mawss.com/bids/standard-specifications/>
  - 7. Earthwork – SECTION 310000.
  - 8. Site Grading – SECTION 312200.
  - 9. Soil Compaction and Control – SECTION 312323.
  - 10. Water Distribution – SECTION 331400.

**1.02 SUBMITTALS**

- A. Provide manufacturer data and installation instructions on water line materials.
- B. Test Results: As specified in MAWSS Standard Specification Section 11.

**PART 2 PRODUCTS****2.01 MATERIALS**

- A. Shall be in accordance with MAWSS Standard Specification Appendix A.

**PART 3 EXECUTION****3.01 INSTALLATION**

- A. Refer to MAWSS Standard Specification Section 11

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 333000 - SANITARY SEWERAGE**

**PART 1 GENERAL**

- A. All work under this Contract shall be done in accordance with the requirements of the Mobile Area Water and Sewer Board Standard Specifications Section 12 Sanitary Sewer
- B. Submit Product Data, as specified under MAWSS Section 12.
- C. Submit Shop Drawings for precast concrete manholes, including frames and covers as specified under MAWSS Section 12.
- D. All Specifications can be found at the following location. <https://www.mawss.com/bids/standard-specifications/>

**PART 2 PRODUCTS**

- A. Shall be in accordance with MAWSS Standard Specification Appendix A.

**PART 3 EXECUTION**

- A. Refer to MAWSS Standard Specification Section 12.

**END OF SECTION**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 333100 – SANITARY SEWER COLLECTION SYSTEM****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material, equipment and incidentals necessary to complete the sanitary sewer collection system as indicated on the drawings and specified herein.
- B. Detail material and construction requirements for this work shall be in accordance with the Standard Plumbing Code, latest edition as interpreted by the City of Mobile Inspection Services Department and the latest version of the “Standard Specifications for Water Mains, Sanitary Sewers, and Sewage Pumping Station” of the Board of Water and Sewer Commissioners of the City of Mobile, Alabama, hereinafter called MAWSS Specifications and all addenda through the bid date of the project.
- C. The items of work to be performed include, but are not limited to:
  - 1. Sanitary sewer conduits.
  - 2. Manholes and clean-outs.
- D. Related work specified elsewhere:
  - 1. MAWSS Standard Specifications Section 12 Sanitary Sewers
  - 2. MAWSS Standard Specifications Section 15 Backfilling
  - 3. MAWSS Standard Specifications Section 17 Encasement Pipe
  - 4. MAWSS Standard Specification Section 19 Rehabilitation of Sanitary Sewer Manholes
  - 5. MAWSS Standard Specification Section 20 Horizontal Directional Drilling (HDD)/HDPE Pipe
  - 6. MAWSS Standard Specification Appendix A
  - 7. MAWSS Standard Specification Appendix C
  - 8. All MAWSS Standard Specifications and be found at the following location:  
<https://www.mawss.com/bids/standard-specifications/>
  - 9. Earthwork – SECTION 310000.
  - 10. Site Grading – SECTION 312200
  - 11. Soil Compaction and Control – SECTION 312323

**1.02 SUBMITTALS**

- A. Provide manufacturer data and installation requirements on all materials.
- B. All referenced submittal information from MAWSS Standard Specifications.
- C. Test Reports As stated in MAWSS Standard Specifications.

**PART 2 PRODUCTS****2.01 MATERIALS**

- 1. Shall be in accordance with the MAWSS Standard Specifications Section 12 and Appendix A “List of Acceptable Products and Approved Manufacturers”.
- 2. Clean-outs – As indicated by drawings.
- 3. Manholes – As indicated by drawings.

4. Collection Piping – As indicated by drawings.

**PART 3 EXECUTION**

- A. Shall be in accordance with MAWSS Standard Specification Section 12.

**END OF SECTION**

**SECTION 334000 - STORMWATER UTILITIES****PART 1 GENERAL****1.01 SUMMARY**

- A. Furnish all labor, material and equipment necessary to complete all construction of the underground storm drainage system indicated on the drawings and specified herein.
- B. Detail material and construction requirements for this work shall be in accordance with the Alabama Department of Transportation "Standard Specifications for Highway Construction", latest edition, hereinafter referred to as "Standard Specifications".
- C. The items of work to be performed include, but are not limited to:
  - 1. Constructing underground storm sewer piping.
  - 2. Backfilling and compaction of pipe trench lines.
  - 3. Construction of inlets, junction boxes, and other drainage structures.
- D. Related work specified elsewhere:
  - 1. Earthwork – SECTION 310000.
  - 2. Soil Compaction Control – SECTION 31232323.

**1.02 SUBMITTALS**

- A. Provide manufacturer data and installation instructions on all materials required under this section.

**PART 2 PRODUCTS****2.01 MATERIALS**

- A. Storm drain piping shall be as follows:
  - 1. Circular pipe 24-inch diameter and larger and all arch pipe shall be Class III R.C. pipe. Circular pipe shall have rubber gasket joints and arch pipe shall have "Ram Nek" type gaskets.
  - 2. Pipe 12" to 24" diameter inclusive shall be A-2000 Ribbed P.V.C. pipe with watertight joints. Pipe less than 12" diameter shall be Schedule 40 Polyvinyl Chloride (P.V.C.) sewer pipe with elastomeric joints. Fittings shall be of the same materials as the pipe.
- B. Materials for drainage structures shall meet the requirements of Section 621 of the Standard Specifications or as called for by the drawings.
- C. Underdrain pipe shall be P.V.C. perforated pipe with filter material as specified in Section 606 of the Standard Specifications.
- D. Rip Rap materials shall be stone from quarry meeting the requirements of Section 610 of the Standard Specifications. Filter fabric beneath rip rap shall also be as specified in Section 610.

**PART 3 EXECUTION****3.01 CONSTRUCTION REQUIREMENTS**

- A. Pipelines
  - 1. Pipelines shall be laid true to lines and grades set forth by the plans in accordance with the Standard Specifications. All pipe bedding shall be Class "C" as defined by the Standard Specifications.

2. Beneath paved areas, trenches and related excavations shall be backfilled with material meeting the requirements for select fill and backfill material beneath paved areas. Material shall be placed in 8" loose lifts and compacted to 95% Standard Density. Excavated materials shall be removed from the new pavement area as unsatisfactory materials.
- B. Inlets and Junction Boxes
1. Inlets and junction boxes shall be constructed in accordance with the plans and Section 621 of the Standard Specifications.
  2. All inlets and boxes shall have weep holes.
  3. Manhole steps placed to allow reasonable access, maximum 6" vertical spaces.
- C. Underdrain
1. Underdrain pipe shall be constructed in specific locations authorized by the Engineer.
  2. The underdrain pipe shall be constructed in accordance with plan details and Section 606 of the Standard Specifications.
- D. Rip Rap and Filter Cloth
1. Rip rap and filter fabric shall be placed as detailed in the Standard Specifications and as shown on the drawings.
- E. Cleanout and Inspection
1. The entire system shall be cleaned of silt, sediment, debris, and other objectionable matter, and inspected. Pipe shall be cut-off flush with the face of the structure. The pipe and structure shall be grouted as indicated by the drawings. Steps, castings and other incidentals shall be placed as indicated by the drawings.

**SECTION 32 13 13 - CONCRETE PAVING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 DESCRIPTION OF WORK**

- A. Extent of portland cement concrete paving is shown on drawings, including exterior walks, paving, entry pads, dumpster pads, and mechanical equipment pads.
  - 1. Stamped, integrally colored concrete exterior walks, with shake-on color hardener/curing compound, only at locations where indicated on the Drawings.
- B. Related Requirements:
  - 1. Section 033000 "Cast-in-Place Concrete" for general building applications of concrete.
  - 2. Section 321316 "Decorative Concrete Paving" for stamped concrete other than stamped detectable warnings.
  - 3. Section 321373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within concrete paving and in joints between concrete paving and asphalt paving or adjacent construction.
  - 4. Section 321713 "Parking Bumpers."
  - 5. Section 321723 "Pavement Markings."
  - 6. Section 321726 "Tactile Warning Surfacing" for detectable warning pavers.
  - 7. Section 321729 "Manufactured Traffic-Calming Devices."

**1.3 SUBMITTALS**

- A. Product Data: Include manufacturer's complete current product data, material descriptions, chemical composition, physical properties, test data, and mixing and application instructions.
  - 1. Include manufacturer's current color charts for integrally colored concrete.
  - 2. Include manufacturer's current color charts for shake-on color hardeners.
  - 3. Include manufacturer's current selections for any locations indicated to receive concrete pattern stamps.
- B. Samples for Verification: Cured samples of each color and pattern selection, approximately 2-feet x 2-feet in size, for acceptance, and for use in verifying the completed work.
- C. Product Certificates: Signed by manufacturers certifying that products furnished comply with requirements that are recommended by manufacturer for uses indicated.
- D. Qualification Data:
- E. Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.
- F. Qualification Data: For installers and manufacturers, to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other specified information.

1. For products required to be installed by workers approved by product manufacturers, include letters of acceptance by product manufacturers certifying that installers are approved to apply their products.
- G. Material Certificates: For the following, from manufacturer:
1. Cementitious materials.
  2. Steel reinforcement and reinforcement accessories.
  3. Fiber reinforcement.
  4. Admixtures.
  5. Curing compounds.
  6. Applied finish materials.
  7. Bonding agent or epoxy adhesive.
  8. Joint fillers.
  9. Concrete mix designs.
- H. Material Test Reports: For each of the following:
1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.
- I. Field quality-control reports.

#### **1.4 QUALITY ASSURANCE**

- A. Codes and Standards: Comply with “Alabama Highway Department Standard Specifications for Highway Construction” (ALDOT), latest edition, and local governing regulations if more stringent than herein specified.
- B. Comply with the more stringent requirements of at least the following, either the latest edition or latest adopted edition of the locality, and all revisions and amendments thereto:
1. Uniform Federal Accessibility Standards (UFAS).
  2. Americans With Disabilities Act of 1990 (ADA) “Accessibility Guidelines” (ADA-AG), and all revisions and amendments thereto.
  3. U.S. Architectural & Transportation Barriers Compliance Board’s ADA-ABA “Accessibility Guidelines” (ADA-AG), Published in the Federal Register July 23, 2024, and revisions and amendments thereto.
  4. American National Standards Institute (ANSI), ANSI A 117.1, 2003.
  5. International Building Code, as applicable at the project locale.
- C. Testing: All laboratory and field testing required to ensure compliance with these specifications will be performed by a qualified independent testing laboratory. Refer to Division 1 for additional information and requirements.
- D. Refer to Division 1 Section “Special Procedures” for additional information and minimum experience requirements.

#### **1.5 PRECONSTRUCTION TESTING**

- A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on concrete paving mixtures.

#### **1.6 FIELD CONDITIONS**

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

- B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
1. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
  2. Do not use frozen materials or materials containing ice or snow.
  3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
- C. Hot-Weather Concrete Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:
1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
  2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
  3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Forms:
1. Steel, wood, or other suitable material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects.
  2. Use flexible spring steel forms or laminated boards to form radius bends as required.
  3. Coat forms with a non-staining form release agent that will not discolor or deface surface of concrete.
- B. Welded Wire Mesh:
1. Welded plain cold-drawn steel wire fabric, ASTM A 185.
    - a. Size: 6" x 6" W1.4 / W1.4 at sidewalks, pedestrian only traffic areas and mechanical pads, and 6" x 6" W2.9 /W2.9 at vehicular paving areas and dumpster pads, unless heavier mesh is indicated on the Drawings.
  2. Furnish in flat sheets, not rolls, unless otherwise acceptable to Architect, for all concrete paving subject to possibility of bearing the weight of vehicular traffic.
  3. Furnish in rolls for all concrete paving accessible only to pedestrian traffic, unless indicated otherwise on structural drawings.
  4. Locations for Use: All concrete pads and paving, at 1/3 of total depth of concrete from top of slab.
- C. Reinforcing Bars: Deformed steel bars, ASTM A 615, Grade 40 or 60.
- D. Concrete Materials: Comply with requirements of Section 03 3000 - "Cast-in-place Concrete", for concrete mix design, materials, admixtures, bonding materials, and other materials as required.

1. Integrally colored concrete for walks as indicated, or if not indicated, as selected by Architect from manufacturer's standard colors after bidding.
  2. Stamped concrete walk pattern as indicated, or if not indicated, as selected by Architect from manufacturer's standard patterns, after bidding.
- E. Expansion Joint Materials: Comply with requirements of Section 07 9000 - "Joint Protection" for preformed and pourable expansion joint fillers and sealers.
- F. Curing and Sealing Compound: Conform to TT-C-800, with 30% solids content minimum.
- G. Patterned Concrete Stamp Mats: Provide durable semi-rigid polyurethane mats with projecting textured and ridged underside, capable of imprinting texture and joint patterns on plastic concrete, equivalent to standard "random slate", approximately 9" x 9" "slate tile", or equivalent priced patterns, of one of the following:
1. Bomanite Corporation
  2. Increte Systems, Inc
  3. Patterned Concrete Industries, Ltd.
  4. Scofield, L.M. Company
  5. Specialty Concrete Products, Inc.
  6. Symons Corporation
- H. Color Hardener: Equivalent to "Lithochrome Color Hardener", as manufactured by L.M. Scofield Company.
- I. Epoxy Adhesive: Provide best quality two-part product, as indicated in current edition of Alabama State Highway Department's "Standard Specifications for Highways and Bridges."

## 2.2 CONCRETE MIX, DESIGN, AND TESTING

- A. Comply with requirements of Section 03 3000 - "Cast-in-place Concrete", for concrete mix design, sampling and testing, and quality control, and as herein specified.
- B. Design mix to produce normal-weight concrete consisting of portland cement, aggregate, water-reducing or high-range water-reducing admixture (super-plasticizer), air-entraining admixture and water to produce the following properties:
1. Sidewalks, curbs and gutters, entry pads, mechanical equipment pads, and below unit pavers' substrates (crushed limestone unless otherwise indicated) - and subject only to pedestrian traffic:
    - a. Compressive Strength: 3,000 psi, minimum at 28 days.
    - b. Slump Range: 3" to 5".
    - c. Air Content: 5% to 6%.
    - d. Thickness: 4", unless indicated otherwise.
    - e. Compacted Subgrade: 4" porous fill on compacted subgrade (98% S.P.D.).
  2. Paving, pads, and below unit pavers' substrates (crushed limestone unless otherwise indicated) - and subject to vehicular traffic, valley gutters, dumpster pads, and where indicated:
    - a. Compressive Strength: 4,000 psi, minimum at 28 days (minimum 600 psi flexural strength).
    - b. Slump: Less than 4".
    - c. Air Content: As required by referenced standards.
    - d. Thickness: 6", unless greater thickness is indicated on the Drawings.
    - e. Subgrade: Unless otherwise indicated on the Drawings, 6" ALDOT graded aggregate base, over properly prepared and tested subgrade, including in part, in compliance with applicable portions of Section 204-2; Compaction to 98% Standard Proctor Density. Refer to Project Manual Section 02 3000 - "Subsurface Investigation" for additional information and requirements.

3. Colored Concrete: Ready-mix concrete supplier's standard integrally colored concrete mix design, colors as selected by Architect after bidding, and otherwise in compliance with the above requirements for mix design based on location and use of the completed concrete work.

### **PART 3 - EXECUTION**

#### **3.1 SURFACE PREPARATION**

- A. Remove loose material from compacted subbase surface immediately before placing concrete.
- B. Proof-roll prepared subbase surface to check for unstable areas and need for additional compaction. Do not begin paving work until such conditions have been corrected and are ready to receive paving.
- C. Subgrade shall be approved by Architect's representative before paving is begun

#### **3.2 FORM CONSTRUCTION**

- A. Set forms to required grades and lines, rigidly braced and secured. Install sufficient quantity of forms to allow continuous progress of work and so that forms can remain in place at least 24 hours after concrete placement.
- B. Check completed formwork for grade and alignment to following tolerances:
  1. Top of forms not more than 1/8" in 10'.
  2. Vertical face on longitudinal axis, not more than 1/4" in 10'.
- C. Clean forms after each use, and coat with form release agent as often as required to ensure separation from concrete without damage.

#### **3.3 REINFORCEMENT**

- A. Locate, place and support reinforcement as specified in Section 03 3000 - "Cast-in-place Concrete", unless otherwise indicated. Install welded wire fabric in as long lengths as practicable, lapping at least one mesh.

#### **3.4 CONCRETE PLACEMENT**

- A. Comply with requirements of Section 03 3000 - "Cast-in-place Concrete", for mixing and placing concrete, and as herein specified.
- B. Do not place concrete until subbase and forms have been checked for line and grade. Moisten subbase, if required, to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
- C. Place concrete using methods which prevent segregation of mix. Consolidate concrete along face of forms and adjacent to transverse joints with internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand-spreading and consolidation. Consolidate with core to prevent dislocation of reinforcing, dowels, and joint devices.
  1. Deposit and spread concrete in a continuous operation between transverse joints, as far as possible. If interrupted for more than 1/2-hour, place a construction joint.

### 3.5 JOINTS

- A. General: Construct expansion, weakened-plane (contraction), and construction joints true-to-line with face perpendicular to surface of concrete. Construct transverse joints at right angles to the centerline, unless otherwise indicated.
- B. Weakened-Plane (Contraction) Joints:
  - 1. Provide weakened-plane (contraction) joints, sectioning concrete into areas as shown on drawings. Construct weakened-plane joints for a depth equal to at least 1/4 concrete thickness, as follows below.
  - 2. Tooled Joints: Form weakened-plane joints in fresh concrete by grooving top portion with a recommended cutting tool and finishing edges with a jointer.
  - 3. Sidewalks shall be scored at 5-foot intervals unless otherwise indicated.
- C. Construction Joints: Place construction joints at end of placements and at locations where placement operations are stopped for a period of more than 1/2-hour, except where such placements terminate at expansion joints.
- D. Expansion Joints:
  - 1. Provide expansion joints with premolded joint filler at locations abutting concrete curbs, catch basins, manholes, inlets, structures, walks and other fixed objects, unless otherwise indicated.
  - 2. Extend joint fillers full-width and depth of joint.
  - 3. Furnish joint fillers in one-piece lengths for full width being placed, wherever possible. Where more than one length is required, lace or clip joint filler sections together.
  - 4. Expansion joints for sidewalks shall be placed at 30-foot maximum intervals and along all intersections with other walks, steps, curbs, or other vertical surfaces.
- E. Fillers and Sealants: Comply with the requirements of Section 07 9000 - "Joint Protection", for preparation of joints, materials, installation and performance.

### 3.6 CONCRETE FINISHING

- A. After striking-off and consolidating concrete, smooth surface by screeding and floating. Using hand methods only where mechanical floating is not possible. Adjust floating to compact surface and produce uniform texture.
- B. After floating, test surface for trueness with a 10' straightedge. Distribute concrete as required to remove surface irregularities, and refloat repaired areas to provide a continuous smooth finish.
- C. Work edges of slabs and formed joints with an edging tool, and round to 1/4" radius, unless otherwise indicated. Eliminate tool marks on concrete surface.
- D. After completion of floating and troweling, when excess moisture or surface sheen has disappeared, complete surface finishing, as follows:
  - 1. Light and smooth broom finish, by drawing a fine-hair broom across concrete surface, perpendicular to line of traffic. Repeat operation as required to provide a fine line texture acceptable to Architect.
  - 2. Stamped pattern (if any), only at locations indicated on the Drawings, as indicated, or if not indicated, as selected from manufacturer's standard patterns by the Architect after bidding.
  - 3. Lightly rework slab edges and all joints with 2-inch wide flat edging tool, so as to remove approximately half of the broom finish relief, leaving a light broom finish and a 2-inch wide pattern framing slab panels at all edges and joint locations.
    - a. Provide above 2-inch wide pattern framing slab panels at all edges and joint locations, at all locations of concrete sidewalks, pads and paving, including areas of stamped, unstamped, integrally colored and natural colored concrete, etc.

- E. On inclined slab surfaces, provide a coarse, non-slip finish by scoring surface with a stiff-bristled broom, perpendicular to line of traffic.
- F. Do not remove forms for 24 hours after concrete has been placed. After form removal, clean ends of joints and point-up any minor honeycombed areas. Remove and replace areas or sections with major defects, as directed by Architect.
  - 1. Provide rubbed finish for exposed edges of concrete work and apply light and smooth broom finish.

### **3.7 PATTERNED AND/OR COLORED CONCRETE**

- A. Provide colored hardener, any stamp patterns, joint patterns, and sealer in compliance with current written instructions and recommendations of the manufacturer of each product or system.
  - 1. Walking surface shall be flat, and flush with adjacent concrete walks and paving.

### **3.8 CURING**

- A. Protect and cure finished concrete paving, complying with applicable requirements of Division 3 Section "Cast-In-Place Concrete". Use curing and sealing compound or approved moist-curing methods.
- B. Begin initial curing as soon as free water has disappeared from exposed surfaces. Where possible, keep continuously moist for not less than 72 hours. Continue curing by use of moisture-retaining cover or membrane-forming curing compound. Cure formed surfaces by moist curing until forms are removed. Provide protections as required to prevent damage to exposed concrete surfaces.

### **3.9 REPAIRS AND PROTECTIONS**

- A. Repair or replace broken or defective concrete, as directed by Architect.
- B. Drill test cores where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory pavement areas with portland cement concrete bonded to pavement with epoxy resin grout.
- C. Protect concrete from damage until acceptance of work. Exclude traffic from pavement for at least 14 days after placement. When construction traffic is permitted, maintain pavement as clean as possible by removing surface stains and spillage of materials as they occur.
  - 1. Sweep concrete pavement and wash free of stains, discolorations, dirt and other foreign material just prior to final inspection.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 13 16 - DECORATIVE CONCRETE PAVING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Extent of decorative portland cement concrete paving is shown on drawings, including exterior walks and paving areas.
  - 1. Integrally colored concrete exterior walks, with shake-on color hardener/curing compound only at locations where indicated in the Drawings.
- B. Related Requirements:
  - 1. Section 033000 "Cast-in-Place Concrete" for general building applications of concrete.
  - 2. Section 321313 "Concrete Paving" for cast-in-place concrete paving with other finishes, curbs and gutters, and stamped detectable warnings.
  - 3. Section 321373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within decorative concrete paving and in joints between decorative concrete paving and other paving or adjacent construction.

**1.3 DEFINITIONS**

- A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.
- B. W/C Ratio: The ratio by weight of water to cementitious materials.

**1.4 SUBMITTALS**

- A. Product Data: Include manufacturer's complete current product data, material descriptions, chemical composition, physical properties, test data, and mixing and application instructions.
  - 1. Include manufacturer's current color charts for integrally colored concrete.
  - 2. Include manufacturer's current color charts for shake-on color hardeners.
  - 3. Include manufacturer's current selections for any locations indicated to receive concrete pattern stamps.
- B. Samples for Verification: Cured samples of each color and pattern selection, approximately 2-feet x 2-feet in size, for acceptance, and for us in verifying the completed work.
- C. Product Certificates: Signed by manufacturers certifying that products furnished comply with requirements that are recommended by manufacturer for uses indicated.
- D. Qualification Data:
- E. Coordinate "Qualification Data" Paragraph below with qualification requirements in Section 014000 "Quality Requirements" and as may be supplemented in "Quality Assurance" Article.

- F. Qualification Data: For installers and manufacturers, to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other specified information.
  - 1. For products required to be installed by workers approved by product manufacturers, include letters of acceptance by product manufacturers certifying that installers are approved to apply their products.
- G. Material Certificates: For the following, from manufacturer:
  - 1. Cementitious materials.
  - 2. Steel reinforcement and reinforcement accessories.
  - 3. Fiber reinforcement.
  - 4. Admixtures.
  - 5. Curing compounds.
  - 6. Applied finish materials.
  - 7. Bonding agent or epoxy adhesive.
  - 8. Joint fillers.
  - 9. Concrete mix designs.
- H. Material Test Reports: For each of the following:
  - 1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.
- I. Field quality-control reports.

### **1.5 QUALITY ASSURANCE**

- A. Codes and Standards: Comply with "Alabama Highway Department Standard Specifications for Highway Construction" (ALDOT), latest edition, and local governing regulations if more stringent than herein specified.
- B. Comply with the more stringent requirements of at least the following, either the latest edition or latest adopted edition of the locality, and all revisions and amendments thereto:
  - 1. Uniform Federal Accessibility Standards (UFAS).
  - 2. Americans With Disabilities Act of 1990 (ADA) "Accessibility Guidelines" (ADA-AG), and all revisions and amendments thereto.
  - 3. U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA "Accessibility Guidelines" (ADA-AG), Published in the Federal Register July 23, 2024, and revisions and amendments thereto.
  - 4. American National Standards Institute (ANSI), ANSI A 117.1, 2003.
  - 5. International Building Code, as applicable at the project locale.
- C. Testing: All laboratory and field testing required to ensure compliance with these specifications will be performed by a qualified independent testing laboratory. Refer to Division 1 for additional information and requirements.
- D. Refer to Division 1 Section "Special Procedures" for additional information and minimum experience requirements.

### **1.6 PRECONSTRUCTION TESTING**

- A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on decorative concrete paving mixtures.

## 1.7 FIELD CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.
- B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
  - 1. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
  - 2. Do not use frozen materials or materials containing ice or snow.
  - 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
- C. Hot-Weather Concrete Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:
  - 1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
  - 2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
  - 3. Fog-spray forms[, **steel reinforcement**,] and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

## PART 2 - PRODUCTS

### 2.1 CONCRETE, GENERAL

- A. ACI Publications: Comply with **ACI 301 (ACI 301M)** unless otherwise indicated.

### 2.2 FORMS

- A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.
  - 1. Use flexible or uniformly curved forms for curves of a radius of **100 feet (30.5 m)** or less. [ **Do not use notched and bent forms.**]
- B. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration indicated. Provide solid backing and form supports to ensure stability of textured form liners.
- C. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

### 2.3 STEEL REINFORCEMENT

- A. [<Double click to insert sustainable design text for recycled content of steel products.>](#)
- B. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from as-drawn steel wire into flat sheets.

- C. Reinforcing Bars: ASTM A615/A615M, **Grade 60 (Grade 420)**; deformed.
- D. Steel Bar Mats: ASTM A184/A184M; with ASTM A615/A615M, **Grade 60 (Grade 420)** deformed bars; assembled with clips.
- E. Plain-Steel Wire: ASTM A1064/A1064M, as drawn.
- F. Joint Dowel Bars: ASTM A615/A615M, **Grade 60 (Grade 420)** plain-steel bars. Cut bars true to length with ends square and free of burrs.
- G. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:
  - 1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.

## 2.4 CONCRETE MATERIALS

- A. [<Double click to insert sustainable design text for regional materials \(concrete\).>](#)
- B. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- C. Cementitious Materials:
  - 1. Portland Cement: ASTM C150/C150M, [**gray**] [**white**] portland cement [**Type I**] [**Type II**] [**Type I/II**] [**Type III**] [**Type V**].
  - 2. Fly Ash: ASTM C618, Class C or F.
  - 3. Slag Cement: ASTM C989/C989M, Grade 100 or 120.
  - 4. Blended Hydraulic Cement: ASTM C595/C595M, [**Type IS, portland blast-furnace slag**] [**Type IP, portland-pozzolan**] [**Type IL, Portland-limestone**] [**Type IT, ternary blended**] cement.
- D. Normal-Weight Aggregates: ASTM C33/C33M, [**Class 4S**] [**Class 4M**] [**Class 1N**] <Insert class>, uniformly graded. Provide aggregates from a single source[ **with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials**].
  - 1. Maximum Coarse-Aggregate Size: [**1-1/2 inches (38 mm)**] [**1 inch (25 mm)**] [**3/4 inch (19 mm)**] <Insert dimension> nominal.
  - 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- E. Air-Entraining Admixture: ASTM C260/C260M.
- F. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
  - 1. Water-Reducing Admixture: ASTM C494/C494M, Type A[, **colored**].
  - 2. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D[, **colored**].
  - 3. Water-Reducing and Accelerating Admixture: ASTM C494/C494M, Type E.

- G. Color Pigment: ASTM C979/C979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, [ **free of carbon black,**] nonfading, and resistant to lime and other alkalis.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- H. Water: Potable and complying with ASTM C94/C94M.

## 2.5 FIBER REINFORCEMENT

- A. Synthetic Fiber: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, [**1/2 to 1-1/2 inches (13 to 38 mm)**] **<Insert dimensions>** long.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Synthetic Fiber: Fibrillated polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, [**1/2 to 1-1/2 inches (13 to 38 mm)**] **<Insert dimensions>** long.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

## 2.6 SURFACE COLORING MATERIALS

- A. Pigmented Mineral Dry-Shake Hardener: Factory-packaged, dry combination of portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Pigmented Powder Release Agent: Factory-packaged, dry combination of surface-conditioning and dispersing agents interground with color pigments that facilitates release of stamp mats. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- C. Liquid Release Agent: Manufacturer's standard, clear, evaporating formulation that facilitates release of stamp mats and texture rollers.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

## 2.7 CURING AND SEALING MATERIALS

- A. Curing Paper: Nonstaining, waterproof paper, consisting of two layers of kraft paper cemented together and reinforced with fiber, and complying with ASTM C171.
- B. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- C. Waterborne, Membrane-Forming, Curing Compound: ASTM C309, Type 1, Class B, nondissipating, non-yellowing, manufactured for use with colored concrete.
1. Curing compound shall be pigmented type matching color of integrally colored concrete and shall be approved by coloring admixture manufacturer.
  2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.
  3. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

- D. High-Solids, Waterborne, Membrane-Forming, Curing Compound: ASTM C309, Type 1, Class B, 18 to 25 percent solids, nondissipating, non-yellowing, manufactured for use with colored concrete..
1. Curing compound shall be pigmented type matching color of integrally colored concrete and shall be approved by coloring admixture manufacturer.
  2. For concrete indicated to be sealed, curing compound shall be compatible with sealer.
  3. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- E. Clear, Solvent-Borne, Membrane-Forming, Curing and Sealing Compound: ASTM C1315, Type 1, Class A, manufactured for use with colored concrete.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
  2. [<Double click to insert sustainable design text for floor treatment products.>](#)
- F. Clear, Waterborne, Membrane-Forming, Curing and Sealing Compound: ASTM C1315, Type 1, Class A, manufactured for use with colored concrete.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
  2. [<Double click to insert sustainable design text for floor treatment products.>](#)
- G. Clear Acrylic Sealer, Low-to-Medium Gloss: Manufacturer's standard, waterborne, non-yellowing and UV-resistant, membrane-forming, acrylic copolymer emulsion or epoxy-modified acrylic emulsion, manufactured for colored concrete, containing not less than 15 percent solids by volume.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- H. Clear Acrylic Sealer, High Gloss: Manufacturer's standard, waterborne, non-yellowing and UV-resistant, membrane-forming, high-gloss, acrylic copolymer emulsion solution, manufactured for colored concrete, containing not less than 25 percent solids by volume.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- I. Slip-Resistance-Enhancing Additive: Manufacturer's standard finely graded aggregate or polymer additive, designed to be added to clear acrylic sealer to enhance slip resistance of sealed paving surface.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

## 2.8 RELATED MATERIALS

- A. Joint Fillers: **[ASTM D1751, asphalt-saturated cellulosic fiber]** [or] **[ASTM D1752, cork or self-expanding cork]** in preformed strips.
- B. Bonding Agent: ASTM C1059/C1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
- C. Epoxy-Bonding Adhesive: ASTM C881/C881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:
1. **[Types I and II, nonload bearing]** **[Types IV and V, load bearing]**, for bonding hardened or freshly mixed concrete to hardened concrete.
- D. Polyethylene Film: ASTM D4397, **1 mil (0.025 mm)** thick, clear.

## 2.9 CONCRETE MIXTURES

- A. Obtain each color, size, type, and variety of concrete mixture from single manufacturer with resources to provide concrete of consistent quality in appearance and physical properties.
- B. Prepare design mixtures, proportioned according to **ACI 301 (ACI 301M)**, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
- C. Cementitious Materials: **[ Use fly ash, pozzolan, slag cement, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.][ Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:]**
1. Fly Ash or Pozzolan: 25 percent.
  2. Slag Cement: 50 percent.
  3. Combined Fly Ash or Pozzolan, and Slag Cement: 50 percent, with fly ash or pozzolan not exceeding 25 percent.
- D. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:
1. Air Content: **[5-1/2] [4-1/2] [2-1/2]** percent plus or minus 1.5 percent for **1-1/2-inch (38-mm)** nominal maximum aggregate size.
  2. Air Content: **[6] [4-1/2] [3]** percent plus or minus 1.5 percent for **1-inch (25-mm)** nominal maximum aggregate size.
  3. Air Content: **[6] [5] [3-1/2]** percent plus or minus 1.5 percent for **3/4-inch (19-mm)** nominal maximum aggregate size.
- E. Limit water-soluble, chloride-ion content in hardened concrete to **[0.15] [0.30]** percent by weight of cement.
- F. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.
1. Use **[water-reducing admixture] [water-reducing and retarding admixture] [water-reducing and accelerating admixture]** in concrete as required for placement and workability.
  2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
- G. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than **[1.0 lb/cu. yd. (0.60 kg/cu. m)] <Insert requirement>**.
- H. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.
- I. Concrete Mixtures: Normal-weight concrete.
1. Compressive Strength (28 Days): **[4500 psi (31 MPa)] [4000 psi (27.6 MPa)] [3500 psi (24.1 MPa)] [3000 psi (20.7 MPa)] <Insert strength>**.
  2. Maximum W/C Ratio at Point of Placement: **[0.45] [0.50] <Insert ratio>**.
  3. Slump Limit: **[4 inches (100 mm)] [5 inches (125 mm)] <Insert dimension>**, plus or minus **1 inch (25 mm)**.

## 2.10 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M[ **and ASTM C1116/C1116M**]. Furnish batch certificates for each batch discharged and used in the Work.
  - 1. When air temperature is between **85 and 90 deg F (30 and 32 deg C)**, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F (32 deg C)**, reduce mixing and delivery time to 60 minutes.
- B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Mix concrete materials in appropriate drum-type batch machine mixer.
  - 1. For concrete batches of **1 cu. yd. (0.76 cu. m)** or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
  - 2. For concrete batches larger than **1 cu. yd. (0.76 cu. m)**, increase mixing time by 15 seconds for each additional **1 cu. yd. (0.76 cu. m)**.
  - 3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.
- B. Proof-roll prepared subbase surface below [**decorative concrete paving**] <Insert locations> to identify soft pockets and areas of excess yielding.
  - 1. Completely proof-roll subbase in one direction[ **and repeat in perpendicular direction**]. Limit vehicle speed to **3 mph (5 km/h)**.
  - 2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than **15 tons (13.6 tonnes)**.
  - 3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of [**1/2 inch (13 mm)**] <Insert dimension> according to requirements in Section 312000 "Earth Moving."
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Remove loose material from compacted subbase surface immediately before placing concrete.
- B. Protect adjacent construction from discoloration and spillage during application of color hardeners, release agents, stains, curing compounds, and sealers.

### 3.3 EDGE FORMS AND SCREED CONSTRUCTION

- A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

- B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

### 3.4 STEEL REINFORCEMENT INSTALLATION

- A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.
- C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.
- D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.
- E. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum **2-inch (50-mm)** overlap to adjacent mats.

### 3.5 JOINTS

- A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.
  - 1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.
- B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.
  - 1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
  - 2. Butt Joints: Use **[bonding agent] [epoxy-bonding adhesive]** at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
  - 3. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least **1-1/2 inches (38 mm)** into concrete.
  - 4. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
- C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.
  - 1. Locate expansion joints at intervals of **[50 feet (15.25 m)] <Insert dimension>** unless otherwise indicated.
  - 2. Extend joint fillers full width and depth of joint.
  - 3. Terminate joint filler not less than **1/2 inch (13 mm)** or more than **1 inch (25 mm)** below finished surface if joint sealant is indicated.
  - 4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
  - 5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.

6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
- D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows[, **to match jointing of existing adjacent decorative concrete paving**]:
1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a [**1/4-inch (6-mm)**] [**3/8-inch (10-mm)**] radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate grooving-tool marks on concrete surfaces.
    - a. Tolerance: Ensure that grooved joints are within [**3 inches (75 mm)**] **<Insert dimension>** either way from centers of dowels.
  2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut **1/8-inch- (3-mm-)** wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
    - a. Tolerance: Ensure that sawed joints are within [**3 inches (75 mm)**] **<Insert dimension>** in both directions from centers of dowels.
  3. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
- E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a [**1/4-inch (6-mm)**] [**3/8-inch (10-mm)**] radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

### 3.6 CONCRETE PLACEMENT

- A. Before placing concrete, inspect and complete formwork installation[, **steel reinforcement**,] and items to be embedded or cast-in.
- B. Remove snow, ice, or frost from subbase surface[ **and steel reinforcement**] before placing concrete. Do not place concrete on frozen surfaces.
- C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
- D. Comply with **ACI 301 (ACI 301M)** requirements for measuring, mixing, transporting, and placing concrete.
- E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.
- F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.
- G. Consolidate concrete according to **ACI 301 (ACI 301M)** by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.
  1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies[, **reinforcement**,] or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating [**reinforcement**] [**dowels**] [**and**] joint devices.

- H. Screed paving surface with a straightedge and strike off.
- I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

### 3.7 FLOAT FINISHING

- A. General: Do not add water to concrete surfaces during finishing operations.
- B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

### 3.8 INTEGRALLY COLORED CONCRETE FINISH

- A. Integrally Colored Concrete Finish: After final floating, apply the following finish:
  - 1. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
  - 2. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.
  - 3. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface **1/16 to 1/8 inch (1.6 to 3 mm)** deep with a stiff-bristled broom, perpendicular to line of traffic.

### 3.9 STENCILING

- A. Cut stencils to slab width and lay on wet concrete. Overlap "mortar joint" on trailing edge of each section of stencil onto leading "mortar joint" of previous section.
- B. Trim stencils to fit slab and adjacent patterns.
- C. Slightly embed stencil into concrete by rolling with stencil roller.
- D. Apply pigmented mineral dry-shake hardener materials to concrete surfaces according to manufacturer's written instructions.
- E. Stencil Rolling:
  - 1. Apply [**pigmented powder release agent**] [**liquid release agent**] according to manufacturer's written instructions prior to applying texture roller to surface of concrete.
  - 2. Perform rolling operation to produce required texture on concrete surface.
- F. Remove stencils when concrete has sufficiently cured to bear weight. Do not leave stencils in concrete overnight.
- G. Remove debris with mechanical blower prior to application of curing compound. If release agent is applied, delay removal of debris for 24 hours, then flood area with low-pressure water hose, wetting release agent, and follow by cleaning surface with pressure washer.

**3.10 PIGMENTED MINERAL DRY-SHAKE HARDENER APPLICATION**

- A. Pigmented Mineral Dry-Shake Hardener Finish: After initial floating, apply dry-shake materials to paving surfaces according to manufacturer's written instructions and as follows:
1. Uniformly apply dry-shake hardener at a rate of [100 lb/100 sq. ft. (49 kg/10 sq. m)] <Insert rate of application> unless greater amount is recommended by manufacturer to match paving color required.
  2. Uniformly distribute approximately two-thirds of dry-shake hardener over the concrete surface with mechanical spreader; allow hardener to absorb moisture and embed it by power floating. Follow power floating with a second application of pigmented mineral dry-shake hardener, uniformly distributing remainder of material at right angles to first application to ensure uniform color, and embed hardener by final power floating.
  3. After final power floating, apply the following finish:
    - a. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
    - b. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.
    - c. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/16 to 1/8 inch (1.6 to 3 mm) deep with a stiff-bristled broom, perpendicular to line of traffic.
- B. Pigmented Powder Release Agent: Uniformly distribute onto dry-shake-hardened and still-plastic concrete at a rate of 3 to 4 lb/100 sq. ft. (1.5 to 2 kg/10 sq. m).
- C. Liquid Release Agent: Uniformly mist surface of dry-shake-hardened and still-plastic concrete at a rate of 5 gal/1000 sq. ft. (0.2 L/sq. m).

**3.11 STAMPING**

- A. Mat Stamping: After floating and while concrete is plastic, apply mat-stamped finish.
1. Pigmented Powder Release Agent: Uniformly distribute onto concrete at a rate of 3 to 4 lb/100 sq. ft. (1.5 to 2 kg/10 sq. m).
  2. Liquid Release Agent: Apply liquid release agent to the concrete surface and the stamp mat. Uniformly mist surface of concrete at a rate of 5 gal/1000 sq. ft. (0.2 L/sq. m).
  3. After application of release agent, accurately align and place stamp mats in sequence.
  4. Uniformly load mats and press into concrete to produce required imprint pattern and depth of imprint on concrete surface. Gently remove stamp mats. Hand stamp edges and surfaces unable to be imprinted by stamp mats.
  5. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.
- B. Tool Stamping: After floating and while concrete is plastic, apply tool-stamped finish.
1. Cover surface with polyethylene film, stretch taut to remove wrinkles, lap sides and ends 3 inches (75 mm), and secure to edge forms. Lightly broom surface to remove air bubbles.

2. Accurately align and place stamp tools in sequence and tamp into concrete to produce required imprint pattern and depth of imprint on concrete surface. Gently remove stamp tools. Hand stamp edges and surfaces unable to be imprinted by stamp tools.
  3. Carefully remove polyethylene film immediately after tool stamping.
- C. Roller Stamping: After floating and while concrete is plastic, apply roller-stamped finish.
1. Cover surface with polyethylene film, stretch taut to remove wrinkles, lap sides and ends **3 inches (75 mm)**, and secure to edge forms. Lightly broom surface to remove air bubbles.
  2. Accurately align roller and perform rolling operation to produce required imprint pattern and depth of imprint on concrete surface. Hand stamp surfaces inaccessible to roller.
  3. Carefully remove polyethylene film immediately after roller stamping.

### 3.12 CONCRETE PROTECTION AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
- B. Comply with ACI 306.1 for cold-weather protection.
- C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching **0.2 lb/sq. ft. x h (1 kg/sq. m x h)** before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.
- D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.
- E. Curing Compound: Apply immediately after final finishing. Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.
1. Cure integrally colored concrete with a **[pigmented]** curing compound.
  2. Cure concrete finished with pigmented mineral dry-shake hardener with a **[pigmented]** curing compound.
- F. Curing and Sealing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating, and repair damage during curing period.
- G. Curing Paper: Cure with unwrinkled curing paper in pieces large enough to cover the entire width and edges of slab. Do not lap sheets. Fold curing paper down over paving edges and secure with continuous banks of earth to prevent displacement or billowing due to wind. Immediately repair holes or tears in paper.

### 3.13 STAINING

- A. Newly placed concrete paving shall be at least **[14] [30] <Insert number>** days old before staining.
- B. Prepare surfaces according to manufacturer's written instructions and as follows:

1. Clean concrete thoroughly by scraping, applying solvents or stripping agents, sweeping and pressure washing, or scrubbing with a rotary floor machine and detergents recommended by stain manufacturer. Rinse until water is clear and allow surface to dry.
    - a. Do not use acidic solutions to clean surfaces.
  2. Test surfaces with droplets of water. If water beads and does not penetrate surface, or penetrates only in some areas, profile surfaces by **[acid etching] [grinding, sanding, or abrasive blasting]**. Retest and continue profiling surface until water droplets immediately darken and uniformly penetrate concrete surfaces.
  3. Apply acidic solution to dampened concrete surfaces, scrubbing with uncolored, acid-resistant nylon-bristle brushes until bubbling stops and concrete surface has texture of 120-grit sandpaper. Do not allow solution to dry on concrete surfaces. Rinse until water is clear. Control, collect, and legally dispose of runoff.
  4. Neutralize concrete surfaces and rinse until water is clear. Test surface for residue with clean white cloth. Test surface according to ASTM F710 to ensure pH is between **[7 and 8]** **<Insert values>**.
- C. Scoring: Score decorative jointing in paving surfaces **1/16 inch (1.6 mm)** deep with diamond blades to match pattern indicated. Rinse until water is clear. Score **[after] [before]** staining.
1. Joint Width: **[3/8 inch (10 mm)]** **<Insert dimension>**.
- D. Allow paving surface to dry before applying stain. Verify readiness of paving to receive stain according to ASTM D4263 by tightly taping **18-by-18-inch (450-by-450-mm), 4-mil- (0.1-mm-)** thick polyethylene sheet to a representative area of paving surface. Apply stain only if no evidence of moisture has accumulated under sheet after 16 hours.
- E. Reactive Stain: Apply reactive stain to paving surfaces according to manufacturer's written instructions and as follows:
1. Apply stain by uncolored bristle brush, roller, or high-volume, low-pressure sprayer and immediately scrub into concrete surface with uncolored, acid-resistant nylon-bristle brushes in continuous, circular motion. Do not spread stain after fizzing stops. Allow to dry four hours and repeat application of stain in sufficient quantity to obtain color consistent with approved mockup.
  2. Remove stain residue after four hours by wet scrubbing with commercial-grade detergent recommended by stain manufacturer. Rinse until water is clear. Control, collect, and legally dispose of runoff.
- F. Penetrating Stain: Apply to paving surfaces according to manufacturer's written instructions and as follows:
1. Apply first coat of stain to dry, clean surfaces by airless sprayer or by high-volume, low-pressure sprayer.
  2. Allow to dry four hours and repeat application of stain in sufficient quantity to obtain color consistent with approved mockup.
  3. Rinse until water is clear. Control, collect, and legally dispose of runoff.

### 3.14 SEALER APPLICATION

- A. Clear Acrylic Sealer: Apply uniformly in two coats in continuous operations according to manufacturer's written instructions. Allow first coat to dry before applying second coat, at 90 degrees to the direction of the first coat, using same application methods and rates.

1. Begin sealing dry surface no sooner than [14] <Insert number> days after concrete placement.
2. Allow stained concrete surfaces to dry before applying sealer.
3. Thoroughly mix slip-resistance-enhancing additive into sealer before applying sealer according to manufacturer's written instructions. Stir sealer occasionally during application to maintain even distribution of additive.

### 3.15 PAVING TOLERANCES

- A. Comply with tolerances in ACI 117 (ACI 117M) and as follows:
1. Elevation: 3/4 inch (19 mm).
  2. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
  3. Surface: Gap below 10-foot- (3-m-) long, unlevelled straightedge not to exceed 1/2 inch (13 mm).
  4. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
  5. Vertical Alignment of Dowels: 1/4 inch (6 mm).
  6. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
  7. Joint Spacing: 3 inches (75 mm).
  8. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
  9. Joint Width: Plus 1/8 inch (3 mm), no minus.

### 3.16 FIELD QUALITY CONTROL

- A. Testing Agency: [Owner will engage] [Engage] a qualified testing agency to perform tests and inspections.
- B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C172/C172M shall be performed according to the following requirements:
1. Testing Frequency: Obtain at least one composite sample for each [100 cu. yd. (76 cu. m)] [5000 sq. ft. (465 sq. m)] or fraction thereof of each concrete mixture placed each day.
    - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
  2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
  3. Air Content: ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
  4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (27 deg C) and above, and one test for each composite sample.
  5. Compression Test Specimens: ASTM C31/C31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.

6. Compressive-Strength Tests: ASTM C39/C39M; test one specimen at seven days and two specimens at 28 days.
  - a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.
- C. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).
- D. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
- E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
- F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.
- G. Decorative concrete paving will be considered defective if it does not pass tests and inspections.
- H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- I. Prepare test and inspection reports.

### 3.17 REPAIR AND PROTECTION

- A. Remove and replace decorative concrete paving that is broken or damaged or does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.
- B. Detailing: Grind concrete "squeeze" left from tool placement. Color ground areas with slurry of color hardener mixed with water and bonding agent. Remove excess release agent with high-velocity blower.
- C. Protect decorative concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.
- D. Maintain decorative concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

### 3.18 DECORATIVE CONCRETE PAVING SCHEDULE

- A. Patterned Decorative Concrete Paving <Insert drawing designation>:
  1. Locations: Install at [drives] [parking lots] [walks] [patios] [and] [swimming pool decks] <Insert location>.
  2. Coloring Method: [Integrally colored] [Pigmented mineral dry-shake hardener].

- a. Color: **[As indicated by manufacturer's designation] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>**.
3. Field Patterning Method: **[Stamped] [Stenciled]**.
    - a. Texture and Pattern: **[Keystone installed at 45-degrees diagonal to main lines of building] <Insert requirement>**.
    - b. Pigmented Mineral Dry-Shake Hardener: **<Insert color>**.
    - c. Release Agent: **[Match pigmented mineral dry-shake hardener] <Insert color>**.
  4. Border and Accent Strip Patterning Method: **[Stamped] [Stenciled]**.
    - a. Texture and Pattern: **<Insert requirement>**.
    - b. Pigmented Mineral Dry-Shake Hardener: **<Insert color>**.
    - c. Release Agent: **[Match pigmented mineral dry-shake hardener] <Insert color>**.
- B. Stained Decorative Concrete Paving **<Insert drawing designation>**:
1. Locations: Install at **[drives] [parking lots] [walks] [patios] [and] [swimming pool decks] <Insert location>**.
  2. Staining Method: **[Reactive] [Penetrating] stain**.
  3. Color: **[As indicated by manufacturer's designation] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>**.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 13 73 - CONCRETE PAVING JOINT SEALANTS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Cold-applied joint sealants.
  - 2. Hot-applied joint sealants.
  - 3. Cold-applied, fuel-resistant joint sealants.
  - 4. Hot-applied, fuel-resistant joint sealants.
  - 5. Joint-sealant backer materials.
  - 6. Primers.
- B. Related Requirements:
  - 1. Section 079200 "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in **1/2-inch- (13-mm-)** wide joints formed between two **6-inch- (150-mm-)** long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
- C. Paving-Joint-Sealant Schedule: Include the following information:
  - 1. Joint-sealant application, joint location, and designation.
  - 2. Joint-sealant manufacturer and product name.
  - 3. Joint-sealant formulation.
  - 4. Joint-sealant color.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For **[Installer]** **[testing agency]**.
- B. Product Certificates: For each type of joint sealant and accessory.

**1.6 QUALITY ASSURANCE**

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

- B. Product Testing: Test joint sealants using a qualified testing agency.

## 1.7 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
  - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer[ or are below 40 deg F (5 deg C)].
  - 2. When joint substrates are wet.
  - 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
  - 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

## PART 2 - PRODUCTS

### 2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backing materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

### 2.2 COLD-APPLIED JOINT SEALANTS

- A. Single-Component, Nonsag, Silicone Joint Sealant: ASTM D5893/D5893M, Type NS.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Single-Component, Self-Leveling, Silicone Joint Sealant: ASTM D5893/D5893M, Type SL.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- C. Multicomponent, Nonsag, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade NS, Class 25, for Use T.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- D. Single Component, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C920, Type S, Grade P, Class 25, for Use T.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- E. Multicomponent, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade P, Class 25, for Use T.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

### 2.3 HOT-APPLIED JOINT SEALANTS

- A. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type I.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type I or Type II.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

- C. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type I, II, or III.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- D. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type IV.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

#### 2.4 COLD-APPLIED, FUEL-RESISTANT JOINT SEALANTS

- A. Fuel-Resistant, Single-Component, Pourable, Modified-Urethane, Elastomeric Joint Sealant: ASTM C920, Type S, Grade P, Class 25, for Use T.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Fuel-Resistant, Multicomponent, Pourable, Modified-Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade P, Class 12-1/2 or 25, for Use T.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

#### 2.5 HOT-APPLIED, FUEL-RESISTANT JOINT SEALANTS

- A. Hot-Applied, Fuel-Resistant, Single-Component Joint Sealants: ASTM D7116, Type I or Type II.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Hot-Applied, Fuel-Resistant, Single-Component Joint Sealants: ASTM D7116, Type III.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

#### 2.6 JOINT-SEALANT BACKER MATERIALS

- A. Joint-Sealant Backer Materials: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.
- B. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.
- C. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.
- D. Backer Strips for Cold- and Hot-Applied Joint Sealants: ASTM D5249; Type 2; of thickness and width required to control joint-sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.

#### 2.7 PRIMERS

- A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine joints to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 PREPARATION**

- A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.
  - 1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
- B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

**3.3 INSTALLATION OF JOINT SEALANTS**

- A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.
- B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions.
- C. Install joint-sealant backings to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
  - 1. Do not leave gaps between ends of joint-sealant backings.
  - 2. Do not stretch, twist, puncture, or tear joint-sealant backings.
  - 3. Remove absorbent joint-sealant backings that have become wet before sealant application and replace them with dry materials.
- D. Install joint sealants immediately following backing installation, using proven techniques that comply with the following:
  - 1. Place joint sealants so they fully contact joint substrates.
  - 2. Completely fill recesses in each joint configuration.
  - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- E. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants according to the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:
  - 1. Remove excess joint sealant from surfaces adjacent to joints.
  - 2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

- F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

### 3.4 CLEANING AND PROTECTION

- A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.
- B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

### 3.5 PAVING-JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Joints within concrete paving[ <PJS-#>].
  - 1. Joint Location:
    - a. Expansion and isolation joints in concrete paving.
    - b. Contraction joints in concrete paving.
    - c. Other joints as indicated.
  - 2. Joint Sealant: [Single-component, nonsag, silicone joint sealant] [Single-component, self-leveling, silicone joint sealant] [Multicomponent, nonsag, urethane, elastomeric joint sealant] [Single component, pourable, urethane, elastomeric joint sealant] [Multicomponent, pourable, urethane, elastomeric joint sealant] [Hot-applied, single-component joint sealant] <Insert joint sealant>.
  - 3. Joint-Sealant Color: [Manufacturer's standard] <Insert color>.
- B. Joint-Sealant Application: Joints within concrete paving and between concrete and asphalt paving[ <PJS-#>].
  - 1. Joint Location:
    - a. Joints between concrete and asphalt paving.
    - b. Joints between concrete curbs and asphalt paving.
    - c. Other joints as indicated.
  - 2. Joint Sealant: [Hot-applied, single-component joint sealant] <Insert joint sealant>.
  - 3. Joint-Sealant Color: [Manufacturer's standard] <Insert color>.
- C. Joint-Sealant Application: Fuel-resistant joints within concrete paving[ <PJS-#>].
  - 1. Joint Location:
    - a. Expansion and isolation joints in concrete paving.
    - b. Contraction joints in concrete paving.
    - c. Other joints as indicated.
  - 2. Joint Sealant: [Fuel-resistant, single-component, pourable, modified-urethane, elastomeric joint sealant] [Fuel-resistant, multicomponent, pourable, modified-urethane, elastomeric joint sealant] [Hot-applied, fuel-resistant, single-component joint sealant] <Insert joint sealant>.

3. Joint-Sealant Color: **[Manufacturer's standard]** <Insert color>.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 14 00 - UNIT PAVING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS:**

- A. The general provisions of the contract, including General and Supplementary conditions and General Requirements apply to the work of this Section.
- B. Section 31 2000 – Earth Moving.

**1.2 DESCRIPTION:**

- A. Extent of masonry paving is shown on Drawings and includes:

1. Clay Brick Pavers: Pine Hall 2 ¼"x4"x8" English Edge F/R pavers, ASTM C-902 Class SX, Type 1, Application PX and C-67.
  - a. ungrouted on limestone fines over slab.
  - b. grouted header and stretchers in mortar bed over slab.

**1.3 RELATED WORK:**

- A. Provide Work in full accordance with applicable Division 3 and 4 section.

**1.4 QUALITY ASSURANCE:**

- A. Installer: Subcontract masonry paving work to a firm with not less than 5 years of successful experience in the required types of paving.
- B. Do not change source or brands for masonry units, setting materials, or grout during progress of work.
- C. Codes and Standards:
  1. Applicable Section of Alabama Highway department (AHD) Standard Specifications for Highway Construction, Latest Edition.
  2. ASTM C902 - Standard Specification for Pedestrian and Light Traffic Paving Brick.
  3. Brick Institute of America (BIA) applicable standards.
  4. Southern Building Code, applicable section.
- D. Job Mock-up:
  1. Prior to installation of paving, provide sample panel at site of each pattern and material called for as masonry paving, minimum 5' x 5' square, over slab and specified setting bed.
  2. Provide jointing as specified.
  3. Obtain Architect's acceptance of visual qualities of mock-up panels before start of finished paving.
  4. Replace unsatisfactory mock-up work, as directed, until acceptable to Landscape Architect.
  5. Retain sample panels during construction as a standard for judging completed paving work.
  6. Do not alter, move, or destroy mock-up until Work is completed. Unless otherwise directed, accepted mock-up panel may be incorporated into the finished work.

E. Allowable Tolerances:

1. Variation from Plumb: For lines, surfaces and steps, do not exceed 1/8' in 10'.

**1.5 SUBMITTALS:**

- A. Product Data: Submit manufacturer's technical data for each manufactured product, including certification that each product complies with specified requirements.
- B. Samples:
  1. Submit set of samples (minimum 5/set) of each size of each clay brick required.
  2. Include in each set full range of exposed color and texture to be expected in completed Work.
  3. Submit cured samples of each type of grout and mortar, showing range of color.
  4. Submit prior to mock-up panels construction.

**1.6 PRODUCT DELIVERY, STORAGE AND HANDLING:**

- A. Protect paving materials during storage and construction against moisture, soiling, staining and physical damage.
- B. Handle brick and pavers to prevent chipping, breakage, soiling. Do not use pinch or wrecking bars without protecting edges of brick and pavers with wood or other rigid materials. Lift with wide-belt type slings wherever possible; do not use wire rope or ropes containing tar or other substances which might cause staining. If required, use wood rollers and provide cushion at the end of wood slides.
- C. Store brick and pavers on wood skids or pallets, covered with non-staining, waterproof membrane. Place and stack skids and brick or pavers to distribute weight evenly and to prevent breakage or cracking of pavers. Protect stored brick and pavers from weather with waterproof, non-staining, cover or enclosures, but allow air to circulate around stored materials.
- D. Protect mortar materials and accessories from weather, moisture and contamination with earth and other foreign materials.

**1.7 JOB CONDITIONS:**

- A. Installer shall review installation procedure and coordination with other work, with Contractor, and other contractors and subcontractors whose work will be affected.
- B. Cold Weather Protection:
  1. Do not use frozen materials or materials mixed or coated with ice or frost. Do not use salt to thaw ice. Do not lower the freezing point of mortar by use of admixtures or anti-freeze agents, and do not use calcium chloride in mortar or grout.
  2. Do not build on frozen work; remove and replace masonry paving damaged by frost or freezing.
  3. During all seasons, protect partially complete masonry paving against weather when work is not in progress. Cover with strong waterproof, non-staining membrane extending at least 2' beyond edge of paving and anchor securely in place.
  4. Comply with requirements of Brick Institute of America (BIA) Technical Notes, N. 1A "Cold weather Masonry construction - construction and Protection Recommendations."

**1.8 ADDITIONAL WARRANTY**

- A. In addition to one-year material and workmanship guarantee, provide two-year warranty against settlement of all masonry work of this Section:

1. During the period of the warranty, maintain masonry paving even, at correct elevation and flush with adjacent pavement surface.
2. Make repairs within two weeks of notice from Owner or Architect than pavers are 1/8" or more below or above adjacent pavers or surface.
3. Should the Contractor fail to make repairs within two weeks of notice, Owner may undertake repairs at Contractor's expense.

## PART 2 - PRODUCTS

### 2.1 MATERIALS:

- A. Brick Paver (brick headers, stretchers and herringbone pavement):
  1. Meeting the requirements of ASTM C902 for Class SX, Type I brick for all clay brick pavers in pedestrian areas. Clay brick pavers in heavy vehicular traffic load areas shall meet C1272-Heavy Vehicular Traffic. Dimensional tolerances and maximum permissible extent of chippage from edges and corners will meet limits for type PX Application method.
  2. Refer to hardscape drawings for brick type and locations. Submit Brick sample for review by Landscape Architect.
- B. Concrete Paver: Heavyweight, hydraulically pressed concrete units, square edged, factory cast for use as landscape pavers; absorption not greater than 5 percent, ASTM C 140; no breakage and maximum 1 percent mass loss when tested for freeze-thaw resistance, ASTM C 67; and as follows:
  1. Hanover Architectural Products: [www.hanoverproducts.com](http://www.hanoverproducts.com).
    - a. Substitutions: See Section 01 6000-Product Requirements.
  2. Compressive Strength: 8500 PSI
  3. Colors and Textures: 80% Natural and 20% random Limestone Grey. Match roof pavers nearby as specified in section 07 5416.
  4. See hardscape drawings for locations.
- C. Setting Materials:
  1. Mortar Mix: Per ASTM C-270, Type M for below grade and ground contact masonry; use portland cement-lime only.
  2. Limestone Fines: #8910 or #810 Crushed Limestone in accordance with AHD 801.11 (d), compacted for setting and leveling bed.
  3. Crusher Run: 3/4" and smaller well-graded crushed limestone, compacted for setting bed.
  4. Sand: Concrete sand complying with ASTM C33.
  5. Slab, Porous Fill and Compacted Subgrade specified elsewhere.
- D. Edge Restraint: See hardscape drawings for specification.

## PART 3 - EXECUTION

### 3.1 GENERAL:

- A. Coordinate with other work to make provisions for the installation of required adjacent work to avoid cutting and patching.
- B. Execute masonry paving using skilled masons, experienced in laying flat masonry work.
- C. Install no mortared work when ambient temperature is below 35 degrees F., or when there is a danger of freezing before mortar is set. Protect masonry from freezing for 48 hours after being laid.

- D. Lay masonry paving only over well compacted subgrade and slab of acceptable, dimension and elevations. Test compaction and depth before commencing masonry paving.
- E. Only lay masonry units which are clean, and without chips or cracks. Cracked, chipped or broken units will be rejected.
- F. Provide specified job mock-ups. Do not proceed without acceptance of mock-ups for visual quality.

### 3.2 INSTALLATION

- A. A. UngROUTED Mortarless Masonry Paving:
  - 1. Place Crusher Run for compacted base over properly prepared and compacted subgrade. Provide compacted thickness of base indicated to allow for thickness of setting and leveling bed and brick masonry paving units. Compact base to 95% Modified Proctor as determined in accordance with ASTM D 1557.
  - 2. Place Limestone Fines for setting and leveling bed over crusher run (as drawn) and screed loose to a thickness which will compact to thickness drawn, taking care to ensure it remains loose until paving units are set and compacted.
  - 3. Treat leveling base with suitable soil sterilizer to prohibit growth of grass and weeds.
  - 4. Set paving units hand tight in the pattern specified on plan, being careful not to disturb leveling base. Use string lines to keep straight lines. Saw-cut edges when full-size units cannot be used. Select units from at least three (3) pallets or cubes to blend color and texture variations.
  - 5. Vibrate paving units into leveling bed with a plate vibrator or hand tamper. Perform this operation on installed areas of paving at end of each day or before any rain.
  - 6. Fill joints after vibration with sharp sand. Sweep and reapply sand as many times as necessary throughout warranty period to fill and secure joints.
- B. Mortar Applications:
  - 1. Install paving units in setting bed of Type S mortar with full joints.
  - 2. Remove excess mortar promptly as work progresses.
  - 3. Lay paving units in pattern shown with straight, uniform joints.
  - 4. Level surface to the elevation shown.
  - 5. Strike 3/8" joints flush with top surfaces and tool slightly concave.
  - 6. Cure mortar by maintaining in damp condition for 7 days.

### 3.3 ADJUSTING, POINTING AND CLEANING:

- A. When mortar has set and hardened, wet all exposed surfaces and clean with Shur-Clean, or equal, following manufacturer's instructions.
- B. Leave all paver surfaces clean, free of mortar daubs, smears or stains, with tight uniform joints throughout.
- C. Remove and replace masonry units which are broken, chipped, stained, or otherwise damaged. Provide new matching units, install as specified and point-up joints to eliminate evidence of replacement. Repoint defective and unsatisfactory joints as required to provide a neat, uniform appearance. Re-clean where necessary. Eliminate evidence of replacement.
- D. Adjust pavers to flush should settlement occur. Continue adjustment throughout warranty period, immediately upon settlement occurring.
- E. Provide final protection and maintain conditions in a manner acceptable to Installer, which ensures masonry paving being without damage, discolorations, or deterioration during subsequent construction and until time of Substantial Completion.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 17 26 - TACTILE WARNING SURFACING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Cast-in-place detectable warning tiles.
  - 2. Surface-applied detectable warning tiles.
  - 3. Detectable warning mats.
  - 4. Cast-in-place detectable warning metal tiles.
  - 5. Surface-applied detectable warning metal tiles.
  - 6. Detectable warning unit pavers.
- B. Related Requirements:
  - 1. Section 321313 "Concrete Paving" for concrete walkways serving as substrates for tactile warning surfacing.
  - 2. Section 321400 "Unit Paving" for unit paving installations incorporating detectable warning unit pavers specified in this Section.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
  - 1. [<Double click to insert sustainable design text for recycled content.>](#)
  - 2. [<Double click to insert sustainable design text for regional materials.>](#)
- C. Samples for Initial Selection: For each type of exposed finish requiring color selection.
- D. Samples for Verification: For each type of tactile warning surface, in manufacturer's standard sizes unless otherwise indicated, showing edge condition, truncated-dome pattern, texture, color, and cross section; with fasteners and anchors.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For tactile warning surfacing, to include in maintenance manuals.

**1.5 QUALITY ASSURANCE**

- A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.6 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at **[Project site]** <Insert location>.

**1.7 PROJECT CONDITIONS**

- A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.
- B. Weather Limitations for Adhesive Application:
1. Apply adhesive only when ambient temperature is above **50 deg F (10 deg C)** and when temperature has not been below **35 deg F (2 deg C)** for 12 hours immediately before application. Do not apply when substrate is wet or contains excess moisture.
- C. Weather Limitations for Mortar and Grout:
1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.
  2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602. Provide artificial shade and windbreaks, and use cooled materials as required. Do not apply mortar to substrates with temperatures of **100 deg F (38 deg C)** and higher.
    - a. When ambient temperature exceeds **100 deg F (38 deg C)**, or when wind velocity exceeds **8 mph (13 km/h)** and ambient temperature exceeds **90 deg F (32 deg C)**, set unit pavers within 1 minute of spreading setting-bed mortar.

**1.8 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace components of tactile warning surfaces that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
    - a. Deterioration of finishes beyond normal weathering and wear.
    - b. Separation or delamination of materials and components.
  2. Warranty Period: **[Five]** <Insert number> years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 TACTILE WARNING SURFACING, GENERAL**

- A. Accessibility Requirements: Comply with applicable provisions in **[the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities]** [and] **[ICC A117.1]** for tactile warning surfaces.
1. For tactile warning surfaces composed of multiple units, provide units that when installed provide consistent side-to-side and end-to-end dome spacing that complies with requirements.
- B. [<Double click to insert sustainable design text for recycled content.>](#)
- C. [<Double click to insert sustainable design text for regional materials.>](#)

- D. Source Limitations: Obtain each type of tactile warning surfacing[, **joint material**] [, **setting material**] [, **anchor**] [, **and**] [**fastener**] from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

## 2.2 DETECTABLE WARNING TILES

- A. Cast-in-Place Detectable Warning Tiles: Accessible truncated-dome detectable warning tiles[ **with replaceable surface**] configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Material: [**Cast-fiber-reinforced polymer concrete tile**] [**Molded glass- and carbon-fiber-reinforced polyester**].
3. Color: [**Safety yellow**] [**Red brick**] [**Black**] [**Gray**] [**As selected by Architect from manufacturer's full line**].
4. Shapes and Sizes:
  - a. Rectangular panel, [**12 by 12 inches (305 by 305 mm)**] [**24 by 24 inches (610 by 610 mm)**] [**24 by 36 inches (610 by 914 mm)**] [**24 by 48 inches (610 by 1219 mm)**] [**24 by 60 inches (610 by 1524 mm)**] [**36 by 48 inches (914 by 1219 mm)**] [**36 by 60 inches (914 by 1524 mm)**] <Insert dimensions>.
  - b. Radius panel, nominal **24 inches (610 mm)** deep by [**6-foot (1829-mm)**] [**8-foot (2438-mm)**] [**10-foot (3048-mm)**] [**12-foot (3658-mm)**] [**15-foot (4572-mm)**] <Insert dimension> outside radius.
5. Dome Spacing and Configuration: [**1.67-inch (42.4-mm) spacing**] [**2.35-inch (59.7-mm) spacing**] [**Manufacturer's standard compliant spacing**] <Insert spacing>, in [**square**] [**diamond**] [**manufacturer's standard**] pattern.
6. Mounting:
  - a. Permanently embedded detectable warning tile wet-set into freshly poured concrete.
  - b. Detectable warning tile set into formed recess in concrete and adhered with [**mortar**] [**adhesive**].
  - c. Replaceable detectable warning tile wet-set into freshly poured concrete and surface-fastened to permanently embedded anchors.

- B. Surface-Applied Detectable Warning Tiles: Accessible truncated-dome detectable warning concrete tiles configured for surface application on existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of tile, and beveled outside edges.

1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
2. Material: [**Cast-fiber-reinforced polymer concrete tile**] [**Molded glass- and carbon-fiber-reinforced polyester**].
3. Color: [**Safety yellow**] [**Red brick**] [**Black**] [**Gray**] [**As selected by Architect from manufacturer's full line**].
4. Shapes and Sizes:
  - a. Rectangular panel, [**12 by 12 inches (305 by 305 mm)**] [**24 by 24 inches (610 by 610 mm)**] [**24 by 36 inches (610 by 914 mm)**] [**24 by 48 inches (610 by 1219 mm)**] [**24 by 60 inches (610 by 1524 mm)**] [**36 by 48 inches (914 by 1219 mm)**] [**36 by 60 inches (914 by 1524 mm)**] <Insert dimensions>.
  - b. Radius panel, nominal **24 inches (610 mm)** deep by [**6-foot (1829-mm)**] [**8-foot (2438-mm)**] [**10-foot (3048-mm)**] [**12-foot (3658-mm)**] [**15-foot (4572-mm)**] <Insert dimension> outside radius.

5. Dome Spacing and Configuration: [1.67-inch (42.4-mm) spacing] [2.35-inch (59.7-mm) spacing] [Manufacturer's standard compliant spacing] <Insert spacing>, in [square] [diamond] [manufacturer's standard] pattern.
  6. Mounting: Adhered[ and fastened] to existing concrete walkway.
- C. Cast-in-Place Detectable Warning Metal Tiles: Accessible truncated-dome detectable warning metal tiles[ with replaceable surface] configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
  2. Material:
    - a. Stainless-Steel Plate and Sheet: ASTM A 240/A 240M or ASTM A 666, [Type 304] [Type 316L].
      - 1) Finish and Color:
        - a) Manufacturer's standard powder coat, [safety yellow] [red brick] [black] [gray] [color as selected by Architect from manufacturer's full line].
        - b) Mill finish.
    - b. Cast Iron: Gray iron, ASTM A 48/A 48M, CL 35.
  3. Shapes and Sizes:
    - a. Rectangular panel, [12 by 12 inches (305 by 305 mm)] [18 by 24 inches (457 by 610 mm)] [24 by 24 inches (610 by 610 mm)] [24 by 36 inches (610 by 914 mm)] [24 by 48 inches (610 by 1219 mm)] [24 by 60 inches (610 by 1524 mm)] [36 by 48 inches (914 by 1219 mm)] [36 by 60 inches (914 by 1524 mm)] <Insert dimensions>.
    - b. Radius panel, nominal 24 inches (610 mm) deep by [6-foot (1829-mm)outside radius] [8-foot (2438-mm)outside radius] [10-foot (3048-mm)outside radius] [12-foot (3658-mm)outside radius] [15-foot (4572-mm) outside radius] [17.5-foot (5334-mm)outside radius] [outside radius indicated on Drawings] <Insert dimension>.
  4. Dome Spacing and Configuration: [1.67-inch (42.4-mm) spacing] [2.35-inch (59.7-mm) spacing] [Manufacturer's standard compliant spacing] <Insert spacing>, in [square] [diamond] [manufacturer's standard] pattern.
  5. Mounting:
    - a. Permanently embedded detectable warning tile wet-set into freshly poured concrete.
    - b. Permanently embedded detectable warning tile set into formed recess in concrete and adhered with [mortar] [adhesive].
    - c. Replaceable embedded detectable warning tile fastened to permanently installed anchors.
- D. Surface-Applied Detectable Warning Metal Tiles: Accessible truncated-dome detectable warning metal tiles or plates configured for fastening to surface of existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of tile, and beveled outside edges.
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

2. Material: Stainless-Steel Plate and Sheet: ASTM A 240/A 240M or ASTM A 666, [Type 304] [Type 316L].
3. Finish and Color:
  - a. Manufacturer's standard powder coat, [safety yellow] [red brick] [black] [gray] [color as selected by Architect from manufacturer's full line].
  - b. Mill finish.
4. Shapes and Sizes:
  - a. Rectangular panel, [24 by 24 inches (610 by 610 mm)] [24 by 36 inches (610 by 914 mm)] [24 by 48 inches (610 by 1219 mm)] [24 by 60 inches (610 by 1524 mm)] <Insert dimensions>.
5. Dome Spacing and Configuration: [1.67-inch (42.4-mm) spacing] [2.35-inch (59.7-mm) spacing] [Manufacturer's standard compliant spacing] <Insert spacing>, in [square] [diamond] [manufacturer's standard] pattern.
6. Mounting:
  - a. Replaceable surface-applied detectable warning tile fastened with permanently installed anchors to existing concrete walkway.
  - b. Permanently fixed detectable warning tile adhered[ and fastened] to existing concrete walkway.

### 2.3 DETECTABLE WARNING MATS

- A. Surface-Applied Detectable Warning Mats: Accessible truncated-dome detectable warning resilient mats, UV resistant, manufactured for adhering to existing concrete walkway surfaces, with slip-resistant surface treatment on domes, field of mat, and beveled outside edges.
  1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
  2. Material: Modified rubber compound, UV resistant.
  3. Color: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color>.
  4. Shapes and Sizes:
    - a. Rectangular panel, [24 by 36 inches (610 by 914 mm)] [24 by 48 inches (610 by 1219 mm)] [24 by 60 inches (610 by 1524 mm)] <Insert dimensions>.
  5. Dome Spacing and Configuration: [1.67-inch (42.4-mm) spacing] [2.35-inch (59.7-mm) spacing] [Manufacturer's standard compliant spacing] <Insert spacing>, in [square] [diamond] [manufacturer's standard] pattern.
  6. Mounting: Adhered to pavement surface with adhesive[ and fastened with fasteners].

### 2.4 DETECTABLE WARNING UNIT PAVERS

- A. Detectable Warning Concrete Unit Pavers: Solid paving units, made from normal-weight concrete with a compressive strength of not less than 5000 psi (34 MPa) <Insert value>, water absorption of not more than 5 percent according to ASTM C 140, and no breakage and not more than 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67, with accessible detectable warning truncated domes on exposed surface of units.
  1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
  2. Shapes and Sizes:

- a. Thickness: **[2 inches (51 mm)] [2-1/2 inches (63 mm)]** <Insert dimension> at field of tile.
  - b. Face Size: Nominal **[12 by 12 inches (305 by 305 mm)] [24 by 24 inches (610 by 610 mm)]** <Insert dimensions>.
- 3. Dome Spacing and Configuration: **[1.67-inch (42.4-mm) spacing] [2.35-inch (59.7-mm) spacing]** **[Manufacturer's standard compliant spacing]** <Insert spacing>, in **[square]** **[diamond]** **[manufacturer's standard]** pattern.
  - 4. Color: **[As indicated by manufacturer's designations]** **[Match Architect's sample]** **[As selected by Architect from manufacturer's full range]** <Insert color>.
- B. Setting Bed: Comply with requirements in Section 321400 "Unit Paving."
  - C. Aggregate Setting Bed:
    - 1. Graded Aggregate for Base: Sound, crushed stone or gravel complying with ASTM D 448 for Size No. 8.
    - 2. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33/C 33M for fine aggregate.
    - 3. Sand for Joints: Fine, sharp, washed, natural sand or crushed stone with 100 percent passing **No. 16 (1.18-mm)** sieve and no more than 10 percent passing **No. 200 (0.075-mm)** sieve.
  - D. Mortar Setting Bed:
    - 1. Portland Cement: ASTM C 150/C 150M, Type I or Type II.
    - 2. Sand: ASTM C 33/C 33M.
    - 3. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed, and not containing a retarder.
    - 4. Thinset Mortar: Latex-modified portland cement mortar complying with ANSI A118.4.
    - 5. Water: Potable.

## 2.5 ACCESSORIES

- A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of tactile warning surfaces, noncorrosive and compatible with each material joined, and complying with the following:
  - 1. Furnish **[Type 304]** **[Type 316]** stainless-steel fasteners for exterior use.
  - 2. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant heads, colored to match tile.
- B. Adhesive: As recommended by manufacturer for adhering tactile warning surfacing unit to pavement.
- C. Sealant: As recommended by manufacturer for sealing perimeter of tactile warning surfacing unit.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Verify that pavement is in suitable condition to begin installation according to manufacturer's written instructions. Verify that installation of tactile warning surfacing will comply with accessibility requirements upon completion.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION OF TACTILE WARNING SURFACING**

- A. General: Prepare substrate and install tactile warning surfacing according to manufacturer's written instructions unless otherwise indicated.
- B. Place tactile warning surfacing units in dimensions and orientation indicated. Comply with location requirements of AASHTO MP 12.

**3.3 INSTALLATION OF DETECTABLE WARNING TILES**

- A. Cast-in-Place Detectable Warning Tiles:
  - 1. Concrete Paving Installation: Comply with installation requirements in Section 321313 "Concrete Paving." Mix, place, and finish concrete to conditions complying with detectable warning tile manufacturer's written requirements for satisfactory embedment of tile.
  - 2. Set each detectable warning tile accurately and firmly in place and completely seat tile back and embedments in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
  - 3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus **1/8 inch (3 mm)** from flush.
  - 4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.
  - 5. Clean tiles using methods recommended in writing by manufacturer.
- B. Removable Cast-in-Place Detectable Warning Tiles:
  - 1. Concrete Paving Installation: Comply with installation requirements in Section 321313 "Concrete Paving." Mix, place, and finish concrete to conditions complying with detectable warning tile manufacturer's written requirements for satisfactory embedment of removable tile.
  - 2. Set each detectable warning tile accurately and firmly in place with embedding anchors and fasteners attached, and firmly seat tile back in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
  - 3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus **1/8 inch (3 mm)** from flush.
  - 4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.
  - 5. Clean tiles using methods recommended in writing by manufacturer.
- C. Surface-Applied Detectable Warning Tiles:
  - 1. Lay out detectable warning tiles as indicated and mark concrete pavement.
  - 2. Prepare existing paving surface by grinding and cleaning as recommended by manufacturer.
    - a. Cut perimeter kerf in existing concrete pavement to receive metal tile flange.
  - 3. Apply adhesive to back of tiles in amounts and pattern recommended by manufacturer, and set tiles in place. Firmly seat tiles in adhesive bed, eliminating air pockets and establishing full adhesion to pavement. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.
  - 4. Install anchor devices through face of tiles and into pavement using anchors located as recommended by manufacturer. Set heads of anchors flush with top surface of mat.
  - 5. Mask perimeter of tiles and adjacent concrete, and apply sealant in continuous bead around perimeter of tile installation.

6. Remove masking, adhesive, excess sealant, and soil from exposed surfaces of detectable warning tiles and surrounding concrete pavement using cleaning agents recommended in writing by manufacturer.
7. Protect installed tiles from traffic until adhesive has set.

### 3.4 INSTALLATION OF DETECTABLE WARNING MATS

- A. Lay out detectable warning mats as indicated and mark concrete pavement at edges of mats.
- B. Prepare existing paving surface by grinding and cleaning as recommended by manufacturer.
- C. Apply adhesive to back of mat in amounts and pattern recommended by manufacturer, and set mat in place. Firmly seat mat in adhesive bed, eliminating air pockets and establishing full adhesion to pavement. If necessary, temporarily apply weight to mat to ensure full contact with adhesive.
- D. Install anchor devices through face of mat and into pavement using anchors located as recommended by manufacturer. Set heads of anchors flush with mat surface.
- E. Mask mat perimeter and adjacent concrete, and apply sealant in continuous bead around perimeter of mat.
- F. Remove masking, adhesive, excess sealant, and soil from exposed surfaces of detectable warning mat and surrounding concrete pavement using cleaning agents recommended in writing by manufacturer.
- G. Protect installed mat from traffic until adhesive has set.

### 3.5 INSTALLATION OF DETECTABLE WARNING UNIT PAVERS

- A. Unit Paver Installation, General:
  1. Setting-Bed and Unit Paver Installation: Comply with installation requirements in Section 321400 "Unit Paving."
  2. Mix unit pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.
  3. Cut unit pavers with motor-driven masonry saw equipment to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible.
  4. Tolerances: Do not exceed **1/4 inch in 10 feet (6 mm in 3 m)** from level, or indicated slope, for finished surface of paving.
- B. Aggregate Setting-Bed Applications:
  1. Place aggregate base, compact by tamping with plate vibrator, and screed to depth indicated.
  2. Place leveling course and screed to a thickness of **1 to 1-1/2 inches (25 to 38 mm)**, taking care that moisture content remains constant and density is loose and uniform until unit pavers are set and compacted.
  3. Treat leveling course with herbicide to inhibit growth of grass and weeds.
  4. Set unit pavers with a minimum joint width of **1/16 inch (1.5 mm)** and a maximum of **1/8 inch (3 mm)**, being careful not to disturb leveling base. If pavers have spacer bars, place pavers hand tight against spacer bars. Use string lines to keep straight lines.
  5. Vibrate pavers into leveling course with a low-amplitude plate vibrator capable of a **3500- to 5000-lbf (16- to 22-kN)** compaction force at 80 to 90 Hz.
  6. Spread dry sand and fill joints immediately after vibrating pavers into leveling course. Vibrate pavers and add sand until joints are completely filled, then remove excess sand. Leave a slight surplus of sand on the surface for joint filling.
- C. Mortar Setting-Bed Applications:
  1. Saturate concrete subbase with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.

2. Apply mortar-bed bond coat over surface of concrete subbase about 15 minutes before placing mortar bed. Limit area of bond coat to avoid its drying out before placing setting bed. Do not exceed **1/16-inch (1.6-mm)** thickness for bond coat.
3. Apply mortar bed over bond coat; spread and screed mortar bed to uniform thickness at subgrade elevations required for accurate setting of pavers to finished grades indicated.
4. Mix and place only that amount of mortar bed that can be covered with pavers before initial set. Before placing pavers, cut back, bevel edge, and remove and discard setting-bed material that has reached initial set.
5. Place pavers before initial set of cement occurs. Immediately before placing pavers on mortar bed, apply uniform **1/16-inch- (1.5-mm-)** thick bond coat to mortar bed or to back of each paver with a flat trowel.
6. Tamp or beat pavers with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each paver in a single operation before initial set of mortar; do not return to areas already set or disturb pavers for purposes of realigning finished surfaces or adjusting joints.
7. Spaced Joint Widths: Provide [**3/8-inch (10-mm)**] [**1/2-inch (13-mm)**] nominal joint width with variations not exceeding plus or minus [**1/16 inch (1.5 mm)**] [**1/8 inch (3 mm)**].
8. Grouted Joints: Grout paver joints complying with ANSI A108.10. Grout joints as soon as possible after initial set of setting bed.
  - a. Force grout into joints, taking care not to smear grout on adjoining surfaces.
  - b. Tool exposed joints slightly concave when thumbprint hard.
  - c. Cure grout by maintaining in a damp condition for seven days unless otherwise recommended by grout or liquid-latex manufacturer.
9. Remove excess grout from exposed paver surfaces; wash and scrub clean.
10. Protect installation from traffic until grout has set.

### **3.6 CLEANING AND PROTECTION**

- A. Remove and replace tactile warning surfacing that is broken or damaged or does not comply with requirements in this Section. Remove in complete sections from joint to joint unless otherwise approved by Architect. Replace using tactile warning surfacing installation methods acceptable to Architect.
- B. Protect tactile warning surfacing from damage and maintain free of stains, discoloration, dirt, and other foreign material.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 31 16 - WELDED WIRE FENCES AND GATES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
1. Metallic-coated-steel, welded-wire fences.
  2. Swing gates.
  3. Horizontal-slide gates.
  4. Gate operators, including controls.
- B. Related Requirements:
1. Section 033053 "Miscellaneous Cast-in-Place Concrete" for concrete [**bases for gate operators, drives, and controls**] [**and**] [**post concrete fill**].
  2. Section 281500 "Access Control Hardware Devices" for access control devices installed at gates and provided as part of a security system.
  3. Section 312000 "Earth Moving" for site excavation, fill, and backfill where welded-wire fences and gates are located.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at [**Project site**] <Insert location>.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For fencing and gates.
1. Include plans, elevations, sections, gate locations, post spacing, [**and**] [**mounting**] [**attachment**] details[, **and grounding details**].
  2. Gate Operator: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
  3. Wiring Diagrams: Include diagrams for power, signal, and control wiring.
- C. Samples: For each fence material and for each color specified.
1. Provide Samples [**12 inches (300 mm)**] <Insert dimension> in length for linear materials.
  2. Provide Samples [**12 inches (300 mm)**] <Insert dimension> square for wire mesh.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Field quality-control reports.

**1.6 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For gate operators to include in maintenance manuals.

**1.7 QUALITY ASSURANCE**

- A. Installer Qualifications: Fabricator of products.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
1. Include **[10-foot (3-m)]** <Insert dimension> length of fence complying with requirements.
  2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Wind Loading:
1. Fence Height: **[0 to 15 feet (0 to 4.57 m)]** **[15 to 20 feet (4.57 to 6.10 m)]**.
  2. Wind Exposure Category: **[B]** **[C]** **[D]**.
  3. Design Wind Speed: **[105 mph (169 kph)]** **[110 mph (177 kph)]** **[120 mph (193 kph)]** **[130 mph (209 kph)]** **[140 mph (225 kph)]** **[150 mph (241 kph)]** **[160 mph (257 kph)]** **[170 mph (274 kph)]** <Insert wind speed>.
  4. Design Wind Pressure: <Insert wind pressure>.
- B. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

**2.2 METALLIC-COATED-STEEL, WELDED-WIRE FENCES**

- A. Metallic-Coated-Steel, Welded-Wire Fences:
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Fence Fabric: Metallic-coated-steel wire.
1. Spacing of Vertical Wires: **[1-3/4 inches (44 mm)]** **[2 inches (51 mm)]** **[3-1/2 inches (89 mm)]** **[4 inches (102 mm)]** **[As indicated]** <Insert spacing>.
  2. Vertical Wire Size: **[0.187 inch (4.76 mm)]** **[0.192 inch (4.88 mm)]** **[0.225 inch (5.72 mm)]** **[0.25 inch (6.35 mm)]** **[0.262 inch (6.67 mm)]** <Insert size>.
  3. Spacing of Horizontal Wires: **[1-3/4 inches (44 mm)]** **[2 inches (51 mm)]** **[4 inches (102 mm)]** **[8 inches (203 mm)]** **[As indicated]** <Insert spacing>.
  4. Horizontal Wire Size: **[0.187 inch (4.76 mm)]** **[0.192 inch (4.88 mm)]** **[0.225 inch (5.72 mm)]** **[0.25 inch (6.35 mm)]** **[0.312 inch (7.94 mm)]** <Insert size>.
- C. Posts:
1. Line Posts: Square tubes **[2 by 2 inches (50 by 50 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **[3 by 3 inches (76 by 76 mm)]** formed from **[0.064-inch (1.63-mm)]** **[0.079-inch (2.01-mm)]** **[0.108-inch (2.74-mm)]** nominal-thickness, metallic-coated steel sheet or formed from **[0.060-inch (1.52-mm)]** **[0.075-inch (1.90-mm)]** **[0.105-inch (2.66-mm)]** nominal-thickness steel sheet and hot-dip galvanized after fabrication.

2. End and Corner Posts: Square tubes [2-1/2 by 2-1/2 inches (64 by 64 mm)] [3 by 3 inches (76 by 76 mm)] formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
  3. Posts at Swing Gate Openings: Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
  4. Posts at Swing Gate Openings: Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
  5. Posts at Horizontal-Slide Gate Openings up to 12 Feet (3.7 m): Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
  6. Posts at Horizontal-Slide Gate Openings Wider Than 12 Feet (3.7 m): Square steel tubing 4 by 4 inches (102 by 102 mm) with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
  7. Guide Posts for Class 1 Horizontal-Slide Gates: Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication; installed adjacent to gate post to permit gate to slide in space between.
  8. Guide Posts for Class 1 Horizontal-Slide Gates: Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized; installed adjacent to gate post to permit gate to slide in space between.
- D. Post Caps: [Formed from steel sheet and hot-dip galvanized after forming] [UV-resistant plastic] [Aluminum castings] [Aluminum castings with round ball finials].
- E. Rails: Rectangular tubes.
1. Size: [1-3/16 by 1-1/2 inches (30 by 38 mm)] [1-3/8 by 1-1/2 inches (35 by 38 mm)] or 1-1/2 by 1-1/2 inches (38 by 38 mm)].
  2. Metal and Thickness: [0.064-inch (1.63-mm)] [0.079-inch (2.01-mm)] nominal-thickness, metallic-coated steel sheet or [0.060-inch (1.52-mm)] [0.075-inch (1.90-mm)] nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
- F. Fasteners: Manufacturer's standard [tamperproof, ]corrosion-resistant, color-coated fasteners matching fence components[ with resilient polymer washers or clips].
- G. Finish: [Organic coating complying with requirements in ASTM F2408] [Powder coating].

### 2.3 SWING GATES

- A. Gate Configuration: [Single leaf] [Double leaf] [As indicated].
- B. Gate Frame Height: [72 inches (1830 mm)] [As indicated] <Insert height>.
- C. Gate Opening Width: [36 inches (914 mm)] [As indicated] <Insert width>.
- D. Automated vehicular gates shall comply with ASTM F2200, [Class I] [Class II] [Class III] [Class IV].
- E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubes [1-1/2 by 1-1/2 inches (38 by 38 mm)] [1-3/4 by 1-3/4 inches (45 by 45 mm)] [2 by 2 inches (50 by 50 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- F. Frame Corner Construction: [Welded] [or] [assembled with corner fittings] [and 5/16-inch-(7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider].

- G. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- H. Infill: Welded-wire fence fabric matching adjacent fence.
- I. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than **5 feet (1.52 m)** wide. Provide **[center gate stops] [and] [cane bolts]** for pairs of gates. **[Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.]**
1. **<Insert requirements for padlocks and chains if not Owner furnished>.**
- J. Spring Hinges: BHMA A156.17, Grade 1, suitable for exterior use.
1. Function: **[320 - Gate spring pivot hinge. Adjustable tension] [321 - Gate spring pivot hinge. Fixed tension].**
  2. Material: Malleable iron; galvanized.
- K. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
1. Function: 39 - Full surface, triple weight, antifriction bearing.
  2. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.
- L. Rim Locks: BHMA A156.5, Grade 1, suitable for exterior use.
1. Function: **[621 - Latchbolt by key from outside and by turn from inside. Latchbolt is held retracted by device from inside] [622 - Deadbolt by key from outside and by turn from inside] [626 - Interlocking deadbolt operated by key from either side] [627 - Interlocking deadbolt operated by key from outside and by turn from inside] [629 - Deadlocking latchbolt by key from outside and by turn from inside] <Insert function>.**
  2. Material: Cast, forged, or extruded brass or bronze.
  3. Mounting Plate: Configuration necessary for mounting locks. Fabricate from **1/8-inch- (3.2-mm-)** thick, steel plate; hot-dip galvanize after fabrication.
- M. Mortise Locks: BHMA A156.13, Grade 1, suitable for exterior use.
1. Function: **[F06 - Holdback lock] [F07 - Storeroom or closet lock] [F09 - Apartment, exit, or public toilet lock] [F16 - Double-cylinder deadlock] [F17 - Deadlock] <Insert function>.**
  2. Material: Brass or bronze.
  3. Levers: Cast, forged, or extruded brass or bronze.
  4. Mounting Box: Configuration necessary to enclose locks. Fabricate from **1/8-inch- (3.2-mm-)** thick, steel plate; hot-dip galvanize after fabrication.
- N. Electric Strikes: BHMA A156.31, Grade 1, of configuration required for use with lock specified, fail**[-safe] [-secure]**, and suitable for exterior use.
1. Mounting Plate: Configuration necessary for mounting electric strikes. Fabricate from **1/8-inch- (3.2-mm-)** thick, steel plate; hot-dip galvanize after fabrication.
  2. Mounting: Mortise into post.
- O. Exit Hardware: BHMA A156.3, Grade 1, Type 1 (rim exit device), with push pad actuating bar, suitable for exterior use.
1. Function: **[01 - Exit only, no trim or blank escutcheon] [04 - Entrance by trim when latch bolt is released by key or set in a retracted position by key] [08 - Entrance by lever. Key locks or unlocks lever] [09 - Entrance by lever only when released by key. Key removable only when locked] <Insert function>.**
  2. Mounting Channel: Bent-plate channel formed from **1/8-inch- (3.2-mm-)** thick, steel plate; hot-dip galvanized after fabrication. Channel spans gate frame. Exit device is mounted on

channel web, recessed between flanges, with flanges extending **1/8 inch (3.2 mm)** beyond push pad surface.

- P. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from [**1/2-inch- (12.7-mm-)**] [**3/4-inch- (19-mm-)**] diameter, round steel bars, hot-dip galvanized after fabrication. Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in [**closed position**] [**both open and closed positions**].
- Q. Finish exposed welds to comply with NOMMA Guideline 1, [**Finish #2 - completely sanded joint, some undercutting and pinholes okay**] [**Finish #3 - partially dressed weld with splatter removed**] [**Finish #4 - good-quality, uniform undressed weld with minimal splatter**].
- R. Metallic-Coated-Steel Finish: [**High-performance coating**] [**Galvanized finish**].

## 2.4 HORIZONTAL-SLIDE GATES

- A. Gate Configuration: [**Single leaf**] [**Double leaf**] [**As indicated**].
  - 1. Type: Overhead slide.
  - 2. Type: Cantilever slide, with [**external**] [**internal**] roller assemblies.
- B. Gate Frame Height: [**72 inches (1830 mm)**] [**As indicated**] <Insert height>.
- C. Gate Opening Width: [**36 inches (914 mm)**] [**As indicated**] <Insert width>.
- D. Automated vehicular gates shall comply with ASTM F2200, [**Class I**] [**Class II**] [**Class III**] [**Class IV**].
- E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubing.
  - 1. Frame Members: Square tubes [**1-1/2 by 1-1/2 inches (38 by 38 mm)**] [**1-3/4 by 1-3/4 inches (45 by 45 mm)**] [**2 by 2 inches (50 by 50 mm)**] [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or formed from **0.105-inch (2.66-mm)** nominal-thickness steel sheet and hot-dip galvanized after fabrication.
  - 2. Bracing Members: Square tubes [**1-1/2 by 1-1/2 inches (38 by 38 mm)**] [**1-3/4 by 1-3/4 inches (45 by 45 mm)**] [**2 by 2 inches (50 by 50 mm)**] [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or formed from **0.105-inch (2.66-mm)** nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- F. Frame Corner Construction:
  - 1. Welded frame [**with panels assembled with bolted or riveted corner fittings**] [**and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider**].
  - 2. Overhead Slide Gates: Welded or assembled with corner fittings[ **including 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider**].
- G. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- H. Infill: Comply with requirements for adjacent fence.
- I. Overhead Track Assembly: Manufacturer's standard track, with overhead framing supports, bracing, and accessories, engineered to support size, weight, width, operation, and design of gate and roller assemblies.
- J. Hardware: Latches permitting operation from both sides of gate, [**locking devices**] [**hangers**] [**roller assemblies**] <Insert hardware items and accessories> and stops fabricated from [**galvanized steel**] [**galvanized malleable iron**] [**mill-finished, Grade 319 aluminum-alloy casting with stainless-steel fasteners**]. [**Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.**]

1. <Insert requirements for padlocks and chains if not Owner furnished>.
- K. Finish exposed welds to comply with NOMMA Guideline 1, [Finish #2 - completely sanded joint, some undercutting and pinholes okay] [Finish #3 - partially dressed weld with splatter removed] [Finish #4 - good-quality, uniform undressed weld with minimal splatter].
- L. Metallic-Coated-Steel Finish: [High-performance coating] [Galvanized finish].

## 2.5 GATE OPERATORS

- A. Gate Operators:
  1. <Double click here to find, evaluate, and insert list of manufacturers and products.>
- B. Provide factory-assembled automatic operating system designed for gate size, type, weight, and operation frequency. Provide operation control system with characteristics suitable for Project conditions, with remote-control stations, safety devices, and weatherproof enclosures; coordinate electrical requirements with building electrical system.
  1. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
  2. Provide operator with UL [approval][approved components].
  3. Provide electronic components with built-in troubleshooting diagnostic feature.
  4. Provide unit designed and wired for both right-hand/left-hand opening, permitting universal installation.
- C. Comply with NFPA 70.
- D. UL Standard: Manufacturer and label gate operators to comply with UL 325.
- E. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators on gates that must provide emergency access.
- F. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1 and the following:
  1. Voltage: [12-V dc] [24-V dc] [120 V] [208-220 V] [NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected] <Insert voltage>.
  2. Horsepower: Not less than [1/4] [1/3] [1/2] [3/4] <Insert value>.
  3. Enclosure: [Open dripproof] [Totally enclosed] [Manufacturer's standard].
  4. Duty: Continuous duty at ambient temperature of 105 deg F (40 deg C) and at altitude of 3300 feet (1005 m) above sea level.
  5. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
  6. Phase: [One] [Polyphase].
- G. Gate Operators: [Gate] [Concrete base] [Post] [In-ground] mounted and as follows:
  1. Hydraulic [Swing] [Slide] Gate Operators:
    - a. Duty: [Light] [Medium] [Heavy] duty, [residential] [commercial/industrial].
    - b. Gate Speed: Minimum [45 feet (13.7 m)] [60 feet (18.2 m)] per minute.
    - c. Maximum Gate Weight: [800 lb (363 kg)] <Insert value>.
    - d. Frequency of Use: [10 cycles per hour] [25 cycles per hour] [Continuous duty].
    - e. Operating Type: Wheel-and-rail drive[ with manual release].
    - f. Hydraulic Fluid: Of viscosity required for gate operation at ambient temperature range for Project.
    - g. Locking: Hydraulic in both directions.

- h. Heater: Manufacturer's standard track and roller heater with thermostatic control.
2. Mechanical **[Swing]** **[Slide]** Gate Operators:
- a. Duty: **[Light]** **[Medium]** **[Heavy]** duty, **[residential]** **[commercial/industrial]**.
  - b. Gate Speed: Minimum **[45 feet (13.7 m) per minute]** **[60 feet (18.2 m) per minute]** **[variable speed]** **<Insert speed>**.
  - c. Maximum Gate Weight: **[600 lb (272 kg)]** **[800 lb (363 kg)]** **[3000 lb (1360 kg)]** **<Insert value>**.
  - d. Frequency of Use: **[10 cycles per hour]** **[25 cycles per hour]** **[60 cycles per hour]** **[Continuous duty]**.
  - e. Operating Type: **[Crank arm]** **[Wheel-and-rail drive]** **[Roller chain]**, **with manual release**.
  - f. Drive Type: Enclosed worm gear **and chain-and-sprocket** reducers, roller-chain drive.
  - g. Drive Type: V-belt and **[worm gear]** **[chain-and-sprocket]** reducers, roller-chain drive.
  - h. **<Insert feature>**.
- H. Remote Controls: Electric controls separated from gate and motor and drive mechanism, with **[NEMA ICS 6, Type 1]** **[NEMA ICS 6, Type 4]** **<Insert type of enclosure>** enclosure for **[surface]** **[recessed or flush]** **[concrete base]** **[pedestal]** **<Insert mounting>** mounting, and with space for additional optional equipment. Provide the following remote-control device(s):
1. Control Station: Keyed, **[two]** **[three]**-position switch with open **[, stop,]** and close function; located remotely from gate. Provide two keys per station.
  2. Control Station: Momentary-contact, **[single]** **[three]**-button-operated with open **[, stop,]** and close function; located remotely from gate. **[Key switch to lock out open and close buttons.]**
  3. Card Reader: Functions only when authorized card is presented. Programmable, **[multiple]** **[single]**-code system **[, permitting four different access periods]**; **face-lighted unit fully visible at night**.
    - a. Reader Type: **[Touch plate]** **[Swipe]** **[Insertion]** **[Proximity]**.
    - b. Features: **[Timed antipassback]** **[Limited-time usage]** **[Capable of monitoring and auditing gate activity]**.
  4. Digital Keypad Entry Unit: **[Programmable, ]**multiple-code capability of not less than **[five]** **[500]** **[2500]** **<Insert number>** possible individual codes, consisting of **[1- to 7]** **[4]** **[5]**-digit codes **[, and permitting four different access periods]**.
    - a. Features: **[Timed antipassback]** **[Limited-time usage]** **[Capable of monitoring and auditing gate activity]**.
    - b. Face-lighted unit with **[metal-keyed]** **[keyless-membrane]** keypad fully visible at night.
  5. Radio Control: Digital system consisting of code-compatible universal receiver for each gate, located where indicated, with remote antenna with coaxial cable and mounting brackets designed to operate gates. Provide **[one]** **[two]** **<Insert number>** programmable transmitter(s) with multiple-code capability permitting validating or voiding of not less than **[1000]** **[10,000]** **<Insert number>** codes per channel configured for the following functions:
    - a. Transmitters: **[Single]** **[Three]**-button operated, with open **[and close ]**function.

- b. Channel Settings: **[Two] [Three] [Four] <Insert number>** independent channel settings controlling separate receivers for operating more than one gate from each transmitter.
- 6. Telephone Entry System: Hands-free, voice-communication system for connection to building telephone system with digital-entry code activation of gate operator[ **and auxiliary keypad entry**].
  - a. Residential System: Designed to be wired to same line with telephone.
  - b. Multiunit System: Designed to be wired to a dedicated telephone line, with capacity to access **[20] [100] <Insert number>** telephones[, **and with electronic directory**].
- I. Vehicle Loop Detector: System includes automatic closing timer with adjustable time delay[, **timer cutoff switch,**] and loop detector designed to **[open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>**. System includes electronic detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light designed to detect presence or transit of a vehicle over an embedded loop of wire and to emit a signal activating the gate operator. System includes number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement, as recommended in writing by detection system manufacturer for function indicated, at location indicated on Drawings.
- J. Vehicle Presence Detector: System includes automatic closing timer with adjustable time delay[, **timer cutoff switch,**] and presence detector designed to **[open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>**. System includes **[retroreflective] [emitter/receiver]** detector with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of a vehicle in gate pathway when infrared beam in zone pattern is interrupted, and to emit a signal activating the gate operator.
- K. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:
  - 1. Action: Reverse gate in both opening and closing cycles, and hold until clear of obstruction.
  - 2. Action: Stop gate in opening cycle and reverse gate in closing cycle, and hold until clear of obstruction.
  - 3. Internal Sensor: Built-in torque or current monitor senses gate is obstructed.
  - 4. Sensor Edge: Contact-pressure-sensitive safety edge, profile, and sensitivity designed for type of gate and component indicated, in locations as follows. Connect to control circuit using **[take-up cable reel] [self-coiling cable] [gate edge transmitter and operator receiver system]**.
    - a. Along entire gate leaf leading edge.
    - b. Along entire gate leaf trailing edge.
    - c. Across entire gate leaf bottom edge.
    - d. Consider retaining first subparagraph below for slide gates; revise for sensor edge at pinch point post of swing gates.
    - e. Along entire length of gate posts.
    - f. Retain first subparagraph below for Type II Cantilever Slide, Class 1 gates.
    - g. Along entire length of gate guide posts.
    - h. Where indicated on Drawings.
    - i. **<Insert extent and location>**.
- 5. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in gate's path when infrared beam in the zone pattern is interrupted.

- L. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop gate at fully retracted and fully extended positions.
- M. Emergency Release Mechanism: Quick-disconnect release of operator drive system of the following type, permitting manual operation if operator fails. Design system so control-circuit power is disconnected during manual operation.
  - 1. Type: [**Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge**] [**Mechanical device, key, or crank-activated release**].
- N. Operating Features:
  - 1. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features[ **with capability for monitoring and auditing gate activity**]. Provide unit that is isolated from voltage spikes and surges.
  - 2. System Integration: With controlling circuit board capable of accepting any type of input from external devices.
  - 3. Master/Slave Capability: Control stations designed and wired for gate pair operation.
  - 4. Automatic Closing Timer: With adjustable time delay before closing[ **and timer cutoff switch**].
  - 5. Open Override Circuit: Designed to override closing commands.
  - 6. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
  - 7. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.
  - 8. Clock Timer: [**24-hour**] [**Seven-day**] <Insert time> programmable for regular events.
- O. Accessories:
  - 1. Warning Module: [**Audio**] [**Visual**], [**constant**] [**strobe**]-light alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving; compliant with the United States Access Board's ADA-ABA Accessibility Guidelines.
  - 2. Battery Backup System: Battery-powered drive and access-control system, independent of primary drive system.
    - a. Fail-Safe: Gate opens and remains open until power is restored.
    - b. Fail-Secure: Gate cycles on battery power, then fail-safe when battery is discharged.
  - 3. External electric-powered [**solenoid**] [**magnetic**] lock with delay timer allowing time for lock to release before gate operates.
  - 4. [**Fire**] [**Postal**] box.
  - 5. Fire [**strobe**] [**siren**] sensor.
  - 6. Intercom System: <Insert requirements>.
  - 7. Instructional, Safety, and Warning Labels and Signs: [**According to UL 325**] [**Manufacturer's standard for components and features specified**] [**As indicated on Drawings**] <Insert requirements>.
  - 8. Equipment Bases/Pads: Precast concrete, [**depth not less than 12 inches (300 mm)**] <Insert depth>, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.

## 2.6 FENCE AND GATE MATERIALS

- A. Metallic-Coated-Steel Wire: Welded-wire fence fabric, hot-dip galvanized after fabrication. Weight of zinc coating shall be not less than **1.0 oz./sq. ft. (305 g/sq. m)**.

- B. Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Tubing: ASTM A500/A500M, cold-formed steel tubing.
- D. Uncoated Steel Sheet: [**Hot-rolled steel sheet, ASTM A1011/A1011M, Structural Steel, Grade 45 (Grade 310)**] [or] [**cold-rolled steel sheet, ASTM A1008/A1008M, Structural Steel, Grade 50 (Grade 340)**].
  - 1. Interior surface of tubes formed from uncoated steel sheet shall be [**hot-dip zinc coated same as exterior**] [or] [**coated with zinc-rich thermosetting coating to comply with ASTM F2408**].
- E. Metallic-Coated Steel Sheet: Galvanized-steel sheet or aluminum-zinc, alloy-coated steel sheet.
- F. Galvanized-Steel Sheet: ASTM A653/A653M, structural quality, **Grade 50 (Grade 340)**, with [**G90 (Z275)**] [**G60 (Z180)**] coating.
- G. Aluminum-Zinc, Alloy-Coated Steel Sheet: ASTM A792/A792M, structural quality, **Grade 50 (Grade 340)**, with **AZ60 (AZM180)** coating.
- H. Iron Castings: Either gray or malleable iron unless otherwise indicated.
  - 1. Gray Iron: ASTM A48/A48M, Class 30.
  - 2. Malleable Iron: ASTM A47/A47M.
- I. Aluminum Castings: ASTM B26/B26M, Alloy A356.0-T6.
- J. Galvanizing: For components indicated to be galvanized and for which galvanized coating is unspecified, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.

## 2.7 COATING MATERIALS

- A. Epoxy Primer for Galvanized Steel: Epoxy primer recommended in writing by topcoat manufacturer.
  - 1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
    - a. **<Insert manufacturer's name; product name or designation>**.
- B. Polyurethane Intermediate Coat and Topcoat: Complying with MPI #72 and compatible with undercoat.
  - 1. Products: Subject to compliance with requirements, [**provide the following**] [**provide one of the following**] [**available products that may be incorporated into the Work include, but are not limited to, the following**]:
    - a. **<Insert manufacturer's name; product name or designation>**.

## 2.8 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
  - 1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for strength and compatibility in fabricated items.
- B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 033000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of **3000 psi (20 MPa)**, **3-inch (75-mm)** slump, and **1-inch (25-mm)** maximum aggregate size[ **or dry**,

**packaged, normal-weight concrete mix complying with ASTM C387/C387M mixed with potable water according to manufacturer's written instructions].**

- C. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M and specifically recommended by manufacturer for exterior applications.

## 2.9 GROUNDING MATERIALS

- A. Comply with requirements of Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Grounding Conductors: Size as indicated on Drawings. Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
1. Material above Finished Grade: **[Copper] [Aluminum]**.
  2. Material on or below Finished Grade: Copper.
  3. Bonding Jumpers: Braided copper tape, **1-5/8 inch (41 mm)** wide and **1/16 inch (1.6 mm)** thick, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
- C. Grounding Connectors and Grounding Rods: Comply with UL 467.
1. Connectors for Below-Grade Use: Exothermic-welded type.
  2. Grounding Rods: Copper-clad steel.
    - a. Size: **5/8 by 96 inches (16 by 2440 mm)**.

## 2.10 METALLIC-COATED-STEEL FINISHES

- A. Galvanized Finish: Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- B. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a **[zinc-phosphate]** conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.
- C. Powder Coating: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat finish consisting of **[zinc-rich]** epoxy prime coat and TGIC polyester topcoat to a minimum dry film thickness of **2 mils (0.05 mm)**. Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of **4 mils (0.10 mm)**.
1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
  2. Comply with surface finish testing requirements in ASTM F2408 **[except change corrosion-resistance requirement to 3000 hours without failure]**.
- D. High-Performance Coating: Apply epoxy primer, polyurethane intermediate coat, and polyurethane topcoat to prepared surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
1. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.
- B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 PREPARATION

- A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of **500 feet (152.5 m)** or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.
  1. Construction layout and field engineering are specified in Section 017300 "Execution."

#### 3.3 FENCE INSTALLATION

- A. Install fences according to manufacturer's written instructions.
- B. Install fences by setting posts as indicated and fastening **[rails] [and] [infill panels]** to posts. **[Peen threads of bolts after assembly to prevent removal.]**
- C. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than **24 inches (600 mm)** plus **3 inches (75 mm)** for each **foot (300 mm)** or fraction of a **foot (300 mm)** that fence height exceeds **4 feet (1.2 m)**.
- D. Post Setting: Set posts **[in concrete] [with mechanical anchors] [by mechanically driving into soil]** at indicated spacing into firm, undisturbed soil.
  1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
  2. Concrete Fill: Place concrete around **[posts] [and] [sleeves]** and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
    - a. Exposed Concrete: Extend **2 inches (50 mm)** above grade. Finish and slope top surface to drain water away from post.
    - b. Concealed Concrete: Top **[2 inches (50 mm)] <Insert dimension>** below grade **[as indicated on Drawings]** to allow covering with surface material. Slope top surface of concrete to drain water away from post.
  3. Posts Set in Concrete: Extend post to within **6 inches (150 mm)** of specified excavation depth, but not closer than **3 inches (75 mm)** to bottom of concrete.
  4. Posts Set into Concrete in Sleeves: Use galvanized-steel pipe sleeves with inside diameter at least **3/4 inch (20 mm)** larger than outside diagonal dimension of post, preset and anchored into concrete for installing posts.
    - a. Extend posts at least **5 inches (125 mm)** into sleeve.
    - b. After posts have been inserted in sleeves, fill annular space between post and sleeve with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions; shape and smooth to shed water. Finish and slope top surface of grout to drain water away from post.

5. Posts Set into Voids in Concrete: Form or core drill holes not less than **3/4 inch (20 mm)** larger than outside diagonal dimension of post.
  - a. Extend posts at least **5 inches (125 mm)** into concrete.
  - b. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions. Finish and slope top surface of grout to drain water away from post.
6. Mechanically Driven Posts: Drive into soil to depth of [**30 inches (762 mm)**] [**36 inches (914 mm)**] <Insert dimension>. Protect post top to prevent distortion.
7. Space posts uniformly at [**6 feet (1.83 m)**] [**8 feet (2.44 m)**] <Insert dimension> o.c.

### 3.4 GATE INSTALLATION

- A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

### 3.5 GATE OPERATOR INSTALLATION

- A. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.
- B. Excavation for [**Support Posts**] [**Pedestals**] [**Concrete Bases**]: Hand-excavate holes for bases in firm, undisturbed soil to dimensions and depths and at locations as required by gate operator component manufacturer's written instructions and as indicated.
- C. Concrete Bases: Cast-in-place or precast concrete, [**depth not less than 12 inches (300 mm)**] <Insert depth>, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.
- D. Vehicle Loop Detector System: [**Cut grooves in pavement and**] bury and seal wire loop according to manufacturer's written instructions. Connect to equipment operated by detector.
- E. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.

### 3.6 GROUNDING AND BONDING

- A. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fence Grounding: Install at maximum intervals of [**1500 feet (450 m)**] <Insert a lesser distance if grounding resistance is high> except as follows:
  1. Fences within **100 Feet (30 m)** of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of [**750 feet (225 m)**] <Insert a lesser distance if grounding resistance is high>.
    - a. Gates and Other Fence Openings: Ground fence on each side of opening.
      - 1) Bond metal gates to gate posts.
      - 2) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least **18 inches (460 mm)** below finished grade.
- C. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of **150 feet (45 m)** on each side of crossing.

- D. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.
- E. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is **6 inches (150 mm)** below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.
- F. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
- G. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
  - 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
  - 2. Make connections with clean, bare metal at points of contact.
  - 3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
  - 4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
  - 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
- H. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

### 3.7 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
  - 1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
  - 2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
  - 3. Report: Prepare test reports of grounding resistance at each test location, certified by a testing agency. Include observations of weather and other phenomena that may affect test results.

### 3.8 ADJUSTING

- A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
- B. Automatic Gate Operators: Energize circuits to electrical equipment and devices. Adjust operators, controls, safety devices, **[alarms,]** and limit switches.
  - 1. Hydraulic Operators: Purge operating system, adjust pressure and fluid levels, and check for leaks.
  - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3. Test and adjust controls[, **alarms,**] and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Lubricate hardware[, **gate operators,**] and other moving parts.

### 3.9 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train]** [Train] Owner's personnel to adjust, operate, and maintain gates.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK.**

**SECTION 32 31 19 - DECORATIVE METAL FENCES AND GATES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
1. Decorative metallic-coated-steel tubular picket fences.
  2. Decorative steel fences.
  3. Decorative aluminum fences.
  4. Swing gates.
  5. Horizontal-slide gates.
  6. Gate operators, including controls.
- B. Related Requirements:
1. Section 033053 "Miscellaneous Cast-in-Place Concrete" for concrete **[bases for gate operators, drives, and controls] [and] [post concrete fill]**.
  2. Section 281500 "Access Control Hardware Devices" for access control devices installed at gates and provided as part of a security system.
  3. Division 26 Sections for electrical service and connections for system disconnect switches and powered devices including, but not limited to, motor operators, controls, and limit switches.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For fencing and gates.
1. Include plans, elevations, sections, gate locations, post spacing, **[and] [mounting] [attachment] details[, and grounding details]**.
  2. Gate Operator: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
  3. Wiring Diagrams: Include diagrams for power, signal, and control wiring.
- C. Samples: For each fence material and for each color specified.

1. Provide Samples [**12 inches (300 mm)**] <Insert dimension> in length for linear materials.
2. Provide Samples [**12 inches (300 mm)**] <Insert dimension> square for [**bar grating**] [**and**] [**sheet or plate materials**].

### 1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.
- B. Product Test Reports: For decorative metallic-coated-steel tubular picket fences, including finish, indicating compliance with referenced standard[ **and other specified requirements**].

### 1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For gate operators to include in maintenance manuals.

### 1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Fabricator of products.
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
  1. Include [**10-foot (3-m)**] <Insert dimension> length of fence complying with requirements.
  2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Wind Loading:
  1. Fence Height: [**0 to 15 feet (0 to 4.57 m)**] [**15 to 20 feet (4.57 to 6.10 m)**].
  2. Wind Exposure Category: [**B**] [**C**] [**D**].
  3. Design Wind Speed: [**105 mph (169 kph)**] [**110 (mph (177 kph))**] [**120 mph (193 kph)**] [**130 mph (209 kph)**] [**140 mph (225 kph)**] [**150 mph (241 kph)**] [**160 mph (257 kph)**] [**170 mph (274 kph)**] <Insert wind speed>.
  4. Design Wind Pressure: <Insert wind pressure>.
- B. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

### 2.2 DECORATIVE METALLIC-COATED-STEEL TUBULAR PICKET FENCES

- A. Decorative Metallic-Coated-Steel Tubular Picket Fences: Comply with ASTM F2408 for [**residential**] [**light-industrial (commercial)**] [**industrial**] application (class) unless otherwise indicated.
  1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

## B. Posts:

1. End and Corner Posts: Square tubes [2-1/2 by 2-1/2 inches (64 by 64 mm)] [3 by 3 inches (76 by 76 mm)] formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
2. Posts at Swing Gate Openings: Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
3. Posts at Swing Gate Openings: Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
4. Posts at Horizontal-Slide Gate Openings up to 12 Feet (3.7 m): Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
5. Posts at Horizontal-Slide Gate Openings Wider Than 12 Feet (3.7 m): Square steel tubing 4 by 4 inches (102 by 102 mm) with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
6. Guide Posts for Class 1 Horizontal-Slide Gates: Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication; installed adjacent to gate post to permit gate to slide in space between.
7. Guide Posts for Class 1 Horizontal-Slide Gates: Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized; installed adjacent to gate post to permit gate to slide in space between.

C. Post Caps: [Formed from steel sheet and hot-dip galvanized after forming] [UV-resistant plastic] [Aluminum castings] [Aluminum castings with round ball finials].

D. Rails: [Square tubes] [Double-wall channels].

1. Size: [1-1/2 by 1-1/2 inches (38 by 38 mm)] [1-3/4 by 1-3/4 inches (45 by 45 mm)].
2. Metal and Thickness: 0.079-inch (2.01-mm) nominal-thickness, metallic-coated steel sheet or 0.075-inch (1.90-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.

E. Pickets: Square tubes.

1. [Terminate tops of pickets at top rail for flush top appearance] [Extend pickets beyond top rail as indicated and terminate with UV-resistant plastic caps] [Extend pickets beyond top rail as indicated and terminate with galvanized-steel caps] [Extend pickets beyond top rail as indicated and press flat and trim to produce spear point shape].
2. Picket Spacing: [6 inches (152.4 mm)] [4 inches (101.6 mm)] [1-3/4 inches (44 mm)] <Insert dimension> clear, maximum.

F. Fasteners: Manufacturer's standard concealed fastening system.

G. Fasteners: Manufacturer's standard [tamperproof,] corrosion-resistant, color-coated fasteners matching fence components [with resilient polymer washers].

- H. Metallic-Coated Steel Sheet: Galvanized-steel sheet or aluminum-zinc, alloy-coated steel sheet.
- I. Interior surface of tubes formed from uncoated steel sheet shall be **[hot-dip zinc coated same as exterior]** **[or]** **[coated with zinc-rich thermosetting coating to comply with ASTM F2408]**.
- J. Galvanizing: For components indicated to be galvanized and for which galvanized coating is not specified in ASTM F2408, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
- K. Finish: **[Organic coating complying with requirements in ASTM F2408]** **[Powder coating]**.

### 2.3 DECORATIVE STEEL FENCES

- A. Decorative Steel Fences: Fences made from steel tubing **[bars]** and shapes **[, hot-dip galvanized]**.
  1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Posts: Square steel tubing.
  1. Line Posts: **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **[3 by 3 inches (76 by 76 mm)]** **<Insert dimensions>** with **[1/8-inch (3.2-mm)]** **[3/16-inch (4.76-mm)]** **<Insert dimension>** wall thickness.
  2. End and Corner Posts: **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **[3 by 3 inches (76 by 76 mm)]** **[4 by 4 inches (102 by 102 mm)]** **<Insert dimensions>** with **[1/8-inch (3.2-mm)]** **[3/16-inch (4.76-mm)]** **<Insert dimension>** wall thickness.
  3. Swing Gate Posts: **[3 by 3 inches (76 by 76 mm)]** **[4 by 4 inches (102 by 102 mm)]** **<Insert dimensions>** with **[3/16-inch (4.76-mm)]** **<Insert dimension>** wall thickness.
  4. Horizontal-Slide Gate Post, Openings up to **12 Feet (3.7 m)**: **[3 by 3 inches (76 by 76 mm)]** **[4 by 4 inches (102 by 102 mm)]** **<Insert dimensions>** with **[3/16-inch (4.76-mm)]** **<Insert dimension>** wall thickness.
  5. Horizontal-Slide Gate Post, Openings Wider Than **12 Feet (3.7 m)**: **4 by 4 inches (102 by 102 mm)** with **[3/16-inch (4.76-mm)]** **<Insert dimension>** wall thickness.
  6. Guide Posts for Class 1 Horizontal-Slide Gates: **[3 by 3 inches (76 by 76 mm)]** **[4 by 4 inches (102 by 102 mm)]** **<Insert dimensions>** with **[3/16-inch (4.76-mm)]** **<Insert dimension>** wall thickness; installed adjacent to gate post to permit gate to slide in space between.
- C. Post Caps: **[Formed from steel sheet]** **[Formed from steel sheet and hot-dip galvanized after forming]** **[Aluminum castings]** **[Aluminum castings with round ball finials]**.
- D. Rails:
  1. Steel Tube Rails: Square steel tubing **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **<Insert dimensions>** with **[1/8-inch (3.2-mm)]** **<Insert dimension>** wall thickness.
  2. Steel Channel Rails: Steel channels **[2 by 1 inch (51 by 25 mm)]** **[1-1/2 by 3/4 inch (38 by 19 mm)]** **[1-1/2 by 1/2 inch (38 by 13 mm)]** **<Insert dimensions>**.
- E. Pickets: **[1/2-inch- (13-mm-) square steel bars]** **[3/4-inch- (19-mm-) square steel bars]** **[Decorative steel bars of pattern and size indicated]** **[5/8 inch (16 mm) square by 0.065-inch (1.65-mm) steel tubes]** **[5/8 inch (16 mm) square by 0.083-inch (2.11-mm) steel tubes]** **[3/4 inch (19 mm) square by 0.065-inch (1.65-mm) steel tubes]** **[3/4 inch (19 mm) square by**

**0.083-inch (2.11-mm) steel tubes] [1 inch (25 mm) square by 0.065-inch (1.65-mm) steel tubes] [1 inch (25 mm) square by 0.083-inch (2.11-mm) steel tubes].**

1. [Terminate tops of pickets at top rail for flush top appearance] [Extend pickets beyond top rail as indicated and mill ends to pyramid-shaped points] [Extend pickets beyond top rail as indicated and press flat and trim to produce spear point shape] [Extend pickets beyond top rail as indicated and cap with metal spear point finial] [Extend pickets beyond top rail as indicated and cap with metal tripoint finial].
  2. Picket Spacing: **[6 inches (152.4 mm)] [4 inches (101.6 mm)] [1-3/4 inches (44 mm)]** <Insert dimension> clear, maximum.
  3. Treillage: Provide iron castings of pattern indicated between each pair of pickets.
- F. Infill: Forge-welded-steel bar grating.
1. Perimeter Bars: Steel flat bars **[1 by 1/8 inch (25 by 3.2 mm)]** <Insert dimensions>.
  2. Vertical Main Bars: Steel flat bars **[1 by 1/8 inch (25 by 3.2 mm)] [1-3/16 by 5/32 inch (30 by 4 mm)]** <Insert dimensions>.
  3. Vertical Main Bar Spacing: **[1-21/32 inches (42 mm)] [1-7/8 inches (48 mm)] [2-7/16 inches (62 mm)]** <Insert dimension> o.c.
  4. Horizontal Cross Rods: **[3/16-inch- (4.8-mm-)] [1/4-inch- (6.4-mm-)]** diameter, steel rods.
  5. Horizontal Cross Rod Spacing: **[1-3/4 inches (45 mm)] [2-19/32 inches (66 mm)] [5-3/16 inches (132 mm)]** <Insert dimension> o.c.
- G. Infill: Custom design as indicated on Drawings.
1. Bars: **[1/2-inch- (12.7-mm-) square steel bars] [3/4-inch- (19-mm-) square steel bars] [1/2-inch- (12.7-mm-) diameter, round steel bars] [3/4-inch- (19-mm-) diameter, round steel bars] [1-by-1/8-inch (25-by-3.2-mm) steel flat bars] [1-by-1/4-inch (25-by-6.4-mm) steel flat bars] [1-by-1/2-inch (25-by-12.7-mm) steel flat bars]** [unless otherwise indicated].
  2. Square Tubes: Square steel tubing **[2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)]** <Insert dimensions> with **[1/8-inch (3.2-mm)]** <Insert dimension> wall thickness[ **unless otherwise indicated**].
  3. Round Tubes: **[1-inch- (25-mm-)] [1-1/2-inch- (38-mm-)] [2-inch- (51-mm-)] [2-1/2-inch- (64-mm-)]** <Insert dimension> diameter, round steel tubing with **[1/8-inch (3.2-mm)]** <Insert dimension> wall thickness[ **unless otherwise indicated**].
  4. Steel Plate: **[1/8 inch (3.2 mm)] [3/16 inch (4.8 mm)] [1/4 inch (6.4 mm)]** thick[ **unless otherwise indicated**].
  5. Perforated Metal Sheet: Uncoated steel sheet, perforated as indicated, **[0.060-inch (1.52-mm)] [0.075-inch (1.90-mm)] [0.105-inch (2.66-mm)]** <Insert dimension> nominal thickness.
- H. Fasteners: Stainless-steel carriage bolts and **[tamperproof]** nuts.
- I. Fabrication: Assemble fences into sections by welding pickets to rails.
1. Fabricate sections with clips welded to rails for field fastening to posts.
  2. Drill posts and clips for fasteners before finishing to maximum extent possible.
- J. Fabrication: Fabricate bar grating infill into sections of size indicated.
1. Fabricate rails with clips welded to rails for field fastening to posts.

2. Drill posts[, **clips**,] and bar grating for fasteners before finishing to maximum extent possible.
- K. Finish exposed welds to comply with NOMMA Guideline 1, [**Finish #2 - completely sanded joint, some undercutting and pinholes okay**] [**Finish #3 - partially dressed weld with splatter removed**] [**Finish #4 - good-quality, uniform undressed weld with minimal splatter**].
- L. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
  1. Hot-dip galvanize posts[ **and rails**].
  2. Hot-dip galvanize rail and picket assemblies after fabrication.
  3. Hot-dip galvanize bar grating infill after fabrication.
  4. Hot-dip galvanize custom-design rail and infill assemblies after fabrication.
- M. Finish for Bar Grating Infill: Powder coating.
- N. Finish for Steel Items[ **Other Than Bar Grating Infill**]: [**Primed**] [**Shop painted**] [**High-performance coating**].
- O. Finish for Metallic-Coated-Steel Items[ **Other Than Bar Grating Infill**]: [**High-performance coating**] [**Galvanized finish**].

## 2.4 DECORATIVE ALUMINUM FENCES

- A. Decorative Aluminum Fences: Fences made from aluminum extrusions.
  1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Posts: Square extruded tubes.
  1. Line Posts: [**2 by 2 inches (51 by 51 mm)**] [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] [**3 by 3 inches (76 by 76 mm)**] <Insert dimensions> with [**0.062-inch (1.57-mm)**] [**0.080-inch (2.03-mm)**] [**0.093-inch (2.36-mm)**] [**0.100-inch (2.54-mm)**] [**0.125-inch (3.18-mm)**] <Insert dimension> wall thickness.
  2. End and Corner Posts: [**2 by 2 inches (51 by 51 mm)**] [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] [**3 by 3 inches (76 by 76 mm)**] <Insert dimensions> with [**0.062-inch (1.57-mm)**] [**0.080-inch (2.03-mm)**] [**0.093-inch (2.36-mm)**] [**0.100-inch (2.54-mm)**] [**0.125-inch (3.18-mm)**] <Insert dimension> wall thickness.
  3. Swing Gate Posts: [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] [**3 by 3 inches (76 by 76 mm)**] [**4 by 4 inches (102 by 102 mm)**] <Insert dimensions> with [**0.125-inch (3.18-mm)**] [**0.250-inch (6.35-mm)**] <Insert dimension> wall thickness.
  4. Horizontal-Slide Gate Post, Openings up to **12 Feet (3.7 m)**: [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] [**3 by 3 inches (76 by 76 mm)**] [**4 by 4 inches (102 by 102 mm)**] <Insert dimensions> with [**0.125-inch (3.18-mm)**] [**0.250-inch (6.35-mm)**] <Insert dimension> wall thickness.
  5. Horizontal-Slide Gate Post, Openings Wider Than **12 Feet (3.7 m)**: [**3 by 3 inches (76 by 76 mm)**] [**4 by 4 inches (102 by 102 mm)**] [**6 by 6 inches (152 by 152 mm)**] <Insert dimensions> with [**0.125-inch (3.18-mm)**] [**0.250-inch (6.35-mm)**] <Insert dimension> wall thickness.
  6. Guide Posts for Class 1 Horizontal-Slide Gates: [**2 by 2 inches (51 by 51 mm)**] [**2-1/2 by 2-1/2 inches (64 by 64 mm)**] [**3 by 3 inches (76 by 76 mm)**] <Insert dimensions> with

[0.062-inch (1.57-mm)] [0.093-inch (2.36-mm)] [0.125-inch (3.18-mm)] <Insert dimension> wall thickness; installed adjacent to gate post to permit gate to slide in space between.

- C. Post Caps: Aluminum castings that [cover entire top of posts] [project at least 1/4 inch (6 mm) beyond posts] [with round ball finial].
- D. Rails: Extruded-aluminum channels, [1-1/2 by 1-1/2 inches (38 by 38 mm), with 0.100-inch- (2.54-mm-) thick sidewalls and 0.070-inch- (1.78-mm-) thick top] [1 by 1-1/2 inches (25 by 38 mm), with 0.082-inch- (2.08-mm-) thick sidewalls and 0.055-inch- (1.40-mm-) thick top] [1-1/4 by 1-1/4 inches (32 by 32 mm), with 0.078-inch- (1.98-mm-) thick sidewalls and 0.062-inch- (1.57-mm-) thick top] [1 by 1 inch (25 by 25 mm), with 0.080-inch- (2.03-mm-) thick sidewalls and 0.055-inch- (1.40-mm-) thick top] [1 by 1 inch (25 by 25 mm), with 0.078-inch- (1.98-mm-) thick sidewalls and 0.062-inch- (1.57-mm-) thick top].
- E. Pickets: Extruded-aluminum tubes, [1 inch (25 mm) square, with 0.062-inch (1.57-mm) wall thickness] [1 inch (25 mm) square, with 0.060-inch (1.52-mm) wall thickness] [3/4 inch (19 mm) square, with 0.050-inch (1.27-mm) wall thickness] [1 by 5/8 inch (25 by 16 mm), with 0.050-inch (1.27-mm) wall thickness] [5/8 inch (16 mm) square, with 0.050-inch (1.27-mm) wall thickness].
1. [Terminate tops of pickets at top rail for flush top appearance] [Extend pickets beyond top rail as indicated and terminate with UV-resistant plastic caps] [Extend pickets beyond top rail as indicated and terminate with cast-aluminum caps] [Extend pickets beyond top rail as indicated and press flat and trim to produce spear point shape] [Extend pickets beyond top rail as indicated and terminate with cast-aluminum spear point finial] [Extend pickets beyond top rail as indicated and terminate with cast-aluminum tripoint finial].
  2. Picket Spacing: [6 inches (152.4 mm)] [4 inches (101.6 mm)] [1-3/4 inches (44 mm)] <Insert dimension> clear, maximum.
- F. Fasteners: Manufacturer's standard concealed fastening system.
- G. Fasteners: Manufacturer's standard [tamperproof,] corrosion-resistant, color-coated fasteners matching fence components [with resilient polymer washers].
- H. Fabrication: Assemble fences into sections by [welding] [fastening] pickets to rails.
1. Fabricate sections with clips welded to rails for field fastening to posts.
  2. Drill clips for fasteners before finishing.
- I. Finish exposed welds to comply with NOMMA Guideline 1, [Finish #2 - completely sanded joint, some undercutting and pinholes okay] [Finish #3 - partially dressed weld with splatter removed] [Finish #4 - good-quality, uniform undressed weld with minimal splatter].
- J. Finish: Baked enamel or powder coating.

## 2.5 SWING GATES

- A. Gate Configuration: [Single leaf] [Double leaf] [As indicated].
- B. Gate Frame Height: [72 inches (1830 mm)] [As indicated] <Insert height>.

- C. Gate Opening Width: **[36 inches (914 mm)] [As indicated] <Insert width>**.
- D. Automated vehicular gates shall comply with ASTM F2200, **[Class I] [Class II] [Class III] [Class IV]**.
- E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)] [1-3/4 by 1-3/4 inches (45 by 45 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)]** formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or formed from **0.105-inch (2.66-mm)** nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- F. Steel Frames and Bracing: Fabricate members from square steel tubing **[1-1/2 by 1-1/2 inches (38 by 38 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] <Insert dimensions>** with **[1/8-inch (3.2-mm)] <Insert dimension>** wall thickness. **[ Hot-dip galvanize frames after fabrication.]**
- G. Aluminum Frames and Bracing: Fabricate members from square extruded-aluminum tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] <Insert dimensions>** with **[0.100-inch (2.54-mm)] [0.125-inch (3.18-mm)] [0.140-inch (3.56-mm)] [0.154-inch (3.91-mm)] <Insert dimension>** wall thickness.
- H. Frame Corner Construction: **[Welded] [or] [assembled with corner fittings] [and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider]**.
- I. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- J. Infill: Comply with requirements for adjacent fence.
- K. Picket Size, Configuration, and Spacing: Comply with requirements for adjacent fence.
1. Treillage: Provide iron castings of pattern indicated between each pair of pickets. Finish as specified for **[adjacent fence] [gates]**.
- L. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than **5 feet (1.52 m)** wide. Provide **[center gate stops] [and] [cane bolts]** for pairs of gates. **[ Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.]**
1. **<Insert requirements for padlocks and chains if not Owner furnished>**.
- M. Spring Hinges: BHMA A156.17, Grade 1, suitable for exterior use.
1. Function: **[320 - Gate spring pivot hinge. Adjustable tension] [321 - Gate spring pivot hinge. Fixed tension]**.
  2. Material: Malleable iron; galvanized.
- N. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
1. Function: 39 - Full surface, triple weight, antifriction bearing.
  2. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.
- O. Rim Locks: BHMA A156.5, Grade 1, suitable for exterior use.
1. Function: **[621 - Latchbolt by key from outside and by turn from inside. Latchbolt is held retracted by device from inside] [622 - Deadbolt by key from outside and by**

- turn from inside] [626 - Interlocking deadbolt operated by key from either side] [627 - Interlocking deadbolt operated by key from outside and by turn from inside] [629 - Deadlocking latchbolt by key from outside and by turn from inside] <Insert function>.
2. Material: Cast, forged, or extruded brass or bronze.
  3. Mounting Plate: Configuration necessary for mounting locks. Fabricate from 1/8-inch- (3.2-mm-) thick, [steel plate; galvanized] [aluminum plate].
- P. Mortise Locks: BHMA A156.13, Grade 1, suitable for exterior use.
1. Function: [F06 - Holdback lock] [F07 - Storeroom or closet lock] [F09 - Apartment, exit, or public toilet lock] [F16 - Double-cylinder deadlock] [F17 - Deadlock] <Insert function>.
  2. Material: Brass or bronze.
  3. Levers: Cast, forged, or extruded brass or bronze.
  4. Mounting Box: Configuration necessary to enclose locks. Fabricate from 1/8-inch- (3.2-mm-) thick, [steel plate; galvanized] [aluminum plate].
- Q. Electric Strikes: BHMA A156.31, Grade 1, of configuration required for use with lock specified, fail[-safe][-secure], and suitable for exterior use.
1. Mounting Plate: Configuration necessary for mounting electric strikes. Fabricate from 1/8-inch- (3.2-mm-) thick, [steel plate; galvanized] [aluminum plate].
  2. Mounting: Mortise into post.
- R. Exit Hardware: BHMA A156.3, Grade 1, Type 1 (rim exit device), with push pad actuating bar, suitable for exterior use.
1. Function: [01 - Exit only, no trim or blank escutcheon] [04 - Entrance by trim when latch bolt is released by key or set in a retracted position by key] [08 - Entrance by lever. Key locks or unlocks lever] [09 - Entrance by lever only when released by key. Key removable only when locked] <Insert function>.
  2. Mounting Channel: Bent-plate channel formed from 1/8-inch- (3.2-mm-) thick, [steel] [aluminum] plate. Channel spans gate frame. Exit device is mounted on channel web, recessed between flanges, with flanges extending 1/8 inch (3.2 mm) beyond push pad surface.
- S. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] diameter, round steel bars, hot-dip galvanized after fabrication. Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in [closed position] [both open and closed positions].
- T. Finish exposed welds to comply with NOMMA Guideline 1, [Finish #2 - completely sanded joint, some undercutting and pinholes okay] [Finish #3 - partially dressed weld with splatter removed] [Finish #4 - good-quality, uniform undressed weld with minimal splatter].
- U. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
- V. Metallic-Coated-Steel Finish: [High-performance coating] [Galvanized finish].
- W. Steel Finish: [Primed] [Shop painted] [High-performance coating].

- X. Aluminum Finish: Baked enamel or powder coating.

## 2.6 HORIZONTAL-SLIDE GATES

- A. Gate Configuration: **[Single leaf]** **[Double leaf]** **[As indicated]**.
1. Type: Overhead slide.
  2. Type: Cantilever slide, with **[external]** **[internal]** roller assemblies.
- B. Gate Frame Height: **[72 inches (1830 mm)]** **[As indicated]** **<Insert height>**.
- C. Gate Opening Width: **[36 inches (914 mm)]** **[As indicated]** **<Insert width>**.
- D. Automated vehicular gates shall comply with ASTM F2200, **[Class I]** **[Class II]** **[Class III]** **[Class IV]**.
- E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubing.
1. Frame Members: Square tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)]** **[1-3/4 by 1-3/4 inches (45 by 45 mm)]** **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or formed from **0.105-inch (2.66-mm)** nominal-thickness steel sheet and hot-dip galvanized after fabrication.
  2. Bracing Members: Square tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)]** **[1-3/4 by 1-3/4 inches (45 by 45 mm)]** **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or formed from **0.105-inch (2.66-mm)** nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- F. Steel Frames and Bracing: Fabricate members from square tubing. **[Hot-dip galvanize frames after fabrication.]**
1. Frame Members: Steel tubing **[1-1/2 by 1-1/2 inches (38 by 38 mm)]** **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **<Insert dimensions>** with **[1/8-inch (3.2-mm)]** **<Insert thickness>** wall thickness.
  2. Bracing Members: Steel tubing **[1-1/2 by 1-1/2 inches (38 by 38 mm)]** **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **<Insert dimensions>** with **[1/8-inch (3.2-mm)]** **<Insert dimension>** wall thickness.
- G. Aluminum Frames and Bracing: Fabricate members from square tubing.
1. Frame Members: Extruded-aluminum tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)]** **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **<Insert dimensions>** with **[0.100-inch (2.54-mm)]** **[0.125-inch (3.18-mm)]** **[0.140-inch (3.56-mm)]** **[0.154-inch (3.91-mm)]** **<Insert dimension>** wall thickness.
  2. Bracing Members: Extruded-aluminum tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)]** **[2 by 2 inches (51 by 51 mm)]** **[2-1/2 by 2-1/2 inches (64 by 64 mm)]** **<Insert dimensions>** with **[0.100-inch (2.54-mm)]** **[0.125-inch (3.18-mm)]** **[0.140-inch (3.56-mm)]** **[0.154-inch (3.91-mm)]** **<Insert dimension>** wall thickness.
- H. Frame Corner Construction:

1. Welded frame [with panels assembled with bolted or riveted corner fittings] [and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider].
  2. Overhead Slide Gates: Welded or assembled with corner fittings[ including 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider].
- I. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- J. Infill: Comply with requirements for adjacent fence.
- K. Picket Size, Configuration, and Spacing: Comply with requirements for adjacent fence.
1. Treillage: Provide iron castings of pattern indicated between each pair of pickets. Finish as specified for [adjacent fence] [gates].
- L. Overhead Track Assembly: Manufacturer's standard track, with overhead framing supports, bracing, and accessories, engineered to support size, weight, width, operation, and design of gate and roller assemblies.
- M. Hardware: Latches permitting operation from both sides of gate, [locking devices] [hangers] [roller assemblies] <Insert hardware items and accessories> and stops fabricated from [galvanized steel] [galvanized malleable iron] [mill-finished, Grade 319 aluminum-alloy casting with stainless-steel fasteners].[ Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.]
1. <Insert requirements for padlocks and chains if not Owner furnished>.
- N. Finish exposed welds to comply with NOMMA Guideline 1, [Finish #2 - completely sanded joint, some undercutting and pinholes okay] [Finish #3 - partially dressed weld with splatter removed] [Finish #4 - good-quality, uniform undressed weld with minimal splatter].
- O. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
- P. Metallic-Coated-Steel Finish: [High-performance coating] [Galvanized finish].
- Q. Steel Finish: [Primed] [Shop painted] [High-performance coating].
- R. Aluminum Finish: Baked enamel or powder coating.

## 2.7 GATE OPERATORS

- A. Gate Operators:
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Provide factory-assembled automatic operating system designed for gate size, type, weight, and operation frequency. Provide operation control system with characteristics suitable for Project conditions, with remote-control stations, safety devices, and weatherproof enclosures; coordinate electrical requirements with building electrical system.

1. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
  2. Provide operator with UL **[approval]****[-approved components]**.
  3. Provide electronic components with built-in troubleshooting diagnostic feature.
  4. Provide unit designed and wired for both right-hand/left-hand opening, permitting universal installation.
- C. Comply with NFPA 70.
- D. UL Standard: Manufacturer and label gate operators to comply with UL 325.
- E. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators on gates that must provide emergency access.
- F. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1 and the following:
1. Voltage: **[12-V dc]** **[24-V dc]** **[120 V]** **[208-220 V]** **[NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected]** **<Insert voltage>**.
  2. Horsepower: Not less than **[1/4]** **[1/3]** **[1/2]** **[3/4]** **<Insert value>**.
  3. Enclosure: **[Open dripproof]** **[Totally enclosed]** **[Manufacturer's standard]**.
  4. Duty: Continuous duty at ambient temperature of **105 deg F (40 deg C)** and at altitude of **3300 feet (1005 m)** above sea level.
  5. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
  6. Phase: **[One]** **[Polyphase]**.
- G. Gate Operators: **[Gate]** **[Concrete base]** **[Post]** **[In-ground]** mounted and as follows:
1. Hydraulic **[Swing]** **[Slide]** Gate Operators:
    - a. Duty: **[Light]** **[Medium]** **[Heavy]** duty, **[residential]** **[commercial/industrial]**.
    - b. Gate Speed: Minimum **[45 feet (13.7 m)]** **[60 feet (18.2 m)]** per minute.
    - c. Maximum Gate Weight: **[800 lb (363 kg)]** **<Insert value>**.
    - d. Frequency of Use: **[10 cycles per hour]** **[25 cycles per hour]** **[Continuous duty]**.
    - e. Operating Type: Wheel-and-rail drive **[with manual release]**.
    - f. Hydraulic Fluid: Of viscosity required for gate operation at ambient temperature range for Project.
    - g. Locking: Hydraulic in both directions.
    - h. Heater: Manufacturer's standard track and roller heater with thermostatic control.
  2. Mechanical **[Swing]** **[Slide]** Gate Operators:
    - a. Duty: **[Light]** **[Medium]** **[Heavy]** duty, **[residential]** **[commercial/industrial]**.
    - b. Gate Speed: Minimum **[45 feet (13.7 m) per minute]** **[60 feet (18.2 m) per minute]** **[variable speed]** **<Insert speed>**.
    - c. Maximum Gate Weight: **[600 lb (272 kg)]** **[800 lb (363 kg)]** **[3000 lb (1360 kg)]** **<Insert value>**.
    - d. Frequency of Use: **[10 cycles per hour]** **[25 cycles per hour]** **[60 cycles per hour]** **[Continuous duty]**.
    - e. Operating Type: **[Crank arm]** **[Wheel-and-rail drive]** **[Roller chain]**, **[with manual release]**.
    - f. Drive Type: Enclosed worm gear **[and chain-and-sprocket]** reducers, roller-chain drive.

- g. Drive Type: V-belt and **[worm gear] [chain-and-sprocket]** reducers, roller-chain drive.
  - h. **<Insert feature>**.
- H. Remote Controls: Electric controls separated from gate and motor and drive mechanism, with **[NEMA ICS 6, Type 1] [NEMA ICS 6, Type 4] <Insert type of enclosure>** enclosure for **[surface] [recessed or flush] [concrete base] [pedestal] <Insert mounting>** mounting, and with space for additional optional equipment. Provide the following remote-control device(s):
1. Control Station: Keyed, **[two] [three]-**position switch with open[, **stop,**] and close function; located remotely from gate. Provide two keys per station.
  2. Control Station: Momentary-contact, **[single] [three]-**button-operated with open[, **stop,**] and close function; located remotely from gate. **[Key switch to lock out open and close buttons.]**
  3. Card Reader: Functions only when authorized card is presented. Programmable, **[multiple] [single]-**code system[, **permitting four different access periods] [; face-lighted unit fully visible at night]**.
    - a. Reader Type: **[Touch plate] [Swipe] [Insertion] [Proximity]**.
    - b. Features: **[Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing gate activity]**.
  4. Digital Keypad Entry Unit: **[Programmable, ]**multiple-code capability of not less than **[five] [500] [2500] <Insert number>** possible individual codes, consisting of **[1 to 7] [4] [5]-**digit codes[, **and permitting four different access periods]**.
    - a. Features: **[Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing gate activity]**.
    - b. Face-lighted unit with **[metal-keyed] [keyless-membrane]** keypad fully visible at night.
  5. Radio Control: Digital system consisting of code-compatible universal receiver for each gate, located where indicated, with remote antenna with coaxial cable and mounting brackets designed to operate gates. Provide **[one] [two] <Insert number>** programmable transmitter(s) with multiple-code capability permitting validating or voiding of not less than **[1000] [10,000] <Insert number>** codes per channel configured for the following functions:
    - a. Transmitters: **[Single] [Three]** button operated, with open **[and close ]**function.
    - b. Channel Settings: **[Two] [Three] [Four] <Insert number>** independent channel settings controlling separate receivers for operating more than one gate from each transmitter.
  6. Telephone Entry System: Hands-free, voice-communication system for connection to building telephone system with digital-entry code activation of gate operator **[ and auxiliary keypad entry]**.
    - a. Residential System: Designed to be wired to same line with telephone.
    - b. Multiunit System: Designed to be wired to a dedicated telephone line, with capacity to access **[20] [100] <Insert number>** telephones[, **and with electronic directory]**.
- I. Vehicle Loop Detector: System includes automatic closing timer with adjustable time delay[, **timer cutoff switch,**] and loop detector designed to **[open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>**. System includes electronic detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light designed to detect presence or transit of a vehicle over an embedded loop of wire and to emit a signal activating the gate operator. System includes number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement, as recommended in writing by detection system manufacturer for function indicated, at location indicated on Drawings.

- J. Vehicle Presence Detector: System includes automatic closing timer with adjustable time delay[, **timer cutoff switch**,] and presence detector designed to **[open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>**. System includes **[retroreflective] [emitter/receiver]** detector with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of a vehicle in gate pathway when infrared beam in zone pattern is interrupted, and to emit a signal activating the gate operator.
- K. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:
1. Action: Reverse gate in both opening and closing cycles, and hold until clear of obstruction.
  2. Action: Stop gate in opening cycle and reverse gate in closing cycle, and hold until clear of obstruction.
  3. Internal Sensor: Built-in torque or current monitor senses gate is obstructed.
  4. Sensor Edge: Contact-pressure-sensitive safety edge, profile, and sensitivity designed for type of gate and component indicated, in locations as follows. Connect to control circuit using **[take-up cable reel] [self-coiling cable] [gate edge transmitter and operator receiver system]**.
    - a. Along entire gate leaf leading edge.
    - b. Along entire gate leaf trailing edge.
    - c. Across entire gate leaf bottom edge.
    - d. Along entire length of gate posts.
    - e. Along entire length of gate guide posts.
    - f. Where indicated on Drawings.
    - g. **<Insert extent and location>**.
  5. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in gate's path when infrared beam in the zone pattern is interrupted.
- L. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop gate at fully retracted and fully extended positions.
- M. Emergency Release Mechanism: Quick-disconnect release of operator drive system of the following type, permitting manual operation if operator fails. Design system so control-circuit power is disconnected during manual operation.
1. Type: **[Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge] [Mechanical device, key, or crank-activated release]**.
- N. Operating Features:
1. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features[ **with capability for monitoring and auditing gate activity**]. Provide unit that is isolated from voltage spikes and surges.

2. System Integration: With controlling circuit board capable of accepting any type of input from external devices.
  3. Master/Slave Capability: Control stations designed and wired for gate pair operation.
  4. Automatic Closing Timer: With adjustable time delay before closing[ **and timer cutoff switch**].
  5. Open Override Circuit: Designed to override closing commands.
  6. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
  7. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.
  8. Clock Timer: **[24-hour] [Seven-day]** <Insert time> programmable for regular events.
- O. Accessories:
1. Warning Module: **[Audio] [Visual], [constant] [strobe]**-light alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving; compliant with the United States Access Board's ADA-ABA Accessibility Guidelines.
  2. Battery Backup System: Battery-powered drive and access-control system, independent of primary drive system.
    - a. Fail-Safe: Gate opens and remains open until power is restored.
    - b. Fail-Secure: Gate cycles on battery power, then fail-safe when battery is discharged.
  3. External electric-powered **[solenoid] [magnetic]** lock with delay timer allowing time for lock to release before gate operates.
  4. **[Fire] [Postal]** box.
  5. Fire **[strobe] [siren]** sensor.
  6. Intercom System: <Insert requirements>.
  7. Instructional, Safety, and Warning Labels and Signs: **[According to UL 325] [Manufacturer's standard for components and features specified] [As indicated on Drawings]** <Insert requirements>.
  8. Equipment Bases/Pads: Precast concrete, **[depth not less than 12 inches (305 mm)]** <Insert depth>, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.

## 2.8 ALUMINUM

- A. Aluminum, General: Provide alloys and tempers with not less than the strength and durability properties of alloy and temper designated in paragraphs below for each aluminum form required.
- B. Extrusions: **ASTM B221 (ASTM B221M)**, Alloy 6063-T5.
- C. Tubing: ASTM B429/B429M, Alloy 6063-T6.
- D. Plate and Sheet: **ASTM B209 (ASTM B209M)**, Alloy 6061-T6.
- E. Die and Hand Forgings: **ASTM B247 (ASTM B247M)**, Alloy 6061-T6.
- F. Castings: ASTM B26/B26M, Alloy A356.0-T6.

## 2.9 STEEL AND IRON

- A. Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Bars (Pickets): Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
- C. Tubing: ASTM A500/A500M, cold-formed steel tubing.
- D. Bar Grating: NAAMM MBG 531.
  - 1. Bars: Hot-rolled steel strip, ASTM A1011/A1011M, Commercial Steel, Type B.
  - 2. Wire Rods: ASTM A510/A510M.
- E. Uncoated Steel Sheet: [Hot-rolled steel sheet, ASTM A1011/A1011M, Structural Steel, Grade 45 (Grade 310)] [or] [cold-rolled steel sheet, ASTM A1008/A1008M, Structural Steel, Grade 50 (Grade 340)].
- F. Galvanized-Steel Sheet: ASTM A653/A653M, structural quality, Grade 50 (Grade 340), with [G90 (Z275)] [G60 (Z180)] coating.
- G. Aluminum-Zinc, Alloy-Coated Steel Sheet: ASTM A792/A792M, structural quality, Grade 50 (Grade 340), with AZ60 (AZM180) coating.
- H. Castings: Either gray or malleable iron unless otherwise indicated.
  - 1. Gray Iron: ASTM A48/A48M, Class 30.
  - 2. Malleable Iron: ASTM A47/A47M.

## 2.10 COATING MATERIALS

- A. Shop Primers for Steel: Provide primers that comply with [Section 099113 "Exterior Painting."] [Section 099600 "High-Performance Coatings."]
- B. Shop Primer for Steel: Manufacturer's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- C. Epoxy Zinc-Rich Primer for Uncoated Steel: Complying with MPI #20 and compatible with coating specified to be applied over it.
  - 1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
    - a. <Insert manufacturer's name; product name or designation>.
- D. Epoxy Primer for Galvanized Steel: Epoxy primer recommended in writing by topcoat manufacturer.
  - 1. Products: Subject to compliance with requirements, [provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:
    - a. <Insert manufacturer's name; product name or designation>.

- E. Epoxy Intermediate Coat for Uncoated Steel: Complying with MPI #77 and compatible with primer and topcoat.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**
- F. Intermediate Coat for Uncoated Steel: Epoxy or polyurethane intermediate recommended in writing by primer and topcoat manufacturer.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**
- G. Polyurethane[ **Intermediate Coat and**] Topcoat: Complying with MPI #72 and compatible with undercoat.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**

## 2.11 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for strength and compatibility in fabricated items.
- B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 033000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of **3000 psi (20 MPa)**, **3-inch (75-mm)** slump, and **1-inch (25-mm)** maximum aggregate size[ **or dry, packaged, normal-weight concrete mix complying with ASTM C387/C387M mixed with potable water according to manufacturer's written instructions**].
- C. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M and specifically recommended by manufacturer for exterior applications.

## 2.12 GROUNDING MATERIALS

- A. Comply with requirements of Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Grounding Conductors: Size as indicated on Drawings. Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
1. Material above Finished Grade: **[Copper] [Aluminum]**.

2. Material on or below Finished Grade: Copper.
  3. Bonding Jumpers: Braided copper tape, 1-5/8 inch (41 mm) wide and 1/16 inch (1.6 mm) thick, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
- C. Grounding Connectors and Grounding Rods: Comply with UL 467.
1. Connectors for Below-Grade Use: Exothermic-welded type.
  2. Grounding Rods: Copper-clad steel.
    - a. Size: 5/8 by 96 inches (16 by 2440 mm).

## 2.13 ALUMINUM FINISHES

- A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 2 mils (0.05 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.

## 2.14 STEEL FINISHES

- A. Surface Preparation: Clean surfaces according to [SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."] [SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."] After cleaning, apply a conversion coating compatible with the organic coating to be applied over it.
- B. Powder Coating: Immediately after cleaning, apply manufacturer's standard two-coat finish consisting of epoxy primer and TGIC polyester topcoat to a minimum total dry film thickness of not less than 8 mils (0.20 mm). Comply with coating manufacturer's written instructions.
1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- C. Primer Application: Apply zinc-rich epoxy primer immediately after cleaning, to provide a minimum dry film thickness of 2 mils (0.05 mm) per applied coat, to surfaces that are exposed after assembly and installation, and to concealed surfaces.
- D. Shop-Painted Finish: Comply with [Section 099113 "Exterior Painting."] [Section 099600 "High-Performance Coatings."]
- E. High-Performance Coating: Apply intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
1. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

**2.15 METALLIC-COATED-STEEL FINISHES**

- A. Galvanized Finish: Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- B. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a [zinc-phosphate] conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.
- C. Powder Coating: Immediately after cleaning and pretreating, apply manufacturer's standard TGIC polyester powder-coat finish to a minimum dry film thickness of 2 mils (0.05 mm).
  - 1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
- D. Powder Coating: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat finish consisting of [zinc-rich] epoxy prime coat and TGIC polyester topcoat to a minimum dry film thickness of 2 mils (0.05 mm). Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of 4 mils (0.10 mm).
  - 1. Color and Gloss: [As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>.
  - 2. Comply with surface finish testing requirements in ASTM F2408 [except change corrosion-resistance requirement to 3000 hours without failure].
- E. High-Performance Coating: Apply epoxy primer, polyurethane intermediate coat, and polyurethane topcoat to prepared surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
  - 1. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.
- B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

- A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of **500 feet (152.5 m)** or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.
1. Construction layout and field engineering are specified in Section 017300 "Execution."

### 3.3 DECORATIVE FENCE INSTALLATION

- A. Install fences according to manufacturer's written instructions.
- B. Install fences by setting posts as indicated and fastening **[rails] [and] [infill panels]** to posts. **[Peen threads of bolts after assembly to prevent removal.]**
- C. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than **24 inches (600 mm)** plus **3 inches (75 mm)** for each **foot (300 mm)** or fraction of a **foot (300 mm)** that fence height exceeds **4 feet (1.2 m)**.
- D. Post Setting: Set posts **[in concrete] [with mechanical anchors] [by mechanically driving into soil]** at indicated spacing into firm, undisturbed soil.
1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
  2. Concrete Fill: Place concrete around **[posts] [and] [sleeves]** and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
    - a. Exposed Concrete: Extend **2 inches (51 mm)** above grade. Finish and slope top surface to drain water away from post.
    - b. Concealed Concrete: Top **[2 inches (51 mm)] <Insert dimension>** below grade **[as indicated on Drawings]** to allow covering with surface material. Slope top surface of concrete to drain water away from post.
  3. Posts Set in Concrete: Extend post to within **6 inches (150 mm)** of specified excavation depth, but not closer than **3 inches (75 mm)** to bottom of concrete.
  4. Posts Set into Concrete in Sleeves: Use galvanized-steel pipe sleeves with inside diameter at least **3/4 inch (20 mm)** larger than outside diagonal dimension of post, preset and anchored into concrete for installing posts.
    - a. Extend posts at least **5 inches (125 mm)** into sleeve.
    - b. After posts have been inserted in sleeves, fill annular space between post and sleeve with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions; shape and smooth to shed water. Finish and slope top surface of grout to drain water away from post.
  5. Posts Set into Voids in Concrete: Form or core drill holes not less than **3/4 inch (20 mm)** larger than outside diagonal dimension of post.
    - a. Extend posts at least **5 inches (125 mm)** into concrete.
    - b. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions. Finish and slope top surface of grout to drain water away from post.

6. Mechanically Driven Posts: Drive into soil to depth of [30 inches (762 mm)] [36 inches (914 mm)] <Insert dimension>. Protect post top to prevent distortion.
7. Space posts uniformly at [6 feet (1.83 m)] [8 feet (2.44 m)] <Insert dimension> o.c.

### 3.4 GATE INSTALLATION

- A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

### 3.5 GATE OPERATOR INSTALLATION

- A. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.
- B. Excavation for [Support Posts] [Pedestals] [Concrete Bases]: Hand-excavate holes for bases in firm, undisturbed soil to dimensions and depths and at locations as required by gate operator component manufacturer's written instructions and as indicated.
- C. Concrete Bases: Cast-in-place or precast concrete, [depth not less than 12 inches (300 mm)] <Insert depth>, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.
- D. Vehicle Loop Detector System: [Cut grooves in pavement and ]bury and seal wire loop according to manufacturer's written instructions. Connect to equipment operated by detector.
- E. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.

### 3.6 GROUNDING AND BONDING

- A. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fence Grounding: Install at maximum intervals of [1500 feet (450 m)] <Insert a lesser distance if grounding resistance is high> except as follows:
  1. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of [750 feet (225 m)] <Insert a lesser distance if grounding resistance is high>.ol style="list-style-type: none;">  - a. Gates and Other Fence Openings: Ground fence on each side of opening.
    - 1) Bond metal gates to gate posts.
    - 2) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches (460 mm) below finished grade.
- C. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet (45 m) on each side of crossing.

- D. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.
- E. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is **6 inches (150 mm)** below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.
- F. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
- G. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
  - 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
  - 2. Make connections with clean, bare metal at points of contact.
  - 3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
  - 4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
  - 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
- H. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

### 3.7 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
  - 1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
  - 2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
  - 3. Report: Prepare test reports of grounding resistance at each test location certified by a testing agency. Include observations of weather and other phenomena that may affect test results.

### 3.8 ADJUSTING

- A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

- B. Automatic Gate Operators: Energize circuits to electrical equipment and devices. Adjust operators, controls, safety devices, [alarms,] and limit switches.
  - 1. Hydraulic Operators: Purge operating system, adjust pressure and fluid levels, and check for leaks.
  - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 3. Test and adjust controls, [alarms,] and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Lubricate hardware, [gate operators,] and other moving parts.

### 3.9 DEMONSTRATION

- A. [Engage a factory-authorized service representative to train] [Train] Owner's personnel to adjust, operate, and maintain gates.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 31 19.53 - DECORATIVE METAL SECURITY FENCES AND GATES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
1. Decorative metallic-coated-steel security fences.
  2. Swing gates.
  3. Horizontal-slide gates.
  4. Gate operators, including controls.
- B. Related Requirements:
1. Section 033053 "Miscellaneous Cast-in-Place Concrete" for concrete **[bases for gate operators, drives, and controls] [and] [post concrete fill]**.
  2. Section 281500 "Access Control Hardware Devices" for access control devices installed at gates and provided as part of a security system.
  3. Division 26 Sections for electrical service and connections for system disconnect switches and powered devices including, but not limited to, motor operators, controls, and limit switches.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at **[Project site] <Insert location>**.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For fencing and gates.
1. Include plans, elevations, sections, gate locations, post spacing, **[and] [mounting] [attachment] details[, and grounding details]**.
  2. Gate Operator: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
  3. Wiring Diagrams: Include diagrams for power, signal, and control wiring.
- C. Samples: For each fence material and for each color specified.

1. Provide Samples [**12 inches (300 mm)**] <Insert dimension> in length for linear materials.

## 1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

## 1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For gate operators to include in maintenance manuals.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Wind Loading:
  1. Fence Height: [**0 to 15 feet (0 to 4.57 m)**] [**15 to 20 feet (4.57 to 6.10 m)**].
  2. Wind Exposure Category: [**B**] [**C**] [**D**].
  3. Design Wind Speed: [**105 mph (169 kph)**] [**110 mph (177 kph)**] [**120 mph (193 kph)**] [**130 mph (209 kph)**] [**140 mph (225 kph)**] [**150 mph (241 kph)**] [**160 mph (257 kph)**] [**170 mph (274 kph)**] <Insert wind speed>.
  4. Design Wind Pressure: <Insert wind pressure>.
- B. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.
- C. Vehicle Crash Testing: Comply with requirements of ASTM F2656.
  1. Impact Category: [**C**] [**P**] [**M**] [**H**] <Insert designation>
  2. Impact Velocity: [**65 mph (40 km/h)**] [**80 mph (50 km/h)**] [**100 mph (60 km/h)**] <Insert value>.
  3. Penetration Rating: [**P1**] [**P2**] [**P3**] [**P4**] <Insert designation>

### 2.2 DECORATIVE METALLIC-COATED-STEEL SECURITY FENCES

- A. Decorative Metallic-Coated-Steel Security Fences:
  1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Posts:
  1. Line, End, and Corner Posts: **1-3/4-by-4-inch (45-by-102-mm)** double-thickness, I-shaped sections formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or **0.105-inch (2.66-mm)** nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
  2. Line, End, and Corner Posts: **4-by-4-inch (102-by-102-mm)** square tubes formed from **0.079-inch (2.01-mm)** nominal-thickness, metallic-coated steel sheet or **0.075-inch (1.90-mm)** nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.

3. Line, End, and Corner Posts: [2-1/2-by-2-1/2-inch (64-by-64-mm)] [3-by-3-inch (76-by-76-mm)] [4-by-4-inch (102-by-102-mm)] square tubes formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or 0.105-inch (2.66-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
  4. Posts at Swing Gate Openings: Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
  5. Posts at Swing Gate Openings: Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
  6. Posts at Horizontal-Slide Gate Openings up to 12 Feet (3.7 m): Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
  7. Posts at Horizontal-Slide Gate Openings Wider Than 12 Feet (3.7 m): Square steel tubing 4 by 4 inches (102 by 102 mm) with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized.
  8. Guide Posts for Class 1 Horizontal-Slide Gates: Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication; installed adjacent to gate post to permit gate to slide in space between.
  9. Guide Posts for Class 1 Horizontal-Slide Gates: Square steel tubing [3 by 3 inches (76 by 76 mm)] [4 by 4 inches (102 by 102 mm)] <Insert dimensions> with [3/16-inch (4.76-mm)] <Insert dimension> wall thickness, hot-dip galvanized; installed adjacent to gate post to permit gate to slide in space between.
- C. Post Caps: Aluminum castings.
- D. Rails: 2-by-2-inch (51-by-51-mm) square tubes.
1. Metal and Thickness: 0.079-inch (2.01-mm) nominal-thickness, metallic-coated steel sheet or 0.075-inch (1.90-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
- E. Rails: 1-3/4-by-1-3/4-inch (44-by-44-mm) square tubes.
1. Metal and Thickness: 0.079-inch (2.01-mm) nominal-thickness, metallic-coated steel sheet or 0.075-inch (1.90-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
- F. Rails: 2-by-2-1/2-inch (51-by-64-mm) pentagon-shaped box channel designed to shed water and to enclose wire rope reinforcement.
1. Metal and Thickness: 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or 0.105-inch (2.66-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
  2. Provide rails with wire rope reinforcement at [34 inches (864 mm)] [41 inches (1041 mm)] [and] [48 inches (1219 mm)] above ground in addition to rails at top and bottom of fence.
  3. Wire Rope Reinforcement: FS RR-W-41-G, 3/4-inch (19-mm) diameter, zinc-coated-steel wire rope.
    - a. Class: [Class 2, 6 by 19] <Insert type>.
    - b. Minimum Breaking Force: [58,800 lb (26 671 kg)] <Insert value>.

- G. Pickets: **3/4-by-2-3/4-inch (19-by-70-mm)** M-shaped pales.
  1. Metal and Thickness: **0.079-inch (2.01-mm)** nominal-thickness, metallic-coated steel sheet or **0.075-inch (1.90-mm)** nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
  2. Extend pickets beyond top rail as indicated and **[terminate with rounded edge] [cut and split to form three points]**.
  3. Picket Spacing: **6 inches (152.4 mm)** o.c., maximum.
- H. Fasteners: Stainless-steel carriage bolts with tamperproof nuts.
- I. Metallic-Coated Steel Sheet: Galvanized-steel sheet or aluminum-zinc, alloy-coated steel sheet.
- J. Interior surface of tubes formed from uncoated steel sheet shall be **[hot-dip zinc coated same as exterior] [or] [coated with zinc-rich thermosetting coating to comply with ASTM F2408]**.
- K. Galvanizing: For components indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
- L. Finish: **[Organic coating complying with requirements in ASTM F2408] [Powder coating]**.

### 2.3 SWING GATES

- A. Gate Configuration: **[Single leaf] [Double leaf] [As indicated]**.
- B. Gate Frame Height: **[72 inches (1830 mm)] [As indicated] <Insert height>**.
- C. Gate Opening Width: **[36 inches (914 mm)] [As indicated] <Insert width>**.
- D. Automated vehicular gates shall comply with ASTM F2200, **[Class I] [Class II] [Class III] [Class IV]**.
- E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubes **[1-1/2 by 1-1/2 inches (38 by 38 mm)] [1-3/4 by 1-3/4 inches (45 by 45 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)]** formed from **0.108-inch (2.74-mm)** nominal-thickness, metallic-coated steel sheet or formed from **0.105-inch (2.66-mm)** nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- F. Steel Frames and Bracing: Fabricate members from square steel tubing **[1-1/2 by 1-1/2 inches (38 by 38 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)]** **<Insert dimensions>** with **[1/8-inch (3.2-mm)] <Insert dimension>** wall thickness. **[ Hot-dip galvanize frames after fabrication.]**
- G. Frame Corner Construction: **[Welded] [or] [assembled with corner fittings] [and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider]**.
- H. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- I. Infill: Comply with requirements for adjacent fence.
- J. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than **5 feet (1.52 m)** wide. Provide **[center gate stops] [and] [cane bolts]** for pairs of gates. **[ Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.]**

1. <Insert requirements for padlocks and chains if not Owner furnished>.
- K. Spring Hinges: BHMA A156.17, Grade 1, suitable for exterior use.
1. Function: [320 - Gate spring pivot hinge. Adjustable tension] [321 - Gate spring pivot hinge. Fixed tension].
  2. Material: Malleable iron; galvanized.
- L. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
1. Function: 39 - Full surface, triple weight, antifriction bearing.
  2. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.
- M. Rim Locks: BHMA A156.5, Grade 1, suitable for exterior use.
1. Function: [621 - Latchbolt by key from outside and by turn from inside. Latchbolt is held retracted by device from inside] [622 - Deadbolt by key from outside and by turn from inside] [626 - Interlocking deadbolt operated by key from either side] [627 - Interlocking deadbolt operated by key from outside and by turn from inside] [629 - Deadlocking latchbolt by key from outside and by turn from inside] <Insert function>.
  2. Material: Cast, forged, or extruded brass or bronze.
  3. Mounting Plate: Configuration necessary for mounting locks. Fabricate from 1/8-inch- (3.2-mm-) thick, [steel plate; galvanized] [aluminum plate].
- N. Mortise Locks: BHMA A156.13, Grade 1, suitable for exterior use.
1. Function: [F06 - Holdback lock] [F07 - Storeroom or closet lock] [F09 - Apartment, exit, or public toilet lock] [F16 - Double-cylinder deadlock] [F17 - Deadlock] <Insert function>.
  2. Material: Brass or bronze.
  3. Levers: Cast, forged, or extruded brass or bronze.
  4. Mounting Box: Configuration necessary to enclose locks. Fabricate from 1/8-inch- (3.2-mm-) thick, [steel plate; galvanized] [aluminum plate].
- O. Electric Strikes: BHMA A156.31, Grade 1, of configuration required for use with lock specified, fail[-safe][-secure], and suitable for exterior use.
1. Mounting Plate: Configuration necessary for mounting electric strikes. Fabricate from 1/8-inch- (3.2-mm-) thick, [steel plate; galvanized] [aluminum plate].
  2. Mounting: Mortise into post.
- P. Exit Hardware: BHMA A156.3, Grade 1, Type 1 (rim exit device), with push pad actuating bar, suitable for exterior use.
1. Function: [01 - Exit only, no trim or blank escutcheon] [04 - Entrance by trim when latch bolt is released by key or set in a retracted position by key] [08 - Entrance by lever. Key locks or unlocks lever] [09 - Entrance by lever only when released by key. Key removable only when locked] <Insert function>.
  2. Mounting Channel: Bent-plate channel formed from 1/8-inch- (3.2-mm-) thick, [steel] [aluminum] plate. Channel spans gate frame. Exit device is mounted on channel web, recessed between flanges, with flanges extending 1/8 inch (3.2 mm) beyond push pad surface.

- Q. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from [1/2-inch- (12.7-mm-)] [3/4-inch- (19-mm-)] diameter, round steel bars, hot-dip galvanized after fabrication. Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in [closed position] [both open and closed positions].
- R. Finish exposed welds to comply with NOMMA Guideline 1, [Finish #2 - completely sanded joint, some undercutting and pinholes okay] [Finish #3 - partially dressed weld with splatter removed] [Finish #4 - good-quality, uniform undressed weld with minimal splatter].
- S. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
- T. Metallic-Coated-Steel Finish: [High-performance coating] [Galvanized finish].
- U. Steel Finish: [Primed] [Shop painted] [High-performance coating].

## 2.4 HORIZONTAL-SLIDE GATES

- A. Gate Configuration: [Single leaf] [Double leaf] [As indicated].
  - 1. Type: Overhead slide.
  - 2. Type: Cantilever slide, with [external] [internal] roller assemblies.
- B. Gate Frame Height: [72 inches (1830 mm)] [As indicated] <Insert height>.
- C. Gate Opening Width: [36 inches (914 mm)] [As indicated] <Insert width>.
- D. Automated vehicular gates shall comply with ASTM F2200, [Class I] [Class II] [Class III] [Class IV].
- E. Galvanized-Steel Frames and Bracing: Fabricate members from square tubing.
  - 1. Frame Members: Square tubes [1-1/2 by 1-1/2 inches (38 by 38 mm)] [1-3/4 by 1-3/4 inches (45 by 45 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
  - 2. Bracing Members: Square tubes [1-1/2 by 1-1/2 inches (38 by 38 mm)] [1-3/4 by 1-3/4 inches (45 by 45 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- F. Steel Frames and Bracing: Fabricate members from square tubing. [Hot-dip galvanize frames after fabrication.]
  - 1. Frame Members: Steel tubing [1-1/2 by 1-1/2 inches (38 by 38 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] <Insert dimensions> with [1/8-inch (3.2-mm)] <Insert thickness> wall thickness.
  - 2. Bracing Members: Steel tubing [1-1/2 by 1-1/2 inches (38 by 38 mm)] [2 by 2 inches (51 by 51 mm)] [2-1/2 by 2-1/2 inches (64 by 64 mm)] <Insert dimensions> with [1/8-inch (3.2-mm)] <Insert dimension> wall thickness.

- G. Frame Corner Construction:
1. Welded frame [**with panels assembled with bolted or riveted corner fittings**] [**and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider**].
  2. Overhead Slide Gates: Welded or assembled with corner fittings[ **including 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider**].
- H. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- I. Infill: Comply with requirements for adjacent fence.
- J. Overhead Track Assembly: Manufacturer's standard track, with overhead framing supports, bracing, and accessories, engineered to support size, weight, width, operation, and design of gate and roller assemblies.
- K. Hardware: Latches permitting operation from both sides of gate, [**locking devices**] [**hangers**] [**roller assemblies**] <Insert hardware items and accessories> and stops fabricated from [**galvanized steel**] [**galvanized malleable iron**] [**mill-finished, Grade 319 aluminum-alloy casting with stainless-steel fasteners**]. [**Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.**]
1. <Insert requirements for padlocks and chains if not Owner furnished>.
- L. Finish exposed welds to comply with NOMMA Guideline 1, [**Finish #2 - completely sanded joint, some undercutting and pinholes okay**] [**Finish #3 - partially dressed weld with splatter removed**] [**Finish #4 - good-quality, uniform undressed weld with minimal splatter**].
- M. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123/A123M. For hardware items, hot-dip galvanize to comply with ASTM A153/A153M.
- N. Metallic-Coated-Steel Finish: [**High-performance coating**] [**Galvanized finish**].
- O. Steel Finish: [**Primed**] [**Shop painted**] [**High-performance coating**].

## 2.5 GATE OPERATORS

- A. Gate Operators:
1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Provide factory-assembled automatic operating system designed for gate size, type, weight, and operation frequency. Provide operation control system with characteristics suitable for Project conditions, with remote-control stations, safety devices, and weatherproof enclosures; coordinate electrical requirements with building electrical system.
1. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
  2. Provide operator with UL[ **approval**][**-approved components**].
  3. Provide electronic components with built-in troubleshooting diagnostic feature.
  4. Provide unit designed and wired for both right-hand/left-hand opening, permitting universal installation.

- C. Comply with NFPA 70.
- D. UL Standard: Manufacturer and label gate operators to comply with UL 325.
- E. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators on gates that must provide emergency access.
- F. Motor Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, within installed environment, with indicated operating sequence, and without exceeding nameplate rating or considering service factor. Comply with NEMA MG 1 and the following:
1. Voltage: [12-V dc] [24-V dc] [120 V] [208-220 V] [NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected] <Insert voltage>.
  2. Horsepower: Not less than [1/4] [1/3] [1/2] [3/4] <Insert value>.
  3. Enclosure: [Open dripproof] [Totally enclosed] [Manufacturer's standard].
  4. Duty: Continuous duty at ambient temperature of 105 deg F (40 deg C) and at altitude of 3300 feet (1005 m) above sea level.
  5. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
  6. Phase: [One] [Polyphase].
- G. Gate Operators: [Gate] [Concrete base] [Post] [In-ground] mounted and as follows:
1. Hydraulic [Swing] [Slide] Gate Operators:
    - a. Duty: [Light] [Medium] [Heavy] duty, [residential] [commercial/industrial].
    - b. Gate Speed: Minimum [45 feet (13.7 m)] [60 feet (18.2 m)] per minute.
    - c. Maximum Gate Weight: [800 lb (363 kg)] <Insert value>.
    - d. Frequency of Use: [10 cycles per hour] [25 cycles per hour] [Continuous duty].
    - e. Operating Type: Wheel-and-rail drive [with manual release].
    - f. Hydraulic Fluid: Of viscosity required for gate operation at ambient temperature range for Project.
    - g. Locking: Hydraulic in both directions.
    - h. Heater: Manufacturer's standard track and roller heater with thermostatic control.
  2. Mechanical [Swing] [Slide] Gate Operators:
    - a. Duty: [Light] [Medium] [Heavy] duty, [residential] [commercial/industrial].
    - b. Gate Speed: Minimum [45 feet (13.7 m) per minute] [60 feet (18.2 m) per minute] [variable speed] <Insert speed>.
    - c. Maximum Gate Weight: [600 lb (272 kg)] [800 lb (363 kg)] [3000 lb (1360 kg)] <Insert value>.
    - d. Frequency of Use: [10 cycles per hour] [25 cycles per hour] [60 cycles per hour] [Continuous duty].
    - e. Operating Type: [Crank arm] [Wheel-and-rail drive] [Roller chain], [with manual release].
    - f. Drive Type: Enclosed worm gear [and chain-and-sprocket] reducers, roller-chain drive.
    - g. Drive Type: V-belt and [worm gear] [chain-and-sprocket] reducers, roller-chain drive.
    - h. <Insert feature>.
- H. Remote Controls: Electric controls separated from gate and motor and drive mechanism, with [NEMA ICS 6, Type 1] [NEMA ICS 6, Type 4] <Insert type of enclosure> enclosure for [surface] [recessed or flush] [concrete base] [pedestal] <Insert mounting> mounting, and with space for additional optional equipment. Provide the following remote-control device(s):

1. Control Station: Keyed, **[two] [three]**-position switch with open[, **stop,**] and close function; located remotely from gate. Provide two keys per station.
2. Control Station: Momentary-contact, **[single] [three]**-button-operated with open[, **stop,**] and close function; located remotely from gate. **[ Key switch to lock out open and close buttons.]**
3. Card Reader: Functions only when authorized card is presented. Programmable, **[multiple] [single]**-code system[, **permitting four different access periods] [; face-lighted unit fully visible at night]**.
  - a. Reader Type: **[Touch plate] [Swipe] [Insertion] [Proximity]**.
  - b. Features: **[Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing gate activity]**.
4. Digital Keypad Entry Unit: **[Programmable, ]**multiple-code capability of not less than **[five] [500] [2500] <Insert number>** possible individual codes, consisting of **[1- to 7] [4] [5]**-digit codes[, **and permitting four different access periods]**.
  - a. Features: **[Timed antipassback] [Limited-time usage] [Capable of monitoring and auditing gate activity]**.
  - b. Face-lighted unit with **[metal-keyed] [keyless-membrane]** keypad fully visible at night.
5. Radio Control: Digital system consisting of code-compatible universal receiver for each gate, located where indicated, with remote antenna with coaxial cable and mounting brackets designed to operate gates. Provide **[one] [two] <Insert number>** programmable transmitter(s) with multiple-code capability permitting validating or voiding of not less than **[1000] [10,000] <Insert number>** codes per channel configured for the following functions:
  - a. Transmitters: **[Single] [Three]**-button operated, with open **[and close ]**function.
  - b. Channel Settings: **[Two] [Three] [Four] <Insert number>** independent channel settings controlling separate receivers for operating more than one gate from each transmitter.
6. Telephone Entry System: Hands-free, voice-communication system for connection to building telephone system with digital-entry code activation of gate operator[ **and auxiliary keypad entry]**.
  - a. Residential System: Designed to be wired to same line with telephone.
  - b. Multiunit System: Designed to be wired to a dedicated telephone line, with capacity to access **[20] [100] <Insert number>** telephones[, **and with electronic directory]**.
- I. Vehicle Loop Detector: System includes automatic closing timer with adjustable time delay[, **timer cutoff switch,**] and loop detector designed to **[open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>**. System includes electronic detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light designed to detect presence or transit of a vehicle over an embedded loop of wire and to emit a signal activating the gate operator. System includes number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement, as recommended in writing by detection system manufacturer for function indicated, at location indicated on Drawings.
- J. Vehicle Presence Detector: System includes automatic closing timer with adjustable time delay[, **timer cutoff switch,**] and presence detector designed to **[open and close gate] [hold gate open until traffic clears] [reverse gate] <Insert functions>**. System includes **[retroreflective] [emitter/receiver]** detector with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of a vehicle in gate pathway when infrared beam in zone pattern is interrupted, and to emit a signal activating the gate operator.
- K. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:

1. Action: Reverse gate in both opening and closing cycles, and hold until clear of obstruction.
  2. Action: Stop gate in opening cycle and reverse gate in closing cycle, and hold until clear of obstruction.
  3. Internal Sensor: Built-in torque or current monitor senses gate is obstructed.
  4. Sensor Edge: Contact-pressure-sensitive safety edge, profile, and sensitivity designed for type of gate and component indicated, in locations as follows. Connect to control circuit using **[take-up cable reel]** **[self-coiling cable]** **[gate edge transmitter and operator receiver system]**.
    - a. Along entire gate leaf leading edge.
    - b. Along entire gate leaf trailing edge.
    - c. Across entire gate leaf bottom edge.
    - d. Along entire length of gate posts.
    - e. Along entire length of gate guide posts.
    - f. Where indicated on Drawings.
    - g. **<Insert extent and location>**.
  5. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in gate's path when infrared beam in the zone pattern is interrupted.
- L. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop gate at fully retracted and fully extended positions.
- M. Emergency Release Mechanism: Quick-disconnect release of operator drive system of the following type, permitting manual operation if operator fails. Design system so control-circuit power is disconnected during manual operation.
1. Type: **[Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge]** **[Mechanical device, key, or crank-activated release]**.
- N. Operating Features:
1. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features **[with capability for monitoring and auditing gate activity]**. Provide unit that is isolated from voltage spikes and surges.
  2. System Integration: With controlling circuit board capable of accepting any type of input from external devices.
  3. Master/Slave Capability: Control stations designed and wired for gate pair operation.
  4. Automatic Closing Timer: With adjustable time delay before closing **[and timer cutoff switch]**.
  5. Open Override Circuit: Designed to override closing commands.
  6. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
  7. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.

8. Clock Timer: **[24-hour] [Seven-day] <Insert time>** programmable for regular events.

O. Accessories:

1. Warning Module: **[Audio] [Visual], [constant] [strobe]**-light alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving; compliant with the United States Access Board's ADA-ABA Accessibility Guidelines.
2. Battery Backup System: Battery-powered drive and access-control system, independent of primary drive system.
  - a. Fail-Safe: Gate opens and remains open until power is restored.
  - b. Fail-Secure: Gate cycles on battery power, then fail-safe when battery is discharged.
3. External electric-powered **[solenoid] [magnetic]** lock with delay timer allowing time for lock to release before gate operates.
4. **[Fire] [Postal]** box.
5. Fire **[strobe] [siren]** sensor.
6. Intercom System: **<Insert requirements>**.
7. Instructional, Safety, and Warning Labels and Signs: **[According to UL 325] [Manufacturer's standard for components and features specified] [As indicated on Drawings] <Insert requirements>**.
8. Equipment Bases/Pads: Precast concrete, **[depth not less than 12 inches (305 mm)] <Insert depth>**, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.

## 2.6 STEEL AND IRON

- A. Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Tubing: ASTM A500/A500M, cold-formed steel tubing.
- C. Uncoated Steel Sheet: **[Hot-rolled steel sheet, ASTM A1011/A1011M, Structural Steel, Grade 45 (Grade 310)] [or] [cold-rolled steel sheet, ASTM A1008/A1008M, Structural Steel, Grade 50 (Grade 340)]**.
- D. Galvanized-Steel Sheet: ASTM A653/A653M, structural quality, **Grade 50 (Grade 340)**, with **[G90 (Z275)] [G60 (Z180)]** coating.
- E. Aluminum-Zinc, Alloy-Coated Steel Sheet: ASTM A792/A792M, structural quality, **Grade 50 (Grade 340)**, with **AZ60 (AZM180)** coating.
- F. Castings: Either gray or malleable iron unless otherwise indicated.
  1. Gray Iron: ASTM A48/A48M, Class 30.
  2. Malleable Iron: ASTM A47/A47M.

## 2.7 COATING MATERIALS

- A. Shop Primers for Steel: Provide primers that comply with **[Section 099113 "Exterior Painting.]" [Section 099600 "High-Performance Coatings.]"**

- B. Shop Primer for Steel: Manufacturer's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.
- C. Epoxy Zinc-Rich Primer for Uncoated Steel: Complying with MPI #20 and compatible with coating specified to be applied over it.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**
- D. Epoxy Primer for Galvanized Steel: Epoxy primer recommended in writing by topcoat manufacturer.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**
- E. Epoxy Intermediate Coat for Uncoated Steel: Complying with MPI #77 and compatible with primer and topcoat.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**
- F. Intermediate Coat for Uncoated Steel: Epoxy or polyurethane intermediate recommended in writing by primer and topcoat manufacturer.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**
- G. Polyurethane[ **Intermediate Coat and**] Topcoat: Complying with MPI #72 and compatible with undercoat.
1. Products: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available products that may be incorporated into the Work include, but are not limited to, the following]:**
    - a. **<Insert manufacturer's name; product name or designation>.**

## 2.8 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

- B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 033000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of **3000 psi (20 MPa)**, **3-inch (75-mm)** slump, and **1-inch (25-mm)** maximum aggregate size[ **or dry, packaged, normal-weight concrete mix complying with ASTM C387/C387M mixed with potable water according to manufacturer's written instructions**].
- C. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M and specifically recommended by manufacturer for exterior applications.

## 2.9 GROUNDING MATERIALS

- A. Comply with requirements of Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Grounding Conductors: Size as indicated on Drawings. Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
  - 1. Material above Finished Grade: **[Copper] [Aluminum]**.
  - 2. Material on or below Finished Grade: Copper.
  - 3. Bonding Jumpers: Braided copper tape, **1-5/8 inch (41 mm)** wide and **1/16 inch (1.6 mm)** thick, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
- C. Grounding Connectors and Grounding Rods: Comply with UL 467.
  - 1. Connectors for Below-Grade Use: Exothermic-welded type.
  - 2. Grounding Rods: Copper-clad steel.
    - a. Size: **5/8 by 96 inches (16 by 2440 mm)**.

## 2.10 STEEL FINISHES

- A. Surface Preparation: Clean surfaces according to **[SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning.]"** **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning.]"** After cleaning, apply a conversion coating compatible with the organic coating to be applied over it.
- B. Primer Application: Apply zinc-rich epoxy primer immediately after cleaning, to provide a minimum dry film thickness of **2 mils (0.05 mm)** per applied coat, to surfaces that are exposed after assembly and installation, and to concealed surfaces.
- C. Shop-Painted Finish: Comply with **[Section 099113 "Exterior Painting.]"** **[Section 099600 "High-Performance Coatings.]"**
- D. High-Performance Coating: Apply intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
  - 1. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

**2.11 METALLIC-COATED-STEEL FINISHES**

- A. Galvanized Finish: Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.
- B. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a **[zinc-phosphate]** conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A780/A780M.
- C. Powder Coating: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat finish consisting of **[zinc-rich]** epoxy prime coat and TGIC polyester topcoat to a minimum dry film thickness of **2 mils (0.05 mm)**. Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of **4 mils (0.10 mm)**.
  - 1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Architect's sample] [As selected by Architect from manufacturer's full range] <Insert color and gloss>**.
  - 2. Comply with surface finish testing requirements in ASTM F2408 **[except change corrosion-resistance requirement to 3000 hours without failure]**.
- D. High-Performance Coating: Apply epoxy primer, polyurethane intermediate coat, and polyurethane topcoat to prepared surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
  - 1. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.
- B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 PREPARATION**

- A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of **500 feet (152.5 m)** or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.
  - 1. Construction layout and field engineering are specified in Section 017300 "Execution."

### 3.3 DECORATIVE SECURITY FENCE INSTALLATION

- A. Install fences according to manufacturer's written instructions.
- B. Install fences by setting posts as indicated and fastening **[rails]** **[and]** **[infill panels]** to posts. **[Peen threads of bolts after assembly to prevent removal.]**
- C. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than **24 inches (600 mm)** plus **3 inches (75 mm)** for each **foot (300 mm)** or fraction of **a foot (300 mm)** that fence height exceeds **4 feet (1.2 m)**.
- D. Post Setting: Set posts **[in concrete]** **[with mechanical anchors]** **[by mechanically driving into soil]** at indicated spacing into firm, undisturbed soil.
  1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
  2. Concrete Fill: Place concrete around **[posts]** **[and]** **[sleeves]** and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
    - a. Exposed Concrete: Extend **2 inches (51 mm)** above grade. Finish and slope top surface to drain water away from post.
    - b. Concealed Concrete: Top **[2 inches (51 mm)]** **<Insert dimension>** below grade **[as indicated on Drawings]** to allow covering with surface material. Slope top surface of concrete to drain water away from post.
  3. Posts Set in Concrete: Extend post to within **6 inches (150 mm)** of specified excavation depth, but not closer than **3 inches (75 mm)** to bottom of concrete.
  4. Posts Set into Concrete in Sleeves: Use galvanized-steel pipe sleeves with inside diameter at least **3/4 inch (20 mm)** larger than outside diagonal dimension of post, preset and anchored into concrete for installing posts.
    - a. Extend posts at least **5 inches (125 mm)** into sleeve.
    - b. After posts have been inserted in sleeves, fill annular space between post and sleeve with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions; shape and smooth to shed water. Finish and slope top surface of grout to drain water away from post.
  5. Posts Set into Voids in Concrete: Form or core drill holes not less than **3/4 inch (20 mm)** larger than outside diagonal dimension of post.
    - a. Extend posts at least **5 inches (125 mm)** into concrete.
    - b. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions. Finish and slope top surface of grout to drain water away from post.
  6. Mechanically Driven Posts: Drive into soil to depth of **[30 inches (762 mm)]** **[36 inches (914 mm)]** **<Insert dimension>**. Protect post top to prevent distortion.
  7. Space posts uniformly at **[6 feet (1.83 m)]** **[8 feet (2.44 m)]** **<Insert dimension>** o.c.

### 3.4 GATE INSTALLATION

- A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

### 3.5 GATE OPERATOR INSTALLATION

- A. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.
- B. Excavation for **[Support Posts] [Pedestals] [Concrete Bases]**: Hand-excavate holes for bases in firm, undisturbed soil to dimensions and depths and at locations as required by gate operator component manufacturer's written instructions and as indicated.
- C. Concrete Bases: Cast-in-place or precast concrete, **[depth not less than 12 inches (300 mm)] <Insert depth>**, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.
- D. Vehicle Loop Detector System: **[Cut grooves in pavement and ]**bury and seal wire loop according to manufacturer's written instructions. Connect to equipment operated by detector.
- E. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.

### 3.6 GROUNDING AND BONDING

- A. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fence Grounding: Install at maximum intervals of **[1500 feet (450 m)] <Insert a lesser distance if grounding resistance is high>** except as follows:
  - 1. Fences within **100 Feet (30 m)** of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of **[750 feet (225 m)] <Insert a lesser distance if grounding resistance is high>**.
    - a. Gates and Other Fence Openings: Ground fence on each side of opening.
      - 1) Bond metal gates to gate posts.
      - 2) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least **18 inches (460 mm)** below finished grade.
  - C. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of **150 feet (45 m)** on each side of crossing.
  - D. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.
  - E. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is **6 inches (150 mm)** below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.

- F. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
- G. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
  - 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
  - 2. Make connections with clean, bare metal at points of contact.
  - 3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
  - 4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
  - 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
- H. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

### 3.7 FIELD QUALITY CONTROL

- A. Testing Agency: **[Owner will engage] [Engage]** a qualified testing agency to perform tests and inspections.
  - 1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
  - 2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
  - 3. Report: Prepare test reports of grounding resistance at each test location certified by a testing agency. Include observations of weather and other phenomena that may affect test results.

### 3.8 ADJUSTING

- A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
- B. Automatic Gate Operators: Energize circuits to electrical equipment and devices. Adjust operators, controls, safety devices, **[alarms,]** and limit switches.
  - 1. Hydraulic Operators: Purge operating system, adjust pressure and fluid levels, and check for leaks.
  - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3. Test and adjust controls[, **alarms,**] and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Lubricate hardware[, **gate operators,**] and other moving parts.

### 3.9 DEMONSTRATION

- A. **[Engage a factory-authorized service representative to train] [Train]** Owner's personnel to adjust, operate, and maintain gates.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 32 23 - SEGMENTAL RETAINING WALLS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. This Section includes [**single-**] [**and**] [**multiple-**]depth segmental retaining walls [**with**] [**and**] [**without**] soil reinforcement.
- B. Related Requirements:
  - 1. Section 312000 "Earth Moving" for excavation for segmental retaining walls.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at [**Project site**] <Insert location>.

**1.4 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
  - 1. <Double click to insert sustainable design text for regional materials.>
- C. Samples: For each color and texture of concrete unit specified. Submit [**full-size units**] [**sections of units not less than 3 inches (75 mm) square**].
- D. Delegated-Design Submittal: For segmental retaining walls.

**1.5 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For testing agency.
- B. Product Certificates: For each type of segmental retaining wall unit[ **and soil reinforcement**] from manufacturer.
  - 1. Include test data for shear strength between segmental retaining wall units according to ASTM D6916.
  - 2. Include test data for connection strength between segmental retaining wall units and soil reinforcement according to ASTM D6638.
- C. Product Test Reports: For each type of segmental retaining wall unit[ **and soil reinforcement**], for tests performed by a qualified testing agency.
  - 1. Include test data for freeze-thaw durability of segmental retaining wall units.
  - 2. Include test data for shear strength between segmental retaining wall units according to ASTM D6916.
  - 3. Include test data for connection strength between segmental retaining wall units and soil reinforcement according to ASTM D6638.
- D. Research/Evaluation Reports: For segmental retaining wall units[ **and soil reinforcement**], from ICC-ES.

- E. Preconstruction test reports.
- F. Source quality-control reports.
- G. Field quality-control reports.

## 1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects.
  - 1. Build mockup of segmental retaining wall [as indicated on Drawings] [approximately **72 inches (1800 mm)** long by not less than **36 inches (900 mm)** high above finished grade at front of wall].
    - a. Include typical soil reinforcement.
    - b. Include typical base and cap or finished top construction.
    - c. Include backfill to typical finished grades at both sides of wall.
    - d. Include typical end construction at one end of mockup.
    - e. Include **36-inch (900-mm)** return at one end of mockup, with typical corner construction.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Engage a qualified testing agency to perform the following preconstruction testing:
  - 1. Test soil reinforcement and backfill materials for pullout resistance according to ASTM D6706.
  - 2. Test soil reinforcement and backfill materials for coefficient of friction according to ASTM D5321.

## 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store and handle concrete units and accessories to prevent deterioration or damage due to contaminants, breaking, chipping, or other causes.
- B. Store geosynthetics in manufacturer's original packaging with labels intact. Store and handle geosynthetics to prevent deterioration or damage due to sunlight, chemicals, flames, temperatures above **160 deg F (71 deg C)** or below **32 deg F (0 deg C)**, and other conditions that might damage them. Verify identification of geosynthetics before use, and examine them for defects as material is placed.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Basis of Design: Design of segmental retaining walls is based on products indicated. If comparable products of another manufacturer are proposed, engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design segmental retaining walls.

- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design segmental retaining walls.
- C. Compliance Review: Qualified professional engineer responsible for segmental retaining wall design shall review and approve submittals and source and field quality-control reports for compliance of materials and construction with design.
- D. Structural Performance: Engineering design shall be based on the following loads and be according to **[NCMA's "Design Manual for Segmental Retaining Walls.]"** **<Insert applicable requirement.>**
  - 1. Gravity loads due to soil pressures resulting from grades **[ and sloped backfill]** indicated.
  - 2. Superimposed loads (surcharge) indicated on Drawings.
  - 3. Horizontal Peak Ground Acceleration (A) for Project: **<Insert value>**.

## 2.2 SEGMENTAL RETAINING WALL UNITS

- A. Concrete Units: ASTM C1372, Normal Weight, except that **[ maximum water absorption shall not exceed 7 percent by weight and]** units shall not differ in height more than plus or minus **1/16 inch (1.6 mm)** from specified dimension.
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
  - 2. Provide units that comply with requirements in ASTM C1372 for freeze-thaw durability **[ as determined by testing]**.
  - 3. Provide units that interlock with courses above and below by means of **[integral lugs, lips, or tongues and grooves] [pins] [clips] [splines] [or] [and] [hollow cores filled with drainage fill]**.
- B. [<Double click to insert sustainable design text for regional materials.>](#)
- C. Color: **[As indicated by manufacturer's designations] [Match Architect's samples] [As selected by Architect from manufacturer's full range]**.
- D. Shape and Texture: Provide units with **[machine-split textured] [smooth], [flat exposed face] [shaped exposed face with deeply beveled vertical edges]**.
  - 1. Face Dimensions: **[4 inches (100 mm)] [6 inches (150 mm)] [8 inches (200 mm)]** **<Insert dimension>** high by **[12 inches (300 mm)] [16 inches (400 mm)] [18 inches (460 mm)]** **<Insert dimension>** long.
  - 2. Face Dimensions: Mix of sizes providing appearance of random range ashlar stone masonry.
  - 3. Face Dimensions: As indicated.
- E. Shape and Texture: Provide units matching basic shape, dimensions, and face texture of basis-of-design product.
- F. Shape and Texture: Provide units of any basic shape and dimensions that produce segmental retaining walls of dimensions and profiles indicated without interfering with other elements of the Work and with **[machine-split textured] [smooth], [flat exposed face] [shaped exposed face with deeply beveled vertical edges]**.
- G. Batter: Provide units that offset from course below to provide **[at least] [1:24] [1:16] [1:14] [1:8] [1:5]** batter.
- H. Cap Units: Provide cap units of **[shape indicated] [same shape as other units]** with smooth, as-cast top surfaces without holes or lugs.
- I. Special Units: Provide corner units, end units, and other shapes as needed to produce segmental retaining walls of dimensions and profiles indicated and to provide texture on exposed surfaces **[matching face] [as indicated]**.

### 2.3 INSTALLATION MATERIALS

- A. Pins: Product supplied by segmental retaining wall unit manufacturer for use with units provided, made from nondegrading polymer reinforced with glass fibers.
- B. Clips: Product supplied by segmental retaining wall unit manufacturer for use with units provided, made from nondegrading polymer reinforced with glass fibers.
- C. Cap Adhesive: Product supplied or recommended by segmental retaining wall unit manufacturer for adhering cap units to units below.
- D. Leveling Base: Comply with requirements in Section 312000 "Earth Moving" for [base] [drainage] course.
  - 1. Leveling Course: Lean concrete with a compressive strength of not more than 500 psi (3.4 MPa).
- E. Drainage Fill: Comply with requirements in Section 312000 "Earth Moving" for drainage course.
- F. Reinforced-Soil Fill: Comply with requirements in Section 312000 "Earth Moving" for satisfactory soils.
- G. Reinforced-Soil Fill: ASTM D2487; GW, GP, SW, SP, and SM soil classification groups or a combination of these groups; free of debris, waste, frozen materials, vegetation, and other deleterious matter; complying with the following gradation according to ASTM C136: 20 to 100 percent passing No. 4 (4.75-mm) sieve, zero to 60 percent passing No. 40 (0.425-mm) sieve, zero to 35 percent passing No. 200 (0.075-mm) sieve, and with fine fraction having a plasticity index of less than 20.
- H. Nonreinforced-Soil Fill: Comply with requirements in Section 312000 "Earth Moving" for satisfactory soils.
- I. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.
- J. Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent.
  - 1. Apparent Opening Size: No. 70 to 100 (0.212- to 0.150-mm) sieve, maximum; ASTM D4751.
  - 2. Minimum Grab Tensile Strength: 110 lb (49.9 kg); ASTM D4632.
  - 3. Minimum Weight: 4 oz./sq. yd. (132 g/sq. m).
- K. Soil Reinforcement: Product specifically manufactured for use as soil reinforcement and as follows:
  - 1. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
  - 2. Product Type: [Knitted or woven geogrid made from polyester yarns with a protective coating] [Molded geogrid made from high-density polyethylene] [Woven geotextile made from polyamides, polyesters, or polyolefins].

### 2.4 SOURCE QUALITY CONTROL

- A. Factory test and inspect each roll of soil reinforcement for minimum average roll values for geosynthetic index property tests, including the following:
  - 1. Weight.
  - 2. Grab or single-rib strength.
  - 3. Aperture opening.
  - 4. Rib or yarn size.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for excavation tolerances, condition of subgrades, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 RETAINING WALL INSTALLATION**

- A. General: Place units according to NCMA's "Segmental Retaining Wall Installation Guide" and segmental retaining wall unit manufacturer's written instructions.
  - 1. Lay units in **[running bond] [bond pattern indicated]**.
  - 2. Form corners and ends by **[using special units] [cutting units with motor-driven saw] [or] [splitting units with mason's hammer and chisel]**.
- B. Do not use units with chips, cracks, or other defects that are visible at a distance of **20 feet (6 m)** where such defects are exposed in the completed Work.
- C. Leveling Base: Place and compact base material to thickness indicated and with not less than 95 percent maximum dry unit weight according to ASTM D698.
  - 1. Leveling Course: **[At Contractor's option, unreinforced lean concrete may be substituted for upper 1 to 2 inches (25 to 50 mm) of base] [Place unreinforced lean concrete over leveling base 1 to 2 inches (25 to 50 mm) thick]**. Compact and screed concrete to a smooth, level surface.
- D. First Course: Place first course of segmental retaining wall units for full length of wall. Place units in firm contact with each other, properly aligned and level.
  - 1. Tamp units into leveling base as necessary to bring tops of units into a level plane.
- E. Subsequent Courses: Remove excess fill and debris from tops of units in course below. Place units in firm contact, properly aligned, and directly on course below.
  - 1. For units with lugs designed to fit into holes in adjacent units, lay units so lugs are accurately aligned with holes, and bedding surfaces are firmly seated on beds of units below.
  - 2. For units with lips at front of units, slide units as far forward as possible for firm contact with lips of units below.
  - 3. For units with lips at bottom rear of units, slide units as far forward as possible for firm contact of lips with units below.
  - 4. For units with pins, install pins and align units.
  - 5. For units with clips, install clips and align units.
- F. Cap Units: Place cap units and secure with cap adhesive.

**3.3 FILL PLACEMENT**

- A. General: Comply with requirements in Section 312000 "Earth Moving," with NCMA's "Segmental Retaining Wall Installation Guide," and with segmental retaining wall unit manufacturer's written instructions.
- B. Fill voids between and within units with drainage fill. Place fill as each course of units is laid.
- C. Place, spread, and compact drainage fill and soil fill in uniform lifts for full width and length of embankment as wall is laid. Place and compact fills without disturbing alignment of units. Where

both sides of wall are indicated to be filled, place fills on both sides at same time. Begin at wall, and place and spread fills toward embankment.

1. Use only hand-operated compaction equipment within **48 inches (1200 mm)** of wall, or one-half of height above bottom of wall, whichever is greater.
  2. Compact reinforced-soil fill to not less than 95 percent maximum dry unit weight according to ASTM D698.
    - a. In areas where only hand-operated compaction equipment is allowed, compact fills to not less than 90 percent maximum dry unit weight according to ASTM D698.
    - b. In areas where fill height exceeds **15 feet (4.5 m)**, compact reinforced-soil fill that will be more than **15 feet (4.5 m)** below finished grade to not less than 98 percent maximum dry unit weight according to ASTM D698.
    - c. In areas where fill height exceeds **30 feet (9 m)**, compact reinforced-soil fill that will be more than **30 feet (9 m)** below finished grade to not less than 100 percent maximum dry unit weight according to ASTM D698.
  3. Compact nonreinforced-soil fill to comply with Section 312000 "Earth Moving."
- D. Place drainage geotextile against back of wall, and place layer of drainage fill at least [**12 inches (300 mm)**] [**6 inches (150 mm)**] wide behind drainage geotextile to within **12 inches (300 mm)** of finished grade. Place another layer of drainage geotextile between drainage fill and soil fill.
  - E. Place a layer of drainage fill at least [**12 inches (300 mm)**] [**6 inches (150 mm)**] wide behind wall to within **12 inches (300 mm)** of finished grade. Place a layer of drainage geotextile between drainage fill and soil fill.
  - F. Wrap subdrainage pipe with filter fabric and place in drainage fill as indicated[, **sloped not less than 0.5 percent to drain**].
  - G. Place impervious fill over top edge of drainage fill layer.
  - H. Slope grade at top of wall away from wall unless otherwise indicated. Slope grade at wall base away from wall. Provide uniform slopes that prevent ponding.
  - I. Place soil reinforcement in horizontal joints of retaining wall where indicated and according to soil-reinforcement manufacturer's written instructions. Embed reinforcement a minimum of **8 inches (200 mm)** into retaining wall and stretch tight over compacted backfill. Anchor soil reinforcement before placing fill.
    1. Place additional soil reinforcement at corners and curved walls to provide continuous reinforcement.
    2. Place geosynthetics with seams, if any, oriented perpendicular to segmental retaining walls.
    3. Do not dump fill material directly from trucks onto geosynthetics.
    4. Place at least **6 inches (150 mm)** of fill over reinforcement before compacting with tracked vehicles or **4 inches (100 mm)** before compacting with rubber-tired vehicles.
    5. Do not turn vehicles on fill until first layer of fill is compacted and second layer is placed over each soil-reinforcement layer.

### 3.4 CONSTRUCTION TOLERANCES

- A. Variation from Level: For bed-joint lines along walls, do not exceed **1-1/4 inches in 10 feet (32 mm in 3 m)**, **3 inches (75 mm)** maximum.
- B. Variation from Indicated Batter: For slope of wall face, do not vary from indicated slope by more than **1-1/4 inches in 10 feet (32 mm in 3 m)**.
- C. Variation from Indicated Wall Line: For walls indicated as straight, do not vary from straight line by more than **1-1/4 inches in 10 feet (32 mm in 3 m)**.
- D. Maximum Gap between Units: **1/8 inch (3 mm)**.

**3.5 FIELD QUALITY CONTROL**

- A. Testing Agency: **[Owner will engage]** **[Engage]** a qualified testing agency to perform tests and inspections.
- B. Comply with requirements in Section 312000 "Earth Moving" for field quality control.
  - 1. In each compacted backfill layer, perform at least one field in-place compaction test for each **[150 feet (45 m)]** **<Insert dimension>** or less of segmental retaining wall length.
  - 2. In each compacted backfill layer, perform at least one field in-place compaction test for each **[24 inches (600 mm)]** **<Insert dimension>** of fill depth and each **[50 feet (15 m)]** **<Insert dimension>** or less of segmental retaining wall length.

**3.6 ADJUSTING**

- A. Remove and replace segmental retaining wall construction of the following descriptions:
  - 1. Broken, chipped, stained, or otherwise damaged units. Units may be repaired if Architect approves methods and results.
  - 2. Segmental retaining walls that do not match approved Samples **[ and mockups]**.
  - 3. Segmental retaining walls that do not comply with other requirements indicated.
- B. Replace units so segmental retaining wall matches approved Samples and mockups, complies with other requirements, and shows no evidence of replacement.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 33 00 - SITE FURNISHINGS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:

1. Seating.
2. Tables.
3. Bicycle racks.
4. Bicycle lockers.
5. Trash receptacles.
6. Ash receptacles.
7. Planters.
8. Bollards.

- B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for **[installing pipe sleeves cast] [installing anchor bolts cast] [formed voids]** in concrete footings.
2. Section 312000 "Earth Moving" for excavation for installing concrete footings.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product.  
B. Sustainable Design Submittals:

1. [<Double click to insert sustainable design text for recycled content.>](#)
2. [<Double click to insert sustainable design text for certified wood.>](#)

- C. Samples: For each exposed product and for each color and texture specified.  
D. Samples for Initial Selection: For units with factory-applied finishes.  
E. Samples for Verification: For each type of exposed finish, not less than **6-inch- (152-mm-)** long linear components and **4-inch- (102-mm-)** square sheet components.

1. Include full-size Samples of **[bench] [table] [bicycle rack] [trash receptacle] [ash receptacle]** **<Insert product>**. Approved samples may be incorporated into the Work.

- F. Product Schedule: For site furnishings.[ Use same designations indicated on Drawings].

**1.4 INFORMATIONAL SUBMITTALS**

- A. Material Certificates: For site furnishings manufactured with preservative-treated wood.
1. Indicate type of preservative used and net amount of preservative retained. **[ For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.]**

**1.5 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For site furnishings to include in maintenance manuals.

**1.6 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Bench Replacement **[Slats] [Planks]**: No fewer than **[two]** <Insert number> full-size units for each size indicated.
  2. Trash Receptacle Inner Containers: **[Five]** <Insert number> full-size units for each size indicated, but no fewer than **[two]** <Insert number> units.
  3. Anchors: <Insert type and number>.

**PART 2 - PRODUCTS****2.1 SEATING** <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Frame: [Cast aluminum] [Cast iron] [Steel] [Stainless steel] [Wrought iron] [Cedar] [Teak] <Insert material>.
- C. Seat[ and Back]:
1. Material:
    - a. Aluminum Sheet: **[Perforated] [Expanded]** metal.
    - b. **[Painted]** Steel: **[Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge framed, evenly spaced, parallel rods or rolled bars]** <Insert description>.
    - c. Stainless Steel: **[Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge framed, evenly spaced, parallel rods or rolled bars]** <Insert description>.
    - d. Wood: **[Douglas fir] [Pine] [Cedar] [Redwood] [Teak]** <Insert species>; formed into **[evenly spaced parallel slats] [planks]** <Insert description>.
    - e. **[Recycled] [Plastic] [Fiberglass]** Planks: **[Evenly spaced, parallel]** <Insert description>.
    - f. **[Recycled] [Plastic] [Fiberglass]** Sheet: **[Solid] [Perforated]**.
  2. Seat Height: **[As indicated]** <Insert dimension>.
  3. Seat Surface Shape: **[Flat] [Contoured or dished]**.

4. Overall Height: **[As indicated]** <Insert dimension>.
  5. Overall Width: **[As indicated]** <Insert dimension>.
  6. Overall Depth: **[As indicated]** <Insert dimension>.
  7. Arms: **[None]** **[One, as indicated]** **[Two, one at each end]** **[Three, one at each end and in center]** <Insert requirements>.
    - a. Arm Material: Match **[frame]** **[seat]** <Insert component>.
  8. Weight: <Insert weight>.
  9. Seating Configuration: Multiple units **[as indicated]**.
    - a. **[Straight]** **[Angled]** **[Curved]** shape.
    - b. Closed **[hexagon]** **[circle]** **[shape indicated]** around a **[tree trunk]** **[planter]** **[light post]** <Insert central element>.
- D. Aluminum Finish: **[Mill finish]** **[Color coated]**.
1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert color>.
- E. Steel Finish: **[Galvanized and]** **[color]** **[PVC-color]** coated.
1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert color>.
- F. Stainless Steel Finish: **[ASTM A480/A480M, No. 6]** <Insert description>.
- G. Wood Finish: **[Unfinished]** **[Factory-applied transparent finish]** **[Factory-applied stain and transparent finish]** **[Factory-applied opaque finish]** **[Manufacturer's standard finish]**.
1. Stain: **[Manufacturer's standard]** <Insert stain type and color>.
- H. **[Fiberglass]** **[HDPE]** Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert description>.
- I. Graphics: **[Surface-applied]** **[Engraved]** **[Attached brass plaque with engraved]** copy, content, and style **[according to manufacturer's standard]** **[as indicated on Drawings]**.

## 2.2 TABLES <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Frame: **[Cast aluminum]** **[Cast iron]** **[Steel]** **[Stainless steel]** **[Wrought iron]** **[Cedar]** **[Teak]** <Insert material>.
- C. Table Top:
  1. Material:
    - a. Aluminum Sheet: **[Perforated]** **[Expanded]** metal.
    - b. **[Painted]** **[Steel]**: **[Perforated metal]** **[Expanded metal]** **[Evenly spaced, parallel flat straps or bars]** **[Evenly woven, flat straps or bars]** **[Edge framed, evenly spaced, parallel rods or rolled bars]** <Insert description>.

- c. Stainless Steel: [Perforated metal] [Expanded metal] [Evenly spaced, parallel flat straps or bars] [Evenly woven, flat straps or bars] [Edge framed, evenly spaced, parallel rods or rolled bars] <Insert description>.
  - d. Wood: [Douglas fir] [Pine] [Cedar] [Redwood] [Teak] <Insert species>; formed into [evenly spaced parallel slats] [planks] <Insert description>.
  - e. [Recycled] [Plastic] [Fiberglass] Planks: [Evenly spaced, parallel] <Insert description>.
  - f. [Recycled] [Plastic] [Fiberglass] Sheet: [Solid] [Perforated].
- 2. Surface Shape: [Round] [Hexagon] [Shape indicated] <Insert shape>.
  - 3. Feature: [Center umbrella hole] <Insert feature>.
- D. Aluminum Finish: [Mill finish] [Color coated].
- 1. Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert color>.
- E. Steel Finish: [Galvanized and] [color] [PVC-color] coated.
- 1. Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert color>.
- F. Stainless Steel Finish: [ASTM A480/480M, No. 6] <Insert description>.
- G. Wood Finish: [Unfinished] [Factory-applied transparent finish] [Factory-applied stain and transparent finish] [Factory-applied opaque finish] [Manufacturer's standard finish].
- 1. Stain: [Manufacturer's standard] <Insert stain type and color>.
- H. [Fiberglass] [HDPE] Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.
- I. Graphics: [Surface-applied] [Engraved] [Attached brass plaque with engraved] copy, content, and style [per manufacturer's standard] [as indicated on Drawings].

### 2.3 BICYCLE RACKS <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Bicycle Rack Construction:
- 1. Frame: [Aluminum] [Steel] [Galvanized steel] [Stainless steel] [Steel and redwood] [Steel and pine] <Insert description>.
    - a. [Pipe] [Tubing] OD: Not less than [1-5/8 inches (41 mm)] [2-3/8 inches (60 mm)] [2-7/8 inches (73 mm)] [4-1/2 inches (115 mm)] <Insert dimension>.
    - b. Locking Bars: Solid round bar, not less than [3/4 inch (19 mm)] [1 inch (25 mm)] in diameter.
  - 2. Style: [Single-side parking] [Double-side parking] [Bollard] [As indicated] <Insert description>.
    - a. Overall Height: [As indicated] <Insert dimension>.
    - b. Overall Width: [As indicated] <Insert dimension>.

- c. Overall Depth: **[As indicated]** <Insert dimension>.
  - d. Capacity: Designed to accommodate no fewer than **[two]** **[three]** **[four]** <Insert number> bicycles.
3. Security: Designed to lock **[wheel]** **[and]** **[frame]**.
  4. Accessories: **[Base covers for each pipe and tubing anchored end]** **[Wheel stops]** <Insert accessory>.
  5. Installation Method: **[Freestanding]** **[Surface flange anchored at finished grade to substrate indicated]** **[Surface flange anchored below finished grade to substrate indicated]** **[Cast in concrete]** **[Bolted to cast-in anchor bolts]** **[Wall mounted]** **[As indicated]**.
- C. Aluminum Finish: **[Mill finish]** **[Color coated]**.
1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert description>.
- D. Steel Finish: **[Galvanized]** **[Color coated]**.
1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert color>.
- E. Stainless Steel Finish: **[ASTM A480/A480M, No. 4]** <Insert description>.
- F. Wood Finish: **[Unfinished]** **[Manufacturer's standard finish]**.

## 2.4 BICYCLE LOCKERS <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Bicycle Locker Construction:
1. Locker: **[Molded one-piece fiberglass]** **[Steel sheet, 0.053 inch (1.4 mm) thick]** **[Steel sheet, 0.053 inch (1.4 mm) thick, with perforated metal sides]** **[with welded tubular steel frame]** <Insert material>.
  2. Door: **[Molded one-piece fiberglass]** **[Steel sheet, 0.053 inch (1.4 mm) thick]** **[with tubular steel frame]** **[Match locker]** <Insert material>.
  3. View **[Window]** **[Grille]**: **[Lexan, 12 inches (305 mm) square]** **[Perforated metal]**.
  4. Lock: **[Manufacturer's standard]** **[Key lock with internal locking bar]** **[Coin/token lock]** <Insert description>.
    - a. Provide **[four]** <Insert number> keys.
  5. Overall Height: **[As indicated]** <Insert dimension>.
  6. Overall Width: **[As indicated]** <Insert dimension>.
  7. Overall Depth: **[As indicated]** <Insert dimension>.
  8. Capacity: Designed to accommodate **[one]** **[two]** bicycle(s).
  9. Installation Method: **[Locker anchored at finished grade to substrate indicated]** **[Locker anchored below finished grade to substrate indicated]** **[As indicated]**.
  10. Locker Configuration: **[Multiple]** **[Four]** <Insert number> units **[as indicated]**, in **[straight row]** **[curved shape]** **[shape indicated]** <Insert description>.
- C. Steel Finish: Color coated.

1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** **<Insert description>**.

D. Fiberglass Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** **<Insert description>**.

## 2.5 TRASH RECEPTACLES **<Insert drawing designation>**

A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)

B. Aluminum Facing Surrounds: **[Aluminum sheet]** **[Perforated aluminum sheet]** **[Grid in tubular frame]** **[Evenly patterned, parallel flat aluminum straps, bars, or tubular shapes]** **[Match benches]** **<Insert material and description>**.

C. Steel Facing Surrounds: **[Steel sheet]** **[Perforated-steel sheet]** **[Evenly patterned, parallel flat steel straps, bars, or tubular shapes]** **[Evenly patterned, parallel round steel rods, bars, or tubular shapes]** **[Grid in tubular frame]** **[Match benches]** **<Insert material and description>**.

D. Stainless Steel Facing Surrounds: **[Steel sheet]** **[Perforated-steel sheet]** **[Evenly patterned, parallel flat steel straps, bars, or tubular shapes]** **[Evenly patterned, parallel round steel rods, bars, or tubular shapes]** **[Grid in tubular frame]** **[Match benches]** **<Insert material and description>**.

E. Wood Facing Surrounds: **[Evenly spaced, Douglas fir slats]** **[Evenly spaced pine slats]** **[Evenly spaced cedar slats]** **[Redwood panels]** **[Evenly spaced redwood slats]** **[Teak panels]** **[Evenly spaced teak slats]** **[Match benches]** **<Insert wood type and description>**.

F. Fiberglass Facing Surrounds: **Molded fiberglass shape.**

G. Plastic Facing Surrounds: **[Molded HDPE shape]** **[Evenly spaced HDPE slats]** **[Evenly spaced, recycled HDPE slats]** **[Match benches]** **<Insert plastic type and description>**.

H. Support Frames: **[Steel]** **[Galvanized steel]**; welded.

I. Trash Receptacles:

1. Receptacle Shape and Form: **[Round cylinder]** **[Round cylinder with tapered funnel top]** **[Round, tapered column]** **[Square column]** **[Rectangular column]** **[As indicated]** **<Insert shape and form>**; with opening for depositing trash in **[lid or top]** **[side of lid or top]** **[receptacle side]**.

2. Lids and Tops: **[Matching facing panels]** **[Aluminum]** **[Steel]** **[HDPE]** **[Recycled HDPE]** **<Insert material and description>** secured by cable or chain, hinged, swiveled, or permanently secured.

a. Description: **[Flat rim ring lid with center opening]** **[Dome top]** **[Arched top]** **[Elevated flat or shallow dome rain-cap lid]** **[Combination ash sand pan and rim lid]** **[Combination ash sand pan and dome top]** **[Combination ash sand pan and elevated flat or shallow dome rain-cap lid]** **<Insert description>**.

b. Opening for depositing trash covered by **[self-closing, spring-loaded-hinged, push-in]** **[rotating]** weather flap.

3. Receptacle Height: **[As indicated]** **<Insert dimension>**.

4. Overall Width: **[As indicated]** **<Insert dimension>**.

5. Weight: **<Insert weight>**.

6. Inner Container: **[Aluminum]** **[Galvanized-steel sheet]** **[Perforated-metal]** **[Fiberglass]** **[Rigid plastic]** container with **[drain holes]** **[lift-out handles]**; designed to be removable and reusable.

7. Disposable Liners: Provide receptacle designed to accommodate disposable liners.

8. Capacity: Not less than **[22 gal. (83 L)]** **[28 gal. (106 L)]** **[30 gal. (114 L)]** **[32 gal. (121 L)]** **[40 gal. (151 L)]** **[55 gal. (208 L)]** **<Insert value>**.

9. Service Access: [**Removable lid or top**] [**Fixed lid or top, side access**]; inner container and disposable liner lift or slide-out for emptying[; **lockable with padlock hasps**] [; **keyed lock with two keys per receptacle**] [; **self-latching hinge**].
  10. Post Mount: [**Color-coated steel pipe; color to match receptacle**] [**Galvanized-steel pipe**] [**Wood**]; for mounting [**one**] [**two**] [**three**] receptacle(s).
- J. Aluminum Finish: [**Mill finish**] [**Color coated**].
1. Color: [**As indicated by manufacturer's designation**] [**Match Architect's samples**] [**As selected by Architect from manufacturer's full range**] [**As indicated in a site furnishing schedule**] <Insert description>.
- K. Steel Finish: [**Galvanized and**] [**color**] [**PVC-color**] coated.
1. Color: [**As indicated by manufacturer's designation**] [**Match Architect's samples**] [**As selected by Architect from manufacturer's full range**] [**As indicated in a site furnishing schedule**] <Insert description>.
- L. Stainless Steel Finish: [ASTM A480/A480M, No. 6] <Insert description>.
- M. Wood Finish: [Unfinished] [Factory-applied transparent finish] [Factory-applied stain and transparent finish] [Factory-applied opaque finish] [Manufacturer's standard finish].
1. Stain: [**Manufacturer's standard**] <Insert stain type and color>.
- N. [Fiberglass] [HDPE] Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.
- O. Graphics: [Surface-applied] [Engraved] [Attached brass plaque with engraved] copy, content, and style [according to manufacturer's standard] [as indicated on Drawings].
1. Copy: [**Litter**] [**Trash**] [**Waste**] [**Recycle**] <Insert term>.

## 2.6 ASH RECEPTACLES <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Aluminum Facing Surrounds: [Aluminum sheet] [Perforated aluminum sheet] [Grid in tubular frame] [Evenly patterned, parallel flat aluminum straps, bars, or tubular shapes] [Match benches] <Insert material and description>.
- C. Steel Facing Surrounds: [Steel sheet] [Perforated-steel sheet] [Evenly patterned, parallel flat steel straps, bars, or tubular shapes] [Evenly patterned, parallel round steel rods, bars, or tubular shapes] [Grid in tubular frame] [Match benches] <Insert material and description>.
- D. Stainless Steel Facing Surrounds: [Steel sheet] [Perforated-steel sheet] [Evenly patterned, parallel flat steel straps, bars, or tubular shapes] [Evenly patterned, parallel round steel rods, bars, or tubular shapes] [Grid in tubular frame] [Match benches] <Insert material and description>.
- E. Fiberglass Facing Surrounds: Molded fiberglass shape.
- F. Support Frames: [**Steel**] [**Galvanized steel**]; welded.
- G. Ash Receptacles:
1. Receptacle Shape and Form: [**Round cylinder**] [**Round cylinder with tapered funnel top**] [**Round, tapered column**] [**Square column**] [**Rectangular column**] [**As indicated**] <Insert shape and form>; with opening for depositing trash in [**lid or top**] [**side of lid or top**] [**receptacle side**].

2. Function: [Uncovered receptacle with sand pan] [Uncovered receptacle with bowl and funnel] [Covered receptacle with sand pan] [Covered receptacle with bowl and screen] [Covered receptacle with slots] [Uncovered receptacle with sand pan attaching to side of trash receptacle] <Insert description and accessories> for depositing cigarette butts; fire-proof design; bowl and pan removable for cleaning.
  3. Lids and Tops: [Matching facing panels] [Aluminum] [Steel] [HDPE] [Recycled HDPE] <Insert material and description> secured by cable or chain, hinged, swiveled, or permanently secured.
    - a. Description: [Flat rim ring lid with center opening] [Dome top] [Arched top] [Elevated flat or shallow dome rain-cap lid] [Combination ash sand pan and rim lid] [Combination ash sand pan and dome top] [Combination ash sand pan and elevated flat or shallow dome rain-cap lid] <Insert description>.
  4. Receptacle Height: [As indicated] <Insert dimension>.
  5. Overall Width: [As indicated] <Insert dimension>.
  6. Weight: <Insert weight>.
  7. Post Mount: [Color-coated steel pipe; color to match receptacle] [Galvanized-steel pipe] [Wood]; for mounting [one] [two] [three] receptacle(s).
  8. Accessories: [Sand sifter] [Butt stub-out] <Insert accessory>.
- H. Aluminum Finish: [Mill finish] [Color coated].
1. Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.
- I. Steel Finish: [Galvanized and] [color] [PVC-color] coated.
1. Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.
- J. Stainless Steel Finish: [ASTM A480/A480M, No. 6] <Insert description>.
- K. [Fiberglass] [HDPE] Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.

## 2.7 PLANTERS <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Aluminum Facing Surrounds: [Aluminum sheet] [Perforated aluminum sheet] [Grid in tubular frame] [Evenly patterned, parallel flat aluminum straps, bars, or tubular shapes] [Match benches] <Insert material and description>.
- C. Steel Facing Surrounds: [Steel sheet] [Perforated-steel sheet] [Evenly patterned, parallel flat steel straps, bars, or tubular shapes] [Evenly patterned, parallel round steel rods, bars, or tubular shapes] [Grid in tubular frame] [Match benches] <Insert material and description>.
- D. Stainless Steel Facing Surrounds: [Steel sheet] [Perforated-steel sheet] [Evenly patterned, parallel flat steel straps, bars, or tubular shapes] [Evenly patterned, parallel round steel rods, bars, or tubular shapes] [Grid in tubular frame] [Match benches] <Insert material and description>.
- E. Wood Facing Surrounds: [Evenly spaced, Douglas fir slats] [Evenly spaced pine slats] [Evenly spaced cedar slats] [Redwood panels] [Evenly spaced redwood slats] [Teak panels] [Evenly spaced teak slats] [Match benches] <Insert wood type and description>.

- F. Fiberglass Facing Surrounds: Molded fiberglass shape.
- G. Plastic Facing Surrounds: [Molded HDPE shape] [Evenly spaced HDPE slats] [Evenly spaced, recycled HDPE slats] [Match benches] <Insert plastic type and description>.
- H. Support Frames: **[Steel]** **[Galvanized steel]**; welded.
- I. Planter Shape and Form: [Round cylinder] [Round cylinder with tapered funnel top] [Round, tapered column] [Square column] [Rectangular column] [As indicated] <Insert shape and form>.
- J. Style: [To match benches] [As indicated by manufacturer's designation].
- K. Overall Height: [As indicated] <Insert dimension>.
- L. Overall [Diameter] [Width]: [As indicated] <Insert dimension>.
- M. Overall Depth: [As indicated] <Insert dimension>.
- N. Weight: <Insert weight>.
- O. Inner Container: [Aluminum] [Galvanized-steel sheet] [Fiberglass] [Rigid plastic] container [with drain holes].
- P. Capacity: Not less than **[22 gal. (83 L)] [28 gal. (106 L)] [30 gal. (114 L)] [32 gal. (121 L)] [40 gal. (151 L)] [55 gal. (208 L)]** <Insert value>.
- Q. Installation Method: [Freestanding] [Freestanding with weighted base] [Anchored to substrate indicated on Drawings] [Wall mounted] [Post mounted] [Mounted on elevated leg angles anchored at finished grade to substrate indicated on Drawings] [Mounted on elevated leg angles anchored below finished grade to substrate indicated on Drawings] [As indicated on Drawings].
1. Post Mount: **[Color-coated steel pipe; color to match receptacle]** **[Galvanized-steel pipe]** **[Wood]**; for mounting **[one]** **[two]** **[three]** planter(s).
- R. Aluminum Finish: Color coated.
1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert description>.
- S. Steel Finish: **[Galvanized and]** **[color]** **[PVC-color]** coated.
1. Color: **[As indicated by manufacturer's designation]** **[Match Architect's samples]** **[As selected by Architect from manufacturer's full range]** **[As indicated in a site furnishing schedule]** <Insert description>.
- T. Stainless Steel Finish: [ASTM A480/A480M, No. 6] <Insert description>.
- U. Wood Finish: [Unfinished] [Factory-applied transparent finish] [Factory-applied stained and transparent finish].
1. Stain: <Insert stain type and color>.
- V. [Fiberglass] [HDPE] Color: [As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule] <Insert description>.
1. Finish: **[Smooth]** **[Textured]**.

## 2.8 BOLLARDS <Insert drawing designation>

- A. [<Double click here to find, evaluate, and insert list of manufacturers and products.>](#)
- B. Bollard Construction:

1. **[Pipe] [Tubing] [Cast Iron]** OD: Not less than **[4-1/2 inches (115 mm)]** <Insert dimension>[, **fluted**].
    - a. Steel: **[Schedule 40] [Schedule 80]** pipe.
    - b. Aluminum: **[Extruded pipe and tubes] [Castings]**.
    - c. Stainless Steel: **[Tubes] [Pipe]**.
    - d. Cast Iron: **[Tapered] [As indicated]**.
  2. **[Round] [Square]** Wood: **[Cedar]** <Insert material>, **[8 inches (203 mm) square] [10 inches (254 mm) in diameter]**.
  3. Style: **[Manufacturer's standard] [Chamfered top] [Dome top] [Ornamental cap] [As indicated]** <Insert description>.
  4. Overall Height: **[As indicated]** <Insert dimension>.
  5. Overall Width: **[As indicated]** <Insert dimension>.
  6. Overall Depth: **[As indicated]** <Insert dimension>.
  7. Accessories: **[Eye bolts]** <Insert accessory>.
  8. Installation Method: **[Surface flange anchored at finished grade to substrate indicated] [Surface flange anchored below finished grade to substrate indicated] [Cast in concrete] [Bolted to cast-in anchor bolts] [As indicated]**.
- C. Aluminum Finish: **[Mill finish] [Color coated]**.
1. Color: **[As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule]** <Insert description>.
- D. Steel Finish: **[Galvanized] [Color coated]**.
1. Color: **[As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule]** <Insert description>.
- E. Cast-Iron Finish: **[Manufacturer's standard] [Galvanized] [Color coated]**.
1. Color: **[As indicated by manufacturer's designation] [Match Architect's samples] [As selected by Architect from manufacturer's full range] [As indicated in a site furnishing schedule]** <Insert description>.
- F. Stainless Steel Finish: **[ASTM A480/A480M, No. 4]** <Insert description>.
- G. Wood Finish: **[Unfinished] [Manufacturer's standard finish]**.

## 2.9 MATERIALS

- A. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated; free of surface blemishes and complying with the following:
1. Rolled or Cold-Finished Bars, Rods, and Wire: **ASTM B211 (ASTM B211M)**.
  2. Extruded Bars, Rods, Wire, Profiles, and Tubes: **ASTM B221 (ASTM B221M)**.
  3. Structural Pipe and Tube: **ASTM B429/B429M**.
  4. Sheet and Plate: **ASTM B209 (ASTM B209M)**.
  5. Castings: **ASTM B26/B26M**.
- B. Steel and Iron: Free of surface blemishes and complying with the following:

1. Plates, Shapes, and Bars: ASTM A36/A36M.
  2. Steel Pipe: Standard-weight steel pipe complying with ASTM A53/A53M, or electric-resistance-welded pipe complying with ASTM A135/A135M.
  3. Tubing: Cold-formed steel tubing complying with ASTM A500/A500M.
  4. Mechanical Tubing: Cold-rolled, electric-resistance-welded carbon or alloy steel tubing complying with ASTM A513/A513M, or steel tubing fabricated from steel complying with ASTM A1011/A1011M and complying with dimensional tolerances in ASTM A500/A500M; zinc coated internally and externally.
  5. Sheet: Commercial steel sheet complying with ASTM A1011/A1011M.
  6. Perforated Metal: From steel sheet not less than **[0.075-inch (1.9-mm)] [0.090-inch (2.3-mm)] [0.120-inch (3.0-mm)]** <Insert dimension> nominal thickness; manufacturer's standard perforation pattern.
  7. Expanded Metal: Carbon-steel sheets, deburred after expansion, and complying with ASTM F1267.
  8. Malleable-Iron Castings: ASTM A47/A47M, grade as recommended by fabricator for type of use intended.
  9. Gray-Iron Castings: ASTM A48/A48M, Class 200.
- C. Stainless Steel: Free of surface blemishes and complying with the following:
1. Sheet, Strip, Plate, and Flat Bars: ASTM A240/A240M or ASTM A666.
  2. Pipe: Schedule 40 steel pipe complying with ASTM A312/A312M.
  3. Tubing: ASTM A554.
- D. Wood: Surfaced smooth on four sides with eased edges; kiln dried, free of knots, solid stock of species indicated.
1. Wood Species: **[Manufacturer's standard.]**
    - a. Douglas Fir: Clear Grade, vertical grain.
    - b. Pine: Southern pine; No. 2 or better; **preservative treated, kiln dried after treatment**.
    - c. **[Eastern White] [Red] [Yellow]** Cedar: Select Grade or better.
    - d. Redwood: **[Clear all heart] [Construction heart or better]**, free-of-heart center.
    - e. Teak (Tectona Grandis): Clear Grade.
    - f. **<Insert wood species>**: **<Insert grade, if applicable, and other requirements>**.
- E. [<Double click to insert sustainable design text for certified wood.>](#)
1. Finish: Manufacturer's standard **[stain] [and] [transparent sealer] [transparent wood-preservative treatment and sealer]** **<Insert treatment or finish>**.
- F. Fiberglass: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.
- G. Plastic: Color impregnated, color and UV-light stabilized, and mold resistant.
1. Polyethylene: Fabricated from virgin plastic HDPE resin.
  2. [<Double click to insert sustainable design text for recycled polyethylene>](#)
- H. Anchors, Fasteners, Fittings, and Hardware: **[Stainless steel] [Brass] [Galvanized steel] [Zinc-plated steel] [Manufacturer's standard, corrosion-resistant-coated or noncorrodible materials]; commercial quality[, tamperproof, vandal and theft resistant] [, concealed, recessed, and capped or plugged].**

1. Angle Anchors: For inconspicuously bolting legs of site furnishings to **[on]** **[below]**-grade substrate; **[one per leg]** **[extent as indicated]** **<Insert extent>**.
  2. Antitheft Hold-Down Brackets: For securing site furnishings to substrate; **[two per unit]** **[extent as indicated on Drawings]** **<Insert extent>**.
- I. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M; recommended in writing by manufacturer, for exterior applications.
  - J. Erosion-Resistant Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound; resistant to erosion from water exposure without needing protection by a sealer or waterproof coating; recommended in writing by manufacturer, for exterior applications.
  - K. Galvanizing: Where indicated for steel and iron components, provide the following protective zinc coating applied to components after fabrication:
    1. Zinc-Coated Tubing: External, zinc with organic overcoat, consisting of a minimum of **0.9 oz./sq. ft. (0.27 kg/sq. m)** of zinc after welding, a chromate conversion coating, and a clear, polymer film. Internal, same as external or consisting of 81 percent zinc pigmented coating, not less than **0.3 mil (0.0076 mm)** thick.
    2. Hot-Dip Galvanizing: According to ASTM A123/A123M, ASTM A153/A153M, or ASTM A924/A924M.

## 2.10 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Preservative Treatment: Pressure-treat wood according to AWPA U1, Use Category UC3b, and the following:
  1. Use preservative chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
  2. Kiln-dry lumber and plywood after treatment to a maximum moisture content, respectively, of 19 and 15 percent. Do not use materials that are warped or do not comply with requirements for untreated materials.

## 2.11 FABRICATION

- A. Metal Components: Form to required shapes and sizes with true, consistent curves, lines, and angles. Separate metals from dissimilar materials to prevent electrolytic action.
- B. Welded Connections: Weld connections continuously. Weld solid members with full-length, full-penetration welds and hollow members with full-circumference welds. At exposed connections, finish surfaces smooth and blended, so no roughness or unevenness shows after finishing and welded surface matches contours of adjoining surfaces.
- C. Pipes and Tubes: Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.
- D. Preservative-Treated Wood Components: Complete fabrication of treated items before treatment if possible. If cut after treatment, apply field treatment complying with AWPA M4 to cut surfaces.

- E. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.
- F. Factory Assembly: Factory assemble components to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

## **2.12 GENERAL FINISH REQUIREMENTS**

- A. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## **2.13 ALUMINUM FINISHES**

- A. Powder-Coat Finish: Manufacturer's standard polyester powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

## **2.14 STEEL AND GALVANIZED-STEEL FINISHES**

- A. Powder-Coat Finish: Manufacturer's standard polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.
- B. PVC Finish: Manufacturer's standard, UV-light stabilized, mold-resistant, slip-resistant, matte-textured, dipped or sprayed-on, PVC-plastisol finish, with flame retardant added; complying with coating manufacturer's written instructions for pretreatment, application, and minimum dry film thickness.

## **2.15 IRON FINISHES**

- A. Powder-Coat Finish: Manufacturer's standard polyester powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

## **2.16 STAINLESS STEEL FINISHES**

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
  - 1. Run directional finishes with long dimension of each piece.
  - 2. Directional Satin Finish: ASTM A480/A480M, No 4.
  - 3. Dull Satin Finish: ASTM A480/A480M, No. 6.

**PART 3 - EXECUTION****3.1 EXAMINATION**

- A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.
- B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.
- C. Install site furnishings level, plumb, true, and **[securely anchored] [positioned]** at locations indicated on Drawings.
- D. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.
- E. Posts Set into Voids in Concrete: Form or core-drill holes for installing posts in concrete to depth recommended in writing by manufacturer of site furnishings and **3/4 inch (19 mm)** larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.
- F. Pipe Sleeves: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 84 00 - PLANTING IRRIGATION****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes valves, piping, sprinklers, accessories, controls, and wiring for automatic irrigation systems.
- B. Extent of underground irrigation system is shown on the Drawings and in Schedules.
- C. Provide all labor, materials and equipment required by or inferred from the Drawings and Specifications to complete the Work of this Section.
  - 1. Provide a complete and operable system for the irrigation of all landscaped areas on the project site, unless indicated otherwise. The Drawings and specifications are intended to include all items obviously necessary and requisite for the proper irrigation of the Project. The Contractor is responsible to furnish any additional labor, materials and equipment required for a proper system.
  - 2. Contractor shall be responsible for adjusting head location, head/nozzle type and size, and any other system components so that irrigation system layout is coordinated with actual field conditions. Such adjustments shall be made at no cost to the Owner except, when authorized in writing, such adjustments which will be compensated for at an agreed upon cost.

**1.2 RELATED DOCUMENTS**

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 Specifications, apply to this Section.
- B. Specification Sections that are related to Irrigation Work:
  - 1. Specification Sections 32 9100 – “Planting Preparation”
  - 2. Specification Sections 32 9300 – “Plants”

**1.3 QUALITY CONTROL**

- A. Qualifications:
  - 1. Installer Qualifications: Engage a firm or firms specializing in irrigation installation. Installer shall have successfully completed five projects similar in material, size, scope and complexity to that indicated for this Project that have resulted in construction with a record of successful in-service performance.
    - a. Firm Experience Period: Five (5) years of experience.
    - b. Field Foreman Experience: Five (5) years of experience with installing firm.
- B. Codes and Standards: Perform the work in compliance with applicable requirements of governing authorities having jurisdiction. County regulations supersede these specifications. Notify the Architect in writing of all discrepancies immediately.
  - 1. American Society for Testing and Materials (ASTM):
    - a. C 33-99 - Specification for Concrete Aggregates.
    - b. C 150-99a - Specification for Portland Cement.
    - c. D 1785-96b - Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
    - d. D 2241-96b - Specification for Poly(Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series)

- e. D 2464-96b - Specification for Threaded Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
  - f. D 2466-94a - Specification for Threaded Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
  - g. D 2467-96b - Specification for Socket-Type Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
  - h. D 2564-96a - Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.
  - i. D 2672-94 - Specification for Joints for IPS PVC Pipe Using Solvent Cement.
  - j. D 2774-94 - Practice for Underground Installation of Thermoplastic Pressure Piping.
  - k. D 2855-96 - Practice for Making Solvent-Cemented Joints with Poly(Vinyl Chloride) (PVC) Pipe and Fittings.
  - l. D 3139-96a - Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
- 2. National Fire Protection Association (NFPA):
    - a. 70 - National Electrical Code.
  - 3. National Electrical Manufacturer's Association (NEMA):
    - a. 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
- C. Do Not Make Substitutions: If the Contractor desires to make substitutions of materials, sufficient descriptive literature and material samples must be furnished to establish the material as an equal substitute. In addition, the Contractor must state his reasons for desiring substitute materials. Submit this request and information to the Architect.
  - D. Approval and Selection of Materials and Work: The selection of all materials and the execution of all operations required under the Drawings and Specification is subject to the approval of the Owner and Architect. They have the right to reject any and all materials and any and all Work which, in their opinion, does not meet the requirements of the Contract Documents at any stage of the operations. Remove rejected Work and or materials from project site and replace promptly.
  - E. Workmanship: Install materials and equipment in a neat and professional manner following manufacturer's recommendations.

#### 1.4 DEFINITIONS

- A. Supply Piping: Piping from water source to connection to irrigation system pressure piping. Piping is under same pressure as water supply.
- B. Pressure Piping: Piping downstream from supply piping to and including control valves. Piping is under irrigation system pressure. Piping in this category includes pressure regulators, water meters, and backflow preventers, when used.
- C. Circuit Lateral Piping: Piping downstream from control valves to irrigation system sprinklers, emitters, devices and drain valves. Piping is under pressure during flow.
- D. The following are industry abbreviations for plastic materials:
  - 1. ABS: Acrylonitrile - butadiene - styrene plastic.
  - 2. NP: Nylon plastic.
  - 3. PE: Polyethylene plastic.
  - 4. PTFE: Polytetrafluoroethylene plastic.
  - 5. PVC: Polyvinylchloride plastic.

#### 1.5 SYSTEM PERFORMANCE REQUIREMENTS

- A. The Drawings are diagrammatic and generally indicate the Work to be installed. The Drawings do not indicate all offset fitting, and sleeves. The Contractor shall furnish such items as may be required to complete the work.
- B. Location of Sprinklers and Devices: Design location is approximate. Make minor adjustments necessary to avoid plantings and obstructions such as signs and light standards.

- C. Minimum Water Coverage: Not less than:
  - 1. Turf Areas: 100 percent
  - 2. Other Planting Areas: 80 percent

## 1.6 SUBMITTALS

- A. Section Cross Reference: Refer to Division 1 Submittals Section for general requirements.
- B. As Built Drawings: Any changes in the layout and/or arrangements of the proposed irrigation system, or any other differences between the proposed system and actual installed conditions are to be recorded by the Irrigation Contractor in the form of an "As Built" Drawing. Provide the Owner and the Architect with a copy of the As Built Drawings before Work under this Contract will be considered for Acceptance. All automatic and manual valves, hose bibs or quick couplers, and wire splice locations shall be shown with actual dimensions to reference points so they may be located easily in the field.
- C. Product Data: Submit, for information only, manufacturer's specifications, product data, installation instructions and general recommendations for ALL components of the irrigation system. Individual copies of product data shall be submitted with the specific product name and model number visibly identified with specific product and model number being identified using a highlighter, asterisk or underlining.
- D. Installer Certification: Submit written documentation certifying that Installer complies with requirements of "Installer Qualifications" above.
- E. Five sets of a site map showing the individual zones using numbers and color code of the installed irrigation system. One of the site maps is to be laminated and placed in the door of the irrigation control clock for on-site reference.

## 1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials and equipment in such a manner as to not damage the parts or decrease the useful life of equipment.
- B. Store materials away from detrimental elements. Coordinate with Owner or General Contractor to secure a safe staging area. Security of stored materials shall be provided by the contractor at all times.
- C. Handle, load, unload, stack and transport materials for irrigation system carefully to avoid damage. Handle pipe in accordance with manufacturer's recommendations.

## 1.8 PROJECT CONDITIONS

- A. The site irrigation system is comprised of an irrigation distribution and sprinkler system. The Contractor shall connect the distribution network to the domestic water meter.
- B. Obtain all required permits and pay all required fees, at no additional cost to the Owner. Any penalties imposed due to failure to obtain permits or pay fees are the responsibility of the Contractor.
- C. Irrigation system water source will be provided by wells, 3 separate systems, installed by others. Irrigation contractor is responsible for connection to irrigation wells.
- D. Provide and maintain all passageways, guard fences, warning lights and other protection devices required by the local authorities.
- E. Existing Grades: Existing grades will be within .2 feet of grades shown on the Civil Engineering Drawings at time of irrigation work. Determine condition of existing grades prior to beginning the Work. When irregular or incomplete grading conditions are encountered, notify the Owner in writing before beginning the Work. Determine location of existing drainage patterns and maintain patterns in completed Work. Perform Work in a manner which will avoid damage to finished grading and drainage patterns. All damage to finished grading and drainage resulting from Work covered in these Contract Documents shall be repaired at the Contractor's expense.
- F. Existing Utilities: Determine location of underground utilities. Perform Work in a manner which will avoid possible damage. Excavate as required. Maintain grade stakes set by others unless

- removal is mutually agreed upon by parties concerned. All damage to utilities resulting from Work covered in these Contract Documents shall be repaired at the Contractor's expense.
- G. Existing Conditions: Perform irrigation Work in the Tree Protection zones and in existing or previously completed landscape areas to avoid damage and disturbance to these areas. Limit work in these areas to only that necessary to perform work specified herein and shown on the Drawings. Return and repair and areas damaged or disturbed while performing the Work to the existing conditions encountered prior to the Work.
  - H. Existing Site Improvements: Perform Work in a manner which will avoid possible damage to other work. The Contractor is responsible for any damage of mechanical nature as well as damage resulting from leaks in the irrigation system whether due to negligence or otherwise.
    - 1. Protect improvements on adjoining properties and on Owner's property.
    - 2. Restore damaged improvements to their original condition at the Contractor's expense.
  - I. Existing Trees: Perform Work in a manner which will avoid damage to existing trees to remain and critical root zone of existing trees.
    - 1. All work should avoid critical root zone of existing trees as much as possible.
    - 2. Work that is done within the critical root zone of existing trees shall be done by hand, no mechanical equipment is to be used.
    - 3. All tree roots 2-inches and large shall not be cut.
  - J. Test Water Conditions: The Contractor shall check the pressure downstream of the irrigation well discharge and confirm minimum operating pressure noted in this Specification. If minimum operating pressure cannot be obtained, notify the Architect.\
  - K. Damages resulting from irrigation installation to work of other trades must be repaired at the expense of the Irrigation Contractor in a timely fashion.
  - L. Make minor adjustments to system layout as may be required and requested at no additional cost to the Owner.
  - M. Keep project site clean and orderly at all times during construction.

## PART 2 - PRODUCTS

### 2.1 PIPES AND FITTINGS

- A. Polyvinyl Chloride (PVC) Plastic Pipe: ASTM D 2241; PVC 1120 compound, SDR 21 of the following size and class:
  - 1. Irrigation Sleeves: PVC Sch 40.
  - 2. Irrigation Main Line: PVC Sch 40.
  - 3. Irrigation Lateral Line: PVC Class 200.
- B. Polyvinyl Chloride (PVC) Plastic Pipe: Exposed pipe; ASTM D 1785, PVC 1120 compound, Schedule 80, 250 psig (1725 kPa) minimum pressure rating for eight (8) inch and smaller sizes, with plain and threaded ends.
- C. Pipe three (3) inch and larger shall be PVC pipe with bell and rubber ring gasket, unless otherwise indicated.
- D. Pipe smaller than three (3) inch shall be solvent weld PVC pipe.
- E. Fittings for integral bell rubber ring gasketed pipe (three (3) inch and larger) shall have the gasket type ductile iron fittings with joint restraints.
- F. Solvent weld PVC pipe shall be rigid PVC pipe and shall be assembled using appropriate PVC pipe cleaner/primer and solvent cement in accordance with the manufacturer's recommendations. Solvent cement shall be No. 717 NSF approved.
- G. All solvent weld firings shall conform to Schedule 40 or Schedule 80 PVC dimensions and specifications for solvent weld fittings.
- H. Expansion Joints: Shall consist of integral bell and rubber gasket coupling, install every three hundred (300) feet of solvent weld piping.

- I. Runs of pipe over twenty (20) feet length must be installed with standard twenty (20) feet length sections.
- J. PVC Pipe Couplings located Within Sleeves: Four (4) inches and smaller shall be solve weld. Six (6) inches and larger shall be mechanical joints. Upon exiting sleeves, pipe solvent weld or integral bell and rubber gasket, as specified.
- K. Polyvinyl Chloride (PVC) Plastic Pipe Fittings: ASTM D 2466, Schedule 40, socket-type.
- L. Exposed Pipe: Polyvinyl Chloride (PVC) Plastic Pipe Fittings: ASTM D 2467, Schedule 80, socket-type.

## 2.2 JOINING MATERIALS

- A. Solvent Cement: ASTM F 656 primer and ASTM D 2564 solvent cement in color other than orange.
- B. Gaskets for Plastic Flanged Joints: Materials recommended by plastic pipe and fittings manufacturer.

## 2.3 ELECTRIC WIRING

- A. 120 Volt AC Wiring: 120-volt service to controller shall consist of three wires: one black, one white, and one ground. Electrical service to be provided by Contractor.
- B. Splices in the field control wiring shall be waterproof UL listed for 600 volts.
  - 1. Acceptable Manufacturers:
    - a. 3M
    - b. Paige
- C. Control wiring shall be 600-volt solid single conductor wire U.L. approved for direct burial in ground. Minimum wire size: 14 gauge. Control wiring and wiring connections from the controller to the valves is included in this Contract.
  - 1. Acceptable Manufacturers:
    - a. Paige Electric Co.
    - b. King Wire and Cable
    - c. Regency Wire Corporation

## 2.4 MASTER VALVES

- A. Valves for isolation purposes shall be brass manually operated globe valves, normally closed, durable construction for dirty water applications.

## 2.5 CONTROL VALVES

- A. Description: Manufacturer's standard control valves for irrigation zones, of type and size indicated, and as follows: Valves are to be constructed of a glass filled nylon material with a self-cleaning stainless-steel screen. The control valve shall be considered to be a "contamination resistant style valve" with flow/low pressure operating capabilities. Flow .25 to 200 GPM; Pressure: 20 to 200 PSI. Valves to conform to Manufacturer's Specifications concerning performance and at pressure provided. Operation will occur through a 24-volt pulse to the AC solenoid.
  - 1. Acceptable Manufacturers:
    - a. Hunter Industries, Inc.
    - b. Approved equal.

**2.6 VALVE BOXES**

- A. Plastic Valve Boxes: Box and cover, with open bottom and opening for piping; designed for installing flush with grade.
  - 1. Control Valves: Shall be in a twelve (12) by eighteen (18) inch standard valve box with non-hinged cover.
  - 2. Backflow Preventer & 1 ½", 2" Drip Valve Assemblies: Shall be in a twenty (20) by thirty four (34) inch valve box with non-hinged cover.
  - 3. Isolation Valves, Wire Splices and Quick Coupling Valves: Shall be in a ten (10) inch round valve box with cover.
- B. All valve boxes are to be green or black with matching colored covers.
- C. Acceptable Manufacturers:
  - 1. Rain Bird
  - 2. Carson Industries, Inc.
  - 3. Armor Access Boxes

**2.7 SPRINKLERS**

- A. Rotary Heads: The sprinkler shall be four (4) inch pop-up with matched precipitation rates. Rotary heads shall have nozzles with adjustable arc and radius.
- B. Full or Part Circle Pop-Up Spray Sprinkler: The sprinkler body. Stem, nozzle and screen shall be constructed of heavy-duty, ultra-violet resistant plastic. It shall have a heavy-duty stainless steel retract spring for positive pop-up and a ratcheting system for easy alignment of the pattern.
  - 1. The sprinkler shall have soft elastomer pressure activated co-molded wiper seal for cleaning debris from the pop-up stem as it retracts into the case to prevent the sprinkler.
  - 2. Spray Sprinklers shall also include a check valve and an internal pressure-regulating device. These units shall be identifiable from the top with markings on the cap.
  - 3. The check valve shall prevent low head drainage of up to ten (10) feet of head. The pressure-regulating device shall prevent high pressure fogging of the nozzle stream by regulating the nozzle pressure to 30 psi for inlet pressure from 35 to 70 psi. Below 35 psi the pressure loss shall not exceed 6 psi. These models shall utilize the bottom inlet only.
- C. All spray sprinkler bodies are to be produced by the same manufacturer a mix of product manufacturer's is not acceptable.
- D. Acceptable Manufacturers and Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. Hunter Industries, Inc.
  - 2. Approved equal.

**2.8 AUTOMATIC CONTROLLER**

- A. Provide an electronic controller system capable of fully automatic and manual operation of the system, made for control of irrigation system automatic control valves and flow sensors. Controller housing shall be wall mounted, as indicated on the Drawings, in a weatherproof and lockable cabinet.
- B. Provide controller, which operates on a minimum of 120 VAC power input and is capable of operating 24 volt AC electric remote control valves, with a reset circuit breaker to protect from overload. Contractor is responsible for connection to 120 VAC power to controller.
- C. Each station shall have a time setting which can be set for variable timing in increments from 0 to 60 minutes, or set to omit the station from the irrigation cycle.
- D. The controller shall have a calendar for setting the programmed start-days, and a 24-hour clock for programming the irrigation cycle start time. A master "on-off" switch shall allow the valve power output to be interrupted without affecting the controller.

- E. The controller shall be constructed so that all internal parts are accessible through the controller door without disturbing the cabinet installation.
- F. The controller will be equipped with a commercial grade remote control capabilities either as a manufacturers option or a peripheral produced by a reputable manufacturer that their equipment interfaces with controller that has been installed.
- G. The controller location must be easily accessible for maintenance. Provide for the possibility of making minor timing adjustments to the controller in the field.
- H. The controller will have optional WiFi capability.

## **2.9 WATER HAMMER ARRESTERS**

- A. Water Hammer Arresters: ASME A112.26.1M, ASSE 1010, or PDI WH-201, bellows or piston-type with pressurized cushioning chamber. Sizes are based on water-supply fixture units, ASME A112.26.1M and PDI WH-201 Sizes "A" to "F".

## **2.10 INDENTIFICATION**

- A. Provide plastic underground warning tape for pipe location, install as per manufacturer's recommendation.

## **2.11 SLEEVES**

- A. Schedule 40 PVC Pipe Type: Size as indicated on Drawings.

## **2.12 LIGHTING AND SURGE PROTECTION EQUIPMENT**

- A. Provide lightning arrestor for controllers not equipped with primary surge protection. Protection to be installed as per manufacturer's recommendations.

## **2.13 MISCELLANEOUS SYSTEM COMPONENTS**

- A. Provide risers, reducers, couplings, adapters, fittings as necessary to complete the irrigation system.

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Observation of Work in Progress: During the installation, the Landscape Architect and Irrigation Consultant will make regular site visits and reject any work and materials which do not meet the requirements called for in the Contract Documents.
- B. Inspect project site prior to start of Work to determine that all site conditions are acceptable for Work to begin. Inform the Architect of unsuitable conditions. Do not proceed with installation of irrigation system until unsatisfactory conditions have been corrected in a manner acceptable to Installer.
- C. Locate all existing underground utilities prior to trenching and/or boring operations and protect them against damage during the Work. Obtain utility locations from Owner and/or General Contractor and utilize utility locating services when necessary.

### **3.2 EXAMINATION**

- A. Investigate and determine available water supply, water pressure and flow characteristics.

- B. When unanticipated utilities that conflict with the intended function or design are encountered, investigate and measure the nature and extent of the conflict. Promptly submit a written report to the Owner for action.

### 3.3 PREPARATION

- A. Layout of Mains and Laterals: Layout sprinkler mainlines and perform line adjustments and site modifications to laterals prior to execution.
- B. Coordinate all installation with landscape planting work, especially fine grading, and soil preparation for planting areas.
- C. Coordinate and cooperate with all other contractors to enable the work to proceed as rapidly and efficiently as possible.
- D. Layout of Sprinkler Heads: Stake sprinkler head locations and check for uniformity of coverage and correctness of pattern. Minor adjustments to layout should be made based on actual field conditions. If there is a discrepancy of the actual site configuration that may cause sprinklers to cast precipitation into any public roads or walks that were not indicated on the drawings, notify the Architect and the Irrigation Consultant so revisions can be made.
- E. Valve Location: Locate valves to assure ease of access for maintenance and that no physical interference with other elements of the project that are existing or planned. Valve boxes shall be placed a minimum of five (5) feet from walkways and roads. Valve boxes shall be located in mulched planting beds and away from view of pedestrians. If there are no mulched areas within forty feet of a proposed valve location valves may be located in turf areas provided no more than two valve boxes are located next to each other.
- F. Furnish temporary support, adequate protection and maintenance of all underground and surface utilities, structures, drains, sewers and other obstructions encountered in the progress of the work.
- G. Contractor shall acquaint himself with all site conditions. Should utilities not shown on the plans be found during excavations, Contractor shall promptly notify the Owner for instructions as to further actions. Failure to do so will make Contractor liable for any and all damage thereto rising from his operations subsequent to discovery of such utilities not shown on the Drawing.
- H. Where the grade or alignment of the pipe is obstructed by existing utility structures such as conduit, ducts, pipe branch connections to sewer mains, main drains, water services, etc., the obstruction shall be permanently supported, relocated, removed, or reconstructed by the Contractor in cooperation with the Owner of such utility. No deviation from the required line or grade shall be made without the written direction of the Architect.

### 3.4 EXCAVATION

- A. All excavation is unclassified and includes all materials encountered that are not classified as rock excavation.
- B. Report exceptions to the Architect before excavation. An adjustment in price will be established which includes removal and disposal of the unsuitable material, and the acquiring of additional backfill material.
- C. Excavation in Newly Sodded Areas: Prior to excavation, remove sod, preserve and replace after backfilling is completed.
- D. Excavation in Established Grass or Newly Seeded Areas: After excavation and backfilling is completed, re-grade trenched area consistent with surrounding area and re-seed, or re-sod with 100 percent pure seed of grass type existing. Mulch with straw and water.
- E. Excavation through existing asphalt, cutting, removal and replacement of asphalt, as noted on the Drawing, is the responsibility of the Irrigation Contractor.
- F. Excavation through critical root zone of existing trees shall be done by hand. Avoid damage to tree roots and roots 2-inches and larger shall NOT be cut.

**3.5 BACKFILL**

- A. Backfill material shall be free from rocks, large stones, and other unsuitable substance which could damage the pipe or create unusual settling problems. Backfill in six (6) inch layers and tamp after each layer to prevent excessive settling.
- B. Backfill trenches containing plastic pipe when pipe is cool to avoid excessive contraction in cold water. Such backfilling can be done in early morning hours or the pipe may be water cooled prior to backfilling procedures.
- C. Minimum depth of cover of all pipe is as follows:
  - 1. Irrigation Lateral Line - minimum depth cover is 12 inches.
  - 2. Irrigation Main Line - minimum depth cover is 18 inches.
  - 3. Irrigation Sleeve - minimum depth is 18 inches.

**3.6 SLEEVING**

- A. Locate sleeving as shown on the Drawings. Contractor to make adjustments necessary to accommodate existing vegetation, utilities and other existing conditions.
- B. Repair of damage to existing utilities, structures or other construction resulting from installation of sleeves is the responsibility of the Contractor.

**3.7 PIPING INSTALLATION**

- A. General Locations and Arrangements: Drawings indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, and in other design considerations. Install piping as indicated, except where deviations to layout are approved on coordination drawings.
- B. Install piping free of sags and bends.
- C. Install groups of pipes parallel to each other, spaced to permit valve servicing.
- D. Install underground thermoplastic piping according to ASTM D 2774 and ASTM F 690.
- E. Lay piping on solid subbase, uniformly slopes without humps or depressions.
- F. Tunneling: Install pipe under streets or other obstructions that cannot be disturbed by tunneling, boring or jacking.
- G. Install piping under sidewalks and paving in sleeves.
- H. Main Line: Install according to Manufacturer's Recommendations. Provide concrete thrust blocks at all directional changes on all pipe 3-inches and larger that is of the gasketed variety, as per drawings.
- I. Lateral Lines and Risers:
  - 1. Install according to Manufacturer's Recommendations using standard techniques.
  - 2. Combine lateral lines and main supply lines in common trenches wherever possible.
  - 3. Plug lines immediately upon installation to minimize infiltration of foreign matter.
  - 4. Flush lateral lines and risers prior to installation of sprinkler heads.

**3.8 JOINT CONSTRUCTION**

- A. Polyvinyl Chloride (PVC) Piping Solvent-Cemented Joints: Construct joints according to ASTM D 2672 and ASTM D 2855.
  - 1. Use PVC pipe cleaner/primer and solvent cement according to pipe manufacturer's recommendations.
  - 2. Dissimilar Materials Piping Joints: Construct joints using adapters that are compatible with both piping materials, outside diameters, and system working pressure.

**3.9 VALVE INSTALLATION**

- A. Valves: Install underground valves in valve boxes or pits.

1. Install according to manufacturer's recommendations, and as indicated on the Drawings. Position boxes at a height that will not cause them to interfere with maintenance machinery (e.g., mowers) and such that soil and mulch do not wash into the box. Locate valve box in mulched or natural areas one (1) foot inside the bed line. Where no mulched areas or natural areas exist within forty (40) feet of proposed valve box locations install valve box in turf area. Install no more than two (2) valve boxes together.
2. Install surge protection equipment, grounding, and lightning protection as per manufacturer's recommendations.

### **3.10 SPRINKLER INSTALLATION**

- A. Pop-up Sprinkler Heads: Install in such a manner that top is one (1) inch above finish grade. Where finish grade has not been established extend a riser a minimum of twelve (12) inches above existing grade to mark location of head. After finish grade is established, install heads as shown on Drawings.
- B. All spray sprinklers installed below grade should be accessed through the bottom inlet so as not to void the internal check valve feature.
- C. Backfill around sprinkler head assembly in such a manner as to stabilize the sprinkler head so that no lateral motion is exhibited during operation.

### **3.11 CONTROL WIRE INSTALLATION**

- A. Install control wires in orderly fashion, locate in main line trench. Bundle wires together and tape at ten (10) foot intervals. Position wires to the right of the water supply line in the direction of the water flow.
- B. Provide looped slack at directional changes in supply line to allow for contraction of wires.
- C. Keep wires splices to a minimum and provide ten (10) inch round valve box at each splice location.
- D. Pass wires under existing or future paving, construction, etc., through PVC sleeves.
- E. For each open station on any given controller, there shall be spare wires to the furthest two (2) control valves located in diametrically opposed directions from the controller, plus one (1) additional spare wire.

### **3.12 AUTOMATIC CONTROL SYSTEM INSTALLATION**

- A. Install controllers according to manufacturer's written instructions and as indicated.
  1. Install surge protection equipment, grounding, and lightning protection as per manufacturer's recommendations.
- B. Controller location to be coordinated with Owner and manufacturer's representative for best location for central control communication.

### **3.13 CONNECTIONS**

- A. Connect piping to sprinklers, devices, valves, control valves, specialties, and accessories.
- B. Electrical Connections: Connect to power source, controllers, and automatic control valves.

### **3.14 FIELD QUALITY CONTROL**

- A. Leak Test: Leakage shall be defined as the evidence of water moving through the pressurized mainline when no irrigation is taking place. After installation, charge system and test for leaks. If leakage is noted, leaks shall be found and repaired. Retest until no leaks exist.
  1. Upon completion of the irrigation system, and after head installation, test the entire system for proper operation. Flush all air from the system and check components for proper operation.

**3.15 BALANCING AND ADJUSTING**

- A. Balance and adjust the various components of the sprinkler system so that the overall operation of the system is most efficient. This includes synchronization of the controllers, adjustments to pressure regulators, part circle sprinkler heads, and individual station adjustments on the controllers.
- B. Adjust automatic control valves to provide flow rate of rate of operating pressure required for each sprinkler circuit.
- C. Carefully adjust lawn sprinklers so they will be flush with, or not more than one-half (1/2) inch above, finish grade after completion of landscape work.
- D. Upon completion of the irrigation system, perform a coverage test with the Owner's representative to determine if the irrigation coverage is adequate. Correct any inadequacies.
- E. Adjust settings of controllers and automatic control valves.

**3.16 CLEANUP AND PROTECTION**

- A. Flush dirt and debris from piping before installing sprinklers and other devices.
- B. Upon completion of Work, clear grounds of debris, superfluous materials and all equipment. Remove from site to the satisfaction of the Architect.
- C. Protect the Work and materials from damage due to irrigation operations, operations by other contractor and trades and trespassers. Maintain protection until Date of Substantial Completion.
- D. Cover all openings into the system as it is being installed to prevent obstructions in the pipe and the breakage, misuse or disfigurement of the equipment.
- E. Theft: Irrigation Contractor is responsible for theft of equipment and material at the job site before, during and after installation, until Date of Substantial Completion of the Work in total.

**3.17 OWNER ORIENTATION**

- A. Upon completion of the Work and at a time and place acceptable to the Architect and Owner, the Irrigation Contractor is responsible for the orientation of the Owner's maintenance personnel in the operation, maintenance, and repair of the system. Furnish copies of all available parts lists, troubleshooting lists and specification sheets, to the Architect.
  - 1. Operating and Maintenance Manuals shall constitute the basis of orientation.
- B. Set the initial watering schedules and programming of the automatic controllers at direction of Landscape Contractor.

**3.18 WARRANTY**

- A. Warranty all Work for a period of one year and 20 days, starting on the Date of Final Completion, against defects in materials, equipment, workmanship and any repairs required resulting from leaks or other defects of workmanship, material or equipment.
- B. Emergency repairs may be made by the Owner without relieving the Contractor of his warranty obligations.
- C. Repair settling of backfilled trenches occurring during the warranty period, including restoration of damaged plantings, paving or improvements resulting from settling of trenches or repair operations.
- D. Respond to Owner's request for repair work within ten (10) days. If not, Owner may proceed with such necessary repairs at the Contractor's expense.

**3.19 OBSERVATION AND ACCEPTANCE**

- A. Periodic site visits will be made by the Architect or Irrigation Consultant to review the quality and progress of the work. Work found to be unacceptable must be corrected within five (5) calendar days. Remove rejected materials promptly from the project.

- B. Upon completion of the work, the Architect or Irrigation Consultant will issue a punch list for work to be corrected. Where work does not comply with requirements, replace rejected Work.
- C. It will be the responsibility of the Irrigation Contractor to provide a reliable communication system (i.e.: Two-way radios or remote radio control activation system) for Substantial Completion and all periodic site visits.
- D. If a site visit to verify Substantial Completion has been scheduled and the Architect or Irrigation Consultant arrives at the site and determines that the irrigation system is not substantially complete (all system components in place, operational and checked) the Contractor shall be responsible for all costs incurred by the Architect or Irrigation Consultant to visit the site. Reimbursable expenses include but are not limited to the following: Mileage, airfare, consultants time, parking fee, meals, rental car, etc. All incurred expenses will be deducted from the final contract amount.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 84 23 – IRRIGATION WORK****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The general provisions of the Contract, including General and Supplementary Conditions, and General Requirements apply to the work specified in this Section.
- B. Section 02900 – Landscape Work

**1.2 DESCRIPTION OF WORK**

- A. Furnish all labor, materials, equipment and services necessary for the complete installation of the landscape irrigation system as drawn and specified. The irrigation system for Phase 1 needs to accommodate expansion of system into Phase 2 plaza and building. The work includes, but is not limited to:
  - 1. Trench, backfill and compaction for irrigation lines.
  - 2. Automatically controlled landscape irrigation system; backflow preventer; pressure reducing valve; isolation gate valves; piping and sleeves under paving; repair of paving, main and lateral lines; electrical valves and wiring; valve boxes and controllers; sprinklers; couplings; connectors; fittings; and if needed, tape and meter.
  - 3. Test all systems and make operative.
  - 4. Submit Record Drawings and Maintenance Manual.
  - 5. One-year Guarantee Period.
  - 6. Maintain and operate for 1-year beyond Date of completion of Substantial Completion punch list.

**1.3 QUALITY CONTROL**

- A. Installer Qualifications: Firm shall hold Alabama General Contractors License for Specialty Construction, Subclassification - Landscaping or Other Specialty Construction (specified as Irrigation). Firm experienced in the successful installation of a minimum of five (5) projects within the past five (5) years similar in scope, quality, and contract value to that indicated for this project. Firm shall have sufficient manpower, equipment and financial resources to complete the Work of this Section.
- B. The Owner and the Landscape Architect reserve the right to reject any and all materials and workmanship, which they deem to be not in accordance with Drawings and Specifications. Rejected materials and work shall be removed from site immediately and replaced with that of the specified quality.
- C. Applicable Standards:
  - 1. ASTM:
    - a. D1785: Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedule 40.
    - b. D2464: Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Threaded, Schedule 40.
    - c. D2466: Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Socket Type, Schedule 40.
    - d. D2564: Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Pipe and Fittings.
- D. Applicable Codes:
  - 1. Most current edition of Uniform Plumbing Code.
  - 2. Applicable Building Code.

3. All applicable local codes and ordinances.
  4. National Electrical Code.
  5. Should Specification's requirements differ from local requirements, consider Contract Document requirements to be the minimum acceptable and comply with any more stringent local requirements.
- E. Permits and Fees:
1. Obtain all permits and pay required fees to any agency having jurisdiction over the work.
  2. Arrange inspections required by local ordinances during the course of construction.
  3. Upon completion of the work, furnish satisfactory evidence to show that all work has been installed in accordance with the ordinances and code requirements.
- F. Testing:
1. Perform testing and inspections required by specifications and by regulating authorities.
  2. Give 24-hour notice that such tests are to be conducted.
- G. Contractor is responsible for verifying all utility locations. Owner is not responsible for damages that may occur as a result of unverified or non-mapped utility locations.

#### 1.4 SUBMITTALS

- A. Qualification data for firms specified in "Quality Control" article to demonstrate their capabilities and experience. Include a list of a minimum of 5-similar projects completed within the last 5-years with project name, address, names of Architects and Owners, overall description of scope of work and contract value.
- B. Shop Drawings:
1. Submit with Shop Drawings manufacturer's catalog sheet showing full specifications of each type sprinkler proposed including discharge of GPM, minimum allowable operating pressure at sprinkler, maximum allowable spacing and distance of throw (coverage).
- C. Record Drawings:
1. Prepare and submit a reproducible Record Drawing showing deviations from the Contract Documents made during construction affecting the main line pipe, controller location, valve locations, and all sprinkler head locations. Record Drawings shall also indicate and show approved substitutions of size, material, and manufacturer's name and catalog number and name.
  2. Deliver Record Drawings with request for inspection and acceptance.
  3. Deliver one (1) set of record drawings, reduced in size and laminated. Drawings should be suitable for mounting adjacent to irrigation controller.
- D. Maintenance Manual:
1. Prepare and submit irrigation system maintenance and operating instructions, with relevant manufacturer's literature. Include complete parts list covering all operating equipment.
  2. Submit in a hardcover, 3-ring binder.
  3. Include full name, address, and telephone number of Installer.

#### 1.5 COORDINATION

- A. Coordinate and cooperate with the Architect and other contractors and trades to enable the work to proceed as rapidly and efficiently as possible, and to be completed on schedule.
- B. Anticipate last minute delays, which may necessitate overtime work to complete the work on schedule. Sleeves under paving shall be placed by Site Contractor. Coordinate with other trades on site for sequencing of work.

**1.6 SITE INSPECTION**

- A. Become familiar with all site conditions.
- B. Should utilities not shown on plans be found during excavations, promptly notify the Architect for instructions as to further action.
- C. Make necessary adjustments in the layout as may be required:
  - 1. To connect to existing stubouts (should such stubs not be located exactly as shown); or
  - 2. To work around existing work. Such adjustments shall be made with no increase in cost to the Owner.
  - 3. To avoid existing utilities.

**1.7 PROTECTION OF EXISTING CONDITIONS**

- A. Take necessary precautions to protect site conditions to remain.
- B. Should damage be incurred, repair the work to its original condition at no additional cost to the Owner.

**PART 2 - PRODUCTS****2.1 PVC PIPE - (POLYVINYL CHLORIDE PIPE)**

- A. PVC pipe shall be manufactured in accordance with standards noted herein.
- B. Marking and Identification: PVC pipe shall be continuously and permanently marked with the following information:
  - 1. Manufacturer's name, pipe, size, type of pipe and material, SDR number, ASTM standard number and NSF (National Sanitation Foundation) seal.
- C. Irrigation Water Piping:
  - 1. Main Lines: ASTM D-1785, Schedule 40.
  - 2. Lateral Lines: ASTM D-1785, Class 200.
  - 3. Sleeves: ASTM D-1785, Schedule 40.
- D. This Contractor is responsible for determining if sleeves were installed prior to submitting a bid. If not installed, boring under paving, and/or hand excavation is required.
- E. All main lines to have 14-gauge tracer wire.

**2.2 PIPE FITTINGS**

- A. PVC: Meeting specified standards, Schedule 40, Standard Weight, at PVC pipe; joints solvent welded as recommended by manufacturer, except swing joints and riser to head, which shall be threaded with Teflon Tape. Swing joints shall be Schedule 80.

**2.3 SOLVENT CEMENT**

- A. Meeting ASTM D-2564 and of proper consistency.

**2.4 RISERS**

- A. Spray Heads in all areas use swing pipe. Submit sample of swing joint for approval.
- B. Rotor heads use triple elbow swing joint, submit sample of swing joint for approval.

**2.5 VALVES**

- A. Electric Remote-Control Valve: Glass filled nylon material normally closed, globe configuration.
- B. Master Valve: Highly durable brass construction, globe configuration, pressure regulating.

**2.6 VALVE BOX AND COVER**

- A. Plastic Valve Boxes: Box and cover with open bottom and opening for piping, designed for installing flush with grade and with provision for locking.
- B. All valve boxes are to be Carson Heavy Duty standard rectangle box, green or black in color.
- C. Wire splices, grounding rods, or other components are to be placed in 6" round boxes.
- D. All valve boxes shall have a minimum of 24-36" of control wire for trouble shooting and maintenance.

**2.7 SPRINKLERS**

- A. Spray Sprinkler Heads: Sprinkler shall be four (4) or twelve (12) in pop-up with fixed arc.
  - 1. Sprinkler to be constructed of heavy-duty, ultra-violet resistant plastic with a heavy-duty stainless steel retract spring for positive pop-up and a soft elastomer pressure activated c-molded wiper seal for cleaning debris from pop-up stem as it retracts.
  - 2. Sprinkler shall have a check valve to prevent low head drainage and pressure regulation
- B. Rotary Sprinkler Heads: Sprinkler shall be four (4) inch pop-up with adjustable arc nozzle, matched precipitation rates, and reducible water radius.
  - 1. Sprinkler to be constructed of heavy-duty, ultra-violet resistant plastic with a heavy-duty stainless steel retract spring for positive pop-up and a soft elastomer pressure activated c-molded wiper seal for cleaning debris from pop-up stem as it retracts.
  - 2. Sprinkler shall have a check valve to prevent low head drainage and pressure regulation.
- C. Rotor Sprinklers: Sprinkler shall be four (4) inch pop-up, part and full circle nozzles with matched precipitation rates and reducible watering radius.

**2.8 WATER METER AND BACKFLOW PREVENTER**

- A. Contractor is responsible for coordinating the installation of new water meter and new backflow preventer with site work. Refer to Civil Plans.

**2.9 AUTOMATIC CONTROLLER**

- A. Provide two-wire decoder controller capable of fully automatic and manual operation of irrigation system automatic control valves. Controller housing shall be wall or pedestal mounted, in a weatherproof and lockable cabinet.
- B. Controller to have WiFi capability.
- C. Provide controller, which operates on a minimum of 110 volts AC power input and is capable of operating 24-volt AC electric remote-control valves, with a reset circuit breaker to protect from overload. Contractor is responsible for connection to 120 VAC power to controller.
- D. Each station shall have a time setting which can be set for variable timing in increments from 0 to 60 minutes, or set to omit the station from the irrigation cycle.
- E. The controller shall have a calendar for setting the programmed start-days, and a 24-hour clock for programming the irrigation cycle start time. A master "on-off: switch shall allow the valve power output to be interrupted without affecting the controller.

- F. The controller shall be constructed so that all internal parts are accessible through the controller door without disturbing the cabinet installation.
- G. Controller location to be verified by Owner.
- H. Provide all lightning and surge protection as per manufacturer's recommendations.

## **2.10 LIGHTNING AND SURGE PROTECTION EQUIPMENT**

- A. Provide as per manufacturer's recommendations and requirements.

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Verify existing and proposed locations of all site utilities (i.e. gas, water, electric, telephone) prior to any trenching and laying of pipe.
- B. Coordinate all irrigation work with that of all other site work trades and contractors.
- C. All piping to be installed directly behind curb where possible and in all cases to be routed around existing or proposed site elements, including root balls of proposed trees and shrubs. Refer to the landscape planting Drawings for approximate tree locations and closely coordinate work and schedule with grading and planting work.
- D. Contractor is responsible for full and complete coverage of all areas designated on the Drawings to be irrigated and shall make any necessary adjustments at any time, at no additional cost to the Owner.
- E. Exact location and configuration of islands and other features may vary from that shown on these Drawings. Verify location and configuration at the site prior to trenching for sleeves and piping under paving, and make any minor adjustments to irrigation systems layout. Notify Architect of substantial changes.
- F. Maintain all warning signs, barricades, bracing, flares, and red lanterns as required by safety regulations and local ordinances.

### **3.2 INSTALLATION**

- A. General:
  - 1. Lay out according to site coordinates and actual field dimensional controls; verify piping and sleeve locations before trenching.
- B. Excavating and Trenching:
  - 1. Perform all excavation required for installation of the work included under this Section, including shoring and bracing of earth banks to prevent cave-in.
  - 2. Restore all surfaces and existing underground installations damaged or cut as a result of the excavations, to their original condition and in a manner approved by the Owner.
  - 3. All excavation shall be unclassified. Trenches shall be 4-inches wide and to the depth required as specified herein and shown in the Drawings.
  - 4. Over-excavation shall be backfilled at the Contractor's expense with cushion sand. Remove all unsuitable or excess material from the site.
  - 5. Dewater excavations as required for dry work including both surface and ground water.
  - 6. Trenches shall have sides as nearly vertical as possible and bottoms shall be shaped to provide continuous bedding of each section of pipe along its entire length in undisturbed soil or thoroughly compacted fill.

7. Trenches for piping shall be of sufficient depths to provide 12-inches minimum cover for pipes from finished grade. In Public Right-Of-Way, provide 18-inches minimum cover over top of main and lateral lines, or greater depth if required by local authorities.
- C. Pipe Installation:
1. Pipe installation includes all irrigation piping required for water and electrical wiring to complete the automatic irrigation system.
  2. Provide firm, uniform bearing for entire length of each pipeline to prevent uneven settlement. Wedging or blocking of pipe will not be permitted. Remove foreign matter or dirt from inside of pipe before joining and keep piping clean by approved means during and after laying of pipe.
  3. Assemble pipe and solvent weld. Clean joint thoroughly of dust, dirt, and moisture before applying solvent with non-synthetic bristle brush.
  4. Install all pipe and wiring under paving in sleeves as specified, whether or not shown on Drawings. Pressure test all piping under paving prior to paving. All mains and piping under pavement to be pressure tested and activated immediately.
  5. Pipe depth is expected to be between 12-18" below grade for all main and lateral lines.
- D. Pipe Fitting:
1. Solvent: Use only solvent recommended by manufacturer to make solvent welded joints. Thoroughly clean pipe and fittings of dirt, dust and moisture before applying solvent.
  2. PVC to Metal Connection: Work metal connection first. Use a TEFLON pipe fitting tape on threaded PVC to metal joints. Use only light wrench pressure.
  3. Threaded PVC Connections: Where required, use threaded PVC adapters into which pipe may be welded.
- E. Irrigation Heads:
1. Prior to installation, verify configuration of planting areas and tree locations, and stake head layout accordingly. Obtain approval of staked head locations from Landscape Architect before proceeding.
  2. Rotor and Pop-up Spray Heads: Attach sprinkler as specified. Adjust riser height after planting.
- F. Wiring:
1. Supply #14 UL listed single strand U.F. direct burial wire from automatic controllers to the valves in accordance with the Specifications. Use PVC conduit for all locations of wire under paving; in landscaped areas, the Contractor may add conduit for wires at his option, in lieu of tucking wire under main lines and lateral lines.
  2. Control wire to be double jacketed, no stranded or twisted 2-wire types will be accepted.
  3. Secure all wire-to-wire connections by approved means.
  4. All wire from controllers to valves shall be tucked under piping.
  5. Test wires prior to backfilling to ensure continuity from valve location to controller location. Any wire not indicating continuity shall be repaired or replaced immediately.
- G. Controller:
1. Coordinate controller location with Architect and Contractor.
  2. Coordinate with Alabama Power Company to provide temporary power to controller location. This Contractor shall make power available for system.
  3. Pull valve wires, program controller, and put controller in operations.
- H. Electrical Valves: Supply and install in accordance with the materials list and the manufacturer's recommendations; set in a level position.
- I. Valve Boxes: Set flush with finish grade (adjust as necessary); set over all valves.
- J. Drainage: Place a minimum 12-inches depth of crushed stone under each box containing either water meter, pressure regulator, valve or backflow preventer.

### 3.3 TESTING

- A. Conduct test in presence of Architect. Notify Architect 48-hours in advance of testing date and time:
  - 1. Thoroughly flush out all water lines before installing heads and valves.
  - 2. Operational Test: After backfilling and adjusting heads to final positions, show that system meets coverage requirements and controls function properly. Adjust heads to be not more than ½-inches above finish grade.

### 3.4 BACKFILL AND COMPACTING

- A. Do not backfill until pipe systems have been hydrostatic tested and approved.
- B. After system is operating and required tests and inspections have been made, backfill excavations and trenches as follows:
  - 1. Backfill Under Paving:
    - a. Backfill for full depth of excavation with the specified crushed stone. Compact in lifts. Backfill shall be free of debris, large clods, roots or other deleterious material.
    - b. Place backfill material evenly in lifts not to exceed 6-inches and compact to 100-percent of maximum density.
    - c. Contractor is responsible for establishing compaction in trenches equal to or exceeding overall compaction of paving base. Leave top of trench ready for asphalt by others.
  - 2. Backfill in Landscape Areas:
    - a. Backfill trenches with material removed during excavation and compacted to 85-percent except where rock is encountered. In this case lay pipe in a cushion sand bed surrounding the pipe, a minimum of 4-inches deep.
    - b. Compact all excavation to prevent settling. Hand rake excavation areas and adjoining areas to leave grade at the previous elevation and in a good or better condition than before installation. Water-floor compaction will not be permitted.
    - c. Repair settled areas throughout Guarantee Period, including repair of affected landscape work.

### 3.5 FINAL ADJUSTMENT

- A. After planting and irrigation installation has been completed, make final adjustment to irrigation system prior to the Architect's final inspection.
- B. The system shall be completely flushed to remove any and all debris from the lines by removing nozzles from all heads on ends of lines and turning on the system.
- C. Check all heads for correct operation, alignment, and direction of throw.
- D. Check each section of spray heads for operating pressure, and balance in relation to all other sections by use of the flow adjustment on top of each valve.
- E. Check nozzles for complete coverage. Prevailing wind or other conditions may indicate the arc or angle of spray should be other than as shown on plan. In this case, revise nozzle degree to provide correct coverage, at the Contractor's expense.
- F. Adjust head and valve heights as necessary. Make any other adjustments determined necessary by the Landscape Architect to provide complete and uninterrupted coverage.

**3.6 CLEAN-UP**

- A. Keep site clean on a daily basis by removing trash and debris resulting from construction operation.
- B. Keep all walks, roads, and circulation routes free from debris, materials, and equipment at all items.
- C. Upon completion of the irrigation work, clean up all work and storage areas by removing trash piles, surplus material, or other material from site.
- D. Restore pavement, curbs, ground, and any other disturbed surface to its original condition.

**3.7 MAINTENANCE AND COMPLETION OF THE WORK**

- A. Complete the irrigation system as specified and operate and maintain same from time of installation until Substantial Completion and for a period of 1-year beyond Substantial Completion.
- B. Instruct Owner's personnel in complete operation and maintenance of irrigation system.

**PART 4 - ACCEPTANCE AND GUARANTEE****4.1 SUBSTANTIAL COMPLETION**

- A. Submit request for inspection for Substantial Completion to the Landscape Architect at least 24-hours prior to anticipated date of inspection and testing (refer to Paragraph 3.3 TESTING, herein).
- B. Submit Record Drawings and Maintenance Manual to the Landscape Architect with request for inspection (refer to Paragraph 1.4 SUBMITTALS, C. and D., herein).
- C. Review the work jointly with the Owner and Landscape Architect for Substantial Completion.
- D. Upon completion of repairs and replacements found necessary at time of review, the Owner and Architect will confirm the date of Substantial Completion of the work.
- E. The date of completion of repairs and replacements found necessary at time of Substantial Completion, will constitute the beginning date of the 1-Year Guarantee.

**4.2 GUARANTEE**

- A. Guarantee all work, products, equipment, and materials for 1-year, beginning at date of completion of punch list from Substantial Completion.
- B. During the period of the Guarantee, replace immediately, with no additional compensation, all work not functioning correctly; make adjustments as necessary to maintain complete coverage; make good any other damage, loss, destruction, or failure. Repairs and replacements shall be done promptly and at no additional cost to the Owner.
- C. Repair damage to grade, plants, and other work or property as necessitated due to irrigation defects, repairs, replacement, or adjustment.
- D. If the replacement is not acceptable during or at the end of the Guarantee Period, the Owner may elect either subsequent replacement or credit. Replacement products shall have a similar 1-year guarantee from time of replacement.
- E. Guarantee applies to all losses with the exception of those due to Acts of God, Vandalism, or Owner neglect, as determined by the Landscape Architect.

**4.3 FINAL INSPECTION AND ACCEPTANCE**

- A. At end of Guarantee Period and upon request for inspection, jointly review all guaranteed work for Final Acceptance.
- B. Submit written request for inspection for Final Acceptance to the Landscape Architect at least 2-weeks prior to anticipated date of inspection; include list of work provisionally accepted and list of work replaced during Guarantee Period.
- C. Upon completion by the Contractor of all required repairs and replacements; the Owner and the Landscape Architect will confirm the date of Final Acceptance of the Work.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 90 00 - PLANTING (LANDSCAPE WORK)****PART 1 - GENERAL****1.1 RELATED DOCUMENTS:**

- A. The general provisions of the Contract, including General and Supplementary and General Requirements apply to the work specified herein.

**1.2 DESCRIPTION:**

- A. Provide all labor, equipment, materials and services necessary to complete the Work of this Section, including:
  - 1. Providing, placing, grading topsoil and/or sand for landscape grading as indicated in the Drawings.
  - 2. Providing and installing trees, shrubs, ground covers, and solid sod for landscape planting.
  - 3. Maintenance for thirty days after Substantial Completion.

**1.3 SUBMITTALS:**

- A. Qualification Data for firms specified in "Quality Assurance" article to demonstrate their capabilities and experience. Include a list of a minimum of five (5) similar projects completed with the last five (5) years with project name, address, names of Architects and Owners, overall description of scope of work, and contract value.
- B. Materials Lists:
  - 1. Within ten (10) days of award of Contract, submit a complete list of materials and unit prices demonstrating source, availability, and complete conformance with requirements specified.
  - 2. Substitutions not permitted unless proof is submitted to the Landscape Architect's satisfaction that the material is unavailable as specified.
- C. Certificates: Deliver all certificates of inspection to the Engineer.
- D. Product Data:
  - 1. Submit manufacturer's product literature, instructions and guaranteed analysis for fertilizer.

**1.4 DEFINITIONS:**

- A. Trees, shrubs, and groundcovers are plant materials listed in Plant Schedule on Drawings.

**1.5 JOB CONDITIONS:**

- A. Coordinate the Work of this Section with that of other trades.
- B. Examine conditions under which Work is to be performed and notify Landscape Architect and Landscape Architect in writing of unsatisfactory conditions.
- C. Do not perform Work until conditions are satisfactory and acceptable.

- D. Notify utility companies, prior to digging, for locations of underground utilities (electrical power, telephone, cable, water, sewer and gas) and perform Work in a manner which will avoid all possible damage. Hand excavate as required.
- E. Maintain stakes or other location markers and controls set by others until removal is mutually agreed upon by all parties.

## 1.6 QUALITY ASSURANCE:

- A. Codes and Standards:
  - 1. Applicable Sections of Alabama Highway Department (ALDOT) Standard Specifications for Highway Construction, latest Edition as amended.
  - 2. All plant materials to comply with State and Federal laws relating to inspection for disease and insect control.
  - 3. Plant material quality to conform to American Standard for Nursery Stock, American Association of Nurserymen, Inc., 1986, ANSI Z-60.1.1.
  - 4. Plant Material nomenclature to conform to:
    - a. *Hortus Third*, a Concise Dictionary of Plants Cultivated in the United States and Canada, MacMillan Publishing Company, Inc., New York, 1976 Edition.
    - b. Names not listed in the above standard to comply with those most commonly used in the trade.
    - c. In all cases, botanical names take precedence over common names.
- B. Installer Qualifications: Firm shall hold Alabama General Contractor's License for Classification S - Specialty Construction, Subclassification 4 - Landscaping. Firm experienced in the successful installation of a minimum of five (5) projects within the past five (5) years similar in scope, quality, and contract value to that indicated for this project. Firm shall have sufficient manpower, equipment and financial resources to complete the Work of this Section.
- C. Personnel: Use adequate numbers of skilled workmen trained and experienced in the Work and familiar with requirements and methods needed for performance of the Work. At all times during planting operations, have on the site a person knowledgeable in horticultural practices as a superintendent.
- D. Inspection and Approval:
  - 1. All plant material is subject to inspection and approval in the field or nursery before digging, by the Landscape Architect.
  - 2. All plant materials and other materials are subject to inspection and/or rejection at the site before planting or placing, or at any other time.
  - 3. Attach secure, durable, legible waterproof labels, stating correct botanical and common names as specified, to a least one (1) plant, bundle or container of each plant variety.
  - 4. Remove from site plant materials or other materials not complying with specified requirements within 5 days of rejection.
  - 5. Approval is for visual qualities only and does not relieve the Contractor of his obligation to provide materials and workmanship in full compliance with the requirements of the Contract Documents.

## 1.7 1.7 PRODUCT DELIVERY, STORAGE and HANDLING:

- A. Deliver packaged materials in manufacturer's original containers showing weight, analysis and name of manufacturer. Protect materials from deterioration during delivery, and while stored at the site.
- B. Deliver all non-packaged or non-containerized materials to site in a manner that will prevent loss, damage, deterioration or contamination.

- C. Store all materials in approved locations to prevent loss, damage, deterioration or contamination.
- D. Deliver, storage and handling of all plant materials shall conform to ALDOT Specifications and the following:
  - 1. Deliver freshly dug plants, which have not been in cold storage or heeled-in.
  - 2. Do not prune prior to delivery.
  - 3. Do not bend or bind trees or shrubs in such a manner as to damage bark, break branches or destroy natural shape.
  - 4. Provide necessary protective covering during transport and delivery.
  - 5. Deliver plants after preparations for planting have been completed and approved, and plant immediately.

### 1.8 SITE MAINTENANCE:

- A. Keep roads, paving and structures adjacent to maintenance operations clean and free of obstructions, mud and debris at all times.
- B. Do not permit flushing of roads or disposal of dirt or debris into sewers or drainage ditches.
- C. Control dust from maintenance operations.

## PART 2 - PRODUCTS

### 2.1 SOIL MATERIALS:

- A. Topsoil:
  - 1. This Contractor shall furnish topsoil in sufficient quantity, to complete grading and planting operations as specified.
  - 2. Characteristics of topsoil to be furnished:
    - a. Fertile, friable, naturally occurring. Free of stones, clay, lumps, hardpan, roots, stumps, branches, sticks and other debris larger than two (2) inches in any dimension; free of noxious weeds, grasses, seeds, plants, extraneous matter and any substance harmful to plant growth. Topsoil from open fields will not be accepted.
    - b. Ph: 5.0 to 7.0
    - c. Organic Matter: 5% to 10%
    - d. Sand: 50% to 70%
    - e. Silt: less than 30%
    - f. Clay: 10% to 25%
    - g. Permeability Rate of 5 x 10 <sup>-3</sup> centimeters or greater at 85% compaction.
  - 3. Notify Engineer of location of proposed topsoil for his inspection before testing or transporting to site.
  - 4. Topsoil testing for furnished topsoil: Sample and test, minimum of three (3) samples, for compliance with specified characteristics. Tests to be performed by soil testing lab approved in advance by Engineer, by this Contractor at his expense. Submit Soil Test Reports to Landscape Architect for approval before transporting topsoil. Amend per recommendations of Soil Test Report and as approved to meet specified characteristics.

### 2.2 SOIL AMENDMENTS:

- A. Fertilizer:
  - 1. Characteristics:

- a. Uniform in composition.
  - b. Dry and free-flowing.
  - c. Commercially available.
  - d. Conforming to the State of Federal Fertilizer Laws.
2. Of the formulation recommended in the Soil Test Report as specified.
- B. Lime:
1. Ground or crushed agricultural lime.
  2. Containing not less than 85% of total carbonates.
  3. 90% passing 20-mesh screen.
  4. Not less than 50% passing a 60-mesh screen.
  5. Dry and free-flowing.
  6. Apply at rate specified in Soil Test Report.

### 2.3 LANDSCAPE PLANTING MATERIALS:

- A. Water:
1. Provide fresh water, free of impurities or any substance harmful to plant growth.
  2. Provide all hose, attachments, and accessories necessary to complete the Work as specified.
- B. Topsoil: Refer to Paragraph 2.1.A, this Section, for specified topsoil for use in all planting operations.
- C. Topsoil Mix:
1. Prepare all topsoil mix used in tree and shrub pits and ground cover beds in the following proportions:
    - a. 2 parts by volume topsoil as specified. 2.1.A.
    - b. 1 parts by volume decomposed organic matter, 2.3.E.
  2. Add three (3) pounds of 12-6-6 fertilizer to each cubic yard of topsoil
- D. Decomposed Organic Matter:
1. Well rotted organic matter.
  2. Containing no weeds, grasses or plants, their seeds, or any substance harmful to plant growth.
  3. Of uniform composition.
  4. Acceptable Materials:
    - a. Mushroom Compost
    - b. Ground pine bark
    - c. Approved equal.
- E. Chemical Weed Control
1. Pre-Emergent (in bed areas):
    - a. Selective pre-emergent with no residual soil activity. Active ingredient: Trifluralin.
    - b. Commercially available.
    - c. Adhere to manufacturer's recommendations for strength, rate, and method of application.
    - d. Acceptable Manufacturers:
      - 1) Elanco: Treflan
      - 2) Approved substitution.
  2. Herbicide:

- a. Non-selective post-emergent with no residual soil activity. Active ingredient: Isopropylamine salt of Glyphosate.
  - b. Commercially available.
  - c. Adhere to manufacturer's recommendations for strength, rate and method of application.
  - d. Acceptable Manufacturers:
    - 1) Monsanto Agricultural Products Company: Round Up.
    - 2) Approved substitution.
- F. Mulch:
1. Pine straw on slopes: Free from leaves, twigs, insects, grasses, weeds, plants and their seeds, other foreign material and any substances harmful to plant growth.
  2. Ground Pine bark: Free from leaves, twigs, insects, grasses, weeds, plants and their seeds, other foreign material and any substances harmful to plant growth.
- G. Solid Sod:
1. Obtain solid sod from sources having growing conditions similar to the area to be planted.
  2. Sod shall be true to name and type of the species named in the plant Schedule.
  3. Sod shall be 100 percent of the type specified and shall contain no other grasses.
  4. Sod shall be well cultivated and weed, disease and insect-free, of good texture, and free from extraneous roots, stones and other foreign material. The presence of nutgrass or other weeds shall be cause for rejection and replacement prior to Substantial completion, or during the Guarantee Period.
  5. Contractor shall lay sod within 24 hours of harvesting. Contractor shall not lay sod if dormant or if ground is frozen or muddy.
- H. Seed (If shown on plans):
1. Use Winter Rye Grass as a temporary grass during the cool months, defined as October to March. Seed is to meet purity standards as outlined in AHD Section 860.01a.
  2. Use Cynodon Dactylon (Common Bermuda) for seeding during the warm months, defined as April through September. Seed is to meet purity standard as outlined in the AHD Section 860.01a. Seed at a rate of 50 lbs. per acre.
  3. Do not broadcast or drop seed when wind velocity exceeds 10 mph. Evenly distribute seed by sowing equal quantities in two directions at right angles to each other. Do not seed against existing trees. Limit extent of seed to outside edge of planting saucer.
  4. Sow seed at a total rate of 1.5 lb/1000 sf (Common Bermuda).
  5. Rake seed lightly into top 1/8 inch of soil, roll lightly, and water with fine spray.
- I. Plant Material:
1. Definition: Trees and shrubs listed in the Plant Schedule in the Drawings.
  2. General:
    - a. Species, sizes, manner in which to be planted, and approximate quantities to complete the planting as indicated are included in the Plant Schedule.
    - b. Scientific and common plant names conform to those given in *Hortus Third*, or are those generally accepted in the nursery trade.
  3. Quality:
    - a. Conform to the standards set forth in *American Standard for Nursery Stock*.
    - b. Standard quality and first-class representatives of their species or variety and true to name and type.
    - c. Nursery-grown, unless specified otherwise.
    - d. In compliance with State and Federal laws relating to disease and insect infestation; file certificates with Landscape Architect.

- e. Having normal, well-developed branches and vigorous root systems, free from defects, decay, disfigurements, sun scaled, bark abrasions, plant diseases, insect pests or eggs, borers and any and all infestations.
4. Rejection of plants for:
    - a. Lack of compactness or proper proportion;
    - b. Weak, thin growth in rows too close together;
    - c. Cut back from larger stock to meet specified requirements;
    - d. Undersized, dry, cracked or broken balls, or plants that are loose in their balls;
    - e. Root bound within container or ball;
    - f. Lacking proper proportion as to height and spread and specified characteristics or plant material;
  5. Size:
    - a. Sizes and proportions of all plant materials shall equal those recommended by the *American Standard for Nursery Stock* for specified grades.
    - b. Measure plants before pruning, with branches in normal position.
    - c. Equal or exceed measurements specified in Plant Schedule, which are the minimum acceptable; provide 50-percent of plant material maximum size specified.
    - d. Height and spread dimensions: General body mass of plant, not from branch tip to tip.
    - e. Well-proportioned as to height; reject plants which meet specified measurements but do not possess an overall balance.
    - f. Take caliper measurement on trunk six-inches above natural ground level up to and including four-inch caliper size; twelve-inches above natural ground level for larger sizes.
    - g. B&B plants shall have firm natural balls of a diameter and depth not less than that recommended in *American Standard For Nursery Stock*.
    - h. Container-grown plants: Conform to standards set forth in *American Standard For Nursery Stock* for container-grown plants.
  6. Quantity: Furnish plants in sufficient quantity to satisfy the intent of the Drawings and Specifications. Locate in sufficient quantity to that time is not lost if some plants are rejected.
- J. Guying and Staking Materials:
1. Wood Stakes:
    - a. Pressure-treated Southern Yellow Pine, or other approved wood, 2-inches x 4-inches x length specified in the Drawings, pointed at one end.
    - b. Free from insects and fungi.
  2. Wire: Pliable #10 or #12 gauge galvanized steel wire, doubled and twisted.
  3. Turnbuckles: As detailed and approved by Landscape Architect.
  4. Protective Hose:
    - a. Reinforced fiber-bearing rubber hose.
    - b. Black.
    - c. May be second-hand.
    - d. Not less than 2-inches inside diameter.

### PART 3 - EXECUTION

#### 3.1 INSTALLATION:

- A. Planting Season:

1. A period of acceptable weather conditions, during seasons in which satisfactory results can be expected as determined by acceptable practice in the locality and approved by the Landscape Architect.
  2. Commence planting operations as soon as portions of the site are available, as approved by the Landscape Architect.
- B. Site Inspection:
1. Examine areas and conditions under which Work is to take place.
  2. Inform Landscape Architect in writing, prior to planting, of conditions existing which could be considered detrimental to the successful planting and growth of any plant material, including but not limited to, subsurface drainage conditions, utility locations, subgrade compaction, percolation rate and elevations.
- C. Site Preparation:
1. Topsoil (4" in sod areas and 6" in shrub and groundcover beds) shall be spread by the Contractor and fine graded. Topsoil, regardless of the source, shall meet all requirements of the paragraph above.  
  
Stockpile material that does not meet the minimum requirements, may, at the option of the contractor, be improved by screening and the addition of organic matter and chemical admixtures.  
  
Do not place or spread topsoil in an area until subgrade is approved by Landscape Architect and is acceptable to this Contractor.
  2. Remove all vegetative growth from topsoil by approved means before commencing with planting operations.
  3. Remove all unwanted vegetative growth from areas designated to receive new planning or sod with chemical herbicide or by other approved means, prior to scarifying and placing topsoil.
  4. Remove extraneous matter measuring 1-2-inch or larger in any dimension from top 4-inches of placed topsoil.
  5. Uniformly grade areas including adjacent transition areas to line and grade shown on Drawings.
  6. Obtain approval of finished grades before proceeding with planting operations; eliminate irregularities and ponding.
  7. Protect stockpiled or spread topsoil from erosion by force of wind, water, or other force; re-establish eroded, rutted or settled grades to proper finished grade.
- D. Plant Location Staking and Excavating Compacted Subgrade Tree Pits:
1. Stake plant locations and areas for approval prior to planting.
  2. Do not dig plant pits prior to obtaining Landscape Architect's approval of plant locations.
  3. Make adjustments in plant locations as directed.
  4. If underground obstructions are encountered in planting areas that would prevent the installation of the plant material, contact the Landscape Architect immediately. Alternate locations may be selected by the D & D at no additional cost to the Owner.
  5. All locations where trees are to be installed shall have the topsoil broken up to an 18" depth and 10' radius (if space allows) with a mini excavator.
- E. Topsoil Mix:
1. Prepare topsoil mix to specification 2.3.C off site, using approved topsoil.
  2. Obtain approval of topsoil mix before delivery to site, and prior to commencing planting operations. Do not mix in place with placed topsoil.

3. Place topsoil mix as backfill for tree and shrub pits and beds as drawn. Place 2-inches of topsoil mix in all shrub beds unless otherwise indicated on the Drawings.
4. Protect stockpiled topsoil mix from erosion by force of wind of water, or damaged by traffic.

F. Planting:

1. Place plants comprising a planting composition in approved staked locates for approval by Landscape Architect.
2. Planting pits and beds:
  - a. Drainage:
    - 1) This Contractor is responsible for achieving and maintaining adequate drainage from all planting beds. Use specified drainage system, or other approved means, in all tree pits.
    - 2) 48-hours prior to planting, test each plant pit for adequate drainage.
    - 3) Owner reserves the right to test tree or plant pits at any time, before or after planting, for adequate drainage. Correct immediately any inadequate drainage encountered.
  - b. Pits are generally circular in outline with vertical sides.
  - c. Tree pits: 3-feet greater in diameter than ball or root spread.
  - d. Shrub pits: 1-foot greater in diameter than ball or root spread.
  - e. Excavate to specified dimensions and dispose of excavated material off site.
  - f. Prepare as specified in detail Drawings.
3. Setting plants:
  - a. Set plants uniformly 2-inches to 4-inches higher than surrounding grade or as necessary to provide adequate positive drainage away from roots. Slope soil gradually from saucer.
  - b. Cut rope, wire or string from top of ball after plant has been set; turn down and bury burlap.
4. Backfilling plants:
  - a. Backfill to 2/3 full with specified topsoil mix.
  - b. Water thoroughly to eliminate air pockets and settling before filling to grade.
  - c. Form shallow saucer at plant pit edge to hold water.
  - d. Water in thoroughly.
5. Pre-Emergent application:
  - a. Apply per manufactures instructions.
6. Staking:
  - a. Inspect tree trunks for injury, improper pruning and insect infestation; take corrective measure.
  - b. Immediately after planting, stake trees as detailed.
7. Pruning:
  - a. Do not prune plants without approval.
  - b. Prune after plants are in place and *ONLY* at the direction of Landscape Architect.
  - c. Main leaders of trees to remain intact.
  - d. Paint all cuts over 2-inch diameter with approved tree wound dressing.
8. Finished Grading: Handgrade and rake planting areas so that grades conform to surrounding areas and surface water drains freely.
9. Mulching:
  - a. Mulch all plant pits and beds with 4-inch deep specified mulch.
  - b. Spread mulch solid in planting beds.

- c. Thickness is uniform throughout.
  - d. Mulch for trees shall be eight (8) feet in diameter from base of tree.
- G. Solid Sod:
  - 1. Procure and handle sod per ALDOT Section 654, 2018 Edition.
  - 2. Preparation of Sod Bed:
    - a. Spread and scarify amended topsoil as specified.
    - b. Rake and otherwise manipulate to form smooth-draining grades, remove all stones and clay lumps 1-inch in diameter or larger.
    - c. Leave the surface of the topsoil 1- 1/2-inches below finished grade.
    - d. Do not move heavy objects over areas to be sodded after the soil has been prepared. Planting in compacted areas will not be permitted.
    - e. The finished surface of the areas to be sodded shall be approved by the Landscape Architect prior to sod placement.
  - 3. Solid Sod Placement:
    - a. Lay sod when sod bed is not excessively wet or frozen, but when soil is damp for a depth of 4-inches.
    - b. Immediately upon approval of bed preparation, lay sod smoothly, edge-to-edge, with staggered joints.
    - c. Press firmly into contact with sod bed by tamping or rolling by approved means to eliminate all air pockets, providing a true and even surface, and assuring knitting.
    - d. Fill cracks between sod blocks with strips of living sod, topsoil, or humus.
    - e. Water thoroughly by use of sprinkler or spray, without erosive force.
- H. Seeding: (may not be applicable if Seeding specification is included)
  - 1. Furnish, sow, establish and maintain an acceptable growth of specified grass over all disturbed areas not otherwise designated to receive planting, mulch or sod.
  - 2. Ground Preparation: Spread and scarify amended topsoil as specified. Ground preparation shall consist of cultivation to loose depth approximately four (4) inches (minimum). The plowing, harrowing, cultivating, and all other operations shall be performed with proper equipment and in such a manner as to break up all clods, lumps or earth balls, and remove all boulders, stumps, large roots, or other particles which will interfere with the Work. The resultant surface is to be smooth, uniform, loose, well broken, and fine grained soil providing a suitable bed for seed grass. The ground shall be plowed to the required depth, then cultivated with a rotary tiller and/or disc harrow, in both directions if feasible, until approved. In small or inaccessible areas use of hand tools will be permitted. After removal of all large particles which cannot be broken, the surface shall then be harrowed and tilled. Add sufficient water to wet the soil in order to prepare the ground.
  - 3. Sowing:
    - a. Sowing seed shall follow promptly after the addition of the fertilizer in a uniform manner at the rates specified by Soil Test Reports.
    - b. Sowing shall be done by approved mechanical seeders. Without prejudice to power equipment or seeders of other types and makes, hand operated cyclone sowers, in sufficient number, will be considered mechanical seeders. No sowing shall be done during windy weather, or when the prepared surface is crusted, or when the ground is frozen, wet or otherwise in a non-tillable condition.
    - c. Care shall be exercised during covering operations to preserve the line, grade and cross-section of the seeded areas and to see that areas adjacent to pavement, curbs, etc., are not left higher than the paved surface. Unless otherwise directed, after seed has been sown the seedbed shall be compacted immediately by means of a cultipacker, light roller or approved drag.

4. Mulching: Spread hay or straw mulch to seeded areas at specified rate within 24 hours after the area has been seeded.
5. Care During Construction:
  - a. Water, fill washes, and otherwise protect and maintain the seeded areas including any mulch or cover used until the Work is accepted.
  - b. Repair damage caused by pedestrian and/or vehicular traffic, or other causes.
6. Satisfactory Stand:
  - a. The acceptance of areas designated to be seeded under this Section will be based on verification of a satisfactory stand of grass as determined by an on-site observation by the Landscape Architect.
  - b. A satisfactory stand is defined as a cover of living grass of specified species, after true leaves are formed in which no gaps larger than five (5) inches square occur. Areas viewed by the Landscape Architect to be solid rock will be exempt from this requirement.
  - c. If a satisfactory stand is not established in any area, the area shall be reseeded until a satisfactory stand is established, without additional compensation.
7. Should the site be ready for seeding during a season when, in the opinion of the Landscape Architect, the specified grass will not form a satisfactory cover, establish a cover of Winter Rye and reseed specified grass at earliest time when acceptable growth can be established at no additional cost to the Owner.

### **3.2 LANDSCAPE MAINTENANCE:**

- A. See Section 32 9005 Landscape Maintenance

### **3.3 SUBSTANTIAL COMPLETION and GUARANTEE:**

- A. Substantial Completion and Payment:
  1. Submit written requests for inspection for Substantial Completion to Landscape Architect at least three calendar days prior to anticipated date of inspection and testing.
  2. Substantial Completion cannot be granted and at the same time no further applications for payment shall be for more than 85 percent of Contract until
  3. there has been a walk - thru for planting at which time a "punch list" will be written consisting of items to be addressed and corrected by Landscape Contractor immediately. Depending on extent of work on "punch list", Landscape Architect will determine job to be "substantially complete" or pending the completion of punch list".
  4. Submit Record Drawings and Maintenance manuals to Landscape Architect with written request for inspection.
  5. Review "punch list" work jointly with Owner and Landscape Architect for
  6. Substantial Completion of total (contract) work.
  7. Upon completion of repairs and replacements found necessary at time of review, Owner and Landscape Architect will confirm date of Substantial Completion and issue written notice of Substantial Completion if items on punch list have been completed. If necessary, another punch list will be written to itemize deficiencies still existing and will be attached to written notice of substantial completion. Landscape Contractor shall complete all "punch list" items if possible within 30 days while continuing maintenance.
  8. Date of Substantial Completion will constitute beginning date of One - Year Guarantee. This date also constitutes beginning of warranty responsibilities and acceptance by Owner and Landscape Architect.
- B. Guarantee:
  1. Guarantee all materials and workmanship for a period of 1-year from the Date of Substantial Completion.

2. During the period of the Guarantee, replace with no additional compensation, and as soon as weather permits, all dead plant materials and all materials not in a thriving condition; replace all other workmanship and materials which are unsatisfactory in the opinion of the Landscape Architect; make good any other damage, loss, destruction, or failure to flourish sufficiently as the result of inferior or defective materials or workmanship, including, but not limited to inadequate drainage.
3. All replacement material shall match the size attained by original materials at the time of the replacement.
4. Remove dead or dying material from the site within 5 days of notice, refer to section 1.6 paragraph D(4).
5. Repair grades and other Work necessitated due to planting replacements.
6. If the replacement is not acceptable during or at the end of the Guarantee Period, the Owner may elect either subsequent replacement or credit. Replacements shall have a similar 1-year Guarantee from date of replacement.
7. Guarantee applies to losses or damage other than those due to vandalism, Owner neglect, or Acts of Nature, as determined by the Landscape Architect. Acts of Nature, but may not be limited to, high winds of hurricane or tornado force, sleet, hail, freezing rain, and extreme cold (as determined by the Landscape Architect). Contractor agrees to replace losses due to Acts of Nature at fifteen percent (15%) less than original contract price for the damaged work.

#### **3.4 FINAL INSPECTION and ACCEPTANCE:**

- A. Contractor is responsible for contacting the Landscape Architect at the end of the Guarantee Period to schedule final inspection. Should the Contractor fail to contact the Landscape Architect at this time, the Guarantee Period is automatically extended until he does so.
- B. At the end of the Guarantee Period, submit request for inspection for Final Acceptance to Landscape Architect at least 1-week prior to anticipated date of inspection; include list of Work substantially accepted and list of Work replaced during Guarantee Period.
- C. Upon request for inspection, jointly review with Landscape Architect all guaranteed Work for Final Acceptance.
- D. Remove tree staking apparatus and saucers from all trees, unless otherwise directed; replace mulch to specified thickness.
- E. Upon completion by the Contractor of all required repairs and replacements, the Landscape Architect will confirm the date of Final Acceptance of the Work.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 90 05 – LANDSCAPE MAINTENANCE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS:**

- A. The general provisions of the Contract, including General and Supplementary Conditions, and General Requirements, apply to the work specified herein.
- B. General specifications for Landscape Work and Irrigation Work.

**1.2 DESCRIPTION AND SCOPE OF WORK:**

- A. Provide all labor, products, equipment and services necessary to maintain site landscape work for one year (365 days) beyond Substantial Completion of the Landscape Work, or other date agreed upon by the Owner, Landscape Architect, and Contractor.
  - 1. Provide pricing for 1 year of landscape maintenance.
- B. Maintenance includes maintaining all landscape and site work as described herein; it does not include sweeping, hosing or cleaning of walks, parking lots or other areas to remove trash, litter, debris, etc. However, the removal of trash, litter, blowing paper, debris, dust and mud from landscape areas and other areas littered as a result of maintenance operations is included.
- C. Maintain all plants in a growing, well formed, healthy, and thriving condition, by watering, fertilizing, pruning, spraying, weeding, straightening, replacement, or by other necessary maintenance operations.

**1.3 SUBMITTALS:**

- A. Qualification data for firms specified in "Quality Assurance" article to demonstrate their capabilities and experience. Include a list of a minimum of five (5) similar projects completed within the last five (5) years with project name, address, names of Architects and Owners, overall description of scope of work, and contract value.
- B. Product Data:
  - 1. Submit manufacturer's product literature, instructions and guaranteed analysis for fertilizer.
- C. Maintenance Manual: In a 3-ring binder, typewritten schedule and procedures for annual landscape maintenance program and procedures, with monthly maintenance guidelines, by Contractor.

**1.4 DEFINITIONS:**

- A. Trees, shrubs, groundcovers and perennials are plant materials listed in the Plant Schedule on the Drawings.

**1.5 JOB CONDITIONS:**

- A. Coordinate the Work of this Section with that of other trades.
- B. Examine conditions under which Work is to be performed and notify Owner in writing of unsatisfactory conditions.
- C. Do not perform Work until conditions are satisfactory and acceptable.
- D. Maintain stakes set by others until all parties mutually agree upon removal.

- E. Determine the extent of underground utilities and impact on proposed installation and maintenance operations.

## 1.6 QUALITY ASSURANCE:

### A. Codes and Standards:

1. All plant materials to comply with State and Federal laws relating to inspection for disease and insect control.
2. Plant material quality to conform to *American Standard for Nursery Stock*, American Association of Nurserymen, Inc., 1986, ANSI Z-60.1.
3. Plant Material nomenclature to conform to:
  - a. *Hortus Third*, a Concise Dictionary of Plants Cultivated in the United States and Canada, MacMillan Publishing Company, Inc., New York, 1976 Edition.
  - b. Names not listed in the above standard to comply with those most commonly used in the trade.
  - c. In all cases, botanical names take precedence over common names.
4. Applicable Sections of the Alabama Department of Transportation (ALDOT) Standard Specifications for Highway Construction, 2001 edition.

### B. Contractor Qualifications:

1. Alabama General contractors License for Classification S - Specialty Construction, Sub-classification 4 - Landscaping.
2. Firm experienced in the successful installation of a minimum of five (5) projects within the past five (5) years similar in scope, quality, and contract value to that indicated for this project. Firm shall have sufficient manpower, equipment and financial resources to complete the Work of this Section.

### C. Supervision:

1. Scheduling, operations, installation, and maintenance shall be supervised by a person(s) having one or more of the following qualifications:
  - a. Is a Certified Nurseryman.
  - b. Is a Licensed Horticulturist.
  - c. Has a State Setting and Maintenance License.

### D. Inspection and Approval:

1. All plant material is subject to inspection and approval by the Landscape Architect in the field prior to digging, in the nursery in containers, before planting and installation, any time during the installation and completion of this phase of work.
2. Immediately remove from site plant materials or other materials not complying with specified requirements.
3. Approval is for visual qualities only and does not relieve the Contractor of his obligation to provide materials and workmanship in full compliance with the requirements of the Contact Documents.

## 1.7 PRODUCT DELIVERY, STORAGE and HANDLING:

- A. Deliver packaged materials in manufacturer's original containers showing weight, analysis and name of manufacturer. Protect materials from deterioration during delivery, and while stored at the site.
- B. Deliver all non-packaged or non-containerized materials to site in a manner that will prevent loss, damage, deterioration or contamination.

- C. Store all materials in approved locations to prevent loss, damage, deterioration or contamination.
- D. Deliver, storage and handling of all plant materials shall conform to ALDOT Specification Section 860.06(c) and the following:
  - 1. Deliver freshly dug plants, which have not been in cold storage or heeled-in.
  - 2. Do not prune prior to delivery.
  - 3. Do not bend or bind trees or shrubs in such a manner as to damage bark, break branches or destroy natural shape.
  - 4. Provide protective covering during delivery.
  - 5. Deliver plants after preparations for planting have been completed and approved, and plant immediately.

### 1.8 SITE MAINTENANCE:

- A. Keep roads, paving and structures adjacent to maintenance operations clean and free of obstructions, mud and debris at all times.
- B. Do not permit flushing of roads or disposal of dirt or debris into sewers or drainage ditches.

## PART 2 - PRODUCTS

### 2.1 WATER:

- A. Owner provides potable water.
- B. Contractor provides necessary hose, attachments, and accessories.

### 2.2 TOPSOIL:

- A. Topsoil necessary to perform or complete maintenance operations, repair or replacement is to be provided by Contractor. Furnish from approved off-site source in sufficient quantity to complete all operations.
- B. Prepare all topsoil used in tree and shrub pits and ground cover beds in the following proportions:
  - 1. 2 parts by volume topsoil as specified.
  - 2. 1 part by volume decomposed organic matter.
- C. Add three (3) pounds of 12-6-6 fertilizer to each cubic yard of topsoil mix during the mixing process, for all plants.
- D. Test at least three (3) samples for compliance.
- E. Characteristics:
  - 1. Fertile, friable, naturally occurring. Free of stones, clay, lumps, hardpan, roots, stumps, branches, sticks and other debris larger than two (2) inches in any dimension; free of noxious weeds, grasses, seeds, plants, extraneous matter and any substance harmful to plant growth. Topsoil from open fields will not be accepted.
  - 2. pH: 5.0 to 7.0
  - 3. Organic Matter: 5% to 10%
  - 4. Sand: 50% to 70%
  - 5. Silt: less than 30%
  - 6. Clay: 10% to 25%
  - 7. Permeability Rate of 5 x 10 <sup>-3</sup> centimeters or greater at 85% compaction.

**2.3 SOIL AMENDMENTS:**

- A. Fertilizer:
1. Uniform in composition, dry and free flowing.
  2. Commercially available.
  3. Mixed per soil test report recommendations.
  4. Acceptable Manufacturers:
    - a. Sta-Green Plant Food Company; Nursery Special.
    - b. O.M. Scott and Sons, Inc.; Scott's.
    - c. W.R. Grace & Company; Peter's 20-20-20 (for deep root feeding trees).
    - d. Approved substitution.
- B. Lime:
1. Ground or crushed agricultural lime.
  2. Containing not less than 85% of total carbonates.
  3. 90% passing 20-mesh screen.
  4. Not less than 50% passing a 60-mesh screen.
  5. Dry and free flowing.
  6. Apply at rate specified in Soil Test Report.
- C. Decomposed Organic Matter:
1. Well rotted.
  2. Containing no weeds, grasses or plants, their seeds, or any substance harmful to plant growth.
  3. Of uniform composition.
  4. Acceptable Manufacturers:
    - a. Klumb Company; "Soil Conditioner."
    - b. Approved equal.

**2.4 MULCH:**

- A. Pine straw.
1. Free from wood, cambium, sawdust, leaves, twigs, insects, grasses or weeds, their seeds, other foreign material and any substance harmful to plant growth.
- B. Ground pine park
1. Free from wood, cambium, sawdust, leaves, twigs, insects, grasses or weeds, their seeds, other foreign material and any substance harmful to plant growth

**2.5 PLANT MATERIALS:**

- A. Plant Material:
1. Trees, shrubs and ground covers as shown and scheduled. Provide and install species, sizes and quantities shown and scheduled; standard quality, first-class representatives of each species or variety, true to name and type; nursery-grown, unless otherwise shown or scheduled.
  2. Conforming to standards in American Standard for Nursery Stock.
  3. Having normal, well-developed branches and vigorous root systems.
  4. Complying with State and Federal laws for disease and insect infestation.
  5. Healthy, vigorous, free from defects, decay, disfigurements, sun-scald injuries, abrasions of the bark, plant diseases, insect pests or eggs, borers, and all forms of infestations or objectionable disfigurements.
  6. Reject plants lacking compactness or proper proportions, plants that are weak, thin or injured from too-close planting in nur

7. Plants which have been cut back from larger grades to meet certain specified requirements will be rejected.
8. Plants with undersized, dry, cracked, or broken balls, or which are loose in their balls will be rejected.
9. Balled and burlapped material: Root-pruned within last two (2) years.
10. Container-grown material: Grown for one (1) growing season in the container in which it is delivered; free from weeds and grasses. Root-bound material will be rejected.
11. Size:
  - a. In accordance with *American Standard for Nursery Stock*.
  - b. Measure plants before pruning, with branches in normal position.
  - c. All replacement material shall match the size attained by original materials at the time of replacement.
  - d. Height and spread dimensions: General body mass of plant, not from branch tip to tip.
  - e. Well-proportioned as to height; reject plants which meet specified measurements but do not possess an overall balance.
  - f. Take caliper measurement on trunk six-inches above natural ground level up to and including four-inch caliper size; twelve-inches above natural ground level for larger sizes.
  - g. Balled and burlapped plants shall have firm natural balls of a diameter and depth not less than per American Standard for Nursery Stock.

## 2.6 CHEMICAL WEED CONTROL:

- A. Pre-Emergent (in bed areas):
  1. Selective pre-emergent with no residual soil activity. Active ingredient: Trifluralin.
  2. Commercially available.
  3. Adhere to manufacturer's recommendations for strength, rate, and method of application.
  4. Acceptable Manufacturers:
    - a. Elanco: Treflan.
    - b. Approved substitution.
- B. Herbicide:
  1. Non-selective post-emergent with no residual soil activity. Active ingredient: Isopropylamine salt of Glyphosate.
  2. Commercially available.
  3. Adhere to manufacturer's recommendations for strength, rate and method of application.
  4. Acceptable Manufacturers:
    - a. Monsanto Agricultural Products Company: Round Up.
    - b. Approved substitution.

## 2.7 GUYING and STAKING:

- A. Wood Stakes:
  1. Pressure-treated Southern Yellow Pine or other approved wood, 2-inches x 4-inches x length specified in the Drawings, pointed at one end.
  2. Aboveground portion painted black.
  3. Free from insects and fungi.
- B. Wire: Pliable #10- or #12-gauge galvanized steel wire, doubled and twisted.
- C. Turnbuckles: As detailed and approved by Architect.
- D. Protective Hose:

1. Reinforced fiber-bearing rubber hose.
2. Black.
3. May be second-hand.
4. Not less than ½-inches inside diameter.

### **2.8 SHRUB BED DRAINAGE:**

- A. Washed pea gravel for drainage fill.
- B. Filter Fabric: SUPAC 5-P manufactured by Phillips Fibers Corporation, or approved substitution.
- C. Corrugated perforated drainage tubing: Four-inch diameter corrugated polyethylene drainage tubing, wrapped in filter fabric.
  1. Acceptable Product: ADS Drain Guard #472 manufactured by Advanced Drainage Systems, Inc.
  2. Approved substitution.

## **PART 3 - EXECUTION**

### **3.1 GENERAL:**

- A. Provide maintenance according to:
  1. Guideline performance specifications herein.
  2. Monthly maintenance guidelines herein.
  3. Accepted horticultural practices and techniques.
  4. Manufacturer's recommendations for material use.
  5. Applicable State laws and local ordinances.

### **3.2 WATERING:**

- A. General Watering:
  1. Water during early morning hours (2:00 am - 7:00 am).
  2. Should irrigation system, or any portion of that system, fail to function, hand water until system is made functional again.
  3. Do not over-water; water should never be allowed to stand in any areas for long periods of time.
  4. Maintain uniform moisture in all planting areas during winter, especially when a freeze is expected.
  5. Heavy clay soils hold moisture longer periods of time; sandy lighter soils drain rapidly and need to be watered more frequently.
- B. Trees: Deep water all newly planted trees once every week during the summer, and the winter as necessary. This schedule should be adjusted to the amount of rain. However, unless it has rained at least ½-inches in twenty-four (24) hours, continue to deep water. Check trees monthly to determine if root ball is well drained. Take permanent corrective measures.
- C. Shrubs: Water shrubs as necessary to maintain sufficient uniform moisture in bed; usually three (3) to four (4) times weekly or more frequently if needed during the summer.

### **3.3 FERTILIZING:**

- A. Fertilize trees, shrubs and lawns per manufacturer's recommended rates in accordance with the monthly maintenance guideline herein.

- B. Cultivate and water beds or pits thoroughly after application.
- C. Adjust fertilizer in accordance with interim Soil Test Reports.

**3.4 PRUNING:**

- A. Remove dead wood and sucker growth as it becomes evident.
- B. Do not top or remove terminal growing point or 'leader' of any plant.
- C. Review pruning practices with Architect before pruning any living portion of any plants.
- D. Crape myrtles will be pruned ONLY as directed by Landscape Architect or owner's representative.

**3.5 INSECT AND DISEASE CONTROL:**

- A. Maintain all plants and grass in a pest and disease-free condition by approved means.
- B. Observe all applicable laws, statues, and ordinances regulating the purchase, use, application, and licensing for all pesticides.
- C. Where possible, combine approved insecticide and fungicide to provide maximum protection for all plants.
- D. Follow manufacturer's recommendations.
- E. Observe all safety precautions.
- F. Trees: Inspect for pests and diseases. Spray for insect and disease control only as infestations are noted. Control shall be specific.
- G. Shrubs: If insect or disease infestation occurs, treat and continue treatment until complete eradication.

**3.6 WEEDING:**

- A. Keep all lawn and planting areas weed free on a continuous basis by approved means.
- B. Minimum weeding:
  - 1. Two (2) applications of chemical pre-emergent spray, approved.
  - 2. Five (5) applications (during growing season) of chemical contact spray (Round Up by Monsanto, or equal, approved).
  - 3. One (1) day per month hand weed during the period of March 1st through September 30th; remove all visible weeds.
  - 4. Weed to remove visible weeds during the winter.

**3.7 SELECTIVE CLEARING:**

- A. Maintain on-going spraying, pruning and mulching program, using approved means, to continually eliminate unwanted vegetation, sucker growth and sprouts from stumps.
- B. Selectively apply approved herbicide minimum of two (2) times per year during the growing season.

**3.8 SOD MAINTENANCE:**

- A. Mowing: Mow and edge lawn areas during the growing season, approximately April 1 through November 15 (year-round if overseeded with Winter Rye). Remove grass clippings from the site.

Adhere to the following mowing schedule:

1. Mow and edge sod areas weekly as needed.
  2. Change mowing directions to prevent rutting of grass.
  3. Mowing heights:
    - a. Bermuda -- 1"-1 ½"
    - b. Zoysia -- 1 ½"-2"
    - c. Fescue -- 2 ½"-3 ½"
- B. Thatch Removal: Thatch removal shall occur once each year at all sod areas or as required by the Owner. Thatch shall be generally removed during early spring or mid-autumn. De-thatch using approved equipment for this purpose.
- C. Core Aerating: Aeration of sod areas shall occur once each year during mid-spring or late summer using approved core aeration equipment, especially manufactured for this specific purpose. Remove cores from site.

### 3.9 MULCHING:

- A. Keep planting areas neat and uniformly mulched to specified depth on a continuous basis.
- B. In addition to replacing and re-spreading mulch as necessary, completely replenish pine straw mulch in all planting areas twice each year in March and November.

### 3.10 STRAIGHTENING:

- A. Maintain plants in their stable upright position and at the proper grade by straightening and tightening staking and guying apparatus, raising plants which have settled, and by other means.

### 3.11 CLEAN-UP:

- A. Keep all planting areas neat, weeded and uniformly mulched on a continuous basis.
- B. Clean-up adjacent walks and pavement where littered as a result of maintenance operations.
- C. Remove trash and debris from surface of planting areas, whether as a result of maintenance operations or otherwise.

### 3.12 MONTHLY MAINTENANCE GUIDELINES FOR LEVEL III (HIGHEST):

- A. January:
  1. Prune trees and shrubs that have become too large or out-of-shape.
  2. Inspect plants, shrubs and trees and remove any damaged or dead wood.
  3. Inspect planting areas and remove any debris or litter.
  4. Check staking and weather protection of first year plants.
  5. Remove leaf and litter on all lawn areas weekly.
  6. Mulch bed areas as needed to replenish mulch levels.
  7. Spray herbicides on winter weeds around January 15th.
  8. Take soil samples.
  9. Transplant any trees and shrubs.
  10. Replace any damaged or dead trees and shrubs.
  11. Prune boxwoods and fertilize boxwoods with cottonseed meal and cow manure.
  12. Check moisture level in all planted areas and water if necessary.
  13. Check drainage of planted areas, correct if excessive water persists.
  14. Fertilize pansies every two weeks or as needed to maintain heavy growth and flowering. Use nitrate based fertilizer.
  15. Protect plants susceptible to winter damage where possible during extreme cold periods.
  16. Mow lawn areas every ten days if overseeded with winter grass.

## B. February

1. Prune trees and shrubs that have become too large or out-of-shape.
2. Inspect plants, trees and shrubs and remove any damaged or dead wood.
3. Inspect planted areas and remove any debris or litter.
4. Check staking and weather protection for first year plants.
5. Remove leaf and litter on all lawn areas weekly.
6. Apply pre-emerge herbicides to lawn to prevent crabgrass.
7. Apply pre-emerge herbicides to beds to prevent weeds.
8. Replace any damaged or dead trees or shrubs.
9. Check moisture level in all planted areas and water if necessary (weekly).
10. Protect plants susceptible to cold damage during excessive cold periods if possible.
11. Mow lawn area every ten days if overseeded with winter grasses.
12. Remove any staking on one-year old plantings.
13. Spot spray any existing weeds with Round-Up.
14. Establish a good edge on all bed areas.
15. Completely replace and replenish mulch in all planting areas.

## C. March

1. Dethatch all lawn areas that have thatch build-up.
2. Mow and trim all lawn areas as needed.
3. Inspect plants, trees and shrubs and remove any damaged or dead wood.
4. Litter removal on all lawn areas.
5. Check moisture level in all planted areas and water if necessary (weekly).
6. Start pruning where necessary to maintain shape and form (do not shear).
7. All Liriope should be cut back to allow new growth to come out and remove winter damage to old growth.
8. Hand weed all bed areas as needed.
9. Deep-root feed all trees except pines (Peter's 20-20-20) as requested or approved by the Landscape Architect.
10. Completely replace and replenish mulch in all planting areas.

## D. April

1. Fertilize all lawn areas with 32-3-12 analysis, with 50% slow release nitrogen, or equal to soil sample reports.
2. Lime lawn areas as per soil sample reports.
3. Mow and edge lawn areas weekly.
4. Fertilize shrubs, trees, groundcover area with Nursery Special by Sta-Green or equal.
5. Cultivate and weed all planted areas.
6. Inspect all planted areas and remove any dead plants and replace.
7. Inspect all plant material (shrubs and trees) and prune any dead limbs.
8. Spot spray any weed problem areas.
9. Clean up any litter on lawn.
10. Inspect all areas for insect and disease damage and treat as necessary (weekly).
11. Prepare bed areas for any annual color and plant after mid-April.
12. Remove any winter and/or early spring color after blooming.
13. Water lawns and planted areas as needed.
14. Prune shrubs after they have bloomed.
15. Inspect all plants and trees for insects and/or diseases and treat as necessary.
16. Prune hedges to keep shape and form as necessary.
17. Hand weed all bed areas as needed.
18. Apply preventive spray for lacebug and leafminer.
19. Plant annual color beds for summer.

## E. May

1. Irrigate all planted and lawn areas as needed.

2. Mow and edge all lawn areas weekly.
  3. Spot spray for weeds in planted and natural areas with Round-Up.
  4. Weed all groundcover and bed areas as necessary.
  5. Clean up litter on lawn and hard surface areas (weekly).
  6. Inspect all lawn and planted areas for insects and/or disease and treat as necessary.
  7. Prune shrubs and hedges as necessary to keep shape and form.
  8. Apply selective herbicides for weed control particular to each variety of lawn.
  9. Prune any damaged plants.
- F. June
1. Irrigate all planted and lawn areas as needed.
  2. Mow and edge all lawn areas weekly.
  3. Trim all lawn areas as needed.
  4. Spot spray for weeds in all planted areas with Round-Up.
  5. Weed all groundcover and bed areas as necessary.
  6. Clean up litter on all lawn areas.
  7. Inspect all lawn and planted areas for insects and/or disease and treat as necessary.
  8. Prune shrubs and hedges as necessary to keep shape and form.
  9. Apply selective herbicides for weed control particular to each variety of lawn.
  10. Fertilize lawn areas except for Centipede.
  11. Fertilize all bed areas.
  12. Hand weed all bed areas as needed.
- G. July
1. Irrigate all planted and lawn areas as needed.
  2. Mow and edge all lawn areas weekly.
  3. Hand weed all bed areas as needed.
  4. Spot spray with Round-Up on weeds in all planted areas where applicable.
  5. Clean up litter on all hard surface and lawn areas weekly.
  6. Inspect all lawn and plant areas for insect and/or disease and treat as necessary.
  7. Prune shrubs and hedges as necessary to keep shape and form.
  8. Check all bed areas for mulch replacement as needed.
- H. August
1. Irrigate all planted and lawn areas as needed.
  2. Mow and edge all lawn areas weekly.
  3. Hand weed all bed areas as needed.
  4. Spot spray with Round-Up on weeds in all planted areas where applicable.
  5. Clean up litter on lawn areas weekly.
  6. Inspect all lawn and plant areas for insect and/or disease and treat as necessary.
  7. Prune shrubs and hedges as necessary to keep shape and form.
  8. Fertilize all lawn areas in late August-early September with 8-8-25 analysis (low nitrogen).
  9. Fertilize all groundcovers and bed areas.
  10. Check all bed areas for mulch replacement as needed.
- I. September
1. Irrigate all lawn and planted areas as necessary.
  2. Mow and edge all lawn areas weekly.
  3. Hand weed bed areas as needed.
  4. Clean up litter on lawn areas.
  5. Inspect all lawn and planted areas for insects and/or disease and treat as necessary.
  6. Prune shrubs and hedges as necessary to keep shape and form.
  7. Apply pre-emergent to all Bermuda or Zoysia lawns unless over seeding with Winter Rye.
  8. Apply pre-emergent to all bed areas.
  9. Apply lime if soil tests show pH is low on lawn areas.
  10. Fertilize fall color beds.

11. Remove any summer color beds and replace with fall color.
12. Take soil test if necessary for lime and fertilizer requirements.

J. October

1. Mow and edge all lawn areas weekly.
2. Monitor water needs.
3. Clean up litter on all lawn areas.
4. Inspect all lawn and planted areas for insects and/or disease and treat as necessary.
5. Prune any damaged plants.
6. Remove leaves from all planted and lawn areas.
7. Plant pansies for winter color.
8. Replace and/or plant any new trees or shrubs.
9. Dethatch all lawn areas that have thatch build-up.

K. November

1. Clean up all litter and leaves on lawns.
2. Mow, edge and trim all lawn areas where applicable.
3. Check mulch in beds and replace where necessary after fall leaf drop. Replenish pine straw mulch.
4. Check all planted areas for water requirements.
5. Weed and cultivate beds for winter.
6. Winterize irrigation system.

L. December

1. Clean up all litter and leaves on lawns.
2. Mow, edge and trim all lawn areas where applicable.
3. Check all planted areas for water requirements.
4. Fertilize winter color beds with liquid fertilizer two times.

**3.13 INSPECTION and ACCEPTANCE:**

A. Monthly Review:

1. Submit a request for inspection of Maintenance Work to the Landscape Architect once a month from April through September and every two (2) months from October through March.
2. Review the previous month's work jointly with the Landscape Architect.
3. Submit a written log of fertilizer applications, and chemical insect, disease or weed control applications with each Application for Payment. This log will be a complete account of each fertilizer and chemical application performed within the month covered by that Application for Payment including date, time, weather conditions, and specific purpose and product of each application.

B. Basis of Acceptance:

1. Contractor is responsible for landscape maintenance work as specified herein and in keeping with acceptable horticultural practices.
2. During the period of the maintenance contract, replace with no additional compensation, and as soon as weather permits, all dead plant materials and all materials not in a thriving condition; replace all other workmanship and materials which are unsatisfactory in the opinion of the Landscape Architect; make good any other damage, loss, destruction or failure to flourish sufficiently as the result of inferior or defective materials or workmanship, including, but not limited to, inadequate drainage.
3. All replacement material shall match the size attained by the original material at the time of replacement.
4. Remove dead or dying material from the site within one (12) week of notice from the Landscape Architect.

5. Repair grades and other work necessitated due to planting replacements.
6. If the replacement is not acceptable during or at the end of the maintenance period, the Owner may elect either subsequent replacement or credit.
7. Responsibility for replacement or repair work applies to losses or damage other than those due to vandalism, Owner neglect, or Acts of Nature, as determined by the Landscape Architect. Acts of Nature include, but may not be limited to, high winds of hurricane or tornado force, sleet, hail, freezing rain, and extreme cold (as determined by the Landscape Architect). Contractor agrees to replace losses due to Acts of Nature at fifteen percent (15%) less than original contract price for the damaged work.
8. The cost of mobilization (including the provisions of General Requirements and General and Supplementary Conditions) as specified herein is considered incidental to the Work and will not be counted as a separate item for payment.

**3.14 FINAL INSPECTION and ACCEPTANCE:**

- A. At the end of the maintenance period, submit request for inspection for Final Acceptance to the Landscape Architect at least one (1) week prior to anticipated date of inspection.
- B. Upon request for inspection, jointly review with Landscape Architect all Work for Final Acceptance.
- C. Remove tree staking apparatus and saucers from all trees, unless otherwise directed. Replace mulch to specified thickness.
- D. Submit Maintenance Manual (three [3] copies) for Owner's information and Landscape Architect's approval, containing full details for care and maintenance of landscape work, personnel and procedures, and weekly schedule for maintenance.
- E. Upon completion by the Contractor of all required repairs and replacements, the Landscape Architect will confirm the date of Final Acceptance of the Work.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 91 13 - SOIL PREPARATION****PART 1 - GENERAL****1.1 SECTION INCLUDES:**

- A. Soil Preparation
- B. Existing Soil Modifications
- C. Planting Soil Mixes
- D. Fine Grading

**1.2 RELATED SECTIONS**

- A. 32 8000 - Irrigation
- B. 32 9300 - Planting

**1.3 REFERENCES**

- A. ASTM C 33: Washed Concrete Sand
- B. ASTM C 602: Agricultural Liming Materials
- C. US Composting Council - [www.compostingcouncil.org](http://www.compostingcouncil.org)
- D. Methods of Soil Analysis, published by the Soil Science Society of America - [www.soils.org](http://www.soils.org)

**1.4 DEFINITIONS**

- A. Modified Existing Soil: on-site soil that shall be used as Planting Soil after specified modifications.
- B. Subgrade: surface or elevation of subsoil remaining after completion of excavation, or top surface of a fill or backfill, before placing Planting Soil.
- C. Topsoil: naturally produced and harvested soil from the A horizon or upper layers of the pedosphere that have been stockpiled on site or imported.
- D. Planting Soil (Planting Soil Mix): soil mixes described in PART 2 and Modified Existing Soils that will be used to support the life and health of plants after installation.

**1.5 SUBMITTALS**

- A. Submit all product submittals eight weeks prior to the start of the soil work.
- B. Submit 2-gallon samples of each Planting Soil Mix, Coarse Sand, and Compost detailed below to the Landscape Architect. Label each sample with the product/soil type name, characteristics, and locations in the Work. Samples shall be submitted at the same time as the analysis and report of that material.
- C. Submit manufacturers or supplier's product data and certified analysis for standard products and bulk materials, complying with testing requirements and referenced standards and specific requested testing.
  - 1. For each Compost product submit the following analysis by a recognized laboratory:
    - a. pH
    - b. Moisture content %, wet weight basis
  - 2. For Coarse Sand product submit the following analysis by a recognized laboratory:
    - a. pH
    - b. Particle size distribution.

**D. Soil Testing Reports**

1. Submit soil test analysis for all Topsoils and Planting Soil Mixes included in Part 2 of this Section as well as for existing soils at the site.
  - a. If tests fail to meet the specifications, obtain other sources of material, retest and resubmit until accepted by the Landscape Architect.
  - b. Soil testing will be at the expense of the Contractor.
2. Provide the following soil properties:
  - a. Particle size analysis (% dry weight) and USDA soil texture analysis.
  - b. USDA gradation of gravel, coarse sand, medium sand, fine sand, silt, and clay.
  - c. pH and buffer pH.
  - d. Percent organic content by oven dried weight.
  - e. Nutrient levels by parts per million including: phosphorus, potassium, magnesium, manganese, iron, zinc, and calcium. Nutrient test shall include the testing laboratory recommendations for supplemental additions to the soil.

**1.6 QUALITY ASSURANCE**

- A. The installer shall be a firm having at least five years of experience in projects similar in scope to that required for the Work. The installer of the Work in Section 32 9300 will be the same firm installing the Work in this section.
  1. There shall be an experienced full-time supervisor, who can communicate in English, on site during the installation of this Section's Work.
- B. Soil testing laboratory shall be an independent laboratory, with experience and capability to conduct indicated testing and that specializes in USDA agricultural soil testing, soil mix testing, and other tests to be performed. Geotechnical engineering testing labs shall not be used.
- C. Planting Soils shall conform to the approved submittal's sample color, texture and approved test analysis.
  1. The Landscape Architect may request samples of delivered or installed soil for testing to confirm Planting Soils' conformity to approved material.
  2. Testing shall be performed by the same soil testing laboratory that performed the original soil testing.
  3. Testing results shall be within 10% of values measured in approved Planting Soil Mixes.
- D. Test soil compaction with a penetrometer following installation or modification of Planting Soil. Have a soil penetrometer and moisture meter on site at all times.

**1.7 PRE-CONSTRUCTION MEETING**

- A. Schedule a pre-construction meeting with the Landscape Architect at least two weeks before beginning work to discuss the Work, administrative procedures during construction, and project schedule.

**1.8 PERMITS AND REGULATIONS**

- A. Acquire all permits related to the Work. If a conflict exists between permit requirements and the work outlined in the contract documents, promptly notify the Landscape Architect in writing including a description of any necessary changes and the resulting changes to the contract price.
- B. Adhere to all Federal, State, and local laws and ordinances bearing on the operation or conduct of the work as drawn and specified. This includes but is not limited to all regulations relating to the inspection for disease and insect control.

**1.9 DELIVERY, STORAGE, AND HANDLING**

- A. Do not mix, deliver, place or grade soils when frozen or with moisture above field capacity.
- B. Protect soil and soil stockpiles, including the stockpiles at the soil blender’s yard, from wind, rain and washing that can erode soil or separate fines and coarse material, and contamination by chemicals, dust and debris that may be detrimental to plants or soil drainage. Cover stockpiles with plastic sheeting or fabric at the end of each workday.
- C. Coordinate bulk material delivery and storage with Landscape Architect and confine materials to neat piles in areas acceptable to Landscape Architect.

**PART 2 - PRODUCTS**

**2.1 COMPOST**

- A. Blended and ground leaf, wood and other plant-based material.
  - 1. Commercially prepared and meets the US Compost Council STA/TMECC criteria.

**2.2 COARSE SAND**

- A. ASTM C-33 Fine Aggregate, with a Fines Modulus Index of 2.8 and 3.2
  - 1. Clean, sharp, natural coarse sands free of limestone, shale and slate particles with a pH lower than 7.0.
  - 2. Particle size distribution:

3/8 inch (9.5 mm)	100%
No 4 (4.75 mm)	95-100%
No 8 (3.36 mm)	80-100%
No 16 (1.18 mm)	50-85%
No 30 (0.60 mm)	25-60%
No 50 (0.30 mm)	10-30%
No 100 (0.15 mm)	2-10%
No 200 (0.75 mm)	2-5%

**2.3 TOPSOIL**

- A. Fertile, friable, naturally occurring soil containing less than 5% total volume of the combination of subsoil, refuse, roots larger than 1 inch diameter, heavy clay, stones larger than 2 inches, noxious weeds and seeds, sticks, brush, litter, or any substance that is harmful to plant growth.
  - 1. Complies with the following criteria:
    - a. Soil texture: USDA loam, sandy clay loam or sandy loam with clay content between 15% and 25%. Combined clay/silt content of no more than 55%.
    - b. pH value shall be between 5.5 and 7.0
    - c. Percent organic matter(OM): 5.0% - 10%, by dry weight.
    - d. Soil chemistry suitable for growing the plants specified.

2. Topsoil existing at the site may be acceptable if it meets the above criteria.

**2.4 PLANTING SOIL MIXES**

- A. PLANTING SOIL MIX 1 - Moderately slow draining soil for trees and shrub beds.

1. A mix of Imported Topsoil, Coarse Sand, and Compost. The approximate mix ratio shall be:

Imported Topsoil(unscreened)	45-50%
Coarse Sand	40-45%
Compost	10%

2. \*Mix component % by moist volume
3. Final tested organic matter between 2.75%-4% by dry weight.
4. Mix Coarse Sand and Compost first, then add Imported Topsoil. Mix with loader bucket, do not over mix. Do not use soil blending machine, do not screen the soil. Clumps of soil, Compost, and Coarse Sand will be permitted in overall mix.
5. Add fertilizer according to rates recommended by the soil tests at time of final grading.

**2.5 FERTILIZER**

- A. Fertilizer types and rates are determined upon the soil tests results. Recommended fertilizer shall be added to soil mixes prior to final screening and prior to delivery to project site.

**2.6 LIME**

- A. ASTM C 602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
  1. Class: T, with a minimum of 99 percent passing through No. 8 (2.36 mm) sieve and a minimum of 75 percent passing through No. 60 (0.25 mm) sieve.
  2. Form: Provide lime in form of finely ground dolomitic limestone.

**2.7 PRE-EMERGENT HERBICIDES**

- A. Chemical herbicide designed to selectively prevent seeds from germinating. Exact type of herbicide shall be based on the specific plants to be controlled and the most effective date of application.
- B. Submit report of expected weed problems and recommendation of most effective control for approval by Landscape Architect. Provide manufacturer’s literature and material certification for recommended product.

**PART 3 - EXECUTION**

**3.1 SITE CONDITIONS**

- A. Coordinate the Work of this Section with that of other trades.
- B. Be aware of all surface and sub-surface conditions, including utilities, and notify the Landscape Architect, in writing, of any circumstances that would negatively impact the health of plantings. Do not proceed with work until unsatisfactory conditions have been corrected.

1. Notification of Local Utility Locator Service, 811, is required for all areas within project area: The Contractor is responsible for knowing the location and avoiding utilities that are not covered by the Local Utility Locator Service.
- C. Prior to installation of Planting
1. Confirm that surfaces receiving Planting Soils or modifications to existing soils are free of construction debris, refuse, compressible or biodegradable materials, stones larger than two inches in diameter, soil crusting films of silt or clay that hinders drainage into subsoils, and/or standing water. Remove unsuitable material from site.
  2. Confirm no adverse drainage conditions are present.
  3. Confirm that utility work has been completed as indicated in the Drawings.
  4. Confirm that Irrigation work, which is shown to be installed below prepared soil levels, has been completed.
- D. Notify the Landscape Architect immediately of unsatisfactory conditions.

### 3.2 EXISTING SOIL MODIFICATIONS

- A. Prepare area by removing existing vegetation and debris. Perform any minor preliminary grading.
- B. MODIFICATION C - SURFACE: MINOR TILLING
1. Spread 3-4 inches of Compost over surface of the soil and make necessary chemical adjustments as recommended by the soil tests.
  2. Till Compost into top 6 inches of soil.

### 3.3 PLANTING SOIL INSTALLATION

- A. Excavate to the proposed subgrade. Do not over excavate compacted subgrades of adjacent pavements or structures. Maintain a supporting 1:1 side slope of compacted subgrade material along edges of all paving and structures where the bottom of paving or structure is above bottom elevation of excavated planting area.
1. Prior to installing Planting Soil, the Landscape Architect shall approve the condition of the subgrade, subgrade preparation, and subsurface drainage.
  2. Slope subgrade elevations approximately parallel to finished grade elevations and/or towards the subsurface drain lines as indicated in the Drawings.
- B. Equipment used to install or grade Planting Soils shall be wide tracked or balloon tire machines rated with a ground pressure of 4 psi or less. All grading and soil delivery equipment shall have buckets equipped with 6-inch teeth to scarify any soil that becomes compacted.
- C. Scarify the subgrade material to a depth of 3-6 inches with the teeth of the back hoe, loader buckets, tiller or other suitable device.
1. If area becomes overly compacted, loosen again prior to installing the Planting Soil.
- D. Install Planting Soil in 12-18-inch lifts to required depths. Apply compacting forces to each lift as required to attain required compaction. Scarify the top of each lift 3-6 inches prior to adding another lift.
- E. Phase work such that equipment does not have to operate over previously installed Planting Soil.
- F. Where possible, place large trees first and fill Planting Soil around root ball.
- G. The depths and grades shown on the drawings are the final grades after settlement and shrinkage of the compost material. Install Planting Soil at a higher level to anticipate the reduction of volume.

**3.4 COMPACTION REQUIREMENTS FOR INSTALLED OR MODIFIED PLANTING SOIL**

- A. Soil compaction shall have a density between 75-250 psi as determined by a penetrometer at a soil moisture approximately midway between wilting point and field capacity.
  - 1. Existing Soil Modifications: compaction measured to depth of modification.
  - 2. Installed Planting Soil: compaction measured to depth of installation.
- B. Maintain moisture conditions within the Planting Soil during installation or modification to allow for satisfactory compaction. Suspend operations if Planting Soil becomes too wet, apply water if the soil is overly dry.
- C. Provide adequate equipment to achieve consistent and uniform compaction of the Planting Soils. Use the smallest equipment that can reasonably perform the task of spreading and compaction.
- D. Do not pass motorized equipment over previously installed and compacted soil except as authorized below:
  - 1. Light weight equipment such as trenching machines or motorized wheel barrows.
  - 2. Follow the requirements of Over Compaction Reduction if work after the installation of the Planting Soil compacts the Planting Soil to levels greater than the above requirements.

**3.5 OVER COMPACTION REDUCTION**

- A. Dig up and reinstall any soil that becomes compacted to a density greater than the specified density. This includes compaction caused by other subcontractors after the Planting Soil is installed and approved.
- B. Roto tilling shall not be considered adequate to reduce over compaction at levels six inches or below finished grade.

**3.6 INSTALLATION OF CHEMICAL ADDITIVES**

- A. Apply chemical additives following the installation of each soil and prior to fine grading as recommended by the soil test and as appropriate to the soil and plants to be installed.
- B. Types, application rates and methods shall be approved by the Landscape Architect prior to application.

**3.7 FINE GRADING**

- A. The Landscape Architect shall approve all rough grading prior to the installation of Compost, fine grading, planting, and mulching.
- B. Grade the finish surface of all planted areas to meet the grades indicated on the Drawings, allowing finished grades to remain higher (10-15% of soil modification depth) than the grades on the grading plan to anticipate settlement over first year.
- C. Utilize hand equipment, small garden tractors with rakes, small garden tractors with buckets with teeth for fine grading to keep surface rough without further compaction. Do not use float bottom of loader bucket.
- D. Provide for positive drainage from all areas toward inlets, drainage structures, and/or edge of planting beds. Adjust grades as directed to reflect actual constructed field conditions of pavements, walls, and inlet elevations. Notify the Landscape Architect if positive drainage is impossible to achieve.
- E. Provide smooth, rounded transitions between slopes of different gradients and direction.
- F. Fill all dips and remove any bumps in the overall plane of the slope.

**3.8 INSTALLATION OF COMPOST TILL LAYER**

- A. Spread 3-4 inches of Compost over the beds and rototill into the top 4-6 inches of the Planting Soil after Planting Soils are installed in planting bed areas and prior to installation of shrub & groundcover plantings.

**3.9 CLEAN-UP**

- A. Keep site free of trash, pavements reasonably clean and work area in an orderly condition at end of each day. Remove trash and debris from site no less than once a week.
- B. Protect adjacent walls, walks, and utilities from damage or staining by the soil.
- C. Wash all soil from pavements and structures after installation is complete and as needed to prevent damage or staining.
- D. Make all repairs to grades, ruts, and damage done to the Work.
- E. Remove and dispose of excess soils.

**3.10 PLANTING SOIL PROTECTION**

- A. Protect installed and/or modified Planting Soil from damage including contamination and over compaction due to other soil installation, planting operations, and operations by other contractors or trespassers.
  - 1. Repair or replace damage done by the Contractor to any part of the Work, existing features to remain on site, and features adjacent to the site at no expense to the Owner.
- B. Provide temporary erosion control as needed to stop soil erosion until the site is stabilized with mulch, plantings, or turf.

**3.11 SUBSTANTIAL COMPLETION ACCEPTANCE**

- A. The date of Substantial Completion of the Planting Soil is the same as the date of Substantial Completion for Section 32 9300 - Plants.

**3.12 FINAL ACCEPTANCE**

- A. The date of Final Acceptance follows the same criteria as outlined in Section 32 9300 - Plants in addition to the following:
  - 1. Restore any soil settlement and/or erosion areas to the grades shown on the drawings. Remove plants and mulch before adding soil and then restore planting. Do not add soil over the root balls of plants or on top of mulch.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 92 00 - TURF AND GRASSES****PART 1 - GENERAL****1.1 SCOPE**

- A. This section pertains to seeding work, including preparing the seedbed, furnishing and placing of topsoil, seed and other required materials for a complete installation to the limits of construction and specified herein. Seeding operations shall be performed on all newly graded earth areas not otherwise specified covered by structures, pavements and/or surfacings, riprap, sod, sprigging, walkways, and other items of a similar nature; on all cleared and/or grubbed areas which are to remain as finish grade surfaces and not to be excavated or embankments constructed thereon; on all existing off site and on site turfed earth surfaces which are disturbed by construction operations and which are to remain as finish grade surfaces; and at all other locations which may be designated on the drawings or specified herein. The contractor shall follow the ALDOT Standard Specifications for Highway Construction, latest edition (ALDOT, 2018) Section 650, 652, 654, 656, 659 and 665.SUMMARY

**1.2 RELATED WORK SPECIFIED ELSEWHERE**

- A. Erosion and Sedimentation Controls – Section 31 2500
- B. Sodding – Section 32 9223 (If Indicated on the Drawings)

**PART 2 - PRODUCTS****2.1 TOPSOIL**

- A. Topsoil for planting shall be a rich friable loam containing a large amount of humus and shall be original surface sandy loam, topsoil of good rich, uniform quality, free from any material such as hard clods, stiff clay, hardpan, partially disintegrated stone, pebbles larger than 1/2 -inch in diameter, lime, cement, bricks, ashes, cinders, slag, concrete, bitumen or its residue, boards, sticks, chips, or other undesirable material harmful or unnecessary to plant growth. Topsoil shall be reasonably free from perennial weeds and perennial weed seeds, and shall not contain objectionable plant material, toxic amounts of either acid or alkaline elements or vegetable debris undesirable or harmful to plant life. Bermuda grass roots in topsoil will not be accepted, unless otherwise approved by Engineer.
- B. Topsoil shall be natural topsoil without admixture of subsoil material, and shall be classifiable as loam, silt loam, clay loam, or a combination thereof.

**2.2 GRASS SEED**

- A. All seeds shall be labeled in accordance with the U.S.D.A. Rules and Regulations. Seeds shall be packaged in suitable containers in accordance with the Georgia Seed Laws, Rules and Regulations currently in effect. No seed shall be used which has become molded, wet or otherwise damaged. Seed shall be tested by the Alabama Department of Agriculture & Industries for the purity and germination within six months prior to the date of sowing.
  - 1. Grass seed on level or slightly sloping ground shall consist of the following for the planting dates specified:
  - 2. Grass seed on slopes 3:1 or steeper and frequently mowed areas shall consist of the following for the planting dates specified:

- a. March 1 to June 15
    - 1) Weeping Lovegrass: 5lbs./acre
    - 2) Sericea Lespedeza (scarified): 60lbs./acre
  - b. August 1 to November 15
    - 1) Tall Fescue: 50lbs./acre
    - 2) Sericea Lespedeza (unscarified): 75lbs./acre
  - c. November 1 to March 1
    - 1) Common Bermuda (unhulled): 10lbs./acre
    - 2) Sericea Lespedeza (unscarified): 75lbs./acre
- B. When as directed by the Engineer, an approved quick growing species of grass seed such as rye, Italian rye, millet or other cereal grass, shall be applied at a rate of 30 lbs./acre in conjunction with and in addition to the seed mixture specified above.

### 2.3 SPRIGS

- A. Bermuda, common, healthy living stolons native to locality of project. Plant on day of removal from growing location. Plant sprigs from March 15 to July 15.

### 2.4 MULCH

- A. Dry Mulch: Dry mulch shall be straw or hay, consisting of oat, rye or wheat straw, or of pangola, peanut, coastal Bermuda or Bahia grass hay. Only undeteriorated mulch which can be readily cut into the soil shall be used. Application rate shall be 2 ½ tons per acre.
- B. Mulch for hydroseeding: This material shall consist of wood cellulose fiber applied at 500 lbs./acre with dye color equal to Weyerhaeuser Company, or Conway Corporation material used for "hydroseeding" and suitable for this purpose.

### 2.5 FERTILIZER

- A. Fertilizer shall be a ready mixed material containing the soil nutrients as specified and in a suitable form compatible with the equipment used to achieve uniform distribution of the fertilizer. The fertilizer mixture shall contain the following nutrients expressed in per cent of the total weight: 6% nitrogen, 12% available phosphoric acid, and 12% water soluble potash (6-12-12) analysis. Container tags shall have the name and address of the manufacturer, the brand name, net weight, and chemical composition of analysis. Fertilizer shall be applied at 1500 lbs./acre.

### 2.6 LIME

- A. Agricultural lime shall be within the specifications of the Georgia Department of Agriculture. Ground limestone is calcitic or dolomitic limestone ground so that 90 percent of the material shall pass a 10-mesh sieve, not less than 50 percent will pass through a 50-mesh sieve and at least 25% shall pass a 100-mesh sieve. Lime shall be applied as indicated by soil test, or the rate of 1 to 2 tons per acre.

### 2.7 WATER

- A. The water used in the grassing operations may be obtained from any approved spring, pond, lake, stream or municipal water system. The water shall be free of excess and harmful chemicals, acids, alkalies, or any substance which might be harmful to plant growth or obnoxious to traffic.

### 2.8 SOD

- A. Shall be healthy living, disease and weed free grass that has been freshly cut.

**PART 3 - EXECUTION****3.1 HYDROSEEDING**

- A. The materials for grassing shall consist of a thoroughly mixed slurry of grass seed, fertilizer, lime and mulch as specified. The application rate for wood fiber mulch shall be approximately 500 lbs./acre. All materials shall be discharged within one hour after being combined in the hydroseeder.
- B. Each kind of leguminous seed shall be inoculated separately with the appropriate commercial culture according to instructions of the manufacturer of the material. All inoculated seed shall be protected from the sun and shall be planted the same day it is inoculated.
- C. Equipment for mixing and applying the slurry shall be especially designed for this purpose. It shall be capable of applying a uniform mixture over the entire area to be seeded. The slurry mixture shall be agitated during application to keep the ingredients thoroughly mixed. A suitable metering device to determine the rate of application and assist in obtaining uniform coverage of the grassed areas shall be incorporated as part of the equipment.
- D. Ground preparation for hydroseeding shall be the same as for conventional seeding.
- E. Hydroseeding shall not be performed when windy weather prevents even distribution; when the prepared surface is crusted; or when the ground is frozen, wet or otherwise in a non-tillable condition.

**3.2 CONVENTIONAL SEEDING**

- A. Grading and Shaping
  - 1. Grade and shape to finish contours and to allow practical use of equipment.
- B. Seedbed Preparation
  - 1. Broadcast Plantings:
    - a. Tillage as a minimum shall: adequately loosen the soil to a depth of 4 to 6 inches; alleviate compaction; incorporate lime and fertilizer; smooth and firm the soil; allow for the proper placement of seed, sprigs, or plants; and allow for the anchoring of straw or hay mulch if a disk is to be used.
    - b. Tillage may be done with any suitable equipment.
    - c. Tillage may be done on the contour where feasible.
    - d. On slopes too steep for the safe operation of tillage equipment. The soil surface will be pitted or trenched across the slope with appropriate hand tools to provide a place 6 to 8 inches apart in which seed may lodge and germinate.
  - 2. Individual Plants:
    - a. Where individual plants are to be set, the soil will be well prepared by excavating holes, opening furrows, or dibble planting.
    - b. For nursery stock plants, holes shall be large enough to accommodate roots without crowding.

**3.3 SPRIGS**

- A. Separate or shred and broadcast over area prepared for planting at 40 cu. ft. per acre. Harrow into ground with disc turned straight.

**3.4 LIME/FERTILIZER APPLICATION**

- A. Lime and fertilizer will be applied uniformly during land preparation so that it will be mixed with the soil during seedbed preparation. On steep surfaces, scarify slope prior to broadcasting lime and fertilizer.

**3.5 PLANTING**

- A. Seeding will be done on a freshly prepared and firmed seedbed. For broadcast planting, use a cultipacker-seeder, drill, rotary seeder, other mechanical seeder, or hand seeding to distribute the seed uniformly over the area to be treated. Cover the seed lightly with a cultipacker or other suitable equipment.
- B. No-till seeding is permissible into annual cover crops when planting is done following maturity of the cover crop or if the temporary cover stand is sparse enough to allow adequate growth of the permanent species.
- C. No-till seeding must be done with appropriate no-till seeding equipment. The seed must be uniformly distributed and planted at the proper depth.

**3.6 MULCHING**

- A. All seeded areas shall be mulched. Soil retention blankets, erosion control netting, and other manufactured materials may be required in addition to mulch on unstable soils and concentrated flow areas. Mulch shall be spread uniformly within 24 hours after seeding.

**3.7 WATER, MAINTENANCE, AND RESEEDING**

- A. Contractor shall be responsible for maintaining the proper moisture content of the soil to ensure adequate plant growth until a satisfactory stand of grass is obtained. Watering shall be performed to maintain an adequate water content in the soil.
- B. Contractor shall mow and maintain all seeded areas without additional payment until final acceptance of the work by the Owner, and any regrading, refertilizing, reliming, reseeding or remulching shall be done at his own expense. Seeding work shall be repeated on defective areas until a satisfactory uniform stand of grass is accomplished. A satisfactory stand of grass is defined as grass that covers at least 98% of the total area with no bare spots larger than one square foot and bare spots shall be scattered such that bare areas do not comprise more than 1/100 of any given area. Damage resulting from erosion, gulleys, washouts, or other causes shall be repaired by filling with topsoil, compacting, and repeating the seeding work at the Contractor's expense.

**3.8 SODDING**

- A. See Section 32 9223 Sodding for additional sod requirements. Smooth grade the specified area to be planted. Apply amendments and fertilizer requirements as determined in soil test. Planting area shall be free of stumps, roots, large stone over 4" diameter, and any other debris. Apply fertilizer and rake into the soil surface. Lightly wet soil surface if dry. Lay the sod at right angles to any major water flow. Sod shall be pinned and secured on slopes greater than 6:1. Sod joints shall be staggered between rows. Sod shall be watered after installation each day.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 9223 – SODDING****PART 1 - GENERAL****1.1 SCOPE**

- A. Sodding shall consist of establishing certain critical areas with sod as designed (on the Drawings) (or designated by the Engineer). Sodding is to be used as indicated on plans.

**PART 2 - PRODUCTS****2.1 SOD**

- A. Sod shall consist of a live, dense, well-rooted growth of turf grass species as noted on the Drawings. The sod shall be free from Johnson grass, nut grass and other obnoxious grasses and shall be of suitable character for the purpose intended and for the soil in which it is to be planted. It shall be uninjured at the time of planting.

**2.2 FERTILIZER**

- A. Fertilizer (10-10-10) used in connection with sodding, shall contain 10 percent nitrogen, 10 percent phosphoric acid and 10 percent potash. The fertilizer shall be furnished in standard containers with the name, weight and guaranteed analysis of the contents clearly marked. The containers shall ensure proper protection in handling and transporting the fertilizer. All commercial fertilizer shall comply with local, state and federal fertilizer laws.
- B. Ammonium nitrate shall be a standard commercial product, shall conform to the requirements for other commercial fertilizers as specified above, and shall have a minimum of 32-1/2 percent nitrogen.

**2.3 LIME**

- A. Agricultural lime shall be within the specifications of the Alabama Department of Agriculture & Industries. Ground limestone is calcitic or dolomitic limestone ground so that 90 percent of the material shall pass a 10-mesh sieve, not less than 50 percent will pass through a 50-mesh sieve and at least 25% shall pass a 100-mesh sieve. Lime shall be applied as indicated by soil test, or the rate of 1 to 2 tons per acre.

**2.4 WEATHER LIMITATIONS**

- A. Sod shall be planted only when the soil is moist and favorable to growth. No planting shall be done between October 1 and April 1 unless weather and soil conditions are considered favorable and permission is granted by the Engineer.

**PART 3 - EXECUTION****3.1 SODDING**

- A. The area to be sodded shall be constructed to the lines and grades indicated on the Drawings or as directed by the Engineer, and the surface loosened to a depth of not less than 3-inches with a rake or other device. If necessary, it shall be sprinkled until saturated at least 1-inch in depth and kept moist until the sod is place thereon. Immediately before placing the sod, the

fertilizer shall be uniformly applied at the rate of 40 pounds of Grade 10-10-10, or equivalent, per 1,000 square feet. Agricultural limestone shall be applied based on soil tests or at a rate of 10 to 20 pounds per 1,000 square feet.

- B. The entire area shall be thoroughly covered with sod. The sod shall be placed on the prepared surface with the edges in close contact and, as far as possible, with staggered joints. If any gaps are present after placement, the contractor shall fill these areas with sand at no additional cost to the owner.
- C. The sod shall be maintained moist from time of removal until reset but shall be placed as soon as practicable after removal from place where growing. Immediately after placing it shall be rolled with a lightweight roller or hand tamped to the satisfaction of the Engineer.
- D. Sod on slopes steeper than 3 to 1 shall be held in place by wooden pins about 1-inch square and 6-inches long, driven through the sod into the soil until they are flush with the top of the sod.

### **3.2 WATERING AND MAINTENANCE**

- A. The sod shall be watered as directed by the Engineer for a period of two weeks after which ammonium nitrate shall be applied at the rate of three pounds per 1,000 square feet and the sod given a final watering.
- B. The Contractor shall not allow any equipment or material to be placed on any planted area and shall erect suitable barricades and guards to prevent Contractor's equipment, labor or the public from traveling on or over any area planted with sod.
- C. It shall be the obligation of the Contractor to secure a satisfactory growth of grass before final acceptance of the Project.
- D. The Contractor shall mow and maintain all sodded areas without additional payment until final acceptance of the work by the Owner, and any regrading, refertilizing, reliming, resodding or mulching shall be done at his own expense. Sodding work shall be repeated on defective areas until a satisfactory uniform stand of sod is accomplished. Damage resulting from erosion, gulleys, washouts, or other causes shall be repaired by filling with topsoil, compacting, and repeating the sodding work at the Contractor's expense.

END OF SECTION

**THIS PAGE INTENTIONALLY LEFT BLANK**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 32 93 00 - PLANTS****PART 1 - GENERAL****1.1 SECTION INCLUDES**

- A. Tree, shrub, ornamental grass, perennial, and groundcover installation.
- B. Post-planting fertilization.
- C. Landscape bed edging and mulch.
- D. Tree staking and guying.
- E. Interim landscape management.

**1.2 RELATED SECTIONS**

- A. 32 8400 – Planting Irrigation
- B. 32 9100 – Planting Preparation
- C. 32 9200 – Turf and Grasses

**1.3 REFERENCES**

- A. When the following referenced standards are in conflict with this specification, the requirements of this specification shall prevail.
  - 1. ANSI Z60.1 – American Standard for Nursery Stock, most current edition.
  - 2. ANSI A 300 – Standard practices for Tree, Shrub and other Woody Plant Maintenance, most current edition and parts.
  - 3. Reference the following documents for interpretation of plant names and descriptions. Botanical names take precedence over common names. Names not listed in the above standards shall comply with those most commonly used in the trade. Where the names or plant descriptions disagree between the several documents, the most current document shall prevail.
    - a. USDA – The Germplasm Resources Information Network (GRIN)
    - b. Manual of Woody Landscape Plants; Michael Dirr; Stipes Publishing, Champaign, IL, most current edition.
    - c. Hortus Third: A Concise Dictionary of Plants Cultivated in the United States and Canada, MacMillan Publishing Company, Inc., New York 1976 Edition.

**1.4 PRICE AND PAYMENT PROCEDURES**

- A. Allowances
- B. Unit Prices
- C. Alternates

**1.5 SUBMITTALS**

- A. Submit Proof of Contractor Qualifications as specified in “Quality Assurance” article of this Section including a list of the five completed projects with project name, address, names of Architects and Owners, overall description of scope work, and contract value.
- B. Submit list of plant materials and unit prices demonstrating source and availability within ten days of award of Contract.
  - 1. Include name and address of nurseries. Include quantities, botanical names, common names, and sizes of plant materials.
  - 2. Substitutions are not permitted unless proof is submitted to the Landscape Architect by the contractor that the plant is unavailable as specified. Request for substitution shall be

accompanied with a list of contacted nurseries (min. of 3 for each plant) and sources of potential substitutions (min. of 3 for each plant) that may be of a different size, habit, species and/or cultivar. The landscape architect will not assist with any substitutions and will not give approval of substantial completion without this information and effort from the contractor.

- C. Deliver all certificates of inspection to the Landscape Architect.

## **1.6 QUALITY ASSURANCE**

- A. Hold an Alabama General Contractor's License for Classification S - Specialty Construction, Subclassification 4 - Landscaping. Firm experienced in the successful installation of a minimum of five projects within the last five years similar in scope, quality, and contract value to that indicated for this project. Firm shall have sufficient manpower, equipment and financial resources to complete the Work of this Section.
- B. Use adequate numbers of skilled workmen trained and experienced in the Work and familiar with requirements and methods needed for performance of the Work. Have a person knowledgeable in horticultural practices as an onsite superintendent at all times.
- C. Observation of the Work:
  - 1. The Landscape Architect may observe the work at any time and shall be notified prior to the start of planting, at the completion of plant layout, and at the completion of the planting.
  - 2. The Landscape Architect shall be given the opportunity to tag and review trees in the field or nursery prior to digging.
  - 3. The Landscape Architect may review all plants for quality, character, form, and overall health. All plant material is subject to inspection and rejection at any time before, during, or after planting.
  - 4. Attach secure, durable, legible waterproof labels, stating correct botanical and common name to at least one plant of each plant variety.
- D. Re-execute any work that fails to conform to the requirements of the contract and shall remedy defects due to faulty materials or workmanship upon written notice from the Landscape Architect, at the soonest possible time that can be coordinated with other work and seasonal weather demands.

## **1.7 PRE-CONSTRUCTION MEETING**

- A. Schedule a pre-construction meeting with the Landscape Architect at least two weeks before beginning work to review any questions the Contractor may have regarding the work, administrative procedures during construction and project work schedule.

## **1.8 SELECTION, OBSERVATION, AND APPROVAL OF PLANTS**

- A. Purchase trees from the growing nursery. Do not use re-wholesale plant suppliers for trees unless the Contractor can certify that the required trees are not directly available from a growing nursery. Refer to Drawings for pre-approved nurseries (if provided).
- B. Remove all rejected plants from the site within five days and provide acceptable replacement plants at no expense to the Owner.

## **1.9 DEFINITIONS**

- A. End of Warranty Final Acceptance: The date when the Landscape Architect accepts that the plants and Work in this section meet all the requirements of the warranty. It is intended that the materials and workmanship warranty for Planting, Planting Soil, and Irrigation work run concurrent with each other.

- B. Healthy: Plants that are growing in a condition that expresses leaf size, crown density, color, and with annual growth rates typical of the species' and cultivar's horticultural description.
- C. Plants or plant materials: Any living, vegetative organism listed in the Plant Schedule within the Drawings.
- D. Planting Soil: Refer to Section 32 9100.
- E. Root ball: The mass of roots including any soil or substrate that is shipped with the tree within the root ball package.
- F. Root ball package. The material that surrounds the root ball during shipping. The root package may include the material in which the plant was grown, or new packaging placed around the root ball Planting shipping.
- G. Substantial Completion Acceptance: The date at the end of the Planting, Planting Soil, and Irrigation installation where the Landscape Architect accepts that all work in these sections is complete and the Warranty period has begun. This date may be different than the date of substantial completion for the other sections of the project.

#### **1.10 PERMITS AND REGULATIONS**

- A. Acquire all permits related to the Work. If a conflict exists between permit requirements and the work outlined in the contract documents, promptly notify the Landscape Architect in writing including a description of any necessary changes and the resulting changes to the contract price.
- B. Adhere to all Federal, State, and local laws and ordinances bearing on the operation or conduct of the work as drawn and specified. This includes but is not limited to all regulations relating to the inspection for disease and insect control.

#### **1.11 DELIVERY, STORAGE, AND HANDLING**

- A. Provide necessary protective covering during transport and delivery.
- B. Deliver packaged materials (non-plant materials) in manufacturer's original containers showing weight, analysis, and name of manufacturer.
- C. Deliver plants after preparations for planting have been completed and approved, and plant immediately.
- D. Deliver and store all materials in a manner that prevents loss, damage, deterioration, or contamination.

#### **1.12 PLANT WARRANTY**

- A. Plants are warrantied to meet all the requirements for plant quality at installation in this specification. Defective plants shall be defined as plants not meeting these requirements and will be replace by the Contractor.
- B. Plant Warranty Period shall begin on the date of Substantial Completion Acceptance and will continue for one year.
- C. Plants determined to be defective during Plant Warranty Period shall be removed immediately upon notification by the Landscape Architect and replaced at no cost to the Owner, as soon as weather conditions permit and within the specified planting period.
- D. Any work required by this specification or the Landscape Architect during the progress of the work, to correct plant defects including the removal of roots or branches, or planting plants that have been bare-rooted during installation to observe for and correct root defects will not be considered grounds to void any conditions of the warranty. In the event the Contractor decides that such remediation work may compromise future health of the plant, the plant in question shall be rejected and replaced with plants that do not contain defects that require remediation or correction.
- E. The Contractor is exempt from replacing plants, after Substantial Completion Acceptance and during the Plant Warranty Period, that are removed by others, lost or damaged due to occupancy of project, lost or damaged by a third party, vandalism, or any natural disaster.

**PART 2 - PRODUCTS****2.1 PLANTS: GENERAL**

- A. Provide plants of quantity, size, genus, species, and variety and/or cultivar as indicated in the Plant Schedule. Plants are to adhere to the recommendations outlined in ANSI Z60.1 and trees shall be sourced as specified above.
- B. Provide healthy stock, grown in a nursery or greenhouse and reasonably free of die-back, disease, insects, eggs, bores, and larvae. Plants are to have a root system, stem, and branch form that will not restrict normal growth, stability and health for the expected life of the plant.
  - 1. Plant quality above the soil line:
    - a. Trees shall have one central leader unless specified as multi-trunk.
    - b. Main branches are to be distributed along the central leader not clustered together. They shall form a balanced, proportional crown appropriate for the cultivar/species.
    - c. The attachment of the largest branches (scaffold branches) shall be free of included bark.
    - d. The tree trunk shall be free of wounds that penetrate to the wood (properly made pruning cuts, closed or not, are acceptable and are not considered wounds), sunburned areas, fungal fruiting bodies, wood cracks, sap leakage, signs of boring insects, galls, cankers, girdling ties, or mechanical injury.
  - 2. Plant quality at or below the soil line:
    - a. Roots shall be reasonably free of scrapes, broken or split wood, and free of injury from biotic agents.
    - b. The root collar shall be within the upper two inches of the substrate/soil.
    - c. The root system shall be reasonably free of stem girdling roots over the root collar or kinked roots from nursery production practices.

**2.2 PLANTS: ROOT BALL PACKAGE OPTIONS**

- A. The following root ball packages are permitted for trees, shrubs, ornamental grasses, perennials, and groundcovers. Specific root ball packages shall be required where indicated in the Plant Schedule located in the Drawings. Root ball packaging is to conform to the standards of ANSI Z60.1 unless otherwise indicated.
  - 1. BALL AND BURLAPPED(B&B):
    - a. B&B plants shall be field grown, and the root ball packaged in a burlap and twine and/or burlap and wire basket package.
    - b. Twine and burlap used for wrapping the root ball packages shall be natural, biodegradable material.
  - 2. CONTAINER PLANTS (BOXES AND PLASTIC POTS):
    - a. Container plants may be permitted for trees only when indicated in the Plant Schedule, in this specification, or as approved in writing by the Landscape Architect.
    - b. Plants shall be established and well rooted in removable containers.
  - 3. LANDSCAPE PLUGS
    - a. Landscape plugs refer to plant material grown in a tray of plug cells for direct planting in the landscape. Numerical designations of 50, 32, or 21 refer to the number of cells within a standard nursery or greenhouse flat.
    - b. Landscape Plug™(LP32 and LP50) is proprietary to North Creek Nurseries in Pennsylvania. Plant material with designated root ball packages of LP32 or LP50 may be sourced from other nurseries provided the substitution adheres to the following:
      - 1) Proposed container volumes fall between #SP1 and #SP2 as defined in ANSI Z60.1.
      - 2) Proposed container dimensions of the requested substitute closely correlate to the Landscape Plug™ sizes specified:
        - a) -LP32: 2.22 inches x 2.22 inches x 4 inches

- b) -LP50: 2 inches x 2 inches x 5 inches

### 2.3 PLANTS: SOLID SOD

- A. Obtain solid sod from sources having growing conditions similar to the area to be planted. Sod is to be:
1. True to name and type of species indicated in the Plant Schedule and contains no other grasses.
  2. Well cultivated and weed, disease and insect-free, of good texture, and free from extraneous roots, stones and other foreign material. The presence of weeds shall be cause for rejection and replacement prior to Substantial Completion, or during the Guarantee Period.

### 2.4 SOIL AND SOIL AMENDMENTS

- A. Refer to Section 32 9100 – Planting Preparation for soil types and definitions.

### 2.5 POST PLANTING AMENDMENTS

- A. Slow Release Planting Tablets
1. 20-10-5 Planting Tablets  
A.M. Leonard, Inc.  
PO Box 816  
Piqua, OH 45356  
937.773.2694
  2. Approved equal.

### 2.6 MULCH

- A. All mulch types to be free from leaves, twigs, insects, grasses, weeds, plants and their seeds, other foreign materials and any substances harmful to plant growth. Types include:
1. Pine straw – Longleaf Pine(P. palustris) needles.
    - a. Unless otherwise indicated, use on slopes greater than 3:1
  2. Shredded Pine Bark (nuggets will be rejected).
  3. Double Shredded Hard wood.

### 2.7 TREE STAKING AND GUYING MATERIAL

- A. Manufacturers:
1. Tree staking & guying to utilize the ArborBrace Tree Guying System ([www.treestaking.com](http://www.treestaking.com)):
    - a. Trees up to 4 inch caliper: ATG-R/ATG-HD
      - 1) ¾ inch polypropylene guy lines, olive drab in color.
      - 2) Nickel plated spring cam-lock tension clips.
      - 3) Arrowhead Anchors(4 inch by 3-3/4 inch)
    2. Trees 4 inch – 7 inch caliper: ATG-J
      - 1) 1 inch polypropylene guy lines, olive drab in color.
      - 2) Nickel plated spring cam-lock tension clip(1500 lb breaking strength)
      - 3) Arrowhead Anchors(5-1/2 inch by 4-1/2 inch)
  - B. Approved equal.

**PART 3 - EXECUTION****3.1 SITE CONDITIONS**

- A. Coordinate the Work of this section with that of other trades.
- B. Be aware of all surface and sub-surface conditions, including utilities, and notify the Landscape Architect, in writing, of any circumstances that would negatively impact the health of plantings. Do not proceed with work until unsatisfactory conditions have been corrected.
  - 1. Notification of Local Utility Locator Service, 811, is required for all areas within project area: The Contractor is responsible for knowing the location and avoiding utilities that are not covered by the Local Utility Locator Service.
- C. Section 32 9100 - Planting Preparation and Section 32 8400 - Irrigation work to be completed and accepted prior to the installation of any plants.
- D. Perform planting during those periods when weather and soil conditions are suitable for planting in accordance with locally accepted horticultural practices and as approved by the Landscape Architect.
  - 1. Do not install plants into saturated or frozen soils. Do not install plants during inclement weather, such as rain or snow or during extremely hot, dry, cold or windy conditions.
  - 2. Landscape plugs may require planting at a different time than trees or shrubs. See Plants: Root Ball Packages and Additional Requirements.

**3.2 SOIL PROTECTION DURING PLANT DELIVERY & INSTALLATION**

- A. Protect soil from compaction during the delivery of plants to the planting locations, the digging of planting holes, and the installing of plants.
  - 1. Where possible deliver and plant trees that require the use of heavy mechanized equipment prior to final soil preparation and tilling.
  - 2. Till to a depth of 6 inches, all soil that has been driven over during the installation of plants.

**3.3 LAYOUT AND PLANTING SEQUENCE**

- A. Notify the Landscape Architect one week prior to layout. Layout all individual tree and shrub locations. Place plants above surface at planting location or place a labeled stake at planting location. Layout bed lines with paint. Adjust plant layout as directed by the Landscape Architect.
- B. Do not begin planting installation until given approval by the Landscape Architect.
- C. When applicable, plant trees before other plants are installed.

**3.4 PLANTS: GENERAL INSTALLATION**

- A. No more plants shall be distributed about the planting bed area than can be planted and watered on the same day.
- B. Excavate the Planting Soil as indicated in the Landscape Details.
  - 1. For trees and shrubs planted in soil areas that are NOT tilled or otherwise modified to a depth of at least 12 inches over a distance of more than 10 feet radius from each tree, or 5 feet radius from each shrub, the soil around the root ball shall be loosened as defined below.
    - a. The area of loosening shall be a minimum of 3 times the diameter of the root ball at the surface sloping to 2 times the diameter of the root ball at the depth of the root ball.
    - b. Loosening is defined as digging into the soil and turning the soil to reduce the compaction. The soil does not have to be removed from the hole, just dug, lifted and turned. Lifting and turning may be accomplished with a tracked mini excavator, or hand shovels.

2. If an auger is used to dig the initial planting hole, the soil around the auger hole shall be loosened as defined above for trees and shrubs planted in soil areas that are NOT tilled or otherwise modified.
  3. The measuring point for root ball depth shall be the average height of the outer edge of the root ball after any required root ball modification.
- C. Set top outer edge of the root ball at the average elevation of the proposed finish unless otherwise indicated in the Planting Details. Set the plant plumb and upright in the center of the planting hole. The tree graft, if applicable, shall be visible above the grade. Do not place soil on top of the root ball.
- D. The Landscape Architect may request that a plant's orientation be rotated when planted based on the form of the plant.
- E. Brace root ball by tamping soil around the lower portion of the root ball. Place additional soil around base and sides in six-inch lifts. Lightly tamp each lift using foot pressure or hand tools to settle backfill, support the tree and eliminate voids. Do not over compact the backfill or use mechanical or pneumatic tamping equipment.
1. When the planting hole has been backfilled to three quarters of its depth, water shall be poured around the root ball and allowed to soak into the soil to settle the soil. Do not flood the planting space. If the soil is above field capacity, allow the soil to drain to below field capacity before finishing the planting. Air pockets shall be eliminated and backfill continued until the planting soil is brought to grade level.
  2. When backfilled to within 6-8 inches of finished grade, install slow-release planting tablets as directed by the manufacturer's directions.
- F. Thoroughly water the root ball and plantings pit immediately after planting.
- G. Remove all nursery plant identification tags, ribbons, ties, and trunk protection after planting except as described in Quality Assurance of this specification section.
- H. Prune plants only as directed by the Landscape Architect.

### 3.5 PLANTS: ROOT BALL PACKAGES AND ADDITIONAL REQUIREMENTS

- A. The following are additional planting requirements for the previously specified root ball packaging types and are to be followed during the planting process in addition to the above Plants: General Installation.
- B. **BALLED AND BURLAPPED PLANTS**
1. Remove all webbing, twine, and burlap from the top of the root ball after the root ball has been backfilled. Do not fold burlap down into the planting soil.
  2. Remove the top 6 - 8 inches of the wire baskets prior to the final backfilling of the tree.
- C. **CONTAINER PLANTS**
1. Shave and scarify the root ball after removing the container.
  2. Remove all substrate at the bottom of the root ball that does not contain roots.
- D. **LANDSCAPE PLUGS**
1. Coordinate with the Landscape Architect for scheduling the layout and installation of planting areas involving the use of landscape plugs. The Landscape Architect shall be present for the layout and supervision of planting.
  2. Landscape plugs are to be installed after the flush of spring growth has begun and with sufficient time within the growing season to establish. Contractor is to account for any additional mobilizations this requirement necessitates.
    - a. Areas to be planted with landscape plugs that require a postponement in planting are to be covered with 3 inches of mulch until weather permits planting.
  3. Water landscape plugs immediately prior to layout.
  4. Excavate planting holes using a 3" auger bit attached to a power drill or earth auger.
  5. Remove plugs from their trays by pushing up through the bottom of the liner. Do not pull the plant by its vegetation. Do not 'tease' the root system apart.
  6. Place plug in excavated hole and ensure that the planting soil evenly matches up to the top of the substrate of the landscape plug. Tamp in soil around the landscape plug and

water individual plugs immediately to reduce air pockets and maximize contact between roots and soil.

7. Do not apply mulch to areas utilizing landscape plugs.
8. Complete a secondary wave of planting at the direction of the Landscape Architect to address anticipated plant failure. Secondary wave of planting is to be anticipated by the Contractor and reflected in the original proposal by accounting for a 10% loss and replacement in landscape plugs.

### **3.6 PLANTS: SOLID SOD**

- A. Lay sod within 24 hours of harvesting. Contractor shall not lay sod if dormant or if ground is frozen or muddy.
- B. Water immediately after installation.

### **3.7 STAKING AND GUYING**

- A. Do not stake or guy trees unless specifically required by the Contract Documents, or in the event that the Contractor feels that staking is the only alternative way to keep particular trees plumb.
  1. The Landscape Architect has the authority to require trees are staked or to reject staking as an alternative way to stabilize the tree.
- B. Remove guy lines after one full growing season or at other times as required by the Landscape Architect.
- C. Utilize the tree staking and guying materials specified. Tie in such a manner as to prevent girdling. Refer to Planting Details for installation.

### **3.8 STRAIGHTENING PLANTS**

- A. Maintain all plants in a plumb position throughout warranty period. Straighten all trees that move out of plumb including those not staked. Plants to be straightened shall be excavated and the root ball moved to a plumb position, and then re-backfilled.
- B. Do not straighten plants by pulling the trunk with guys.

### **3.9 INSTALLATION OF FERTILIZER AND OTHER CHEMICAL ADDITIVES**

- A. Do not apply any soluble fertilizer to plants during the first year after transplanting unless soil test determines that fertilizer or other chemical additives is required. Apply chemical additives only upon the approval of the Landscape Architect.
- B. Apply control released fertilizers according to manufacturer's instructions and standard horticultural practices.

### **3.10 PLANTING BED FINISHING**

- A. Smooth out grades between plants after planting and before mulching.
- B. Separate the edges of planting beds and lawn areas with a smooth, formed edge cut into the turf with the bed mulch level slightly lower than the adjacent turf/sod or as directed by the Landscape Architect.
- C. Install metal edging as indicated in the Drawings.

### **3.11 MULCHING OF PLANTS**

- A. Apply mulch to the depth indicated in the Planting Details, covering the entire planting bed area unless otherwise directed. Install no more than 1 inch of mulch over the top of root balls. Taper mulch depth down to 2 inches when abutting pavement.

- B. For trees planted in lawn areas, the mulch shall extend to a 4-foot radius around the tree or to the extent indicated on the plans.
- C. Lift all leaves, low hanging stems, and other green portions of small plants out of mulch if covered.

### **3.12 WATERING**

- A. The Contractor shall be fully responsible to ensure that adequate water is provided to all plants from the point of installation until the date of Substantial Completion Acceptance. The Contractor shall adjust the automatic irrigation system, if available, and apply additional water, or adjust for less, using hoses as required.
- B. Hand water root balls of all plants immediately after planting to assure that the root balls have moisture above wilt point and below field capacity.
- C. The Contractor shall install and maintain 25 gallon watering bags for each tree for the duration of the warranty period.
  - 1. Watering bags shall remain the property of the Owner at the completion of the Work.

### **3.13 PROTECTION DURING CONSTRUCTION**

- A. Protect planting and related work and other site work from damage due to planting operations, operations by other Contractors or trespassers. Maintain protection during installation until Substantial Completion Acceptance. Treat, repair or replace damaged work immediately.
- B. Damage done by the Contractor, or any of their sub-contractors to existing or installed plants, or any other parts of the work or existing features to remain, including those on adjacent property, shall be cleaned, repaired, or replaced by the Contractor at no expense to the Owner. The Landscape Architect shall determine when such cleaning, repair, or replacement is satisfactory.

### **3.14 CLEAN UP**

- A. Keep site free of trash, pavements reasonably clean and work area in an orderly condition at the end of each day. Remove trash and debris in containers from the site no less than once a week.
  - 1. Immediately clean up any spilled or tracked soil, fuel, oil, trash or debris deposited by the Contractor from all surfaces within the project or on public right of ways and neighboring property.
- B. Wash all soil from pavements and other structures. Ensure that mulch is confined to planting beds and that all tags and flagging tape are removed from the site.
  - 1. Tags mentioned in Quality Assurance Article of this Section are to remain until End of Warranty and Final Acceptance.
- C. Make all repairs to grades, ruts, and damage by the plant installer to the work or other work at the site.
- D. Remove and dispose of all excess planting soil, subsoil, mulch, plants, packaging, and other material brought to the site by the Contractor.

### **3.15 INTERIM PLANT MANAGEMENT**

- A. Maintain all plants and planted areas during the project work period and prior to Substantial Completion Acceptance.
  - 1. Maintenance during the period prior to Substantial Completion Acceptance shall consist of pruning, watering, cultivating, weeding, mulching, removal of dead plant material, repairing/replacing/tightening of tree guying materials, resetting plants to proper grades and upright position, and furnishing and applying such sprays as are necessary to keep plantings reasonably free of damaging insects and disease, and in healthy condition. The threshold for applying insecticides and herbicides shall follow established Integrated Pest

Management (IPM) procedures. Mulched areas shall be kept reasonably free of weeds and grass.

### 3.16 SUBSTANTIAL COMPLETION ACCEPTANCE

- A. Upon written notice from the Contractor, the Landscape Architect shall review the work and decide if the work is substantially complete.
  - 1. Notify the Landscape Architect at least 7 days prior to the requested review date.
  - 2. The Landscape Architect may develop a "punch list" that describes the work to be completed or amended before Substantial Completion is granted. After the Contractor has completed the items on the punch-list, the Contractor may request another review by the Landscape Architect.
- B. The date of Substantial Completion of the planting shall be the date when the Landscape Architect accepts that all work in the following sections are complete:
  - 1. 32 8400 – Planting Irrigation
  - 2. 32 9100 – Planting Preparation
  - 3. 32 9200 – Turf and Grasses
  - 4. 32 9300 - Plants
- C. The Plant Warranty Period begins at the date of written notification of Substantial Completion from the Landscape Architect. The date of Substantial Completion for the Sections listed above may be different than the date of Substantial Completion for the other Sections of the Work.

### 3.17 END OF WARRANTY & FINAL ACCEPTANCE

- A. Contractor is responsible for contacting the Landscape Architect at the end of the Plant Warranty Period to schedule final inspection. Should the contractor fail to contact the Landscape Architect, the Plant Warranty Period is automatically extended until he/she does so.
- B. At the end of the Plant Warranty Period, submit request for inspection for Final Acceptance to Landscape Architect at least one week prior to anticipated date of inspection; include list of Work substantially accepted and list of Work replaced during Warranty Period.
- C. Upon request for inspection, jointly review with Landscape Architect all guaranteed Work for Final Acceptance.
- D. Remove tree guying apparatus and saucers from all trees, unless otherwise directed; replace mulch to specified thickness.
- E. Upon completion by the Contractor of all required repairs and replacements, the Landscape Architect will confirm the date of Final Acceptance of the Work.
